Third edition 1949-50
Fourth edition 1958

ABBREVIATIONS

The titles of subjects, which are printed first in bold type, have been abbreviated within each article to the initial letter or letters

ac. , acre(s).	lat. , latitude.
agric. , agricultural.	lb. , pound(s).
ambas. , ambassador(s).	l. b. , left bank.
Amer. , American.	long. , longitude.
anct. , ancient.	m. , mile(s).
ann. , annual.	manuf. , manufacture.
arron. , arrondissement.	M.E. , Middle English.
A.-S. , Anglo-Saxon.	min. , minute(s).
A.V. , Authorised Version.	Mod. E. , Modern English.
b. , born.	m.p.h. , miles per hour.
Biog. Dic. , Biographical Dictionary.	mrkt tn. , market town.
bor. , borough.	MS., MSS. , manuscript(s).
bp. , birthplace.	mt, mts. , mount, mountain(s)
Brit. , British.	N. , north; northern.
c. , about.	N.T. , New Testament.
C. , Centigrade.	O.E. , Old English.
cap. , capital.	O.F. , Old French.
cent. , century (7th cent.).	O.T. , Old Testament.
chem. , chemistry.	oz. , ounce(s).
co. , county.	par. , parish.
com. , commune.	parl. , parliamentary.
cub. ft. , cubic feet.	pop. , population.
d. , died.	prin. , principal.
Dan. , Danish.	prof. , professor.
dept. , department.	prov. , province; provincial.
dimin. , diminutive.	pub. , published; publication.
dist. , district.	R., riv. , river.
div. , division.	R.A.F. , Royal Air Force.
E. , east; eastern.	r. b. , right bank.
eccles. , ecclesiastical.	rep. , republic.
ed. , edition; edited.	Rep. of Ireland, Eire.
educ. , educated.	R.N. , Royal Navy.
e.g. , example.	Rom. , Roman.
Ency. Brit. , <i>Encyclopædia Britannica</i> .	r.p.m. , revolutions per minute.
Eng. , English.	R.V. , Revised Version.
estab. , established; establishment.	S. , south; southern.
fl. , flourished.	sec. , second(s).
Flem. , Flemish.	sev. , several.
fort. tn. , fortified town.	Sp. , Spanish.
Fr. , French.	sp. gr. , specific gravity.
ft. , feet.	sq. m. , square miles.
Ger. , German.	temp. , temperature.
Gk. , Greek.	ter. , territory.
gov. , government.	tn. , town.
Heb. , Hebrew.	trans. , translated; translation.
hist. , history.	trib. , tributary.
horticult. , horticultural.	U.K. , United Kingdom.
h.p. , horse-power.	U.N. , United Nations.
H.Q. , headquarters.	univ. , university.
hr(s) , hour(s).	U.N.O. , United Nations Organisation
in. , inch(es).	urb. , urban.
inhab. , inhabitant(s).	U.S.A. , United States of America.
is. , island(s).	vil. , village.
It. , Italian.	vol. , volume.
Jap. , Japanese.	W. , west; western.
jour. , journal.	Wm. , William.
Lat. , Latin.	yd(s) , yard(s).

Coquelin, Benoit Constant (1811-1909), Fr. actor, destined to be a baker, but fortunately his histrionic talent was discovered, and he was allowed to enter the Conservatoire and studied under Régnier. Here he gained the second prize for comedy (1860), and in the same year played the part of the comic valet, Gros René, in Molière's *Dépit amoureux* at the Comédie Française. In 1864 he became *sociétaire* of that theatre, and for the 22 years following played with conspicuous and well-deserved success the leading roles in over 40 new plays. He excelled in the impersonation of characters with a humorous bias, and his originality was especially marked in such plays as de Banville's *Gringoire* (1867); Ferrier's *Tabarin*; Émile Augier's *Paul Forestier* (1871); Dumas's *L'Étranger* (1876); Lomou's *Jean Jacier* (1877); Pailleuron's *Le Monde où l'on s'ennuie* (1881); and Erekmann and Chatrian's *Les Rantcau* (1884). As there had been some difficulty over his prov. and foreign tours, he gave up in 1886 his position at the Comédie Française and spent 2 years visiting with his company the chief cities of Europe and America. From 1890 to 1892 he was again associated with his old theatre, where he appeared as Labussière in Sardou's *Thermidor*, but in 1892 he again went on a foreign tour and never afterwards appeared at the Comédie. For 2 years from 1895 he acted at the Renaissance theatre in Paris, but in 1897 became director of the Porte-Saint-Martin. It was here that he created his most famous and probably his finest role, that of the inimitable Cyrano de Bergerac, in Rostand's play of that name (1897). Such was his success in this part that Rostand is said to have written *Chantecler* solely for C. But C. d. quite suddenly in the midst of the rehearsals for this new romantic drama, which was to have carried Paris by storm.

Coquelin, Ernest Alexandre Honoré (1848-1909), Fr. actor and author, brother of Benoit Constant C. He played at Odéon and the Variétés, but was mainly associated with the Comédie Française, where his spirited and witty interpretation of a series of comic roles attracted large audiences. His humorous *Livre des convalescents*, 1880, and *Fariboles*, 1882, etc. afford delightful reading.

Coquerel, Athanasé Josué (1820-75), Fr. Protestant divine, son of A. L. C. C. (q.v.), helped publish the first scientific theological review of his country (*Nouvelle revue de théologie*, 1852). In *Jean Calas et sa famille*, 1857, *Précis de l'église réformée*, 1862, etc. he expressed his enlightened ideas. He wrote also on art in *Les Beaux-Arts en Italie*, 1857.

Coquerel, Athanasé Laurent Charles (1795-1868), Fr. Protestant divine, lived

in Holland 1818-30. From 1831 to 1844 he ed. 3 papers, *Le Protestant*, *Le Libre Examen*, and *Le Lien*, and by his advocacy of a wider religious freedom angered the orthodox Calvinists. His contemporaries admired him chiefly for his oratory; but he wrote many works, including a *Réponse to Strauss's Life of Christ*, 1841, and a treatise on the Reformed Churches of France, 1861.

Coques (or Cox), Gonzales (1618-84), Flemish painter, was a pupil of Pieter Bruechel (q.v.), and later of David Ryo-kaert the second. In 1671 he became painter in ordinary to Count Monterey, Governor-General of the Low Countries. Sometimes he depicted tavern and rustic scenes, but he excelled in portraiture, in which he took Van Dyck as his model. Mainly small in scale, his works found favour with such important patrons as the Archduke Leopold, the Prince of Orange, and Charles I of England.

Coquet, riv. of Northumberland, England, rising in the Cheviot Hills and flowing 40 m. N.E. to enter the sea at Amble. It is navigable to Warkworth; just off the riv. mouth is C. Is.

Coquimbo: 1. Mountainous prov. of Chile. The chief industry is mining copper, gold, and silver, and great iron-ore deposits exist (the combined output of iron-ore from C. and Atacama in 1953 was just under 3,000,000 metric tons). Branches of the Cordillera mts lie in the E.; in the W. agric. is carried on in irrigated valleys. The cap. is La Serena. Area 15,400 sq. m.; pop. 236,500.

2. Tn. of above prov., 8 m. SW. of La Serena, an industrial centre and agric. market on C. Bay on the Pacific. It is the winter quarters of the Chilean fleet. It exports grain, fruit, copper, and manganese. Pop. 30,000.

Coquito, or *Jubaea spectabilis*, is a palm which constitutes a genus in itself. The sap is evaporated by the natives of Chile to make it yield a palm-honey.

Cor Anglais, or **English Horn**, wood-wind instrument of the reed species, belonging to the oboe family, of which it is the tenor. It is related to the oboe as the basset horn is to the clarinet. A C. A. differs from an oboe in having a curved mouthpiece, a larger, globular bell at the bottom, and a wider conical bore to the wooden tube. It has a compass of two octaves and a fifth, and possesses

COR
ANGLAIS

a nasal tone, its quality, however, being more mellow and mournful than that of the oboe. In his It. version of *Alceste*, Gluck wrote parts for C. A. (1767). Other examples are the shepherd's piping in *Tristan and Isolde*, and the faun's in Debussy's *L'Après-midi d'un faune*. 'Anglais' probably does not mean 'English,' but is a corruption of *angle*, many of the earlier instruments being crooked or bent.

Cora, see **Cori**.

Coracle, or **Curraich** (Lat. *curuca*, Welsh *coruwl*), skiff with a slight wooden frame, covered over with hides, and made watertight by a coating of tar and pitch. Caesar describes the C.s in use among the Britons of his day, and hist. speaks of a seven days' voyage by missionaries in 878

E.N.I.

CORACLES IN WALES

These craft are used for fishing on the R. Towy, Carmarthenshire.

from Ireland to Cornwall in a C. made of two and a half skins. C.s were oval in shape, about 3 ft. by 4 ft. in size. The rower propelled himself by a paddle. If two men went fishing in C.s they held the net between them, hauling it up after a catch till their boats touched and the fish could in this way be secured. This kind of canoe is still used on the It. Severn and R. Towy, and in Clare. C.s have disappeared from the Usk and the Wye, and on the Taff the last was seen in 1850. In Ireland and Scotland C.s are no longer seen. Light boats, very similar, were built for crossing the lakes on the way to Klondike after the passage of Chilkoot Pass, Alaska.

Coracoid Process, beak-like projection in the upper part of the scapula, or shoulder blade. It may be felt by pressing the finger in the depression just below the collarbone, two-thirds of its length outwards.

Coral, the solid support or hard skeleton of solitary or colonial coelenterates. It is secreted from sea-water, and is chiefly carbonate of lime.

The Anthozoan polyps are the prin. source of the C. reefs of the world. The skeletons of many other organisms contribute to C. masses, such as Polyzoa and Mollusca, but these cannot be properly included in the term C. The reef-building C.s are the Madrepora and Maecandrina, confined to waters in which the temp. does not fall below 68° F. even in the coldest months. C. reefs are abundant in the W. Indies, on the coast of Brazil, on the E. coast of Australia, and in the Central Pacific. The great C. reef regions are within the limits of the trade-winds and monsoons, with the exception of the Ellice and Marshall Is.

CORAL

C.s may be roughly classed under two heads—horny, and lime or stone C.s. The former consist chiefly of a horny secretion from the polyps, while the stone C. consists almost entirely of lime firmly joined in a solid mass. All possible gradations, however, can be found, so that it is impossible to draw a sharp line between the two groups. Corallidae C. is quite solid, and is produced in concentric layers by the living gelatinous substance enveloping it, from which the polyps project. When the C. is taken out of water, the gelatinous living part soon decomposes and disappears. Beyond their general utility and value as sources of lime, C.s are not of any especial industrial importance with the exception of the red C. (*Corallium rubrum*) of the Mediterranean Sea. This C. is susceptible of a high polish, and is largely used for ornamental purposes. It has a shrub-like, branching form, and grows about a foot high, being as thick as the little finger of the human hand. Extensive fisheries are carried on in the Mediterranean, and it is exported to India. Red C. is also obtained in the Red Sea and Persian Gulf. It also occurs off the NW. coast of Africa. Black C. is still more highly prized, and has a wide distribution, growing to a considerable height

and thickness in the tropical waters of the Great Barrier Reef of Australia. It is also found in the Persian Gulf. From remote times, *C.* has been highly prized for personal ornaments and decorative purposes generally. In India, a great trade was carried on from the beginning of the Christian era, and it was esteemed as a substance endowed with sacred properties. A belief in its potency as a charm continued to be entertained throughout medieval times, and among the Romans branches of *C.* were hung round the children's necks to preserve them from danger, and many medicinal virtues were attributed to it. In Italy, at the present day, *C.* is worn as a preservative from the evil eye. The range of value of *C.* varies according to colour and size, and its price is considerably affected by the fluctuations of fashion. Rose-pink *C.* is the most valuable. Good coloured *C.* commanded high prices in China, where it was in great requisition for the button of office worn by the mandarins. It is also a favourite ornamental substance with the negroes of Central Africa and America.

Coral Fishery, since the beginning of the Christian era, has been a lucrative trade. The finest fisheries are along the N. coast of Africa, in Tunisia, Algeria, and Morocco. Before the 16th cent. these *C.* reefs were controlled by the It. republics. For a time the Tunisian reefs fell into the hands of Spain, but the monopoly of trading was ultimately secured by France, who held it till 1793, when the trade was thrown open to other nations. For a short period the control lay in the hands of Great Britain, but finally was regained by France. Boats not bearing the Fr. republican flag have to pay heavy dues to fish. *C.* is only fished once in ten years, as it requires that time to develop. The boats vary in size from 3 to 14 tons. The raw material is made up chiefly in It. cities. There are also valuable *C.* reefs off the coasts of Italy, Catalonia, and Provence.

Coral Islands and Reefs are low is. or reefs formed from the petrified calcareous skeletons of *C. polyphi*. They may best be subdivided into three classes, one of which often develops from the other. *Fringing reefs* are found extending outwards from the shore, from which they are not separated by a channel. *Barrier reefs*, on the other hand, are found at some distance from the shore, along which they extend at a more or less uniform distance. The greater part of such a reef is submerged, its place being marked by the line of breakers, but in places it rises above the sea level, and here sparse vegetation is found. The channels which lie between reef and shore are of the greatest value as providing roadsteads for shipping. The greatest of barrier reefs is the Great Australian Barrier Reef off the coast of Queensland which stretches intermittently for over 1000 m. *Atolls* are small is. roughly circular in shape and enclosing a lagoon. These typical *C.* is. vary greatly in size, and have sometimes a length of over 70 m. Beneath the lagoon, to which there is usually access through a gap in the encircling ring, is a *C.* floor. The

depths of these lagoons vary from a few feet to about 300, and frequently the lagoon forms a safe harbour for ships. *C. polyphi* flourish most in the W. Pacific and in the shallow seas near Australia, Mexico, the W. Indies, and New Guinea. The reefs and is. are composed principally of rock which bears but little superficial resemblance to the organic substance which we recognise as *C.* The foundation is one of white limestone, which often further assumes a crystalline form under the influence of chemicals present in the salt water. To this are added *C.* fragments washed off from another part of the reef and rendered shapeless by pressure. Sand and the skeletons of molluscs, radiates, etc., form the rest of the mass, and on this the living *C.* builds. The growth of the *C. polyphi* is restricted by many circumstances. Warm salt water is required, free from cold currents, and with a temp. which does not fall below 63° F., and the *polyphi* must also have abundance of food if it is to develop properly. The water must be clear, not muddy. Reef-forming *C.s* live in symbiotic association with algal plants and therefore can only flourish at shallow depths where the light is good. The rate of growth varies with the species and the conditions; some species build at the rate of 1 in. per year, others at the rate of 3 in. per year, and still higher rates of progress have been chronicled in certain parts. Since the growth of *C.* is restricted by so many conditions, the circumstances and procedure by which is. and reefs have come to their present state have been much discussed. The first serious attempt to provide a theory was made by Adelbert von Chamisso (q.v.) who made a voyage through the South Seas from 1815 to 1818. He conjectured that the *C.* structures were built up in places where the sea bottom came near to the surface—in short on submarine mts. Growth took place on the sloping sides of the mts., and continued in an outward direction so that the atoll with its lagoon was the result. The subject next engaged Darwin's attention during the celebrated voyage of the *Beagle* (1831-6). He propounded the view that the construction of the reefs had commenced when the land was above the surface of the sea, and that subsidence had then followed as the growth proceeded. When first built, therefore, every *C.* structure would be a fringing reef, when the land actually rose above the surface. As the land sank, construction would continue on the old foundations and a barrier reef would result. In time the land would entirely disappear, and the atoll, the final form, would be complete. Much evidence favouring Darwin's theory of subsidence has been brought to light. Borings put down in the lagoon of the atoll of Maratua passed through 429 metres of reef and reef debris without reaching the foundations. Geophysical work by the United States Navy on Bikini indicated that coral-line material exists to the depth of at least 600 metres below sea level. These depths are far below those at which corals

can live, and suggest long-continued subsidence of the floor on which the reef was built up. An alternative hypothesis put forward by Daly postulates a general rise in sea level instead of a subsidence of the foundations. Daly's explanation takes account of the lowering of the sea level during the Glacial Period, when much water was locked up in the ice sheets. When the sea level was low, he suggested, marine erosion prepared platforms on which coral reefs began to grow up as the climate improved. As the sea level rose when the ice sheets melted, the growth of coral reefs kept pace with the rise, and built up a great thickness of reef material. It seems probable that both a rise in sea level and a subsidence of the foundations may have contributed to the development of thick coral reefs. See C. R. Darwin, *Structure and Distribution of Coral Islands*, 1842, 1889; J. D. Dana, *Coral and Coral Islands*, 1872. W. Savile Kent, *Great Barrier Reef of Australia*, 1893; J. S. Gardiner, *Coral Reefs and Atolls*, 1931; B. Malinowski, *Coral Gardens and their Magic*, 1938; R. Gibbings, *Over the Reefs*, 1948. See also ATOLL.

Coral-flower, Coral tree, see ERYTHRINA.

Coral Sea stretches between the New Hebrides to the E. and Australia to the W., being part of the Pacific. The coral reefs give the sea its name. The C. S. was the scene of an Amer. naval and air victory over the Jap. Navy in May 1942. An exceptionally large Jap. naval force, which had been concentrated at the Louisiade Is. in the C. S., was attacked by an Amer. task force of ships and aircraft on 4 May, and in an engagement lasting sev. days the Jap. Navy lost a number of battleships (estimated at over half a dozen), while inflicting only slight loss on the Amer. forces. For details see NAVAL OPERATIONS IN SECOND WORLD WAR.

Coral Snakes, relations of the cobra in the family Colubridae. *Elaps corallinus* is a typical specimen; it occurs in the tropical forests of S. America, and its small body, less than 3 ft. in length, is ringed with coral-red. It is highly poisonous, but has a small mouth.

Corallian (Fr. *Corallien*), in geology, the name of a div. of the Jurassic System. In Britain the C. Series outcrops in the S. of England and in Yorks. as a predominantly calcareous group, whereas from Beds. to Lincs. it is mostly clay.

Coralline, popular name applied to *Corallina*, genus of calcareous algae. *C. officinalis* is a beautiful seaweed of red colour, but others are often purple.

Coralline Crag, a Pliocene deposit of light coloured sands and beds of comminuted shells (crag) with a phosphatic nodule bed at the base. Exposed only in SE. Suffolk.

Coram, Thomas (1668-1751), philanthropist, b. Lyme Regis. A man of varied ventures by sea and land; settled in London, where, moved by the sufferings of the poor, he estab. the Foundling Hospital. In this work he was supported by Hogarth; but his charity so impoverished him that he ended his days on a small annuity raised by subscription. See FOUNDLING HOSPITALS. For life, see

J. Brownlow's *History of the Foundling Hospital*, 1658.

Coran, see KORAN.

Corangamite, saltwater lake in Victoria, Australia, with an area of 76 sq. m. and a circumference of 99 m. It has no outlet, and is shallow on the S. side.

Coranto, see COURANTE.

Coras Iompair Eireann, Ireland's Transport Company, formed in 1945 by the amalgamation of Great Southern Railways with the Dublin United Transport Company. Under the Transport Act, 1950, C.I.E. was made a statutory body comprising the undertakings of C.I.E. (1945) and the Grand Canal Company. It operates rail and road services, both passenger and goods, through 23 co.s of Ireland. The total mileage of railway lines owned by the Company is 2,477 m. 22 ch. Main-line services operate from Dublin to Cork, Limerick, Galway, Tralee, Sligo, Ballina, Rosslare Harbour, and Waterford. Most of C.I.E.'s main-line rail passenger services are now operated by diesel trains, composed of two diesel railcar units with intermediate coaches. Road passenger services, operated from a number of main centres, usually the prin. cities or tns., provide connections to areas largely not served by rail, and as far as possible co-ordinate with main-line passenger services. City bus services are operated in Dublin, Cork, Limerick, Waterford, and Galway. A chain of six hotels situated at Killarney, Kenmare, Parknasilla, Galway, Sligo, and Mullrany, called Great Southern Hotels, are owned and run by C.I.E.

Freight services by inland waterways are also operated by C.I.E. over the canal system previously known as the Grand Canal. The mileage of the canal system is 149 m., with a further 7½ m. on the Barrow Navigation and 123 m. on the Shannon Navigation, making a total mileage of canal and connections of 343½ m.

Corbeil-Essonnes, Fr. tn, cap. of an arron., in the dept of Seine-et-Oise, on the Seine. The church is partly 12th cent., and the important flour mills are of medieval origin. There are railway workshops and printing works. Pop. 21,000.

Corbel, in architecture, is a projected piece of stone, wood, or iron placed so as to support a pillar, beam, or roof-truss. In Norman architecture the cornice is supported on C. stones, the ends of which are carved; and in mediæval castles the main beams of the floors were frequently carried on large C.s. Ornament comprised foliage, or human or animal heads, often grotesque. The term bracket is sometimes used for a C., but bracket is better applied as synonymous with cantilever (q.v.).

Corbet, Richard (1582-1635), poet and bishop, son of a gardener at Ewell, Surrey, educ. at Westminster School and at Christ Church, Oxford, of which he became dean. He was afterwards appointed chaplain to James I, Bishop of Oxford, and Bishop of Norwich successively. He had a reputation for conviviality and wit. His only pub. writings were *Certain Elegant Poems*, 1647, and *Portica*

Stromata, 1648, the latter ed. with a life of the author by Octavius Gilchrist, 1807.

Corbett, Harvey Wiley (1873-1954). Amer. architect; b. San Francisco; graduated univ. of California, 1895; then studied at the Ecole des Beaux-Arts, Paris, till 1905. Member of the firm of Helmle & C., New York. Designed and built Maryland Institute, Brooklyn Masonic Temple, Springfield (Massachusetts) Municipal Group, Bush Terminal Office Building (New York), George Washington Masonic National Memorial (Alexandria, Virginia), Bush House (London, England), also King's College Hospital Buildings, Holy Innocents' Church, and St. Francis Xavier's School—all in Brooklyn.

CORBELL

Merton College Chapel, Oxford

Corbett, James John (1866-1933). Amer. prize-fighter, b. San Francisco, California, U.S.A. He began work as a book-keeper in a local bank. After winning in some amateur boxing matches, he became a professional in 1884. In 1889 he knocked out the veteran Joe Choynski in 28 rounds. He defeated Jake Kilrain in 1890 and fought a drawn battle with the famous negro boxer Peter Jackson. By this time he had earned the right to a contest with John L. Sullivan, who for many years had been world's champion heavy-weight pugilist. So firmly was Sullivan estab. in the esteem of the Amer. public that it was not thought that C. had any chance of winning. However, he defeated Sullivan in 1892 in New Orleans; and soon became known by the sobriquet Gentleman Jim. He successfully defended his title against Charlie Mitchell, the Brit. heavy-weight champion, but was knocked out by Bob Fitzsimmons at Carson, Nevada, 1897, by the blow which became famous as the solar plexus punch. His last fight was in 1903, when he was knocked out by Jim Jeffries. C. then went on the vaudeville stage and was a big success. He wrote his reminiscences under the title *The Koor of the Crowd*, 1925.

Corbett, Sir Julian Stafford (1854-1922), historian, educ. at Marlborough and Trinity College, Cambridge. Before the

First World War he pub. a number of works on naval hist.; and, after it, contributed *Naval Operations* to its *Official History*, 1920. He was knighted in 1917.

Corbie, Fr. tn in the dept of Somme, at the confluence of the Somme and the Ancre. It had a famous abbey and was the birthplace of Saint Colette, a 15th-cent. Franciscan reformer. It has mineral springs, and haberdashery manufs. Pop. 3900.

Corbie Steps, or **Crow Steps**, Scottish expression derived probably from corbel, the similarity of this word to corbie, Scottish for crow, accounting for the alternative name. From the 14th to the 17th cent. gables in Scotland (also often in Flanders and Holland) were finished by stepped slopes, called C. S. It was customary to arrange steps for the passage from one side of the roof to the other, hence arose the fashion of cutting the parapet alongside into steps.

Corbridge, par. on the Tyne in Northumberland, England, 3½ m. to the E. of Hexham. The dist. is of anct habitation, for an axe of the New Stone Age (c. 3000 B.C.) has been found near by. The Rom. station known as *Corstopitum*, which served as an important base for military operations under Antoninus Pius, lay half a mile to the W. Ruins of 2 great granaries facing what must have been a broad highway were excavated in 1907. These had lain embedded in the earth since the 5th cent., when the site was abandoned. The par. church was probably built about AD 674, and is of architectural interest. Pop. 2500.

Corbulo, **Gnaeus Domitius**, Rom. general of the 1st cent. AD. His popularity with the soldiers and his successes in the field aroused the envy of Claudius, who recalled him from beyond the Rhine. Between 58 and 63 C. conducted a series of brilliant campaigns against the Parthians; but 4 years later he was summoned to Greece by Nero, who ordered him to commit suicide at Cenchreae on the grounds that he was guilty of conspiracy.

Corbusier, **Le**, see LE CORBUSIER.

Corby, tn in Northamptonshire which has grown rapidly from a small vil. to its present size since 1930. It owes its importance to the iron and steel foundries based on locally found ironstone. The major expansion has taken place since 1933 and is due to the estab. of Messrs. Stewarts & Lloyds Ltd. steelworks, which employ about 6000 hands. The Brit. Oxygen Co. Ltd. has a research plant here. The anct 13th-cent. church stands in the old vil. to the E., and contains a founder's tomb and a triple sedilia. There are a number of fine 17th-cent. stone houses. C. is one of the 'New Towns' (q.v.) designated under the Act of 1946; it is proposed that its ultimate population will be 40,000. Pop. (1954) 20,000.

Coreyra, anct name of Corfu (q.v.).

Coreyra Nigra, see KOREULA.

Cord, derived from the Greek *chorda* through the Lat. *chorda*, the string of a musica instrument, now denotes a piece of thick string composed of sev. woven or twisted strands. In the 17th cent. in England,

and in America, a C. of wood was cut timber, usually for fuel, measuring 8 ft long by 4 ft broad, and 4 ft high.

Cordaiales, group of Palaeozoic gymnosperm plants with strap-like leaves. They were abundant as large trees in Coal Measure forests. *Cordaies* is the best-known genus.

Corday d'Armont, Marie Anne Charlotte, commonly called **Charlotte Corday** (1768-93), Fr. revolutionary, b. St Saturnin, near Sées in Normandy, of a noble family, among her ancestors being Pierre Corneille. At first a strong supporter of the Fr. Revolution, she afterwards thought that it had gone too far in its atrocities, and on the overthrow and proscription of the Girondists (May 1793) she determined to support the opposing side. She chose Marat as her first victim, and, after two unsuccessful attempts, she gained admission to him under pretence of communicating news of the Girondists at Caen, and stabbed him in his bath, where he d. She was arrested, brought before the revolutionary tribunal, and condemned to be guillotined. Her execution took place on 17 July 1793. See life by M. Cher, 1929.

Cordeliers, branch of the Franciscan or Grey Friars, so named from wearing a knotted cord for a girdle. The name was also applied to the members of a club founded in Paris in 1790 in the former convent of the C. during the Fr. Revolution, the chief leaders of which were Marat, Danton, Hébert, and Camille Desmoulins. It fell in importance after the execution of Danton, and was ordered to be discontinued by the Convention of 1795.

Cordials, sweetened and flavoured spirits once highly thought of as heart stimulants.

Cordier, Henry Joseph Charles (1827-1905), Fr. sculptor, a pupil of Fougnet and Rude. From the first he showed an alert interest in anthropology. The Jardin des Plantes, Paris, possesses his 12 busts of Algerians. Others of his notable works are statues of Arabian women and fellows in onyx and bronze, polychromatic busts of a Negro of Timbuctoo and an African Venus, and a statue of a young sculptor (Gk) of the is. of Tinos.

Cordier, or Corderius, Mathurin (c. 1480-1564), Fr. schoolmaster, for some time a teacher at the college of Navarre, Paris, where Calvin was his pupil, but taught for most of his life at Geneva, having embraced Calvin's religious views. He had a special gift for instructing children, and his graduated dialogues for beginners in Lat., entitled *Colloquiorum scholasticorum libri quatuor*, were still used in the school-room three centuries after his death. In his *De corrupti sermonis emendatione* he attacked what was called the *Latin de cuisine*, whilst a Lat. grammar and *Miroir de la jeunesse pour la former à bonnes mœurs et à civilité de vie* were both written for young people.

Cordierite, a complex aluminium and silicon ore with the chemical formula $4(\text{Mg, Fe})\text{O} \cdot 4\text{Al}_2\text{O}_3 \cdot 10\text{SiO}_2 \cdot \text{H}_2\text{O}$. It is rhombic, has a sp. gr. of 2.6, and a hardness of 7 to 7.5.

Cordilleras (Sp. 'chains'), name applied

to the mt systems of N., S., and central America; the C. of N. America being the Rocky Mts, and those of S. America the Andes.

Cordite, smokeless propellant used in the Brit. and other armies. It was introduced by Sir Frederick Abel; Nobel, the Swedish chemist, claimed that his patents covered the substance, but the claim was disallowed after a series of lawsuits in 1894-5. The propellant prepared in 1891 consisted of 58 per cent nitro-glycerine (q.v.), 37 per cent of gun cotton (q.v.), and 5 per cent mineral jelly or vaseline, and was known as M.J., of which there have been many variants with small variations in composition and ingredients. Gun cotton and nitro-glycerine are mixed in incorporating machines together with acetone which gelatinises the gun cotton; mineral jelly (vaseline) is added as a stabilising agent. The gelatinised dough is extruded through dies into cords of various cross-section sizes and shapes and perforations according to the ballistic requirements. The acetone is evaporated off in stoves. These C.s have now been largely replaced by solventless C.s in which M.J. is replaced by centralite, which dispenses with the use of a volatile solvent in manuf., and imparts a greater degree of storage stability to the C. In addition, small arms or rifle powder usually consists of gelatinised nitro-cellulose (q.v.) without the addition of nitro-glycerine. C. has good propellant properties and is generally safe to handle. If ignited in the open air it burns; it may be subjected to considerable shock without detonating, e.g. bullets fired through packages of C. fail to explode it. It is waterproof and is unaffected by climatic changes; it remains unaltered for a considerable time, even when kept in contact with metallic envelopes. These properties make it a valuable military propellant, as with suitable precautions it is safe for transport and storage for many years. It is customary for C. stored in magazines to be tested for chemical stability at regular intervals and its use to be limited to a certain number of years in accordance with these tests, after which it is destroyed. See EXPLOSIVES.

Cordoba, Alaska, see CORDOVA.

Córdoba (Eng. **Cordova**): 1. Sp. prov., in Andalucía (q.v.). It is watered by the Guadalquivir (q.v.), and its tribs. the Guadato, Benbézar, and Guadajoz, and contains part of the Sierra Morena (q.v.). The plains produce cereals, vines, olives, fruits, and beans; the mt slopes pasture cattle and horses. Lead, copper, and coal are mined. Area 5300 sq. m. Pop. 787,200.

2. (Rom. **Corduba**) Sp. city, cap. of the prov. of C., on the Guadalquivir. Founded in the 2nd cent. by the Romans, under the Moors it developed into a great city, and was the cap. of Moorish Spain after 756. In the 10th cent. it was one of the foremost centres of art and learning in Europe. Ferdinand III (q.v.) of León and Castile took it from the Moors in 1236. C., with its old walls, narrow streets, tall houses, and gardens, preserves a great

deal of its anct character. It has numerous fine churches and mansions, and a notable Rom. and Moorish bridge. The greatest treasure of the city, however, is the wonderful mosque, now the cathedral, built in the 8th-10th cents. This immense temple, 742 ft in length and 472 ft in width, containing 19 aisles, the arches of which are supported by nearly one thousand richly-coloured pillars, is probably the finest Moorish building in Spain. C. was once celebrated for its goat leather, whence *cordovan* and *cordwainer* (q.v.). Its manufs. include textiles and silverware, and it has a large commerce in agric. produce, wine, oil, and lead. Seneca (q.v.) was b. here. Pop. 171,500.

Córdoba: 1. Central prov. of the Argentine Rep., having an area of nearly 65,000 sq. m., consisting mostly of pampa land. In the W. the Sierra de C. and de Pocho rise sometimes to over 6600 ft, but the rest of the state is a plateau sloping down toward the E. Four of the five rivers, Primero, Segundo, Tercero, Cuarto, and Quinto, which flow from the W.

in 1821) confirmed Mexican independence. Pop. 17,900.

Cordon, line of military posts or sentries placed around a dist. or tn to prevent any communication between it and the country beyond. When it is used to prevent a disease from spreading it is called a *C. sanitaire*.

Cordon Bleu originally referred to the blue ribbon of the knight's grand cross of the order of the Holy Spirit, the first order of the Bourbon kings. To-day the term is humorously applied to good chefs. Properly it refers only to women cooks.

Cordova, see CÓRDOBA.

Cordova, tn in Alaska, U.S.A., formerly the terminus of the Copper R. and NW. railway serving a copper-producing region, including the Kennicott mines. Pop. 1140.

Cordovan, **Cordwain** or **Crup**, vegetable-tanned, curried shoe leather made from a special part of a horse hide known as the shell (a kidney-shaped, very compact layer below the surface of the skin which is only to be found on the back of equine animals). Originally C. was a high class.

INTERIOR OF CORDOBA CATHEDRAL (formerly a mosque)

succeed in reaching the E. limits. The prin. products are wheat, maize, flax, linseed, hay, flour, cattle, hides, and marble. Pop. (1955) 1,792,555.

2. Cap. of the above prov. and third largest city of the Argentine Rep., c. 435 m. NW. of Buenos Aires. Founded in 1573, its early growth was due to the driving of cattle from the Argentine pastures to the mining centres of the Andes. The local industries include State car and aero works, leather goods, textiles, glass, frozen meat, dairy products, confectionery, etc. There are also flour mills, foundries, marble works, tanneries, and paper mills. C. is a centre of culture. There is an important univ. (founded 1613), and the national observatory is one of sev. unusually fine buildings, including the National Academy of Sciences and the National Meteorological Bureau; there is an 18th-cent. cathedral, and a splendid museum. Pop. 351,600.

3. City of Veracruz state, E. Mexico, 3040 ft above the sea, in a fertile valley with coffee plantations, 55 m. WSW. of Veracruz. The treaty of C. (signed here

very flexible goatskin shoe leather originating in Cordova, from which it obtained its name.

Corduba, see CÓRDOBA.

Corduroy, cotton material made like a ribbed velvet. The fabric has cords running the length of the cloth, these cords or ribs being produced by a weft pile. It is generally all cotton, but may be made with a rayon pile for women's dress materials. A coarse heavy make is used for workmen's suits, for riding breeches, or for upholstery.

Corduroy Road, term used to designate a road which is formed of tree trunks or logs laid side by side in a transverse direction. Such roads are used chiefly in America, when a marshy piece of land has to be negotiated as a more or less temporary expedient. The origin of the term is the similarity of design of such a road to a piece of corduroy, in which the ribs run in similar fashion.

Cordwainer originally, in Sp., It., and O.F., signified a maker of, or dealer in, Cordovan leather, and thence in later Fr., a shoemaker. It is now obsolete, but

survives as the name of the trade-guild or company of shoemakers; it is also used by trade unions to include all branches of the trade.

Core, internal mould which forms the interior of a cylinder, tube, pipe, or other hollow casting. The C. is made in a C.-box, and has projecting portions known as C.-prints, which rest in the prints of the mould. The model from which the object is cast is solid, and makes an impression, partly in the cope and partly in the drag. When the pattern is removed the C. is laid in its place, the projecting portions resting in the recesses made by the pattern prints. When the metal has been poured around the space and then cooled, the C. is broken out, leaving the casting hollow. To prevent the formation of blow-holes, the material of the C. must be porous, and vents should be provided to allow gases to escape from the interior of the mould.

Corea, see KOREA.

Coregonus, or **Whitefish**, genus of fishes in the Salmonidae, and usually to be found represented in lakes. Their scales are large and silvery, the teeth are either minute or absent, and the height or front of the first dorsal is greater than its breadth. *C. oxyrinchus*, the houting, is a native of N. Europe; *C. pollan* is the pollan found in Irish loughs; *C. clupeoides* is the powan; the Welsh gwyniad (or schilly of Ulsterwater) is *C. clupeoides pennanti*; the powan and gwyniad are both found in the Eng. lakes, in Loch Lomond, and in lakes in Wales. The vendace (*C. raudius*) is found in the lake of Lochmaben in Scotland, and *C. vandensis gracilior* is found in Derwentwater.

Corelli, Arcangelo (1653-1713), violinist and composer, b. at Fusignano. He studied at Faenza and Bologna. Visits to France and Germany are reported, though uncertain, but he was settled in Rome by 1685. He met Handel there in 1707. Living at a time when the viol was yielding to the violin, C. was the first outstanding violinist and composer of music for that instrument, as well as teacher. His *Concerti grossi*, five books of twelve concertos each (short suites of non-dance pieces), are for two violins, cello, and harpsichord. They were only pub. shortly after his death, but 5 sets of sonatas appeared between 1681 and 1700.

Corelli, Marie (1855-1924), novelist, daughter of Charles Mackay (q.v.) by Ellen Mills, who became his second wife; at his death his son Eric was constituted her guardian, and he sent her to a Fr. convent to be educ. Her education was framed with a view to a musical career, but on her return home she wrote in 1886 a story entitled *A Romance of Two Worlds*. This was so successful that the idea of a musical career was abandoned for the writing of novels, all of which were immensely popular. No writer of her day (unless it was Hall Caine) had a larger number of readers. The critics invariably fell foul of her work, and for many years no copies of her novels were sent for review. The reason for her success lay not in the excellence of her work, but in the

fact that it met so exactly the popular taste. Her chief novels are *Vendetta*, 1886; *Thelma*, 1887; *Ardath*, 1889; *The Soul of Lilith*, 1892; *Barabbas*, 1893; *The Sorrows of Salam*, 1895; *The Mighty Atom*, 1896; *Temporal Power*, 1902; *Holy Orders*, 1908; *The Life Everlasting*, 1911; *Eyes of the Sea*, 1917; *The Secret Power* 1921. *Poems*, ed. by B. Vyver, 1925. See K. Carr *Miss Marie Corelli*, 1901; B. Vyver, *Memoirs of Marie Corelli*, 1930; lives by G. Bullock, 1940, and E. Bigland, 1953.

Corentijne, see COURANTYNE

Corenzio-Belisario (1558 or 1560-1643), Gk artist, b. in the prov. of Achaia. Became a pupil of Tintoretto at Venice. Settled at Naples, where he painted in fresco for the churches and was noted equally for his florid style and the terrorist methods by which he discouraged rivals.

Coreopsis (Gk. *koris*, a bug; *opsis*, resemblance), or **Ticksseed**, genus of plants of the family Compositae. It takes its name from the fact that the seeds are generally awned and slightly winged and look remarkably like an insect. There are many species found in the U.S.A. and Mexico, and a few in Africa. The flowers are cultivated for decoration.

Co-respondent, denotes either generally a co-defendant with one or more other parties to an appeal; or specially in the divorce court, any person cited in a suit for divorce or judicial separation, and charged with adultery with the spouse (respondent) against whom the petition is brought.

Corf, name formerly given in mining to a large and strong basket used in carrying ore, or coal, from the working-place to the surface. Tubs made of wood and iron are now used for this purpose; they are still sometimes termed corves. In fishing, a corf is the name given to a cage in which fish, particularly crabs, lobsters, etc., are kept alive in the water. Such corves are made from a large basket, or a box with holes in it.

Corfe Castle, vil. and par. in Dorset, England, situated in the E. div. of the Isle of Purbeck, 6½ m. SW. of Poole, and 21 m. ESE. of Dorchester. C. C. itself is situated on a high ridge, and is separated from the vil. by a ravine over which a bridge has been built. The castle dates from the 11th cent., though for a long time ascribed to Edgar; it was here on the site of the castle that King Edward the Martyr was murdered in 978 at the instance of his stepmother Elfrida. Many times the castle has been besieged; it was captured by the earl of Devonshire in Stephen's reign, and was twice besieged by the forces of the Parliament during the Civil war, being sacked after its capture in 1645. The prin. trade of the vil. is in fireclay and there is a milk collecting and distributing centre. Pop. 1400.

Corfu (Gk *Kerkyra*): 1. The second largest of the Ionian Is., of which the anc. name was Corcyra. In the 8th cent. bc it was colonised by the Corinthians and soon estab. an extensive commerce. Rivalry soon broke out with Corinth, from which C. became independent, and about 660 bc a battle was fought—the

most anct sea-fight on record—between the two cities. In 433 bc it allied with Athens and so caused the Peloponnesian war. Civil dissensions caused a decline in its power, and it was taken by the Romans in 229 bc. It was held by the Venetians from 1206 until 1797, when it was ceded to France. Russia and Turkey captured it in 1798, but gave it back to France in 1807. It was in the hands of the Brit. from 1815 to 1864 when it was incorporated in Greece. The surface of the is. is mountainous; the climate in summer is hot and dry, and in the winter rainy. C. has an area of 227 sq. m. and a pop. of about 105,000. Since Venetian times the chief exports have been olives and olive oil. On all sides there is luxurious vegetation, pears, figs, pomegranates, and flowers. The best Gk musicians come from C. The excellent roads are relics of the Eng. occupation. In 1916 the defeated Serbian army occupied C. which became the seat of the Serbian Gov. for the rest of the war. Over 25,000 Serbs d. there of typhus and cholera.

2. Chief tn. of the is. of C., famous for its harbour. The tn has few classical or medieval remains. On 27 Aug. 1923 the It. delegate on the Albanian Boundary Commission was found murdered, and Mussolini thereupon sent a fleet to C., which bombarded the dilapidated Venetian forts and killed 16 refugees and orphans. It., which was once universally understood, is no longer generally spoken. C. has no railway. Pop. 27,450.

Corgi, see WELSH CORGI.

Cori (formerly *Cora*), It. tn. in Lazio (q.v.), 12 m. N. of Latina (q.v.). It was once a tn of the Volsci (q.v.). During the Second World War there was severe damage. The tn has sev. anct churches, but is remarkable for its Rom. remains, which include temples, walls, and a bridge. There is an iron foundry, and there is a trade in agric. produce, olive oil, and wine. Pop. 7500.

Coria, Sp. tn in the prov. of Cáceres, on the Alagón. It has Rom. walls, almost intact, a Gothic cathedral, a 12th. cent. castle, and the palace of the dukes of Alba. Pop. 4800.

Coriander, or *Coriandrum sativum*, species of Umbelliferae which flourishes in Asia, America, and S. Europe. The plant is an ann., with a disagreeable smell of bed-bugs, but the globose fruit has a pleasant aroma when dried, and is used as an aromatic flavouring in confectionery and in the manuf. of liqueurs; in medicine it is used as a carminative.

Corigliano Calabro, It. tn. in Calabria (q.v.), near the gulf of Taranto, 26 m. N.E. of Cosenza (q.v.). It is a gloomy and badly built tn, but has a fine castle. Pop. 20,300.

Corinna (late 6th cent. bc), Gk lyric poetess, b. Tanagra in Boeotia. She wrote in her native dialect and was praised by Alexandrian critics. Pindar, whose work she had slighted, called her a 'Boeotian sow.' See E. Diehl, *Anthologia Lyrica Graeca*, 1949.

Corinth, anct city of Greece, lying between the gulf of C. on the W. and the gulf of Aegina on the E., 48 m. from

Athens. It is situated on the SW. end of the rocky isthmus of C., which connects the Peloponnesus with the mainland. Its citadel, the Acrocorinthus, was built on the N. slope of a steep mt. (1836 ft. high), with the famous fountain of Pirene nearby. The city had three harbours—Schoenus and Cenchræe on the Saronic Gulf, and Lechaëum at its opposite end in the gulf of C. C. enjoyed splendid advantages from its situation, and became the chief trading centre in anct times of E. and W. traffic. Its chief exports were the productions of ceramic art, and the inhab. also excelled in weaving and in metal-work. C. was supposed to have been founded by Sisyphus about 1350 bc, but did not come into prominence until after the Dorian conquest. It was ruled by an oligarchy from 748 till 655, when Cypselus became tyrant. Under his rule and that of his son, Periander, the

E. Buchanan

CORINTH, THE TEMPLE OF APOLLO

city increased in wealth and power, but in 581 the old constitution was restored. C. joined the Lacedaemonian league, incited the Peloponnesian war (431) upon Athens, and, on the fall of that city, united with it and Thebes against Sparta in the Corinthian war (395–387). It was occupied by the Macedonians until 243, and then joined the Achaean league. It was sacked and almost destroyed by the Romans under L. Mummius in 146. Its treasures of art were carried off to Rome, and for many years the city lay in ruins, until Julius Caesar rebuilt it in 46. During the Middle Ages it passed into the hands of the Venetians, from whom it was captured by Mohammed II. in 1458, and it remained in Turkish hands until 1858. In that year it was destroyed by an earthquake, and the new city was built 3 m. N.E. of the old site. At the time of its prosperity C. had numerous colonies including Syracuse, Apollonia, Corcyra, etc. The tn was notorious for its luxury

and licentiousness, and was beautifully laid out with gardens and fountains, statues and theatres. The ancient temple of Apollo, the theatre, the foundations of the Acrocorinthus, the Agora, and other important sites have been identified, and archaeological excavations have been undertaken by the American School of Classical Studies at Athens. The worship of Aphrodite prevailed in the city. The most celebrated Corinthians are Diogenes, the Cynic philosopher; Cleanthes and Cleophrantus, painters; and the statesmen Periander and Timoleon. At its height C. had a pop. of 300,000. It is now 5350. In the Second World War the liberating Brit. troops entered C. on 9-10 Oct. 1944.

Corinth, co. seat of Alcorn co., Mississippi, U.S.A., with foundries and machine shops. Owing to its position it played an important part in the W. campaigns of the Civil war. Pop. 9800.

Corinth (or **Lepanto**), **Gulf of**, separates the Peloponnese on the S. from Hellas on the N. Numerous small rivers run into the gulf, which communicates with the Gulf of Patras by the Strait of Lepanto. Earthquakes are very frequent, the seat of shock being generally between Patras and Poros. The gulf has a length of 75 m., and an average breadth of 15 m.

Corinth, Isthmus of, in Greece, unites the Peloponnese to Attica, between the gulfs of C. and Aegina. Remains of great antiquity have been discovered, including traces of the temple of Poseidon, and the Isthmian wall. A ship canal through the isthmus was begun in Mar. 1882, and completed in Aug. 1893. The canal is 3.7 m. in length, and has a width at bottom of 69 ft., at the surface of from 165 to 230 ft., and a minimum depth of 264 ft. The canal was destroyed by the Germans in the Second World War, but was repaired and brought into operation again in 1948. It was temporarily blocked by an earthquake in 1953. The new towns of Isthmia and Posidonia are situated at the SE. and NW. extremities of the canal respectively.

Corinthian Order, in architecture, *see* ORDERS OF ARCHITECTURE.

Corinthians, First and Second Epistles to the, written by St Paul to the Christian Church at Corinth, which he had established there during his stay of a year and a half. From internal evidence the first epistle was written in AD 56 or 57 from Ephesus, and the second epistle was written from Macedonia in AD 57 or 58. Two main reasons induced Paul to write the first epistle—information which he had received from members of the 'house of Chloe' (1 Cor. i. 11) about the condition of the Church in Corinth, and certain questions which he had received from that Church by Stephanas, Fortunatus, and Achaicus. Paul learned of religious factions and wrongs and abuses as prevalent at that time in Corinth; and he maintained that the Church had power to settle all disputes, both theological and civil. He condemned the factions and abuses in the Church, emphasising the unity of the Church as the Body of Christ, and its subordination to Him as its head. He also discussed and answered

the questions sent to him from Corinth—concerning marriage and celibacy, idolatry, the support of the ministry, public worship, institutions such as the Lord's Supper, spiritual gifts, and the resurrection. The second epistle is closely related to the first, and Paul determined to write it because of the good effect on the Corinthians of his first epistle. The Pauline authorship of 2 C., as in the case of 1 C., has been denied only by German professors, with a reputation to make. St Paul makes his salutation, mentions the Judaizers, and then gives a graphic account of his ministry as an apostle, its methods and its motives. He also describes how he waited for the coming of Titus from Corinth, and his joy at his arrival and the tidings which he brought; he exhorts the Christians to contribute to the collections for the saints in Jerusalem; and describes how the Judaizers assailed his position and authority as an apostle. Although their integrity has been questioned it is beyond doubt that both epistles are authentic, and they admirably display the character of their author. *See* commentaries by Kennedy, 1900; H. L. Goudge, *The Westminster Commentaries*, 1903 (1 Cor.), 1927 (2 Cor.); K. Lake, *Earlier Epistles of St Paul*, 1911; E. Evans, *The Clarendon Bible*, 1930; Allo, 1934, 1937; J. Moffatt and E. Evans, *New Testament Commentary series*, 1935, 1938.

Corinto, port in Chinandega dept., Nicaragua, 19 m. WNW. of León. It is in the SE. of Aserradores Is. on C. Bay, and is Nicaragua's prin. Pacific seaport, connected by rail with Managua, León, and Granada.

Coriolano, name of three engravers: *Coriolano, Cristoforo* (d. 1600), native of Nuremberg. He cut the very clever portraits of the second ed. of Vasari, pub. at Florence in 1568.

Coriolano, Giovanni Battista (c. 1590-1649) is thought to be the son of Cristoforo, but probably was his grandson. His cuts in wood are few, his work consisting chiefly of engravings and etchings on copper.

Coriolano, Bartolomeo (c. 1599-1676), also said to be the son of Cristoforo. He was b. at Bologna, and studied under Caracci. He executed some very effective prints in chiaroscuro. His prin. work is 'The Fall of the Giants,' after Guido (1638). He was granted a pension by Pope Urban VIII.

Coriolanus, Gaius or Gnaeus Marcius, hero of an early Rom. legend. His original name was Gaius or Gnaeus Marcius and he received his surname Coriolanus owing to his capture of Corioli from the Volscians. Banished from Rome by the commons in 491 BC, he fled to the Volscians, whose king, Attius Tullius, made him general of their army. He advanced against the Romans, and was only induced to lead back his army by the approach of Veturia, his mother, Volturna, his wife, and his two children. He returned to the Volscians, with whom he lived until his death. Some believed that the Volscians put him to death as a traitor. The story is told in Shakespeare's *Coriolanus*.

Corisco Bay, bay of the Gulf of Guinea, W. Africa, in the Bight of Biafra, extending from Cape Esteiras on the S. to Cape St. John on the N.

Corisco Island, small is. in Corisco Bay, belonging to Spain.

Cork, Earls of, see BOYLE.

Cork: 1. Maritime co. of the Rep. of I., prov. of Munster, the largest co. in I., with an area of 2880 sq. m. There are many fine harbours and bays, including (E. to W.) Youghal harbour, Ballycotton bay, Cork harbour, Kinsale harbour, Courtmacsherry harbour, Clonakilty bay, Rosscarbery bay, Glandore harbour, Roaring Water bay, Dumanus bay, and Bantry bay. It is intersected (W. to E.) by the riv. valleys of the Blackwater, Lee, and Bandon, which rise near the Cork-Kerry border and constitute the natural drainage for most of the co. The W. and NW. are rough and mountainous but elsewhere the co. is comparatively level. The highest point is in the Boggerah and Derrynasagart mts in the NW., rising to 2239 ft (Caherbarnagh). In the W. are Sliaibh Mish and Cahal mts, and in the SW. Shehy mt. The coast is irregular and deeply indented, particularly in the W., where the bays are bold and rocky. The only large lake is Lough Allua, on the upper Lee near Inchigeela. The climate is mild, the prevailing winds SW. and W. making the atmosphere warm and moist. Ann. rainfall is 40 in. in the city of C. and somewhat higher over the whole co. The ann. mean temp. is 50·9° F., and usually there is little snow. The scenery is bold and rugged in the W.; in the centre and N. are quiet, green valleys. There is excellent sea-bathing at many places along the coast. Bantry, Glengarriff, and Youghal are favourite tourist resorts. There are large salmon industries at Blackrock near C. city, and net fishing in C. harbour, deep-sea fishing at Ballycotton, Youghal, Kinsale, and Bantry bay, the game fishing at Ballycotton being among the finest in the world; rod-angling for salmon and trout on a large scale in the Lee, Blackwater, and Bandon rivs. and their tribs., and white and brown trout fishing, particularly in the llen, Glengarriff, Ouvane, and Coonhola rivs. Is. off the coast include Sherkin, Clear, Dursey, and Bere, while in C. harbour are many is., including Great and Little Is., Haulbowline Is., and Spike Is. The geological formation of the co. consists of limestone and redstone or brownstone; in the valleys there is a considerable mixture of soil constituents owing to weathering and the carrying down of brownstone detritus, hence there is much variety in the soils and this is marked by the system of agriculture and crops grown in different dists. The prin. crops are sugar beet, wheat, barley, potatoes, oats, and flax. Cattle are raised extensively, and the meat and creamery industries are the prin. ones in the co. Pigs have increased in number in recent years, and sheep and poultry are important. The co. is rich in Christian and pre-Christian antiquities. There are round towers at Cloyno and Kinneigh, over 40 eccles. foundations, and

over 300 castles; among the more ant remains are forts, megalithic tombs, stone circles, and ogham and inscribed stones. Blarney Castle is the best-known castle because of the legend attached to the Blarney Stone under the parapet at the top of the tower. Spenser wrote his *Faerie Queen* at Kilcolman Castle near Doneraile. The co. is administered by a co. council and co. manager, 9 of the tns having independent urban councils. There are many important educational institutions in C., including agric. colleges and vocational schools. Public libraries are provided at all the chief tns and in the rural areas. Pop., including the co. bor., 343,200.

2. City and seaport of co. C., Rep. of I., situated on the R. Lee at the head of the splendid inlet known as C. Harbour, 13 m. from the sea. Founded by St Finnbar in the 7th cent. on the site of a more ant foundation, the city is the largest in S. I. and one of the most important industrial and trading centres in the country. The nucleus of C. is built on an is. formed by 2 arms of the riv., known as N. and S. Channels, but the city has grown extensively, taking in the hills to N. and S. and the level ground E. and W. Large suburbs have developed, particularly since 1946. The city has many fine buildings, almost all in local limestone of a rather unusual whiteness, and these, with the cut limestone quays, give it a distinctively modern appearance, while the terraced hills lend it a continental air. The only monument of the Middle Ages still standing is the tower of the Red Abbey (Augustinian), and most of the interesting buildings date from within the last 200 years. The Protestant cathedral (St Finnbar's), erected in 1865 on the site of many older churches and possibly of the original church founded by St Finnbar, is an impressive building in Fr. Gothic. St Mary's Rom. Catholic pro-cathedral in pointed Gothic was built in 1808 on the site of an older church. C. has many other interesting churches, including St Ann's Shandon, built in 1722 to a rather eccentric design, world-famous for its bells (immortalised in the song *The Bells of Shandon*); SS. Peter and Paul's (1866), regarded as one of the best of Pugin's works; Holy Trinity (Capuchin Fathers), erected in 1832 to commemorate Father Matthew, the Apostle of Temperance; St Finnbar's South (1766), which contains the 'Dead Christ' by Hogan, the noted C. sculptor; St Patrick's (1836); Christ the King (1931), at Turner's Cross, a unique example of modern functional architecture; the Augustinian church in Washington Street; the new Franciscan church (1953) in Liberty Street, the finest modern interpretation of the Byzantine style in Europe to-day; the Honan Chapel (1916) in the univ. grounds, modelled on the Hiberno-Romanesque 12th-cent. Cormac's Chapel at Cashel, a gem in design and decoration; and St Vincent's at Sunday's Well. The customs house (1818), occupying a fine position overlooking the riv., the Courthouse (1835), City Hall (1929), C. Savings Bank

(1842), and the former Mansion House (now the Mercy Hospital), erected in 1767, are among the more notable buildings, while the giant grain silos and the electrical power station on the lower quays are fine examples of modern architecture.

The city was originally walled by the Northmen, and later by the Anglo-Normans, and suffered many burnings and sieges in its hist. Until the end of the 13th cent. C. was more celebrated as a seat of learning than as a centre of trade, and despite its prominence to-day in industry and commerce it has remained faithful to its tradition of learning. Univ. College is a constituent college of the National Univ. of I., and has over 1000 students; its library is one of the most important in the country. There are many primary, secondary, and vocational schools, a school of music, a school of art, art gallery, public museum, and public library. The harbour is the most important on the S. coast of I.; it is studded with is., its shores are well wooded, and it is most picturesque. The lower harbour at Cobh is available for all classes of vessels at all states of the tide, and with its great, sheltered, land-locked basin is one of the finest, safest, and most commodious of natural harbours, where trans-Atlantic liners embark and disembark passengers; the upper harbour at C. provides berthage for vessels drawing up to 27 ft. of water on all tides. Substantial dry-dock facilities are available at Rushbrooke, near Cobh. The harbour is administered by a harbour board, comprised of members of the local authorities and the commercial, employers' and labour organisations. Excellent crane facilities are provided, and most of the quays have rail connection. The prin. imports are coal, feeding stuffs, fertilisers, fruit, maize, machinery, motor car spirit, motor car parts, oils and oil fuel, phosphate rock, pollard, pyrites, rubber, salt, steel, timber, and wheat. The prin. exports are bacon, butter, burnt ore, chilled meat, clay, confectionery, eggs, malt, meat, livestock, provisions, and poultry. The chief local industries are bacon, boots and shoes, brewing and distilling, margarine, metal products, motor cars, trucks and tractors, paints, pottery, soap and candles, steel, tyres and rubber goods, and ship repairing. C. is governed by a lord mayor, aldermen and councillors, and a city manager. It was the first local authority in I. to have the managerial system, later applied to all local authorities in the Rep. of I. Pop. of co. bor. 75,300.

Cork, tissue or layer of the bark of the C. oak (*Quercus suber*) which grows in Spain, Portugal, and some dists. of Europe bordering the Mediterranean. A tree first yields a supply when it is about 20 years old, and supplies are obtained about every 10 years. The first production is of little value, but each successive supply increases in value. The C. is stripped from the tree by means of incisions made in longitudinal and transverse directions by a curved knife with a

handle at each end. The pieces thus detached are soaked in water, scraped, washed, pressed flat, and dried. They are then placed over a coal fire which conceals blemishes and blackens and makes smooth the surface. The elasticity of C. makes it useful for stopping bottles and casks; its lightness for life-belts, artificial logs, and the floats of nets; and its impermeability to water for the soles of shoes. The uses of C. were known to the ancients—Pliny mentions them. Phutarch says that Pontius Cominius swam the Tiber by the help of pieces of C., and the ancients Egyptians made coffins of it. The use of C., however, for stopping glass bottles was not known until the 15th cent. Sp. black is made by burning the parings of C., and C. waste is employed in the manuf. of linoleum. See FORESTRY.

'Cork Examiner', Irish prov. newspaper, estab. in 1841, pub. in Cork, and having a wide area of influence. Substantial coverage is given to contemporary affairs—home and foreign—with special emphasis on agriculture. Progressive in outlook, its leading articles are virile and pertinent. Associated newspapers are the *Evening Echo* and *Cork Weekly Examiner*.

Corleone, tn in Sicily (q.v.), on a hill near a source of the Belice R., 21 m. S. of Palermo (q.v.). Pop. 16,200.

Cormac MacArt, or **Cormac na Cuinn**, King of Ireland from 218 to 254, was grandson of Conn Cead Cathach (Conn of the Hundred Fights). He reigned in great splendour, and was a great patron of art and learning. Schools of military science, law, and literature are said to have been founded by him at Tara (q.v.). Some of his sayings are preserved in the *Book of Aicill*.

Cormac MacCulinnán (836-908), King (901-8) of Munster in Ireland, a descendant of Angus. He reunited the offices of king and bishop, being bishop of Cashel. During his reign the country was troubled by the invasions of the Danes, and it was in resisting these that C. fell at the battle of Moy Albe. He wrote a chronicle in Irish verse, *The Psalter of Cashel*, and an etymological glossary of the Irish language, called *The Glossary of Cormac*.

Cormenin, Louis Marie de la Haye, Vicomte de (1788-1868), Fr. politician. He was appointed auditor to Napoleon's Council of State; in 1814 he rallied to the monarchist cause, and after the Hundred Days was made master of requests at the Council of State at the restoration of the Bourbons. His political views were moderately radical, however, and he was constantly in opposition to the monarchy. He was made a member of Napoleon III's Council of State, 1852. His *Droit administratif*, 1821, for the first time collected the scattered fragments of administrative law, and gave shape to them.

Cormons, lt. mrkt tn, in Friuli-Venezia Giulia (q.v.), 7 m. W. of Gorizia (q.v.). It produces good wine. Pop. 6500.

Cormontaigne, Louis de (1697-1752), Fr. military engineer who served in the war of the Sp. Succession. He entered the engineers in 1715, and was put in charge of new works—Forts Moselle and Bellecroix at Metz—which he had designed.

Cormorant, *Phalacrocorax*, large web-footed bird of the order Pelecaniformes. The *C. P. carbo* has a bright shiny head and neck, with bluish-black feathers, sprinkled with white. The general colour above is a greenish black, the throat white, and the bill and feet are dark grey. It is found in all parts of the world in coastal regions. This bird is notorious for its voracious appetite. It collects the food in a kind of pouch formed by the dilatable skin at the front of its throat. C.s feed entirely on fish, which they catch by swimming and diving under the water, sometimes to a considerable depth. There are more than 30 species, among which are the familiar shag, or green cormorant (*P. graculus*), and the small S. European *P. pygmaeus*, which is a fresh-water bird. The guanay C. of the Peruvian coast is the main producer of the guano of those regions.

Corn, collective term which is applied to the grain or seed of any cereal or farinaceous plant as a produce of agriculture. In England it is chiefly applied to wheat, in Scotland to oats, and in America to maize. See BARLEY; MAIZE; OATS; RYE; WHEAT, etc.

Corn, localised thickening of the epidermis (see SKIN), generally on the toes, arising from continued pressure. C.s are either hard and dry when they are situated externally, or soft when they occur between the toes, and are often very painful. A hard corn begins by the thickening of the skin; as the pressure increases so does the irritation and thickening until the core of the corn is formed. Horses, as well as men, are subject to C.s, usually caused by the animal being badly shod (see HORSE, DISEASES).

Corn, Indian, see MAIZE.

Corn-cockle, or *Agrostemma* (synonym *Lycnis*) *githago*, pretty ann. herb, family Caryophyllaceae, a common but decreasing weed of cornfields. The seeds are said to be poisonous, and deleterious in wheat when milled.

Corn-flour, starchy ingredient of puddings, sauces, etc., obtained from finely ground maize or Indian corn. Also denotes flour made of rice or any other grain. The starchy granules, after separation from the germ and gluten, are carefully selected and purified. The germ, after its oil has been extracted, is used for cattle food, as is also the residue of coarser constituents of the granules. See MAIZE.

Corn Laws, name given to certain statutes passed in the Brit. Parliament relating to the exportation and importation of grain. Laws regulating trade in corn date as far back as the reign of Edward III. In the reign of Henry VI, with the object of securing a plentiful and cheap supply for home consumption, no corn was allowed out of the country. In the reign of Elizabeth I little advantage was taken of the new law providing free importation, and practically all the corn grown remained in the country. Towards the end of the 17th cent. the legislators, who, being generally landowners, had the

interests of agriculture at heart, conceived a new plan of promoting home production. Exportation was now encouraged freely by bounties, but the price of corn remained low and tended to decrease. In 1773 Burke passed an Act which exacted the small duty of 6d. on foreign corn, which might be imported when the home price was at or above 48s. a quarter. The exportation with its corresponding bounty was to cease when the home price was at or above 44s. This legislation was very beneficial to the rising manufacturing classes, but in 1791 it was repealed in the interest of the landowners and a prohibitive duty imposed when corn was at or below 50s. In 1815 Parliament enacted that foreign corn might not be imported into Great Britain until the home price of wheat was 80s. a quarter. The law caused great economic distress. In 1827 and 1828 more liberal measures were brought before the House by Canning and Charles Grant. Agriculturists were gradually being convinced of the fact that the C. L. were based on a wrong principle, and that the interests of the general community were being sacrificed to the supposed interests of the landowners. England was still suffering from the effects of the Napoleonic war, and a series of bad harvests (1816 and 1837-42) increased the distress. Robert Peel attempted to effect a compromise by introducing a system of a sliding scale in the duties, depending on the rise and fall in the price of wheat. In 1836 an agitation was started in Manchester for the repeal of the C. L. and in the following year the Anti-Corn Law League was formed. Mr Cobden and Mr Bright were among the foremost of the advocates of Free Trade. The country was inundated with pamphlets on both sides of the question. In 1843 corn was allowed to be imported, at a practically negligible duty, from Canada, and before long it happened that Amer. corn came into England, through Canada, at the same rates. Peel, who was himself willing to abandon protection, could not hold his ministry together and resigned. He was obliged, however, to take office again, and in 1846 declared himself a convert to Free Trade. A fixed but reduced duty was placed on corn for 3 years, after which the C. L. were to be abolished. The price of corn did not fall greatly with the repeal of the C. L., nor did agriculture appear to suffer any great loss, while the country prospered in its industries. See ANTI-CORN LAW LEAGUE; PEELE; BRIGHT; COBDEN; CHAMBERLAIN; FREE TRADE; PROTECTION. Consult the text of the C. L. in *British Statutes* (16 vols), London, 1882-1900; W. T. Thornton, *Historical Summary of the Corn Laws*, 1841; and J. S. Nicholson, *History of the Corn Laws*, 1904; C. R. Fay, *Corn Laws and Social England*, 1933.

Cornaceae, family of about 120 dicotyledonous species, chiefly shrubs with usually opposite, simple leaves, small flowers in heads, 4 or 5 parted, with inferior ovary. Genera include *Aucuba*, *Cornus*, *Corokia*, *Curtisia*, *Davidia*, *Griselinia*.

Cornaro, Caterina (1454-1510), Queen of Cyprus, member of a famous Venetian family who married in 1472 Jacques de Lusignan, King of Cyprus. Caterina was left a widow in 1473; she governed for her son, Jacques III, until his death in 1475, when the Venetian Senate decreed that she should abdicate in favour of the republic. This event actually took place in 1489, when it was made the occasion of a solemn ceremonial. Caterina retired to the castle of Asolo, near Venice, where she lived till her death; she was always surrounded by a 'court' of poets and artists. Her beauty and wit were famous, and her portrait was painted by many artists, including Palma the elder and Titian.

Cornaro, Luigi (1467-1566), Venetian nobleman, whose weak constitution was further weakened by his intemperance in eating and drinking. When he was 40 he gave up these excesses on the advice of his physicians and began to lead a regular and abstemious life, and within a year his health was in a perfect condition, and his spirits greatly recovered. In his eighty-first year he wrote *Discorsi sulla vita sobria* (*The Advantages of a Temperate Life*), which was pub. in Italy in the vernacular tongue, and in Lat. It was trans. into most European languages, and was at one time a very popular book. The best Eng. trans. is that dated 1779. C. also wrote three other treatises on the same subject.

Cornbrash (geology), sub-div. of rocks occurring at the upper layer of the Lower Oolite rocks of England, and the most persistent stratum of the series, extending as it does right across the country from Dorset to the Yorks coast. It is a thin-bedded rubbly limestone, consisting of clays and calcareous sandstones, which pass into the forest marble, as at Bradford, or into beds of clay. It contains many echinodermata and brachiopods.

Corncrake, Landrail, or *Crex crex*, species of Rallidae which is well known in Britain on account of its unmelodious voice. The general colour of the bird is a

dullish brown, the bill and tail are short, the legs long and powerful, and the toes have sharp claws. It has a wide geographical range which extends throughout the milder regions of all the continents, and it often spends the summer in Britain, haunting dry meadows. It can swim and run easily, but its flight is heavy.

Cornea, *see* EYE.

Corneille, Pierre (1606-84), Fr. tragic dramatist, b. Rouen. His father was a legal official, and he was trained for the Bar. He tried for some time to obtain a practice at Rouen, and came to Paris in 1629. Here he produced the comedy of *Médite*, which had already been played at Rouen. This was highly successful, largely on account of the extreme ingenuity and complexity of the intrigue, and was followed by *Cilianeire*, *La Veure*, *La Galerie du palais*, *La Suivante*, and *La Place royale*. In 1631 C. was presented to Richelieu, who made him one of his five authors, a group of dramatists whom the cardinal kept to carry out plays for which he himself supplied the plot. But he had not sufficiently the spirit of a follower to remain in this position, and he was soon dismissed. At this period C. became acquainted with Sp. literature, and this marks the starting point of his greatness. In 1635 appeared *Médée*, a tragedy which showed a marked improvement on his earlier work; but in 1636 the *Cid*, based on a drama by Guilhem de Castro, took Paris by storm. While following the Sp. poet closely in detail, C. shows in his treatment the spirit which was to dominate Fr. tragedy. The piece is classically conceived, the hardness and savagery of the Sp. are removed, the action is simplified and concentrated, and the whole drama is changed from the external world to the internal world of the heart. The greater number of the Fr. critics, represented by the recently founded Academy, and instigated by Richelieu, condemned the play severely, on account of its incomplete observance of classical rule. However, all their force was unable to change the popular verdict. As Boileau says:

'En vain contre le *Cid* un ministre se ligue,

Tout Paris pour Chimène a les yeux de Rodrigue';

and the phrase 'beau comme le *Cid*' passed into the language. For three years C. remained in retirement, and when in 1639 he reappeared with *Horace* and *Cinna*, he had learned the lesson of strict submission to the unities. Then came *Polyeucte*, 1640, in which a Christian saint takes the place of hero, giving one of C.'s noblest tragedies; *La Mort de Pompée*, 1643; *Rodogune*, 1646; *Héraclius*, 1647. In 1643 had appeared *Le Menteur*, the comedy which first shows the style which Molière was to perfect. In 1647 C. was elected a member of the Academy, and produced *Andromède*, *Don Sanche d'Aragon*, and *Nicomède*. In 1652 the failure of *Pertharite* drove C. from the stage, and he remained in retirement for six years, during which he commenced a Fr. verse trans. of the *Imitatio Christi*. In 1659

CORNCRAKE

he returned to the stage with *Oedipe*, feeling confident that his powers were unimpaired. This was an illusion, and henceforth all his works show a decline. In 1674 his dramatic career ended with *Sertorius*. For ten years the poet remained silent, suffering from the death of his two sons and from domestic troubles, suffering still more from the sense of his vanished genius, and the knowledge that he was abandoned and despised by a new generation. At the age of seventy-eight he d. in Paris. C. is the creator of the Fr. tragic drama. 'You know,' writes Racine in the eulogy of C. which he read before the Academy, 'in what a condition the stage was when he began to write. What disorder, what irregularity! . . .

PIERRE CORNEILLE
Engraving after a painting by
C. Lebrun.

All the rules of art, and even those of decency and decorum, broken everywhere. In this infancy, or better in this chaos, of our dramatic poetry, C., after having for some time sought the right path and struggled against the bad taste of his day, inspired by extraordinary genius and helped by the study of the ancients, at last brought reason upon the stage, but reason, indeed, adorned with all the pomp, with all the ornaments, which our language can provide. He had the happy gift of reconciling the credible and the marvellous, and left far behind him all the rivals there were.' While the drama of C. has not the freedom of the romantic type, it is by no means so strictly classical as that of Racine. C. accepted the unities, but only with difficulty. His great work is the creation of the drama of the

soul. His characters are exalted and superhuman, always masters of themselves and their emotions. Love he treats as a weakness, the will as the sole source of action. Stoicism and devotion to duty is the lesson he teaches. See C. A. Sainte-Beuve, *Portraits littéraires*, 1844; F. P. G. Guizot, *Corneille et son temps*, 1852; F. Brunetière, *Époques du théâtre français*, 1892; L. Batiffol, *Richelieu et Corneille*, 1936; M. Turrell, *The Classical Moment*, 1947; O. Nadal, *Le Sentiment de l'amour dans l'œuvre de Corneille*, 1948.

Corneille, Thomas (1625-1709), Fr. playwright, younger brother of Pierre C., twenty years his junior, b. Rouen. He distinguished himself in early life by a comedy in Lat. verse, which he composed while he was at the Jesuits' college. On the death of his brother, Pierre, Thomas took his place in the Academy, contributed to the *Dictionnaire*, and afterwards became a member of the Academy of Inscriptions. Altogether he wrote forty-two tragedies and comedies. His earlier works are imitations of the Sp. dramatists, the chief being *Le Cédier de soi-même*, 1655; and *Le Baron d'Albikrac*, 1668. Of his comedies the best known are *Les Dames renégées*, 1695, in collaboration with Visé; *La Devincesse*, 1679; and an adaptation from Molière's *Festin de pierre*, 1677. He was, however, made famous by his dramas *Timocrate*, 1656; *La Mort d'Annibal*, 1669; *Ariane*, 1672; and *Le Comte d'Essex*, 1678. See G. Reynier, *Thomas Corneille, sa vie, ses ouvrages*, 1892.

Cornel, see CORNUS.

Cornelia: 1. Daughter of Publius Scipio Africanus. She married Tiberius Sempronius Gracchus, and was the mother of Tiberius and Caius Gracchus, the reformers. In her were exemplified the virtues of the best type of Rom. matron, and a statue was erected to her during her lifetime, with the inscription 'Cornelia mater Gracchorum.' See Valerius Maximus, 4, c. 4; Cicero in *Brut.* 58, and *De Claris Oratoribus*, 58, etc.

2. Daughter of Metellus Scipio; she married first Publius Crassus, and afterwards Pompey, by whose influence her father obtained the consulship. She was the helpless witness of her husband's murder, and it is said that he attributed all his ill fortune to her unlucky influence.

Cornelian, see CORNELIAN.

Cornelisz, Cornelis (**Cornelis van Haarlem**) (1562-1638), Dutch historical and portrait painter, b. Haarlem. He received lessons in his youth from Pieter Aertzen and later from Porbus and Coignot. His 'Banquet of the Archers' Guild' (1583) is in the Haarlem Museum; and his 'Massacre of the Innocents' (1590) is in Amsterdam. A well-known example of his art is 'The Deluge', painted for the earl of Leicester.

Cornelisz, Jakob, or **Cornelisz van Oostzanen**, 15th-16th-cent. Dutch painter, whose works are represented in museums at The Hague, Berlin, Antwerp, and Vienna.

Cornelisz, Lucas (1495-c. 1552), Dutch subject and portrait painter, b. Leyden. He received instruction in art from his father, Cornelis Engelbrechtz, who was the tutor of Lucas van Leyden. Owing

to poverty he was forced to act as cook, but on going to England, about 1527, he was made royal painter by Henry VIII. Afterwards he was employed at the court of Ferrara in Italy from 1535.

Cornelius, centurion of the Italian cohort stationed at Caesarea. In consequence of a special revelation Peter received him into the Christian Church by baptism (Acts xi). This is generally regarded as being the beginning of the admission of Gentiles into the Christian Church. But the baptism of the Ethiopian eunuch (Acts viii. 38) may have been prior to this, and C. was already a proselyte. According to legend C. founded a church at Caesarea and became bishop of Scamandros.

Cornelius, Peter (1824-74), Ger. author and musician, nephew of Peter von C. (q.v.). His opera entitled *The Barber of Bagdad* was produced at Weimar in 1858 under the auspices of Liszt, who was his friend. The work was hissed off the stage, and Liszt resigned his post as conductor in consequence. C. went to Vienna and occupied himself in writing songs and poems, being very much under Wagner's influence. His second opera, *Der Cid*, was produced at Weimar in 1865. For the last decade of his life he was at work on his opera *Günther* and other compositions. In 1867 he became teacher of rhetoric and harmony at the school of music, Munich. Many of his original poems and trans. from the Fr. were highly esteemed, and among his songs the *Weihnachtslieder* and *Bräutlieder* are especially noteworthy.

Cornelius, Peter von (1783-1867), celebrated Ger. painter, b. Düsseldorf. He early exhibited a taste for art. At the early age of 19 he was commissioned to paint the cupola of the church of Rouss. He visited Rome, and illustrated Goethe's *Faust* in a manner worthy of the subject. In 1808 he went to Frankfurt, where he was well received, and in 1811 to Rome, where in conjunction with Veit, Overbeck, and others he founded practically a new school of Ger. art and revived fresco painting. In 1824 he was made director of the Academy of Munich; in 1841 he was made a member of the Academy of Berlin. He exhibited at Paris in 1855 4 cartoons of the decorations of the Campo Santo, or royal mausoleum, at Berlin, which were widely admired. The frescoes in the Bartholdy Palace at Rome, representing the hist. of Joseph, are among his best works. Among his other works may be mentioned his great national picture 'Cycle of the Nibelungen,' his fresco illustrating Tasso's *Jerusalem Delivered*, the frescoes in the Glyptothek of Munich, and his colossal 'Last Judgment' in the Ludwigskirche at Munich. He d. at Berlin. C.'s art was essentially Ger., and he illustrated with remarkable felicity the masterpieces of Ger. poetry. His work is marked by a somewhat frigid idealism characteristic of the 'Nazarene' group to which he belonged. He had numerous famous pupils, among them Kaubach, and some of the finest Ger. engravers, such as Amsler, Eberle, etc.,

selected his pictures to work on, and so enhanced their popularity. See lives by A. Kuhn, 1921, and K. Koetschau, 1934.

Cornell, Ezra (1807-74), Amer. philanthropist, b. Westchester Landing, New York. In his early life he practised as a mechanic in Ithaca; later on he became very rich through his association with the Western Union Telegraph Company. C. Univ. was founded by him at Ithaca in 1868.

Cornell, Katharine (1898-), Amer. actress, b. Berlin. Her father, Peter C., M.D., was a theatre manager. She married Guthrie McClintic. She is rightly regarded as the leading actress of America and has a long and most distinguished record. She made her first appearance on the stage at the Comedy Theatre, New York, in 1916, with the Washington Square Players in *Bushido*, later touring with Wm A. Brady. Her first London appearance was at the New Theatre in 1919, when she played 'Jo' in *Little Women* and scored a remarkable and immediate success. Her list of successes is a long one. In 1931 she entered management successfully, playing Elizabeth in *The Barretts of Wimpole Street*. K. C. is one of the outstanding actresses of her day and has received many academic honours and degrees from all the leading Amer. univs.

Cornell University, at Ithaca, New York, and New York City, named after its founder, was opened at Ithaca in 1868. Andrew D. White was president until 1885. It became coeducational in 1872 and had 10,300 students (7800 undergraduates) in 1956, with a teaching staff of 1390. It has colleges of arts and sciences, agriculture, architecture, home economics, engineering, a medical college and a veterinary college, and schools of education, law, hotel administration, industrial and labour relations, nursing, nutrition, and business and public administration. The libraries contained 1,700,000 vols. in 1956. Cornell College, at Mount Vernon, Iowa, is a separate institution.

Cornor, word of Amer. origin. In the first instance used to denote a market given to a particular class of stock, e.g. railway C. Now, however, it is used for a speculation in the stock exchange in which a broker or brokers puts up all the available stock of any particular commodity, such as wheat, with a view to forcing sellers of the stock or commodity to buy from those who formed the C. at their own price. A C. is generally brought off in a new security when by false dealing stock-jobbers are persuaded to sell speculatively shares which really are in the hands of the set of people who cornered the market.

Cornor Brook, in on the W. coast of Newfoundland, at the mouth of the Humber R. (which empties into Bay of Islands), N. of St George's Bay. It is noted as the site of the largest integrated pulp and newsprint mills in the world and for its scenery and its herring fisheries.

Cornet was in the 18th cent. and up to 1871 the lowest rank of commissioned officer in the cavalry, corresponding to ensign in the infantry. In 1871 the title

of C. was abolished and that of second Lieutenant substituted. The work of a C. was to assist the capt. in the duties connected with his troop.

Cornet (Fr. *cornet à piston*; It. *cornetto*), treble wind instrument made of brass. It has a cupped mouthpiece, and a tube intermediate in size between a trumpet and a bugle, which give it a tone intermediate between these two instruments. Its open notes consist of C (below the treble

VALVE CORNET

stave), G, C, E, and above the stave C, B \flat , C, and in addition 4 higher notes D, E, F, and G, and a fundamental note, C (an octave below the stave), but these last 5 notes are seldom used. Three valves give the connecting notes and half-notes of the scale, the first slide lowering the sound by 1 tone, the second by a semitone, and the third by 3 semitones. Three valves or pistons which are depressed by the fingers allow the air to pass through these slides. The C. is used in orchestral and solo music and in military bands. Formerly the C. was played in a number of different keys, but, like the trumpet, it now exists, as an orchestral instrument, in the 2 keys of B flat and A.

Corneto, see TARQUINIA.

Cornett (Ger. *Zink*), old wind instrument, now in disuse, in no way resembling the modern valve cornet. It had a long, thin, slightly tapering stem, curved or straight, made of wood or ivory and covered with leather, and a cupped mouthpiece. The bass instrument of the C. family was the serpent (q.v.).

Cornflower, or **Bluebottle**, see CENTAUREA.

Cornford, **Frances Crofts** (1886-), poetess, b. Cambridge. Her mother was a lecturer at Newnham. Her books of verse include *Spring Morning*, 1915, *Autumn Midnight*, 1923, *Different Days*, 1928, *Mountains and Moorlands*, 1934, and *Travelling Home*, 1948; her *Collected Poems* appeared in 1954.

Cornhill, one of the most important streets in the City of London, running from the Royal Exchange to Leadenhall Street. A Rom. basilica used to stand at its E. end and partly on the site now occupied by Leadenhall Mkt. Stow, who was b. in the par. of St Michael's, C., states (unsupported by any other authority) that an auct. corn mkt. existed on this site. A general mkt. appears to have existed here in the 14th cent. C. contains the churches of St Michael and St Peter (both built by Wren), banks, and insurance and other offices. The Royal

Exchange, situated between C. and Threadneedle Street, was originally built by Sir Thomas Gresham (q.v.) in 1566-71 as a centre for the meetings of merchants and bankers. It was destroyed in the Great Fire and rebuilt 1667-9; again destroyed by fire in 1838 and rebuilt 1842-4.

Cornhill Magazine, literary magazine founded in 1860 by Thackeray, who was its first editor. His *Lovel The Widower*, Anthony Trollope's *Framley Parsonage*, and George Eliot's *Romola* appeared in its pages. Ruskin, Matthew Arnold, Elizabeth Barrett Browning, and Tennyson were amongst early contributors. Recent writers include Somerset Maugham, H. E. Bates, Sir Harold Nicolson, Margaret Lane, Evelyn Waugh, Osbert Lancaster, John Betjeman, Elizabeth Bowen, Betty Miller, and Patrick Leigh Fermor. The C. M. appears four times a year, and is illustrated.

Cornice, in architecture, is the moulded projection which crowns or finishes the entablature, each Order of architecture having its own peculiar C. The Gk Doric C. is composed of few and bold parts, really of little more than a corona (the projecting and prin. member in every C.) finished above by one or two simple mouldings, and having attached a series of shallow plates or tablets called mutules, which are a distinctive feature of the Doric C. Dentils are peculiar to the Ionic C., and modillions to the Corinthian C. In Gothic architecture there are various types of C.; sometimes taking the form of a row of corbels bearing the

CORNETTS OR ZINKEN

Treble and one-keyed tenor, 16th and 17th centuries.

parapet, and sometimes small arches rising from the corbels.

Corniferous Period (from Lat. *corna*, horn, *ferre*, to bear). In Amer. geology this is the second of the four great divs. of the Devonian system, and includes the Schoharie grit and Corniferous limestone. It is a widespread formation, full of fossils, and rocks of this series, mostly sandstone, are found along the Appalachians in Ohio and in Canada, where they contain valuable deposits of petroleum.

Cornigliano, It. tn, in Liguria (q.v.), a residential suburb of Genoa (q.v.). There are textile and dyeing industries. Pop. 20,000.

Corniglio, It. tn, in Emilia-Romagna (q.v.), 25 m. SW. of Parma (q.v.). Pop. 7500.

Cornimont, Fr. tn, in the dept of Vosges. Thread is manuf. Pop. 2200.

Corning, **Erastus** (1794-1872). Amer. capitalist, b. Norwich, Connecticut. He moved to Albany, New York, in 1814, and eventually became the owner of large iron works and banks. Principally known as connected with early Amer. railway development. He was twice elected a Democratic representative to Congress, and at the time of his death was vice-chancellor of the univ. of New York.

Corning, city of Steuben co., New York, U.S.A., situated on the Chemung R., 13 m. WNW. of Elmira. Its industrial life consists of foundries, machine works, brick and glass works, and lumber mills. The 200-in. telescope mirror of Mt Palomar (California) Observatory was made at the C. glass works. Pop. 17,864.

Cornish, **Vaughan** (1862-1948), geographer, b. Debenham, Suffolk. Educ. at St Paul's School and Victoria Univ., Manchester. Worked for the preservation of the scenery of rural England. President, geographical section, Brit. Association, 1923; of the Geographical Association, 1928. Pubs. include *A Strategic Atlas of the Oceans*, *National Parks and the Heritage of Scenery*, 1930; *The Scenery of England*, 1932; *Ocean Waves and Kindred Geophysical Phenomena*, 1934; *The Beauties of Scenery*, 1943; *Geographical Essays*, 1946; *Photography of Scenery*, 1946.

Cornish Language. The old C. L. belonged to the Cymric div. of Celtic (see CELTIC LANGUAGES), in which are included Armorican (see BRETON LANGUAGE AND LITERATURE) and Welsh. It survives in a few words still used in the fishing and tinning communities, as well as in the names of persons and places, but the last persons to speak it (the last of all was reputed to be one Dolly Pentreath) d. towards the end of the 18th cent. Early C. is represented by *Vocabula in pensum discipuli* in a 12th-cent. manuscript ed. by Zeuss, 1853. The most interesting relics of the C. L. are a few miracle plays, entitled *Gwarioc*, which were ed. and trans. by Edwin Norris, 1859. Added to the trans. is a sketch of Cornish grammar and a vocabulary from a 13th-cent. manuscript. The best dictionary is Williams's *Lexicon Cornu-Britannicum*, 1865. Of the C. miracle plays, the

most considerable of the series were those known as the *Ordinalia*, a trilogy, of which two 15th-cent. copies are still in existence. Most of the C. miracle plays emanated from Glasney College at Penryn and date from 1350 to 1500. Two notable plays are the *Beunans Meriasek* (or *Life of Meriasek*, copy of 1504) and *Gwercans an Bys* (or *The Creation of the World*; the earliest extant copy was written by William Jordan of Helston, 1611). Recently there has been an attempt to revive the C. L. See E. Norris, *Sketch of Cornish Grammar*, 1859, and *The Ancient Cornish Drama* (2 vols.), 1859; W. Stokes, *The Passion*, 1861, and *The Life of Saint Meriasek*, etc., 1872; H. Jenner, *Handbook of the Cornish Language*, 1904; R. Morton Nance, *A New Cornish-English Dictionary*, 1938; W. Ll. Davies, *Cornish Manuscripts in the National Library of Wales*, 1939; A. S. D. Smith, *The Story of the Cornish Language*, 1947.

Corno, **Monte**, see GRAN SASSO.

Corno di Bassetto, see SHAW, GEORGE BERNARD.

Cornouaille, dist. in Brittany in the dept of Finistère; the chief tn is Quimper. It is barren, rocky, and desolate, resembling in many features some parts of Cornwall in England.

Cornu Copiae, later called **Cornucopia**, a horn of plenty. It is used as a symbol of prosperity. In architecture and sculpture the horn is often seen placed in the hands of Plutus, Fortuna, and others, who pour from it abundance of fruits or corn.

Cornus, chief genus of Cornaceae, of 40 species of shrubs, trees, and herbs distributed over temperate regions of N. hemisphere. *C. sanguinea*, the common dogwood or cornel, is a native berry-bearing shrub with cymes of white flowers. *C. suecica*, the dwarf cornel, is a herbaceous plant about 6 in. high, with few flowers. It is a creeping plant growing in pastures in Scotland and Northumberland, and its berries have tonic qualities. The barks of *C. florida*, *C. sericea*, and *C. rugosa* are used in the U.S.A. as substitutes for Peruvian bark. *C. canadensis*, or bunchwood, has large conspicuous flowers. *C. officinalis* is cultivated in Japan as a febrifuge. *C. mas*, Cornelian Cherry, *C. nuttallii*, and *C. florida* are grown in gardens for their ornamental beauty.

Cornutus, **L. Annaeus**, Stoic philosopher of the time of Nero, who exiled him for criticising his projected verse chronicle of Persian annals. One of his pupils was Persius, whose satires he revised. See G. Martini, *De L. Annaeo Cornuto*, 1925.

Cornwall, **Barry**, see PROCTOR, BRIAN WALLER.

Cornwall, **Earl of**, see GAVESTON, PIERES. **Cornwall**, SW. maritime co. of England, bounded on the N. and NW. by the Atlantic Ocean, E. by Devonshire, and S. and SW. by the Eng. Channel. The Scilly Isles, 24 m. W. of Land's End, form part of the co. There are only 2 harbours of any importance on the N. coast, one formed by the estuary of the Camel, where Padstow is situated, and the other being the bay of St Ives; there are

numerous small creeks of little importance. The coastline on the N. is formed of bold and rugged cliffs, and is famed for its wild, rocky scenery, while the S. coast is still bold and rocky, but in a lesser degree, and its headlands are covered with luxuriant vegetation. Falmouth harbour, on the S. coast, is one of the finest in Britain. The surface of C. is extremely irregular, and from the Tamar to Land's End it is a series of rugged hills, alternating with wide stretches of moorland. Brown Willy (1375 ft) is the highest point in the co. The chief riv. is the Tamar; it is tidal, and navigable for 19 m. The climate is mild, particularly in

in 1925 with 1 lb. of Fr. Rescoff seed, and developed into an industry worth £1,250,000 a year by 1939. Numbers of cattle and sheep are bred. C. formerly obtained much wealth from its mines, yielding tin, copper, lead, iron, zinc, bismuth, and arsenic. At one time C. supplied half of the world's copper, and all Britain's tin. As late as 1913 5000 tons of tin were produced yearly, but at the present day 2000 mines are abandoned and only 4 are working. The decline has been caused by the easier worked Malayan sources, for the difficulties of extraction in C. are considerable, and the cost therefore high. The rich lodes remain, however,

John H. Stone

MEVAGISSEY, A CORNISH FISHING PORT

the S., and there the vegetation grows in almost tropical abundance, fuchsias, geraniums, camellias, myrtles, and hydrangeas of considerable size flourishing in the Penzance and Falmouth dists. during the winter; in the Scilly Isles exotics grow in the open, and a good supply of early vegetables is the result of the development of market-gardening. The growing of anemones alone has an ann. value of £250,000 sterling. Fruit-trees, with the exception of the apricot, nectarine, and peach, thrive successfully. C. ranks high as an agric. co.; the soil is rich in most parts, the crops plentiful, and very early in some localities. Oats form the most important grain crop; the green crops include swedes, turnips, and mangolds. The Cornish broccoli trade was expanded

and the newly formed Cornish Mining Development Association has set forth (1948) a plan for development which, it is stated, can eventually produce tin and by-product metals (arsenic, tungsten, etc.) to an ann. value of £3,000,000, providing sufficient capital and labour is available. A product also of great importance is China clay, the centre of this industry being at St Austell. It is exported to the pottery dists. for the manuf. of porcelain and to Lancashire for cotton goods. The serpentine rock is largely quarried in the Lizard dist., and made into ornamental objects; it is noted for its beautiful colourings. The fisheries of C. are among the most important on the SW. coast, and form another industry of the co. The chief fishing stations are on Mount's Bay

and at St Ives; mackerel, pilchards, and herrings are caught in large quantities, 20,000 hogshheads of pilchards being taken in an average year. In some respects the natives resemble the Welsh people, such as in their aptitude for oratory and an intense love and pride of country. It is a co. full of prehistoric remains. They may be classed as follows: (1) cromlechs, such as Lanyon, Mulfra, and Zennor, these all being found in the Land's End dist. The first is high enough for a man to ride under; (2) rough monoliths, found in all parts of C.; (3) circles, of which the prin. is that known as the Hurlers, near Liskeard; (4) alignments, or avenues of stones, a very interesting example of one being that called the Nine Maidens near St Columb Major. The ant. remains also include hut dwellings, cliff castles, and hill castles. C. possesses many ruined castles, such as those at Tintagel and Launceston, parts of which date from Norman times. The co. belongs to the W. circuit, and the assizes are held at Bodmin. The co. tn is Truro (pop. 13,350). C. is popular with holiday-makers and tourists. Area 868,167 ac. Pop. 317,900. See R. Polwhele, *The History of Cornwall*, 1816; W. Collins, *Rambles beyond Railways*, 1851; M. Quiller-Conch, *Cornwall's Wonderland*, 1914; C. E. Vulliamy, *Unknown Cornwall*, 1925; A. Mee, *Cornwall*, 1937; A. K. Hamilton Jenkin, *Cornish Miner*, 1927, *Cornwall and its People*, 1945.

Cornwall, co. seat of Stormont co., Ontario, Canada, at the foot of the long Sault Rapids of the R. St Lawrence, 55 m. S. of Ottawa, on the main line of the Canadian National railway, and on the Canadian Pacific railway and New York Central railroad. Situated on the St Lawrence R. (bridge to New York state), it has unlimited cheap hydro-electric power. C. has a good harbour for lake and riv. traffic. It began as the co. seat of an agric. area that exported only potash, grain, and masts for sailing ships. Now it is an industrial community, with textile and chemical plants, furniture, pulp and paper, fibre products, and draperies. It is the market centre of a rich mixed farming and cheesemaking dist. C. was founded in 1783 by United Empire Loyalists. It was incorporated as a tn in 1848. Almost opposite is the Indian vil. of St Regis, Quebec. Pop. 41,064.

Cornwallis, Charles, Marquess (1738-1805), soldier and administrator, son of the first Earl C. On leaving college he entered the army, and in 1761 served a campaign in Germany. In 1762 he succeeded to the earldom and estates of his father. He was made governor of the Tower in 1770. When the war of Amer. Independence broke out he accompanied his regiment and was victorious over Gen. Gates at Camden, 1780; also over Gen. Greene at Guilford, 1781; but at Yorktown, Virginia, disaster befell him, and the Eng. cause in America was completely overthrown. He escaped censure owing to the great esteem in which the king held him, and in 1786 he was appointed Governor-General of India, and while

there made many reforms, but on account of differences with Tipoo Sahib his plans were much interrupted. In 1791 he captured Bangalore, and after having concluded a treaty with Tipoo Sahib he returned to England in 1793. He was then raised to the rank of marquess, and in 1798 was appointed to the vice-royalty of Ireland, where he succeeded in subduing the rebellion of 1798, showing much integrity and wisdom in his method of obtaining peace. In 1801 he was replaced by Lord Hardwicke. In 1802 he negotiated the peace of Amiens. In 1805 he was sent to India as governor-general in the place of Lord Wellesley, but upon arrival at Calcutta his health had already broken down, and on the way up country, to take command of the troops, he died at Ghazipur. See W. S. Seton-Karr, *Cornwallis*, 1890.

Cornwallis, Sir William (1744-1819), admiral, was the younger son of Charles, first Earl C. He entered the navy in 1755, and in 1758 served at Louisbourg. In 1759 at the battle of Quiberon Bay, and for his services was made commander in 1762. He was afterwards engaged in the actions off Grenada (1779), St Kitts (1782), and Dominica (1782). He was made rear-admiral in 1793, vice-admiral in 1794, and admiral in 1799. In 1795 he encountered a Fr. force far greater in numbers than his own, but safely escaped, and he commanded the Channel fleet in 1801 and from 1803 to 1806. See C. F. M. Cornwallis-West, *Life and Letters of Admiral Cornwallis*, 1927.

Cornwell, John Travers (1899-1916), boy naval hero of the First World War, b. at Leyton, Essex, and educ. at Walton Row council school. At the battle of Jutland he stayed alone at his post on the *Chester*, though mortally wounded. He was awarded the V.C. posthumously.

Cornyshe, William (†-1523), composer, poet, playwright, and actor, was master of the choristers at Westminster Abbey under Henry VII. and also organised pageants and masques at court under that king and Henry VIII, whom he twice accompanied to France with the Chapel Royal, in 1513 and 1520. In 1523 he was given the manor of Hylden in Kent, but he d. there only some 2 months later. He wrote sacred music and songs for sev. voices; a MS. contains works by him and by Henry VIII, the latter possibly written with his assistance.

Coro, city, cap. of Falcón state, Venezuela, about 200 m. WNW. of Caracas. It was founded in 1527, and was the cap. of the Sp. prov. from that date until 1578. Pop. 28,300, of whom many are Indians and mestizos. It has much declined since Caracas was made the cap. Its port is La Vela (8 m. ENE.), which exports coffee, timber, and hides.

Corocoro, tn and mining centre, cap. of Pacajes prov., in La Paz dept., Bolivia. Copper ore is the chief product of the mines. Altitude 13,100 ft. Pop. 6900.

Corgne, La, see CORUÑA, LA.

Corolla (from Lat. *corona*, a wreath or crown), inner whorl of floral envelopes which surround and protect the essential

organs of the flower. The C. is made up of petals which are usually brightly coloured and often scented, in order to attract insects for the purpose of pollinating the flower. Another function of the petals together with the sepals is to protect the stamens and pistil when the flower is in bud, and in some cases from rain, etc., by closing when the sun goes in. When the petals are free from one another, as in buttercups, the flower is said to be polypetalous; it is gamopetalous when they are joined to form a tube or cup as in primroses. A flower is distinguished as hypogynous, perigynous, or epigynous, according as the bases of the petals are inserted below, on a level with, or above the ovary, as in buttercup, rose, snowdrop respectively. In many flowers, e.g. daffodil, there is no distinction between two floral envelopes, but the calyx and C. together form the perianth; in other cases there is calyx only, and C. is missing, e.g. meadow-rue. When all the petals are alike, the flower is said to be regular, as in lily, otherwise it is irregular, as in orchid, pea, etc. Of irregular flowers the two best-known types of C. are the bi-labiate or two-lipped, as in the dead-nettle family, and the ligulate or strap-shaped, which occurs in the outer florets of the daisy. In some cases the C. is fugacious, i.e. it falls off as soon as it is gathered, as in flax; in a few cases it is persistent and remains in a withered condition round the fruit; this occurs in campanula.

Corollary, in mathematics, is a proposition which follows another proposition as a consequence, and therefore does not require any separate demonstration.

Coromandel, name of the oldest gold field in New Zealand, discovered in 1852. It is the centre of the former gold-mining and kauri timber dist. on the C. (Colville) peninsula, and is now a popular holiday resort.

Coromandel Coast, name given to E. coast of India, between Cape Calimere and the mouth of Kistna R.

Coron, or **Koroni**, seaport and medieval fortress of Greece in Messenia, situated on the W. coast of the gulf of Calamata, near the site of the anc. Colonides. The industry of the tn is silk manuf. Pop. 2300.

Corona: 1. In architecture, the lower part or drip of a cornice which projects for some distance in order to carry off the rain. The term is also used of the crown or circlet suspended from the roof of a church to hold candles or lamps, which are lighted on solemn occasions.

2. In astronomy, see SUN.

3. In botany, the crown at the mouth of the tube formed by the perianth (petals and sepals) in the genus *Narcissus*.

4. Electric discharge from a conductor at high potential, due to breakdown of the insulating layer next to the conductor surface. For bare conductors the C. is both visible and audible, and also noticeable by a smell of ozone. The C. is different for positive and negative wires; the critical potential at which it arises is lower for thin than for thick wires, lower at high altitudes (lower atmospheric pressure) and high humidity.

Corona Borealis and **Australis**, N. Crown and S. Crown. The first is a N. constellation, situated between Boötes and Hercules, and the bright star of its cluster (marked α) may be seen about an hour E. of Arcturus, and about eight degrees nearer to the pole. Nova Coronae was the first nova to be observed with the spectroscope (1866). C. Australis is a small S. constellation, first found in Ptolemy's catalogue. It is situated S. of Sagittarius.

Coronach, name applied to a dirge which in years past was sung at funerals in Scotland. In the highlands the singing of this dirge was called keening (as also in Ireland), but it was later played on the bagpipes.

Coronado, Francisco Vázquez de (1500-1545), Sp. explorer of the SW. of the U.S.A.; appointed in 1539 governor of New Galicia; set out in 1540 to discover the 'seven cities of Cibola'. He explored E. Arizona, the Rio Grande, and Kansas. See G. P. Winship, *The Coronado Expedition*, 1896.

Coronation (Lat. *coronare*, to crown), ceremony of crowning the sovereign of a country. The practice of placing a crown on the head of a new sovereign dates from early times, as we read in the O.T. that Solomon was crowned. The kings of Israel and Judah were usually anointed with oil by the high priest, by which act they were consecrated to the service of God. This anointing with oil still forms part of the C. service of a Brit. sovereign. It probably resembles the hallowing of kings mentioned in the *Anglo-Saxon Chronicle*, and its form is in all essentials that used since the time of Richard I, though of course the service has been modified from time to time. The C. of the Brit. sovereign takes place in Westminster Abbey. The anct C. chair is carefully preserved, and has been used at the C. of Eng. kings and queens since the time of Edward I. Under the throne rests the Stone of Destiny (*Lia Fail*), which according to tradition was the pillow of Jacob, and was, in the fifth century BC, carried to Ireland and thence to Scotland. It was brought to England by Edward I as a symbol of his conquest of Scotland, for on that stone the Scottish kings had always been crowned. The service is read by the archbishop of Canterbury, after which the sovereign takes his C. oath. The oath in the Eng. service has always been very explicit, in this way differing from that of other European countries. After the revolution of 1688 the Brit. sovereign had to promise to maintain 'the laws of God, the true profession of the Gospel, and the Protestant reformed religion as it is estab. by law.' Special clauses were here added which were particularly obnoxious to the Rom. Catholic subjects in the United Kingdom. By an Act of Parliament in 1910 the oath was altered, and the objectionable phrases omitted. After the oath has been taken the sovereign is seated in the anct C. chair above mentioned, and is anointed, on the head, breast, and palms of the hands, with holy

oil from the ampulla. Next follows the investiture, when the sovereign dons the *colobium sindonis*, a white silk shirt, and is girt with a sword. The orb and the ring are also delivered to him, after which he is crowned by the archbishop. The sovereign then goes back to his throne, and receives the homage of the peers. It was formerly the custom for the consort of the sovereign to be crowned some months after the formal C., but at recent C.s in England the consort was anointed and crowned after the acts of homage had been paid. The king and queen finally receive the holy communion. In early times in Europe a king or queen was not

Coronel, Battle of, naval battle in the First World War fought on 1 Nov. 1914, off Coronel on the coast of Chile, between Rear-Adm. Cradock's squadron comprising the armoured cruisers *Good Hope* and *Monmouth*, the light cruiser *Blagovest*, and the converted merchantman *Otranto*, and a Ger. squadron commanded by Adm. von Spee consisting of the armoured cruisers *Scharnhorst* and *Gneisenau*, and the light cruisers *Leipzig* and *Dresden*. The Brit. ships were old and their armament immensely inferior to that of the Ger. cruisers. The result was never in doubt, and the *Good Hope* and *Monmouth*, after a gallant fight against odds, were

A SCENE FROM THE CORONATION OF H.M. QUEEN ELIZABETH II, WESTMINSTER ABBEY, 1953.

For Photos

recognised until the C. had taken place. Now the reign dates from the accession and not from the C., which is usually delayed for some months after the death of the late sovereign. *Consult* L. G. W. Legg, *English Coronation Records*, 1901; H. Thurston, *Coronation Ceremonial*, 1911; P. E. Schramm, *The History of English Coronations* (trans.), 1937; L. E. Tanner, *History of the Coronation*, 1953.

Coronation Gulf, arm of the Arctic Ocean the extreme N. point of Canada. It was discovered by Sir John Franklin (1786-1847), the Arctic explorer.

Coronea, anct tu in Boeotia, in Greece, situated to the W. of Lake Copais. The Boeotians conquered the Athenians here in 447 BC, and the Spartans defeated the Thebans and their allies in 394.

sunk, the Brit. loss being 1400 men. Cradock went down with his ship.

Coronella, genus of ophiidians inhabiting Europe, Asia and America. All are harmless. *C. austriaca*, a species found in Britain, is called the smooth snake. It is about 2 ft. in length, feeds on lizards and mice, and is viviparous.

Coroner. The office of C. is one of considerable antiquity. The *Mirror of Justice* is cited by Coke to show that the office existed as early as the reign of Alfred. But there is no satisfactory evidence to establish an earlier period than that of Richard I. The name of C. is said by Lord Coke to be derived from Lat. *corona* (crown), from the fact that the C.'s office had principally to do with pleas of the crown. In this general sense

the lord chief justice is by virtue of his office supreme C. for England, with power to hold an inquest in any part of the kingdom. But the officers now usually understood by this term are the co. C.s, although the Coroners Act, 1887, which re-stated the qualifications of a C., expressly saved the powers of *ex officio* C.s. In early times the office of C. appears to have been one of great estimation; for by statutes of the reign of Edward I and Edward III C.s are required to be knights, or 'of the most meet and most lawful men of the county.' Before the Coroners Act of 1887 there existed a proprietary qualification, the idea being that the C. should have sufficient wherewithal to answer to the people for his shortcomings. The property qualification is now practically dispensed with, as the Coroners Act of 1887 has in effect left the co. to pay any penalties incurred by the C. A C. must be a barrister, solicitor, or qualified medical practitioner of not less than five years' standing in his profession. The C. formerly had jurisdiction of a very comprehensive nature, embracing inquiries as to sudden death, treasure trove, wreck, whales, sturgeon, and deodands (proceeds of sale of a personal chattel which had caused the death of any person ordered to be paid to charity). The Coroners Act, 1887, put an end to all these duties except the function of holding inquests *super visum corporis*, and as to sudden death and treasure trove. The prin. duty of a C. is, with the assistance of a jury composed of at least twelve men and not more than twenty-three, to inquire into the deaths of persons who have died suddenly by violence, under suspicious circumstances, in prison, or at the hands of the hangman. C.s are elected for life; but if they accept any office incompatible with their duties, such as that of sheriff or alderman, or become incapacitated, they may be removed by means of the writ *de coronatore exonerando*; and a C. guilty of extortion, corruption, or wilful neglect of duty is, by an Act of George II's reign, not only punishable as for misdemeanour, but also incapable of ever again acting as a C. The lord chancellor has power independently of the above Act to remove C.s for neglect of duty, upon petition presented by the freeholders of the co. A C. can enforce a post-mortem examination of the body and summon medical or other witnesses. He may also order exhumation, but will generally, in cases of doubt, first obtain the order of the home secretary. The C. must, but the jury need not, view the body. If the C.'s jury find a verdict of murder or manslaughter, the C. can commit the accused for trial, and, in manslaughter, admit him to bail. The verdict of the jury must be that of twelve at least. Under an Act of 1926, if the C. learns, before the verdict, that some person has been charged with murder, manslaughter, or infanticide, he must adjourn the inquest until the criminal proceedings are concluded. In consequence the C. has virtually ceased to exercise the function of committing persons for trial. Even if

the justices decline to commit for trial, the prisoner is not generally tried on the C.'s inquisition. Under a local Act the C. of the City of London is empowered to hold an inquiry into the outbreak of fires, which inquiry may eventuate in a verdict of arson. A departmental committee appointed in 1936 to inquire into the law concerning C.s reported that their jurisdiction should be limited to investigation of how, when, and where death occurred; that a C. should not have power to commit a person for trial on a charge of murder, manslaughter, or infanticide; that C.s' courts should be prohibited from passing censure; and that only barristers should be appointed to the office. Under the London Government Act, 1939, a C. for the co., or his deputy, is disqualified from being elected to or being a member of the co. council.

Coronet, inferior crown worn by the nobility. In England it was in use in the reign of Edward III; but the different forms given to the C.s of the various orders of the peerage are of later date, as is also the use of the crimson velvet cap, lined with ermine and surmounted by a gold tassel, now worn within the C. Barons first wore C.s in the reign of Charles II. They are worn by peers on the occasion of a state ceremony, such as the coronation of a king. In 1665 permission was granted by Charles II to the peers of Scotland and Ireland to use similar C.s to those worn by Eng. peers. The following are the different forms that are used throughout Great Britain: the C. of the Prince of Wales differs from the royal crown only by the absence of one arch. The C.s of the other princes, sons of the king, have no arches. The C. of a duke bears over the rim of gold eight strawberry leaves. A marquess has four strawberry leaves, alternating with as many pearls upon short points. An earl's C. has eight points of a greater height, with a pearl on each, alternating with as many strawberry leaves on the rim below. A viscount's C. has sixteen pearls set on the rim itself, while a baron has six in the same position. The pearls, so named, are made of silver. No peer, unless of royal family, may have his C. adorned with jewels. The C.s of foreign nobility have no caps, and are used only in blazonry.

Corot, Jean Baptiste Camille (1796-1875), Fr. landscape painter, *b.* Paris. According to his father's wishes he became an assistant in a Paris drapery business, but, after having served an apprenticeship of seven years, he resolved to become a painter. He first studied art with Michallon, on whose death he passed into the atelier of Victor Bertin. In 1825 he went to Italy, where he stayed for two years, studying the old masters and feeding his imagination upon the beautiful scenery that surrounded him. In 1827 he exhibited two lt. landscapes at the Salon, 'Vue prise à Narni' and 'Campagne de Rome.' He then settled in Paris, though he again travelled in Italy, in 1835 and 1843, as well as in England and Switzerland. In 1833 he won a medal

of the second class, and in 1855 and 1857 medals of the first class. He received the cross of the Legion of Honour in 1846, and was promoted officer in 1857. C.'s genius was not early recognised, and he made his way slowly, but in later life wealth and honour were heaped upon him. In 1874 his admiring, almost worshipping friends, hurt by the indifference of the Salon, gave him a gold medal. His pictures were sold at a very high price, but C. was indifferent to money. 'Hagar in the Wilderness' and 'Dante' he never parted with, refusing all offers for them. He was a gentle, kind-hearted man, very generous to his friends, and devoted to his mother and sister. He never married. C.'s early work is clearly influenced by his classical studies. He showed an extraordinary technical ability; his drawing is very careful and detailed, and his execution somewhat precise and severe. He peopled his landscapes with nymphs and goddesses. It was not till about 1843, after his return from his second visit to Italy, that he began to assert his full individuality. Following the example of Constable and other Eng. painters, he worked out of doors, choosing for his main sketching grounds Barbizon, in the forest of Fontainebleau, and the valley of the Seine. He interpreted nature in her tender, elusive moods, on a hazy spring morning or a shadowy night. He was fond of painting mists, and his colours are of the most delicate shades of greys and greens. Some critics have objected that he did not paint in nature's blemishes. His pictures are imaginative visions of 'the light that never was, on sea or land.' Among his masterpieces are 'Danse des Nymphes,' 'Orphée,' 'Paysage Breton,' 'Macbeth,' 'Joueur de flûte,' 'Homère et les Bergers,' 'Les Bûcherons,' 'Étoile du Soir,' 'Effet de Matin,' 'Plaisirs du Soir,' and 'Baptême de Jésus-Christ.' See A. A. P. C. Blanc, *Les Artistes de mon temps*, 1876; G. Geffroy and A. Alexandre, *Corot and Millet*, 1902; E. Meynell, *Corot and his Friends*, 1908; also lives by A. Michel, 1905; M. Lafargue, 1925; C. Maclair, 1930; P. Jamot, 1936.

Corowa, in on the N. bank of the Murray, New S. Wales, Australia. There are lead mines in the neighbourhood, and the tin is noted for its butter, wine, and dried fruits. Pop. 3090.

Corozal, second tin of Brit. Honduras, on a strategic road, 96 m. N. of Belize and 8 from the Quintana Roo frontier of Mexico. There are tropical forest products and fisheries. Pop. 2190.

Corporal, in the Brit. Army, a non-commissioned officer ranking below a sergeant. The derivation of the word is somewhat doubtful, but similar terms are in use by other countries for non-commissioned officers of corresponding rank, as *caporal* in France and *caporale* in Italy. A C. is distinguished by wearing 2 chevrons on both sleeves. While he has certain advantages, and on occasion may be given the command of a small number of men, a C. usually takes his place in the ranks as a private during parade. In the household cavalry there

is a C. of Horse, the equivalent of the sergeant elsewhere; while in the navy the term ship's C. is applied to a petty officer who takes orders from the master-at-arms.

Corporal, linen cloth spread on the altar on which the sacred vessels stand, and the sacred elements of the Holy Eucharist are consecrated.

Corporal Punishment, see FLOGGING.

Corporation. A C. is an association of individuals which by a legal fiction is regarded as a single person. The distinguishing characteristic of a C. is expressed in the maxim that a C. can never die, and consequently the death or change of the persons who administer the corporate property has no effect upon the ownership, which subsists in the artificial person or legal entity of the C. The notion of a C., together with its various corporate attributes, is a conception borrowed from the Rom. legal idea of a *collegium*, having a right of universal or perpetual succession. In the Eng. system C.s are said to be either sole or aggregate. The best examples of C.s sole are the Queen, a parson, and the Public Trustee. A C. sole implies a succession of single persons occupying a particular office, each assuming the rights and powers of his predecessor. The conception of a C. sole appears to be quite indigenous to Eng. law. The constitutional dogma that the sovereign cannot die is said to have originated in turbulent times, when it was desirable to make an impression on superstitious minds. A C. aggregate is defined by Blackstone to be one which consists of many persons united in one society; hence many writers consider C.s aggregate to be the only true form of C. Illustrations are the mayor and commonalty of a city or town (see BOROUGH), now called a municipal C. C.s are also classified as eccles. and lay. Illustrations of the former are bishops, deans, and chapters. The latter are divisible into civil, or such as exist for temporal purposes, and *eleemosynary*, or such as are constituted for the perpetual distribution of alms, e.g. hospitals supported by voluntary contributions. Modern writers frequently classify C.s into eccles., municipal, trading, charitable, and educational. Lay C.s may also be divided into *privileged*, i.e. endowed by the law with special powers in excess of the ordinary law for the purpose of carrying out some work to the public advantage, e.g. chartered companies; and *unprivileged*, the most common examples being registered joint-stock companies. These latter entities are assimilated rather to ordinary partnerships in many respects. A C. can only be created by the sovereign or by an Act of Parliament; but when any such body has existed from time beyond legal memory (i.e. the death of Richard I, 1199), it is presumed to have originated in one of these ways. The essential characteristics of a C. are the use of a common seal, the power of making by-laws, the capability of suing and being sued in its corporate name as a single person (so that the C. as an entity is responsible for the acts, contracts, and

defaults of its members), the power of the majority to bind the C., and the power at common law to acquire and hold land. The power to hold land is, however, restricted by the Mortmain Acts, which make it necessary for a C. to obtain the licence of the Crown before it can acquire land for any purpose. The dissolution of a C. may be effected by a surrender to the Crown, where all the members concur. *See also* BOROUGH and LOCAL GOVERNMENT.

In the U.S.A. C. is the equivalent of the Eng. joint-stock company. *See* COMPANY.

Corporation Duty, duty of 5 per cent levied in 1885 on the ann. value of income or profits accruing to a corporation (q.v.) from all its real and personal property. This duty is a substitute for death duty, which a corporation escapes since by a legal maxim it can never die. But a corporation is liable to pay succession duty on realty acquired under a will, and legacy duty on a gift of personality.

Corporation of London, The, governing body of the city of London, officially styled 'the mayor and commonalty and citizens of the city of London,' and often referred to as the City C. It is the oldest municipal authority in the United Kingdom. The foundations of municipal gov. were laid when Alfred the Great in 886 appointed his son-in-law Ethelred governor of the city, apparently with jurisdiction over Middlesex. Between 1068 and 1075 William the Conqueror granted the citizens a charter which confirmed existing rights. The city has no charter of incorporation, but is a city by prescriptive right. Its medieval constitution is largely preserved to-day, and it has powers not possessed by any other local authority in the co. of London, such as the control of its own police force; it is also the Port Health Authority for the Port of London. It has 2 characteristics entirely peculiar to itself—the non-party basis of its voting, and the power to modify its own constitution. The city which it governs is in status both a city and a co. There are 3 governing councils:

1. The *Court of Aldermen* consists of 25 aldermen (who must be freemen) elected for life by the householders of wards: these wards into which the city has been divided for at least 800 years, are more or less coeval with the rank of alderman. The form of election is peculiar to the city, aldermen of other municipalities being elected by the councillors. Their primary function is to act as justices of the peace, and they administered the city before the emergence of the Common Council. 2. The *Court of Common Council*, arising out of early direct democracy, and which assumed something of its present form by 1322, is the prin. administrative body. It consists of the lord mayor, the aldermen, and 206 common councillors (whose numbers are to be progressively reduced to 159 by 1959). These last are elected annually by the wards on St Thomas's Day (21 Dec.), the electors being the rated householders of the wards, who need not be freemen or citizens of the city. The council does its

work in the form of about 30 committees appointed for the various parts of the administration, e.g. the City Lands, Library, and Markets Committees. It elects the clerk, the city remembrancer (representative of the city before parl. committees and at Council and Treasury boards), the city coroner, and the undersheriff. 3. The *Court of Common Hall*, the third of the main courts, is composed of the lord mayor, sheriffs, aldermen, and the liverymen of the city companies, which last have been included in the assembly since 1475. It meets only twice a year; its main business is to elect the sheriffs, the city chamberlain (treasurer), and certain other officials, and to nominate 2 aldermen from whom the Court of Aldermen chooses a lord mayor.

The lord mayor is elected for a year, and to qualify for election must previously have been an alderman and a sheriff. He summons and presides over the courts and meetings of the C., has complete authority to regulate discussion and procedure, and is chief magistrate of the city. He performs much ceremonial duty, such as presiding at the important banquet at the Guildhall (q.v.) on taking office, and within the city he ranks next in precedence to the sovereign. The first mayor of the city, Henry Fitz Aylwin, was appointed in 1192 or 1193. The title of *lord mayor* was never conferred; it occurs in Latin in the 13th cent., in English in 1414, and became accepted usage by 1500. The lord mayor's show, which takes place when he assumes office, has been held since the 14th cent. There are many other officers of the C., whose duties in some cases are survivals of the medieval pageantry of the city. The office of sheriff is the oldest, and is traceable back to the 7th cent. The recorder, appointed for life, is recognised as the prin. officer of the C., and is the senior law officer and the prin. judge of the Central Criminal Court. The field of civic administration, not already indicated, includes open spaces, of which the C. owns over 6000 ac. (nearly all outside the co. of London), the city schools, the 4 bridges within the city area, and the markets, for which the C. is the authority over a radius of 7 m. Though in the main the C. is a self-governing unit, the London Co. Council has certain powers over it. As far as the city itself is concerned, they are jointly responsible for the Co. of London Development Plan (*see* LONDON, *Reconstruction and Replanning*). *See* (ANON.), *The Corporation of London*, 1950.

Corporation of SS Mary and Nicolas, *see* WOODWARD SCHOOLS.

Corporation Profits Tax, imposed in 1920–1; 1s. in the pound on the profits of limited liability companies. It has since been abolished.

Corporative State, one governed by an industrial parliament instead of a chamber of deputies. This political machinery was evolved in Italy. In 1934 a National Council of Corporations was constituted, consisting of representatives of all the chief trades, while the governing body of each individual corporation included

representatives of the State administration and of the Fascist party. The salient feature was the equal proportion of representatives of capital and labour for each section of a corporation, together with an additional element of technical experts. The name corporation was originally applied to the Fascist trade unions, which were designed to replace the old labour unions or confederations. In 1938 the Grand Fascist Council replaced the existing chamber of deputies by a new chamber of the Fasci and corporations as the legislative and representative organ of the State. The new council was formed by a combination of the National Council of the Fascist party and the National Council of Corporations. When Franco defeated the republicans in Spain he set up a C. S. on the It. model. See INDIVIDUALISM.

Corps, Army, a wartime military formation comprising a number of divs. and itself forming part of an army. It is commanded by a lieutenant-general and its approximate strength is 60,000 men. The permanent A. C. system introduced into the Brit. army at the beginning of the cent. was replaced by the commands in 1905.

Corpulency, see OBESITY.

Corpus Christi, one of the prin. feasts in the Rom. Catholic Church, founded by Pope Urban IV in 1264 in honour of the Blessed Sacrament. The festival is kept on the first Thursday after Trinity Sunday. It also figures in the Anglican calendar.

Corpus Christi : 1. Thriving city and seaport, cap. of Nueces co., Texas, U.S.A., on C. C. Bay, 192 m. WSW. of Galveston. Much cotton is grown in the vicinity and it is a popular resort. It has extensive trade in fish, oysters, turtles, canned food, and fruit. Pop. 108,300.

2. The celebrated bay on which the city stands, properly an arm of the Gulf of Mexico. The shallow extension behind the is., S. to the mouth of the Rio Grande, represents the first 110 m. of the Laguna Madre.

Corpus Christi College : 1. Cambridge, founded in 1352 by the members of two Cambridge guilds of C. C. and the Virgin Mary, for the purpose of educating priests. Henry, Duke of Lancaster, alderman of these guilds, procured a royal charter for the foundation, which for many years was also known as Benet College from the neighbouring church of St. Benet at which the society worshipped. In 1578 Sir Nicholas Bacon and other benefactors built a chapel for the college, to which Archbishop Parker had in 1575 bequeathed the bulk of his fine collection of plate and his valuable library of MSS. and printed books.

2. Oxford, founded in 1516 by Richard Fox, Bishop of Winchester, and lord privy seal. The main buildings consist of the quadrangle, hall, chapel, and library. In 1706 Dr Turner erected an additional building overlooking Christ Church walks. C. C. was the first college in Oxford to throw open its professorial lectures to all members of the univ., and

the first to establish an endowed chair of Greek. It has numbered among its scholars Nicholas Udall, Richard Hooker, Thomas Day, and John Keble.

Corpus Delicti (Lat., body of the offence), in the Scots criminal law means the substance of the crime or offence alleged, together with the attendant circumstances, as specified in the libel (the summons containing the prosecution's allegations). The C. D. must be satisfactorily proved before a conviction can be obtained.

Corpus Juris Civilis, literally a body of civil law, a term denoting the main body of Rom. law, compiled in the reign of Justinian (q.v.), incorporating the *Codex*, *Pandects*, *Digest*, *Institutes*, and *Novels*.

Corpuscles, **Red and White**, see BLOOD.

Corrective Labour Camps, official name of the forced labour or concentration camps in the Soviet Union. Over 200 camps are known to have existed in Russia after the Second World War. They are spread all over the country, and small camps can be found near most industrial ins. The larger camps and camp groups are situated in the remote mining and timber areas in the N. and E. All the main construction projects of the 1930's-1950's, such as canals and hydro-electric stations, were largely based on forced labour. The total number of inmates of camps is not pub.; it has been variously estimated at from 3 to 15 million. The first camps were estab. in 1918 and the system developed on a large scale during the Collectivisation of Agriculture (q.v.) and the Great Purge (q.v.). The inmates were increased by deportees from ters, annexed in 1939-40, prisoners-of-war, and deportees from Russian ters, previously occupied by the Germans, as well as from E. European states occupied by the Soviet army. The regime in the camps, very severe during the Great Purge and the war, improved markedly from 1950. After the war, and particularly after the separation of political prisoners from criminals, various political groups existed in the camps. A series of large-scale strikes and revolts in the major camp areas in 1953-5 was an important landmark in the development of post-Stalin Russia. Since 1953 the Soviet Gov. has been reducing the number and pop. of the camps. See also KARAGANDA; KOLYMA; MAGADAN; NORIL'SK; SOLOVETSKIY; VORKUTA. See D. Dallin and B. Nikolaevsky, *Forced Labour in Soviet Russia*, 1948; United Nations, *Report of the 'ad hoc' Committee on Forced Labour*, Geneva, 1953.

Correggio, **Antonio Allegri da** (c. 1494-1534), It. painter, surnamed C. from the place of his birth, a small town near Modena. Nothing very definite is known about his life. Vasari and contemporary historians record that he lived and died in poverty, but from existing documents it appears that he received a high price for his pictures, and that his relatives were tradespeople in comfortable circumstances. He is said to have studied under Francesco Bianchi-Ferrari at Modena, but his early work shows no resemblance to

that of this artist; Giambattista Lombardi, Andrea Mantegna, and C.'s uncle, Lorenzo Allegri, a local painter of little note, have also been named. Lombardi was head of the academy at Correggio, and very probably taught him anatomy. In his treatment of mythological subjects, and in his figures of children, he clearly shows the influence of Mantegna. C.'s figures of children have never been surpassed. Traces of the influence of Raphael and of Leonardo da Vinci may also be found in C.'s work, but at the same time his style is peculiarly his own. It is remarkable for chiaroscuro. The lights and shades imperceptibly glide into one another, and his exquisite, delicate colours attain perfection. In 1518 C. was engaged on frescoes for the Camera di San Paolo (the chamber of the abbess) in

ANTONIO ALLEGRI DA CORREGGIO
Engraving after a self-portrait, Parma
Cathedral.

the monastery of S. Ludovico at Parma. There he also executed frescoes for the cupola of San Giovanni, and his 'Assumption of the Virgin' for the cathedral excited the highest praise from Titian. In 1530 he returned to Correggio, where he lived till his death. He had early attracted the attention of Lady Veronica Gamba, and still retained her patronage. C. devoted himself to mythological and sacred subjects. The frescoes at Parma (1518) represent Diana, drawn in a car by white stags, with cupids peering through vines. Other mythological pieces are 'Mercury instructing Cupid before Venus,' in the National Gallery, London; 'Jupiter and Antiope,' in the Louvre; and 'Danae,' in Rome. Among his sacred pictures are famous 'Notte' (1529), a beautiful picture of the nativity in the Dresden Gallery; 'Ecce Homo,' in the National Gallery; and 'The Marriage of St Catherine,' in the Louvre. His greatest fresco work is, perhaps, that in the cupola

of the cathedral at Parma, already mentioned. The Madonna, surrounded by a host of singing and adoring angels, goes forward to meet her son, Christ. The frescoes in the cupola of San Giovanni of Christ in the clouds, with His twelve apostles seated below, are impressive in their power. See C. Ricci, *Antonio Allegri da Correggio*, 1896; S. Brinton, *Correggio*, 1900; T. Sturge Moore, *Correggio*, 1906; P. Roi, *Il Correggio*, 1921.

Correggio, It. tn. in Emilia-Romagna (q.v.), 10 m. NE. of Reggio nell' Emilia (q.v.). It has a cathedral and a fine old palace. Antonio Allegri, surnamed C. (see previous article), was b. here. Pop. 20,000.

Correlation of Organs, interdependence which appears to exist between certain structures in an organism. Instances are given in the works of Cuvier, Isidore Geoffroy Saint-Hilaire, Charles Darwin, and others, but the laws governing them are still obscure. Hairless dogs have imperfect teeth, and pigeons with short beaks have small feet. Sometimes the correlation seems particularly whimsical, as in the case of male white cats with blue eyes, which are generally deaf. The only generalisation possible is the rule that certain structures are so intimately associated that variation in one is always accompanied by variation in the other.

Correspondence Classes. Chautauqua Literary and Scientific Circle in 1878 inaugurated a system of education by C., exercises being sent out to pupils residing in all parts of the U.S.A., the work being sent back to tutors for correction and the corrected exercises and explanations returned to the pupils. Britain has adopted the same system in connection with univ. extension organisation. The Univ. Correspondence College is one of the chief institutions of the kind; it prepares pupils for London Univ. examinations, and degrees may be obtained through preparation by C. alone. The college magazine, pub. weekly, is *The University Correspondent*. Text-books are pub. in connection with the C. C. by the Univ. Tutorial Press. See also CORRESPONDENCE SCHOOLS.

Correspondence Schools provide education for children living in very remote rural areas and for adults in many countries who wish to improve their qualifications after leaving school. In Australia, for example, all the states run C. S. for children of primary school age who live in such isolated parts that it is impossible for them to be transported by bus to the nearest consolidated school or one-teacher school. There is an increase in the number of courses provided through C. S. at the secondary level. Some states now offer a full secondary school course. In New Zealand some 2250 pupils from remote areas or with some disability are enrolled in C. S. In Japan courses at the upper secondary level—both compulsory and optional subjects—are offered through C. S. Some 450,000 pupils are enrolled. Somewhat similar arrangements are made in many countries where the pop. is thinly spread. In addition C. S. provide

opportunities for adults in many countries to acquire further qualifications. In Britain, for example, external exams and diplomas of the univ. of London can be obtained through correspondence courses. There are also a number of commercial C. S. that offer courses in accountancy, journalism, commercial art, etc. Similar facilities exist in the U.S.A., where private and public univs. offer correspondence courses. See also CORRESPONDENCE CLASSES.

Corrèze, dept. of S. central France, formed of part of the auct. prov. of Limousin. The surface is tableland, hilly, especially in the NE, and is broken up by fertile riv. valleys. The chief rvs. are the Dordogne, Vézère, and Corrèze. In general the dept is infertile, but some potatoes, cereals, and chestnuts are produced. The main agric. activity is the raising of cattle, pigs, and poultry. There is some coal, and iron is mined. There are metallurgical, textile, leather, and foodstuff industries, and important hydro-electric installations. The prin. towns are Tulle (the cap.), Brive, and Ussel (qq.v.). Area 2272 sq. m. Pop. 242,800.

Corrib, Lough, in the co.s of Galway and Mayo, Rep. of I. It is the second largest lake in Ireland, 27 m. long, with an extreme breadth of 7 m. It is very shallow, and contains about 300 is.; its outline is very irregular, and it is drained by the R. Corrib into Galway Bay. It is connected on its N. side with Lough Mask, by means of a partly underground channel.

Corridor (Fr. *corridor*, from It. *corridore*; Lat. *corridorium*, from *currere*, to run), gallery or passage in a large building, on to which many different apartments open.

Corrie, see CIRQUE.

Corrientes: 1. Prov. of the Argentine rep., bounded on the W. by the Paraná R. and on the E. by the Uruguay R. The N. dist. is low and marshy, but the S. is fertile with some forests. The chief industries are connected with cattle rearing, maize, cotton, rice, tobacco, fruits (especially oranges), sugar, and timber. Its prin. riv. is the C., 150 m. long. Area 33,544 sq. m.; pop. 617,424.

2. Cap. of the above prov., on the E. bank of the Paraná, below the confluence of this riv. and the Uruguay, 480 m. N. of Buenos Aires (670 m. by rail). It is surrounded by orange groves and trades in hides, maté, cotton, wool, sugar, and tobacco. Cattle, sheep, and horse rearing, meat packing, and shipbuilding are carried on. Founded 1588; the Plaza S. Cabral has the statue of the sergeant who saved the life of the national hero, San Martín, at the battle of San Lorenzo. Pop. 64,400.

Corriere della Sera, Milan daily newspaper, founded in 1876 by a group of industrialists, and now owned by the Crespì brothers. It is independent in political outlook, and has the largest circulation of the It. dailies (500,000 copies), being mainly read by the middle class. The C. also owns an evening paper, the *Corriere d'informazione* (estab. 1945), with 3 daily eds. and a circulation

of 250,000; and 2 weeklies, the *Domenica del Corriere* (1,300,000 copies), and the *Corriere dei piccoli* (500,000), a children's paper.

Corrievrechan (Gaelic *Corrie-Bhrecain*, or Breacan's cauldron), whirlpool off Argyll, Scotland, between the is. of Scarba and Jura.

Corrigan, Michael Augustine (1839-1902), third Rom. Catholic Archbishop of New York, U.S.A. He was b. Newark, New Jersey; graduated at Mount St Mary's College, Emmittsburg (1859), and later became prof. of theology at Seton Hall College, S. Orange. In 1873 he was made Bishop of Newark by Pius IX, and in 1885 succeeded McCloskey as Archbishop of New York.

Corroboree, name applied by the aborigines of Australia to a nocturnal convention. Strange rites are performed, and there is also wild and furious dancing round the camp-fires. These C.s take place on all great occasions. It is 'the medium through which the delights of poetry and the drama are enjoyed.' It is also the occasion for gymnastic displays and religious observances and, in fact, for all sorts of festivities. See W. M. Roth, *Ethnological Studies*, 1897; B. Spencer and F. J. Gillen, *The Native Tribes of Central Australia*, 1899, and *Native Tribes of the Northern Territory*, 1914.

Corrosion of Metals, the destruction of metals by direct chemical attack, and when used in connection with iron or steel it is commonly known as rusting. The dangerous effects of C. may be the weakening of a metallic structure, as in bridges, boilers, etc., or the introduction of metallic poisons into water and foodstuffs. Some metals like gold, silver, and platinum are not easily attacked and are thus useful where the maintenance of purity is important. Their expense forces the use of comparatively cheap but more easily corroded metals such as iron, zinc, tin, and lead for many purposes. There are many types of C. but the most common is due to electrolytic action which is influenced by a large number of factors. Moist air contains water, oxygen, carbon dioxide, and certain acids, and the effect of these, singly or together, can cause C. Iron is particularly susceptible to attack and will corrode in pure water. Rusting in air is promoted by an increase in relative humidity, which must be at least 60 per cent, and presence of solid particles and acid vapours such as sulphur dioxide and carbon dioxide, although above certain concentrations the latter will inhibit rusting. Rust is mainly hydrated ferric oxide, $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$, with some basic ferrous and ferric carbonates. The impurities in the iron and the iron itself form the poles of a large number of microscopical electrolytic cells in which iron is often the anode. This enables ferrous ions to pass into solution and form insoluble ferrous hydroxide, which does not stifle the anode because the ferrous hydroxide decomposes in water to give a loose granular deposit of triferrous tetroxide (Fe_3O_4) which is not protective.

This has led to various methods for the protection of iron, such as alloying with a non-corrosive metal, like chromium or nickel, in suitable proportions. Another method is to form a film on the surface of the metal, but this film must be continuous and either be non-corrosive or must corrode preferentially. Such methods include galvanising, which is the formation of a zinc film, painting or subjecting the iron to the action of superheated steam to form an Fe_2O_3 film. This film is likely to crack owing to differences in thermal expansion and contraction compared with that of iron. A modern example of galvanic protection of iron is in the use of magnesium which is directly coupled by an electric cable to pipe lines; e.g. oil pipe lines in the Middle E., water pipe lines in England and Scotland, and gas mains in Texas. The magnesium, and zinc in the case of galvanising, becomes the anode since it is more active and higher in the electro-chemical series than iron, and so corrodes preferentially. This is known as sacrificial C. If however the iron is tin plated, the coating is relatively non-corrosive in air but is still porous and the pores cannot be closed. In moist air and salt solutions the tin is cathodic to the iron so that the iron dissolves and rusting occurs. In tinned iron containers containing fruit juices the tin is anodic to the iron. Hence the tin dissolves in the fruit juices, but tin compounds are relatively non-toxic and the amount dissolved over the usual passage of time prior to consumption of the contents is often much less than the maximum legal limit of dissolved tin. To prevent the tin dissolving fruit and meat cans are often lacquered inside. Aluminium will corrode in moist air forming a partly protective oxide film, and use is made of this by artificially thickening this oxide film by 'anodising', i.e. by electrolysis in an acid solution using aluminium as the anode. The film so formed is very resistant to abrasion, very porous and adsorbent, and the immersion of the anodised aluminium in suitable dyestuffs gives attractive finishes. The porosity can be closed by boiling in water or in sodium silicate solution, but the material is still corroded by salt.

Lead is rapidly tarnished in air, forming a superficial layer of the hydroxide and carbonate which tends to inhibit further attack. Air-free water does not attack lead, but water with dissolved air does dissolve lead slightly owing to the formation of the slightly soluble hydroxide which is poisonous, and it is important to note that the effects of lead poisoning are cumulative.

Copper is corroded by moist air, forming mainly oxide and sulphide films in industrial fns, a basic sulphate inland, and mainly basic chloride in coastal dists. The ease of formation of a sulphide film explains why copper which is to be used for electrical purposes and insulated with vulcanised rubber is first coated with tin. Copper also reacts with weak organic acids in the presence of air; e.g. it forms verdigris with acetic acid and

may give rise to poisoning if vegetables are allowed to ferment in copper utensils.

Of the metals which are not easily attacked, it must be noted that the tarnishing found on silver articles is due to a sulphide film and not an oxide film. See F. L. Bindy, *Corrosion of Lead in Buildings*, 1934; U. R. Evans, *Metallic Corrosion, Passivity and Protection*, 1937, and *An Introduction to Metallic Corrosion*, 1948.

Corrosive Sublimate, Mercuric Chloride (HgCl_2), is formed by passing chlorine over heated mercury. It is prepared on a large scale by heating a mixture of mercuric sulphate and common salt. It sublimes as a white mass, dissolves in water, readily melts, and volatiles unchanged. It dissolves without decomposition in sulphuric and nitric acids. It is a violent poison, the best antidote to which is the white of an egg or albumen, since it forms an insoluble compound with albumen. Because of its strong antiseptic properties it is widely used by taxidermists.

Corrugated Metal. Iron and other metals are corrugated in order that their rigidity and power to resist buckling may be increased. It is done by means of pairs of ridged rollers through which the metal is passed. Its most extensive use probably is in galvanised iron, i.e. zinc-plated iron, for roofs of buildings. The principle is of great value mechanically, as, for example, in flues and boilers, where the corrugation adds to the strength and increases the heating surface. It is further used as flooring for bridges.

Corrupt Practices Act, see BRIBERY; ELECTIONS.

Corsairs, pirates of the Middle Ages. They plundered ships of their own or any other nationality, their one object being to procure booty. After the discovery of America, the Mediterranean and the Atlantic Ocean, even as far N. as Iceland, became infested by them. The richly laden ships from the Indies were the especial prey of the Moors in revenge for their persecution by the Spaniards in Spain. They built citadels in Algiers, Tunis, and Tripoli, and produced great leaders like Khair ed Din (Barbarossa), Uruch and Drajnt, Turkish C. waged war upon the vessels of Christian nations. In course of time the activities of C. became recognised. Many attempts to suppress them were made by Christian govs. in the interests of their trade. But only at the congress of Paris in 1856 were the powers able to come to an agreement, and even then the U.S.A. and Mexico would give no formal undertaking. The U.S.A. and Spain did not revive the custom during the war of 1898.

Corse, see CORSICA.

Corsham, tn in Wiltshire, England, 4 m. from Chippenham; with an anct church, almshouses and Flemish buildings, extensive quarries of Bath stone, and the anct mansion of Lord Methuen called Corsham Court. Pop. 8500.

Corsica (Fr. *Corse*), large is. in the Mediterranean, forming a dept of France. It lies to the N. of Sardinia, from which

it is divided by the Strait of Bonifacio (q.v.). Its greatest length is 114 m., and breadth 52 m. It has sev. rivs., the Golo being the longest. The coast-line is rugged, and affords many bays and harbours, the most important being Porto, Sagone, Ajaccio, Valinco, St Florent, Ile Rousse, and Calvi. The climate varies from warmth in the lowlands to extreme cold in the mt regions, snow lying 6 months of the year on the highest summits. The soil is very fertile, but lack of enterprise in the inhab. makes agriculture backward. The uncultivated dists. are covered with a dense growth of arbutus, thorn, myrtle, and broom, known as the maquis. The culture of fruit, the vine, citrons, and olives, vegetables, and tobacco, also the rearing of sheep, goats, and silkworms, are the chief industries. The chief exports are wool, wood, wheat, wine, cork, tobacco, silk-worms, oranges, etc. In the inaccessible parts of the mts live a peculiar breed of sheep, called moutons, and in the E. parts wild boars and stags are found; the latter are exceedingly scarce. There are mines of anthracite, antimony, copper, and silver lead, also valuable stone, such as alabaster, jasper, marble, porphyry, red and blue granite. At Guagno, Pardinia, Guitera, and Orezza there are mineral springs. The manufs. are not of much importance, consisting chiefly of the preparation of preserved citrons, of macaroni, an extraction of acid from the chestnut bark, and the manuf. of cigars. The character of the Corsican is one of dignity and pride; he has much native courtesy, which is shown in the hospitality he extends to strangers. To his fellow countrymen he is relentless when once roused, but the custom of the vendetta (exploited in the Corsican *novelle*, *Colomba*, by Prosper Mérimée, 1840), has died out. The landscape and scenery of C. are full of freshness and novelty. Here is a corner of Algeria, there one of Italy, of Greece, of Provence. The cap. is Ajaccio, and other tns of importance are Bastia, Calvi, Corte, and Sartène (qq.v.). Area 3367 sq. m. Pop. 247,000.

History.—In early times C. was known as *Kyrrnos* (q.v.). The earliest inhabs. were probably Ligurian, and the first civilised people who estab. themselves there were Phocaeans of Ionia, who landed about 560 bc. and founded the tn of Alalia. At the end of the 6th cent. these people were driven out by the Etruscans, who in their turn had to make way for the Carthaginians, and these again were followed by the Romans. In time the Genoese came into possession, who surrendered it to the Fr., being unable to subdue the Corsicans who had risen under Gen. Paoli. Britain was appealed to for assistance, and in 1794, after hard fighting, C. offered the sovereignty to King George III of England. Brit. rule lasted for 2 years, then C. passed once more into the hands of France, and since the settlement of 1815 they have remained united. On 11 Nov. 1942, after the successful landing of allied forces in N. Africa, Hitler sent Ger. troops into un-

occupied France, and invited It. troops to occupy C., asserting that the move was necessary to forestall Allied plans for an attack on the is. and on the S. coast of France. Pétain (q.v.) made a formal protest, but the Vichy Gov. made no show even of passive resistance. Fr. troops (non-Vichy) liberated C. on 4 Oct. 1943. Ger. consolidation on the is. having been prevented by the prompt action of local patriots before the landing of Free Fr. forces. The It. part of the garrison held Bastia long enough to get their forces away. The conquest of C. by the Allies was a strategic blow against the whole Ger. position in Italy. See ITALIAN FRONT, SECOND WORLD WAR CAMPAIGNS ON. *An Account of Corsica*, by J. Boswell, appeared in 1768. See also Prosper Mérimée, *Notes d'un voyage en Corse*, 1840; F. Girolami-Carona, *Géographie générale de la Corse* (Ajaccio), 1893; J. M. Jacobi, *Histoire générale de la Corse*, 2 vols., 1833-1835; L. H. Caird, *History of Corsica*, 1899; R. Le Joindre, *La Corse et les Corscs*, 1904; C. de Cesari-Rocca and L. Villet, *Histoire de Corse*, 1916, 1927; P. Alloge, *Histoire du peuplement de la Corse*, 1926; D. Archer, *Corsica, the Scented Isle*, 1929; A. R. Dugmore, *Corsica the Beautiful*, 1930; A. Ross and J. Minton, *Time was away: a Notebook in Corsica*, 1948.

Corsicana, cap. of Navarro co., Texas, U.S.A., on the Houston and Texas Central and the St Louis SW. railroads. It is a trading centre for cotton, wool, oil, and agric. produce. Pop. 19,200.

Corsite, variety of diorite (q.v.) found near Ajaccio in Corsica; known also as Napoleonite. It forms a beautiful ornamental stone on cutting and polishing, and is composed of anorthite feldspar, hornblende, and a little quartz.

Corslet, light armour (q.v.) for the upper part of the torso; later worn as an alternative to the cuirass (q.v.) by soldiers of the 16th and 17th cents.

Corso, It. word, meaning race or race-course, used alike of a slow procession of handsomely decorated equipages, and of the mad gallop of a frightened riderless horse. The word has been given to various streets, generally the main street, in some It. tns, through which processions frequently take place. The best known is the C. (anc. Via Flaminia) in Rome, which is the scene of the famous carnival.

Corsen, Wilhelm Paul (1820-75), Ger. classical scholar and philologist. In 1858-59 he won the prize, awarded by the Royal Prussian Academy of Sciences, for a thesis on Lat. pronunciation and accent with his *Ueber Aussprache, Vokalismus, und Betonung der Lateinischen Sprache*.

Corstopitum, see CORRIDGE.

Cort, Cornelis (1536-78), Dutch designer and engraver. He studied engraving with Jerom Cockx of Antwerp, and about 1565 he went to Venice and worked for Titian, executing copper-plates of 'St Jerome in the Desert', 'Prometheus', 'The Magdalen', and others. At Rome he founded a famous school of engraving. His engravings helped to popularise works by Raphael, Titian, Clovio, Muziano, Baroccio, and other painters.

Cort, Henry (1740-1800), ironmaster, who invented a process, called puddling, of purifying iron, which has been superseded by the invention of Bessemer (q.v.) steel.

Cortaderia, a genus of S. Amer. tall perennial grasses, family Gramineae, about 6 species; *C. argentea* is the pampas grass (q.v.).

Cortázar, Daniel (1845-1927), Sp. mathematician, geologist, and lexicographer, b. Madrid. His 14,000 amendments to the *Dictionary of the Language* were a great influence in the purification and stabilisation of written Spanish.

Corte, tn in central Corsica, 35 m. NE. of Ajaccio, built on a steep rock which overhangs the Tavignano and the Restonica. Marble is found in the vicinity, and there is a trade in fruit and wine. The tn is a tourist centre. Pop. 6020.

Cortés, Hernán or **Hernando** (1485-1547), conqueror of Mexico. He was b.

his mistress. She was of great help to him on his adventures, and acted as interpreter. Moving a little to the N. he founded the colony of Villa Rica de Vera Cruz, and then, marching inland, defeated the Tlascalans, and destroyed the tn of Cholula, whose inhab. were plotting against him. C. and his men were now regarded as descendants of the sun, destined by prophetic tradition to come from the E. and subdue the Aztecs. For this purpose the Tlascalans and Cholulans joined him in a march on Mexico. On 8 Nov. 1519 C. entered Tenochtitlan, the cap. of Mexico, and was received with honour by the Aztec chieftain. But, hearing that the native leaders were conspiring against him, he captured Montezuma (or Moteculizoma) by a trick, and held him as a hostage. In April 1520 C. heard of an expedition sent by Velásquez against him, and headed by Narváez, and set out with a small band for San Juan de Ulloa. He took Narváez prisoner and persuaded the Spaniards to join his standard. During his absence, however, the Aztecs had revolted against his lieutenant, Alvarado. In the revolt Montezuma lost his life, and C. returned to the city only to retreat with all his men on 30 June, *la noche triste* (the unhappy night). C. drove off the pursuing Mexicans at Otumba, 7 July 1520, and retreated to Tlascala to recuperate. In the following year he laid siege to the stronghold of the Aztecs, and, after three months' fighting, he again entered their city. C. rebuilt it and filled it with Sp. colonists, and, using it as his headquarters, sent out expeditions to the Gulf Coast and to Tampico. His enemies in Spain and Cuba were at work, however, and in 1528 Estrada arrived to take command, and C. was obliged to return to Spain. There he was royally received and created marquis of the Valle de Oaxaca. In 1530 he returned to Mexico, but, as he was no longer governor, he found that his schemes were continually being thwarted. In 1536 he explored the coast-line and discovered lower California. He returned to Spain in 1540, but obtained no redress for his grievances, though he was received with honour. He accompanied Charles V on his disastrous expedition to Algiers, 1541. He d. in retirement near Seville, and was buried there, but his remains were subsequently reinterred in Mexico. See W. H. Prescott, *History of the Conquest of Mexico*, 1843; the *Dispatches*, trans. G. Folsom, 1843; Sir A. Helps, *Life of Cortés*, 1871; F. A. Ober, *Hernando Cortez*, 1905; H. D. Sedgwick, *Cortés the Conqueror*, 1927; C. Walker, *Guatemala, Last of the Aztec Emperors*, 1934; and S. de Madariaga, *Hernán Cortés: Conqueror of Mexico*, new ed. 1955.

Cortés, name given in Spain and Portugal to the representative assembly of the nation. Formerly there were different C. representing various dists. of Spain, the chief being the C. of Castile and that of Aragon, each with its own constitution, which was frequently modified. During the Fr. invasion under Bonaparte it framed a new constitution, known as the

HERNÁN CORTÉS

at Medellín, a vil. of Estremadura in Spain, and was first sent to study law at Salamanca. His high spirits and love of adventure led him westwards, so that in 1504 he sailed for Santo Domingo to join his relative, Ovando, governor of Hispaniola. In 1511 he distinguished himself under Velásquez in his expedition for the conquest of Cuba, and he subsequently became alcalde in Santiago. In 1518 C. was chosen by Velásquez to command an expedition into the interior of New Spain (Mexico), which had just been discovered by Grijalva. He set sail on 18 Nov. with a fleet of seven vessels from Santiago de Cuba. Early in the following year he reached the R. Grijalva, and captured Tabasco, after a fierce fight with the natives. Velásquez, meanwhile, had revoked the commission of his lieutenant, but C. refused to turn back. He landed at San Juan de Ulloa, where he took many captives, one of whom, Marina, he made

'Constitution of 1812.' See SPAIN, *Constitution and History*.

Cortisone, see HORMONES; SUPRARENALS.

Cortland, co. seat of C. co., New York, U.S.A., on the Tioughnioga R., in a dairying and cattle-breeding region, with manufs. of wire netting, wire cloth, furniture, etc. Pop. 18,150.

Cortona, Pietro (Berettini) da (1596-1669), It. painter and architect, so called from his bp., Cortona, his real name being Berettini. His prin. works are in the Barberini and Sacchetti palaces, Rome, and in the Pitti palace, Florence. His 'Nativity' attracted the notice of Pope Urban VIII, and he enjoyed the patronage of successive pontiffs. His architectural works include the facade of Santa Maria in Via Lata, and the church of San Martino (Rome), in which he was buried. He wrote a treatise on painting.

Cortona, It. tn. in Tuscany (q.v.), 14 m. SSE. of Arezzo (q.v.). Anciently, it was one of the cities of the Etruscan Confederation (see ETRURIA), and it has many

Cape Finisterre (q.v.), the most westerly point in Spain. Agriculture and industry are well developed, and the prov. is rich in minerals. Area 3050 sq. m. Pop. 794,850.

2. (Eng. Corunna, also **The Groynes**; Fr. **La Corogne**; Rom. **Ardobium Cauronium**) Sp. seaport, cap. of the prov. of L. C., lying on a narrow peninsula between 2 bays. It was once, probably, a Phoenician settlement. In 1588 the Sp. Armada (q.v.) rested here on its way to England, and in 1589 part of the tn was burnt by Drake and Norris (qq.v.). Sir John Moore (q.v.) was killed here in 1809 in battle against the Fr. L. C. has a large and busy harbour, used by transatlantic liners, is a military centre, and has many buildings of interest, including Romanesque and Baroque churches. On a cliff N. of the tn stands the Tower of Hercules, a lighthouse dating from the time of Trajan. The 'old tn' still has part of its anct. walls. The prin. industries are fishing and canning, and textiles, tobacco, and glass are manuf. Pop. 142,500.

THE HARBOUR, LA CORUÑA

Etruscan and Rom. remains, including its immense city walls. A medieval castle, the highest point of C., stands 2130 ft above sea level. There is an 11th-cent. cathedral (restored, 18th cent.), which has paintings by Luca Signorelli (q.v.), a native of the tn, and there are other fine churches and anct. palaces. The museum contains Egyptian and Etruscan antiquities, and there is an important library. Near by there are marble quarries. Pop. (tn) 3700; (com.) 31,900.

Cortracum, see COURTRAI.

Corumbá, port of Mato Grosso prov., Brazil, on the r. b. of the R. Paraguay. With the coming of the Bolivia-Brazil railway and the new industries, it is an important trading centre exporting products from Brazil's interior and from E. Bolivia. There are extensive manganese deposits at Morro do Urucum (15 m. SSE.). There are metal works, lumber mills, meat packing plant, and a blast furnace. Pop. 30,000.

Coruña, La: 1. Sp. prov., in Galicia (q.v.), on the Atlantic coast, containing

Corundum, aluminium ore, consisting solely of the oxide, Al_2O_3 . It possesses a high sp. gr., and is only inferior to the diamond in hardness. It crystallises in the hexagonal system. The sapphire, oriental ruby, oriental topaz, oriental emerald, and oriental amethyst are all forms of C., although the name is usually reserved for the coarser specimens. The precious forms owe their value to the lustre of their polished surfaces, and their beautiful colours. The ordinary forms are dull in appearance, but vary in colour—green, blue, and red, inclining to grey. Emery is an impure form of C. containing oxide of iron. C. is used for cutting and polishing all gems except the diamond, which is too hard for it. Found in (ruby) Burma, Siam and Ceylon; (sapphire) Kashmir, Ceylon, Burma, Siam, Australia, and the U.S.A.

Corunna, see CORUÑA, LA.

Corvallis, city in Benton co., Oregon, U.S.A., seat of Oregon State College. It is a processing and trade centre for a dairying, fruit, agric., and timber area. Pop. 16,207.

Corvée, term applied to unpaid and forced labour paid by a tenant to his lord, or by subjects to a state. The system of unpaid labour dates from the earliest times, and was fully developed in the rep. of Rome. Instead of paying taxes, the citizens performed *operae publicae*, which consisted chiefly of keeping roads and bridges in good repair. The Rom. landlords could also demand free labour on their estates for a certain number of days from their tenants or *coloni*. The freedmen also were under certain obligations as a condition of their freed state, and their *operae officiales* generally consisted of unpaid work on their landlord's estate. In the Middle Ages the C. became a recognised part of the feudal system. The fixed services that the serf was obliged to pay regularly were called *operae rigae*. Those that were only demanded in times of exceptional stress were called *operae corropatae*, i.e. services or works requisitioned, from Lat. *rogare*, to request. This term became corrupted into *corvatae*, and later *corvetae*, and finally developed into the present form C., which became the general term for all such unpaid labour. The tenants and serfs performed labour, such as working in the fields, threshing corn, etc., in payment or partial payment of rent, small allotments, called *mansai*, being distributed among them. They repaired high roads, bridges, churches, and castles, entertained messengers, and carried dispatches, as a sign of fealty to their feudal lord. C. could also include conscription. C. existed in France till the Revolution, of which it may be said to have been a cause. It was revised (1824, 1836, and 1871) under the name of *prestation*, when it was enacted that every able-bodied man was responsible for the condition of his local roads, and must give 3 days' labour or its equivalent in money to keep them in repair. C. has been used from the earliest times as a means of irrigating the canals and reaping the harvest. The great pyramids were probably built by forced labour. By this means the Nile barrage above Cairo was constructed (1841-67). C. labour was abolished under Brit. rule in 1891. See N. D. Fustel de Coulanges, *Histoire des institutions politiques de l'ancienne France*, 1875-92.

Corvette (Lat. *corbita*, a slow ship of burden, from *corbis*, basket), sailing warship smaller than a frigate, having three square-rigged masts and carrying her broadside guns under a covered deck. In the Second World War the term was revived for small escort vessels with anti-submarine devices. Large numbers of Cs were built in Brit. and Canadian shipyards, and were instrumental in reducing losses from U-boat action in the Atlantic convoy. They are now known as frigates (q.v.).

Corvey, or **Korvey**, famous Benedictine abbey in Germany, on the Weser (q.v.), near Höxter (q.v.). It was founded in the 9th cent. by monks from Corbie (q.v.) in France, under the patronage of the Emperor Louis I. Its abbots were chosen

from the princes of the Holy Rom. Empire. The abbey was under the direct supervision of the pope until 1793, in which year Pius VI converted it into a bishopric. It was secularised in 1803, and was held successively by Nassau, Orange, Westphalia, and Prussia. In 1811 its library of over 150,000 vols. was given to Marburg Univ.

Corvinus, Matthias, see MATTHIAS CORVINUS.

Corvisart des Marest, Jean Nicolas, Baron de (1755-1821), Fr. physician, b. Dricourt, Champagne. He qualified in medicine at Paris, 1785. He is remembered especially for his *Nouvelle Méthode pour Reconnaître les Maladies Internes de la Poitrine par la Percussion de Cette Cavité*, 1808, a trans. of Auenbrugger's (q.v.) neglected classic on percussion; he brought this method of diagnosis into general use. His *Essai sur les Maladies et les Lésions Organiques du Cœur et des Gros Vaisseaux*, 1806, was the outstanding book on cardiovascular disease in its time. C. was personal physician to Napoleon, who created him a baron.

Corvus, Marcus Valerius (c. 370-270 BC), soldier famous in early Rom. hist. His surname was attributed in popular story to the fact that a raven (Lat. *corvus*) settled on his helmet while he was locked in combat with a gigantic Gaul, and assisted him by flying in the face of his foe. C. was twice dictator (342 and 301), and between 348 and 299 was consul six times.

Corvus, member of the family of Corvidae, such as the rook, raven, jackdaw, and various kinds of crow.

Corvus (Raven or Crow), anct S. constellation described by Ptolemy (2nd cent. AD). It consists of four prin. stars of the second and third magnitude, and is situated S. of Virgo, between Libra and Crater. The constellation is sometimes called Hydra et Corvus, as strictly it contains part of the body of Hydra.

Corwen, par. and mkt tn of Merioneth, N. Wales, 12 m. ENE. of Bala, on the r. b. of the R. Dee and at the foot of the Berwyn Mts, a favourite resort with tourists and anglers. Pop. 2500.

Cory, William Johnson (1823-92), schoolmaster and poet, b. Torrington, Devon, son of Charles Johnson. Educ. at Eton and King's College, Cambridge, of which he became a Fellow, he was an assistant master at Eton for over 26 years. In 1872 he inherited an estate, assumed the name of Cory, and settled at Hampstead. His collection of lyrics, *Tonica*, was first pub. anonymously in 1858, and *Extracts from Letters and Journals* was ed. in 1897. He was a skilful Lat. and Gk versifier, his best-known poem being 'Heracitus,' a paraphrase from Callimachus. He also wrote the 'Eton Boating Song.' See life by F. C. Mackenzie, 1950.

Coryate, or **Coryatt**, Thomas (c. 1577-1617), traveller, son of George C., rector of Odecombe and a Lat. verse writer, b. Odcombe, Somerset. He was educ. at Westminster School and at Oxford, and became a court fool to James I. *Coryate's*

Cruditius hastily gobbled up in Five Months' Travel, 1811, is an account of his travels on foot through France, Italy, Switzerland, Germany, and Holland, which began in 1608. He hung up the boots which he used on this tour in Odcombe church. In 1612 he set out again and passed through Constantinople, Greece, Alexandria, Cairo, Jerusalem, Babylon, Lahore, and Agra, but died at Surat. See A. & Wood, *Athenae Oxonienses*, II, 1691-2, 1813-20; McLehose's ed. of the *Cruditius*, 1905.

Corybantes, priests of Cybele or Galli (q.v.) and Attis in Phrygia, who worshipped with wild, ecstatic orgies to the accompaniment of drum and cymbal. They were also called Curetes (q.v.). Cybele being identified with the Cretan Rhea.

Corydalis, a genus of ann. or perennial herbs, native to N. temperate regions; family Papaveraceae; about 20 species. Many are grown as rock garden plants.

Corygaum, see KOREGAON.

Corylus, genus of Betulaceae, contains about 15 species, which grow in N. lands. *C. avellana* is the common hazel-nut found in Europe, Asia, and America; *C. colurna*, the Constantinople nut of Asia Minor; *C. rostrata*, the horned hazel-nut of the Carolinas; *C. chinensis*, the Chinese hazel; and *C. tibetica*, the Tibetan hazel. See COB-NUT.

Corypha, genus of tropical palms, contains 6 species with gigantic fan-shaped leaves. *C. umbraculifera*, the tala or talipot palm, is a native of Ceylon which serves sev. useful purposes. The trunk reaches a height of 100 ft., and the leaves are 14 ft. broad and 18 ft. long; fans and umbrellas are made from the leaves, which are also used in thatching and employed as writing material; while the pith of the trunk furnishes a sort of flour from which bread is made. *C. talliera* is a stately species which inhabits Bengal and is known as the tara or talliera; the natives write on the leaves with a steel style.

Coryphaena, genus of perciform fishes, commonly known as dolphins, represents the family Coryphaenidae. Dolphin fishes are large and brilliantly coloured, with hues of metallic yellow, blue, and silver; their bodies are elongated, compressed, and covered with small scales. In diet they are carnivorous and feed largely on flying fish. The length to which they usually attain is about 6 ft. *C. hippurus* inhabits the warmer parts of the ocean.

Coryphaeus (Gk *koruphē*, head), leader of a Gk chorus. Hence the word is applied to any leader in the realm of science or art. At Oxford the word is used to denote the assistant of the choragus in the musical praxis, founded by Dr Heather.

Corystes, brachyurous crustacean, found in the seas of Europe. *C. cassivelaunus* is a crab commonly seen on the shores of France and England, especially at Plymouth, and the carapace is marked like the face of a human being.

Coryza, catarrh of the mucous membrane lining the nasal passages, commonly called cold in the head. See COLD.

Cos, Kos, Stanko, or Istanku, is. some 25 m. long, with an area of 111 sq. m., at the mouth of the Gulf of Haicarnassus, in the Aegean Sea, off the SW. coast of Asia Minor. The chief products are grain, wine, olive oil, vegetables, and honey. There is a small Turkish minority. Near Cos, the only tn. lie the ruins of Asclepius's temple, the precincts of which were marked out sev. centuries BC. Brit. forces occupied C. on 16 Sept. 1943, but the Germans recaptured the is. on 3 Oct. Pop. 19,100. See also DODECANESE.

Cosa, Juan de la (c. 1450-1510), Sp. navigator and cartographer, thought to have been b. at Santona in Calabria, and d. at Tabasco in Darien. After having explored parts of the W. coast of Africa, he accompanied Columbus on his famous voyage of discovery in 1492, acting as pilot. He held the same position under Alonso de Hojeda in 1499, and in 1504 himself led an expedition in N. America; in 1509 he was appointed *alguazil mayor* over Uraba (Darien). He was killed in the following year during a skirmish between the Spaniards and the Indians. He executed two very interesting coloured maps on vellum, one marking the Sp. dominions acquired in Africa in 1500, and the other showing the lands discovered by Columbus and his successors.

Cosbuc, George (1866-1918), Rumanian poet. He began as a literary journalist. His first book was pub. in 1893. His poems, optimistic and vigorous, depict country life or Rumania's heroic past. He trans. the *Aeneid*, *The Divine Comedy*, and Byron's *Mazeppa*.

Coscinomaney (Gk *koskionon*), divination by means of a sieve and a pair of shears, employed in ant. times for the discovery of thieves and other suspected persons. The sieve was supposed to tremble or move round when the name of the guilty person was mentioned.

Cosecant, see TRIGONOMETRY.

Coseguina, volcano of Nicaragua, near the Gulf of Fonseca, not far from the Pacific Ocean. The eruption of 1835 was one of the greatest ever known in geological hist., and reduced it to 2776 ft. from a former 10,000 ft.

Cosel, see KOZLE.

Coseley, industrial tn. of S. Staffordshire, England, manufacturing metal products of all kinds. Pop. 32,000.

Cosenz, Enrico (1812-98), It. soldier and politician, b. Gaeta. He fought against the Austrians in Upper Italy (1848), distinguishing himself at the defence of Venice. On its surrender he took refuge in Turin, but returned to join one of Garibaldi's regiments, the Hunters of the Alps, of which he became colonel in 1859. Under the dictatorship of Garibaldi he was appointed minister of war. He commanded an attack on Rome in 1870. From 1881 till 1893 he was chief of the general staff of the It. Army.

Cosenza: 1. Prov. of Italy, in N. Calabria (q.v.). It is the N. part of the 'toe' of Italy, and is bordered on the W.

by the Tyrrhenian Sea (q.v.) and on the E. by the Gulf of Taranto (q.v.). It is mainly mountainous and contains some high ranges of the S. Apennines (q.v.), but is bisected SW.-NE. by the broad, fertile valley of the Crati and its tribes. The mts are thickly forested, and tin, lead, silver, and other minerals are found. The princ. tns include C. and Castrovillari (q.v.). Area 2620 sq. mi.; pop. 709,000.

2. (ancient *Consentia*) It. tn, cap. of the prov. of C., at the confluence of the Crati and the Busento, 88 m. NNE. of Reggio di Calabria (q.v.). The old part of the tn has steep and narrow streets; the modern part is well laid out and has good buildings. There is an archiepiscopal cathedral (12th-20th cents.). Silk, leather goods, furniture, and pottery are manuf., and there is a trade in cereals, fruit, olive oil, and cloth. Pop. (com.) 57,300.

Cosgrave, William Thomas (1880-), Irish statesman, president of the executive council of the Irish Free State, 1922-32, son of Thomas C., tn councillor of Dublin. He was educ. at the Christian Brothers' School, and engaged in the grocery trade; became a member of the Dublin Corporation in 1909, and from 1916 till 1922, when he retired from the corporation, was chairman of its finance committee. In 1913 he joined the Irish volunteers, and sided with the rebellious section in Aug. 1914. He was in the Easter rising in Dublin in 1916; and, on capture, was detained in Frongoch Camp, Morioneth, till Christmas. In 1917 he was elected Sinn Féin M.P. for Kilkenny city; and from Dec. 1918 till 1922 he was M.P. for the N. div. of Kilkenny co. He was elected in 1922 to the first legalised Dail Eireann for cos. Carlow and Kilkenny, which he represented till 1927; but in 1919 he joined those members of parliament who constituted themselves the revolutionary Dail, and held the post of minister for local gov. in the revolutionary cabinet—consequently he was among the proscribed in the time of the Black-and-Tans. From Jan. 1922 he was minister for local gov. in the Irish Free State set up by the treaty. He acted as deputy for President Griffith during the absence of the latter in London in 1922; and after Griffith's death in Aug. and the assassination of his successor Michael Collins (q.v.) the same month, C. was chosen president. In 1923 he represented the Irish Free State at the League of Nations Assembly and at the Imperial Conference. He became member for Cork in the Dail elected 1927; and in 1928 he signed the Kellogg Pact and visited U.S.A., where he was received by the president, and Canada. After de Valera's party, Fianna Fail, came into power in 1932, he led the Fine Gael opposition until 1944.

Coshery, or Coshering, was the ancient feudal right of an Irish chief to quarter himself and his retainers on his tenantry at his own pleasure.

Cosimo (Cosmo) I. (1519-74), Duke of Florence, afterwards Grand Duke of Tuscany, was the son of Giovanni de' Medici. The elder branch of the house of Medici

became extinct (1537) and C., who was descended from a collateral branch of the house, was proposed as successor and supported by the Emperor Charles V. C. defeated his enemies at Montemurlo and became absolute lord of Florence. He was a harsh and ruthless ruler, but succeeded in establishing the independence of Tuscany. In 1552 he added Piombino and the is. of Elba to his estates, and in 1555 captured Siena, which, however, was allowed to retain its municipal institutions. In this way he united Tuscany under one gov., and in 1569 he received from Pius V the title of grand duke. C. was a patron of art and literature, and founded the Florentine academy and the Accademia del Disegno, and restored the univ. of Pisa.

Cosimo, Piero di (1462-1521), It. painter, b. Florence. He was a pupil of Cosimo Rosselli (q.v.), and afterwards the master of Andrea del Sarto (q.v.). Leonardo exercised great influence over him. A painter of whimsical imagination, he delighted in picturing pagan, half-human creatures, satyrs and centaurs. Vasari mentions various pictures of his in Florence, among which is the 'Perseus and Andromeda' (Uffizi Gallery), full of fine detail, and showing a typically fantastic dragon. Some of his best works are 'Death of Procris' (National Gallery); 'Coronation of the Virgin' (Louvre); and 'Venus, Mars, and Cupid' in Berlin. See R. Langton-Douglas, *Piero di Cosimo*, 1946.

Cosimo de' Medici, see MEDICI.
Cosin, John (1594-1672), Bishop of Durham, b. Norwich, educ. at Norwich Grammar School and Caius College, Cambridge. A friend of archbishop Laud, and a High Churchman. He first became known as an author in 1627, when he pub. his *Collection of Private Devotions*. In 1634 he was made master of Peterhouse, Cambridge; in 1640 vice-chancellor of the univ., and dean of Peterborough. For nineteen years he was an exile in France, being denounced by the Puritans for his extreme theological views, though opposed to Rom. Catholicism; he was deprived of his benefices. But at the Restoration he received his preferments back, and became Bishop of Durham, 1660. He had a large part in the revision of the Prayer Book of 1661-2.

Cosine, see TRIGONOMETRY.

Cöslin, see KOSZALIN.

Cosmas and Damian, Sts (d. c. 303), patrons of medicine. They were Arabians by birth, and practised as physicians at Aegae in Cilicia, where they suffered martyrdom under Diocletian. Their relics were brought to Rome; they are mentioned in the Canon of the Mass; and their feast is on 27 Sept.

Cosmas Indicopleustes, merchant and traveller of Alexandria, who lived during the 6th cent. During his early life he visited Abyssinia, W. India, Ceylon, and other places. He eventually became a monk, and during his seclusion wrote in Gk a work in twelve books called *Topographia*, 548. This was trans. in 1897 into Eng. by the Hakluyt Society. In the work he propounds absurd theories as to the shape of the earth, denying that it

is round, and upholding the scriptural account of the world. Some people think he was a Nestorian.

Cosmetics (from Gk *kosmein*, to adorn). The word is applied to preparations used for improving the appearance of the skin or emphasising the features of the face or the beauty of the finger-tips. Jars and bottles for containing C. and implements for applying them have been found among the remains of all the ancient civilisations. Face powder, made of rice or semolina powdered, or of chemical compounds, has been widely used for giving a matt surface to the skin, and recently pastes mixed with gum have been used for the same purpose. Kohn (q.v.) is used in some parts of the E. for shading the eyelids in order to make the eyes appear bigger; henna (q.v.) for staining finger-tips and toes. Rouge powder or paste is used by W. women for colouring the cheeks, and at some periods has also been worn by men. The second decade of the 20th cent., which saw the widespread emancipation of women, saw also a great increase in the use of C., especially sticks of rouge-paste—'lip-sticks'—for reddening the lips, and varnish for reddening the finger-nails and toe-nails. C. have always been used by actors and actresses to give a different character to the face, or to counteract the effect of strong lights, which deaden the look of the skin, and to help the features and facial expression to be visible from a distance. C. are also used to clean, preserve, and nourish the skin.

Cosmic Radiation. Gases are nearly perfect insulators of electricity under ordinary circumstances, and owe what little conductivity they possess to the presence of relatively small numbers of charged molecules or ions. Some ions are continually produced in a gas by radioactive materials in it or in the walls of the containing vessel, but experiments dating from 1903 (Rutherford, McLennan) showed that not all the ions are produced in this way, and that some are due to the action of an extremely penetrating radiation capable of passing through many feet of lead or thousands of feet of water. This radiation is now called the C. R., and has a penetrating power enormously greater than that of X-rays or any other known radiation. Its source is at present uncertain; but it comes from outside the earth's atmosphere, and certainly from outside the solar system. Its intensity at high latitudes is greater than at the equator, and at any locality the ionisation produced by it increases with altitude to about 50,000 ft and then diminishes again. The primary radiation entering the atmosphere apparently consists chiefly of protons, or positively charged hydrogen atoms, travelling at enormous velocities. The average energy of a cosmic ray when it strikes our atmosphere is more than a thousand times that of a radioactive particle, i.e. 6 Gev or 6,000 million electron volts, and occasionally particles are observed with energies up to 10^{11} electron volts. In the atmosphere these produce showers of mesons (q.v.), particles whose

mass is between that of an electron and a proton, and also hyperons (q.v.), which are between one and two times the mass of a proton. They may be negatively or positively charged or neutral, and break up or decay after very short lives between 10^{-11} and 2×10^{-8} sec., into other particles or quanta of gamma rays (q.v.) which ionise the air. They may also interact with the atoms in the air with the same result. See P. M. S. Blackett, *Cosmic Rays*, 1936; R. A. Millikan, *Cosmic Rays and Mesotrons*, 1939; J. G. Wilson, *About Cosmic Rays*, 1948; G. D. Rochester and J. G. Wilson, *Cloud Chamber Photographs of the Cosmic Radiation*, 1952.

Cosmo I., see COSIMO.

Cosmogony, theory of the origin of the universe and its inhab., the term being usually restricted to mythological accounts as distinct from more scientific or philosophical theories which are treated under cosmology (q.v.). In all races except among the very lowest type of savage some C. is found in their mythology or theology. There is a surprising variety in the various explanations, the only common ground seeming to be that water is usually regarded as the starting-point, from the depths of which the land has been drawn up by some supernatural power. Among other conceptions may be mentioned that of the Egyptians who conceived of a world egg, and the Hindu tortoise supporting elephants supporting the world. Then the Polynesian conception involved an air god Tangaloa, hovering over the waters. But in the Babylonian C.s deciphered by George Smith, and also perpetuated in the Gk of Herodotus, we arrive at startling similarities to the creation story as told in Genesis 1. The Zoroastrian conception involved a personal deity creating at his own free will. Again, one of the old Phœnician C.s refers to organic matter as being due to spontaneous emanations. Modern cosmogonists are divided naturally into two great camps, according as they are Theists or Pantheists. A belief in Theism almost inevitably leads to a C. which explains the creation of matter and order and life as being the outcome of the omniscient will. Pantheism, on the other hand, will lead to a belief in the universe as being itself the deity, and this will lead to a belief in matter as having existed from eternity. Apart from these C.s, the problem, as narrowed down to the origin of our own globe and its system, and similar systems, has occupied men's minds considerably. Laplace, on observing the motion and relationship of the planets, was able to lay down the foundations of the nebular theory or hypothesis (q.v.) for which Herschel collected so much evidence, and of which physicists are not altogether sceptical even to-day. Another theory is that the earth has originated from meteorites. Thus, in so far as C. touches modern science at all, it can be seen that the tendency would be to trace backwards the causes and effects, thus reaching back to the early stages in cosmic growth, but not to the actual creation itself. This after all was the standpoint of the old philosophies, for

Plato recognised a personal creator, and Aristotle postulated an uncaused cause, Democritus, on the other hand, in strange similarity to some modern scientists, conceived a self-created universe, which sprang from a fortuitous concourse of atoms. See also ADAM; CREATION; MATERIALISM; THEOGONY; and the various religions. See J. C. Smuts, *Holism and Evolution*, 1926; Sir J. Jeans, *Astronomy and Cosmogony*, 1929; W. lt. Inge, *God and the Astronomers*, 1933.

Cosmology, variant of cosmogony, both terms denoting an account of the origin or evolution of the universe or of its orderly development out of a primordial chaos. The word cosmogony, however, is now usually limited to mythological accounts of the genesis of the world and of mankind, while C. is applied to all those accounts which have a more scientific or philosophical value. Philosophy, as a term of general application, was not restricted by Aristotle (or his successors) to logic, aesthetics, psychology, and ethics, and he includes under that title all his physical inquiries. After the synthesis of knowledge by Aquinas in the Middle Ages the term philosophy ceased to be applied to inquiries concerned with the particulars as such, and the details, e.g. of physics, were left to the scientific specialists, while philosophy limited its inquiries to the relation of the physical universe to the ultimate ground, origin, or author of things. This inquiry was long entitled rational C. and may be said to be part of the general science of metaphysics. C., as defined above, may be illustrated by some of the more widely known attempts by philosophers or scientists to explain the origin or evolution of the world from chaos or formless void. Empedocles established earth, air, fire, and water as the four elements (though the word element is not used by him). This, in his view, explained the infinite variety of the world, and generation is merely change of composition. Anaxagoras differed from his predecessors in regarding mind (*nous*) as a substance which enters into the composition of living things and distinguishes them from dead matter. He was impressed by the fact that the movement of the elements was not haphazard, but gave birth to an ordered and harmonious world. With the Manichaeans the forming of the world is in itself the beginning of the deliverance of the 'imprisoned elements of light,' and the world is represented as an orderly structure of various heavens and various earths, which is borne and supported by the aeons, the angels of light; and in the sun dwells the primal man himself, as well as the glorious spirits which perform the work of redemption; while in the moon the mother of life is enthroned. Descartes supposes the existence of matter and the laws of motion, and then concludes that if all of this had been created by God, the resulting world would have resembled our world, including the planets, their forms, sizes, organisation, the laws of gravity, the nature of light, and all the other elements with which we are familiar. Herschel

thought that gravity shows that bodies are urged downwards by some force or effort, or that there is a will existing somewhere directing the action; and he attributes consciousness to this will—which consciousness Schopenhauer denies. Kepler's idea of the universe, like the Pythagorean cosmos, was threefold—consisting of the centre or sun, the surface or sphere of the fixed stars, and the intermediate space occupied by ethereal matter. See also NEBULAR HYPOTHESIS.

The cosmological argument for the existence of God is a form of first-cause argument, which is itself derived from Aristotle's argument of the unmoved mover. The first-cause argument is superficially simple—it points out that everything finite has a cause, which in turn had a cause, and so on. This series of previous causes cannot be infinite, and the first term in the series must itself be uncaused, since otherwise it would not be a first term. There is therefore an uncaused cause of everything, and this is obviously God. The argument takes a somewhat different form with Leibnitz: he argues that everything in the world is 'contingent,' i.e. it would be logically possible for it not to exist. According to him everything has a sufficient reason; therefore the universe as a whole must have a sufficient reason, which must be outside the universe; this sufficient reason is God. The ultimate assumption of his argument is that the forces of the universe are in the hands of a perfectly wise intelligence, and that, as in man there is a rational power of initiation and guidance, so in the world as a macrocosm there is a primal reason which governs the movements and coordinates them to a desirable end. Kant, however, holds that this cosmological argument depends on the ontological. If the existence of the world can only be accounted for by the existence of a necessary being, then there must be a being whose essence involves existence, for that is what is meant by a necessary being. But if it is possible that there should be a being whose essence involves existence, then reason alone, without experience, can define such a being, whose existence will follow from the ontological argument, for everything that has to do only with essence can be known independently of experience.

C. also embraces the biological speculations of Darwin respecting the ultimate origin of living things as influencing anthropological speculation generally, and it extends his concept of self-preservation beyond the organic world to the cosmos as a whole. Coming to the speculations of Darwin's contemporaries we may mention Czolbe's mechanistic view of the world order, which he combined with teleological conceptions of the world. Lotze defends the mechanical view of the world as worked out by modern science, applies the mechanical method to all depts. of phenomena, and attempts to apply the method to the question of the genesis of the world and its order. Metaphysical teleology also describes von Hartmann's system: to him the world is a

manifestation in time of an ontological principle, styled the unconscious, which is at once will and intelligence. Finally, we may notice the 'emergence' of world order—the 'emerged evolution' of Samuel Alexander, i.e. the emergence of totally new things from combinations of the old. In recent years the term C. has been applied to the mathematical concept of universal space-time developed by Einstein from the Newtonian system and further elaborated by de Sitter, Eddington, and Milne. A recent attempt to formulate a C. consistent with modern physics has been made by Hoyle, who has suggested that the universe does not alter with time in its general appearance. The disappearance of matter from sight owing to the expansion of the universe is compensated by the continuous creation of matter throughout the universe. However, some scientists now believe that it is impossible to make strictly scientific statements of any significance about either the beginning of time or the creation of the universe. See A. E. Taylor, *Elements of Metaphysics*, 1903; S. Alexander, *Space, Time, and Deity*, 1920; A. N. Whitehead, *Process and Reality: an Essay in Cosmology*, 1929; H. Macpherson, *Modern Cosmologies*, 1930; Sir A. Eddington, *The Expanding Universe*, 1933; E. A. Milne, *Relativity, Gravitation, and World Structure*, 1935; J. A. McWilliams, *Cosmology: a Text for Colleges*, 1939; Sir E. T. Whittaker, *The Beginning and End of the World* (Riddell Lectures), 1942, and *Space and Spirit* (Donnellan Lectures), 1946; B. Russell, *A History of Western Philosophy*, 1947; G. J. Whitrow, *The Structure of the Universe*, 1948; F. Hoyle, *Nature of the Universe*, 1950.

Cosmos, a genus of ann. and perennial herbs of tropical America, family Compositae, about 12 species; *C. bipinnatus* is the parent species of many garden forms.

Cosquin, Emmanuel (1841–1922), Fr. folklorist and lawyer, native of Vitry-le-François. C. is chiefly famous for his writings on folklore, which appeared in the journal *Romania* and were pub. in book form, *Contes populaires de Lorraine*.

Cossa, Pietro (1830–81), It. dramatist, b. Rome. He taught in a school at Leghorn, and wrote the plays *Mario, Sordello, Monaldeschi, Puschin*. His tragedy, *Nerone* (Eng. trans. by F. E. Trollope, 1870), was acted with success, and after this he continued to write classical and historical plays, such as *Cleopatra, Messalina, Cecilia, Paulo e il suo Secolo*. C.'s own favourite comedy; other works: *Teatro Poetico* (in 7 vols.), and a vol. of lyrics. See life by Trevisani; and Arcari, *Di P. Cossa e del Dramma in Italia*.

Cossacks (Russian *kazaki*, Ukrainian *kozaky*), distinct section of the Russian pop. in the S. of European Russia, S. Siberia, and the Far East. The word C. is of Turkish origin and means 'free warriors'. In the 15th cent. the Crimean Khanate and the Russian principality of Ryazan' had C. as irregular frontier troops. In the 16th cent. large and

active C. communities grew up along the banks of the middle and lower Dnieper and of the Don and its tribs.; they were formed by people, mostly peasants, who had fled from Poland-Lithuania and Muscovy respectively, driven by the religious and national oppression of the Orthodox Russian (Ukrainian) pop. in Poland, by political tyranny and the burden of taxation in Muscovy, and by the development of serfdom in both cases. For the further hist. of the Dnieper C. see SICH; UKRAINE. Still in the 16th cent., some Don C. settled on the riva. Ural and Terek, forming autonomous communities. The life in C. regions was not unlike that of the Amer. 'Wild West.'

The C. occupations, apart from military raids, were hunting and fishing, and from the 17th cent. agriculture. Their internal organisation was based on principles of direct democracy with elected *atamans* (see HETMAN). The relations between C. and the Russian Gov. were for a long time unsettled, ranking from direct service, as in the conquest of Siberia (see SIBERIA), to uneasy alliance *vis-à-vis* Turkey, and to open rebellion and invasion of Central Russia (see PUGACHËV; RAZIN; TROUBLES, TIME OF). In the 18th and 19th cents. the C. were gradually subordinated to the central authorities, retaining self-gov. locally, and were transformed into a prosperous, exclusive, hereditary estate of the realm. New C. communities were created by the Gov. (Astrakhan', Orenburg, Siberia, Transbaikalia, Kuban', Amur, Semirech'ye, Ussuri); some non-Russians (Kalmyks and Bashkirs) were also made C. All C. had to serve in C. military units which distinguished themselves in many wars. In the late 19th and early 20th cents. they were also used for police purposes. After the Feb. revolution in 1917 all C. communities transformed themselves into small reps. with elected *atamans*, and the All-Russian C. Union headed by the Don *ataman* Kaledin was set up. In Oct. 1917 the South-Eastern League (q.v.) was formed under C. leadership in S. Russia 'as a part of future Federal Russia.' The seizure of power by the Bolsheviks was met with hostility by most C., and they took a prominent part in the civil war (see CIVIL WAR, RUSSIAN). In some C. regions (e.g. Kuban') guerilla warfare continued till 1924. The Soviet Gov. abolished in 1920 all C. institutions and restricted C. service in the Red Army. The Collectivisation of Agriculture (q.v.) provoked a new wave of mass armed resistance among C., particularly strong in the Kuban' region in 1932–3. In 1936 the C. were officially 'forgiven' and some cavalry units were renamed C., though they were to be staffed by recruits from the Don and the N. Caucasus irrespective of their origin (mountain people were not recruited). During the Second World War C. units fought both in the Soviet and in the Ger. army; those of the latter who had taken part in the It. campaign were in 1945 compulsorily repatriated by the Brit. The C. self-awareness, military traditions, peculiarities of dress (adopted

from the Canaanian natives), and customs (horsemanship) have survived all vicissitudes of the last four decades.

Cossimbazar, see KASIMBAZAR.

Cossus, genus of lepidopterous insects, is typical of the family Cossidae, the goat-moths or carpenter-worms. The larva is a wood-borer, and the pupa is enclosed in a cocoon. *C. ligniperda* is one of the largest of Brit. moths, measuring from 3 to 4 in. from tip to tip of the expanded wings. The insect resides in and feeds upon the wood of the oak, poplar, aspen, and willow, and the caterpillar emits a very disagreeable odour.

Cost Accounting is the term applied to that system of accounting by which the cost of production or service rendered at any particular stage in the manuf. or part-manuf. of any commodity is ascertained. It differs from the ordinary system of accounting in that the latter simply gives the results of the business or section of the business as a whole, without attempting to dissect the cost of manuf. or service rendered at any particular period in the course of manuf. The two systems are, however, usually worked concurrently by independent staffs, although to bring out the best of both systems some sort of liaison is necessary. The value of the C. A. system is that the costs are put on record, and consequently are always handy for reference for comparative purposes. It provides a safe check against wastage, either in material or time, and is a sure means of discovering that section of a business which is not pulling its weight. It would, of course, be impossible to formulate any system of C. A. that would be applicable to all businesses. Indeed it would be safe to assert that each large business, apart from fundamentals, has its own system, that system which has been found from experience to be best adapted to its own particular requirements. The cost of a product or job would be obtained from the following details: (1) the prime cost, which would embrace cost of raw materials and wages; (2) shop expenditure, which would embrace foremen's wages, power, plant, maintenance, etc.; (3) overhead charges, which would embrace cost of distribution and administrative charges. The Institute of Cost and Works Accountants issue a diploma to successful candidates in their examination scheme, classes for which are held at most of the evening educational establishments. See also BOOK-KEEPING.

Cost-book System, system of partnership which obtains in various Cornish and Devonian mines. The system consists in a particular method of keeping the accounts and so managing the affairs of the partnership that the exact financial state of the concern can be readily ascertained. The Stannaries Act provides that the cost-book, which contains an abstract of the working expenses and returns on sales, must be made up and laid before the shareholders once in every 16 weeks. The process of formation of a cost-book company is begun by obtaining a licence to search for minerals; if ore is

found a lease is granted for a term of years, and then a meeting of the co-adventurers is called to decide on the constitution of the company. Cost-book companies may be registered under the Companies Act, 1908. A member of a cost-book company is at liberty to transfer his shares without obtaining the consent of the other members, and he may also insist on the company taking back his shares and paying him for them. A cost-book company, or rather partnership, is not dissolved by a member merely obtaining an account against the other members or transferring his shares, or by the death or bankruptcy of any member. The interest of a deceased member devolves as personality on his next of kin. Members or shareholders cannot, like ordinary partners, bind fellow members by any contract other than one for necessities required for the working of the mine in accordance with the custom of the locality. Cost-book mines are commonly managed by an agent of the shareholders, but such agent cannot make the members liable on a bill of exchange.

Cost of Living. Although the C. of L. must be of prime importance to the majority of the pops. of the different countries of the world, over normal periods the variation up and down is so gradual that it is only noticed by statisticians and economists. But the advent of the two world wars brought such a sudden rise in the price of commodities necessary to civilised life that the C. of L. became a matter of the most urgent concern to millions. From the time of the First World War to the present, wages have been fixed for very large sections of the community on a C. of L. basis determined formerly by the C. of L. Index Number, and since 1947 by the Retail Prices Index Number issued by the Ministry of Labour.

The newer Retail Prices Index Number is, however, based on a wider concept than the old C. of L. Index Number. It measures all commodities and services entering into the expenditure of the average family; and after the Second World War working-class standards rose to the point at which much of its spending was on semi-luxuries and services and not merely on food, rent, and other necessities. In these circumstances the C. of L. has lost its original meaning of the cost of the goods necessary to maintain minimum standards, and might in time be replaced by 'the cost of living well' (or at least much better than in the past). The index number compares the level of prices or the purchasing power in two different periods. It represents the average level of retail prices of commodities purchased by nine households out of ten in 1953-4 compared with retail prices in June 1947; it also measures the retail prices of each category of goods compared with their prices in Jan. 1956. The commodities include food, rent, clothing, fuel and light, transport, entertainment, services, and other items making up the budget of the average household. The index number of the

'base' month is taken as 100 and rises or falls are registered against this figure. Retail prices rose by about 50 per cent between 1947 and 1957. Although the rise was irregular, and for short periods there was relative stability, this period may be described as one of serious inflation. The drawback of the Index Numbers of Retail Prices is that they are based on the same 'basket' of goods and cannot therefore allow for changes in taste, purchasing habits, and quality, or in the choice available to the consumer. They must therefore be revised periodically (the last revision was in 1956, when new index numbers, based on the expenditure pattern of households in 1953-4, replaced those based on working-class budgets in 1937-8), and comparisons over long periods are consequently difficult. See STANDARD OF LIVING; PRICE.

Costa, Claudio-Manoel da (1720-90), Brazilian poet, native of Mariana, Minas Gerais. His 2 vols. of poetry, some written in Portuguese and Italian, gained for him a reputation. The poem *Villa Rica* is noted for its historical matter. He was (rightly) suspected of authorship of the *Cartas chilenas*, highly satirical of the Governor; his intimacy with Ribeiro caused him to be implicated in the political agitation of 1789, and he was imprisoned at Villa Rica, where he d., as is supposed, by poison. See S. Romero and J. Ribeiro, *Compêndio de História da Literatura Brasileira*, 1909.

Costa, Isaac da (1798-1860), Dutch poet and theologian of Jewish descent, was educ. at Amsterdam and Leyden. His first great poem, *De Verlossing van Nederland*, appeared in 1814, and 7 years later a collection of romantic poems, *Poëzy*, placed him in the front rank of national writers. In 1822 he became a Christian, and was thenceforward an ardent supporter of his adopted faith, writing many theological as well as poetical works. He also trans. the *Persians* and *Prometheus* of Aeschylus, and ed. the poems of Bilderdijk, his literary foster-father.

Costa, Lorenzo (1460-1535), It. painter, native of Ferrara. He probably studied under Cosimo Tura and Francesco Cossa. His celebrated picture, 'Madonna and Child,' and some frescoes, are in the Bentivoglio chapel in the San Giacomo Maggiore. His pupil, Francia (q.v.), was much influenced by him, and both worked in the chapel of St Cecilia. He went to Mantua in 1509, and was patronised by Francesco Gonzaga. Most of his best paintings are at Bologna: the 'Madonna and Child enthroned' hangs in the National Gallery. See J. Crowe and G. Cavalaselle, *History of Painting in Italy*.

Costa, Sir Michael (1808-84), conductor and composer, b. Naples. He came to England, conducted Zingarelli's *Cantata sacra* in Birmingham, 1829, and settled in London in the next year, when he produced the ballet *Kenilworth*. C. conducted at Covent Garden and at the Philharmonic concerts, as well as at musical festivals in the provs. His

compositions are now forgotten. The most considerable were two oratorios written for the Birmingham musical festival, *Eli*, 1855, and *Naaman*, 1864.

Costa Rica, the most S. state of central America, bounded on the N. by Nicaragua, on the E. by the Caribbean Sea, by Panama on the SE. and S., and by the Pacific Ocean on the W. Lies between 8° and 11° 15' N. lat. and from 82° 30' to 86° W. long. Its area is estimated at 19,650 sq. m., and it is divided into 7 provs.: San José, Alajuela, Heredia, Cartago, Guanacaste, Puntarenas, and Limón. The Atlantic coast, with the exception of Port Limón, has few indentations, but along the Pacific there are the 2 large gulfs of Nicoya and Dulce. Across the country SE. to NW. extends the Sierra Talamancá, a continuation of the Cordillera of Chiriquí. Some of the peaks attain a great altitude, the highest being over 12,700 ft. There are a number of volcanoes, extinct or dormant, including Orosi (5056 ft), Poás (8930 ft), Barba (9567 ft), Irazú (11,260 ft), and Turrialba (10,974 ft). The rivs. are not useful for navigation, the chief being the San Juan, Reventazón, and Tárcoles. The San Juan partly separates C. R. from Nicaragua. The country is rich in minerals. Gold, silver, copper, zinc, nickel, lead, coal, mercury, and iron are found. The chief industry, however, is agriculture, the soil being fertile and the climate mild and temperate. The region of concentrated settlement in the highland forms the nucleus around which the C. Rican state is organised. It is a region of expanding pioneer settlements, of people vigorously at work transforming empty country into a country of farms and permanent homes. Superb coffee is cultivated to a very large extent, and on the success of the crops depends largely the revenue of the country. Coffee forms 50 per cent of the total exports, and in 1944 it was estimated at 22,400 metric tons, which is about average, but the 1955 record of over 33,000 tons brought in U.S. \$35 million. Bananas rank second in importance, forming about one-third of the total export trade, but they have only recently returned to the 12-million-bunch standard owing to the havoc caused by the 'Panama disease.' The new plantations are mainly on the Pacific coast. Vanilla and sarsaparilla are grown; sugar is still exported, but not in such great quantities; while cacao is rapidly increasing in importance. There is considerable trade in timber and cattle. International trade in 1954 was valued at \$28,750,000 (imports) and \$29,000,000 (exports). In the wooded dists. are found mahogany, india-rubber, ebony, Brazil-wood, cedar, and oak. There are thousands of sq. m. of public lands in C. R. that have never been cleared, on which can be found quantities of virgin rosewood, cedar, mahogany, and other cabinet woods. The Second World War temporarily stimulated the collection of wild rubber, the estab. of plantation rubber on 3000 ac., and the planting of abacá or hemp. The chief imports are cotton goods, rice,

chemical products, tanned leather, fats, industrial machinery, mineral oil, railway materials, and paints.

C. R. was discovered by Columbus in 1493, and, after much trouble with the Indians, effective colonisation began in about 1530. Its political life, like that of many of its neighbouring states, has been unsettled. It formed a part of the captain-generalcy of Guatemala until 1821, when for 2 years it was connected with Mexico. From 1824 to 1839 it formed part of the federal rep. of the states of central America. It was not till 1848 that C. R. was fully estab. as a rep. C. R. has been involved in sev. boundary disputes, the first of these, with Nicaragua, being settled by the president of the U.S.A. in 1888; and with Colombia, in 1921. The dispute with Panama was also

of the Communists, but the gov. controlled congress declared the election void and refused to give Ulate his credentials as president-elect. In the ensuing civil war the gov. was overthrown and a junta set up to govern pending the adoption of a new constitution. Towards the end of the year 1948 elections were held for a constituent assembly and Ulate's National Union party won three-fourths of the seats. Colonel Jose Figueres, as provisional president, and later as president, has governed the country since the suppression of the civil war in May 1948. The C. Rican Army was abolished on 1 Dec. 1948 on the eve of C. R.'s ratification of the Inter-Amer. Treaty of Reciprocal Assistance drawn up at Rio de Janeiro, but Figueres immediately ordered a general mobilisation when C. R. was

E.N.A.

COSTA RICA: THE VOLCANO OF IRAZÚ

settled in 1921, after Panama had entered and held the ter. to which it laid claim, but diplomatic relations were not resumed until 1928. Internally C. R. has had a much more pacific hist. than most of the central Amer. states during recent years. In 1917, however, Gen. Frederico Granados ousted Alfredo González from the presidency and himself assumed office. President Wilson of the U.S.A. persistently refused to recognise his claims, and when C. R. followed the action of the states by breaking with Germany in May 1918, he totally ignored the gov. as then formed. His opposition extended even to excluding representatives of C. R. from the League of Nations, but the State later became a member of the League. In the presidential elections of Feb. 1948, the National Union leader, Otilio Ulate, decisively defeated Calderón, candidate

invaded from Nicaragua by forces led by supporters of the exiled former president, Rafael Guardia, seeking to overthrow the military junta of Figueres. The invaders seized the tn of La Cruz, 5 m. inside the border, and pushed inland to Liberia. C. R. and Nicaragua signed a pact of friendship in Washington on 21 Feb. 1949, both countries having agreed to a peaceful settlement of their dispute. C. R., like Colombia, has been able to make use of its contrasted regions as a source of strength; it is one of the few countries in Lat. America which have been able to develop a strongly coherent national life. To a smaller degree than in most other countries has the political and economic power been concentrated in the hands of a very few, and for this reason C. R. is an example of an effective democracy, affording a notable example

of what can be done in road construction, building and operating schools, and organising other public services under the monotonous weather conditions of a tropical land. The president serves for a term of 4 years, aided by the 9 secretaries of state whom he appoints. The Constitutional Congress is the legislative body, of 44 deputies elected for 4 years, one-half of whom retire at the end of every 2 years.

Much Eng. capital is invested in the rep. Education is compulsory and the 844 elementary schools and 14 secondary schools are free. The univ. at San José was estab. in 1843, and has 10 faculties, with 200 profs. and lecturers. There are secondary schools for boys and girls at San José, a normal school at Heredia, and colleges at Alajuela and Cartago. C. R. can boast one of the lowest percentages of illiteracy in Lat. America. Spanish is the language of the country. The national religion is Rom. Catholicism, but toleration is granted to all sects. The cap. is San José. The other important towns are Cartago, Limón, Heredia, Alajuela, Puntarenas, and Liberia. The total pop. of C. R. is 900,000. See L. Fernández, *Historia de Costa Rica, 1502-1821* (Madrid), 1889; M. de Périgny, *La République de Costa Rica* (Paris), 1918; L. F. Guardia, *Historia de Costa Rica* (San José), 1939; P. E. James, *Latin America* (New York), 1941; and J. and M. Blesauz, *Costa Rican Life*, 1944.

Costanzo, Angelo di (1507-91), It. historian and poet, b. Naples. His most important work was his *Historia del Regno di Napoli, 1250-1489, 1581-2*, which was written in clear style, and which occupied him for over 30 years.

Costello, John Aloysius (1891-), Irish lawyer and statesman. He was called to the Bar in 1914, was attorney-general 1926-32, and helped to draft the Statute of Westminster (q.v.). A member of the Fine Gael party (q.v.), he was Taoiseach (prime minister) of the Rep. of Ireland 1948-51 and 1954-7.

Costello, Louisa Stuart (1799-1870), authoress and miniature painter, b. Co. Mayo. She wrote poetry, but is chiefly known for her works on travel, memoirs, and romances. Her prin. books are *Songs of a Stranger*, 1825; *Specimens of the Early Poetry of France*, 1835; *A Pilgrimage to Auvergne*, 1842; *Catherine de' Medici*, 1848; *Memoirs of Anne of Brittany*, 1855; *Bearn and the Pyrenees*, 1884; *The Rose Garden of Persia*, 1887.

Costello Giubileo, see FIDENAE.

Coster, Laurens Janszoon, supposed at one time to have been the inventor of movable types and therefore the precursor of printing, was b. Haarlem, where it is known he was living 1436-83. Junius in his *Batavia*, written in 1568, states C.'s claim. Twenty years before Gutenberg he had the idea of carving out characters from cubes of wood; these he put together to form inscriptions to accompany engravings. Later on he used metal instead of wood. A dishonest workman, having stolen some of C.'s apparatus, took it to Mainz, where he set up a printing business, taking Gutenberg as partner.

The problem as to who really was the inventor of printing has never been solved. The rival claims of Gutenberg and of C. are set forth by A. van der Linde in *The Haarlem Legend of the Invention of Printing by Coster* (trans. 1871); Hessel in his *Haarlem, the Birthplace of Printing*, 1887; by Wyss in *Zentralblatt für Bibliothekswesen*, 1888; and by A. Ruppel, *Gutenberg*, 2nd ed. 1947.

Costigliole D'Asti, lt. tn. in Piedmont (q.v.), 8 m. S. of Asti (q.v.). It has an imposing castle, and produces a well-known wine. Pop. 9000.

Costroma, see KOSTROMA.

Costs. This word in legal matters generally means the fees of a solicitor for his professional services. For certain types of work (e.g. conveyancing) a solicitor, in the absence of any express agreement to the contrary, may charge his client only such fees as are prescribed by the Lord Chancellor under the Solicitors' Remuneration Act. In litigation C. usually refer to the amount of money which the court orders the loser of an action to pay his opponent for the legal fees and expenses which he has incurred in the proceedings. The award of C. is at the discretion of the court, but in practice the loser is ordered to pay. A successful plaintiff may not, however, be awarded his C. if he is given only contemptuous damages (q.v.). The court may, in certain circumstances, order each party to pay its own C. If an action in the high court ought properly to have been brought in the county court (q.v.), by reason of the amount recovered or the value of the subject matter involved, the successful party will be awarded C. on the county court scale, unless the judge is satisfied that there was sufficient reason for bringing the action in the high court. In actions tried by judge and jury the successful party is awarded C. unless the judge 'shall for good cause otherwise order' (e.g. if he considers that the action was frivolous or vexatious). There is no appeal from a judge's order as to C. except where the successful party is deprived of his C. for 'good cause,' it being for the court of appeal to decide whether such 'good cause' existed. The successful party prepares a bill of C. and the amount properly payable by his opponent is assessed or 'taxed' by a court official called a 'taxing master.' Any items in the bill which are disallowed are said to be 'taxed off.' The net amount allowed by the master is called taxed C. C. are usually awarded on a 'party and party' basis, i.e. only those items are included which are really indispensable for the adequate conduct of the action. The cost of all the work done by the solicitor is not allowed, so that his client, although successful in his action, usually has to pay the balance not recoverable on taxation. Sometimes a successful party may be awarded C. on the more liberal 'solicitor and client' basis; this does not, however, mean that the loser is required to pay any amount which his opponent's solicitor wishes to charge, but only that amount which the master considers

reasonable in the circumstances. In actions concerning the interpretation of wills or the administration of trusts, the court usually orders that the taxed (i. of all parties be paid out of the estate (i.e. the trust fund).

Costume, see DRESS.

Costume Design, Theatrical. In the early Gk drama the actors performed their parts in various masks of three readily discernible types—the comic, tragic, and satiric. The wide mouth of the mask served as a megaphone, carrying the voice to the full extent of the theatre, and the set mask showed the wearer's characteristics in a building perhaps too vast for the detection of facial expression. The tragic actor was further distinguished by his long coloured and embroidered robe (the *chiton*), with sleeves and high belt, his tall headdress (*onkos*), his cloak (*chlamys*), and his buskins (*colturni*) or high thick-soled boots, which made his height impressive, and were graded in thickness according to the importance of the wearer. The comic actor was contrasted by his low shoe (*soccus*), his lack of headdress, abbreviated or absent *chiton*, his usually

in a brown mask, with hooked nose and white beard, was attired in red, with a black cloak and soft noiseless slippers. The anct Pulcinella, the forerunner of Punch, was always clothed in white; his back was humped and his stomach padded, his mask bore a crooked nose, and his headdress was at times a skull-cap, at others a cone-shaped hat.

The early Eng. plays were all connected with religious subjects, and the most notable costumes were those worn by the devil, who was represented with the head of a beast and his body clothed in the skin of an animal. In the times of Shakespeare the prevailing costume of the day was usually worn, but concessions were made in the Rom. dramas, when the leading actors were adorned with breast-plates and plumed helmets. Dressing to suit the part is of comparatively recent date. In the middle 18th cent. Garrick played Macbeth in a contemporary suit of black silk, with silk stockings and a tie-wig; Spranger Barry (q.v.) played Othello in a full suit of gold-laced scarlet, cocked hat, knee-breeches, and silk stockings; and Mrs Yates, as Lady Macbeth, appeared in

TWO SCENES OF A GREEK KOMOS
From a vase painting

skin-fitting costume, and the padding in various parts of the figure to give him a ludicrous effect. In addition, the colours of the actors' clothing had a symbolic significance.

The Rom. dramatic costume was closely modelled on the Gk, coloured wigs replacing the headdress—white wigs for the aged, black for youths, and red for slaves. Kings wore crowns and were gorgeously apparelled, while beggars were clad in rags.

The It. comic play, or the *Commedia dell' Arte*, developed the still-familiar figures of Harlequin, Columbine, Pantaloon, and Punch. The original Harlequin wore a long jacket laced in front, with multi-coloured patches on his breeches, a bat and wallet hanging from his belt; his head was shaved and his cap adorned with a tuft of feathers or the tail of a hare, rabbit, or fox. Later the patches became blue, red, and green triangles symmetrically arranged, and they finally became diamond-shaped. Columbine, usually the wife or sweetheart of Harlequin, wore originally the long wide skirt and the apron of a peasant, but later took to the abbreviated skirt of the ballet so much more adapted to the dancer. Pantaloon,

enormous hooped petticoats and huge flourishes. It was not that these great actors of George II's and George III's day were oblivious of these solecisms. Benjamin West, who introduced modern costume into historical painting, tried to induce Garrick to reform stage costume on his lines; but Garrick was aware that the public had grown accustomed to actors in the dress of their own period irrespective of the cent. in which the story of the drama passed. He did, however, introduce modifications in costume. Audiences did not notice any incongruity, and when, in the previous cent., Pope and Addison satirised the theatrical costumes of their day, it was not on the score of anachronism, but because the hero overdressed, as by wearing a huge plume of feathers, or because the heroine distracted the attention of the audience by her complicated train. Provided the dress did not detract from the dignity of thought and sublimity of expression of the play, the critics were satisfied. The change came with John Kemble (q.v.), who is credited with being the first Eng. actor to make a close study of 'dressing a part on its merits.' Yet even Kemble was guilty of such gross anachronisms as playing

Macbeth in a bonnet of the Black Watch Regiment. It was not strict historical accuracy he aimed at so much as a combination of suitability and restraint. But later both he and Macready (q.v.) were strongly influenced by the researches of James Robinson Planché (q.v.), dramatist and student of costume, and it was to Planché that the Eng. stage owed the first real advance in the reform of costume design. Charles Kean, during his tenancy of the Princess's Theatre in Oxford Street (1850-9), did much to improve the dressing and staging of plays. Macready went further than all his predecessors, and is said to have been so impressed with the importance of 'becoming' his dress that after rehearsal he went to bed in it. This practice appears to have been followed by Sir Henry Irving (q.v.), who showed a taste and aptness in the art of costume design that proved the main factor in the present development of that art on the Eng. stage. In our day there have been spasmodic signs of a reaction, as exemplified in the paradox of Hamlet in a top-hat and frock coat; but such experimentation may be regarded as no more than a satire on the pageantry of Sir Herbert Beerbohm Tree's productions. Not seldom, too, the stage has been the medium of introducing new fashions, especially to women: Miss Violet Vanbrugh, for example, focused attention on the allure of the corselet and stock collar, and Miss Mary Moore, in *Mrs Goring's Necklace*, revived the popularity of the Alsatian bow, while to Kate Vaughan was due the vogue of the lace-frilled petticoat.

Before the Second World War the influence of the Russian stage had its effect on theatrical costume throughout Europe. Early in the 20th cent. Diaghilev (q.v.) introduced the Russian ballet to Paris, London, and Berlin, and the spectacular beauty of scenery and costume displayed originated in the brilliant imagination of the great artists Benois and Bakst (q.v.). The Bakst tradition is continued by many modern artists. See E. Aria, *Costume: Fanciful, Historical, and Theatrical*, 1906; M. Willson Disher, *Costumes and Pantomimes*, 1925; A. Nicoll, *Development of the Theatre*, 1927; P. L. Duchartre, *Italian Comedy* (trans. by R. T. Weaver), 1929; R. Fenop-Miller and J. Gregor, *Russian Theatre* (trans. by P. England), 1930; M. Fernald and E. Shenton, *Costume Design and Making*, 1937; and F. M. Kelly, *Shakespearian Costume for Stage and Screen*, 1938.

Costus, family Zingiberaceae, genus of tropical herbaceous plants with pinnately veined leaves and brightly coloured flowers in spikes, the enlarged lip of the flower being the conspicuous part. Owing to the spiral arrangement of the leaves on the stem the genus is popularly known as spiral flag. Sev. species are cultivated in England under glass, the most attractive species being *C. igneus*, with orange-red flowers, and *C. malortianus*, with gold and orange flowers.

Cosway, Richard (1742-1821), miniature painter, son of the master of Blundell's

School, Tiverton, where he received his education. His success in life is said to have been due to his clever portrait of Mrs Fitzherbert, which gained for him the interest of the Prince of Wales. He was elected R.A., 1771.

Coswig, Ger. tn in the dist. of Halle, on the Elbe, 35 m. NNE. of Halle (q.v.). It has lignite mines, and paper, chemical, and tyre manufs. Pop. 14,600.

Cotabato, or **Cottabato**, chief tn of a dist. of the same name in Mindanao, one of the Philippine Is. The dist. is mountainous, and the chief peak, Mt Apo, is a volcano. The tn is situated on the Moro Gulf, at the mouth of the N. arm of the Rio Grande de Mindanao or Pulangi R. Pop. 20,407.

Cotangent, see TRIGONOMETRY.

Côte d'Azur, see ALPES-MARITIMES.

Côte d'Or, dept of E. France, part of the old prov. of Burgundy. A chain of hills known as the Plateau de Langres runs through the centre of the dept; in the S. is the chain of the C. d'O. The NW. dist. of Châtillonais is densely wooded, and there the Seine takes its rise. Other rvs. are the Rhone and the Loire, and a canal, which connects the Saône with the Yonne, is 94 m. in length. The climate is equable and healthy, the plains and valleys are fertile, and there is rich pasture land. The prin. wealth of the prov. lies in its vineyards, and it is here that the celebrated Burgundy wines are produced. Other products are wheat, barley, potatoes, hops, and a little tobacco. Sheep and cattle rearing takes place in the W. dists. Iron and coal are mined, and there are chemical, metallurgical, and foodstuff industries. The prin. tns are Dijon (the cap.), Beaune, and Montbard (qq.v.). Area 3390 sq. m.; pop. 356,800.

Côte-Rôtie, see RHONE WINES.

Côteaux, small coastal tn of Sud dept, Haiti, W. Indies, 12 m. SSE. across the peninsula from Jérémie. Pop. 2000.

Cotelerius, Jean Baptiste (1627-86), eminent Fr. Hellenist, b. Nîmes. He held the office of prof. of Gk at the Royal College in Paris with great distinction. He pub. *Monumenta Ecclesiae Graecae* in 3 vols., 1677-86, and various other works.

Cotentin, Anne Hilarion de, see TOURVILLE, COMTE DE.

Cotentin, dist. of France which forms part of the dept of La Manche, on its N. coast being Cape La Hague. This portion of land was originally the diocese of Coutances. Its chief tn is now Cherbourg. The C. peninsula was the scene of hard-fought engagements in the battle of Normandy in July 1944, and, though fanatical groups continued to resist for a short time, all resistance in the N. C. came to an end by 1 July. On 28 July the Ger. escape route through Coutances was sealed with the capture of the city by the U.S. 4th Armoured Div., which, with the 6th Armoured Div., formed the spearhead of the 7th Corps. The enemy withdrawal, following the loss of Coutances, began to degenerate into a disorderly retreat. See further WESTERN FRONT in SECOND WORLD WAR, *Battle of Normandy*.

Cotes, Francis (1725-70), portrait painter, one of the founder members of the Royal Academy. He was a Londoner by birth, and became a pupil of George Knapp. He worked both in London and Bath. His portraits in crayons were unrivalled, and he was also a good painter in oils. His chief works are portraits of Mrs Child of Osterley Park, and of the beautiful daughter of Wilton, the sculptor, afterwards the wife of Sir Robert Chambers. His portraits have been engraved by Bartolozzi, Ittland, Green, MacArdell, and others.

Cotes, Roger (1682-1716), famous mathematician, b. Burbage, Leicester. He was educ. at St Paul's School, London, and at Trinity College, Cambridge, becoming a fellow of Trinity in 1705, and in the following year Plumian prof. of astronomy. In 1713 he completed his valuable preface to the second ed. of Newton's *Principia*. His death at the early age of 34 brought the tribute from Newton that 'had Cotes lived we might have known something.' His writings were published in 1722 under the title *Harmonia mensurarum*.

Côtes-du-Nord, maritime dept of the N.W. of France, formed from part of Brittany. Area 2787 sq. m. Off the steep rocky coast lie Bréhat and other small is. In form C. is an undulating plateau, with 3 ranges of hills in the S. portion. The climate is mild and equable. On the high lands the soil is poor, but along the coast, where seaweed and marl are used as a fertiliser, it is much richer. Wheat, oats, and buck-wheat are largely grown, also potatoes, mangels, apples, and plums. The culture of flax is an important industry, and the dept is famed for its breeding of horses. Slate, lime, and china-clay are found, and the flour mills, tanneries, iron-works, and ship-building yards form a source of employment to many of the natives. The chief imports are coal, wood, and salt, and the exports are horses, flax, and agric. products. The fishing industry is of great importance. C. is divided into the 4 arrons. of St Brieuc, Dinan, Guingamp, and Lannion. The cap. tn is St Brieuc. The dept contains many interesting churches dating from the 12th cent. Pop. 527,000.

Cotgrave, Randle (d. 1634), the author of the earliest Fr.-Eng. dictionary pub. in England. He was of a Cheshire family, but little is known of his early life. He was educ. at St John's College, Cambridge (1587), and afterwards became secretary to Wm Cecil, Lord Burghley. In 1611 he pub. his Fr.-Eng. dictionary, of which there was a second ed. in 1632. It was a remarkable book of its time, and is still of great value to the philologist.

Cöthen, see KÖTHEN.

Cotignac, Fr. vil., in the dept of Var. Near it is a pilgrimage church dedicated to Notre Dame de Grâce. Pop. 1300.

Cotillon. The Fr. dance of this name was a square dance, similar in form to dances used throughout the ages, even amongst primitive peoples. It was the forerunner of the quadrille, and became

known in Eng. society about 1770. Many figures of C.s were introduced into the quadrilles. Thus the true C. faded into the quadrilles and the lancers in England, though its popularity remained in France and Italy for some years. In mid-19th-cent. dance books, pub. in Boston and New York, descriptions of C.s then in vogue are given. During the second half of the 19th cent. the name C. was used for a ballroom entertainment and was 'little more than a name for a variety of games.' Dancers selected their partners in several ways—choosing the name of a flower, looking through a mirror, catching an orange, etc., whereupon they danced either the polka or the waltz, according to the fashion of the moment.

Cotin, Charles (1604-82), wealthy Fr. preacher and poet, and the counsellor and almoner of Louis XIV. He was versed in philosophy, theology, and the Heb., Syriac, and Gk languages. His *Œuvres Mêlées* was pub. in 1659 and his *Œuvres Galantes* in 1663. Boileau frequently mentions him in his satires, and Molière in his *Femmes Savantes* satirises him under the name of Trissotin.

Cotinga, bird of the family Cotingidae, commonly known as the Chatterer. It is found only in tropical America. The plumage of the male is especially magnificent at certain times of the year. The general colour of the female is plain grey or green. It feeds on fruit and insects.

Cotman, John Sell (1782-1842), eminent artist, b. Norwich, where he was educ. at the grammar school. Showing an aptitude for painting, he went to London about 1798 to study, and there made the acquaintance of a number of famous artists, including Turner. He returned to Norwich in 1807, and obtained a livelihood by giving lessons in drawing, while he also painted many landscapes and attempted portraiture. He was consistently unsuccessful, which partly accounts for his fits of deep melancholy, but with the help of his patron, Dawson Turner, finally gained a modest security as drawing-master at King's College, London, 1834. Like Crome, he gives lustre to the 'Norwich school,' and his earlier water-colours, including the famous 'Greta Bridge, Yorkshire,' are among the masterpieces of the art. He also produced some excellent oil-paintings. See L. Binyon, *John Crome and John Sell Cotman*, 1897; and S. D. Kitson, *The Life of John Sell Cotman*, 1937.

Cotman, Joseph John (1814-78), landscape painter, the second son of John Sell C. As an artist he had much original power, but his ill-health was an insurmountable bar to any success in life. He produced many drawings of merit.

Cotman, Miles Edmund (1810-58), landscape painter and the eldest son of John Sell C. He painted riv. and sea views, and etched a few plates, his work showing much taste and skill.

Cotoneaster, family Rosaceae, genus of deciduous and evergreen shrubs, of which *C. integerrima* is found in Wales. Most garden species come from China and the Himalaya, and outstanding kinds are

C. bullata, *C. franchetii*, *C. frigida*, *C. horizontalis*, *C. serotina*, *C. simonsii*, *C. wurdii*, and *C. x watereri*.

Cotonu, or **Kotonu**, tn and port of Dahomey, W. Africa, 17 m. WSW. of Porto Novo. A railway connects it with Sabé, and another with Porto Novo. It was ceded to France in 1868. See DAHOMEY.

Cotopaxi, volcano in the E. range of the Andes in Ecuador, S. America. The cone of the volcano is snow-clad. Estimated by Whymper to be 19,613 ft (the top is about 10,000 ft higher than the elevation of the valley), *C.* is the world's highest active volcano. There have been numerous eruptions, the most violent being probably that of 1768. The first ascent

tershire, and S. Warwickshire. The range of the *C. H.* is, roughly, divided into two portions by the valley of the Churn, and the scenery E. and W. of this valley differs to a great extent.

The *C. H.* were of considerable importance in anct times, as is shown by the old tracks on the high parts, and the early Brit. forts and Rom. camps. The dist. was of equal importance during the Middle Ages, when the woollen industry of the Flemings was at the height of its prosperity, and the splendid par. churches, imposing houses, and solidly built inns are evidences of the wealth of those bygone days. In the byways beyond the chief tns of the Cotswolds little vils., still old-world and unspoilt, with their houses of

Valentine & Sons Ltd, Dundee

UPPER SLAUGHTER IN THE COTSWOLDS

was made by Wilhelm Reid and A. M. Escobar in 1872.

Cotrone, see CROTONE.

Cotswold Hills, range of oolitic limestone hills mainly in Gloucestershire, England. They extend over a length of about 50 m.; the highest peaks reach to a height of 1100 ft (Cleve Hill is 1134 ft), but the average height is between 500 and 600 ft. The Thames takes its rise in the E. slopes. Large flocks of sheep are bred in the dist. Most people associate the word Cotswold with the line of hills extending across Gloucestershire from Wotton-under-Edge to Aston-sub-Edge; it is about 40 m. long by 30 m. wide in some parts. The hills, however, really commence at Bath, spread northwards into Gloucestershire, and over the border of that co. into N. Oxfordshire, S. Worces-

ter, and a source of delight to artists and tourists.

Among the chief tns are Gloucester, Cheltenham, Stroud, Evesham, Cirencester, Chipping Norton, Stow-on-the-Wold, Tewkesbury, Malnesbury, Lechlade, Pershore, and Tetbury. Among the smaller tns and vils. may be mentioned Painswick, Minchinhampton—noted for its common—Chipping Sodbury, Charlton Kings (in the grounds of Ashley Manor are the biggest oaks in the country, and there are traces of a Rom. camp at Battle-down Knoll), Broadway, Burford, Chipping Campden—noted for its market hall—Upper Slaughter, Lower Slaughter (with a delightful stream which flows down the middle of the street between stone banks and grassy verges, and eventually joins the Windrush at Bourton-on-the-Water),

Amberley (with a beautiful common on which, at Rose Cottage, Mrs Craik wrote *John Halifax, Gentleman*), Sapperton, and Winchcombe. Other features include Bear Hill, near Woodchester; and Painswick Beacon (922 ft high), with a Brit. hill-top fort on the summit. *See also under* the names of the tns. *See* H. Branch, *Cotswold and Vale*, 1904; O. G. S. Cranford, *Long Barrows of the Cotswolds*, 1925; H. J. Massingham, *Cotswold Country*, 1938; J. A. Gibbs, *A Cotswold Village*, 1939; and F. Derrick, *Cotswold Stone*, 1948.

Cottet, Charles (1863-1925), Fr. painter, b. Le Puy. He was a pupil of Puvis de Chavannes, and of Roll. He made his name by his gloomy, sombre, and impressive scenes of life on the coast of Brittany. His 'Storm on the Meuse,' 1890, and 'A Burial in Brittany,' 1895, now in the Lille Gallery, are typical of his work.

Cottian Alps, that portion of the main chain of the Alps extending from the Graian Alps on the N. to the Maritime Alps on the S., lying on the borders of France and Italy, and forming a div. of the W. Alps, as distinct from the Dauphiné Alps to the W. The C. A. have more than 30 peaks exceeding 10,000 ft, of which the most important are Monte Viso (12,602 ft), Aiguille de Scolette (11,500 ft), Aiguille de Chambeyron (11,155 ft), Rognosia d'Etache (11,106 ft), Dents d'Ambin (11,096 ft), Rochebrune (10,906 ft), and Rognosia di Sestrières (10,758 ft). There are some 20 passes or cols, among which is the pass of the Mont Genève, between the Cottian and Graian Alps, connecting the valleys of the R.s Dora Riparia in Piedmont and Durance in the Hautes Alpes. This is one of the oldest of the Alpine passes, and is the lowest carriage road in the W. Alps, while it is believed by many authorities to be the roadway used by Hannibal when crossing into Italy. There is also the famous Mont Cenis pass between Susa and Modane, constructed by Napoleon, and once the most used of the roadways, while the railway tunnel of Mont Cenis, 7 m. long, passes under the Col de Fréjus about 15 m. away. Other passes are the Col de Longet, Col d'Agnello, Col de la Traversette, Col de Sestrières, and the Col des Echelles. Here also are the Waldenses, who took refuge in the valleys of the C. A. **Cottingham**, tn in the Hants (p. 100) (q.v.) urb. dist. of Yorkshire, England, 4 m. from Hull. Pop. 11,000.

Cottle, Joseph (1770-1853), bookseller and author. He set up in the publishing business in Bristol (1791), where, through Robert Lovell, he made the acquaintance of Southey and Coleridge, making offers to each of them of 30 guineas for their poems; and in addition 50 guineas for Southey's *Joan of Arc* and 1½ guineas to Coleridge for every 100 lines of poetry he might write. C. was chiefly responsible also for Coleridge's periodical *The Watch-*

man, and, after an introduction to Wordsworth, pub. the *Lyrical Ballads*, 1798. On retiring from business C. produced *Malvern Hills*, 1798, and sev. other vols. of his own verse. It was he who handed over to Coleridge De Quincey's donation of £300, and he had some extremely sanctimonious correspondence with the poet protesting against his indulgence in opium. His *Early Reflections*, 1837, 1847, contains an injudicious and unworthy exposure of Coleridge, and the book is condemned, moreover, for inaccuracy and confusion.

Cotton, Sir Arthur Thomas (1803-99), general and irrigation engineer, who in 1828 began his life-work on the irrigation of S. India. The scheme for the waters of the Krishna was his, though it was carried out by Maj.-Gen. Charles Orr. Before his efforts Tanjore and the adjoining dists. were threatened with ruin from lack of water; they afterwards became the richest part of Madras. C. founded a school of Indian hydraulic engineering, and much of his work was done in the teeth of opposition and discouragement.

Cotton, Charles (1630-87), poet and translator, b. Beresford Hall, Staffs. He is said to have been educ. at Cambridge. His father, himself a brilliant man, numbered among his friends Ben Jonson, Selden, Izaak Walton, and Donne, and possessed estates in Derbyshire which were lessened in value through law suits. The younger C. travelled on the Continent as a boy, and seems to have been continually embarrassed by money matters. His *Ode to Winter* was eulogised by Wordsworth and Lamb, but his most meritorious work is a trans. of Montaigne's essays, first pub. in 1685. His *Scarronides*, or the *First Book of Virgil Travestied*, was pub. anonymously in 1664, and was revised in later eds., becoming more gross on each occasion. He also wrote *The Compleat Gamester*, 1674; *Wonders of the Peake*, 1681; and contributed a treatise on fly-fishing to the 5th ed. of Walton's *Compleat Angler*, 1676. *See* C. J. Sem-bower, *The Life and the Poetry of Charles Cotton*, 1911, and G. G. P. Heywood, *Charles Cotton and his River*, 1928.

Cotton, George Edward Lynch (1813-66) Eng. educationist who became an assistant master at Rugby, co-operating heartily with Arnold. In 1852 he was appointed headmaster of Marlborough College, which he raised to a high position. In 1858 C. became bishop of Calcutta, his chief work being the estab. of schools for Brit. and Eurasian children. *See* A. G. Bradley, *History of Marlborough College*, 1923.

Cotton, John (1584-1652), nonconformist divine, b. Derby. He was a tutor at Cambridge, and was later appointed vicar of Boston, Lincolnshire. Cited to appear, for his Puritan views, before Laud at the high commission court, he fled, in 1633, to Boston, Massachusetts. Here he preached and helped to frame the civil laws for the colony of Massachusetts. He was reputed a profound scholar, and was the author of nearly 50 works, including a catechism, forms of prayer, and a defence of the interference of a civil authority in

religious matters, in a famous controversy with Roger Williams.

Cotton, Sir Robert Bruce (1571-1631), antiquary, *b.* in Hunts, and educ. at Westminster School, London, under Wm Camden, and at Jesus College, Cambridge. He then began his collection of historical MSS. and coins, and rapidly acquired a great reputation as an antiquarian. Elizabeth I referred to him a question of precedence between England and Spain, while similar requests were made by members of the gov. Under James I he rapidly gained royal favour, and received a baronetcy in 1611, while the king employed him on sev. antiquarian researches. In 1615 he was imprisoned on suspicion of being implicated in the murder of Sir Thomas Overbury, but was released after 8 months. He was first returned to Parliament in 1604, but after the accession of Charles I his influence was used in opposition to the Crown on constitutional grounds, and he strongly opposed the suggested debasement of the coinage. His written criticisms of royalty led to his being excluded from his library, 1629-31. Although C. wrote many pamphlets, his original work is not outstanding: it is for his collections of MSS. that he is remembered. His library, with its additions from C.'s descendants, was bequeathed to the nation in 1700, and in 1753 removed to the Brit. Museum.

Cotton, Sir Stapleton, see COMBERMERE.

Cotton, Cotton Fibre. India had an export trade in C. in the reign of Anasis, 569-525 BC, and the consumption of raw C. for the making of garments existed long before Herodotus. The C. plant is indigenous to nearly all tropical and semitropical countries. It is a wool-bearing shrub (*Gossypium*) and is largely distributed all over the torrid zone. No sooner does the C. plant arrive at maturity than its swollen capsules or pods burst with a natural force into three or five segments to display its fleecy product. It has been calculated that there are about 137 varieties of C. The main species in use, however, are *Gossypium barbadense*, *G. herbaceum*, *G. hirsutum*, and *G. arboreum* or *G. peruvianum*. These include, respectively, Sea Is. and Egyptian (the finest varieties of all C.); Amer. Upland C.; Indian, African, Chinese, and other Asiatic varieties; and the fourth species named comprises grades of C. grown in India, S. and Central America, and Asia, and is the most universally consumed. C. is classified according to grades and staple lengths. Grades comprise a range of characteristics such as colour, feel, presence of extraneous material, etc., which are less susceptible to accurate measurement than staple lengths, which largely determine the spinning capacity of the fibre. Many different types of C. exist, with distinct but overlapping ranges of staple. According to the United States Dept. of Agriculture, C. with a staple range between $\frac{1}{2}$ in. and $1\frac{1}{4}$ in. constituted 60 per cent of the world production between 1927 and 1928, and 1931 and 1932.

The increasing output of comparable staple ranges in places such as S. Brazil,

China, and the irrigated regions of India has materially raised the share of this group in the world total in recent years (before the Second World War). C. below $\frac{1}{2}$ in. staple predominates in the indigenous growths of China and India. The adoption of shorter-stapled and earlier-maturing varieties to reduce the incidence of boll weevil, and the general shift of C. growing towards the W. sub-humid zones, largely accounts for the preponderance of the staples below 1 in. in the output of the U.S.A. India is also endeavouring to grow finer C., on account of the restricted market for short-staple varieties of the coarser types. Under the microscope a C. fibre appears as a flattened twisted tube, thicker at the edges than in the centre, and being of equal diameter for about three-fourths of its length; after which it gradually tapers for the remainder of its length, at the same time becoming more cylindrical. This twist of the C. fibre on its axis is the prin. cause of the C. fibres being so admirably adapted for spinning. Unripe fibres and C. in a wild state do not possess these readily twisting qualities. Botanists show that a good staple contains from 300 to 800 twists in its length, the mean length varying from 1.7 in. as in Sea Is. to 0.9 in. as in the best Indian quality; in an ordinary variety the number of twists ranges to over 150. Strength depends upon the number of twists and fineness of diameter and upon the length of the fibre. The length of C. fibres grown in the U.S.A. varies from $\frac{1}{2}$ in. to $1\frac{1}{4}$ in.; Sea Is. fibres from $\frac{1}{2}$ in. to $2\frac{1}{4}$ in.; Egyptian from $\frac{1}{2}$ in. to $1\frac{1}{4}$ in.; Brazilian from $\frac{1}{2}$ in. to $1\frac{1}{4}$ in.; Indian from $\frac{1}{2}$ in. to $1\frac{1}{4}$ in.; Peruvian from $\frac{1}{2}$ in. to $1\frac{1}{4}$ in. The fibres vary in diameter as follows: Sea Is., $\frac{1}{16}$ in.; Egyptian, $\frac{1}{16}$ in.; Amer. (ordinary), $\frac{1}{16}$ in.; Indian (best quality), $\frac{1}{16}$ in.

Cotton Crop and Production Statistics.—The largest C. crop is produced in the U.S.A., and it remains the most marketable C. because it is the most adaptable to general domestic use. But besides the countries already mentioned, C. is grown on Russian ter. in Asia, and (under the auspices of the Brit. C.-growing Association) in Uganda, Nyasaland, W. Indies, W. Africa, and the Sudan. But the three greatest grades for general consumption are cultivated in the U.S.A., Egypt, and India. In round figures about 35,000,000 bales, averaged at 500 lb. each, are consumed, in all parts of the world, annually. In the decade before the Second World War the C. industry was subjected in certain countries to gov. measures designed either to expand or restrict acreage by means of loans and subsidies. The demand for C., together with the market position of alternative commodities, largely influenced the ann. acreage under C. Acreage planted to C. in the U.S.A. represents (1954) about 37 per cent of the world total, and modern mechanical methods in cultivation include the use of the flame-thrower weeder, the C. picker, and the four-row cultivator, thus reducing considerably the labour force necessary. It should be noted that the unit yield of

C. varies in different countries, and also in the same country, through weather and soil conditions; but the average yield per ac. of the chief producing countries for the five seasons ended 1953-4 is as follows, in lb. per ac.: Port., 492; Egypt, 448; Soviet Union, 393; Anglo-Egyptian Sudan, 305; U.S.A., 285; Brazil, 140; Argentine, 196; Uganda, 90; Pakistan, 178; and India, 82. The largest exporters of raw C. are the U.S.A., India, Egypt, Brazil, and Pakistan.

Manufacturing Processes: Ginning.—The preparation for each season's crop of raw C. begins in Jan. and goes on until Mar., this work consisting of clearing and breaking up the ground. Planting of seeds commences in April, ending at the latest about the middle of the month. The picking of the ripe C. starts in Aug. and is completed in Dec. or the middle of Jan. The new season's crop of Amer. C. begins to arrive in Lancashire about the

these before the C. can be used for spinning, or even for baling. The first C. gin was invented in 1793 by Eli Whitney (q.v.), an American, and its productive capacity completely revolutionised the C. industry. It may be briefly stated that of the sev. types of gins in use, the most universally adopted are the Macarthy (or roller) gin and the Eagle (or saw) gin. After leaving the ginning houses the C. is pressed by machinery into bales, varying in weight from 200 lb. as in the case of Peruvian C., to 500 lb. as in the case of Amer. C., and 730 lb. as in Egyptian C.

Mixing and Blending.—On arriving at the spinning mill the raw material begins to pass through a series of processes. Mixing is the first. The C. is taken from the bales in its closely packed and matted condition and piled in stacks. It is allowed to stand in storage compartments for sev. days to permit the fibres to expand to their natural condition, and also to take out any excessive moisture. The blending is done for economic reasons, as it has been learnt by experience that the required quality of yarn may be effected by mixing a higher grade of C. with a lower one. It is essential that there should be a proper blending of shades if the C. is meant for yarn that has not to be dyed; but the chief consideration is that of getting a mixture of grades of fairly even fibres, so as to obtain the necessary evenness and elasticity in the yarn. Some mills still do the mixing by hand, but the large mills mix C. by machinery. Bale-breakers are used for this purpose, and one machine will mix over 150,000 lb. of C. a week. When the bales of C. have been opened, and the raw material properly mixed and stored, the next process is that of scutching.

Scutching, Carding, Combing, and Drawing.—The scutcher is a machine consisting of beaters running at from 1000 to over 1500 r.p.m. The machine beats the rough dirt out of the C., and by an ingenious process of fans and rollers forms it into a continuous sheet, which is lapped. The laps, or rolls of C., formed at the scutcher are even in weight and thickness, but the fibres are mixed up, and it is the function of the carding engine to comb them. The machine turns the C. into a sliver or rope of gossamer fibres, delivering the sliver into a revolving cam. There are different types of carding engines in use, but the one most generally adopted is the revolving flat carding engine. The wire teeth of the cards are of varied counts or thinness or thickness, according to the class of C. most used at the mill; they vary from 300 to 650 points per sq. in. In mills devoted to the spinning of fine counts, C. is put through combers after having been through the carding engine. The object of carding is to clean the C. and prepare it in slivers for the drawing frames, which draw the fibres parallel and even out irregularities, and the flyer frames where the attenuated slivers are further evened out. The effect of combing is to remove the shorter fibres. Other processes follow, lessening the

COTTON PLANT

A, cotton; B, section of seed; C, seed; D, calyx.

middle of Sept. or the beginning of Oct. The chief markets for the sale of the world's C. are New York, New Orleans, Liverpool, Bombay, Havre, Bremen, Milan, and Amsterdam. It is sold on 'spot,' but principally in 'futures,' for delivery at some future date arranged by those who contract its sale, which is governed by the strict rules of the various C. exchanges. Every C.-producing country has a variety of grades or quality, the prices being arranged accordingly. Amer. C. of the base price is known by the term of middling, and Egyptian by good brown, there being grades below and above these qualities. The first process through which raw C. passes after being picked from the plants (by hand and sometimes by machinery) is that of ginning, which consists of separating the seeds from the raw material. This is usually performed by different types of gins operated in close proximity to the plantations. This is an important process, as C. before being picked is composed of two-thirds seeds, and it is absolutely essential to separate

thickness of the sliver made at the drawing frames from that of rope to a string or roving. But whereas it used to be normal to use three or four flyer frames before spinning, each frame reducing the thickness of the sliver, with improved methods of drafting one or two passages are sufficient to produce a roving ready for spinning.

Spinning—Mules and Spindles.—In all the processes previously mentioned, from the carding engine, the object has been to bring the thick sliver more and more to the fineness of the yarn to be spun on the spinning mule, and afterwards prepared for the loom where it is woven into fabric. Practically all the movements of the machinery are automatic, the workers simply being attendants upon the machines. The bobbins manufactured on the roving frames are conveyed to the spinning rooms, where they are fixed in long rows or creels forming part of the spinning mule. For higher quality yarns

stretch. The distance that the carriage travels from the rollers is called a draw, or a stretch, there being three or more performed each min. Each spindle winds on about 210 in. of yarn every min.; or a pair of mules of 2000 spindles, managed by one spinner and two piecers, make 420,000 in. of yarn every min. of the working day, or over 31,500,000 yds a week. The spindles vary in speed, as the motion of the carriage does, according to the counts being spun. Generally speaking, a mill of 80,000 spindles would yield about 62,000 lb. of yarn per week. Spinning is the most interesting and the most ingenious process in the treatment of C. Richard Arkwright is usually regarded as the founder of the C. factory system. He directed his attention to the matter of C. spinning machinery about 1767. He erected his first mill at Nottingham in 1769, and put up one at Cromford in Derbyshire in 1771. Perhaps the most

 REPLICAS OF (LEFT) HARGREAVES'S SPINNING JENNY, AND (RIGHT) CROMPTON'S MULE SPINNING FRAME

two bobbins of roving are used to make one thread of yarn. In the classical mule the double roving passes through three sets of rollers running at different speeds, in order to stretch it still further. Under the most modern practice, called high drafting, there is often a fourth line of rollers or one line is replaced by a revolving apron, and this enables good quality yarns to be spun from coarser roving. One spinner and two or three helpers look after a pair of mules. With the headstock or driving parts of the mule in the centre, a pair of mules consists of two long, moving carriages, carrying, on an average, about 1000 spindles each. The carriage of the mule is continually moving to and fro, a distance of about 60 in. out and 60 in. back again towards the rollers and the creels of bobbins. In its outward run it twists and stretches the yarn; for instance, on 60's twist, the length of yarn coming from the rollers is about 60 in., but the quantity wound up to the 'cop' or the spindles during the inward run of the carriages is 64 in. per

distinct departures from the old domestic spinning wheels were made by Arkwright and James Hargreaves, a poor weaver of Standhill, near Blackburn. Hargreaves invented the spinning jenny in 1764, in which spindles were fixed in a perpendicular position, or very slightly inclined. Arkwright patented the spinning or water frame in 1764, which, while drawing out the carding or roving, gave to it a twist and pressure necessary to produce the hardness and firmness which fitted it so admirably to the purposes of the warp; it was also capable of producing finer yarn than had been done prior to that time. It was this invention and the jenny of Hargreaves for multiplying the spindles in one machine that estab. the C. factory system. But the great waste of labour and time rendered a combination of the two machines eminently desirable; and it was in 1779 that Samuel Crompton, a weaver living at the Hall-in-th'-Wood, near Bolton, invented a machine which combined the essential principles of Arkwright's frame with the property of

stretching possessed by Hargreaves's jenny. The machine became known as the mule.

Warps for Weaving.—Warps for weaving are usually made up of hard twist, and weft yarn (containing little twist) is used in the shuttles and interlaced with warp, thus forming the cloth. Formerly the yarn was wound on the spindles by hand; but in 1825 Richard Roberts, a Manchester engineer, perfected a system of self-action in mules which gradually dispensed with the hand-mule, of which only museum pieces now exist. Improvements that have been added from time to time in the self-acting mule have made it into a very complex and highly productive machine. Although there is still a lot of mule spinning in this country it is steadily being replaced by spinning on ring-frames. In contrast to mule spinning, spinning on the ring-frame is performed on a machine that has no movable carriages. Unlike the mule, it spins the yarn on a continuous system, drawing the roving from a creel of bobbins. Also unlike the mule, it does not wind the yarn on a bare spindle, but on bobbins or paper tubes. From the rollers (which deliver the roving) the rove passes through thread-guides, placed over the centre of the spindle, and is wound upon the spindle by means of a ring and traveller. The rapid rotation of the spindle and traveller impart the necessary twist to the yarn. The ring is borne upon a movable rail, which moves upwards and downwards, thus providing the necessary traverse for the building of the cop of yarn. Hence the origin of its name. The ring-frame was originally used for coarse yarn, but as a result of steady development fine yarns are now spun satisfactorily on rings. Generally ring yarns are preferred where strength is important. Mule yarns still have advantages in the finest counts and where softness (as in hosiery yarns) is desired. Counts of any number can be spun on the mule, from 1's upwards of 350's. Ring yarns rarely go beyond 100's. The term count means the number of hanks of 840 yds of yarn in 1 lb. Hence 350's means 350 hanks of 840 yds each to the lb. Yarn as delivered by the spinning machine is unsuitable, both in form and condition, for immediate conversion into cloth. There are various methods of warping—that is, the making of the warp and attaching it to the loom. In fact, after C. yarn has been spun it has to undergo almost as many processes to prepare it for the loom as it had to go through in making it suitable for the mule. The yarn cops are sometimes first of all wound upon warping bobbins, there being various types of machines for this purpose. This is followed by warping, which consists in placing the thread together to form a warp so that it can be evenly wound upon the beam of the weaver's loom.

Sizing of the Yarn.—Next comes the sizing of the yarn; this is an important feature. It is necessary that all single-twist warp yarns should be sized. The object is to increase the strength and

smoothness of the yarn to enable it to bear the strain of weaving; sizing also increases the weight and bulk of the yarn and improves the appearance of the cloth. Among the substances used are flour and starch (from wheat, rice, sago, maize); dextrine and gum tiagazol are also used. For making the yarn soft and pliable mixings are applied containing tallow, grease, oils, wax, soap, and glycerine. For weight china-clay, barytes, and Fr. chalk are added. Zinc chloride is one of the substances put in to prevent mildew. Magnesium chloride, calcium chloride, glycerine, and common salt are used to help the cloth to retain the qualities given to it by sizing, which has now become of a far more scientific character than formerly. The main secret, however, of getting the right sizing is in the boiling. There are several makes of machinery for applying the size to the yarn, also for drying the yarn afterwards. The warps for weaving are made of single threads mostly, but sometimes of doubled yarn; for doubling there is special machinery. Usually the object is to give the threads a twist in the opposite direction to the twist of each single thread; this renders the doubled yarn stronger, smoother, and more elastic than a single thread would be that was equal in counts to the doubled thread. Special effects in cloth can be produced by doubling in the same direction as the spinning twist or by doubling with hard twist to produce crepe yarns. Doubled yarn is normally used in sewing C. and lace, and in making heavy fabrics like sail-cloth. Yarn is also sometimes gassed before being woven. It is run through gas-flames to take off all loose fibres adhering to the surface. Yarn is gassed principally for the manu. of sewing threads, lace and mercerised goods. Before weaving also, yarn that has to undergo bleaching or dyeing is reeled into hanks of a suitable size. Yarn for export purposes is also reeled into hanks of 840 yds of yarn each.

Weaving.—Weaving is an ancient art. Woven goods were used by the Egyptians over 6000 years ago. Woven cloth has been preserved as specimens of work of the lake dwellers of prehistoric times. The shuttle is mentioned in the Bible and other ancient books. The art of weaving consists of interlacing a continuous thread amidst a series of parallel threads. No doubt weaving was carried on in its primitive forms till the invention of the fly-shuttle by John Kay of Bury in 1733. Before this shuttle, with its apparatus for sending it to and fro across the lathe of the loom, it was the custom to have two weavers for each loom, one at each end to throw back the shuttle. With Kay's introduction one weaver could manage a loom, and double the quantity of cloth woven each day. Of course, the invention was adapted to the hand loom. The steam power loom was first constructed by Dr Cartwright, who was granted a patent in 1785. Kay had to fly from the country on account of the attitude of the workers towards inventions that displaced

labour. Cartwright's first looms were also destroyed by mobs of working men. Like spindles in spinning, looms have continued to increase in speed. Patent inventions form the basis of automatic weaving. Improvements have been added from time to time, including the drop-box motion, to operate the rising and falling of the shuttles according to their use for putting in different shades and colours to make up the patterns of the cloth. Various labour-saving introductions have made it comparatively easy for one weaver to manage from four to eight of the ordinary Lancashire looms, but until the invention of the modern automatic loom it was still necessary for the weaver to renew each weft cop as it ran out. In automatic weaving specially wound bobbins are used for the weft and the machine replaces each as it runs out from a battery, without stopping the loom. With assistants, a weaver can tend from 20 to 60 automatic looms, according to the width and complexity of the cloth.

Other processes.—Mercerising was invented in 1850 by John Mercer (*see* MERCERISED COTTON), a calico printer of N.E. Lancs. There are now many patent methods in use. The process of mercerisation is to give to C., yarn, and cloth the appearance of silk, to prevent shrinkage, and to give to the vegetable fibres a greater attraction for dyes. In many cases mercerised C. has displaced silk; indeed, it has such a lustre that it can be scarcely distinguished from silk. Mercerisation also increases the strength of yarn and cloth. Its action is to remove such resistance to dyes as arises from wax, oil, and other natural colouring substances always present in C. fibres. As a result of mercerisation the yarn has been noticed to have increased in strength to the extent of 50 per cent. The bleaching, dyeing, and finishing of C. have developed considerably of recent years. The bleaching is now carried out at all stages of manuf.—those of raw C., slubbings, rovings, cops, cheeses, hanks, and warps, and in the cloth pieces. By far the greater quantity, however, is bleached in a woven state. Dyeing also is now carried on at all stages of manuf. Of late years, the practice of dyeing yarns in forms other than in hanks has grown considerably. Details are given under DYE. There are sev. methods of bleaching, but the old chloride of lime bleach is still the most successful, both in regard to results and cost. Calico printing is now carried on extensively. In this process there are four distinct operations, as follows: preparation of the cloth for printing; application of the colouring matter; the fixing of the colouring matter; and the finishing. The printing rollers are engraved in various ways. Hand engraving is applied mainly to very fine work. The pentagraph method is used for bold designs, this being an etching process on a coating of varnish. Photo-etching is also applied for transferring the necessary design on to the copper rollers used in the printing machines. Fine designs are also im-

printed on the roller by a process of milling; in this case the copper roller is run over hardened steel rollers which contain a relieved impression of the required design. In recent years processes have been developed, and are now widely applied, which greatly reduce the tendency of cotton cloth to shrink and crease in wear and laundering. C. cloth can also be rendered waterproof and fire-resistant.

The British Cotton Industry.—This is carried on mostly within a radius of 30 or 40 m. of Manchester, where the humidity of the atmosphere is highly suitable for spinning and weaving. The area also has a good supply of coal and water. Spinning is done in S. Lancs, principally in the dists. of Manchester, Oldham, and Bolton. Oldham is the centre of the coarse-spinning area, and Bolton is the centre of the fine-spinning area. C. weaving is mostly confined to the N. and N.E. of Lancs, the prominent dists. being Blackburn, Preston, Burnley, Nelson, and Accrington. C. knitting and lace-making are carried on in Derby, Leicester, and Nottingham, and sewing thread is manuf. at Paisley in Scotland. Some few years before the Second World War the Brit. Gov. somewhat improved the Brit. colonial market for Lancs C. piece goods by a system of quantitative restriction of imports especially directed against Jap. imports into the Brit. colonies. In 1939 a Cotton Industry (Reorganisation) Bill was introduced by the president of the board of trade. Its chief aims were to reduce the excess capacity in the C. industry, the result of serious contraction suffered in the last 25 years, which overlay the markets, and to counteract weak selling by schemes of minimum price-fixing. The Cotton Industry Act, 1940, provided for setting up a board to perform specified services for the benefit of the C. industry. Among the services specified are advertising to stimulate exports, research and experiments relative to the manuf. or consumption of the products of the industry, and the collection and pub. of statistics. The Act, which was suspended at the outbreak of war and later repealed by the post-war Labour Gov., also provided for payments by C. spinners to meet the expenses of the board and to help the Empire C. Growing Corporation. In 1945 the Gov. appointed a working party to examine the organisation and operation of the C. industry, and as a result of their recommendations the C. board was reconstituted as a development council. It became tripartite, that is it included representatives not only of the employers and trade unions in all branches but also of outside interests. Its funds are now raised from all sections of the industry (not only spinners) and include the industry's ann. contribution to the cost of running the Brit. C. Industry Research Association at its research centre at Didsbury, Manchester. The Amer. C. industry is in a flourishing condition owing to the large domestic consumption of C. goods, the use

of automatic machinery, and the enterprise which discovers new uses for C. products. The quantities and value of U.K. exports of C. yarns and manufs. in 1938 and 1954 are shown in the table on pp. 54-55.

Government Controls. — During the Second World War no yarn could be spun in Britain without gov. approval given according to the intended final use of the product. Complete 'planning' of production began in 1942; its objects were to ensure that enough C. goods were produced for the forces (including, later, demobilisation clothing), for use by other industries, and for the civilian clothing ration. Exports were, in general, unimportant. After the war the aims of the C. industry were to earn foreign exchange,

and non-wool cloths sold over the counter in the piece.

The Raw Cotton Commission, appointed in 1943, was the (Labour) Gov.'s first experiment in state buying as a permanent policy. In 1952, after the Conservative Gov. took office, spinners were given an ann. choice of buying from the Commission or obtaining their own supplies. In the first year about 30 per cent was bought privately. In the second year the percentage rose to over 50 per cent and the Gov. decided to wind up the Commission. The Liverpool Futures Market was reopened in May 1954 and the Commission came to an end in Aug. 1954, a liquidator being appointed to dispose of the remaining stocks.

Cotton Board, Manchester

'COMBERS' IN A MODERN COTTON FACTORY

to enable the clothes ration to be increased, and supply war-devastated areas, especially in the Far East. Controls were progressively relaxed, but yarn order books and exports were limited by a licensing system until 1949, and price controls on yarn and cloth were retained until 1948. During this period exporting on commercial principles, the earning of useful foreign exchanges, and the rebuilding of Lancashire's trade connections received little attention; and it was not until the convertibility crisis of 1947 that the Gov. began to look to the C. industry for dollars. Clothes rationing ended in 1949, and the Utility Scheme was replaced by a system under which purchase tax is charged only on the excess over an arbitrarily fixed price, so that the cheaper goods escape tax. In 1955 the tax was removed entirely from household textiles

Cotton in the U.S.A. — The growing of C. and its manuf. have for many decades played a very large part in the economic life of the U.S.A. Although the farmers of the S. states vary their crops, C. is still by far the most important element in farming in the S. The total ann. value of the C. crop of the U.S.A. has averaged something like \$1,500,000,000. The leading C. states are Texas, with 6,100,000 ac. devoted to its growth and producing over 1,650,000 bales; Mississippi, over 2,280,000 ac. and 1,040,000 bales; Arkansas, 1,625,000 ac. and 1,240,000 bales; Alabama, 1,520,000 ac. and 800,000 bales; Georgia, 1,045,000 ac. and 555,000 bales (compared with a previous average of 956,000 bales); N. Carolina, 578,000 ac. and 420,000 bales; S. Carolina, 925,000 ac. and 695,000 bales; and Oklahoma, 520,000 ac. and 260,000 bales.

Type of Product	1938
Cotton yarns: grey and unbleached bleached and dyed	110,002,900 lb. 12,947,300 lb.
Cotton manufs.: woven piece goods: grey unbleached white bleached printed dyed in the piece manufactured wholly or in part of dyed yarn and commonly known as coloured cottons	446,678 cwt. 633,365 cwt. *306,281,000 sq. yds *368,777,000 sq. yds * 78,581,000 sq. yds

*No weights given.

QUANTITIES AND VALUES OF UNITED KINGDOM EXPORTS OF COTTON

In the early days of C. manuf., the raw material was grown in the S. and manuf. in the N., principally in the New England states which had almost a monopoly of the business. Since the First World War a veritable revolution has taken place in the industry. With water power, cheap coal, and cheap labour in the S., it suddenly occurred to business men that it was more economical to manuf. C. right in the section where it was mainly grown. The result is that to-day the S. has more spindles in operation than New England. Recent figures showed the S. with 15,000,000 spindles as against 9,000,000 in the New England states. N. Carolina had 5,740,000 spindles; S. Carolina, 5,586,000 spindles; Massachusetts, 4,204,000 spindles; Georgia, 3,140,000 spindles; and Rhode Is., 1,768,000 spindles. The average number of active spindles is about 25,000,000. *See also DYE.*

Marsh, Mercerising, 1941; H. Hargreaves, A List of Recorded Cotton Insects of the World, 1948; and The Cotton Year Book (ann.).

Cotton Printing, *see* CALICO PRINTING.

Cotton Weed, or *Oenothera maritima*, a very rare perennial of seashores and shingle in Cornwall and Jersey, and the Mediterranean; covered with long silky hairs. It belongs to the family Compositae.

Cotton Wool, name given to C. in its raw, woolly state as gathered from the bolls or capsules of plants of the genus *Gossypium* and family Malvaceae (*Gossypium herbaceum* or *album*, *G. barbadense* or *nigrum*, *G. arboreum*). It consists of the soft, downy fibres (1 to 2 in. long) surrounding the C.-seeds. These hairs or fibres are separated from the seeds and

freed from impurities, wax and fatty matters being removed by boiling in dilute caustic potash. Bleaching-powder and hydrochloric acid are used in preparing C. W. for use, and it is washed frequently. Prepared sheets or rolls of it are used like C. batting for stuffing and quilting. A soft, downy substance resembling fine wool, it is usually enclosed between glazed surfaces for such purposes, and sold by the yard. A specially prepared kind is used in surgery for dressing wounds, etc. It is absorbent, soft, and elastic, and is often steeped in disinfectants. *See COTTON.*

Cotton-worm, popular name of the larva of *Aletia xylinæ*, a species of Noctuidæ, or owlet-moths, closely allied to the army-worm. This caterpillar is to be found in both N. and S. America, where it ravages the cotton crops and leaves other plants alone. The destructive nature of this creature sometimes costs the U.S.A. sev. millions of dollars in one year.

Cottonseed, seed of various species of the genus *Gossypium*, grown in tropical, sub-tropical, and warm temperate climates primarily to produce cotton fibre; C. is thus essentially a by-product. Prin. varieties cultivated are, broadly speaking, *G. hirsutum* in the U.S.A., *G. nigrum* and *G. arboreum* in India, and *G. barbadense* in Egypt. The plant grows as a bush, to a height of 2 to 3 ft., and bears flowers of various colours ranging from a creamy hue to red, depending upon the variety. After pollination, the seed pods develop into 'bolls' which gradually ripen and finally burst, revealing the fine white cotton fibres enclosing the black seeds. These bolls are picked by hand or machine and passed through 'cotton-gin' machines for separation of staple fibre from seed, the fibre to be pressed into bales for transporting to spinning mills and the seeds either fed to cattle or delivered to crushing mills for extraction of the oil. Some seeds, in addition to producing staple cotton, produce a high percentage of short fibres or 'linters' and, as these are not all

YARNS AND MANUFACTURES FOR THE YEARS 1938 AND 1954

removed in the ginning process, the seeds are commercially known as 'White'; others produce no linters and the essentially naked ginned seed is known as 'Black'. White seed is 'delinted' at the crushing mill by machines similar in principle to the cotton saw-gins. C. is ovoid, about a quarter of an inch in length, and comprises 2 prin. parts: the hull or spermoderm, constituting about 40 per cent of the whole seed and from which the cotton fibres arise, and the kernel or embryo, from which oil and meal are obtained. Main cotton producing countries are: the U.S.A., the Soviet Union, India, China, Brazil, Egypt, Mexico, Pakistan, Turkey, and Argentina. The U.S.A. is by far the largest producer with yields of over 6 million tons per year, while yields in other countries vary from an estimated 2 million tons in the Soviet Union to about a quarter of a million tons in Argentina. In 1954 only about 2 per cent of world production of C. was exported, chiefly by the smaller producing countries; the Sudan was the major exporter with rather more than 100,000 tons out of a production of some 170,000 tons. The linters removed at the crushing mill are used as a stuffing material in upholstery, for the production of wadding and low-grade yarns and, when purified and bleached, in the preparation of paper and surgical dressings. Also, they contain from 72 to 85 per cent of cellulose, which is purified and used for the production of high-tensacity rayon for tyres, hosiery, etc., esters and ethers for plastics, and nitro-cellulose for explosives. See COTTONSEED OIL.

Cottonseed Oil, obtained from the seed of various species of the plant *Gossypium* by expression, using hydraulic presses or continuous screw presses (expellers), and, to a lesser extent, by extraction with a solvent (see OILSEEDS, PROCESSING OF). The black or delinted seed may be pressed as a whole, or the hull, which constitutes about 40 per cent of the seed and contains only 1-2 per cent of oil, may first be

removed and the kernel only, containing about 37 per cent of oil, pressed or solvent extracted to produce cake or meal of high protein content and oil of better quality and colour. Crude C. O. is dark in colour, has a strong characteristic flavour and odour, and is remarkable for the presence of an unusual amount of non-glyceride substances including a complex phenolic body known as gossypol, which is removed during alkali refining. The refined oil is liquid at room temp. but, due to the presence of high melting glycerides, it deposits a solid fat known as C. 'stearine' when cooled below 50° to 60° F. It is used as a frying oil, or is hydrogenated (hardened) to a desired plasticity for use in the manuf. of margarine and cooking fats, or is separated into two fractions by cooling or 'winterisation' to produce a liquid oil suitable for use in salad oils and mayonnaise and, to a small extent, for packing foods (sardines, etc.). Formerly, separation of the high melting glycerides was by simply allowing the oil to stand and settle out in outside tanks during the winter, hence 'winterisation'; but, due to the large demand for 'winter' oil, artificial cooling is now employed and the liquid oil is separated from the solid portion by filtration. Main fatty acid components of the whole oil are—saturated: Palmitic (20-24 per cent); unsaturated: Oleic (23-36 per cent) and Linoleic (42-54 per cent). The black soapstocks produced in the refining process are used for soap making and are also a source of raw material for fatty acids for use in the manuf. of alkyd resins, greases and lubricants. The 'undecorticated' and 'decorticated' C. cake and meal residues, produced from seed with and without hulls respectively, are valuable protein foods for cattle. Cottonseed hulls have so far only limited uses but it is thought that their potentialities have not been fully explored. They have little nutritional value and are included in meal only with the object of adjusting the protein content. Main constituents are: crude cellulose, pentosans, lignin and

tannins. The pentosans may be converted into furfural for use in the petroleum, lacquer, synthetic resin and other industries. Some hulls are used as boiler fuel. See COTTONSEED.

Cottrell, Ida Dorothy Otley (1902-), Australian novelist, *b.* Picton, New South Wales. Her maiden name was Wilkinson, and in 1922 she married Walter M. Cottrell and went to live in America. Her novels *The Singing Gold*, 1929, and *The Earth Battle*, 1933, were followed by 2 animal stories, *Warka*, 1936, the hero of which is a terrier, and *Wilderness Orphan*, 1940, about a kangaroo.

Cottrell-Lodge Method, method of precipitating dust and smoke particles by a high-tension electric discharge, discovered in 1883 by Sir Oliver Lodge, and developed on an industrial scale by Lodge and Cottrell. It is used to purify the fumes from cement and other furnaces, sulphuric acid works, smelting plants, factories, and so on. The apparatus consists of chambers containing electrodes maintained at high voltage, e.g. 75,000 v., and the dust particles are attracted to these electrodes. From time to time the deposited solid is shaken off by the action of an automatic hammer. The C. M. not only helps to purify the atmosphere of industrial dists., but enables valuable solid by-products in the fumes to be collected easily; thus the rare metal thallium is obtained from the flue dust of sulphuric acid works.

Cottus, the genus of spiny-finned fishes which includes the bull-heads and miller's thumbs, is typical of the family Cottidae. The species are to be found round the coasts and in fresh water of the N. temperate zone. *C. gobio* is the common bull-head (q.v.) of streams in Britain.

Coty, René (1882-), Fr. statesman, educ. at Caen Univ. He served in the First World War, and subsequently entered Parliament. After the Second World War he was a member of the National Assembly 1945-8, and an independent member of the Senate from 1948. In 1953 he was elected second president of the Fourth Republic in succession to Vincent Auriol (q.v.), being chosen in the thirteenth ballot.

Cotyledon: 1. Family Crassulaceae, as now classed a genus of 30 species, chiefly S. African, grown in cool greenhouses in gardens. *C. caldioides*, with fleshy stem and leaves, *C. paniculata*, and *C. reticulata* are summer flowering and succulent; *C. undulata* is a shrubby plant with attractive mealy leaves and cream flowers with red striping.

2. The first leaf or leaves of a plant, forming part of the embryo in the seed. C.s may stay in the testa below ground or be raised above ground on germination; and in some plants (e.g. legumes) contain food reserves for the embryo. The number of C.s is the basis of the two classes of flowering plants, Monocotyledons and Dicotyledons.

Cotylosaurs, primitive Upper Carboniferous and Triassic reptiles from which other reptiles are believed to have originated.

Cotys, or **Cotyto**, Thracian goddess, whose festival, the **Cotytdia**, was celebrated during the night and resembled that of Cybele. She was later worshipped at Corinth and Athens.

Coucal, or **Crotropus**, genus of bush-birds of the family Cuculidae; the species inhabit Asia, Africa, and Australia. They are strong-billed birds which feed on small animals, from insects to young birds, and in habit they are chiefly terrestrial. Unlike many of their allies the cuckoos they build their own nests. *C. sinensis*, the crow-pheasant, is an Asiatic species.

Couch, Sir Arthur Thomas Quiller-, see QUILLER-COUCH, SIR ARTHUR T.

Couch-grass, see AGROTYRON.

Couchant, term in heraldry, used to describe the position of a beast lying down with its head up. If its head rests on its paws it is dormant.

Coucy, Chastelain de, Fr. poet of the 12th cent., who took part in the Third Crusade (1189-91), being killed by the Saracens in 1203. His few songs were pub. by Fath as *Die Lieder des Castellans von Coucy*, 1883. He was the hero of *Le Roman du Châtelain de Coucy et de la Dame de Fayel*, a romance of the end of the 13th cent. Crapet's ed. appeared in 1829, a reprint in 1895. See G. Paris, *Romania*, viii, 1879.

Coucy, Sires de, Fr. medieval family. They were resolute opponents of the policy of royal aggrandisement pursued by Louis VI. One of them died at the siege of Acre (q.v.) in 1191, and another at Crécy (q.v.) in 1346. A member of the family, sent as a hostage to England, married Isabel, daughter of Edward III.

Coucy-Le-Château-Auffrique, Fr. vil. in the dept of Aisne, 10 m. from Soissons. There are the ruins of the splendid 13th-cent. castle of the Sires de Coucy (q.v.), and a 12th-16th-cent. church. Pop. 760.

Coué, Emile (1857-1926), apostle of auto-suggestion as a method of cure for disease, *b.* Troyes, France. He carried on business as a chemist at Troyes, 1882-1910, and was led, by an accidental occurrence in his business, to belief in the curative power of imagination and expectation. His fame was almost entirely due to his sincere simplicity and charity. He opened a free clinic at Nancy in 1910, and after the First World War lectured throughout France and in England and America—on his famous text 'Day by day and in every way I am growing better and better.'

Coueron, tn. of France, situated on the Loire, in the dept Loire-Inférieure. It has metal industries. Pop. 10,000.

Coues, Elliott (1842-99), Amer. ornithologist and biologist, *b.* Portsmouth, New Hampshire, U.S.A. He was prof. of anatomy at Washington and founded the Amer. Ornithologists' Union. His chief works are *Key to the North American Birds*, 1872; *A Field Ornithology*, 1874; *Birds of the North-west*, 1874; *Birds of the Colorado Valley*, 1878; *New England Bird Life*, 1881; and *Dictionary of North American Birds*, 1882. He also pub. a notable vol. on N. Amer. mammals,

Fur-bearing Animals, 1877, and sev. works on early travel in the W.

Cougar, or **Cougat**, see **PUMA**.

Cough, explosive expulsion of air from the respiratory passages produced by reflex action. The nerves of the mucous membrane lining the upper air passages are particularly sensitive to irritation caused by foreign substances or inflammation. The action of coughing consists of a deep inspiration, followed by the closure of the glottis. The expiration suddenly bursts open the glottis, producing a current of high velocity which tends to sweep obstructive particles outwards through the mouth. The action—which is automatic, although it can be modified by voluntary efforts—normally has a salutary effect in preventing these particles reaching the lung field and setting up foci of infection there. It may, however, lead to excessive disturbance and exhaustion in some diseases. Coughing may be caused by irritation in the nasal passage, pharynx, larynx, trachea, bronchial tubes, or lungs, due to the presence of particles of dust or food, or to inflammation. The breathing of acrid vapours has the same effect, and gastric or purely nervous disturbances may constitute a cause. Some varieties of C. may be recognised by their characteristic sound: pleurisy (q.v.) gives rise to a half-suppressed C., bronchitis (q.v.) causes a loud and explosive C., whooping C. (q.v.) is accompanied by a violent inspiration, which causes the characteristic whoop, while the purely nervous C. has an affected sound. The treatment depends on the predisposing cause, as it is often inadvisable to check a C. as such. It is to be observed, however, that continued coughing produces an ultra-sensitive condition of the respiratory passages, and, as so often happens, nature's method of eliminating irritating substances may be too vigorous for the comfort of the organism as a whole. In young children coughing may produce hernia, and there is possible danger of rupture of blood-vessels in consumptive patients. Remedies fall into two classes: expectorants, which help in the expulsion of irritating substances, and sedatives, which tend to allay the sensibility of the nerves causing coughing.

Couillet, industrial in the prov. of Hainaut, Belgium, 1 m. S. of Charleroi. It has coal-mines, chemical works, ironworks, and furnaces. Pop. 13,900.

Coulanges, Numa Denis Fustel de, see **FUSTEL DE COULANGES**.

Coulmiers, Fr. vil. in the dept of Loiret, 12 m. from Orleans. The French defeated the Bavarians here in 1870 (see **FRANCO-GER. WAR**). Pop. 160.

Coulomb, Charles Augustin de (1736–1806), Fr. scientist, b. Angoulême. He is well known for research work in connection with magnetism and electricity, and he invented the torsion balance for measuring the force of electric and magnetic attraction. The practical unit of quantity of electricity is named after him. In 1779 his essay, *Théorie des machines simples*, secured a prize offered by the Academy, of which he afterwards became a member.

Coulomb, practical unit of quantity of electricity, being the quantity conveyed by a current of 1 ampere in 1 second. It is so called after the Fr. physicist and engineer. See **AMPERE**.

Coulommiers, Fr. tn in the dept of Seine-et-Marne, on the Grand-Morin. It has printing works, and manufs. sugar and Brle cheese. Pop. 7700.

Coulson and Purley, urb. dist. of Surrey, England, about 3 m. from Croydon. There are light engineering industries and chalk quarrying. Pop. (1954) 64,180.

Coulter, John Merle (1851–1928), Amer. botanist and educationalist, b. Ningpo, China, educ. Hanover College. Botanist on the U.S.A. Geological Survey in the Rockies, 1872. President of the Amer. Association for the Advancement of Science (q.v.) in 1918. Pubs.: *Plant Relations*, 1899, 1910; *Plant Structures*, 1899, 1904; *Plant Studies*, 1902, 1904; *A Text Book of Botany*, 1906; *Manual of Rocky Mountain Botany*, revised ed. 1909; *Fundamentals of Plant Breeding*, 1914; *Evolution in Sax. Plants*, 1914; and *Plant Genetics*, 1918.

Coumarin, one of the most widely used synthetic crystalline aromatics in fancy perfumes for soaps and creams and in flavours. It occurs naturally in a number of plants, of which tonka beans, dates, leaves of woodruff, meililot herbs may be mentioned. It has a pleasant spicy odour recalling that of new-mown hay and a characteristic bitterish flavour much appreciated in confectionery, liqueurs, and tobacco.

Coumarouna, see **DIPTERYX**.

Council Bluffs, city and railway centre, cap. of Pottawattamie co., Iowa, U.S.A., on the Missouri R. opposite Omaha, Nebraska, with grain elevators and stockyards. It manufs. food products, machinery, tools, railway equipment, batteries, radio parts, and plastics, and is the seat of Iowa School for the Deaf. It was named after the 1804 council between (Meriwether) Lewis and Clark and the Indians. C. B. was an outfitting point for the gold rush of 1849, and became the E. terminus of the Union Pacific Railroad in 1863. Pop. 45,400.

Council of Europe, estab. in 1949 by agreement of the consultative council of the Brussels treaty (q.v.) organisation, consisting of a consultative assembly and a council of ministers. Its headquarters are in Strasbourg. Although having no statutory force the Council of Europe has played a considerable part in preparing the ground for subsequent treaties among groups of its members on economic and defensive topics, all tending towards the European unity which is the Council's ultimate goal. See further under **EUROPE. History**.

Council of Industrial Design, see **INDUSTRIAL DESIGN**.

Council of National Defense (U.S.A.), body created by Act of Congress in Aug. 1916, and inaugurated in the spring of 1917, to co-ordinate the industries and resources of the nation. It included the secretaries of war, navy, interior, agriculture, commerce, and labour, and it

was responsible for the creation of sev. organisations, each of which had special functions bearing directly on the successful prosecution of the war. The C. was assisted by an advisory commission. The principle underlying its formation was adopted throughout the States, and state C.s of N. D. were formed with duties similar to those of the parent body. It has been replaced by the National Security Council and National Security Resources Board.

Council of Ten, see TEN, COUNCIL OF.

Councils, Church (Lat. *concilium*, from *cum*, together, and root *cal*, to call), assemblies of eccles. dignitaries for the purpose of regulating some point of faith or discipline. The hist. of C. C. can be carried back to the 2nd cent. AD, when the churches of Asia Minor held C. to decide against Montanism. These early C. were evidently of a somewhat informal nature. Neither their composition nor their jurisdiction was clear. At various times more important C. comprehending a diocese or a prov. were called, but the rise of oecumenical C. throws these into the background. These general C. were convoked by the emperor. Bishops alone, or the representative priests or deacons of absent bishops, had the right to vote in early times. Abbots were later included, and cardinals who held no bishopric. At the Vatican Council cardinals, bishops, and generals of religious orders were allowed to vote. There is no proof that the papal legates exercised the presidency. Even Ultramontane writers of the Rom. Church agree that there is no more than a probability that they did so at Nicaea. The question as to the superiority of the Pope to an oecumenical council was hotly contested during the Middle Ages, but Rom. Catholics have now had the matter settled for them by the Vatican Council. Many medieval theologians also held that the decisions of a general council were only binding when they were received as such by the whole Church, and this practically resolves itself into a question as to which C. are oecumenical. St Augustine, in a treatise against the Donatists, affirms that plenary C. assembled from the whole Christian world may be corrected, but by the beginning of the 7th century was generally held that general C. were infallible. The modern Rom. Catholic theory is that the decrees of a council only become binding when ratified by the Pope. Though there is some difference in the manner of numbering the oecumenical C., the following method, that of Hefele, is the one generally adopted in the Rom. Church: (1) The first of Nicaea (AD 325), held at the height of the Arian controversy at the summons of Constantine, drew up the major part of the Nicene Creed. (2) The first of Constantinople (381) completed the Nicene Creed, defining the divinity of the Holy Spirit. (3) The Council of Ephesus (431), held to defend the faith against the Nestorians, safeguarded the personality of Christ by giving the title of *Theotokos* (Mother of God) to his mother. (4) The Council of Chalcedon (451) condemned the opposite heresy of Eutyches. (5) The second of

Constantinople (553), held against Nestorianism. (6) The third of Constantinople (680) condemned the Monothelite heresy. (7) The second of Nicaea (787) was concerned with the iconoclast controversy, and defined the respect to be paid to images. (8) The fourth of Constantinople (869) attempted to secure the peace of the E. and W. Churches by deposing Photius of Constantinople, who had unjustly obtruded himself into this see. These 8 C. were convoked by the emperor, and the first 7 alone are recognised by the E. Churches. All the rest are subsequent to the great schism. The 4 Lateran C. (Nos. 9-12) dealt with questions of discipline and condemned the Waldenses and Albigenses. The dates are 1123, 1139, 1179, 1215. In 1245 was held the first of Lyons (No. 13), in 1274 the second of Lyons (No. 14). The fifteenth council was held at Vienne in 1311. The sixteenth, the Council of Constance (1414-18), ended the scandal of the rival Popes. Then came the C. of Basle (1431 ff.) and Ferrara-Florence (1438-41), usually combined as No. 17. The C. of Lateran V (1512-17) and Trent (1545-63) were reforming C. The twentieth, held at the Vatican in 1869, defined the infallibility of the Pope. The great work on the subject is K. J. von Hefele's *Konkiliengeschichte* (7 vols.), 1855-74, completed by J. Hergenröther, 1887-90.

Coundouriotis, Paul (1855-1935), Gk adm. and president; b. in the isle of Hydra. He successfully commanded the navy in the Balkan war of 1912-13, and was minister of marine, 1915 and 1917-19. C. became regent on the death of King Alexander, 1920; and again on the departure of King George II, Dec. 1923. In April 1924 he was proclaimed president; he resigned Mar. 1926, but resumed office on 25 Aug. Re-elected 31 June 1929, he resigned 9 Dec. 1929.

Counsel, see ADVOCATE; BARRISTER.

Counsellor, in law, one who gives advice in legal matters, now always termed counsel. The term C. is retained as the full description of a queen's counsel in the ceremony of calling new 'silks' within the Bar. The peers of the realm are hereditary C.s of the Crown.

Count (Lat. *comes*, a companion), name derived from classical times, practically synonymous with the Eng. word earl of the present day. In the earliest times it was merely the name given to an attendant; but those who were the attendants of the Rom. emperor came, by reason of their office, to be much more important officials than mere attendants, hence the meaning of the word changed slightly. This was also the case under the Emperor Constantine, who made the word a title of some of his officials. Under the Frankish kings the word also meant more than attendant, the *comes palatii*, or C. of the palace, being the second highest official of the state. He eventually came to act as the representative of the king during the latter's absence. This same title was used also in other countries, and the C.s palatine, as they were called, ruled over certain provs. and made the title

hereditary by handing it down to their eldest sons. Later on, however, in France there were numbers of people who bore the title of C., many of them having merely assumed the title without royal grant. This title does not exist in England, the nearest approach being that of an earl's wife, who is a countess. In Germany the Graf seems to have been identical with the C. of other countries; the word still remains in the Eng. words margrave (or marquess) and landgrave.

Count Out. Forty members must be present either in a debate in the House of Commons or in a committee of the whole House, and it is the duty of the Speaker or chairman if he is not satisfied that there is a quorum of forty members to give the order for withdrawal of strangers and for the summons of members from the precincts of the House. Two minutes are allowed for additional members to assemble; if, after two counts, there are under forty, the House adjourns.

Counter: 1. Circular parry in fencing (q.v.).

2. Blow given as a reply to the opponent's lead in boxing.

Counter Irritants form a class of remedies used externally, which by setting up irritation relieve pain or congestion elsewhere in the system. Their effect is probably due to reflex action, caused by the impression they produce on the nerves of the skin. They are divided into three classes: (1) *Iubefacients*, which increase the heat and redness, e.g. hot water; (2) *Vesicants*, which produce blisters, e.g. cantharides; and (3) *Pustulants*, of which croton oil is an example. The use of the stronger C. I. should only be under medical advice, as great harm can be done by careless or injudicious treatment.

Counterfeit, see COINING.

Counterfort, in architecture, a buttress or arch built against a wall to strengthen it. C.s are frequently used when outward pressure is exerted on the opposite side of the wall by heavy constructional work, and in terraces to resist the pressure of soil.

Counterguard, term used to designate the rampart built lower than and running along the length of a bastion or ravelin, a ditch lying between them.

Countermine, see MINES.

Counterpoint, one of the most important devices of musical composition, best defined in non-technical terms as the art of combining two or more melodies in such a way that, looked at or listened to horizontally, they retain their individual quality, while vertically they produce satisfactory harmonies and progressions, with dissonances, where they occur incidentally, resolved into concord according to certain rules. The so-called strict C. is governed entirely by rules and has to be mastered by the student of composition; but it is rarely applied to any music that claims to be a work of art, where C. is far more often governed by the composer's imagination and feeling for satisfying combination. Double or invertible C. is the joining of two parts, or more (triple C., quadruple C., etc.), in combinations sounding equally well whichever part

is placed uppermost, in the bass, or (in the more numerous combinations) in the middle; but the complicated changes in the intervallic incidence of the parts which this involves make a knowledge of the rules the more imperative, even if, as often in modern music, the composer decides to disregard them and to let each part pursue its way regardless of passing disagreeable clashes. This kind of writing is now usually known as 'linear' C., the line traced by each part being more important than the harmonic results of their intersection.

Counter-Reformation, The, the revival in the Rom. Catholic Church which combatted and, within little more than 100 years, checked the advance of the Reformation (q.v.). Its main factors were as follows: (1) The revival of true piety and devotion at the heart of the Church. The Oratory of Divine Love, a sodality of priests founded at Rome, 1517, to restore the dignity of divine service and cultivate the spiritual life, included men of the highest calibre and of great influence, e.g. Caraffa (later Paul IV, 1555-9), Reginald Pole, and Morone. Paul III made 6 of its members cardinals, and commissioned from them a scheme for reform, the *Consilium delectorum cardinalium . . . de emendanda ecclesia*, 1538. Moreover, a series of popes of the highest moral and spiritual temper directed the Church throughout the period, while an extraordinary number of saints arose to invigorate her and by the foundation of new religious orders to recruit and train souls for her service: e.g. Philip Neri (1515-95), founder of the Oratorians; Ignatius Loyola (1491-1556), founder of the Jesuits; Teresa of Avila (1515-82), founder of the Discalced Carmelites. Other great saints of the period were John of the Cross, Charles Borromeo, John of God, Francis Xavier, Peter of Alcantara, Vincent de Paul, and Francis de Sales; among the new orders were the Capuchins, Paulines, Barnabites, and Ursulines. But the most powerful instrument of the C. R. undoubtedly was (2) the Society of Jesus, founded 1534, originally for the conversion of the heathen (for its achievements, see JESUITS; MISSIONS, *Roman Catholic*) and sanctioned, 1540, by Paul III, who also in 1542 founded (3) the Rom. Inquisition (q.v.) which, with the Sp. Inquisition extinguished Protestantism and heresy in Italy and Spain. In this connexion the Index of Prohibited Books, instituted by Paul IV, 1559, should be mentioned, and the brutal massacre of 2000 Waldenses in Calabria, 1562. Paul III also deserves credit for summoning (4) the Council of Trent (q.v.), 1545-63, which laid the dogmatic and disciplinary basis of the C. R., abolished many abuses, and started the specialised training and formation of the clergy by ordering and regulating the institution of seminaries. The amazing exploits of (5) Catholic missionaries, especially Jesuit, also provided a thrilling stimulus to emulation in the Church at home (see MISSIONS, *Roman Catholic*). In 1622 the Congregation de propaganda fidei was set

up. (6) Education was another potent weapon of the C. R., and in 1558 St Peter Canisius produced his *Triple Catechisms* which went through 200 eds. before his death in 1597. In the innumerable Jesuit schools and colleges many of the (7) rulers who used their political power on the side of Rom. Catholicism had been brought up, e.g. the Emperor Ferdinand II (1619-37) and the Elector Maximilian of Bavaria (1519-1651). See L. Pullan, *Religion since the Reformation*, 1924; H. J. Kidd, *The Counter-Reformation*, 1933.

Counterscarp, military term to denote that side of a ditch in fortifications which confronts the attacking force, the inner side being known as the escarp or scarp.

Countersign, military term for a watchword or sign previously arranged to prevent unauthorised persons from passing a line of sentries.

Countertenor, the highest adult male voice produced naturally, i.e. without falsetto, as in the case of the male alto. The range is short, from about G below the treble stave to E at its top, and it occurs extremely rarely, though it is now cultivated again for the performance of old music. It is used most frequently in 17th-cent. vocal music, notably that of Purcell, who was himself a C.

Countervailing Duty, term applied to describe import duties imposed by a gov. to protect home industries against foreign competition or the dumping of foreign products on an unprotected market. Examples of C. D.s are the duties fixed by the Brit. Gov. under the Safeguarding of Industries Act.

Countervallation, or **Contravallation** (Lat. *contra*, against, *vallum*, a rampart), term used with reference to fortifications, and signifying a chain of forts constructed round a besieged place to prevent any sorties by the garrison. These redoubts, which were put up by the besieging army, could be disconnected or joined by means of a parapet.

Countess of Huntingdon's Connection, or **Huntingdonians**, sect of Calvinistic Methodists founded in 1748 by Selina, Countess of Huntingdon (1707-91), widow of the ninth earl. Coming under the influence of John Wesley, she became a member of his religious society in Fetter Lane in 1739, but when he renounced Calvinism she supported George Whitefield, and made him her domestic chaplain in 1748. Whitefield's personality and preaching attracted many notable people to her house in Park Lane, including Lord Chesterfield, Bolingbroke, and Horace Walpole. Later the countess built chapels in Brighton (1761), Bath (1765), Tunbridge Wells (1769), Worcester (1773), Spa Fields, London (1779), and many other places, while in 1768 she instituted Trevecca College, near Talsgarth, Breconshire, for the theological training of her chaplains. She seceded from the Church of England in 1783 when the bishops refused to ordain her protégés, thus becoming a dissenter; and in 1790 she evolved a scheme for the perpetuation of the Connection after her death. In 1792 the lease of Trevecca House expired and

Cheshunt College in Hertfordshire was opened, but was transferred to Cambridge in 1906. Spa Fields chapel was transferred to Golders Green in 1910. Most of the churches are now served by Congregational ministers. See the ann. reports of the Countess of Huntingdon's Connection.

Country Dance, originally an Eng. dance practised by C. people in the open air. It was introduced into France (1715-23) under the erroneous name *contre-danse*, and passed on to other countries, where it lost its rustic character and became a ballroom dance. In Eng. the word C. D. is especially applied to dances with 2 long lines of an indefinite number of couples facing each other. The dancers are continually changing their places, as in the 'Swedish' and 'Sir Roger de Coverley.' In recent years there has been in Great Britain a revival of interest in these dances, under the aegis of the Folk Dance and Song Society. See Steele, *Spectator*, 2 (1711).

'Country Life', weekly periodical founded by the late Edward Hudson in 1897 to cover racing, hunting, and other outdoor sports. More recently it has owed its reputation to its descriptions of country houses, its articles on collecting and the fine arts, and the high standard of its photography.

'Countryman, The.' quarterly non-party review, pocket size, founded in 1927 by J. W. Robertson Scott, now owned by the proprietors of *Punch* and edited by John Cripps at Burford, Oxfordshire. Its circulation has risen to over 80,000. It covers every aspect of rural life except field sports.

County (derived from the Lat. *comitatus*, through the Fr. *comte*). C. or shire is a term used to designate a specific area of a kingdom for administrative purposes. In the United Kingdom the boundaries of the C.s in some cases combine dists, which were formerly old kingdoms, notably Kent, Surrey, and Sussex, while other C.s have been formed by Acts of Parliament. The C.s are themselves combinations of hundreds, and have their own officers for the administration of certain local matters and an elective C. council. In the U.S.A. C.s are divs. of the states made by the state legislature primarily for purposes of law, their powers differing widely in each state. See LOCAL GOVERNMENT.

County Clerk, see LOCAL AUTHORITIES, OFFICERS OF.

County Council, created by the Local Government Act, 1888, as the unit of local government for the management of the administrative and financial business of a co. or div. of a co. Before the Act the vast increase in the activities of the State in matters of local government found expression in the periodical creation of numerous local boards acting independently of each other, and in the gradual extension in all directions of the administrative duties of justices of the peace in quarter sessions. The consequent overlapping of local governmental areas, nearly every public authority dividing the country differently and with no reference to other divs., led to a lack of coherent

principle in the performance of these delegated State duties. The Act of 1888, by creating bodies in area and personnel truly representative of cos., effected a considerable measure of uniformity in the world of local government. The term county, or administrative county, as used in the Act is not synonymous with county in the ordinary sense. By adopting the existing tin councils in the municipal bors. (see also BOROUGH) as co-ordinate bodies with the C. C.s the term C. C. includes a number of large tins with a pop. of over 75,000 each in the category of administrative cos. Under the Local Government Act, 1933, a bor. council may not promote a Bill to constitute the bor. a co. bor. unless the pop. is 75,000 or upwards (The first Schedule to the Local Government Act, 1933, gives 49 administrative cos. for England, excluding London, and 12 for Wales; and 80 co. bors. in England and 3 in Wales.) Means were provided for creating additional administrative cos. as occasion requires by Order in Council, e.g. Isle of Wight, 1889. Further, some cos. possess more than 1 C. C., e.g. Yorkshire is divided into 3 administrative cos., the N., E., and W. Ridings, the W. Riding comprising as much of the wapentake of the co. of York as is not included in York bor. Lincoln is divided into 3 administrative cos., and Suffolk and Sussex into 2 each; while the administrative co. of London, under the London C. C., comprises the metropolitan portions of Middlesex, Kent, and Surrey. The C. C. consists of a chairman, aldermen, and councillors without restriction as to sex. The chairman is elected annually by the C. C. from among the co. aldermen and councillors, or persons qualified to be aldermen or councillors; and unless he resigns or ceases to be qualified he continues in office until his successor becomes entitled to act as chairman. During his term of office the chairman continues to be a member of the C. C., notwithstanding the provisions of the Act of 1933 as to the retirement of co. councillors at the end of three years. Aldermen are elected by the councillors from co. councillors or persons qualified to be co. councillors; the number of aldermen is one-third of the number of co. councillors, and in every third year, being the year in which co. councillors are elected, one-half of the total number of aldermen must retire. Co. councillors are elected for 3 years, and they must retire together in every third year in April. Clerks in holy orders and peers owning property in the co. may serve as aldermen or councillors, and, generally, the qualification for councillors is the same as for bor. councillors. Persons of either sex registered as co. electors, or enrolled burgesses of any non-co. bor., are qualified as co. electors, the qualifications for the franchise being the same for men and women (Representation of the People Acts, 1948 and 1949; and Local Government Act, 1933, section 7).

The constitution of the London C. C. differs somewhat from that of other C.C.s. Each parl. div. in London co. elects 2

members to the council with the exception of the City, which elects 4, making a total of 124 councillors. The 20 aldermen are elected as in the case of other councillors. The functions of the C. C.s comprise a great variety of duties original and supervisory, and until 1933 the Ministry of Housing and Local Government had the power to transfer to them the statutory powers, duties, and liabilities of the Privy Council, or any gov. dept, relating to matters of administration within the cos. The co. police outside the Metropolitan area are under the joint control of sub-committees appointed by the C. C. and the justices of quarter sessions. The C. C., since the Education Act, 1944, is the local education authority, except that local educational divisional executives may be estab. where the pop. is 60,000 or there are 7000 primary school pupils. A C. C. has the same power of making by-laws as a bor. It is also the highway authority for all co. roads (see HIGHWAYS and below) and may make contributions towards the cost of maintaining and improving any highway or public footpath, although not a co. road; and it has special duties as to the repairs of co. bridges. It has certain duties appertaining to public health, administering the Acts relating to noxious insects and pests, and preventing the pollution of rivers, and abuses in selling bread and coal. Under the Housing Acts it may assume the powers of a defaulting rural dist. council in the duty of providing housing accommodation, and is charged with the duty of appointing a co. medical officer of health. It may prepare draft schemes for small holdings and lend money to tenants purchasing small holdings. It sanctions the compulsory purchase of land for allotments (statutory provisions on the powers of C. C.s to acquire and deal in land are to be found in the Local Government Act, 1933, part vii). It grants music, dancing, and race-course licences. It appoints the coroner (q.v.) for the shire, the co. surveyor, and the public analyst. It may fix the boundaries of dist. and par. councils subject to confirmation by the Minister of Housing and Local Government, and make orders for grouping pars. into one administrative unit with their consent. Over smaller local governing bodies it exercises under various Acts large supervisory powers, and generally it is responsible for the proper working of the Local Government Acts within its boundaries. Its powers in relation to finance are considerable. It does much of the work once exclusively performed by quarter sessions. It sanctions loans by par. councils, and itself has large borrowing powers on the security of its ann. revenue, subject to the control of the Ministry of Housing and Local Government: chiefly for the execution of permanent works. The revenue of the C. C. apart from the co. rate is derived chiefly from royalties, fines, tolls, and rents, together with State subventions. Very extensive powers have been vested in the London C. C., and others have been added. With the necessary modifications the Local Government Act of 1888 did not

extend to Scotland or Ireland. The Act of 1894 applies only to England and Wales.

There has been a distinct trend in modern legislation to use more and more the machinery of the C. C.s for the administration of local government. The Education Act of 1902 transferred to them work of the highest importance from a national point of view, and, as a result, there has been a perceptible levelling up in the standard of primary and secondary education throughout the country. More work was given to them by the Local Government Act of 1929, which abolished Boards of Guardians and transferred the functions of the poor law authorities as from 1 April 1930 to the council of the co. or co. bor. comprising the poor law area for which the poor law authority had previously acted. To-day, however, local authorities are no longer responsible for the relief of the poor, a National Assistance Board having been set up to administer a State scheme. In view of the remarkable development in road transport in the last two decades, the administration and maintenance of roads became a matter of vital importance, and the same Act made certain provisions with regard to them which affected C. C.s. As from 1 April 1930 the following are co. roads: (1) main roads; (2) roads constructed by a C. C. with the aid of an advance by the Road Board (no longer existing) or Ministry of Transport; (3) roads declared by a C. C. to be main roads; (4) roads built under the Development, etc., Roads, etc. Act, 1909; (5) highways in rural dists. which before 1 April 1930 were controlled by rural dist. councils; (6) classified roads which were or are vested in bor. councils and urb. dist. councils; (7) any ordinary road which a C. C. on application of an urb. dist. council declares to be a co. road or which the Ministry of Transport so declares on appeal by an urb. dist. council. Co. roads, however, may cease to be such by an order of the Ministry of Transport on application of the C. C. Certain bor. and urb. dist. councils may claim to maintain a co. road within their area, but the C. C. must pay for the work. The following lists are a broad attempt to show the present distribution of functions to C. C.s, co. bor. councils, and the London C. C. The lists are, however, liable to much local variation. C. C.s: registration of births, deaths, and marriages; various by-laws; adoption and boarding out, etc. of children; education (including school medical service and meals); registration of electors; licensing of entertainments (theatres, cinemas, race-courses); analysis of fertilisers and feeding stuffs; inspection, analysis, etc. of food and drugs; housing (assistance in rural areas); land charges registration; libraries and museums; motor vehicles and drivers' licensing; nursing homes registration; parks and open spaces; petroleum storage and stations; police (through a joint standing committee of the C. C. and the co. justices); remand homes; prevention of pollution of rivers; maintenance of roads and bridges;

inspection of shops; inspection of weights and measures; and protection of wild birds. The functions of co. bor. councils include all the above, but police are controlled by a Statutory Watch Committee. In addition the following: provision of allotments; baths, swimming baths, and wash-houses; control of building; cemeteries; control of common lodging houses; notification and disinfection of infectious diseases; mortuaries; suppression of nuisances; sanitary services—drains, sewerage, refuse disposal; smoke abatement; and vaccination. The functions of the London C. C. include most of those of the C. C.s generally, excepting registration of births, deaths, and marriages; registration of electors; analysis of fertilisers and feeding stuffs; food and drug inspection; libraries and museums; police; and wild birds protection. But the London C. C. has the following additional functions: control of building; provision of houses; road construction, as well as maintenance; and prevention of Thames floods.

In Canada, in Ontario, Quebec, and New Brunswick, where rural local government areas are known as cos., the C. C. is made up of the elected reeves and deputy reeves of the townships and vils. In some cos. the smaller tns are also part of the co., and in that case the mayor of the tn is also a member of the C. C. These Canadian C. C.s, whose presiding officer is chosen by the council and is called a warden, control all matters of general interest to the whole co., such as health, education, welfare, and roads. See also LOCAL GOVERNMENT.

County Courts. Historically a co. court was a development of the judicial side of the shire-moot and the old court of requests or 'lesser Court of Equity for the hearing of poor man's suits.' Civil jurisdiction of C. C. ceased when the judges of the Curia Regis travelled the country on circuit to hear cases at local assizes. The modern C. C. were set up in 1846 to deal with cases involving less than £20 for the benefit of persons who could not afford to litigate in the higher courts. Subsequent statutes, the most recent being the County Courts Act, 1955, have increased their jurisdiction. The County Courts Act, 1846, divided the country into co. court dists. At present there are 59 dists. or circuits in England and Wales, to each of which are assigned one or more judges. The lord chancellor is empowered to appoint up to 80 judges. A co. court judge, who must be a barrister of at least 7 years' standing, may not practise at the Bar or sit in Parliament. Actions are usually tried by judge alone, trial by jury being very rare. The less important cases are tried by the co. court registrars (q.v.), who also deal with interlocutory proceedings (q.v.). Co. court procedure is simpler and less costly than that of High Court actions.

The C. C. have jurisdiction in: (1) actions involving contract and tort (q.v.) for amounts not exceeding £400; (2) actions for the recovery of or concerning the title to land or hereditaments whose net

ann. value for rating purposes does not exceed £100; (3) equity actions in which the value of the matter in dispute does not exceed £500; (4) probate and admiralty actions limited to £1000; (5) actions remitted from the High Court; (6) bankruptcy petitions in dists. outside a radius of 5 m. of the Royal Courts of Justice, Strand. A wide range of miscellaneous matters are by various statutes referred to C. C. for decision (e.g. the granting of new leases under the Landlord and Tenant Act, 1954, disputed rent increases under the Housing Repairs and Rents Acts, 1954) (see LANDLORD AND TENANT).

Unlike the High Court, C. C. may order judgment debts to be paid by instalments.

County Rates are the part of the general rate collected by precept of the co. council (q.v.), in connection with local gov. expenditure to meet deficiencies not provided for out of revenue or Exchequer grants. Some purposes for which a precept may be issued are the cost of the assizes and co. sessions, half the approved net expenditure of the co. police, and expenses under the Education Act, 1944. See also LOCAL GOVERNMENT FINANCE.

County Sessions, the general or quarter sessions of the peace for the co., sit to try such crimes as statute law expressly permits them to try, and hear appeals against summary convictions where a right of appeal is given by statute to the person convicted. Quarter sessions in

COUNTY HALL, LONDON

London County Council

County Hall, Lambeth, is the headquarters of the London Co. Council (q.v.). It is situated on a site of 6½ ac., partly reclaimed from the riv. foreshore, running northwards along the S. bank of the Thames from Westminster Bridge. The building, designed by Ralph Knott (who was influenced by Piranesi), was begun in 1911 and the S. part of the riv. frontage completed in 1922, when C. II. was formally opened. The N. part was completed 1931-3, and the total cost was nearly £4,000,000. There are 9 floors and nearly 1000 rooms, among them a large council chamber, a large library devoted to London hist., etc., 22 committee rooms, and rooms devoted to an art collection and MSS. relating to London. There is also an Extension Building between Bolyvère Road and York Road. C. II. has a staff of about 6000.

cos. must be held within a period of three weeks immediately before and after the four quarter days. Quarter sessions in hors. are fixed by the bor. recorder. The court is constituted by two or more justices of the peace presided over by a chairman. Generally speaking, the criminal jurisdiction of the C. S. is restricted to minor felonies and misdemeanours, the more serious crimes being tried at assizes. They are forbidden to try treason, murder, or any capital felony or any felony punishable by penal servitude for life. They also exercise jurisdiction in rating appeals and the licensing of places for the sale of intoxicants.

Coup. A *coup d'état* is an arbitrary stroke of policy, carried out suddenly both violently and illegally by the ruling power, with entire disregard of the prerogatives of other parts of the body politic.

The two most famous instances are Napoleon Bonaparte's C. of 1799, ending the directory by his 'whiff of grapeshot,' and that of Louis Napoleon, which broke up the national assembly by force, 1851. A *coup de main* is a sudden and successful attack, made to capture a position instantaneously. A *coup d'œil* (glance) means a rapid, comprehensive view of a complicated matter, often used of the faculty of taking a general survey of a military position and estimating its advantages and disadvantages. *Coup de grâce* is the merciful final blow which puts a victim out of pain, hence a decisive or finishing stroke. A *coup de théâtre* is a trick of the stage, or any sudden sensational act.

Coupár-Angus, par. and burgh of Perthshire, Scotland, near R. Isla, 12 m. from Perth. There are remains of a Rom. camp, and also of the Cistercian abbey, founded 1164 by Malcolm IV. C. has a cannery, and there are steam saw-mills and agric. implement works. Pop. 2175.

Coupé (*Coupé*), heraldic term used to describe the head or any limb of an animal, or a part of a plant, represented as cut off clean and smoothly in a straight line. Where the representation is jagged and uneven, as if forcibly torn off, it is blazoned 'erased.' *Coupé* (from Fr. *couper*, to cut) is also applied to an ordinary with extremities cut off so as not to reach the shield's boundaries.

Couperin, François (1668-1733), Fr. organist, harpsichordist, and composer, the greatest member of a large musical family. Learnt music from his father, Charles C. (1638-79), his uncle François C. (c. 1631-1701), and from Jacques-Denis Thomelin, organist of the king's chapel. Appointed organist at the Paris church of Saint-Gervais in 1685, where he remained until his death. In 1693 he succeeded Thomelin as organist to the king, and in 1717 received the title of Ordinaire de la Musique de la chambre du Roi. He had been connected with the court before and taught the royal children. In wider circles, too, he was famous as harpsichord teacher, and laid down his system in the treatise *L'Art de toucher le clavecin*, 1716. He married Marie-Anne Ansault c. 1689, and they had two daughters, the second of whom, Marguerite Antoinette, b. 1705, became a distinguished harpsichordist. Works include 4 books of harpsichord pieces (c. 230); 42 organ pieces; 4 *Concerts royaux* for harpsichord, strings, and wind instruments; 10 chamber concertos, *Les Godels-réunis*; 4 suites for strings and harpsichord, *Les Nations*; chamber sonata *Le Parnasse, ou l'Apothéose de Corelli* and *L'Apothéose . . . de Lully*; 2 suites of pieces for viols with figured bass; some miscellaneous chamber works; 12 songs for one, two or three voices; church music includes *Laudate pueri Dominum, Leçons de Ténèbres*, a number of motets, etc. See life by A. Tessier, 1926; J. Tiersot, *Les Couperin*, 1926; W. Mellers, *François Couperin*, 1950.

Couperus, Louis-Marie-Anne (1863-1923), Dutch poet and novelist, b. The Hague, but spent his boyhood years in the

Dutch E. Indies. His first works were two collections of poems, *Een Lent van Faerzen* (Springtide of Verso), 1884, and *Orchideeën*, 1886. His first novel, *Eline Vere*, 1888, a vivid picture of society at the Dutch cap., won him fame. He united in his writings the ideas and tendencies of both Fr. and Scandinavian literature. Other works are *Noordijl*, 1890; *Extase*, 1891; *Majesteit*, 1893; *Vereldvrede*, 1894; *Mcianorfoze*, 1897; *Over lichtende Drempels*, 1903; *Dionysos*, 1904. C. also wrote the fairy-tales *Psyche*, 1897, and *Fidessa*, 1899. He has a preference for portraying decadent times and people, which he describes with great psychological insight. Most of his novels have been trans. into Eng. by A. Toxela de Mattos. See J. L. Walsh, *L. Couperus*, 1921; H. van Booven, *Leen en Werken van L. Couperus*, 1933.

Couple, in statics, consists of two equal forces acting in opposite directions on a body along two parallel straight lines. It is impossible for a C. to keep a body in equilibrium, for any C. tends to rotate the body. The distance between the lines of action of the two forces is known as the arm of the C., and the moment is the product of one of the forces and the arm of the C.

Coupled Circuits are electric circuits so placed or connected that energy can be transferred from one to the other. Circuits which have a resistance or reactance in common are resistance- or reactance-coupled. The primary and secondary of a transformer are inductively coupled. Two coils so placed that magnetic flux produced by a current in one (primary) is linked with the other (secondary) have mutual inductance M defined as M (in henrys) = $10^{-8} \times$ (linked flux in secondary produced by primary current)/(primary current). If L_1 and L_2 are the primary and secondary inductances, the maximum M would occur if the whole flux were linked with both circuits, $M' = L_1 \times L_2$. The ratio $M/\sqrt{(L_1 L_2)}$ is the coefficient of coupling. Coupling a secondary coil to a primary has the effect of adding an impedance $(\omega M)^2/Z_1$ to the primary, where Z_1 is the secondary impedance. The induced voltage in the secondary is $-\omega M I_1$, where I_1 is the primary current. See ALTERNATING CURRENT; CIRCUITS, ELECTRIC; ELECTROMAGNETIC INDUCTION.

Couplet, 2 lines of verse, usually of the same length, rhyming and forming a unit. The commonest forms in Eng. are the heroic C. (see HEROIC VERSE) and the octosyllabic C.

Coupon, document attached to a share warrant, bond, or other negotiable instrument, indicating the dates on which dividends or other periodical payments will become payable. Share warrants are a device for legalising the issue of fully paid shares payable to bearer, and when issued the name of the shareholder is struck off the register, because henceforth the holder is the person who happens to hold the warrant; the company neither knows who he may be nor who is entitled to the dividends. Hence the necessity for

attaching C.s dated with the successive dates on which dividends will be paid, during sev. years following the issue of the warrant, to the person producing them. The C.s attached to bonds issued for any term of years represent the total number of periodical payments of interest, whether quarterly, half-yearly, or yearly, that will become payable, the date of such payments being printed on each C. On the date of any one payment maturing, the holder of the bond merely detaches the C. and presents it for payment at a specified bank.

'Coupon' Election, general election of Dec. 1918, which returned the Coalition Gov. of Lloyd George. After the armistice Lloyd George and his Cabinet resolved on an immediate election in order that he might go to the peace conference with the authority of a new Parliament behind him. The gov. fought the election as a coalition and both Liberal and Conservative supporters of the coalition received a letter of support from Lloyd George and Bonar Law, leader of the Conservatives. The Asquithian Liberals were refused such a letter, as also were candidates of the Labour party, other than a few who remained with the gov. This letter from the leaders of the gov. was nicknamed a C. by its opponents, and so the election has become derisively known as the C. E.

Courante, It. *coranto*, Fr. dance which was popular in the 17th cent. The term is also used in music for a movement with a distinct rhythm in 3-2 time, generally forming part of a suite and coming immediately after the Allemande. Bach and Handel have C.s in 3-8 and 3-4 time.

Courantyne, or Corentijne, riv. of S. America, forming the frontier of Brit. and Netherlands Guiana. It rises in the Acaia Mts., and has a length of 450 m. The C. is navigable for large vessels for 45 m. upstream, and for small ones for a further 30 m., but great cataracts in about 4° 20' N. lat. and sev. others higher up interrupt the navigation. See also NETHERLANDS GUIANA.

Courbet, Gustave (1819-77), Fr. painter, chief of the realists, b. Ornans, near Besançon. He left the study of theology for art, became a pupil of Steuben, d'Angers, and Hesse in Paris, but was largely self-taught. C. was much influenced by Flemish and Venetian masters, but his aim, in his own words, was to 'interpret the manners, ideas and aspect' of his own time. He was a member of the com., 1871, and in 1875 was jailed and forced to pay for re-erecting the Vendôme column, which he was accused of pulling down. A great painter, but also a revolutionary, he died in exile. Among his portraits and figure-paintings are 'Homme à la Pipe', 1844; 'Casseurs de Pierres', 1850; 'L'Enterrement à Ornans', 1850 (now in the Louvre); 'Fair Dutchwoman', 1853; 'Demoiselles de la Seine', 1857; 'Man with a Leather Belt', 1870. C. is at his best with landscapes of his native Franche-Comté, such as 'Combat de Coris', 1861; 'Remise de Chevreuils', 1866; 'The Wave', 1870.

See lives by H. d'Ideville, 1878; L. Bénédite, 1911; C. Léger, 1929; P. Courthion, 1931; M. Zahar, 1953.

Courbevoie, Fr. tn in the dept of Seine, on the Seine, a NW. suburb of Paris. It has numerous manufs. including automobiles, chemicals, and textiles. Pop. 59,700.

Courcelles, tn in the prov. of Hainaut in Belgium, about 5 m. NW. of Charleroi, with coal, iron, and glass industries. Pop. 17,900.

Courier (or Courier de Méré), Paul Louis (1772-1825), Fr. writer, b. Paris, and educ. at the Collège de France and at a military academy, devoting himself to Gk literature. Starting as a pure writer of belles-lettres, he became a journalist and the leading Fr. pamphleteer, noted for his irony. In *Pétition aux deux Chambres*, 1816, he described the grievances of the peasantry; in *Lettre à Messieurs de l'Académie des Inscriptions*, 1819, the most brilliant of all his writings, he flagellated that learned body for having preferred to him in their last election a man whose only advantage was noble birth. His best known writing, however, was his *Simple discours*, one of a series of pamphlets addressed to his 'fellow villagers' and signed 'Paul Louis Vigneron.' For this he was fined and imprisoned for two months. He was shot on his small estate in Touraine by a farm hand whom he had dismissed from his service. As an author and satirical writer he was brilliant, rich in contemporary historical knowledge and classical quotations. His collected works were pub. in 4 vols. in 1830.

Courier (derived from the Fr. *courir*, to run), term applied to servants whose duty is to relieve their employer of trouble when travelling by making all the necessary arrangements for transport, hotel accommodation, securing passports, etc. Prior to the formation of the post office, messengers were employed to deliver letters and messages and were known as C.s. Important dispatches to foreign embassies are still frequently delivered by the king's messenger or Foreign Office C.s.

Courlan, Caran, Crying Bird, and Crazy Widow, popular names of the wading-bird *Aramus scolopaceus*, which is found in S. America. The bird is noted for its peculiarly dismal cry.

Courland, see KURLAND.

Cournot, Antoine Augustin (1801-77), Fr. mathematician, philosopher, and economist, b. Gray. He is chiefly noted for work on the calculation of probabilities, and his foundation of the so-called mathematical school of social economy. He wrote *Recherches sur les principes mathématiques de la théorie des richesses*, 1838, *Exposition de la théorie des chances et des probabilités*, 1843, and *Principes de la théorie des richesses*, 1863.

Cours, Fr. tn in the dept of Rhône, on the Trambouze. Cotton goods, called Beaujolais, are manuf. Pop. 5200.

Coursing, pursuit of hares by greyhounds, not by scent but by sight. In ant times other game also was coursed

generally deer: the sport is described by Arrian about AD 150, also by other classic authors (see W. Dansey, *Arrian on Coursing*, 1831). Our own ancestors probably practised it as much to fill the larder as for sport. In Saxon and Norman times only nobles and landowners had the privilege of keeping greyhounds, but in the reign of Elizabeth rules for the sport of C. were drawn up by the duke of Norfolk, and during the next century open competitions came into vogue. But no regular club was formed until 1776, when Lord Orford founded one at Swaffham, Norfolk, and soon afterwards the Ashdown Park club was formed, holding its meetings at Lambourn, Berkshire. The sport spread widely, some of the finest courses being on the downs at Amesbury, Stockbridge, etc. After the passing of the Game Laws in 1831 C., which had hitherto been almost restricted to clubs, was more generally taken up, and in 1880 the passing of the Ground Game Act, greatly altering the conditions of the sport, led to the estab. of many enclosed courses. These were much favoured by betting men, as the whole run could be watched from a stand, but it was found that the system encouraged breeding entirely for speed, training for other qualities being neglected, and with keen sportsmen open courses are now most in favour. The season lasts from about Sept. to March, the Altcar or Waterloo meeting, which decides the championship, coming in Feb. The Waterloo Cup, the coursers' Derby, is so called from having been originated in 1836 by the proprietor of the Waterloo Hotel, Liverpool, who gave the cup and was lucky enough to nominate the first winner, Lord Molyneux's Milanic. In 1882 the *Greyhound Stud Book* was estab., and no dog not appearing there with properly traced pedigree can compete at any meeting under the rules of the National Coursing Club, a representative association formed in 1858, which governs C. all over the kingdom. Courses vary a good deal in their character; some particularly favour speed, e.g. Kempton Park, Surrey, where at the Jan. meeting the very fastest dogs are to be seen. But though speed is highly important, cleverness tells greatly in the estimation of points, and it is in the breeding and training for all requisite qualities that judgment, skill, and luck are required. A competition is held thus: the slip-steward sees that each slipper in turn is ready punctually, with his brace of hounds in leash, a hare is started (at an open meeting by beaters), and when it has about 60 yds start the hounds are simultaneously released, and the judge follows the run on horseback. He decides the points as follows: on *speed*; the *go-by*, when a greyhound starts a clear length behind, and in a straight run gains a clear length's lead; the *turn*, bringing the hare round at a right angle or more; the *wrench*, turning it at less than a right angle; the *trip*, throwing it over, but failing to kill; the *kill*. The judge may declare a 'no course' if the trial is not satisfactory, or a tie if

points are equal. His decision is signalled by the flag-steward. The victory goes not necessarily to the greyhound that kills, but to the one that does most to make the kill possible. Some experienced dogs are artful, and manage to get the kill themselves after leaving all the work to the others; this tendency has often been proved hereditary. C. in the Eng. style has been taken up in Australia and the U.S.A.; in the latter the prairie jack-rabbit often takes the place of the hare.

Court, Ecclesiastical, see ECCLESIASTICAL COURTS.

Court, Presentation at, formal presentation to the sovereign of subjects whose status entitles them to this honour. In monarchical countries this ceremonial function is considered the highest honour, and serves as a credential. Having once obtained this privilege people may claim to be presented by their country's representative at any foreign court and to be received everywhere. In England the names of those desiring to be presented and of their presenters must be sent some weeks in advance to the lord chamberlain. The privilege is strictly guarded from abuse, and none are admitted unless accepted and approved of both by the sovereign and the lord chamberlain. Each lady who makes a presentation is required to become sponsor (in its fullest sense) for her presentee. Cases of undesirable introduction are rare, but should they occur a notice may be printed in the *Court Circular* that 'the presentation is cancelled.' Those who are not Brit. subjects may be presented to the sovereign by their own ambas. At the end of Victoria's reign ladies were most frequently presented at drawing-rooms held at Buckingham Palace in the afternoon. When the Prince and Princess of Wales presided on her behalf, such presentations were by royal command counted as a presentation to the Queen. Gentlemen are presented usually at levees at St James's Palace, held in the morning. The first levee was held at Buckingham Palace, 1840. King Edward replaced the drawing-rooms by courts, held at Buckingham Palace in the evening, but levees also continued to be held at intervals. There was an elaborate ceremonial at these functions, and full court dress had to be worn by those invited.

Since the Second World War presentations have been made at the Buckingham Palace garden parties and in Scotland at Holyrood Palace.

Court Baron, necessary court of a baron. It was partly administrative and partly judicial. Other courts at the manors were the customary court and court leet.

Court for Crown Cases Reserved, see CROWN CASES RESERVED.

Court-hand, a term often used for the old Eng. style of handwriting, a modification of the Norman (as distinguished from the modern or It.), which was employed in the Eng. law courts from the 16th cent. till abolished by George II in the early 18th cent.

Court Leet, old court of record that originally had an almost plenary jurisdiction in the trial of crimes. Any lord of a manor with a right of 'sac and soc' (the right to hold a court for one's tenants and the right to the amercements or fines respectively) was entitled to hold a C. L. Their decline followed on the passing of the statute of Marlborough, 1267, but C.s L. are still occasionally held once a year before the stewards of certain lordships or manors.

Court-martial, see COURTS-MARTIAL.

Court of Appeal, see APPEAL.

Court of Arches, see ARCHES.

Court of Record, see RECORD.

Court of Session, supreme civil tribunal of Scotland. In its present form it was estab. in 1532 by the Act of Institution of the C. of S., as a development of previously existing tribunals which were generally independent committees of the Scottish Parliament. The C. of S. now consists of 15 judges. It has an Outer House in which sit 7 lords ordinary of co-ordinate jurisdiction, and an Inner House divided into a 1st and 2nd div., each div. consisting of 4 judges of co-ordinate jurisdiction. The president of the 1st div. is the Lord President; of the 2nd, the Lord Justice-Clerk. The 2 divs. of the Inner House are mainly appeal courts, but they have an original jurisdiction in certain actions relating to div. of common lands (commonry), sale of bankrupt estates, curatory of the insane, and special cases. At the hearing of an appeal from a jury case which comes before the div., the judge who presided at the trial sits along with the div. Original actions in the Outer House are heard in the first instance before any 1 of the 7 lords ordinary, but certain causes are specifically appropriated to particular judges. Appeals against valuations of lands and heritages, registration appeals, and election petitions are heard by specially constituted C.s of S. The C. of S. exercises no criminal jurisdiction as such, but gives a civil remedy in cases of perjury, fraudulent bankruptcy, forfeitures, and breach of arrestment, etc. The C. of S. has exclusive jurisdiction in exchequer, maritime, and teind (tithe) causes, and has superseded the consistorial and commissary courts in actions of status such as declarators (q.v.) of marriage, or separation, and the C. of S. alone may try questions of heritable right, unless the ann. value of the subject-matter does not exceed £50, or the total value does not exceed £1000. Where the value of the subject-matter in dispute does not exceed £50 the case may not be brought in the C. of S. There are 2 sessions, winter and summer, lasting from Oct. to March and from May till July, respectively. The judges of the C. of S. also form the High Court of Justiciary (q.v.).

Courtauld, Samuel (1876-1947), Brit. industrialist and art patron, second son of Sydney C. of Huguenot descent, of Braintree, Essex; educ. at Rugby School. He entered the family business of silk manufacturers, and soon became manager of the Halstead mill, and, by 1908, was

general manager of all the company's textile factories under H. S. Tetley, who had played a leading part in the development of rayon in England—a branch of textile in which C.'s were pioneers. Samuel C. was early trained in the chemical side of the rayon industry in Krefeld, Germany. In 1915 he was appointed to the board of the company and, in 1917, joint managing director with Henry Johnson; and finally, in 1921, he became chairman, thus succeeding to the leadership of the business founded 96 years previously by his great uncle, Samuel C., and by his grandfather. There have been in Brit. industry few parallels to the way in which C.'s came to dominate a new field and for a long time to hold the lead in research and production of rayon; and for all this C. was largely responsible during his 25 years as chairman. He spent his great fortune munificently. Not only did he form a collection of paintings of the Impressionist and post-Impressionist schools, chosen with conspicuous taste, but his generosity enabled the Tate Gallery to acquire masterpieces that would otherwise never have entered the public collection. In 1931 he founded and endowed the C. Institute of Art in the univ. of London, the first institute to be created in this country for the appreciation of art and the study of art hist.; and to house the institute he handed over his house in Portman Square, one of the finest examples in London of the work of Robert Adam, and with it the greater part of the collection of the Impressionist pictures which he had formed. The rest being bequeathed to the National Gallery. C. was also a trustee of the National Gallery.

Courtaulds Ltd, manufacturers of man-made yarns and staples, fabrics, plastics, and chemicals, estab. in 1824 as Samuel Courtauld & Company. The production of rayon, or artificial silk as it was originally called, was begun in 1904, with H.Q. at Coventry, and in 1910 factories were set up in the U.S.A., Germany, and Russia. The company was incorporated in its present form in 1913. It acquired jointly with Imperial Chemical Industries all capital of British Nylon Spinners. Spinning factories are estab. at Halstead and Braintree in Essex, Halifax in Yorks, and Leigh in Lancs. Other factories are at Flint, Coventry, Nuneaton, Wolverhampton, Bocking, Bradford, Froylsden, Greenfield, Preston, Rochdale, Grimsby, Holywell, Carrickfergus, and Trafford Park. In 1941 the Brit. Gov. acquired from the company about 95 per cent of its holding in Amer. Viscose Corporation (for the sake of the dollar exchange). In 1957 the company acquired the whole of the capital of its only serious competitor, British Celanese Ltd, it being claimed by both companies that the merging of interests would strengthen their ability to meet competition from imported textiles in the home mkt and also enable them to improve their position in export mtrks.

Courtenay, name of a distinguished Eng. family, at one time widely distributed in the W. country. The founder is said to

have been Athos, who fortified Courtenay in Gâtinois in the early 11th cent. Renaud, his descendant, was one of the magnates who fought in the Crusades. With his daughter Elizabeth the estate of C. passed to her husband Pierre, son of the Fr. king, Louis VI. There were numerous lines of royal C.s, sprung from Pierre of France. In England a house of C. has fl. since the reign of Henry II. Sir Hugh de C. shared in the honours of Crécy and Calais, and was one of the knight founders of the order of the Garter. The earldom was extinguished by attainder after the wars of the Roses, but in 1511 Henry VIII allowed Henry C. to succeed to it. Sir William C., a cousin of Henry C., who was beheaded for correspondence with Cardinal Pole, was head of a knightly line of C.s whose seat was Powderham Castle. The title of Earl of Devon, sev. times forfeited and recovered, is still held by the C.s. Henry C.'s son, Edward C., was created earl in 1553 and the present earldom dates from then. Charles Christopher C. (b. 1916) is the 17th earl.

Courtenay (Courtney), William (c. 1342-1396), archbishop, fourth son of Hugh, earl of Devon, and Margaret Bohun. He studied at Oxford, becoming chancellor of Oxford Univ., 1367; bishop of Hereford, 1370; bishop of London, 1375. As Wycliffe's prosecutor (1377) C. was involved in a quarrel with the duke of Lancaster. C. was archbishop of Canterbury, 1381-96. In 1382 he summoned a council, which met in the Black Friars' monastery to pass judgment on Wycliffe's heretical teaching. Wycliffe was allowed to go free, but many of his followers were compelled to recant. After Wycliffe's death, C. continued the systematic eradication of Lollardy from Oxford Univ. and elsewhere. C. was a strong upholder of the rights of the Church, and was very conscious of his rights as Primate; for the latter reason he was influential in carrying through the statute of Praemunire of Richard II's reign.

Courteras, Gabrielle Anne de Cisternes de, see DASH, COMTESSE DE.

Courtesy, see COURTESY.

Courtesy Titles, titles allowed by custom to the eldest sons of dukes, marquesses, and earls in the peerages of England, Ireland, and the United Kingdom; but the holders have no actual legal right to them. A peer of high rank may have numerous inferior titles, and while known himself by his highest title or titles, his eldest son bears one of the inferior titles by courtesy. The courtesy title need not be the next highest, and may differ in different generations. It does not affect the legal status of the holder, who, as a commoner, is still eligible for the House of Commons. Younger sons of dukes and marquesses take the title lord (q.v.), while the daughters assume that of lady prefixed to their Christian and surnames, still retaining it if they marry men of lower rank. The title honourable is applied to the children of earls, viscounts, and barons, although, as stated above, an earl's eldest son normally uses one of his father's inferior titles. In Scotland a viscount's or baron's eldest son is styled master.

Courthope, William John (1842-1917), literary historian, b. South Malling, near Lewes. Educ. at Harrow and New College, Oxford, he became prof. of poetry at Oxford, 1895-1901. Among his works are *The Three Hundredth Anniversary of Shakespeare's Birth*, 1864; *The Genius of Spenser*, 1868; *Ludibria Lunae*, 1869; *The Paradise of Birds*, 1870; *Addison*, 1884; *History of English Poetry* (6 vols.), 1895-1909. He ed. Pope's works in 10 vols. with a biography, 1871-89. C. was for a time joint editor of the *National Review*.

Courtmacsherry, seaside resort in co. Cork, Rep. of Ireland, 11 m. S. of Bandon. Pop. 250.

Courtneidge, Cicely (1893-), Brit. actress, b. Sydney, daughter of Robert C., theatre manager and producer. She made her first stage appearance at the Prince's Theatre, Manchester, which her father then controlled, as Peaseblossom in *A Midsummer Night's Dream*, 1901. The family then returned to Australia and she did not appear in this country again until 1907 when she played Rosie Lucas in *Tom Jones* at the Prince's Theatre, Manchester, in 1907. She made her first London appearance in the same part under her father's management at the Apollo Theatre in 1907. Since then she has had a long and brilliant career, here and in America and all over the world, not only in musical comedies but in revue and variety. She and her husband, Jack Hulbert, starred together for many years in very successful revues and musical plays. She has also had a brilliant film career and now stars in radio and television as well as on the stage and in straight plays. C. C. is one of the most accomplished comedienne of the Brit. stage possesses—with a wonderful technique and a complete mastery of the art of burlesque. Her force, her vitality, her timing, and clarity of diction are remarkable.

Courtney, William Leonard (1850-1928), Eng. journalist and author, b. Poona, India. He was educ. at Somersetshire College, Bath, and at Oxford. He became headmaster of Somersetshire College, 1873, and fellow of New College, Oxford, 1876. He came to London, 1890, joining the *Daily Telegraph* staff. He succeeded Harris as editor of the *Fortnightly Review* in 1894, a post he held till his death. Among his works are *The Metaphysics of John Stuart Mill*, 1879; *Studies in Philosophy*, 1882; *Constructive Ethics*, 1886; *Studies New and Old*, 1888; *Studies at Leisure*, 1892; *The Idea of Tragedy*, 1900; *The Development of Macerlinck*, 1904; *The Feminine Note in Fiction*, 1904; *The Literary Man's Bible*, 1907; and *Rosemary's Letter Book*, 1909. His drama, *Kil Marlowe*, was produced at St James's Theatre in 1893.

Courtney of Penwith, Leonard Henry, first Baron (1832-1918), statesman, b. Penzance, and educ. at St John's College, Cambridge. A pronounced Liberal in politics, C. was under-secretary of state for the Home Dept., 1880-81, for the Colonies, 1881-82. He succeeded Cavendish

as financial secretary to the treasury, resigning office in 1884. He was chairman of committees and deputy speaker 1886-1892. He opposed his party on the Transvaal war question, and retired from the House of Commons in 1900. C. was made a peer in 1906. He stood alone in the House of Lords as an opponent of the prosecution of the war against Germany. He was an early advocate of proportional representation. *See* life by G. P. Gooch, 1926.

Courtois, Jacques (1621-76). Fr. painter, commonly called Le Bourguignon. He studied painting with his father, Jean C., and won his reputation as a battle painter. His scenes of the camp, the march, and the battlefield may be found in most of the prin. galleries of Europe. He entered the Society of Jesus in Florence, taking the habit in Rome (1655), where he lived piously, and where he d.

Courtrai (Flem. Kortrijk), tn in the prov. of W. Flanders, Belgium, 26 m. S.W. of Ghent. The tn is built on both sides of the R. Lys, and is very picturesque with its old walls, its castle, and famous belfry. The Gothic church was founded by Baldwin, count of Flanders, in the early 13th cent., and the tn hall dates from 1526. C. is a busy manufacturing tn, and is celebrated for its table damask, fine linen, and lace. To the Romans, it was known as *Cortracum*, but gained its industrial importance in the Middle Ages. Here in 1302 was fought a 'battle of the Spurs' (not to be confused with Henry VIII's battle at Guinegate, 1513), when the citizens of Ghent, Ypres, and Bruges won a glorious victory over the Fr. Army, calling the battle after the golden spurs they plucked off the vanquished dead. C. was occupied by the Gers. in 1914, and recovered by the Allies in 1918. Again occupied by the Gers. in 1940, but liberated by Brit. troops in 1944. Air-raids in 1943-4 destroyed much of the centre. Pop. (1955) 41,400.

Courts, Ecclesiastical, *see* ECCLESIASTICAL COURTS.

Courts-martial, courts usually convened for the purpose of trying offences against military or naval discipline, and also for administering martial law. Previous to 1640 ordinances were issued by the king for the trial of these offences, and justice was administered under the old court of chivalry of which the earl marshal was the president. The military laws adopted by the commanders during the Thirty Years war, however, were not without their effect on Eng. military law, and we may safely say that C. were instituted in the reign of Charles I. They did not receive parl. sanction, however, until the Mutiny Act of 1689 was passed, and from that date until 1879 C. administered the discipline laid down in the articles of war. In that year the Army Discipline and Regulation Act was passed, and two years later the Army Act (1881) superseded that. C. are divided into three different classes: (1) a dist. court-martial, (2) a general court-martial, (3) a field general court-martial. A dist. court-

martial is convened by a general officer having authority to do so; it must be composed of at least three officers, each of whom has served at least two years, and it can give punishment to the extent allowed by the Army Act. A general court-martial is the only court which has authority to try an officer, or to pass a death sentence, or a sentence involving penal servitude. It must consist of at least five officers. A field general court-martial is convened in war-time when held necessary by the officer in command of troops on active service, and when it is impossible to convene an ordinary general court-martial. The ordinary procedure of a general court-martial must be maintained as far as possible, and the prisoner is allowed to conduct his own defence and to address the court himself. The experiences of the First World War gave an impetus to the humanitarian tendency in the infliction of punishment upon military offenders, and to this tendency may be traced the modification of the power of C., particularly in the abolition soon after the war of the death sentence in certain cases. These cases are leaving one's commanding officer in order to go in search of plunder; sleeping or being drunk when on sentry duty; breaking into a house in search of plunder; forcing or striking a soldier who is acting as a sentinel; and forcing a safeguard. Public opinion also strongly animadverted on certain forms of field punishment, in view of which flogging and the tying of offenders to guns or vehicles have been abolished. Following the recommendations of the committee appointed after the war, improvements were effected in procedure and in the requirements as to the qualifications of officers constituting a court, and regimental C. were abolished, a change justified by the marked diminution of crime in the Brit. Army. Sentences of C. during the First World War were not always put into execution, and the services of offenders were retained in the field by the operation of the Army Suspension of Sentences Act, which, passed in 1915, is still operative. In Oct. 1946, as a sequel to the quashing of the sentences on 243 Brit. paratroopers for mutiny against their living conditions in Malaya, a number of M.P.s demanded that persons sentenced by C. should have the right to appeal to high court judges either through the court of criminal appeal or some special court. The right of appeal was introduced in 1951 by the Courts Martial (Appeals) Act. *See* *Manual of Military Law*, 1956.

The R.A.F. has its own code of law, which is largely based on military law, and, in consequence, its court-martial procedure is analogous to that of the army.

Naval Courts-martial. These courts are held under the authority of the Naval Discipline Act, 1866, which was amended in 1884. From the time of the Stuarts down to the time of the third George, discipline in the navy was regulated only at the discretion of the commanders,

under the authority of the Admiralty. In more cases than not this meant that the law was badly administered, and depended too largely upon the whims and fancies of the commander. Under the Naval Discipline Act, however, the court must consist of from five to nine officers of certain fixed rank. The court also must be held on board one of H.M. ships of war, and there must be at least two such ships together at the time. The sentence, save in the case of the death penalty, does not need confirmation by the commander-in-chief of the station. The court also has the power of reducing the gravity of the charge, and sentencing the prisoner on the reduced charge. The Naval Discipline Act also lays down definitely the jurisdiction of the courts which have by that Act authority to deal with any offender who is for the time being directly or indirectly connected with the navy or naval authorities.

Courts-martial Reforms. A reorganisation of the system of army and air force C. was recommended in the report of the Lewis Committee (pub. as *Cmd* 7608, 1949). The changes recommended include the provision of legal aid before and during trial, the appointment of directors of legal services in the three service ministries, the estab. of a C. appeal court, and a reconstitution of general and dist. C. It was suggested that the judge advocate general (q.v.) should be appointed on the recommendation of the lord chancellor (instead of by the Crown) and be responsible to him. His new title should be chief judge martial and he should enjoy a status and remuneration not less than those of a puisne judge of the high court. In the Lewis Committee's view general C. should be composed of a judge martial or his deputy and five officers of at least the rank of lieutenant or flying officer. Dist. C. should be under a permanent president and restricted in jurisdiction to offences for which the maximum penalty is imprisonment, and to soldiers and airmen below warrant rank. It was also proposed that the field general court-martial should be called an emergency court-martial, and that it should not be held in peace time in the U.K. In special cases, such as sentence of death for treachery, the sentence should not be executed immediately unless the convening officer and the next two senior officers in the force (who did not sit on the court-martial) affirm the conviction and conclude that the interests of discipline so require. The report also made far-reaching proposals in relation to appeal against conviction. Whenever the accused had pleaded not guilty it was proposed that he should have the right of appeal on a question of law. The court of appeal, to be called the C. appeal court, should, it was recommended, be formed of the chief judge martial, the vice-chief judge martial, and the judges martial, with the assistance of queen's counsel from a panel approved by the lord chancellor. It was not proposed that the court should hear appeals against sentence.

Most of these proposals were embodied

in subsequent legislation—the Court Martial (Appeals) Act, 1951, and the Army Act, 1955.

Certain of the above new features proposed by the Lewis Committee already form part of the naval C. system. In regard to others the Admiralty has taken administrative action on similar lines to the War Office and Air Ministry. In particular, as a result of the Pilcher Committee report, the judge advocate of the fleet has since 1951 been appointed by, and is responsible to, the lord chancellor instead of the first sea lord.

Couserans, or Conserans, Le, anct dist. of France, once part of Gascony, now in the dept of Ariège. Its cap. was St-Lizier.

Cousin, Jean, the elder (1490–1560), b. Sens. He began as a glass painter, but is mainly known as the first important Fr. painter of the nude, by his picture 'Eva prima Pandora' (Louvre), in the style of the Fontainebleau school.

Cousin, Jean, the younger (c. 1522–c. 1594), b. Souchy, near Sens, was, like his father Jean C. the elder (q.v.), a picture and glass painter. The windows in the Sainte Chapelle, Vincennes, are considered his best work, other examples being in the church of St Gervais, Paris, and the church of Sens. His 'The Last Judgement' (Louvre), with its multitude of nude figures, helped to establish subject painting in oils in France. C. was also a goldsmith, miniaturist, sculptor, and engraver. He made woodcuts for Jean le Clerc's Bible and also wrote books on geometry and perspective, including, among others, *Livre de Perspective*, 1580, and *Livre de Portraiture*, 1571. See A. Firmin-Didot, *Étude sur Jean Cousin*, 1872.

Cousin, Victor (1792–1867), Fr. philosopher and critic, b. Paris and educ. at the École Normale there. By 1814 he was Royer-Collard's assistant lecturer in philosophy at the Sorbonne. C. was at first a follower of the Scottish psychological ('common-sense') school of Reid and Dugald Stewart; after his visit to Germany, 1817–19, he showed the influence of Kant, Hegel, Fichte, and others. In 1820, after the assassination of the Duc de Berry, C. was for a time deprived of his office because of his Liberalism. During his second visit to Germany, 1824–25, he was arrested at Dresden, suspected of revolutionary tendencies, and detained for some months at Berlin. He returned to France and regained his position, in 1828, under Martignac's ministry. By this time he had pub. his eds. of Proclus and Descartes (1820–26), and the first vols. of his trans. of Plato. C. became director of the École Normale in 1830. He was minister of public instruction in the Cabinet of Thiers in 1840, and a member of l'Académie des Sciences Morales et Politiques. After the revolution of 1848 C. aided the gov. of Cavaignac, publishing an anti-socialistic pamphlet, *Justice et Charité*. He retired from public life after the *coup d'état* of 1851. He was founder of the 'eclectic' system, so named by himself; this system or school derived its doctrines partly from Scottish philosophy

and partly from Ger. Among his prin. works are *Fragments philosophiques* (1826; new eds. 1847, 1848); *Cours d'histoire de la philosophie* (1826; new eds. 1840, 1863); *Du vrai, du beau et du bien* (1836; new ed. 1853); *Galerie des femmes illustres du 17ème siècle* (1844); *J. Pascal* (1844); *La Jeunesse de Mme de Longueville* (1853); and *Mme de Sablé* (1854). See C. Secretan, *La Philosophie de Victor Cousin*, 1868; J. Simon, *Victor Cousin*, 1887.

Cousin (Lat. *consobrinus*), kinsman (like the Lat. *consanguineus*, a blood relation), especially applied to the child of one's uncle or aunt. If A and B are C.s, A's child is a first C. once removed to B. The children of brothers or sisters are C.-german (full or first C.s). Children of C.-german are second C.s to each other. In some parts of Cornwall and Somerset C. merely means friend or comrade (cf. Scottish friend, meaning kinsman). European sovereigns used to call each other C. or coz (see Shakespeare's *Henry V*). This name is still used by sovereigns for their nobles.

Cousin-Montauban, Charles Guillaume Marie Apollinaire Antoine, Comte de Palikao (1796-1878), Fr. general. He commanded the Anglo-Fr. forces in the expedition against China, winning the victory of Palikao in 1860. For this Napoleon III granted him his title after the fall of Peking. He was premier and war minister from Aug. to Sept. 1870, at the beginning of the Franco-Ger. war. After the disastrous battle of Sedan he fled from the country, refusing the dictatorship offered him. C.-M. wrote *Un Ministère de vingt-quatre jours* (1871) describing his experiences.

Cousins, Samuel (1801-87), mezzotint engraver, apprenticed to S. W. Reynolds. He produced his 'Lady Acland and Children' and 'Master Lambton' after Lawrence in 1826. These engravings won him a reputation, and were followed by numerous plates after Lawrence, Landseer, Reynolds, Millais, and others. 'Marie Antoinette in the Temple' is another famous work. C. became A.R.A. in 1835, and first academician engraver in 1855, retiring in 1880. He left £15,000 to found academy annuities for poor artists. See Pycroft's *Memoir*, 1887.

Coustou, name of three Fr. sculptors: **Nicolas Coustou** (1658-1733), Fr. sculptor, b. Lyons. His chief works are a statue in marble of Louis XV (in the Louvre), 'Daphne pursued by Apollo' (in the garden of the Tuileries), and the 'Descent from the Cross,' commonly known as 'Le Vœu de Louis XIII' (in the choir of Notre-Dame).

Guillaume Coustou (1678-1746), brother of Nicolas, and with him a pupil of his uncle, Antoine Coysevox (q.v.). He entered the academy of Paris in 1704 with 'Hercule sur le Bûcher.' He executed the bas-reliefs of the chief entrance to the Hôtel des Invalides, and the statues of the façade of the Château d'Eau, opposite the Palais Royal. Other works of his are a statue of St Augustine, 'Faith and Religion,' and 'Jesus Christ in the Temple.'

Guillaume Coustou (1716-77), son of the above, b. Paris. He won the Prix de Rome at the age of 19. He designed the sculptures formerly in front of the church of St Geneviève, and executed in bronze 'The Visitation.'

Coutances, Fr. tn in the dept of La Manche, 5 m. from the Eng. Channel, standing on the site of the Rom. Constan-tia. It is the seat of a bishopric, and is built on the slope of a hill surmounted by a beautiful 13th cent. Gothic cathedral. In the 17th cent. C. was the centre of a revolt against the imposition of the salt-tax. It has an agric. market and textile manufs. Pop. 5500.

Couthon, Georges (1755-94), Fr. revolutionary, a lawyer, who became president of the Clermont tribunal in 1789. He voted for the death of Louis XVI. Gradually he became more and more

GEORGES COUTHON

radical, and sided against the Girondists. Eventually he became president of the committee of public safety. He helped Robespierre to destroy the partisans of Hébert and Danton, but was guillotined with his leader in 1794.

Coutras, Fr. tn in the dept of Gironde, on the Dronne. Henry of Navarre (see HENRY IV of France) defeated the League (q.v.) here in 1587. It has a trade in wine and flour. Pop. 3800.

Coutts, Baroness Angela Georgina Burdett-, see BURDETT-COUTTS.

Coutts, Thomas (1735-1822), famous London banker, of Scottish birth, founder of the bank house, Coutts & Co., of which he became solo manager on the death of his brother James in 1778. He became banker to George III, and left a fortune of £900,000. C. married twice, his second wife being the actress Harriet Mellon. His grandchild was Lady Angela Burdett-C.

(d. 1906). See R. Richardson, *Coutts & Co.*, 1906; and R. Chambers, *Biographical Dictionary of Eminent Scotsmen*, 1875.

Couvade (Fr. *couver*, to hatch), the custom prevalent among sev. peoples in different parts of the world, requiring that the father at, and sometimes before, the birth of a child shall retire to bed and fast from all animal food. The mother continues her work in the fields until a few hours before the birth, and returns to it as soon after as she can stand, while the father affects to suffer all the physical pains and is waited on hand and foot by the women. The custom existed in ancient times among the Corsicans (recorded by Diodorus) and among the Sp. Basques (recorded by Strabo). It is still found in Guiana, in Tibet, and in some parts of China and India. See W. R. Dawson, *The Custom of Couvade*, 1929.

Covadonga, see CANÇAS DE ONÍS.

Cove, see COBB.

Cove, in architecture, a concave surface at the junction of wall and ceiling; used in place of a cornice.

Covenant, in law, is a written agreement under seal (i.e. in a deed) between two or more persons whereby some act is agreed to be done or not to be done; or upon the happening of some event, some liability is agreed to be borne by some party thereto. C.s may be express, e.g. not to use a house for any other purpose than as a dwelling-house; or implied, e.g. in a conveyance on sale the words 'as beneficial owner' imply C.s that the vendor of the land has a right to convey, that the land is free from encumbrances, that the purchaser shall be left in quiet enjoyment of the land, and that the vendor will make any further deed for the conveyance of the land that may prove necessary. C.s are said to 'run with the land' when they bind anyone to whom the land in respect of which they have been entered into is assigned. A breach of C. gives rise to an action of damages, and in some cases the covenantee may sue for an injunction to restrain a threatened or intended breach.

Covenant (through O.F. from Lat. *convenire*), or **Testament**, mutual agreement made by two persons or groups of persons, or by a person or persons with their god or gods. The term (Heb. *bērit*) is much used in the O.T. for various kinds of agreement. The children of Israel were particularly forbidden to make any C. with the Canaanites. More important, however, than these are the C.s made between Yahweh (Jehovah) and His chosen people. All these were summed up in the C. made with Moses on Sinai, spoken of in Isa. lv. 3 as 'the everlasting covenant.' This C. was expressly conditional. Israel had to be faithful and obedient if the C. was to be fulfilled. Human weakness and temptation made Israel unfaithful to the Mosaic C., but in Jer. xxxi a new C. written in man's heart was promised. This was fulfilled by Jesus Christ, the author of a New C. ratified in his own blood. This rests on faith, and is expounded by St Paul and the writer of the epistle to the Hebrews as the ful-

filment of the original C. made with Abraham. See Schultz, *Old Testament Theology*, vol. II, 1892.

Covenant of the League of Nations, short statement of essentials to the formation of the League of Nations, incorporated in the treaty of Versailles, 1919. It contained 26 clauses, and might be regarded as the constitution of the League. Its primary purpose was the prevention of war, and of necessity it envisaged the League as an organic body capable of seeing to its own development, and did not therefore do more than provide in general language such tentative machinery for securing international peace as at the date of the treaty was likely to command mutual agreement among the signatories of the treaty. There was no outlawry of war as such in the C., and the obligations laid on the signatories in the matter of the prevention of war were definitely limited in scope. These obligations were imposed by Articles 12, 13, 15, and 16. Under Article 12 the members of the League agreed to submit disputes either to arbitration or to inquiry by the League council, and, in any case, not to resort to war until three months after the award by the arbitrators or the report by the council. This article contained no absolute prohibition of war; it merely made provision for an interim period during which other means than resort to war might be employed towards finding a settlement. In the event of one disputant being dissatisfied with the award of the arbitrators and declaring war on the other disputant, who might faithfully have observed the award, a purely negative obligation was imposed by Article 13 on all members of the League other than the recalcitrant disputant, viz. that they would not resort to war against the complying disputant. In the case of a dispute submitted in the first instance, not to arbitration, but to inquiry by the council, it was provided by Article 15 that the members would not go to war with any other party to the dispute which complied with the recommendations of the council's report. But if the report was not unanimous, no obligation whatever was imposed on League members, who 'reserve to themselves the right to take such action as they shall consider necessary for the maintenance of right and justice.' Again, if a disputant failed to wait the stipulated time until the machinery set up by the League for seeking a solution other than war had been put into operation, then, under Article 16, the recalcitrant member was deemed to have committed an act of war against all other League members, and two sanctions, the one economic, the other military, naval, or aerial, might come into operation. In many cases the mere threat of an economic blockade would be effective, as was shown by the sudden cessation of the invasion of Albania by Yugoslavia in 1921. But, indeed, the threat was inadequate on the face of it because the C. provided no clue to the questions as to who was to say when the military sanction should operate, or who was to decide its nature and direct its application against

the common enemy. The C. imposed no compulsory contribution of military, naval, or air forces, and the duty of the council was solely one of recommendation, for there was no definitely organised force at the disposal of the League council. These defects of Article 16 of the C. were discussed at the 1921 assembly of the League, with the result that its text was altered by resolution so as to speed up the operation of sanctions in a crisis. This amendment was never ratified by the requisite number of members, and could not therefore be included in the official text of the C.

It did not follow from the restricted character of these obligations that the prin. articles of the C. were always valueless. On the contrary, they were sometimes instrumental in averting war, as, for example, in the case of the Greco-Bulgarian frontier dispute of 1925. No really grave dispute between two great nations was ever averted by the C., however, and when such disputes threatened to assume a serious aspect, one or other of the disputants adopted the course of resigning its League membership and reserved its entire freedom of action. Even small nations were undeterred by the League. Thus, in the prolonged dispute between Paraguay and Bolivia over the Gran Chaco, the C. machinery failed of its purpose. Again, the League failed to check Italy in the Corfu incident of 1923, and during the ensuing years it became evident that when a totalitarian state regarded its vital interests as being affected in a dispute it declined to tolerate League interference. In 1932 the C. machinery was strained to breaking-point when Japan invaded Manchuria, and again in 1935-36, in the Italo-Ethiopian war. It was attempted to explain away the former of these failures by assuming that there existed no reliable central gov. in China, and that Japan had really confronted the League with a *chose jugée*. The ensuing Lytton report plausibly stressed the interests of Japan and, to some extent, this emphasis reflected that by no means negligible section of world opinion which applauded Japan's adventure as calculated to restore order and good gov. in China. The report, however, did not even placate Japan and, in face of her condemnation as an aggressor by the League, she resigned her membership in order to pursue, thenceforward, her own course in China. When the clouds began to darken the Italo-Ethiopian political horizon, strenuous efforts were made to avert the threatened It. invasion of Ethiopia by action under Article 15, while the League council also strove to appease Italy by formulating a comprehensive programme of reforms in Ethiopia under a guarantee of collective assistance from Great Britain and France; and when this programme was rejected the League applied economic sanctions, only to abandon them soon afterwards as ineffective. No attempt was made to invoke the machinery of the C. in the case of the invasion of Austria, Czechoslovakia, and Poland by Hitler, and thereafter the

European political situation developed as if there were no League in existence.

It may be noted that Article 8 of the C. reflected the recognition by members of the necessity for reducing national armaments 'to the lowest point consistent with national safety,' and entrusted the council with the duty of making plans for the reduction of armaments and the supervision of munitions factories. That, however, was as far as the framers of the C. went in the sphere of disarmament (q.v.). Brief reference may also be made to Article 10, which stated that the members undertook to 'respect and preserve, as against external aggression, the territorial integrity and existing political independence of all members'; and that 'in case of any aggression or threat of aggression,' the council 'shall advise upon the means by which the obligation shall be fulfilled.' This article, however, was so ambiguous, when read in conjunction with the rest of the C., that it was almost meaningless; and indeed it was against this particular article that much of the opposition to the C. in the U.S.A. was directed. The two cardinal objections by the U.S.A. were that the article might involve the U.S.A. continually in purely European disputes over frontier adjustments, and that its natural interpretation was to perpetuate for all time the territorial *status quo*. Finally mention may be made of Article 14, which contained provision for instituting a Permanent Court of International Justice; but the court was not estab. until 1921 (*see* INTERNATIONAL COURT OF JUSTICE; OPTIONAL CLAUSE).

In 1938 at the nineteenth session of the League assembly the question of revision of the C. was raised again; but further consideration of the question of League reform was indefinitely postponed by the growing tension in Europe leading to war in the succeeding year.

The C. has been described by Dr Gilbert Murray as a 'call to repentance.' It rang with a moral tone; it called for the renunciation of war, for justice, and for 'a scrupulous respect for all treaty obligations'; it declared that any war or threat of war, whosoever it might occur, was 'a matter of concern to the whole League.' Perhaps it was because these aspirations came to nothing that the Dumbarton Oaks conference (Aug.-Oct. 1944) produced a plan that invoked no principles, but contained practical arrangements for restraining an aggressor. Under the League C. a dispute likely to lead to war could be brought before either the assembly or the council, although it was the council which had to call for action (sanctions) if forcible restraint was to be used. According to the Dumbarton Oaks plan, the council (called, for this reason, the security council) would alone shoulder the burden of keeping the peace; and for this purpose it would be aided by a military staff committee consisting of the chiefs of staff of the great powers (or their representatives). Moreover, in order that an aggressor state might be immediately restrained, all member-states

of the United Nations Organisation would have entered into agreements with the security council to determine their quota of military assistance for collective operations. There would therefore be an international force which could, in whole or part, be mobilised at the security council's command, if the interruption of diplomatic and trade relations, for which the council would first call, proved ineffective. These powers, vested in the security council, were much more precise and formidable than the powers of request for sanctions allowed to the council of the League. See also UNITED NATIONS, CHARTER; SAN FRANCISCO CONFERENCE.

followed, lasting for years. In 1679 the C. rose again, and won a small victory at Drumclog, but were completely crushed three weeks later at Bothwell Bridge, and in the next few years the remaining C. were persecuted with great cruelty, suffering imprisonment in appalling conditions. After their ultimate release some took the Oath of Allegiance, but others, refusing, were sent to the plantations in America. The struggle was at last ended by the revolution of 1688. Scott's *Old Mortality* gives a vivid account of the insurrection of 1679. See J. Aikman, *Covenanters in Scotland*, 1848; A. Smellie, *Men of the Covenant*, 1904; J. King Hewison, *The Covenanters*, 1908;

Valentine & Sons Ltd, Dundee

DUNOTTAR CASTLE IN KINCARDINESHIRE, WHERE COVENANTERS WERE IMPRISONED

Covenanters, name given to all subscribers to the various undertakings entered into by members of the Reformed Church in Scotland, from 1557 onward, for the defence of their faith; especially associated with the signatories of the Solemn League and Covenant (see also COVENANTS, THE), 1638-48. The Scottish Presbyterians co-operated with the Eng. Puritans in putting down episcopacy, and were in their turn crushed by Cromwell and the Independents. Charles II, needing Scottish support, signed the covenant in 1650, and again in 1651, but after the Restoration denounced it as unlawful (1662). The nobles mostly yielded, but thousands of the Scottish people stood firmly by their principles and attempted resistance. The battle of Rullion Green (1666) dispersed the insurgent army, and fearful persecutions

and R. C. Bosanquet, *Cavaliers and Covenanters*, 1932.

Covenants, The, in Scottish hist., certain public religious bonds entered into by the whole Scottish nation. They were two in number, the National Covenant and the Solemn League and Covenant, but they were preceded by sev. earlier religious bonds entered into by leading reformers and statesmen at the beginning of the Reformation period. The National Covenant is also known as the Short Confession of Faith to distinguish it from the more elaborate exposition set forth by Parliament in 1560. It was drawn up at the command of James VI by John Craig, one of his chaplains, its aim being to maintain the Protestant faith with the Presbyterian organisation, and to resist the attempts being made by the papal see to regain its hold upon Scotland. It gives a short

account of the faith which is to be supported, and then contains an oath of allegiance to the king in support of the same. The National Covenant was subscribed by all ranks of society in 1581, on the order of the king, Privy Council, and general assembly. It was renewed in 1590, after the defeat of the Armada, and again in 1598. It was once more brought into use in 1638, to unite the people in resistance to the attempt of Charles I to impose episcopal organisation and a prayer-book on the Eng. model upon the Scottish people. In Greyfriars churchyard at Edinburgh the covenant was signed by multitudes, and copies were then sent throughout the country. Many are still extant, a notable copy, bearing the names of many distinguished men, being in the library of the Faculty of Advocates at Edinburgh. The Solemn League and Covenant was a treaty between the Eng. and Scottish nations by which the Eng. Parliament received help from the Scots against Charles I on conditions given therein. The covenant was signed in England by the Parliament, the Assembly of Divines, and all classes, and it was also universally signed in Scotland. The Protestants of Ireland also subscribed to it. Its aim was to preserve and propagate the reformed faith by securing uniformity of doctrine, worship, discipline, and government throughout the three countries, and thus uniformity was generally understood to signify uniformity on the Presbyterian model. The National Covenant was renewed by Parliament in 1640, the Solemn League and Covenant in 1648, and both were subscribed by Charles II at Speymouth in 1650 and at Scone in the following year. After the Restoration both C. were declared unlawful (1662) and later treasonable (1685). See W. L. Mathieson, *Politics and Religion in Scotland, 1550-1695*, 1902, and A. Mure Mackenzie, *Passing of the Stuarts*, 1937.

Covent Garden, square in London situated N. of the Strand, deriving its name from the Convent Garden on this site that belonged to the Abbey of Westminster. The land was granted by the Crown to John Russell, 1st Earl of Bedford, in 1552. For the fourth earl Inigo Jones laid out the square (1631) followed by the erection of the church of St Paul's on the W. side. The church, twice destroyed by fire and twice reconstructed, has the curious feature of a portico at its E. end. Of the piazzas or open arcades of Inigo Jones' square only a fragment on the N. side survives. C. G. became a fashionable residential area until about the mid 18th cent. The centre was used as a mkt when the square was first laid out, but the present buildings were not erected until 1831, and C. G. has become London's chief vegetable, fruit, and flower mkt. The mkt. one of London's sights, is busiest between 6 and 9 a.m. The mkt rights were sold by the 11th Duke of Bedford in 1913.

Covent Garden Theatre and Royal Opera House. This famous London theatre (opposite Old Bow Street police court),

now the home of grand opera, was first built in 1732 by the harlequin Rich. At its opening Quin was the leading actor. The present building is virtually the fourth on the same site, as the alterations in 1792 amounted to a new theatre. It was burnt down in 1808 and rebuilt by Smirke. The increased prices of admission to cover the costs led to the 'old price riots' of 1809. In 1847 it was called the Royal Italian Opera House. Another fire in 1856 resulted in the present building by Barry, opened in 1858, seating about 2000. The interior is almost semicircular, the stage 90 ft deep by 50 ft high. A noticeable feature outside is the Corinthian portico of six columns, with the statues and reliefs by Flaxman and Rossi (saved from the former buildings) ranged on either side. Garrick played at C. G. in 1746, joining Rich for the season of 1747. C. G. and Drury Lane (first opened 1663) Theatres have always been rivals. In 1750-1 *Romeo and Juliet* was produced in rivalry at both houses alike. Peg Woffington performed at C. G. from 1740 to 1757. By 1803 John Kemble was part-proprietor and stage-manager. At this time Mrs Siddons was the leading actress. She retired in 1812, after playing *Lady Macbeth*. In 1817 John Kemble retired in favour of his brother Charles. The theatre then drifted for a time into great difficulties, and in 1829 was in possession of the bailiffs. Laporte of Her Majesty's and Bunn of Drury Lane were managers, 1832-5. Osbaldestone followed, presenting the tragic actress, Helen Faucit, in 1836. Macready, Mathews, and Miss Vestris leased the theatre later. From 1842 to 1859 Jullien's promenade concerts were often held here. The house was opened for opera, 1848, with F. Gye as manager. This venture proved successful, and Gye introduced Gounod and Wagner to London, amongst other composers. Grist, Mario, and Viardot were all noted singers of this period. From 1888 to 1896 Augustus Harris took over the management. He devoted his efforts to raising the standard of the whole cast, and not relying solely on the prima donna. After his death a company took over the management. C. G. was leased to the Anti-Corn Law League for its meetings and bazaar, 1843-5.

In 1896 Neil Forsyth became secretary of the Royal Opera Syndicate, and for many years acted as general manager and held auditions. In 1930, the secretaryship of the C. G. Syndicate Ltd, was vested in S. C. Edgar. Some of the famous singers heard in C. G. were Patti, Alboni, Albani, Tetrazzini, and Sammarco. In more recent times the Russian singer Shaliapin charmed opera-lovers, and a few of the newer stars of the musical world to appear at C. G. were Florence Austral, Lotte Lehmann, Elisabeth Schumann, Rosa Ponsello, Rudolf Bockelmann, Friedrich Schorr, Richard Mayr; and Eva Turner and Walter Widdon, two gifted Eng. operatic singers. Bruno Walter was the conductor of the Strauss and Wagner operas at C. G. in more recent years. Sir

Thomas Beecham mooted a scheme for an Imperial League of Opera, but the inadequate public response, and the absence of guaranteed support over any considerable period, proved so serious a handicap to the development of grand opera in Great Britain that, until an arrangement was made at the end of 1930 between the C. G. Opera Syndicate and the B.B.C., it seemed improbable that the C. G. seasons would be continued, otherwise than in a limited sense, beyond 1932. The arrangement with the B.B.C., however, provided for production over a number of years, the undertaking being administered by a new company known as the C. G. Opera Syndicate (1930) Ltd.

In 1946 began a new phase of opera in English, with C. G. now, for the first time, an estab. organisation subsidised in part by the Arts Council of Great Britain. An element of the international summer seasons remains, but opera in the vernacular is the rule, though foreign artists who can sing in English are often engaged. Brit. artists are enlisted wherever they can be found, and the highest standards are aimed at, if not always attained as yet, except in the matter of stage design, in which C. G. is supreme. The Royal (formerly the Sadler's Wells) Ballet is also estab. at C. G. and holds notable seasons of its own as well as taking part in operas.

See D. Shawe-Taylor, *Covent Garden*, 1948.

Coventry, Countess of, see GUNNING.

Coventry, Sir John (d. 1689), politician. He was M.P. for Evesham in the Long Parliament (1640), fought as a Royalist, and was knighted in 1661. In 1667 he was elected M.P. for Weymouth, and during a debate on playhouses in 1670 asked whether the king's pleasure lay among the men or the women who acted, popularly supposed to be an allusion to Nell Gwynn. His mutilation by Sir T. Sandys and a band of ruffians in consequence of this remark led to the passing of the Coventry Act which made such mutilation a capital offence.

Coventry, parl. and co. bor. in Warwickshire, England, on the R. Sherbourne, 9½ m. from Warwick, 18 m. SE. from Birmingham, 10 m. N. from Leamington, and 18 m. NE. from Stratford-on-Avon. It possesses a station on the main line from Birmingham to London (94 m.), with a branch to Nuneaton and another to Leamington. It also has the advantage of a canal, and this waterway has connection with the Oxford and Trent and Mersey canals. In 1936 a municipal aerodrome was estab. The city returns three members to Parliament.

C., anciently *Coventre*, and in Domesday *Coventreu*, is conjectured by Dugdale from the termination '-tre,' a place or dwelling, to have been a Brit. settlement. In 1451 it was constituted by Henry VI a co. of itself, and this privilege continued until 1842; under the provisions of the Local Government Act, 1888, the distinction was revived, and the place declared a co. bor. A convent appears to have been founded here at an early period, of which

at one time St Osburg was abbess. It was destroyed in 1016, when Edric invaded Mercia. At a later period, in the time of the Confessor, Leofric, earl of Mercia, and his countess, Godiva, erected and munificently endowed a monastery on the same site for an abbot and 24 monks of the Benedictine order. The first extant record of the famous legend of Godiva and her ride through the city appears about 150 years after the death of Leofric, which occurred in 1057. The city has long maintained a reputation as a manufacturing centre. Before the 15th cent. C. had estab. itself as the midland centre of the cloth industry. In the late 15th and the 16th cents. the making of caps and bonnets was extensively carried on. The place was then famous for a particular kind of blue dye, whence came the saying 'true as Coventry blue.' From the 17th cent. the manuf. of clocks and watches and of silk ribbons was developed, and they became the main industries of the 18th and 19th cents., followed in the late 19th cent. and early 20th cent. by the manuf. of bicycles. The staple trades now are motor cycles, motor cars, aero-engines, aircraft, machine tools, tractors, gauges, and instruments, general allied engineering, rayon, textile smallwares, telecommunications, radio and television sets, electrical equipment and plastics.

The cathedral church of St Michael, which possessed perhaps the deepest place in the affections of the people, was entirely destroyed, with the exception of the beautiful spire, by the enemy raid of 14 Nov. 1940. It was an edifice of surpassing beauty and dignity. The spire, a magnificent specimen of perpendicular architecture, resting on an octagonal tower, rises to a height of 300 ft. and forms a conspicuous feature of the city. The Great Hall of St Mary's Hall was built by the Trinity Guild at the turn of the 14th and 15th cents. The roof was damaged in the Second World War, but has now been restored. Ford's Hospital, founded in 1509, and rightly considered one of England's finest specimens of Tudor architecture, was destroyed by enemy action, but has now also been restored. Bond's Hospital provides further testimony to the generosity of C.'s wealthy merchant citizens of a bygone age. This almshouse was founded in 1506, and though the place was damaged in the raids it has now been restored. The origin of Holy Trinity Church is lost, but sufficient records exist to show its great antiquity and the interesting fact that it was attached to the monastic estab., Dugdale mentioning its appropriation to the priory in 1259. The steeple of Christ Church, notable as being one of the striking architectural group forming the celebrated Three Spires, was the sole remaining portion of a former Franciscan monastery, and it was the only part of the modern church which survived the enemy air attack of 10 April 1941. In the very heart of medieval C., breathing the spirit of the past, was the anct Palace Yard, a quaint quadrangle of half-timbered buildings, once the home of the

Hopkins family, to whose memory a marble monument appeared in the cathedral. Originally there were 12 city gateways, but the only two remaining relics of the medieval city defences now to be seen are the Swanswell or Priory Gate in Hales Street, and Cook Street Gate in Cook Street. Both these have been restored, and are now in an excellent state of preservation. Fragments of the old city walls still remain near Cook Street Gate, and here a beautiful little garden, known as Lady Herbert's Garden, has been laid out by Sir Alfred Herbert, K.B.E. Almshouses are also on the site, the gift of the same donor; some were destroyed by enemy action but have now

The commercial buildings have been grouped together, and the central feature of the shopping layout is a pedestrian precinct, at the four corners of which are large new stores, and flanking which are linking blocks which provide shopping facilities off a first-floor terrace as well as shops on the ground floor. The cultural buildings are grouped in a civic area away from the main commercial centre. C.'s new cathedral, designed by Mr Basil Spence, is under construction; consecration services and celebrations are planned for 1961. Pop. 265,000.

Cover: 1. In finance, a term used in reference to a method of speculating in shares by which it is possible to limit one's

'The Coventry Standard'

BROADGATE, COVENTRY, THE CENTRE OF THE CITY

The entrance to the shopping precinct, for pedestrians only, can be seen behind the stationary bus to the right centre.

been rebuilt. The C. and Warwickshire Hospital, founded in 1838, was first estab. in a small house in Little Park Street. In 1867 a new hospital was opened in Stoney Stanton Road, and enlarged from time to time over a period of years. In the course of concentrated attacks on the city the hospital was almost totally destroyed, the only part remaining being the out-patients' dept and the nurses' home. Some rebuilding has since taken place.

The city centre of C. sustained a great deal of war damage, and a plan for rebuilding the city centre has been prepared and is now being carried out. This plan provides wide new roads and all the facilities required for the commercial, cultural, and civic life of a great city.

loss to a specified amount, viz. the amount deposited to cover the sum the speculator is willing to risk in the deal. The amount deposited is called the C. If by settling day the difference in the price of the shares is such that the C. is exhausted, or has 'run off', a further sum must be deposited with the broker, if the speculator desires to carry over. If not, the account is closed. Where a transaction of this nature is entered into with a broker it is normally allowable by the rules of the Stock Exchange, and would not, without other evidence, be regarded in a court of law as a mere speculation in differences (q.v.). If the contract were made directly with a jobber it would be contrary to the gaming Acts. Such transactions are common with outside

brokers, who are really jobbers, and whose businesses go by the colloquial name of bucket shops.

2. Term used as a synonym for the security given for a loan, e.g. debentures, stock bonds, or title deeds, deposited with a banker as security for an overdraft. Insurance companies often issue a 'cover note' pending preparation of a policy for the risk insured.

Coverdale, Miles (1488-1568), Bishop of Exeter, translator of the Bible. He was a native of Yorkshire and was educ. in the house of the Augustine friars at Cambridge. He was ordained at Norwich in 1514, and the same year became an Augustine friar. But by 1526 he had entirely changed his religious opinions; he left his convent and preached against confession, and likened the veneration of images in churches to idolatry. In 1532 he travelled on the Continent, and possibly assisted Tyndale in his trans. of the Bible. In 1535 his own trans. 'out of Douche and Latyn' appeared, with a dedication to Henry VIII—the first complete Bible printed in Eng. The Psalms of C.'s Bible are those used in the Book of Common Prayer. In 1538 C. superintended the printing of a trans. in Paris. Many of the copies were seized by the Inquisition, but a few reached England, which enabled the noted printers, Grafton and Whitchurch, to bring out the Great Bible in 1539. C. became Bishop of Exeter in 1551. During Mary's reign he sought refuge on the Continent, where he took part in the production of the Geneva trans. (1557 and 1560). C. returned from exile in 1559, but, owing to the principles he had derived from continental reformers, he was not restored to the see of Exeter. In 1564 he accepted the rectory of St Magnus, London, but resigned two years later. C. wrote many tracts in order to promote the doctrines of the Reformation, and trans. works of his friends on the Continent. A complete ed. of his works and letters was issued by the Parker Society in 1844-6. *See The Memorials of Miles Coverdale*, 1838; and F. Fry, *The Bible by Coverdale*, 1867.

Covered Way, term used to describe a passage constructed in fortification outside the ditch of a fortress. It is usually about 11 yds wide, and being between the counterscarp and the glacis, and protected by the latter as well as by traverses, is used as a safe position for sentries and for the movements of small bodies of men towards assembling places.

Coverley, Sir Roger de, *see* ROBERT.

Coverture, in law, is a term used to indicate the state of a married woman, who is considered as under *cover* or the power of her husband, and therefore called a *feme covert*. The condition of C. followed from the legal maxim that by marriage husband and wife became one person, and that the legal existence of the woman was incorporated into that of her husband. Since the passing of the Married Women's Property Act in 1882 the maxim above alluded to was bereft of practically all its force, and a married woman can now make contracts and deal with her property

as she chooses. For recent legislation *see* HUSBAND AND WIFE.

Covilhã, tn. of Portugal, in Castelo Branco dist., 34 m. N. of Castelo Branco (q.v.). It is on the SE. slopes of the Serra da Estrêla, has an important woollen industry, and is a tourist centre. Pop. 19,200.

Covington, city of Kentucky, U.S.A., on the Ohio R. opposite Cincinnati, to which it is connected by bridges. It is an important industrial centre, and the second largest city in the state. It has tobacco and meat-packing plants, foundries, breweries, and distilleries; it manufs. X-ray equipment, machine tools, wire goods, metal, paper, and wood products, electrical equipment, bricks, tiles, asphalt, hardware, and fertiliser. C. is the seat of the Northern Kentucky State Vocational School, the Villa Madonna, and several private colleges. It was the boyhood home of Dan Carter Beard.

Cow, *see* CATTLE; DAIRY FARMING.

Cow Parsley, or *Anthriscus sylvestris*, umbelliferous plant, often called keck.

Cow-wheat, or *Melampyrum*, genus of the family Scrophulariaceae, consists of ann. herbs, said to be good for cattle. There are sev. species. *M. arvense*, Field C., is rare in cornfields of S. England; *M. cristatum*, Crested C., and *M. sylvaticum*, Wood C., are local; *M. pratense* is the Common C.

Cowal, mountainous peninsular dist. of Argyll, Scotland, between Loch Fyne on the W. and Loch Long and the firth of Clyde on the E. Its NE. half is a National Forest Park.

Coward, Noel Pierce (1899-), actor, dramatist, composer, b. Tedington on the Thames. He came of a musical family, and when at the Chapel Royal School, Clapham, developed a fine singing voice. He got his dramatic training at the Italia Conti Academy. One of his earliest stage appearances was as a page-boy in Charles Hawtrey's company, and in 1913 he played Slightly in Barrie's *Peter Pan*. During the First World War he enlisted in the Artists' Rifles, but was discharged for health reasons. Taking to play-writing he achieved his first success with *The Forger* in 1923. This was followed by *Fallen Angels*, 1925; *Hay Fever*, 1925; a sophisticated comedy, *Easy Virtue*, 1926; *The Queen Was in the Parlour*, 1926; *Private Lives*, 1930; *Design for Living*, 1933; *Blithe Spirit*, 1941; *This Happy Breed*, 1943; *Relative Values*, 1951; *Quadrille*, 1952; *South Sea Bubble*, 1956; and *Nude with Violin*, 1956. *Cavalcade*, 1931, a story of 30 years in the life of a family, initiated a new type of drama. C. also composed the revues *On with the Dance*, 1925, and *Sigh No More*, 1943, and sev. tuneful operettas, including *Bitter Sweet*, 1929, which was highly successful in both London and New York; others were *Conversation Piece*, 1934, *Pacific 1860*, 1946, and *After the Ball*, 1954. Besides writing the words and music he produced most of his plays, as well as acting in some of them. *Present Indicative*, 1937, and *Future Indefinite*, 1954, are

autobiographies. See P. Braybrooke, *The Amazing Mr Noel Coward*, 1933.

Cowasjee, Sir Jehanghir Ready-money (1812-78), called the Peabody of Bombay, a Parsee merchant and philanthropist. At the age of 15 he became warehouse clerk to the firm of Duncan, Gibb & Co. of Bombay. In 1846 he began trading on his own account, and soon amassed a large fortune, of which he gave away huge sums to philanthropic institutions in Bombay. He was made C.S.I. in 1871, and created a Knight Bachelor of the United Kingdom in 1872.

Cowbane, *Cicuta virosa*, a poisonous, umbelliferous, erect perennial, that grows on wet ground, locally, in Brit. Is.

Cowbridge, bor. of Glamorgan, Wales, 12 m. W. of Cardiff. Portions of the old Norman fortifications and wall still remain. The industry is entirely agric., and the tn has good markets and cattle fairs. Pop. 1100.

Cowdenbeath, tn of Fifeshire, Scotland, 5 m. N.E. of Dunfermline, with a coal-mining industry. Pop. 13,153.

Cowdray, Westman Dickinson Pearson, first Viscount (1856-1927), engineer and air minister. Head of a firm of engineers and contractors. Constructed the Dover harbour works, the Blackwall Tunnel, and the tunnel under the East R., New York. Was also engaged on the Tehuantepec Railway, Mexico. Appointed chairman of the Air Board in Jan. 1917. His great experience was invaluable in the board's work of constructing and delivering aeroplanes. Lord rector of Aberdeen Univ., 1918-21. See J. A. Spender, *Westman Pearson, First Viscount Cowdray, 1856-1927*, 1930.

Cowell, Edward Byles (1826-1903), Sanskrit scholar, who, in 1856, was appointed prof. of hist. and political economy in the re-formed Presidency College, Calcutta, and in 1858 principal of the Sanskrit College, also at Calcutta. In 1867 he was appointed prof. of the newly founded chair of Sanskrit at Cambridge, where he spent the remainder of his life. He taught Sanskrit and Pali, Indian philosophy, Persian, and Zend. He pub. numerous works (on Hindu drama and philosophy, on Persian poetry, on Prakrit grammar, etc.) as well as trans. of Sanskrit works. His linguistic versatility (including Hebrew, Welsh, Spanish) and his knowledge of literatures were remarkable. See G. Cowell, *Life and Letters of Edward Byles Cowell*, 1904.

Cowen, Sir Frederick (1852-1935), conductor and composer, b. Kingston, Jamaica. He studied under Benedict and Goss, and at Leipzig and Berlin, and his works include oratorios, operas, symphonies, cantatas, overtures, and the settings of over 200 songs. He was appointed conductor to the Philharmonic Society in 1888, and held many other important appointments as conductor.

Cowes, seaport and watering place on the estuary of the R. Medina, on the N. coast of the Isle of Wight, England, 10½ m. S.E. of Southampton and 8½ m. S.W. of Portsmouth. It is a world-famous yachting centre and is the H.Q. of the Royal

Yacht Squadron. Other clubs are the Royal Corinthian Yacht Club and the Royal London Yacht Club, and there are sev. sailing clubs. It is the most highly industrialised part of the Isle of Wight, with ship and boat building, aircraft manuf., sail making, and rope works. Dr Arnold, the headmaster of Rugby, was born here in 1795. E. and W. Cowes, each on its respective side of the riv., form the Cowes urb. dist., and are connected by a floating bridge. Osborne House, built in 1845 by Queen Victoria, was one of her favourite residences. Whippingham church, designed by the Prince Consort, E. Cowes Castle (John Nash's residence) and Norris Castle are also noteworthy. Pop. 17,154.

Cowles, Henry Chandler (1869-1937), Amer. botanist, b. Kensington, Connecticut; son of Henry Martyn C. Educ. at Oberlin College and Chicago Univ. Prof. of natural sciences at Gates College, Nebraska, 1894-5, and, later, of botany at Chicago Univ. Works: *Vegetation of Sand Dunes of Lake Michigan*, 1899; *Plant Societies of Chicago*, 1901; *Text-book of Plant Ecology*, 1911; and *Plant Societies of Chicago and Vicinity*, 1913.

Cowley, Abraham (1618-67), poet and essayist, b. London. He was educ. at Westminster and Trinity College, Cambridge. While still at school he pub. 2 vols. of poems, *Poetical Blossoms*, 1633, and *Sylva*, 1636, and wrote a pastoral comedy, *Love's Riddle*, pub. 1638. At Cambridge he brought out a Lat. comedy, *Nafragium Jocularis*, 1638. He was ejected from the univ. as a royalist by the parliamentarians in 1643, and removed to St. John's College, Oxford, where he pub. a satire, *The Puritan and the Papist*, 1643. In 1646, at the surrender of Oxford, he obtained a confidential appointment in the royal household, going to Paris with the queen and dealing with the cipher correspondence between her and the king. He remained abroad for about 10 years, being secretary to Lord Jermyn (the earl of St. Albans), and travelling to Jersey, Scotland, Flanders, Holland, and elsewhere on royalist missions. In 1647 he pub. *The Mistress*, a series of poems in the most exaggerated style of the metaphysical school, and on returning to England in 1656 issued a vol. containing earlier books of poems, *Miscellanies*, *The Mistress*, *Pin-darique Odes*, and *Davidis*, the last an epic which had been largely composed at Cambridge. In 1657 he took the degree of doctor of medicine at Oxford. On the death of Cromwell he returned to France as secretary to the royal family, and at the Restoration, being apparently disappointed at not receiving a greater reward for his loyalty than a lease of some of the queen's lands, retired to the country, living first at Barn Elms and then at Chertsey. He is buried in Westminster Abbey. His other works include 5 books on plants in Lat. (1662, 1668, 1678); a comedy, *Cutler of Coleman Street*, 1641; in prose, *A Proposition for the Advancement of Experimental Philosophy*, 1661; a discourse on the gov. of Cromwell; and some delightfully clear and pleasant essays.

The beauties of his poems are spoilt by false taste and affected wit. See Sir E. Gosse, *Seventeenth-century Studies*, 1883; R. Schafer, *The English Ode*, 1918; and A. H. Nethercot, *Abraham Cowley: the Muse's Hannibal*, 1931.

Cowley, Hannah (1743-1809), dramatist and poetess, b. Tiverton, Devonshire, her maiden name being Parkhouse. In 1768 she married Capt. C. of the E. India Company, who d. in 1797. Her 2 most successful comedies were *The Runaway*, 1776, and *The Belle's Stratagem*, 1780, and she also produced sev. other popular plays and some poems, including *The Maid of Arragon*, 1780; *The Scottish Village or Pitecaine Green*, 1786; and *The Siege of Jeric*, 1799, 1801. Her collected works, in 3 vols., with memoir, appeared in 1813.

Cowley, Henry Richard Charles Wellesley, first Earl (1808-84), diplomat, ednc. at Brasenose College, Oxford. From 1852 to 1867 he was ambas. at Paris, and exercised great influence in the relations between France and England, helping Clarendon to promote the Declaration of Paris, 1856, and Cobden to carry through his commercial treaty between France and England, 1860. He was created Earl C. in 1857.

Cowpen, part of Blyth municipal bor. (q.v.), Northumberland, with coal mines and light industries.

Cowpens, tn in Spartanburg co., S. Carolina, U.S.A., 2 m. S. of the N. Carolina boundary. It is famous for the battle, during the War of Independence, in which the Amer. general Morgan defeated the Brit. under Tarleton (1781). Pop. 1880.

Cowper, Edward (1790-1852), engineer and inventor who in 1827, with his brother-in-law, Applegarth, invented the four-cylinder machine, which was in general use for the printing of newspapers for many years.

Cowper, William, first Earl (c. 1665-1723), statesman, son of Sir Win C., M.P. In 1707 he became the first lord chancellor of Great Britain. He presided at the trial of Sacheverell in 1710, but resigned his office on the fall of the Whig ministry in the same year. George I. reappointed him lord chancellor, and as such he presided at the trial of the rebels of 1715. See Lord J. C. Campbell, *Lives of the Lord Chancellors*, 1845-69.

Cowper, William (1666-1709), surgeon and anatomist, b. Petersfield, Hampshire. He was admitted a barber-surgeon in 1682, and pub. *Myotomia Reformata*, 1694, a treatise on the muscles, and *The Anatomy of the Human Body*, 1698. His name is associated with the glands described by him in 1699, although they had been discovered by Jean Méry in 1684. He was first to describe insufficiency of the aortic valve.

Cowper, William (1731-1800), poet, b. Great Berkhamsted, Herts., of which vil. his father, John C., was the rector. His mother d. when he was very young, and he was sent at the age of 10 to Westminster School, having been removed from his previous school on account of the cruel treatment he had sustained from

another boy. At Westminster his impressions were also somewhat painful, and from his youthful experiences he developed a hatred of public schools which he retained all his life. He had here Warren Hastings and the satirist Churchill as fellow pupils. Shortly after leaving school C. was articled to an attorney named Chapman, but he never showed any intention of practising, though he was called to the Bar in 1754. Though he almost entirely neglected his professional work, his time was not being wasted. He was reading and writing, and, with his brother, trans. part of Voltaire's *Henriade*. He also belonged to the Nonsense Club, and fell in love with his cousin Theodora, daughter of Ashley C. The feeling was reciprocated, but the poet never had the energy

WILLIAM COWPER

to overcome his uncle's objections to the match. Meanwhile he was expecting the influence of his family to secure him some useful gov. post where the position was a sinecure, and this occurred in 1763. His cousin, Maj. C., offered him the post of clerk to the journals of the House of Lords, and he accepted it in preference to a more important post which was also vacant. Before he could take up his position, however, he had to undergo a so-called examination as to his fitness, which really amounted to no more than an appearance before the Bar of the House. C., however, who had already been somewhat given to fits of depression, grew so nervous at the prospect of this appearance that he finally attempted to commit suicide. Fortunately his courage failed him. His mind now gave way, and he was visited with terrible religious despair, describing himself as 'damned below Judas.' In this condition he was removed (Dec. 1763) to a private asylum at St Albans, where he gradually recovered.

In 1765 he settled in Huntingdon, where he became acquainted with the

Unwins, at whose house he soon came to reside. They were an amiable and religious family, and after the death of Mr. Unwin, C. continued to reside with his widow. In 1767 he removed with her to Olney, where he came under the influence of John Newton, curate of the vil. Under this stimulus the poet gave himself up entirely to piety and good works, though too energetically for his health. It is from this period, at the suggestion of Mrs. Unwin, that the real commencement of of C.'s poetic life must be dated. In 1773 his failing health again gave way, and a bout of madness ensued, which clouded his brain for 3 years. In 1779, 3 years after his recovery, appeared the *Olney Hymns*, written by him in conjunction with Newton. His next vol., consisting of secular verse, appeared in 1782, and contained *Table Talk*, *The Progress of Error*, *Truth*, and *Expostulation*. Much of this was the outcome of a new friendship he had just formed with Lady Austen, a widow who had lately fixed her residence at Olney. She it was who told C. the tale of John Gilpin, about which he wrote one of his most delightful poems. Lady Austen then suggested that he should write blank verse, and carelessly pointed to a sofa as a theme. This suggestion was the inspiration of *The Task*, which appeared in 6 books in 1785. But the year before had seen the end of this friendship, perhaps because of Mrs. Unwin's jealousy of Lady Austen's influence. In 1786 Lady Hesketh, sister of Theodora C., came to visit them at Olney, and persuaded them to move to Weston Underwood in 1787. In 1787 came another six months' insanity during which the poet again attempted suicide. In 1791 appeared a trans. of Homer into blank verse which he had started in 1784, and a projected ed. of Milton brought him into touch with the famous Hayley. In 1794 came a final attack of insanity, from which he never entirely recovered. His cousin, John Johnson, took him to Norfolk with Mrs. Unwin, who d. at E. Dereham. The poet lingered on for 4 more years, dying on 25 April 1800. He is buried near Mrs. Unwin in E. Dereham church. C. may justly be described as the herald of the Romantic movement. In him were gathered up and concentrated all the gleams which had shone disconnectedly in Thomson, Gray, Lady Winchelsea, and the novelists. Though he was not one of the greatest poets of the country, his work is important both intrinsically and historically. In addition, he was among the very best of Eng. letter-writers. His letters show the same command of pure idiomatic Eng., the same acute observation, and the same mingling of gentle humour and melancholy. See W. Hayley, *Life and Posthumous Writings*, 1803-4, and *Life and Letters*, 1809; G. Smith, *Cowper*, 1880; T. Wright, *The Life of William Cowper*, 1892, *Correspondence*, 1904, and *Unpublished and Uncollected Letters*, 1925; H. I. A. Fausset, *William Cowper*, 1928; Lord D. Cecil, *The Stricken Deer*, 1929; and T. Gilbert, *William Cowper and the Eighteenth Century*, 1935.

Cowper (afterwards **Cowper-Temple**), **William Francis, Baron Mount-Temple** (1811-88), politician, educ. at Eton. He entered Parliament in 1835 and was raised to the peerage in 1880. His name is chiefly associated with the Cowper-Temple clause (q.v.) of the Education Bill, 1870.

Cowper-Temple Clause. The principle underlying this clause of the Education Act, 1870, which was incorporated on the amendment of Sir (then Mr) Wm Cowper-Temple (q.v.) on the second reading of the Bill, introduced by Mr Arnold-Forster, lies at the root of the bitter controversies that raged round education until 1944. From the moment public elementary schools were estab. it became clear that rate-payers generally had a right to demand the exclusion from such schools of the teaching of any catechism or formula distinctive of any individual denominational creed. The C. C. was designed to effect that exclusion, but applied only to a public elementary school. On the advice of the law officers of the Crown, the Board of Education decided that the teaching of the Apostles' Creed, the Lord's Prayer, and the Ten Commandments is not a contravention of the clause, but that the teaching of that part of the catechism known as the Duties is a contravention. The whole question of religious instruction in schools was revived in 1897 when voluntary schools received a grant in aid, and still more acutely in 1902, when the Education Act of that year made such schools rate-aided. Section 25 of the Education Act, 1944, laid down that the school day in every co. and voluntary school should begin with an act of worship. Religious instruction, according to an agreed syllabus, was to be provided. Parents are free to withdraw their children from both. The provisions of the Act virtually solved the denominational struggle. See **EDUCATION**.

Cowper's Glands, pair of small bodies about the size of a pea, situated in the male just below the apex of the prostate and between the two layers of the triangular ligament. They correspond to Bartholin's glands in the female.

Cowra, tn in Forbes co., New S. Wales, Australia, on the r. b. of the Lachlan R., 300 m. W. of Sydney, and 60 m. SW. of Bathurst. It is the centre of a fertile agric. and grazing dist. Pop. 6230.

Cowrie Pine, see **KAURI**.

Cowry, name given to gastropod molluscs of the family Cypræidae. The shells of the money C. (*Cypræa moneta*) were formerly used as currency in India and Africa. C.s are mainly tropical, some of the larger forms being objects of great beauty. The attractive little European or ridged C. (*Cypræa europæa*) is not uncommon on some Brit. beaches. In the young C. the shell is of the usual spiral type, but as it grows the last formed whorl covers and hides the others. At the same time the lip thickens and turns inwards, so that the opening is reduced to a narrow slit. The spiral structure is revealed if a fully formed shell is broken. See **MOLLUSCS** and **SHELL**.

Cowslip, or *Primula veris*, a species of Primulaceae. The common Eng. variety is a bright yellow herbaceous perennial. The flowers are terminal, rising on scapes, stalks in closely umbellate form. The corolla is gamopetalous and tubular below; the stamens are adnate to the corolla.

COWSLIP

Cox, David (1793-1859), landscape painter, b. Birmingham, and in early life became a scene-painter. He took to water-colour painting and art-teaching, and in 1814 pub. *A Treatise on Landscape Painting*. In 1839 he turned his attention to oils, but his oil-paintings, although masterly, are not so well known as his water-colours. It is impossible to rank C. among the greatest artists, even in water-colours, but he excelled in rendering atmospheric effect and made an individual contribution to the development of Eng. landscape painting as an interpreter of windy, cloudy skies, and of rainstorms beating down on open commons. At his best he was second only to Constable and de Wint. Among his most famous pictures are 'Peace and War,' 1846, sold for £20 by C., and for £3601 in 1872; 'The Hayfield,' sold in 1875 for £2950, the largest sum paid for a water-colour up to that date; 'The Vale of Clwyd,' 1846; 'Bolton Abbey,' 1847. C.'s favourite scenery was in N. Wales, especially around Bettws-y-Coed. See W. Hall, *biography*, 1881; R. and S. Redgrave, *Century of Painting*, 1893; and T. Cox, *David Cox*, 1948.

Cox, Sir George William (1827-1902), divine and mythologist, b. Bonares, India, educ. at Rugby and Trinity, Oxford, pub. *The Mythology of the Aryan Nations*, 1870; *Popular Romances of the Middle Ages*, 1871; *A General History of Greece to the Death of Alexander the Great*, 1876; *History of the Establishment of British Rule in India*, and *An Introduction to the Science of Comparative Mythology and Folklore*, 1881; *A Concise History of England and the English People*, 1887.

Cox, Gonzales, see COQUES.

Cox, Jacob Dolson (1828-1900), Amer. general, b. Montreal, Canada; graduated at Oberlin, 1851; admitted to the Ohio Bar in 1853, and was elected to the State Senate, 1859. He took part as a brigadier-general, U.S.A., in the W. Virginia campaign of 1861, and in many campaigns during the war. He was governor of Ohio, 1866-7, was a representative to Congress, 1877-99, and president of the univ. of Cincinnati, 1885-9. A great authority on military hist. His *Military Reminiscences of the Civil War* was pub. posthumously, 1900.

Cox, Sir Percy Zachariah (1864-1937), administrator. Educ. at Harrow and Sandhurst and began his career in the army, serving in the Cameronians till 1889, when he joined the Indian staff corps. Later he became vice-consul at Zeila, Somali coast, and filled other consular posts at Berbera, 1894-5, at Muscat, 1899-1904, and at Bushire, 1904. He then became political resident for the Persian Gulf, and in 1914 secretary for the dept of India there, and, when the First World War began, chief political officer for the Indian expeditionary force. He was acting minister to Persia in 1919-1920, and closed his career by becoming Iraq's first high commissioner, which post he held for five years.

Cox, Samuel (1826-93), nonconformist divine and writer, b. London. For 25 years he was minister of a Baptist church in Nottingham. C. was the founder and editor (1875-84) of the *Expositor*, and the first 20 vols. are nearly all his work. He pub. numerous theological works, the best known of which are *Salvator Mundi*, 1877; *A Commentary of the Book of Job*, 1880; and *The Larger Hope*, 1883.

Coxie, Michael, see COXIE.

Coxe, Henry Octavius (1811-81), librarian and scholar, b. at Bucklebury, Berks. In 1860 he became head librarian of the Bodleian, Oxford. His reputation as a palaeographer induced the gov. to send him to the Levant in search of anc. MSS. in 1857, but his quest was unsuccessful, though he detected the forgery attempted by Constantine Simonides. He pub. *Rogeri de Wendover Chronica* (5 vols.), 1841-1, for the Eng. Historical Society; *The Black Prince*, 1842, an historical poem written in Fr. by Chaudos Herald; Gower's *For Clamantis*, 1850; and a *Report on the Greek Manuscripts yet remaining in the Libraries of the Levant*, 1858. Under his direction the catalogue of the Bodleian in over 720 vols. was completed, and he was the compiler of *Catalogue of Greek MSS. at the Bodleian*, 1852-54. See J. W. Burgon, *Twelve Good Men*, 1888.

Coxe, William (1747-1828), writer of hist. and travels, educ. at Eton and Cambridge. He travelled on the Continent, once as tutor to the Marquess of Blandford and another time as companion to Lord Herbert. His works include *Travels into Poland, Russia, Sweden, and Denmark*, 1784-90; *Travels in Switzerland*, 1789; *Memoirs of the Life and Administration of Sir Robert Walpole*, 1798; *History of the House of Austria, 1218 to 1792*, 1807;

Memoirs of the Kings of Spain of the House of Bourbon, 1700 to 1788, 1813; and Memoirs of John, Duke of Marlborough, 1818-19.

Coxie, or **Coxcie**, **Michael** (1499-1592), Flem. painter and engraver, b. Mechlin; studied under van Orley and later at Rome, where he was a great admirer of Raphael, on whose works he based his style. His chief works include 'St Sebastian' and 'The Triumph of Christ,' both in the Antwerp Gallery; another 'St Sebastian' in Mechlin Cathedral; and a copy of van Eyck's 'Adoration of the Lamb,' which he executed for Philip II of Spain. He d. at Antwerp.

Coxwell, **Henry Tracy** (1819-1900), aeronaut, one of the best known of Victorian professional balloonists, who made his first ascent in 1844. In 1862 he made a famous high-altitude ascent with J. Glaisher for scientific observation.

Coyote, **Prairie Wolf**, or **Canis latrans**, wolf-like member of the dog family Canidae which inhabits N. America. The fur is long and thick, and the animal has a dirty yellow colour. Its mournful howling in the night is an unwelcome sound to lonely travellers.

Coyote State, see SOUTH DAKOTA.

Coypel, name of four Fr. painters:

Noel Coypel (1628-1707), b. Paris; employed on the decoration of the Louvre in 1655; became an academicien in 1659; became director of the Fr. Academy at Rome in 1672. Returning to Paris later, he executed paintings at the Tuilleries and the vault of the Church of the Invalides.

Antoine Coypel (1661-1722), son of Noel, b. Paris; studied under his father at Rome, and returning to Paris was very popular, decorating sev. royal palaces, and becoming prin. painter to the king in 1715.

Noel Nicholas Coypel (1688-1734), son of Noel, b. Paris; became an academicien at 28. He had a considerable contemporary reputation as a historical painter, which has now diminished.

Charles Antoine Coypel (1694-1752), son of Antoine, succeeded his father in the king's household. Noted for his pastel work and 25 scenes from the life of Don Quixote.

Coypu, popular name of a species and genus of rodent in the family Capromyidae. The technical name of this S. Amer. creature is *Myocastor C.*, and in habit and appearance it resembles a large water rat. Its maximum length is about 2 ft, its general colour a brownish-red, and the edges of the lips and muzzle are whitish. It has short limbs, small ears, a long naked tail, and the hind feet are webbed. The fur (nutria) is used for coats, and the flesh is sometimes eaten. The diet of the C. is principally vegetarian.

Coysevox, **Antoine** (1640-1720), Fr. sculptor, b. Lyons, of a Sp. family; studied in Paris under Lerambert, and produced a statue of the Virgin before he was 17. In 1667 he went to Alsace to decorate the palace of Cardinal Fürstenberg, which occupied him for 4 years. On returning to Paris he executed 2 statues of Louis XIV, one being an equestrian figure commissioned by the prov. of Bretagne. He

became very famous, and was admitted into the Academy in 1676, later becoming chancellor of that body. Among his chief works are the tombs of Cardinal Mazarin and of Colbert, in St Eustache; the monument of Charles le Brun in St Nicholas; the statue of Condé and that of Louis XIV in Notre-Dame; the two-winged horses in marble surmounted by Fame and Mercury placed one on each side of the entrance to the garden of the Tuilleries from the Place de la Concorde; and sev. statues in the gardens of Marly and Versailles. His bust by Lemoine is in the Musée des Monuments Français. See life by G. Keller-Dorian, 1920.

Cozens, **Alexander** (c. 1717-86), landscape painter, b. Russia, where Peter the Great had invited his father to stay as shipbuilder. He was sent to Italy to study painting, and from there went to England and settled there in 1746. From 1760 to 1781 he exhibited many pictures, some of them at the Royal Academy. During this period, moreover, he spent much time in teaching, and was from 1763 to 1768 drawing master at Eton. Many of his earlier works in colour, pen and ink, and pencil are in the Brit. Museum. He was the author of sev. works on art, including his 'New Method' of evolving landscape compositions from blots or rough smudges.

Cozens, **John Robert** (1752-99), landscape painter in water-colours, was the son of Alexander C., and was b. in England. It has been said that he was 'the greatest genius who ever painted a landscape,' and though this is too great praise he was of undeniable importance in the development of Brit. landscape painting. He was first instructed in painting by his father. In 1776 he went to Switzerland with R. Payne Knight, and returned to England in 1782; in 1783 he went to Italy with Wm Beckford. He first exhibited at the Incorporated Society of Brit. Artists in 1767, and he made some beautiful sketches of the trees in Windsor Forest. In 1794 he became insane. Many of his works are to be found in the print room at the Brit. Museum; they are noted for their delicacy and their beautiful colouring, and they certainly influenced Turner and Girtin. Constable said that 'the works of Cozens are all poetry.'

Crab, **Roger** (c. 1621-80), hermit, b. Buckinghamshire. From 1642 to 1649 he served in the parl. army and was wounded in the head. In 1651 he sold his business in Chesham as a 'haberdasher of hats,' and built a hut where he retired and practised great austerities. He was accused of witchcraft and persecuted, being imprisoned, cudgelled, and put in the stocks. He pub. *The English Hermit*, 1655; *Dagon's Downfall*, 1628; and tracts against the Quakers. See R. Chambers, *The Book of Days*, 1862-4.

Crab, name applied to various mechanical weight-lifting contrivances, including an engine with 3 claws used in the launching and docking of ships, a portable windlass used in building and in loading and unloading operations, and a kind of pillar used as a capstan.

Crab, popular term applied to numerous species of decapod crustaceans, properly only to those in the div. Brachyura, but also commonly to others included in the Anomura. The true C.s have short antennae, eyes which can be retracted into sockets, a short tail which is tucked up under the cephalothorax, a compressed body covered by a hard carapace, and two large anterior claws curved closely round the carapace, these being usually larger in the male than in the female. In diet they are carnivorous, and will feed on carrion or on living matter; a few species sometimes vary their food with vegetables. Nearly all of the C.s are marine, but there exist also land C.s, which would drown if kept in water; some are so tiny that they will hide in disused shells, and others have a fondness for burrowing in sand and mud. Many of the males are pugnacious, and will fight bitterly with an opponent; some are capable of casting a claw in self-preservation, and all are able to regenerate a missing limb. In intelligence they rank probably highest of the crustaceans. The hermit or soldier C.s are anomurous, and are characterised by having a fleshy, spirally twisted abdomen, usually covered over by an empty gastropod shell; they are united in the tribe Paguridae, of which the genus *Pagurus* is typical. The species in the tribe Galatheiidae are symmetrical in shape, and the young are noted for the length of the spines on the carapace; the species and genus *Aeglea laevis* is found in fresh-water streams of S. America. The tribe Hippidae comprises the sand or mole C.s, and *Hippa eremita* burrows in the sand. The brachyurous species are divided into five tribes: (1) Brachyura Anomala, Notopoda or Dromiacea, of which *Dromia vulgaris* is a common Brit. representative; (2) Oxytomata, in which are found the genera *Dorippe* and *Cymonimus*; (3) Oxyrhyncha, which contains spider C.s and others, e.g. *Maia*; (4) Catometopa, in which occurs *Sesarma pisonii*, a climbing and air-breathing species, and also the calling-C. genus *Gelasimus*, whose members have one claw larger than the others, and this is borne in a beckoning manner; (5) Cyclometopa, to which belong *Cancer pagurus*, the large edible C. seen in markets, *Carcinus moenas*, the common shore-C. of Britain, *Portunus puber*, the velvet or devil C., and *Corystes cassidellus*, the masked C., a curious species bearing on its carapace marking as of a human face. See also KING-CRAB.

Crab, The, see CANCER.

Crab Apple, or *Malus sylvestris* (synonym *pumila*), family Rosaceae; native of Britain, Europe, and SW. Asia; progenitor of cultivated apples, makes a small round-headed tree, of which the yellow fruits are tart, and chiefly used for preserves and jellies. 'Dartmouth,' 'John Downie,' 'Golden Gem,' and 'Veitch's Scarlet' are garden forms grown for their ornamental value.

Crabbe, George (1754-1832), poet, b. Aldeburgh, Suffolk, the son of a schoolmaster and par. clerk. He had only a very rudimentary education, but by his devotion to his books soon overcame this

defect. Destined for the medical profession, he served as apprentice, first to a doctor at Wickham Brook, and presently to another at Woodbridge, in which latter place he first met his future wife, Sarah Elmy, the Mira of his poems. He now began to write verse, and, in 1780, with a borrowed five-pound note and some MSS., went to London to seek fame and fortune. He found the metropolis a cold-hearted stepmother, and he was at the end of his tether, when, having failed to secure a hearing elsewhere, he sent *The Candidate* to Burke. Burke read it, saw its merits, and induced Dodsley to publish it in 1780. At Burke's suggestion C. took orders and, after a term as a curate, was in 1782 appointed chaplain to the duke of Rutland. In the following year *The Village* appeared, and 3 years later C. pub. *The Newspaper*, after which, though he wrote—and destroyed—diligently, he remained silent for more than a score of years. In 1807 he broke his long silence by the pub. of *The Parish Register*, and this work he followed 3 years later with *The Borough*. He paid a visit to London in 1817, and was everywhere received as the distinguished man of letters he was. Two years later he pub. his last great work, *Tales of the Hall*, for which John Murray gave him £3000. He d. at Trowbridge, where the living had in 1813 been given to him by the duke of Rutland. A monument to his memory has been erected in Trowbridge church. Much of his work was in a way a protest against the pastoral poetry in the style of *The Deserted Village*. He endeavoured to paint nature as it was, and in this he succeeded greatly. His complete works were ed., with a life, in 8 vols. by his son George, 1834; and his poetical works by A. J. and H. M. Carlyle 1908, 1914. See T. E. Kebbel, *The Life of George Crabbe*, 1888; A. C. Ainger, *Crabbe*, 1903; R. Huchon, *Un Poète réaliste anglais, George Crabbe, 1754-1832* (with bibliography), 1906 (Eng. trans. by F. Clarke, 1907); J. W. Holme, *The Treatment of Nature in Crabbe*, 1912; J. H. Evans, *The Poems of George Crabbe: a Literary and Historical Study*, 1933; and *The Life of George Crabbe*, by his son (with introduction by Edmund Blunden), repub. 1947.

Cracking of Petroleum. Crude petroleum is a mixture of paraffin and aromatic and naphthene hydrocarbons. Distillation separates it into fractions each of which consists of hydrocarbons having a wide range of boiling points, e.g. natural gas, motor spirit (35-200° C.), kerosene (150-300° C.), gas oil, and fuel oil. Some of these fractions are used directly for the manuf. of chemicals, but the gas oil is cracked. This process consists of heating a petroleum product to a high temp. and pressure, causing the large molecules to break up into smaller ones, e.g.:

The gas oil is heated in a vaporiser furnace and distilled. The heavier fractions are used as fuel oil, the lighter ones being passed to the cracking furnace and distilled. This yields gases rich in the

type of unsaturated hydrocarbon, the olefine, such as ethylene, propylene, butylene, etc. They are the starting materials for the manuf. of a large variety of alcohols and ketones. For example, propylene is hydrated, giving iso-propyl alcohol which is used as a solvent for lacquers and which, on dehydrogenation, gives acetone, this being used in the manuf. of viscose rayon, plastics, perfumes, drugs, etc.

which is used in the manuf. of Nylon 66. Very long chain hydrocarbons can be separated from petroleum and cracked to give higher olefines which are then treated with sulphuric acid to produce synthetic detergents, e.g. 'Teepol.' Cracking processes are thus producing very many of the chemicals which were originally derived from coal, and are capable of producing almost any organic chemical.

Cracovienne, see KRAKOWIAK.

Cracow (Pol. **Kraków**, Ger. **Krakau**):

1. Prov. (*województwo*) of S. Poland, bordered on the S. by Czechoslovakia. It is crossed W.-E. by the Vistula (q.v.), and in the S. has ranges of the Carpathians (q.v.). There is some industry, and there are important salt deposits. Area 6140 sq. m.; pop. 2,133,400.

2. Historic city of Poland, cap. of C. prov., on the l.b. of the Vistula, 158 m. SW. of Warsaw. It occupies an important

CRACOW

E.N.A.

The Vistula, with the cathedral of St Stanislaus and the old royal castle in the background.

The hydrogen produced is very pure and is used in certain hydrogenating processes, e.g. hardening of fats and manuf. of ammonia and methyl alcohol. Dehydrogenation of butane and butylene gives butadiene, the starting point for the production of synthetic rubber. Ethylene has become an important raw material for the production of ethylene glycol (an anti-freeze), ethyl chloride in the manuf. of tetra-ethyl lead (an anti-knock in petrol), and ethyl glycol. Ethylene has been chlorinated at high temps., the product being used in the manuf. of glycerine. Certain cracking processes using a copper catalyst yield high proportions of aromatic hydrocarbons such as benzene, toluene, xylene, etc. Ortho-xylene, for instance, is used to make phthalic anhydride, a component of 'alkyd' synthetic resins. Phenol can be made into adipic acid

stratological position, 672 ft above sea level, in a wide plain commanding the riv. approach to Silesia and to the Danube valley via the Moravian Gate. The city may be divided into the old tn, with promenades formed on the old walls; the castle quarter, lying to the S.; and the suburbs, including the former Jewish Kasimierz quarter and Posgorz, on the other side of the riv., with which C. is connected by a bridge built in 1856. C. is a very picturesque tn, and contains many interesting buildings. Among them are the castle, on the Wawel Rock, long the residence of the kings of Poland; the Gothic cathedral (1320-59), adjoining the castle, where many of the kings and famous men of Poland, including John Sobieski, Poniatowski, and Kosciuszko, are buried, and which contains Thorwaldsen's statue of Christ; the univ., next to Prague the oldest in central Europe,

having been founded in 1364 by Casimir the Great and reorganised in 1817, and which is situated in the W. part of the city, and possesses a library of 350,000 vols., a botanic garden, and an observatory; the recently restored Cloth Hall, in Ring Square, which contains the Polish National Museum; the Episcopal Palace; the Royal Academy of Sciences; and the Czartoryski Museum. About 3 m. to the W. of the city is a grassy tumulus over 100 ft high, which was raised in 1820-3 in commemoration of the patriot Kosciuszko. Another mound has been piled up in memory of the legendary Krak, or Krakus, a Slavonic prince, who is said to have founded the city about 700, and to have given it its name. It is more probable, however, that the name is derived from the Slavonic *krak*, a raven. There are manufs. of cloth, leather, machinery, agric. implements, chemicals, beer, tobacco, etc. C. was the cap. of the kingdom of Poland from 1320 to 1609, when Warsaw became the seat of gov., C. remaining the coronation city for a century and a half longer. The third partition of Poland in 1795 assigned C. to Austria. From 1809 to 1815 it was part of the duchy of Warsaw, and during 1815-46 was the cap. of the rep. of C. This, forming the last stronghold of Polish independence, comprised a ter. of 445 sq. m. After a rebellion it was re-annexed to Austria in Dec. 1846. During the First World War much fighting took place round C. in the latter months of 1914. In Sept. of that year there were indications that the Russians under the Grand Duke Nicholas would endeavour to enter Germany via Moravia, and the Central Powers made plans to counter this move. In their retreat before the Russian 'steam-roller' both Ger. and Austro-Hungarian troops in this region concentrated upon C., the capture of which was essential to the Russian plan of invading Germany. During the last weeks of Nov. the Russians made persistent efforts to break the line between Łódź and C., but failed, and at the latter place the Austrian forces gallantly held their own and foiled all Russian onslaughts. In 1917 there were riots in C., as in other important tns of the constituent countries of the dual monarchy, organised by agitators against the oppression of subject nationalities. On 1 Sept. 1939 C., together with many other Polish cities, was bombed by the Germans simultaneously with their general attack on Poland. C. fell to the Germans on 6 Sept. 1939. It was the cap. of the so-called general gov., and Frank (q.v.), the governor, later tried at Nuremberg, had his H.Q. in Wawel Castle. It was recaptured by Russian troops on 14-16 Jan. 1945 (see EASTERN FRONT; RUSSO-GERMAN CAMPAIGNS IN SECOND WORLD WAR). Pop. 423,000.

Cradley, par. and tn, Worcestershire, England, 3½ m. S. of Dudley, with coal- and iron-mines and manufs. of iron and steel goods. Pop. 9300 (1954).

Cradling, in architecture, a slight framework of timber built under floors to form curved ceilings, etc.

Craddock, Rear-Admiral Sir Christopher (1862-1914), sailor, b. Hartforth, Yorks, and entered the navy in 1875. His first active service was in the 1884 Egyptian campaign, and he was also in the 1891 campaign in the Sudan. In the 1900 China campaign he commanded the Naval Brigade. His gallantry and fearlessness were proverbial in the navy. Promoted captain in 1900 and rear-admiral in 1910. He commanded the cruiser squadron at the battle of Coronel (q.v.), 1 Nov. 1914, which was sunk by the Ger. squadron under Admiral von Spee, C. going down in his flagship, the *Good Hope*. There is a memorial to him in York Minster. He was a writer on naval subjects.

Craddock, tn and dist. in Cape Province, S. Africa, 56 m. SSE. of Middelburg. Altitude 2856 ft. Founded 1814 as a frontier post, C. is an important centre of wool, hides, and skins, as well as of mohair production. Olive Schreiner is buried near C. Pop.: Whites, 4765; Bantu, 6715; Coloureds, 3323; Asiatics, 36.

Crafers, tn of S. Australia, 21 m. SE. of Adelaide; nearest station Mount Lofty. The dist. is famous for fruit growing. Pop. 2000.

Crag, term applied in geology to the uppermost of the Tertiary strata in England. It is a shelly sand occurring in E. Anglia, being the only example of a Pliocene stratum. The C. strata consist of the following members, beginning with the uppermost: (1) the Forest Bed series, containing many animal and plant remains; (2) the Chillesford beds, containing a molluscan fauna; (3) the Norwich C., containing both marine and freshwater shells; (4) the Red C., being a subcalcareous sand rich in shells; (5) the White or Coralline C., being a calcareous mass with argillaceous bands containing Mollusca and Bryozoa. The term C. is taken from the local name for shelly sand.

Crag and Tail, term applied to a peculiar formation of hills in which one side forms a steep and precipitous cliff, while the other 'tails' away in a gentle slope. This is due to glacial action on rocks of varying hardness, the harder rocks (generally igneous, such as dolerite or basalt) having resisted denudation and so protecting the softer rocks on the lee side. The 'crag' thus generally faces the direction from which the ice came, while the 'tail' faces the direction in which it was advancing. The phenomenon is very prevalent in the lowlands of Scotland and especially round Edinburgh; the Castle Rock of Edinburgh and the Abbey Craig of Stirling are two of the most famous examples of this formation.

Craig, Edward Gordon (1872-), theatrical designer and actor, b. near London, son of Ellen Terry (q.v.) and Edward Wm Godwin, architect and archaeologist (1833-86). Educ. at Bradfield College and Heidelberg Univ., on leaving which in 1889 he adopted the name of Edward Gordon C., legalised by deed-poll 24 Jan. 1893. He made his début under Sir Henry Irving at the Lyceum as Arthur St Valery in *The Dead Heart*, and in the

ensuing 10 years took part in various plays of Shakespeare and in *Ravenswood*, *The Lyons Mail*, *School for Scandal*, etc., his best roles being Biondello, Cassio, Petruchio, and Charles Surface. His powers as a designer and producer were first shown in the production of Purcell's *Dido and Aeneas* in 1900, and soon after this in *Bethlehem*, *Sword and Song*, and *The Vikings*, in which he made artistic innovations in scenery and costume, lighting and stage management; and in 1905 he prepared designs for Eleonora Duse for the production of *Elektra*. Memorable productions by him include those of *Hamlet*, at the Moscow Art Theatre in 1912, and of Ibsen's *The Pretenders*, at the State Theatre, Copenhagen, in 1926. The designs used in the latter were pub. in 1930, entitled *A Production*. C. also illustrated an ed. of *Hamlet*, pub. by the Cranach Press, Weimar, in 1930. In 1913 he founded a school for the art of the theatre at Florence. His ideas as a theatrical artist, as described in a series of pamphlets and papers collected and pub. under the title *On the Art of the Theatre*, have germinated, and, through Reinhardt, Jessner, Stanislavsky, and the Russian ballet, have spread throughout the world. The essence of his theories as a practical producer is that the 'art of the theatre is neither acting nor the play, it is not the scene nor dance, but it consists of all the elements of which these things are composed,' and, as a philosopher, he wished the theatre to be 'a place in which the entire beauty of life can be unfolded, and not only the external beauty of the world, but the inner beauty and meaning of life.' The theatrical producers found it impossible to believe that he was anything more than a vague philosopher of an impossible theatre, but through his mother he had his chance in 1903 to reveal his genius; and the beauty of his productions of *The Vikings* and *Much Ado About Nothing* won the admiration of Wm Rothenstein and Count Kessler, even though, commercially, both were failures. Kessler wanted him to produce a play at Weimar for the grand duke, but his revolutionary theories were not likely, in his own view, to appeal to the actors there, and, instead, he went to the Lessing Theatre at Berlin and there produced Hoffmannstall's version of *Venice Preserved*. Berlin recognised his genius: his shadowy settings with their soaring arches, their deceptive simplicity, and their perfect proportion filled Reinhardt and Jessner with ideas for their work and made possible the expressionism (q.v.) of the Ger. theatre of the twenties and such films as *The Cabinet of Dr Caligari*. Exhibitions of C.'s designs toured Germany and Austria, and from that time his influence spread through central Europe.

C. is also celebrated as a wood-engraver, an art which he began to practise in 1893 at the instance of Wm Nicholson, the artist. Some of his woodcuts are reproduced in *Woodcuts and some Words*, 1924, and many originals are in the Victoria and Albert Museum. Books by C. include *The Art of the Theatre*, 1905; *On the Art*

of the Theatre, 1911; *Towards a New Theatre*, 1913 (contains plates of designs for Shakespeare, Ibsen, and other dramatists); *The Theatre Advancing*, 1921; *Scene*, 1923; *Books and Theatres*, 1925; *Henry Irving*, 1930; and *Ellen Terry and Her Secret Self*, 1931. See E. Rose, *Gordon Craig and the Theatre*, 1931.

Craig, John (c. 1512-1600), Scottish reformer, educ. at St Andrews and became a monk. He was patronised by Cardinal Pole, and on his advice joined the Dominicans, becoming rector of their school at Bologna. He was converted to Protestantism by reading Calvin's *Institutes*, and having made open confession was tried by the Inquisition at Rome and condemned to be burnt to death. The day before his execution, however, Pope Paul IV d., and the prison being broken open by a mob, he escaped and returned to Scotland about 1560, where he became one of the most popular preachers of the recently estab. Reformation. In 1574 he became minister of Aberdeen, in 1577 the colleague of John Knox at the par. church of Edinburgh, and in 1579 one of the chaplains of the household of James VI. In 1580 he drew up the *National Covenant*, and later compiled part of the *Second Book of Discipline*, and sev. treatises.

Craig, Sir Thomas (1538-1608), jurist, b. Edinburgh; studied at St Andrews Univ. and in Paris. His great work, *Jus Feudale*, completed in 1603, but only pub. in 1655, is still consulted, and he also wrote a treatise proving the legality of James's right to the Eng. throne. See his life by P. F. Tytler, 1823.

Craigavon of Stormont, James Craig, first Viscount (1871-1940), soldier and statesman, son of James Craig of Craigavon, Down, N. Ireland; educ. at Merchiston School, Edinburgh. He served with the Imperial Yeomanry and Irish Horse in S. African war, 1899-1902. His election for Down, 1906, to the House of Commons at once placed him in the front rank of Ulster Unionists. When Sir Edward Carson assumed the leadership in Ulster, C. was his right-hand man in the fight for Ulster's integrity against Asquith's Home Rule Bill. He joined Lloyd George's Gov. in 1916 as treasurer of the household, but resigned in 1918 when Carson resigned from the War Cabinet. He was parl. secretary to the minister of pensions, 1919-20, and then parl. and financial secretary to the admiralty, 1920-1. In June 1921 he resigned his Eng. office on becoming first Prime Minister of N. Ireland. He was made a viscount in 1927. C. was all his life an uncompromising champion of Ulster's membership of the Brit. Commonwealth, and must be regarded as one of the creators of Ulster in its present political form.

Craigie, Pearl Mary, see HOBBS, J. O. **Craigie, Sir William Alexander** (1867-1957), lexicographer, b. Dundee. Educ. at St Andrews and Oxford, in 1897 he joined the staff of the *Oxford English Dictionary*, of which eventually he became editor-in-chief; on its completion in 1928 he received a knighthood and honorary doctorates of Oxford and Cambridge. From 1915 to

1925 he was Professor of Anglo-Saxon at Oxford, then occupied a Chair in Chicago, where he compiled a 4-vol. *Dictionary of American English*, 1944. His latest task was a *Dictionary of the Older Scottish Tongue*, which covers the language to the end of the 17th cent.

Craik, Dinah Maria, née Mulock (1826–1887), novelist, *b.* Stoke-upon-Trent, where her father was minister. She settled in London at 20 to write for the support of an invalid mother and 2 young brothers. Her first novel, *The Ogilvies*, 1849, was followed by *Olive*, 1850; *The Head of the Family*, 1851; and *Anatha's Husband*, 1853. Her famous book *John Halifax, Gentleman*, 1857, met with an immense success not only in England, but, through trans., in France, Germany, Italy, Greece, and Russia. A pension of £60 a year awarded to her she placed at the service of poor authors. Among her other works are *A Woman's Thoughts about Women*, 1858; *Thirty Years. Poems, New and Old*, 1881; *Concerning Men and Other Papers*, 1888. See Louisa Parr, *The Author of 'John Halifax, Gentleman': a Memoir*, 1898; and A. L. Reade, *The Mellards and their Descendants*, 1915.

Crail, the Caryl of the 9th cent., anct seaport in SE of Scotland, in Fifeshire, 9 m. SE. of St Andrews. Its fishing industry has declined, but it is an attractive summer resort. Here John Knox preached his 'idolatrous sermon,' 9 June 1559. Pop. 1300.

Crailsheim, Ger. tn in the *Land of Baden-Württemberg* (q.v.), on the Jagst, 48 m. NE. by R. of Stuttgart (q.v.). It has many old buildings, including a fine 14th cent. church. There are tanning and textile industries. Pop. 10,000.

Craiova (Krajova), chief tn of the prov. Craiova, Rumania, 120 m. W. of Bucharest, with many manufs., including (in 1940) belting, candles, soap, conserves, *terra cotta*. There are also flour mills. There are many churches and synagogues. It is the centre of the very fertile Oltenia dist. Pop. (1948) 85,000.

Crake, member of the family of the *Rallidae* (Ralls), order of the *Grulliformes*. The best-known Brit. C. is the corn-C., whose cry may be heard all over the country in the early summer. They are short-billed, thick-bodied birds. The colour is reddish-brown, lighter below, with dark brown streaks on the feathers above. The corn-C. is becoming rarer in England every year.

Cram, Ralph Adams (1863–1942), Amer. architect and author, *b.* Hampton Falls, New Hampshire. Started practice in Boston, 1889. As senior partner of C., Goodhue & Ferguson he helped to design many notable buildings, e.g. Graduate College and Cleveland Tower, Princeton Univ.; the cathedrals of St John the Divine, New York, 1911; St Alban, Toronto; and St Paul, Detroit; also the buildings of the W. Point Military Academy, and of Wheaton College, Norton, Mass. He was an enthusiast for and an authority on Gothic. Among his books are *The Ruined Abbeys of Great Britain*, 1906; *The Gothic Quest*, 1907;

The Substance of Gothic, 1916 (Lowell lectures); and *Walled Towns*, 1919.

Crambe, genus of 20 species of *Cruciferae*, perennial herbs of which *C. maritima* is the native Sea-kale, in gardens cultivated for its delicious shoots. *C. cordifolia* and *C. orientalis*, of E. Asia, are grown for their handsome foliage; flowers are small.

Crambeck Ware, a local variety of Rom. pottery manufactured at Crambeck, Castle Howard, Yorks, during the 4th cent. It is chiefly buff in colour and decorated with reddish-brown paint.

Crambus (Gk *krambos*, parched), genus of insects in the family *Pyrallidae*, the vaneers, or grass-moths, is well represented in Britain. The species are small and inconspicuous, and are to be found in grassy places.

Cramer, Gabriel (1704–52), Swiss mathematician, *b.* Geneva. Until 1724 he held the chair of mathematics in the univ. of Geneva jointly with Calandrin. He wrote *Introduction à l'analyse des lignes courbes algébriques*; also on elementary determinants and on the physical cause of the spheroidal shape of the planets and the motion of their apses.

Cramer, Johann Baptist (1771–1858), Ger. pianist and composer, one of a family of musicians, the most famous of the three sons of Wilhelm C. (1745–99), himself a musician settled in London. His compositions are no longer valued, but his technical exercises are still useful and his *Études*, esteemed by Beethoven, contain fine music. He founded the music publishing firm which bears his name.

Cramlington, part of the urb. dist. of Seaton Valley (q.v.), SE. Northumberland, England. Pop. (1954) C. 7763; urb. dist. 26,200.

Cramp, see SPASM.

Cramp, Crampenn, metal fixing bar used in masonry, bent at both ends and let into the upper surfaces of two blocks of stone that have been joined at their perpendicular faces. Non-corrodible alloys should be used; iron and steel are liable to rust, and the resulting expansion may split the stone.

Cramp Rings, rings worn to ward off attacks of cramp. From the 11th cent. to the time of Queen Mary rings blessed by the sovereign on Good Friday, and made of the gold and silver coins offered by him on that festival, were supposed to possess the power of curing cramp, *serofula* or 'the king's evil,' and epilepsy.

Crampton, Thomas Russell (1816–88), railway engineer, *b.* Broadstairs. He invented the locomotive which bears his name and which for 40 years was used by the N. of France railway for its express trains. He invented also a rotary dust-fuel furnace, brick-making machinery, etc., and an automatic hydraulic tunnel-boring machine which aroused great interest in connection with the Channel tunnel project. C. laid the first successful submarine cable between Dover and Calais in 1851.

Cran, in Scotland, a measure of herring, just taken from the net, that will fill a barrel; equal to 37½ imperial gallons or about 750 herrings.

Cranach, or Kranach, Lucas (1472-1553), called the Elder, Ger. painter and engraver, *b.* Cranach, near Bamberg, Bavaria, his family name being Sunder. After 1504 he worked for nearly 50 years at the electoral palace at Wittenberg. In 1508 Frederick the Wise granted him the crest of a winged serpent, with which all his prin. pictures are marked. He was an intimate friend of Melancthon and Luther, painting portraits of both, and being a witness to, and one of the convivers at, the latter's marriage to Catherine Bora. He was twice burgomaster of Wittenberg, and *d.* at Weimar. His style seems to have been formed by Matthew Grünewald, and his work is more admirable for invention than execution. Among his best works are 'Christ on the Cross,' being the altar-piece at Weimar, and 'The Preaching of John the Baptist.' His engravings, both on wood and copper, are excellent but very rare. His works are numerous, and may be seen at Weimar, Prague, Leipzig, Schneeberg, Gotha, Munich, and Berlin. In 'Charity' and 'Jealousy' the National Gallery has delightful examples of his nude allegorical figures. See his *Life and Works* by Heller (Nuremberg), 1854.

Cranach, or Kranach, Lucas (1515-86), called the Younger, Ger. painter, son of Lucas C. the Elder. The son of his father's devoted helper and collaborator, and it is often difficult to decide whether a picture is the work of the elder or of the younger C., so much do their separate paintings resemble each other in style, etc. Some of his pictures are at Wittenberg and others at Dresden, Munich, and Berlin.

Cranberry, species of *Oxycoccus*, family Ericaceae, evergreen, creeping shrubs, of which *O. palustris*, the C., is found in bogs

CRANBERRY

throughout Britain, and *O. microcarpus*, the small C., in Scottish Highlands. *O. macrocarpus* is the large Amer. C., grown for its red edible fruits, used for sauces, jellies, and preserves.

Cranborne, par. of Dorset, England, 26 m. N.E. of Dorchester, in the woodland tract known as O. Chase. Boadicea is believed to have fought the Romans here. C. was a royal manor from the Conquest to the 17th cent.; its antiquities include a

hunting residence of King John. C. Abbey was transferred to Tewkesbury in the 13th cent. Pop. 800.

Cranbrook, tn and par. pleasantly situated in the weald of Kent, England. It has a large trade in hops and fruit. From the 14th cent. to the 17th it was a busy site of the broadcloth manuf., introduced there by the Flemings. St. Dunstan's Church contains a celebrated baptistery. C. School was founded about 1520 by John Blubery, and received a royal charter in 1574. Pop. 4000.

Crandall, Prudence (1803-90), Amer. school teacher, *b.* Hopkinton, Rhode Is.; her parents were Quakers; she estab. at Canterbury, Connecticut, a private academy for girls, where she lost her white patrons by admitting a coloured child. She then opened, on advice of W. L. Garrison, a school for 'young ladies and little misses of colour,' in connection with which she was subjected not only to social persecution, but also to prosecution under special enactment of the state legislature, i.e. the Black Law of 24 May 1833. She refused to obey this law, and was imprisoned sev. months. In 1834 her house was attacked and partially destroyed. She gave up her project and married the Rev. Calvin Philleo; after which she lived in Illinois and Kansas.

Crane, Stephen (1871-1900), Amer. writer, *b.* Newark, New Jersey. Fourteenth child of a Methodist preacher, he studied for some time at Syracuse Univ. and then entered newspaper work. His first book, a harshly realistic novel, *Maggie: a Girl of the Streets*, 1893, did not attract much attention, but in 1895 appeared his masterpiece *The Red Badge of Courage*, a graphic picture of scenes taking place during the Amer. Civil war. Later he was a war correspondent in the Greco-Turkish war and in America's war with Spain. Previously he had been on a filibustering expedition to Cuba. The ship on which he was a passenger was wrecked. The exposure permanently affected his health and eventually brought about his early death, but it also gave him the inspiration for one of the finest short pieces in Amer. literature—'The Open Boat,' 1897. C. was also precursor of the free-verse school, which in after years was to be made celebrated by the Imagists. He pointed the way in his 2 vols. of verse *The Black Riders*, 1895, and *War is Kind*, 1899. He came to England in failing health and became a close friend of Joseph Conrad. He *d.* of consumption at Badenweiler in the Black Forest. See life by T. Beer, 1923.

Crane, Walter (1846-1915), painter, designer, book illustrator, writer, was *b.* Liverpool, son of Thomas C., an artist, from whom he received his first lessons in painting. His illustrated children's books are masterpieces and include *Baby's Bouquet*, *Pan-pipes*, Grimm's *Household Stories*, Spenser's *Faerie Queene*, *Illustrations to Shakespeare's Tempest*, etc. He owed his reputation as a painter chiefly to his water-colour paintings, though he worked in oils too. Among his easel pictures are 'The Bridge of Life,' 'The

Chariot of the Hours,' 'La Belle Dame Sans Merci,' 'A Masque of the Four Seasons,' 'Prometheus Unbound,' etc. His pictures are generally allegorical in subject and the pre-Raphaelite influence predominates. A number of private homes and public buildings contain decorative work—modelling, friezes, panels, and mosaics—by him, and some of his designs for tapestries are in the Victoria and Albert Museum. He, jointly with Wm Morris, brought about the revival of the decorative arts and crafts in England; he was the first president of the Arts and Crafts Exhibition Society, 1888, and helped to found the 'Art Workers' Guild.' He wrote, among other works, *The Basis of Design*, 1898; *Line and Form*, 1900; *Ideals in Art*, 1905; and an autobiography, *An Artist's Reminiscences*, 1907. See P. G. Konody, *The Art of Walter Crane*, 1902.

Crane, member of the family of the Gruidae, order Gruiformes, superficially resembling the heron, with which it is commonly confused, and which in Scotland is usually called the C. The C.s are tall birds with long legs and necks, the head being either naked or tufted. Their wings are short and powerful, the feet unwebbed. They are the largest of the wading birds, and are found in most parts of the world except Malaysia. The hind toe is greatly elevated, and has a sharp claw. Noteworthy among this species is the N. Amer. whooping C. whose breeding places have for long been a mystery. Recent discoveries of the birds in Saskatchewan may enable steps to be taken for their protection, and to save them from rapid extinction. The European C. is now only known in England as a migrant, passing to the N. to breed.

Crane, machine for raising, lowering, or placing in position heavy bodies. From early times such appliances have been in use, of simple construction and actuated by manual or animal power. Modern C.s are worked by steam, hydraulic, or electric power.

Derrick cranes have an upright member pivoted at the ends, the top being maintained in position by two raking members anchored at their lower ends. From the foot of the derrick slopes a raking jib, guyed at its upper end to the derrick top, suitable crab and lifting tackle being provided.

Portable cranes are jib C.s mounted upon a carriage running upon rails. The jib is tied back to the upper part of a frame turning horizontally upon a pivot. The rear end of the frame is carried back to support the crab gear, which, with supplementary weights, balances, in whole or in part, the load to be lifted. Steam power is also used to operate such C.s, a vertical boiler and engine, with the necessary gear and winding drum, being substituted for the crab. Jib C.s are also mounted on specially constructed motor vehicles.

Gantry cranes consist of girders mounted on end wheels, carrying a crab, and are able to lift and transfer loads to the limit of the gantry run. The crab is made also

to travel along its girders, giving a double motion.

Goliath cranes have power appliances for lifting, mounted and running upon girders with rigidly framed legs at either end supported by wheels resting upon rails, along which the whole machine may move. They are used in the shifting and setting of heavy blocks in harbour work, or other heavy operations.

Titan cranes used for similar purposes have horizontal girders, capable of swivelling upon a turntable which is mounted at the top of a travelling substructure. At one end of the double girder is the power plant. By an ingenious arrangement the load can be moved along while hanging from the arm of the Titan, remaining at the same level, rising, or falling as desired.

Hammer-headed cranes are similar to Titans, but work on a fixed tower.

Hydraulic cranes, largely used about docks, are simple machines operated by water pressure through the medium of a ram having pulleys, served with a chain or rope passing over the head of a projecting jib, which may be swan-necked in form. See W. H. Atherton, *Hoisting Machinery*, 1940.

Crane-fly, or **Daddy-long-legs**, popular names given to members of the Tipulidae, a family of dipterous insects containing over 1000 species world-wide in distribution. The significance of the long and fragile legs is unknown, but their presence has given the owners their nicknames. The larvae are aquatic and terrestrial; the latter grubs are often called leather-jackets, and are destructive to the roots of crops. The abdomen of the female insect terminates in a long ovipositor.

Crane's Bill, see GERANIUM.

Cragon, genus of decapod crustaceans, belongs to the family Cragonidae. *C. vulgaris* is a very well-known species, as it is the common shrimp found on our shores.

Craniotabes, atrophy of the skull occurring in infancy, resulting from syphilis, rickets, or marasmus. The wasting occurs in small areas, about the size of a shilling, which when pressed with the finger indent and spring back with a crackle as if made of parchment. The condition is now rare in this country owing to the rarity of the diseases which cause it.

Cranium, see SKULL.

Crank, in mechanics, a device consisting of C. arm and C. pin by means of which rectilinear reciprocating motion is changed into rotary motion. The handle of a grindstone is an example of a single C., while the C. of a wheel changes the rectilinear motion of a piston-rod. The bell C. merely changes the direction of rectilinear motion.

Cranleigh, vil. of Surrey, England, 8 m. SE. of Guildford. Here is a public school. Pop. 5500.

Cranmer, Thomas (1489-1556), Archbishop of Canterbury, b. of a good family at Aslacton, Notts. After being educ. under a tutor remarkable, even in those days, for sternness, he was sent in 1503 to

1. Goose necked crane at George V dock; 2. Giant floating crane at the Port of London, 3. Titan crane at the Naval Dockyard, Devonport.

(Photos: Hulton Picture Library)

Jesus College, Cambridge, where he became a fellow. He remained as divinity prof. at this college until 1528. The 'sweating sickness' was then raging throughout the co., to avoid which C. removed to Waltham with two of his pupils. Here he met Fox and Gardiner, to whom, in conversation on the question of Henry VIII's desire for the annulment of his marriage with Catherine of Aragon, he made the remark which was the cause of all his later promotion. His suggestion was that Henry should have recourse to the canonists and univs. rather than to the Pope. Henry immediately commanded him to write a treatise on the subject, and to be prepared to support his position. In 1530 C. was sent on an embassy to Rome, and two years later to Germany. The

THOMAS CRANMER

An engraving after a picture at Lambeth Palace.

Pope made him grand penitentiary of England, and on his Ger. embassy he married the niece of the reformer Osiander, an uncanonical but not illegal proceeding, though he was already high in the Church. He was summoned back to England on the death of Warham to fill the vacant archiepiscopal throne, and, preceded by his wife, he came reluctantly to be consecrated on 30 Mar. 1533. Cranmer's sincere belief in the duty of obedience to the sovereign made him a pliable tool in Henry's hands. In May C. pronounced the king's marriage with Catherine to be void *ab initio*, and that with Anne Boleyn, secretly celebrated the Jan. before, to be valid. Three years later he annulled the marriage with Anne in the same fashion. In 1540 he divorced him from Anne of Cleves, and next year he was instrumental in securing Catherine

Howard's condemnation. Yet, although C.'s frailty led him into culpable compliance with the king's wishes, he was naturally kind-hearted. He opposed the Six Articles, 1539, and did his best to save the lives of Fisher, More, and Anne. He had little to do with the dissolution of the monasteries, though he was connected with the deaths of Frith, Lambert, and other heretics. C.'s chief work was in the direction of the Eng. Reformation. From the beginning he had been zealous for the Bible, and in 1538 it was ordered that a copy should be placed in every church. In 1545 he pub. his *Litany*, almost identical with the one at present in use, which shows his great merit as a master of prose. In 1548 came his *Catechismus*, and in 1550 his *Defence of the True and Catholike Doctrine of the Sacrament*, an attack on transubstantiation. His influence in the compilation of the Prayer Book itself can hardly be over-estimated. On the accession of Mary, C. was brought to trial and deposed from his office of archbishop. Finally he was persuaded to recant. Then at the end courage came to him, and at the moment when he should publicly have proclaimed his recantation, he restated his old position, and deplored his past cowardice. Courageously then on 21 Mar. 1556 he met his death at the stake outside the univ. church at Oxford, first burning the hand which had signed his recantation. See J. Strype, *Memorials of Thomas Cranmer* 1894; W. F. Hook, *Lives of the Archbishops of Canterbury*, 1860-76; A. J. Mason, *Thomas Cranmer*, 1898; C. H. Smyth, *Cranmer and the Reformation under Edward VI.*, 1926; and A. C. Deane, *Life of Thomas Cranmer*, 1927.

Cranmere Pool, boggy pool on Dartmoor, Devon, England, about 7 m. from Chagford. It is known as the loneliest place in England, and in summer months is almost dry.

Crannog (from the Irish *crannog*, a derivative of *crann*, tree or wood beam), an artificial dwelling-site in a lake or on a marsh. The buildings of timber are raised on a platform of tree trunks which is often secured by brushwood to a pile foundation and raised by successive layers of stones or rubble. Notable examples of Neolithic and late Bronze Age date are known in Switzerland and in the Alpine area of Württemberg, the latter sites revealing the farmsteads of the inhabitants. In Britain C.s of the Early Iron Age lake-vils. of Glastonbury and Meare, Somerset, excavated with care over many years, have yielded remarkable specimens of wood turnery and joinery preserved by the constant water-logging of the site. Some Irish C.s, of which about 400 are recorded, appear to date from the Neolithic period and the latter part of the Bronze Age, but many belong to the early Christian era, as do those of SW. Scotland. See also **PILE DWELLINGS**.

Cranston, city of Providence co., Rhode Is., U.S.A., with an area of 29 sq. m. It manufa. textiles, mill machinery, beverages, chemicals, metal products, wood and paper products, fire extinguishers, artificial leather, and plastics. It is the seat

of a state training school, and has a mental hospital. Pre-Revolutionary buildings remain. It was incorporated as a tn in 1754, as a city in 1910. Pop. 55,000.

Cranwell, Lincs, England, situated 6 m. from Sleaford, since 1920 has been noted as the location of the Royal Air Force College, whose purpose is to produce permanent officers for a lifetime career in the general duties, equipment, and secretarial branches of the Service. To-day the entire cost of training, including the cost of uniform, flying clothing, and sports kit, is met from public funds. The course extends over a period of two years and eight months, at the end of which flight cadets pass out, and, in the case of the general duties flight cadets, are awarded their 'wings.' Candidates must possess the required educational qualifications, be Brit. subjects between the ages of 17½ and 19, and must pass medical and flying aptitude tests before final selection is made by the Royal Air Force Selection Board, which is also at C.

Craonne, Fr. tn in the dept of Aisne, 10 m. from Laon. Napoleon defeated the Allies here in 1814, and in the First World War it was the scene of fierce fighting owing to its position in the Chemin des Dames (q.v.) sector. Pop. 140.

Crape, thin transparent silk material, with an unglossed, rough, and wavy surface. It is manufactured by twisting the threads before weaving, without removing the natural gum of the silk, and then either boiling or dressing with a viscous gunny solution, by which the threads are partially untwisted and the characteristic appearance obtained. It is usually dyed black and used for mourning dresses. The Fr. word for C., *crêpe*, is usually used to denote C.-type fabrics other than black mourning silk. *Crêpe de Chine* is a coloured or white fabric made from raw silk; other fabrics used as dress materials are *crêpe georgette* and *crêpe marocain*.

Craponne-sur-Arzon, Fr. tn in the dept of Haute-Loire. It has many old buildings, and manufs. lace. Pop. 3000.

Craps, see DICE.

Crashaw, Richard (c. 1612-49), poet and priest, b. London, the son of Wm C., a puritan clergyman. He was educ. at Charterhouse and Pembroke Hall, Cambridge, and became a fellow of Peterhouse in 1636. In 1643 he left Cambridge, shortly after the beginning of the struggle between king and parliament, and went to the Netherlands. In 1644 he was, in his absence, ejected from Cambridge Univ. by the parliamentarians for refusing to accept the covenant, and deprived of his fellowship. At this time, or soon after, he was in France under the patronage of the exiled Queen Henrietta Maria, and was converted to Rom. Catholicism. In 1646 he gained, through the friendship of the poet Cowley, the patronage of Cardinal Palotta, who found him a post at Rome. He was later, in 1649, appointed as canon to the church of Our Lady of Loretto, and d. there on 21 Aug. of the same year. His prin. sacred poems were pub. in *Steps to the*

Temple, 1646, to which were added some secular poems under the title 'Delights of the Muses.' Later eds., 1648 and 1652, contained additional poems, and others have since been added from MS., while his earlier poems in Lat. and Greek were pub. in 1634 under the title *Epigrammatum Sacrorum Liber*. C.'s poems are of the metaphysical school, and his best work places him in the front rank of Eng. religious poets. A complete ed. of his poems, collated with all existing texts, was pub. in 1927, ed. by L. C. Martin. See R. C. Wallerstein, *Richard Crashaw: a Study in Style and Portical Development*, 1935; and A. Warren, *Richard Crashaw, a Study in Baroque Sensibility*, 1939.

Crassulaceae, natural order of dicotyledons, consist of succulent plants, herbaceous or shrubby, ann. or perennial, which grow in hot, dry, exposed places in the more temperate parts of the Old World. Genera include *Aconium*, *Bryophyllum*, *Cotyledon*, *Crassula*, *Echeveria*, *Sedum*, *Sempervivum*, etc.

Crassus, Lucius Licinius (140-91 bc), Rom. orator. In 95 bc he was elected consul together with Q. Mucius Scaevola, and their legislation concerning Rom. citizenship was among the causes of the Social war. In 92, as censor, he closed all the recently estab. rhetorical schools at Rome. C. is one of the speakers in Cicero's *De Oratore*.

Crassus, Marcus Licinius (c. 115-53 bc), Rom. financier, soldier, and statesman; surnamed *Dives*, 'the Rich.' Obligated to take refuge from the Marian party in Spain (87 bc), he returned with Sulla (q.v.), in whose army he held a command (83-82). The Sullan proscriptions opened for C. the door to enormous wealth: he bought up confiscated estates, trafficked largely in high-quality slaves, and further enriched himself by usury. His financial power lent weight to his political and military ambitions. In 71, as praetor, he crushed the rebellion of Spartacus; in 70 he was consul with Pompey; and in 60 became a member of the triumvirate with Caesar and Pompey (qq.v.). In 55 he was again consul with his former colleague, and received the prov. of Syria for a period of 5 years. Late in the same year he set out for the E., hoping to increase his fortune by plundering those wealthy regions on the excuse of war against the unoffending Parthians. Mesopotamia, and even the temple at Jerusalem, had already suffered from his insatiable greed when, in 53, his army was annihilated by the Parthians under Surenas near Carrhae. C. was taken prisoner and put to death.

Crataegus, hawthorn, family Rosaceae, genus of deciduous trees and shrubs: *C. monogyna*, the hedgerow thorn, and *C. oxyacantha*, the hawthorn, are common in Britain. *C. apiifolia*, *C. crus-galli*, *C. orientalis*, and *C. tomentosa* are exotic ornamental thorns for the garden.

Crataeva, genus of tropical plants, family Cappariaceae. *C. dymandra*, the garlic pear, is an evil-smelling, evergreen, spineless tree of Jamaica; *C. tapia*, the tapia or common garlic pear, is a tree about 20 ft high, and the fruit conveys the

odour of garlic to animals feeding on it; *C. mannelos*, the bilva or mahura, is a small tree with a nutritious and aperient fruit of delicious taste.

Crater, see VOLCANO.

Crater, constellation of the S. hemisphere N. of Hydra and S. of Leo.

Craterus (d. 321 BC), trusted general, friend, and the mentor of Alexander the Great. C. did not fear to rebuke Alexander for his faults or to lay before him the complaints of his soldiers. He commanded the cavalry during the expedition to India and led the veteran army back to Macedonia. Alexander appointed him to succeed Antipater, whose daughter he married, as regent of Macedonia; but on Alexander's death, in 323, C. and Antipater together governed Macedonia, Greece, and Illyria. He helped to defeat the Greeks in the Lamian war, and was killed in combat with Eumenes, his old companion in arms, in Antipater's war with Perdiccas in Cappadocia.

Crates (d. 425 BC), Athenian writer of the Old Comedy. According to Aristotle he initiated the movement away from satirical comedy towards a regular plot. The titles of 10 plays are known, but only fragments of his work survive. See G. Norwood, *Greek Comedy*, 1931.

Crathie, par. in Aberdeenshire, Scotland, among the Grampian Mts. In it is Balmoral Castle, the highland royal residence. Pop. 525.

Cratinus (c. 490–422 BC), Gk comic poet, probably b. at Athens, the son of Callimedes. He was a writer of the Old Comedy and the rival of Aristophanes, over whom he gained sev. victories, and through whom our knowledge of C. is mostly gained. He is credited with various improvements in the arrangement of the chorus and in Gk comedy generally, and is said to have been the first to make comedy an instrument of personal satire. He himself used it as a vehicle for audacious sarcasm, frequently directed against Pericles. The names of 40 comedies by him have come down to us, of which 9 appear to have gained prizes. Among these the chief is *The Wine Flask*, which in 423 gained the first prize, the *Connus* of Ameipsias coming second, and the *Clouds* of Aristophanes third. See T. Kock, *Comicorum Alectorum Fragmenta*, 1880; J. Demianczuk, *Supplementum Comicum*, 1912; D. L. Page, *Greek Literary Papyri*, vol. I (Loeb Library), 1942.

Cratippus, peripatetic philosopher of Mitylene in the 1st cent. BC, chiefly known through allusions in the works of Cicero, his pupil and friend. Plutarch says that he conversed with Pompey on his retreat from Pharsalia. About 48 BC he opened a school of philosophy at Athens, which was attended by Marcus, the son of Cicero, and by M. Brutus.

Crau, La, originally a stony and partially sterile desert in the dept of Bouches-du-Rhône, devoted to the raising of sheep. In recent times irrigation (the Crauponne and Langlade canals) has developed part of it into a prospering agric. dist. It is part of the alluvial delta of the Rhône (q.v.).

Craven, Pauline (1820–91), Fr. novelist, b. Paris, daughter of Comte Auguste Marie de Ferronays and wife of Augustus C., diplomatist. Her *Récit d'une sœur* (trans. as *A Sister's Story*, 1868) is the story, told with great charm, of the sorrows of her family while in Rome and Naples. The book, which was crowned by the Fr. Academy, made so great an impression in France and in England that 9 eds. were pub. in a few months. Her other works include *Le Travail d'une Âme*, 1877; *La Jeunesse de Fanny Kemble*, 1880; *Eliane*, 1882; *Lucia*, 1886.

Craven, a limestone dist. of W. Yorks, England, extending from the sources of the rivs. Wharfe and Ribbles to the Lancs border. The scenery, with its fells and moorlands, is particularly wild and beautiful; Skipton (q.v.) is the 'cap.' of the area.

Craven Arms, vil. of Shropshire, England, 7 m. NW. of Ludlow. The par. church of Stokesay (1 m.) dates from the 17th cent., with a roofed manorial pew; nearby is a 13th-cent. moated castle. Pop. 1400.

Crawfish, see CRAYFISH.

Crawford, Francis Marion (1854–1909), Amer. novelist, b. Lugni di Lucca, Tuscany. He was a son of Thomas C., the sculptor, and nephew of the Gen. Marion who took part in the Amer. War of Independence. He spent the first 11 years of his life in Rome, but was educ. at Concord, New Hampshire, Trinity College, Cambridge, Karlsruhe, and Heidelberg. Returning to Rome he studied Oriental languages, and in 1873 undertook press work at Allahabad for the *Indian Herald*. Falling ill, he went to live in New York with his uncle, Samuel Ward, who was to become the hero of the novel, *Dr Claudius*. Later he travelled in America and Turkey, settling at Sorrento in 1883. His first novel, *Mr Isaacs*, appeared in 1882, and following it (among others) came *Dr Claudius*, 1883; *A Roman Singer* and *An American Politician*, 1884; *Zoraster*, 1885; *Saracinesca* and *Marzio's Crucifix*, 1887; *With the Immortals*, 1888; *Sant' Ilario*, 1889; *A Cigarette Maker's Romance*, 1890; *The Ralstons*, 1894; *Casa Braccio*, 1895; and *A Rose of Yesterday*, 1897. He wrote also a play, *Francesca da Rimini*, produced in Paris in 1902, and a historical work, *Ave Roma Immortalis*, 1898. See M. H. Elliott, *My Cousin, Francis Marion Crawford*, 1934.

Crawford, Joan (1908–), Amer. actress, b. San Antonio, Texas. She began her professional career as a dancer under the name Lucille Le Sueur in Ernie Young's revue in Chicago; after other stage shows she made her first film appearance in *Pretty Ladies*, 1926. She began starring roles in silent productions, and has remained a star ever since, though she has long since forsaken dancing in favour of dramatic roles. She won an Academy Award for the best performance by an actress in 1945 (*Mildred Pierce*).

Crawford, Osbert Guy Stanhope (1886–), archaeologist and anthropologist. Archaeology Officer of the Ordnance Survey, 1920–46, in which capacity he greatly

improved the archaeological information on ordnance survey maps and was responsible for the first production of the now well-known ordnance survey period maps. Has pub. many papers and sev. books on various archaeological subjects, and is an expert in air photography as applied to archaeology, in which matter he was a pioneer. Founder and editor of *Antiquity*, a highly successful quarterly review of archaeology, 1927 and in progress. His most recent book, *Archaeology in the Field*, 1953, is well recommended.

Crawford, Robert (1700-33), poet, b. Edinburgh. He contributed lyrics to

of the Scottish family of Lindsay. The first of this name to settle in Scotland seems to have been *Waller de Lindsay*, an Anglo-Norman baron of the reign of David I. Becoming rapidly influential, and spreading from their original homes at Ercildoun, Roxburghshire, and Crawford in Clydesdale to Haddington, Forfar, Fife, etc., the Lindsays figured conspicuously in the hist. of Scotland. Their name occurs frequently in the accounts of the feuds between the Scottish nobles; the doings of 'the Lindsays light and gay' are commemorated in the ballad of the battle of Otterbourn, and Froissart refers to the adventures of *Sir John Lindsay* in the

John H. Stone

STOKESAY CASTLE, SHROPSHIRE

Allan Ramsay's *Tea Table Miscellany*, and his work was praised by Burns. He is chiefly remembered for his songs, such as 'Tweedside' and 'The Bush aboon Traquair,' many of which were pub. in the *Orpheus Caldonius*. He was drowned while returning from France.

Crawford, Thomas (1813-57), Amer. sculptor, b. New York city. In 1834 he settled in Rome and studied under Thorwaldsen. He estab. his reputation by a statue of Orpheus for Boston in 1839. He executed also statues of Washington and Beethoven; a figure of Liberty; a bas-relief, 'The Progress of American Civilization,' etc. He became blind in 1854, and d. in London. See L. Tait, *The History of American Sculpture*, 1924.

Crawford and Balcarres, Earls of, title

same battle. Another famous member of the family was *Sir David Lindsay* of Glenesk, who was created Earl of Crawford in 1397. He married Princess Elizabeth, daughter of Robert II, and is the hero of the tournament against Lord Welles described in Wyntoun's *Cronykill*. *Alexander* (d. 1454), the fourth earl, was famed for his violent and ferocious character, and was surnamed the Tiger Earl; he was also known as Earl Beardie. He became hereditary sheriff of Aberdeen, a dignity of which he was later deprived by James II; and his estates were forfeited for an attempt, in concert with other Scottish nobles, to dethrone the king. *David*, the fifth earl, became very powerful and was created Duke of Montrose in 1488 for his support of James III

against the rebellious barons. The title of duke had never before been conferred upon a Scot not of royal birth. He was besides hereditary sheriff of Angus, keeper of Berwick, high admiral, master of the household, lord chamberlain, joint high justiciary, and was employed on important embassies to England.

Alexander, the ninth earl, won by his crimes and misdeeds the title of the Wicked Master of Crawford, and forfeited his title, which passed to David Lindsay of Edzell, but, David dying without issue, the son of the wicked earl succeeded to the title in 1558. In the Reformation struggles the elder branch of the Lindsays took the Catholic side, and their implication in these contests and as royalists in the great civil wars of Mary and James VI brought about their ruin and the succession to the earldom of the Byres branch of the family. *John*, sixth Lord Lindsay of the Byres, was a Protestant and a man of iron character, who helped to compel Mary to resign her crown. His grandson *John* was high treasurer of Scotland, and his great-grandson *William* was president of the Parliament after the revolution of 1688, and leader of the party who overthrew the episcopacy. *John*, the twentieth earl, served with the imperial army under Prince Eugene, then in Russia and Turkey. In 1747 he was appointed to the command of the Scots Greys, became lieutenant-general, and fought with distinction at Dettingen and Fontenoy.

The earldom reverted to the earls of Balcarres on the death (1808) of the twenty-second earl. The title was not assumed by them, however, until 1848, when James, the 7th Earl of Balcarres, established his claim to it before the House of Lords. *Alexander William Crawford Lindsay*, 25th Earl of Crawford and 8th Earl of Balcarres (1812-80), was well known as a writer on religious art and on philosophy, etc. He was also the founder of a magnificent private library at Haigh Hall, Lancs, in which the literatures of all nations were represented. He was succeeded by *James Ludovic*, his son, who became twenty-sixth earl. His son, *David Alexander Edward Lindsay* (1871-1940), succeeded to the title in 1913. He was for many years Unionist Whip in the House of Commons, where he sat from 1895 to 1913, and held a number of ministerial posts. He was succeeded by his son, *David Alexander Robert Lindsay* (b. 1900).

Crawfordsville, city, co. seat of Montgomery co., Indiana, U.S.A., on Sugar Creek, 45 m. NW. of Indianapolis in agric. area. It manufactures steel and wire, foundry products, and farm implements. Wabash College for men is here. Pop. 12,900.

Crawford, Thomas (c. 1530-1603), Scottish soldier, who was taken prisoner at the battle of Pinkie, 1547, and afterwards helped in bringing the murderers of Darnley to trial. He took Dumbarton Castle in 1571, and forced Edinburgh Castle into surrender, 1573.

Crawl, racing stroke in swimming (q.v.).

Crawley, Aldan Merivale (1908-), political commentator, educ. at Harrow and Oxford. He was a journalist before the Second World War; during the war he served in the R.A.F. and was a prisoner-of-war in Germany 1941-5. From 1945-51 he was Labour M.P. for Buckingham. After losing his parl. seat he became famous for his broadcasts and television commentaries on political affairs and industrial problems. In 1955 he became Editor-in-Chief of Independent Television News Ltd.; his resignation in 1956 caused considerable comment. He has since left the Labour party and resumed his career as a free-lance commentator.

Craeyr, or **Craeyer**, **Caspar de** (1584-1669), Flem. painter, b. Antwerp. He was a follower of Rubens and Van Dyck. His chief works were altar-pieces for various churches in the Netherlands, and include 'Christ appearing to the Magdalen', in the church of Notre Dame at Brussels, and 'The Assumption,' in Ghent cathedral.

Crayfish, or **Crawfish**, name given to sev. species of decapod crustaceans which

CRAYFISH

are very closely allied to the lobsters. All are fresh-water animals, and the only marine crustacean to which the term is ever applied is *Nephrops norvegicus*, the Norwegian lobster, which is not a true C., but a lobster. C. are nocturnal in habit, omnivorous in diet, and they undergo a series of moults before the perfect creature is formed. C. may be found in the rivers and streams of England, especially in limestone districts. They make small burrows in the banks where they remain during the daytime, away from the light. The name crayfish is also given to the spiny-lobster, *Palinurus*, a marine genus.

Crayford, urb. dist. of Kent, England, on the R. Cray, now a dormitory area for London, and largely industrial in character. It was the probable site of a Roman station on Watling Street; in 457 AD Hengist won a victory here over the Britons. The par. church of St Paulinus

dates from Norman times. There are playing fields at Mayplace (93 ac.), recreation grounds at Martens Grove (27 ac.), and a park at Shenstone (19 ac.). Pop. 27,950.

Crayon Drawing, see PASTEL.

Crazy-bone, see FUNNY-BONE.

Crazy Widow, see COURLAN.

Cream, see BUTTER.

Cream-Coloured Ware, fine lead-glazed earthenware invented in Staffordshire about 1760 and perfected by Wedgwood in his 'Queen's Ware,' so called because of the patronage he received from Queen Charlotte about 1765. See EARTHENWARE, *European*; WEDGWOOD.

Cream of Tartar, or Potassium Bitartrate (CaH₂O₄K), substance occurring in a crude form in the later stages of the fermentation of grape-juice. This product is known as 'argol,' and is found deposited on the sides of the cask in which the fermentation has taken place. It is dissolved in hot water, the solution is filtered, and the pure C. of T. crystallised out. C. of T. is used in medicine as a purgative, and is often used as the acid element in baking powder.

Creameries. Until the middle of the 19th cent., butter-making was carried out entirely by the farm on which the milk was produced. In Ireland, which has always been primarily an agric. country, Sir Horace Plunkett inaugurated a co-operative movement among farmers which would enable them to market their produce on a more business-like and profitable basis. Plunkett had gained first-hand knowledge of farming while ranching as a young man in the W. states, and the Irish Agric. Organisation Society, which he founded in 1894, became a great success; he was later, 1900, made vice-president of the Dept. of Agric. and Technical Instruction in Ireland. Although he experienced the utmost difficulty in establishing the first creamery in the country, to-day there are well over a thousand throughout Ireland. The Eng. Agric. Organisation Society was based on the I.A.O.S. To-day comparatively little butter is made on Brit. farms, and its price is always in advance of that of creamery butter. C. also act as collecting and distributing centres for milk, and have pasteurising and bottling plants. 'Clouted cream' (clotted, or *salded*) is made chiefly in Devonshire, Somerset, and Cornwall. There are numerous C. in New Zealand, Australia, and Canada, and much of the butter production of these countries takes place in them. The total output of butter in 1954 was: New Zealand and Australia about 3,830,000 cwt each, and Canada 2,985,000 cwt. However, New Zealand has the largest export trade, and this amounted to 2,658,000 cwt, most of which came to Britain.

In the U.S.A. C. are most numerous in the corn belts, and respond to winter as well as summer dairying, whereas the cheese factories are estab. chiefly in the cooler parts of the dairying region of Wisconsin, and are useful mainly in absorbing the extra supply of summer

milk. A cheese and butter factory combined was estab. in Orange co., New York, in 1851, but the first actual creamery dates from 1872 in Manchester, Iowa. In some of the great Amer. C. machinery is estab. which can manuf. millions of pounds of butter every year. An average of over 1,800,000,000 lb. of farm and factory butter is produced yearly. The *Dairy and Creamery Journal* was estab. in London in 1889. See also DAIRY; DAIRY FACTORIES.

Creanga, Ion (1837-39), Rumanian author. Of peasant origin, he was trained as a priest against his will, and as a schoolteacher, and only started to write on Eminescu's (q.v.) encouragement. His works—fables, recollections, and stories—are founded on peasant life and legend and his vigorous style is equally founded on peasant language, though it is considerably polished. An Eng. trans. of his recollections (with 4 stories) appeared in 1930 and a selection of his stories, *Folk Tales from Rumania*, in 1952.

Creasy, Sir Edward Shepherd (1812-78), historian, b. Bexley, Kent, and educ. at Eton and King's College, Cambridge. He was called to the Bar in 1837, and served as assistant-judge at the Westminster Sessions Court. In 1840 he was appointed prof. of hist. at London Univ., and from 1860-70 he was chief justice of Ceylon. He was knighted in 1860. His chief works are *The Rise and Progress of the British Constitution*, 1834; *The Fifteen Decisive Battles of the World*, 1851 (his most outstanding work, which has become a classic); and *Invasions and Projected Invasions of England*, 1852.

Creation, in Christian theology, the act whereby God, the Infinite, brought all finite things, material and spiritual, into existence out of nothing, and sustains them in being continually. Time itself is a creature. The act of C. is therefore outside time and beyond the scrutiny of natural science. This means that the doctrine of C. is not directly affected by scientific theories about the origin and age of the cosmos, and even of continuous creation. It is important to note that C. involves not only the original production of the Universe and all it contains (with any other Universe that there may be) but also its maintenance and direction from moment to moment. God is not only the remote first cause of every being, but the immediate ground of its present existence, and all the laws of nature proceed from him. The theory of evolution as the process whereby the varieties of living creatures were produced, is therefore compatible with C. at any rate so far as physical life is concerned. Spiritual being does not fall within the province of natural science, but of religion and philosophy, both of which assure us that the rational soul cannot be derived from matter or material processes. While, therefore, it may be true that man's physical nature (and even some of his sub-rational and instinctive activities) have been gradually evolved, the imparting to man of a rational soul, whereby he became *Homo Sapiens* (see ADAM), was

a fresh creative act (and still is such at every human conception). (See also SOUL, and, for the teaching of the Rom. Catholic Church, the encyclical *Humani Generis*, 1950.) During the 19th cent. the theory of Evolution raised much controversy with Christian teachers, because it apparently conflicted with the account given of the C. in the book of Genesis and so with the inspiration and truth of Scripture. Great advances however have been made both in biblical studies and in our knowledge of primitive literature, which show that the controversy was due to a misinterpretation of the early chapters of Genesis. These had been taken as a factual and historical

dispute). Christians known as fundamentalists, however, accept the Genesis story as literally inspired and true in every detail. For these the conflict with science is acute. See also COSMOGONY and COSMOLOGY; also C. Gore, H. L. Goudge, and A. Guillaume, *A New Commentary on Holy Scripture*, 1928.

Crébillon, Claude Prosper Jolyot de (1707-77), Fr. novelist and dramatist, b. Paris, the son of Prosper Jolyot de C.; educ. at the Jesuit College of Louis le Grand. He began by writing for the stage, but later took up fiction. In 1748 he married Lady Stafford, an Englishwoman. In 1755 he became censor. He

A detail from the Sistine chapel of the Vatican, Rome.

record, instead of being read as the prehistoric lore, inspired with theological truth, that they are. As prehistoric myth or legend they have close parallels with similar narratives elsewhere, notably those of Mesopotamia of which we now possess a number of versions. But as documents inspired with theological truth they are in striking contrast with the other C. myths, lacking as these are in moral, spiritual, and psychological insight, and full of a gross polytheism. The task of disentangling the theological truth contained in Genesis from the popular lore that is its vehicle is the duty of the proper authority that God has provided (whether this be the Church or the Christian individual, is the Catholic-Protestant

seems to have disappeared some time before his death. His novels, which include *Le Sopha*, 1745 (Eng. trans., 1781), for the indecency of which he was banished from Paris, *Lettres de la Marquise de . . .*, 1732, and *Les Égaréments du cœur et de l'esprit*, 1736, are clever but licentious. *Ouvrages complètes*, 1772. See A. Huxley, *Crébillon the Younger (Essays New and Old)*, 1926.

Crébillon, Prosper Jolyot de (1674-1762), Fr. dramatist, b. Dijon; intended for the law, but persisted in writing, and at an early age produced the tragedy *Idoménée*, which was very successful. He continued to write tragedies on classical subjects in rapid succession: *Atreé et Thyeste*, 1707; *Electre*, 1709; and *Rhadamiste et Zénobie*,

1711, his masterpiece. His plays are full of gruesome violence, written in a style often too forced. In 1711 he lost his wife, and after her death lived in retirement for some years, much of the time in considerable distress from poverty. Later, however, his previous work was recognised by a place in the Fr. Academy and the position of police censor, and his new comfortable circumstances allowed him to recommence writing. In 1748 *Catiline* appeared, and was produced under court patronage in the presence of the king. *Le Triumvirat*, 1755, was only moderately successful. His last play, on Cromwell, was never completed.

Crécy (*Crécy-en-Ponthieu*), or *Cressy*, vil. of France, in the dept of Somme, 12 m. NE. of Abbeville, noted for the battle of 1346 (see below). Pop. 1300.

Crécy, Battle of, fought on 26 Aug. 1346, in which Edward III of England decisively defeated Philip VI of France.

Edward invaded France through Normandy, crossed the Seine, and then forded the Somme, which Philip, who was on the E. bank, had hoped to make his battle line. The Eng. formed in battle order on a wooded hill between Wadicourt and Crécy (q.v.), all on foot, the Welsh archers at the front. The Fr. nobles were impatient for victory. Their army was numerically superior to that of the Eng. and they insisted on joining battle immediately, even though, tradition says, their archers' crossbows had been dampened by a recent shower, and the wooded country was clearly unsuitable for a mounted charge.

In the result, the Fr. cavalry were cut to pieces by the Eng. longbowmen and spearmen. They fought bravely, but their repeated charges only increased their casualties, said to have been heavy, and by sunset they were beating a disorganised retreat. The engagement was the first major action of the Hundred Years' War (q.v.). In it the superiority of the Eng. military machine, with its reliance on a professional infantry of longbowmen and spearmen, was clearly demonstrated. For a contemporary source see *Froissart's Chronicles*; see also A. H. Burne, *The Crécy War*, 1955.

Credence, name for small table which stands within the chancel rails, beside the altar, on which stand the elements and sometimes the vessels for the Eucharist. The term was formerly used in social life to designate a side table on which were placed the dishes before being served at the general table. At this side table the different foods were tasted as a precaution against poison in Italy, France, and Germany about the 15th cent.

Credentials, instruments which an ambas., envoy, or other diplomatic agent receives from his own gov. authorising him to appear in his diplomatic character and defining his powers. The C. are usually in the form of a closed letter addressed to the sovereign or head of the gov. of the state to which the officer is accredited.

Credi, Lorenzo di (c. 1458-1537), It. painter of the Tuscan school, b. at

Florence, and a fellow pupil with Leonardo da Vinci under Andrea Verrocchio (q.v.), of whom he made an excellent portrait (Uffizi). His style and choice of subject remained uninfluenced by the pagan side of the Renaissance, and he burnt some of his pictures in the famous bonfire under the influence of Savonarola, who had arranged the so-called 'burning of the vanities' (1497). A capable minor master, he excelled in madonnas and holy families, and was particularly fond of painting children. His best works include 'The Nativity' in the academy at Florence; 'The Madonna and Child' in the Louvre, Paris, which Vasari considered his masterpiece; 'The Virgin and Child' in the National Gallery; and 'The Holy Family' at Edinburgh. He shows the influence of da Vinci very strongly. See Sir E. J. Poynter, *Classic and Italian Painting*, 1882, and G. Vasari, *Lives of the Painters*.

Credit, in a commercial sense, the undertaking on the part of one party to a contract to pay money at a future time to the other party, who gives valuable consideration for that undertaking, e.g. in the presenting of bills of exchange drawn on third parties in payment for goods sold, by one merchant to another for exportation. The merchant taking the bill of exchange does not wait for payment to fall due on it, but gets it discounted at a bank. Thus, having given C. to one person in goods, he obtains C. from another in money. Commerce could not be carried on without C. The extensive part which C. plays in the circulation of capital and the production and exchange of wealth is one which will be found discussed in all the text-books on economics. The precise use of C. as an agent in the production of wealth is that it gives circulation to capital (q.v.) and renders it available wherever it can be most profitably employed. See also BILL OF EXCHANGE; CAPITAL.

Credit, Letter of, order, open or sealed, given by bankers or others at one place, to enable a person to receive money from their agents at another place. The person who obtains a L. of C. may go to a particular place and need only carry with him a sum sufficient to defray his expenses. The L. of C. gives him some of the advantages of a banking account when he reaches his destination, as he may avail himself of it for part only of the sum named in it. A L. of C. is not transferable, and is said to be 'special' when addressed to a particular individual by name, requesting him to advance money to the bearer of the L. of C. Travellers' cheques are a form of L. of C.

Credit, Social, see SOCIAL CREDIT; ABERNATHY, WILLIAM.

Credit Foncier, institution founded in France by the economist Wolowski, and created under gov. patronage by a decree issued in 1852, to enable landowners and owners of house property to obtain money on mortgage of real securities at a low rate of interest, the loans to be repayable by annuities, including redemption of capital. The C. F. is really the name adopted subsequently on the amalgamation of the three original mortgage banks of Paris,

Nevers, and Marseilles. Its operations and area of activity have been frequently extended since its formation, and in 1860 it was empowered to make advances to municipalities and depts for public works and improvements. The control of the gov. over the C. F. is exercised by the appointment of the governor and two deputy governors, and by the rule that the approval of the governor is required to validate the decisions of the directors. The C. F. possesses under its charter, which has been extended for a period of 99 years from 1881, the right to issue bonds at a fixed rate of interest repayable in 50 or 60 years, and, where specially authorised, carrying a right to draw for prizes.

Credit Insurance, form of commercial insurance indemnifying the insured in respect of losses arising from the insolvency of his debtors, or their failure to pay admitted or estab. debts within 90 days of due date. Losses may be in respect of moneys owing to the insured by the debtors for delivered goods or, in certain circumstances, in respect of contingent liabilities. Policies may cover the whole of an insured's business during a stated period or certain specified transactions only, subject to admission by the insurers. For the export trade policies are available through gov. institutions, or with gov. backing, to include in the indemnity losses arising from risks of a political nature which are beyond the scope of private enterprise. The indemnity under a C. I. policy is never in respect of 100 per cent of a loss, but usually from 75 per cent to 85 per cent, the balance being borne by the insured. Contracts for the issue of C. I. policies are within the Statute of Frauds and must, therefore, be in writing. They are also contracts *uberrimæ fidei* and so require full disclosure by the applicant of all material facts, falling which the contract is voidable. In general this covers any fact affecting the quality of the risk, such as the terms of credit and the apparent financial standing of the debtor in so far as this is known to the applicant. During the currency of a policy the insurers are discharged from liability, generally speaking, if the insured, without their agreement, consents to any alteration in the terms of liability of a debtor. This does not refer, however, to liability in so far as the amount of credit allowed is concerned, the insurer's limit of liability being agreed in advance in respect of each debtor and any excess over such limit in individual cases being the responsibility of the insured.

Crédit Mobilier: 1. Institution formed simultaneously with the *Crédit Foncier* in 1852 in France for making advances on the security of personal or movable (*mobilier*) estate. It was taken over in 1932 by the *Banque de l'Union Parisienne*. The C. M. of London, which was formed in 1864, was ultimately absorbed in the *Crédit Foncier* of London.

2. The C. M. of America was a construction company which, having obtained the contract to construct the Union Pacific

Railroad, caused one of the gravest scandals in the hist. of Amer. politics by the nature of its financial operations after the railroad company's stock-holders had acquired the controlling interest in its bonds.

Crediton, or **Kirton**, mkt tn of England, in the co. of Devon. It is situated on the R. Creedy, 8 m. NW. of Exeter, lying in a narrow valley between two steep hills, and is divided into an old and new tn. It was the bp. of Winfrid, or St Boniface, in 680, and from 910 to 1049 was the seat of a bishopric, afterwards transferred to Exeter. The par. church is interesting and dates from the Norman period. Cromwell captured C. in 1645; in 1743, and again in 1769, much of the tn was destroyed by fire, consequently it is fairly modern in appearance. Agriculture is the prin. industry, but there are also sweet, medicinal lozenge, and cider factories, and eccles. woodwork is made. Pop. 4140.

Crech, Thomas (1659-1701), poet and translator, b. Blandford, Dorset. He trans. into Eng. verse Lucretius's *De Rerum Natura*, 1682; *The Odes, Satyrs, and Epistles* of Horace, and *The Idylls* of Theocritus, 1684. He is best known for his trans. of Horace.

Creed (from Lat. *credo*, I believe, the first word of the Apostles' and Nicene C.s), the authorised summary (or symbol) of the faith of a Church, generally used liturgically. The three great C.s of the Church are very early in date, and of only one of them is the origin at all clearly known. The *Apostles' C.*, the simplest and earliest, has the most complicated hist. In the 4th cent. Rufinus traced it to the Apostles themselves, each of whom he declared to have had a share in its composition. This tradition, however, is generally disregarded. Certainly some form of baptismal confession was required at a very early date, and the nucleus of this is found in Christ's command to baptise 'in the name of the Father, and of the Son, and of the Holy Ghost.' This formula was expanded into a short form, common to E. and W., with the same three sections as the present C., but lacking many details, such as 'He descended into hell' and 'the Communion of Saints,' which are first found in the Gallican formulae of the 5th cent. In the E. this common C. was much modified and expanded in various ways according to the heresy it was required to combat at the moment. In the W. the most important step in the development is the Rom. symbol, which has been reconstructed with substantial agreement by various authorities. Before this Irenæus, Tertullian, and Hippolytus show earlier forms of baptismal confession, all with the same type of construction. The present *Apostles' C.* is a compound of Rom. and Gallican forms deriving its authority from Catholic consent. The hist. of the *Nicene C.* (q.v.) is more definite. It was promulgated at the ecumenical council convoked by Constantine at Nicæa in 325 to settle the Arian controversy. The heresy of Arius (q.v.)

which made Christ a creature, however supreme, was excluded by the adoption of the unscriptural expression 'of one substance with the Father' to define the scriptural truth of Christ's divinity, and distinction from, yet union with, the Father within the one Deity (see CONSUBSTANTIAL). At the Council of Constantinople (381) some additions were made, the divinity of the Holy Ghost being stated. Except for one clause, the *filioque* (q.v.), declaring the procession of the Holy Ghost to be 'from the Father and the Son,' the C. was now in the form in which we know it in the W. The *Athanasian C.* probably dates from the 5th cent. The C. is an elaborate statement of the doctrine of the Trinity. It expounds the faith of Athanasius (q.v.) but has no direct connection with him. It is in fact not a C. so much as a hymn or psalm, as is shown by its concluding *Gloria*. Since the Council of Trent, the *Professio Fidei Tridentina*, issued in 1564 (amended 1870), commonly known as the 'C. of Pope Pius,' has practically assumed the rank of a C. in the Rom. Church. See C. A. Swainson, *The Athanasian Creed*, 1870; and *Nicene and Apostles' Creeds*, 1875; C. G. A. Harnack, *The Apostles' Creed* (trans.), 1901; and C. Barth, *Credo* (trans.), 1936.

Creeks, a confederacy of Amer. Indian tribes, built around a tribe called Muskoogee, in Georgia and Alabama. They were famous mound builders (q.v.) and practised a very elaborate ritual. In 1813-14 they were defeated by Andrew Jackson; in 1825 they were transferred to the Indian Ter.; and they became Amer. citizens in 1906. They number about 12,000.

Creeper, see CLIMBING PLANTS.

Creeper, name often applied to any small bird which seeks its food by running on the ground, but more properly applied only to the family Certhiidae, order Passeriformes. They have long, slender bills and dull plumage. The tail is somewhat long and square, and the feet slender.

Crees, important tribe of N. Amer. Indians of Algonquian linguistic stock. They number about 10,000, living in the region to the W. of Hudson's Bay. They were long known as guides and hunters for the fur traders, and their usefulness seems to have prevented the destruction that overtook so many Amer. Indian tribes.

Crestown, seaport forming part of the par. of Kirkcubrecht, in Kirkcudbrightshire, Scotland, at the mouth of the R. Cree. Salmon fishing is carried on, and industries include the Solway Pre-Cast factory, quarrying, and aggregate bricks. Pop. 900.

Creevey, Thomas (1768-1838), politician and diarist, b. Liverpool of Irish descent, and educ. at Queen's College, Cambridge. He entered Parliament as a Whig in 1802. He held a number of minor offices, and in his old age was treasurer of Greenwich Hospital, when he was described by Charles Greville as 'perfectly happy and exceedingly poor.' He is remembered,

however, as the author of the historically valuable C. Papers. C. bequeathed to his stepdaughter all his papers—letters, diaries, etc.—and selections from these were first pub. in 1903. Whilst they are of no great literary worth, they are of considerable interest to the student of late Georgian politics. C. knew almost all the prominent personalities of his day, and their characters as well as the social life of the period are vividly reflected in these papers. See H. Maxwell (ed.), *The Creevey Papers*, 1903; J. Gore, *Creevey's Life and Times*, 1934; (ed.) *Creevey*, 1949.

Crefeld, see KREFELD.

Creighton, Mandell (1843-1901), bishop and historian, b. Carlisle, and educ. at Durham and Merton College, Oxford. He was made Bishop of Peterborough, 1891, and Bishop of London, 1896. In 1882 he pub. the first two vols. of his *History of the Papacy*, and was appointed Dixie prof. of eccles. hist. at Cambridge in 1884. Three more vols. of this work appeared before 1894. Its historical judgement, impartiality, and widely accurate scholarship are universally acknowledged, and it remains a standard work on the subject. He founded the *English Historical Review* in 1886, and ed. it for 5 years. The following are among his other works, though these are now less widely read: *Life of Simon de Montfort*, 1876; *The Tudors and the Reformation*, 1876; *Cardinal Wolsey*, 1888; and *Queen Elizabeth*, 1896. See L. Creighton, *Life and Letters of Mandell Creighton*, 1904.

Creil, Fr. tn in the dept of Oise, on the Oise. It has a 12th-15th cent. church. It is an important railway junction, and manufs. rolling-stock, machinery, chemicals, pottery, and glass. Pop. 10,000.

Crema, It. tn in Lombardy (q.v.), on the Serio, 27 m. NW. of Cremona (q.v.). It has a 13th cent. Romanesque-Gothic cathedral, and manufs. textiles, millinery, and church bells. Pop. 28,000.

Cremation, reduction to ashes of human corpses. At the present day, when there are over 90 crematoria in the U.K. and many more under construction or under contemplation, it is difficult to realise that towards the end of the 19th cent. popular sentiment was either so hostile or so apathetic to this mode of burial that not one crematorium existed in England, and very few abroad. On its religious side that sentiment has not passed, and the Cremation Act, 1902, expressly exempts any minister from the obligation to perform a burial service at or after the C. of remains. On the Continent C. is by no means estab.; e.g. it was not until 1931 that it was legalised in Belgium. It prevails mainly in Japan, where there are over half a million C.s annually. In 1957 the number of C.s in Great Britain exceeded 150,000. There were over 150 crematoria in N. Amer. and sev. hundred in Europe. C. is by no means a modern practice, except in regard to the scientific process employed; it was the common custom among most of the natives of the anc. world, except Egypt, where embalming was in vogue, and China, where interment in the soil of that country was so

involved with religious notions that it was and remains essential to send corpses to China wherever the death may have occurred. It is chiefly due to such It. chemists and physicians as Polli and Brunetti that the whole question of C. began to be discussed in Europe in the middle of the 19th cent. In England the matter was never really before the public until Sir Henry Thompson (author of *Modern Cremation: its History and Practice to the Present Date*, 1901), in 1873, having conducted experiments with both regenerative and reverberating furnaces according to the It. processes, demonstrated the possibility of resolving a corpse into gases with rapidity and efficacy. The result was the formation in 1874 of a society for the promotion of C., with Sir H. Thompson as its president. In 1878 the society bought a site at Woking, but, owing to the opposition of the Home Office, the society was obliged to abstain from any attempt at practising C. In 1884, however, the legality of C. was estab. in a rather curious manner. At the Cardiff assizes in Feb. of that year, a man was indicted for attempting to burn the body of his child instead of burying it. Mr Justice Stephens directed the jury that to burn a dead body instead of burying it was not an offence unless it was done so as to amount to a public nuisance. After this the society, having acquired further funds, announced its intention to perform C., and other crematoria were soon estab. It was not until 1902 that the Act of 2 Ed. VII, c. 8 was passed to legalise and regulate C.s. By this Act burial authorities, including local authorities, maintaining a cemetery under the Public Health (Interments) Act, 1879, may provide and maintain crematoria. No crematorium may be constructed nearer to any dwelling-house than 200 yds without the consent of the owner or occupier, or within 50 yds of the highway, or in the consecrated part of the burial ground of any burial authority. Regulations were laid down by the home secretary in 1903 providing that no C. may take place until the death of the deceased has been duly registered and the written authority of the medical referee appointed for the crematorium has been obtained. The two ordinary processes of C. are carbonisation in a reverberating furnace, the body being resolved into lime dust by the direct contact of the fire, and the noxious effluvia consumed in a second or outer chamber; and that of the Siemens regenerative or hot-blast furnace, in which the combustible gases from the body itself meet hot air or gas generated in another furnace. See F. C. Fidler, *Cremation* (with bibliography), 1930; P. H. Jones and G. H. Noble, *Cremation in Great Britain*, 1931.

Cremer, Sir William Randal (1828-1908), politician, b. Fareham, Hants, was first apprenticed to the shipbuilding trade, but afterwards became a carpenter, and founded the Amalgamated Society of Joiners. The Inter-Parliamentary Conferences on Peace and on Arbitration were

founded by him, and he acted as secretary to the International Arbitration League for 35 years. In 1903 he was awarded the Nobel peace prize. See life by H. Evans, 1909.

Cremerieux, Isaac Moïse, called Adolphe (1796-1880), Fr. lawyer and statesman, b. Nîmes. After the *coup d'état* of 1851 he was arrested and imprisoned, but became minister of justice in the Gov. of National Defence, 1870. He resigned in 1871, and was afterwards made senator for life of the national assembly. C. was also president of the Universal Israelite Alliance. A selection of his speeches was pub. in 1869, and he helped to compile the *Code des Codes*, 1835.

Cremona, *see* KREMNITZ.

Cremona, Luigi (1830-1903), It. mathematician, b. Pavia. In 1860 he was appointed prof. of higher mathematics in Bologna Univ., and was called to the chair of higher mathematics in the univ. of Rome in the year 1873. He was vice-president of the Senate in 1897, and minister of education in 1898. He wrote sev. works, the most noteworthy being *Le Figure reci proche nelle Statica grafica*, 1879, and *Elementi di Geometria proiettiva*, 1873 (trans. into French in 1875).

Cremona: 1. Prov. of Italy, in S. Lombardy (q.v.). It is part of the plain of Lombardy, and is watered by the Po (q.v.) and its tribs. the Adda (q.v.) and the Oglio. It produces silk and other fabrics, cereals, rice, and wine. The prin. tns include C. Soresina, Crema, and Casalmaggiore (qq.v.). Area 690 sq. m.; pop. 378,000.

2. It. city, cap. of the prov. of C., on the l. b. of the Po, 48 m. SE. of Milan (q.v.). It was colonised by the Romans, c. 218 BC, to command Cisalpine Gaul (q.v.). It was destroyed by Vespasian in AD 70, by the Goths in 540, and by the Longobards in 605 (qq.v.). It passed into the possession of the Visconti (q.v.) in the 14th cent. In 1535 it came under Sp. control, in 1814 it became Austrian, and in 1859 It. It has ant. walls, a cathedral (begun 12th cent.) containing fine paintings, tapestries, and sculpture, and a lofty (396 ft) 13th-cent. belfry. St Michel's church dates from the 7th cent., and there are many other beautiful old churches, as well as palaces, museums, libraries, and picture galleries. In the 16th-17th cents. C. produced a notable school of painters. In the 16th-18th cents. it was greatly celebrated for its violins (*see* VIOLIN), and these instruments are still manuf. There is a large trade in the produce of the Po valley, and there are silk, confectionery, and foodstuff (*torrone*) industries. Pop. 69,000.

Cremona Gardens, popular place of amusement in Chelsea, London, from c. 1825 until it was closed in 1877, and named after a former owner of the property. It provided summer evening entertainments and fêtes for charitable purposes.

Creodonts, the earliest and most primitive group of carnivores. They had long, low skulls with small braincases, and lived in Paleocene and Eocene times.

Creoles (derived from Sp. *criar*, to create), strictly the natives of the W. Indies, S. America, and S. U.S.A., descended from the original French, Spanish, or Portuguese, as distinguished from offspring of mixed races (mulattoes, quadroons, mestizoes), or non-lat. stock, and from negroes and aborigines. The name accordingly does not imply a coloured race, and the term is often wrongly used for negroes and others.

Creon: 1. King of Corinth, burned to death when his daughter, Glauce, put on the incendiary garment sent to her by Medea because she had married Jason.

2. Son of Menoeceus and brother of Jocaste, the wife of Laius, governed Thebes for a short time after the death of Laius, but surrendered to Oedipus, who delivered the country from the Sphinx. After the death of Eteocles and Polyneices, the sons of Oedipus, he once more took the reins of government. His cruelty in forbidding burial of the corpse of Polyneices, and in sentencing Antigone (q.v.) to death for disobeying his commands, occasioned the death of his own son Haemon, who loved Antigone. See Sophocles, *Oedipus Tyrannus*, *Oedipus Colonus*, and *Antigone*.

Creosote (Gk *kreas*, flesh; *sōzō*, preserve) originally designated the oils distilled from wood tar which were (and still are) used as an antiseptic. The scope of the term has now been widened to include distillate oils, either single fractions or mixtures of fractions, produced by the distillation of any type of tar. The word should be preceded by an indication of its origin e.g. wood tar C., coal tar C., etc. Wood tar C. whose prin. constituents are phenols and phenolic ethers is used in pharmacy as an internal and external antiseptic and as an analgesic, and finds other outlets in the removal of liquid from jute fibres and in ore flotation. C. derived from coal tar is, however, the most important type, the annual production in Britain amounting to about three-quarters of a million tons. Its prin. uses are as a preservative for railway sleepers, telegraph poles and other outdoor timber, as a liquid fuel, as a fluxing oil in the production of road tar and bituminous paints, and as horticultural insecticide; it is also hydrogenated to produce motor fuel. For each of these purposes it must meet the appropriate specifications. Chemically, coal tar C. is a complex mixture containing appreciable amounts of naphthalene, fluorene, anthracene, phenanthrene, and other aromatic hydrocarbons together with their methyl and hydroxy-derivatives; it also contains basic materials such as quinoline and quinaldine and, particularly that derived from vertical retort coal tar, appreciable quantities of paraffins.

Crepis, see BARCKHAUSIA.

Crepuscularia (Lat. *crepusculum*, twilight), tribe of lepidopterous insects, including those called sphinxes or hawk-moths. They are twilight fliers, as distinguished from Diurna which, as the name implies, fly in the day, and Nocturna

which fly by night. The antennae of the C. taper to the end, where they have a club which is pointed at the apex in place of the oval club of the Diurna (butterflies) or the filiform antennae of the Nocturna (moths).

Crépy-en-Valois, Fr. tn in the dept of Oise. It is a picturesque tn with the remains of an old castle. The manufs. are furniture and textiles. Pop. 5400.

Créqui, anct Fr. family of Artois, taking their name from a vil. near Calais, and including *François C. de Blanchefort*, *Marquis de Marines* (c. 1624-87). Fr. soldier, made marshal of France, 1668. He refused to serve under Turenne, and was exiled. Later he was surprised and beaten at Consarbruck, 1675, lost Trèves, and was taken prisoner. Subsequently he returned to France, and took command on the Meuse and Moselle. In 1684 he took Luxembourg.

Renée Caroline de Froulay, Marquise de (1714-1803), b. at château of Montfaucon, married, in 1737, Marquis Louis Marie de C., who d. in 1741. She attracted around her a number of prominent literary figures, including Rousseau.

Cres (It. *Cherso*), Yugoslavian is. in the Adriatic, in the bay of Kvarner (q.v.), off the coast of Croatia. It belonged to Austria until 1919, in which year it was ceded to Italy. By the It. Peace Treaty of 1947 it went to Yugoslavia. The is. is very long and narrow. The prin. tn, also called C. (pop. 20000), has Rom. remains, and a Gothic church. Wine, fruit, and vegetables are produced. Area 160 sq. m.; pop. 9000. See ISTRIA.

Crescendo (It. from *creocere*, to grow, increase). The term is used in music to denote a gradual and steady increase in volume of sound. It is usually noted in the abbreviation *cresc.* or the sign <.

Crescent (Lat. *crēscere*, to grow) is properly applied to the moon in its first quarter, i.e. the waxing moon, but is also applied to the moon in its last quarter. Hence it is used of a crescent-shaped object whose horns point in any direction (originally to the observer's left). The C. is the anct symbol of the Turkish power or empire, having been adopted at the taking of Constantinople in 1453. It is also used figuratively of Islam. In heraldry a C. is the mark of cadency for the second sons of families and their descendants.

Crescentia, genus of evergreen trees, family Bignoniaceae, named after Pietro Crescenti of Bologna, who lived in the 13th cent. and wrote treatises on agric. subjects dedicated to Charles II of Sicily. The genus consists of large trees with solitary flowers rising from the trunk or branches. *C. cujele* is the cujele, or calabash-tree, indigenous to tropical America. The subacid pulp is eaten by the natives and is made into poultices. The hard shell is used for a bottle, and is also made into spoons, ladles, cups, basins, and bowls.

Crescentino, It. tn, in Piedmont (q.v.), 18 m. SW. of Vercelli (q.v.). Its bell-tower is famous for the fact that in 1776 an ordinary unson moved it to its present

position from its original site some distance away. Pop. 6000.

Crescimbeni, Giovanni Mario (1663-1728), It. poet and critic, joined the Jesuits' college in his native city of Macerata, and there composed his tragedy on the life of Darius and his motrical version of Lucan's *Pharsalia*. He was a founder of the *Accademia dell' Arcadia* in 1690, and was its secretary for 38 years. His *magnum opus*, *Istoria della volgar Poesia*, 1698, revised in 1714, is still a standard work on the hist. of It. poetry, the *Commentaries*, 1702-11, being the most valuable of his other works. Yet his country remembers him chiefly for his opposition to the artificial criteria of what was good in literature, which Marini and his admirers had estab. See G. Natali, *Atti dell' Arcadia*, 1928.

Crespi, Daniele (1590-1630), It. painter, worked in the studios of Giovanni Battista Crespi (q.v.) and Giulio Procaccini. Pavia and Milan, his bp., contain many of his paintings, and his finest work, a series of pictures illustrative of the life of St Bruno, hangs in the Carthusian monastery of Milan. His celebrated 'Stoning of St Stephen' may be seen in the Brera.

Crespi, Giovanni Battista (1557-1633), It. artist, known also as Il Cerano after his bp., was president of the Milanese Academy, instituted by Cardinal Borromeo, and attained to high distinction in his native city. A man of versatile gifts, C. was at once sculptor, painter, and architect. Guercino (q.v.) was his pupil.

Crespi, Guiseppe Maria (1665-1747), It. painter, also named 'Lo Spagnuolo,' from his love of finery. He was employed by the Grand Duke Ferdinand in the Pitti Palace. His method of colouring, consisting mainly of glazing, has caused the obliteration of many of his works. Besides being a historical and portrait painter, he was a brilliant caricaturist and did a number of etchings (after Rembrandt and Salvator). His 'Massacre of the Innocents' is at Bologna. Other works are in the Dresden Gallery (series of 'the Seven Sacraments'), Vienna Gallery ('Cumæan Sibyl'), Florence, Leningrad, Munich, and elsewhere. His three sons were also painters. See life by H. Voss, 1921.

Cress, name given to many plants with acrid or pungent leaves, chiefly belonging to the Cruciferae; but Indian C., *Tropaeolum majus*, is of the Tropaeolaceae, also known as nasturtium. Water-C., formerly *Nasturtium officinale*, is now *Rorippa nasturtium-aquaticum*. Other native cruciferous species include *Cardamine amara*, bitter-C.; *C. hirsuta*, hairy bitter-C.; *Barbarea vulgaris*, winter C., or yellow rocket; *B. verna*, land-C., or early-flowering yellow rocket; *Cardaminopsis petraea*, northern rock-C.; *Arabis alpina*, Alpine rock-C.; *A. hirsuta*, hairy rock-C.; *A. stricta*, Bristol rock-C.; *Coronopus squamatus*, swine-C., and wart-C.; *C. didymus*, lesser swine-C.; *Cardaria draba*, hoary C.; *Lepidium sativum*, garden-C., cultivated as a salad plant; *I. smithii*, Smith's C.;

Teesdalia nudicaulis, shepherd's C.; and the *Thlaspi* genus is one of the penny-C.s.

HAIRY BITTERCRESS

Cressy, see CRÉCY.

'Cressy,' armoured cruiser in the Brit. Navy, which gave its name to a class of six vessels laid down in 1898. They were steel built, with a h.p. of 21,000, a displacement of 12,000 tons, and a length of 440 ft. In the First World War the C. was a unit of the ill-fated force C. Whilst on patrol duty between England and Holland she was torpedoed and sunk together with the *Hogue* and *Aboukir* on 22 Sept. 1914, just off the Dutch coast. This event estab. beyond doubt the power of the submarine, which had previously been underestimated.

Crest, Fr. tn, in the dept of Drôme, 19 m. SSE. of Valence. It has an impressive 12th cent. keep, and has a silk industry. Pop. 5400.

Crest (Lat. *crista*, a tuft or plume), comb on the head of an animal, whence any tuft or the top of anything, e.g. of a helmet or a hill. In heraldry, the ornament surmounting the helmet of a knight, which came into general use as part of armorial bearings in the 14th cent. It was generally made of leather, painted, and held in place by rivets, wires, or thongs. It was never placed on top of a coronet as shown in some modern drawings. Early C.s were usually in the form of a panache of feathers, or the head of an animal or bird. Much later it assumed all manner of ridiculous shapes, e.g. rocks, windmills, broken masts, and the like.

Cresting, in architecture, an ornamental finish to the ridge of a roof, or the top of a wall, screen, etc.; usually takes the form of conventional foliage. It was originally executed in stone, but later copied in wood and metal, e.g. on wooden screens, iron railings, etc. It was derived from the Middle E., and introduced into W. Europe during the Romanesque period. In Gothic times it became more elaborate and graceful.

Creswell, Sir William (1850-1933), Australian admiral and organiser of the modern Royal Australian Navy, *b.* Gibraltar. In 1891 he was appointed commandant of the Australian Naval Defence Force. When the Australian Commonwealth was estab. he was the first director of its naval forces.

Creswick, small tn in the co. of Talbot, in Victoria, Australia. It lies on the Tullaroop Creek, 11 m. N. of Ballarat in the centre of a fruitful well-forested country. The neighbouring alluvial gold and quartz mines are the chief source of its prosperity. Pop. 1400.

Creswick, Thomas (1811-69), landscape painter, *b.* Sheffield. He began to draw as a schoolboy, and in 1828 went to London to study art, becoming R.A. in 1851. He usually painted faithful representations of the rural scenery he had enjoyed in his native Yorks, in N. Wales, and Cornwall. From 1848 onward C. tried his hand at seascapes, the best of which are 'A Squally Day' and 'Wind on Shore,' but is at his best in smoothly-painted calm and cheerful country scenes.

Cretaceous System, so called because its best-known and most characteristic rock

of marine origin. Above these is a mass of clay known as Gault in the SE., but in Norfolk, Lincs, and Yorks this is replaced by a thin deposit of lime known as the Red Chalk. These are marine deposits, as also are the Upper Greensand and the Chloritic Marl (q.v.). Then lying over these is the most extensive of the C. rocks—the Chalk, which retains the same general characters wherever it exists in England. It is usually a white earthy limestone with layers of flint running parallel to the bedding planes in the upper portions. Fragments of shells occur plentifully, but it is mainly composed of coccoliths (q.v.).

Fossils of the Cretaceous System are similar to those of Jurassic times. Since the Cretaceous strata of Britain are almost all of marine origin, the remains of plant life are chiefly found in the S., where the beds are of fresh-water origin, and consist chiefly of ferns and conifers. The upper C. rocks of Germany, however, furnish plant remains of extinct species of maple, oak, walnut, beech, laurel, etc. Amongst animals the protozoa are abundant. Other animals which flourished in the chalk were foraminifera, sponges,

CONTINENTAL CRETACEOUS.	EQUIVALENT ENGLISH STRATA.
Danian	(Wanting)
Senonian	Upper Chalk
Turonian	Middle Chalk

	Lower Cretaceous

consists of white chalk. The C. rocks in England lie to the E. and SE. of the Jurassic rocks. They extend from the Yorks coast through E. Yorks, Lincs, the E. Anglian cos., and so in a SW. direction to Hants and the Isle of Wight, and also eastwards through Surrey, Sussex, and Kent to the coast between the mouth of the Thames and Brighton. They are only found in patches in Scotland and Ireland, but are considerably developed on the Continent, being found spread over large areas in France, Belgium, Holland, Denmark, Sweden, Germany, Poland, and Russia, while also largely developed in S. Europe. They lie under younger formations, being more or less concealed over a large part of this area, however. In England and France the main Cretaceous development is white chalk, in Germany this is replaced by limestones, shales, sandstones, etc., while in S. Europe there is a great development of massive marine limestone. The System extends over America, Canada (where there are the chief oil-producing centres), and Greenland, Australia, and New Zealand, while a large development occurs in the Deccan in India.

The lower strata of the C. S. consist of sand and clay. In the S. of England, where the Weald clay is followed by the Lower Greensand, the beds are of fresh-water origin, whereas in Yorks they are

sea-urchins, star-fishes, and brachiopods. Bivalves, such as *Hippurites*, etc., were very numerous, while ammonites were abundant. Among the fishes were various kinds of shark, while the majority of the genera of fishes existing to-day (Teleostei) were existing then. Further, huge land reptiles (dinosaurs), winged reptiles (*Pterodactylus*), and serpent-like reptiles (*Mesaurus*) were common then, and toothed birds, such as *Ichthyornis* and *Hesperornis*, were also existent in the W. hemisphere in this epoch.

Conditions under which Cretaceous rocks were deposited. The Lower C. rocks were formed under similar conditions to the Upper Jurassic. At this time most of Britain and Ireland existed as dry land, while a large riv. from the N. had its estuary lying over the SE. of England. The delta deposits of that riv. formed the Wealden beds. Then the land sank and marine conditions prevailed, while the Gault was laid down, although the area was not too remote for mud to be deposited from the rivs. Then as the depression continued, the coast receded until a little earthy deposit was added, and then the chalk was deposited. Similar conditions at present prevail in the Caribbean Sea, where sediment is being piled up which may form a rock similar to chalk.

Crete (Gk *Krētē*, Lat. *Creta*, Turkish

Girit, It. Candia), or Candia, large is. in the Mediterranean Sea, considered the most southerly part of Europe. Its NW. extremity, Cape Grabusa, is 60 m. S. of Cape Mallia in Greece, and its NE. extremity, Cape Sidero, is 110 m. from Cavo Crio in Asia Minor. C. is situated between $34^{\circ} 55'$ and $35^{\circ} 41'$ N. lat., and between $23^{\circ} 30'$ and $24^{\circ} 19'$ E. long. Its length from E. to W. is about 155 m., its width varies from 7 to 35 m. Its area is about 3200 sq. m., and it is by far the largest of the Gk. is. The coasts are generally steep and unfavourable for harbourage, though the N. coast is greatly indented. Some of the prin. bays, from W. to E., are those of Kisamos, Canea, Suda, Rethymnon, Candia, Mallia, Mirabello, and Sitia. On the N. are the capes of Spada, Drepano, Stauros, Panagia, and Sidero (NE.). The chief capes on the S. side, which is less indented, are Crio (SW.) and Lithinon. The only large bay is that of Messará. The largest is. in the neighbourhood is Gavdo (anc. Claudia), about 40 m. SW. of Cape Lithinon. The surface is extremely mountainous, especially in the W., where the massive range of the White Mts culminates in Mt Pachnes, at a height of 8045 ft. In the centre of the is. is a lower group, but it attains to a greater height in the almost isolated Mt Psiloriti (anc. Ida), 8058 ft, the highest peak in the is. Further E. are the Lassithi Mts (chief peak Mt Christos, 7024 ft). There are a few plains of which the largest is that of Messará, drained by the Yeros R. and about 30 m. long and 6 m. wide. It is very fertile. Next to this comes the plain of Canea, in the N., through which flows the R. Platanos (anc. Iardanos). From the nature of the country it is evident that the streams are mere mt torrents. The mountainous country is cut up by deep and precipitous ravines. Among the mts are fertile plateaux, which furnish excellent pasturage during the warm season of the year. The climate is salubrious, and is one of the best in Europe. Summer is hot and dry, winter warm and wet. The air is pure and fresh as a general rule, but the fierce southerly wind, known as the *sirocco*, sometimes raises the temp. to over 100° F. Earthquakes are common but not often severe. See R. Pashley, *Travels in Crete*, 1837; T. A. B. Spratt, *Travels and Researches in Crete*, 1865; X. Fielding, *The Stronghold*, 1953.

Flora and Fauna. The forests with which C. was once covered have now disappeared almost entirely, but the cypress is still found extensively among the hills, while the lower slopes of the mts and many of the valleys are covered with olive woods. Though in many parts the soil prevents the growth of vegetation, in others it is very luxuriant. Oranges and lemons are extensively cultivated and exported, while the carob-tree yields the carob beans. Sheep are bred in many parts of the is., and the native breed of mules is very famous. The largest wild animal is the Cretan ibex or goat. Numbers of these animals are still found in the higher regions.

Minerals. The volcanic origin of the is. would lead one to the opinion that it is rich in minerals, but nothing much has yet been done to verify this supposition. Gypsum occurs fairly widely. Iron, copper, lignite, chrome, lead, and zinc have been found, but the minerals of C. have not been exploited much since the Middle Ages.

Population, Religion, and Chief Cities. The pop. is approximately 462,000. The vast majority of the inhab. of C. are Christians. The Muslims, mostly descendants of Greeks converted to Islam, emigrated after the annexation of C. to Greece. The Jewish pop. is numbered only in hundreds. Under the Venetians the pop. had been estimated at 250,000, but this number diminished after the conquest of the is. by Turkey. The pop. then rose until the Gk revolution of 1821, after which came a great fall. Since that time it has again increased to the present number. All the inhab., whether Christian or non-Christian, speak Greek, but the dialect of C. is distinctive. The great bulk of the inhab. belong to the Gk Orthodox Church; the is. being governed by a synod of seven bishops, with their president, the metropolitan of Candia, dependent on the patriarch of Constantinople. There are about 3500 Gk churches on the is., and 4 Rom. Catholic churches. Education is nominally compulsory. The chief cities are Canea, the cap. (33,200), Candia or Heraklion, the former cap. and see of the archbishop of C. (51,150), and Rethymnon (11,050), all on the N. side of the is.

Archaeology. In the Homeric age there were over a hundred flourishing cities throughout C. The remains of many of these are of great interest archaeologically. Extensive excavations have been carried out during the 19th cent., and through the discoveries made by Schliemann at Hissarlik (Troy) and at Mycenae, interest in the origin of prehistoric Gk civilisation was revived. The art and culture thus brought to light were termed Mycenaean, covering the later Bronze Age. They represent, in fact, a late and decadent stage of a highly advanced and wide civilisation centred in C., of which the greatest period may be placed between about 2000 and 1400 BC. This civilisation, now generally known as Aegean, covers all that period of E. Mediterranean culture before the beginning of the historic period of Gk hist., usually dated 800 BC. Perhaps the most striking feature is that writing, hieroglyphic and linear, was in use, a confirmation of the old legend that the Phoenicians did not invent but only changed the alphabet. Traces of Aegean civilisation have been found as far W. as Spain, Sardinia, and Marseilles, near Venice in the Adriatic, largely in Sicily, throughout the Aegean, in Cyprus, and in Palestine. Trade with Egypt was frequent from the earliest time. Before the discoveries, mainly due to Sir Arthur Evans, Gk hist. before the Dorian invasion was a waste of legends and myths. The tale of Minos, the law-giver, the tribute of boys and maidens from Athens to the minotaur of Theseus,

Ariadne, and the labyrinth built by Daedalus, all have now a foundation of fact. In 1834 was found, 4 m. from Candia, the site of Cnossus, the ancient metropolis; in 1851 Spratt discovered many ruins, and in 1878 Minos Kalokhairinos came on large jars and remains of pottery identical with 'Mycenaean' art. In 1894 Evans explored part of E. and Central C. Evidence was forthcoming of a script, afterwards called 'Minoan B' and now (1956) claimed to have been deciphered (see M. Ventris and J. Chadwick, *Documents in Mycenaean Greek*, 1956). In 1905 Evans began the

one of a procession in life-size of women with tight-belted waists and flounced skirts, curiously modern in appearance. The costume is markedly different from that of historic Greece. A fresco of a handsome youthful cup-bearer with tightly fitting belted drawers has a profile almost Gk in outline, with no Semitic or E. traces. Immense stone and earthenware jars, beautifully decorated, were found in large quantities, probably used for storing oil and corn. Clay documents, inscribed in the Minoan writing, abound, as also do lead and clay seals, probably used for documents of more perishable

E.N.A.

THE HALL OF THE DOUBLE AXES IN THE PALACE OF MINOS, CNOSSUS

excavation work at Cnossus, and unearthed a vast palace, forming a large square occupying nearly 6 ac., with a paved central court, halls, and ante-chambers, connected by passages well built and arranged. A small council chamber, in which is a gypsum throne, has a bath chamber attached; there were upper stories and wide stone stairs; the palace revealed a most modern system of drainage, with water-closets, a stone shaft carrying the water from the roofs to flush the drains, latrines, and other sanitary conveniences. Terra-cotta pipes of modern pattern connect with the main drains. Fresco-paintings of an advanced and realistic style decorated the walls, many representing bulls and bull-fights,

nature. From the shrines it is seen that the worship was mainly that of a great mother goddess, with fetish images of pillar and dove, of double-headed axes and of serpents. Enamel work and inlay are of high artistic excellence; a gaming-table of gold-plated ivory with crystal plaques set in silver and blue enamel is a beautiful example. Ivory figures of exquisite workmanship show the plastic skill. The highest perfection is found in the pottery: the polychrome on white or dark ground, 'Kamarens' ware, preceding that of dark painting on a lighter ground. The decoration, markedly distinguished from the early Gk geometric patterns, is designed in free representations of flowers, aquatic plants, and animals. A small

columnar sanctuary used in the worship of the Minoan goddess as Lady of the Nether World was found in 1929, and the W. portico and E. portico were explored. A winding staircase from the sanctuary led to a lustral basin in the depths of the earth; while a tunnel in the E. bastion was found to lead in a series of parabolic curves, broken up at intervals by small settling tanks, to a large tank for purposes of washing. Sherds were also found, which dated from about 1900 BC, and wall-paintings formed by the impressions caused by a small sponge dipped into yellow paint and then applied to the wall. The restoration of a fresco of Minoan octagonal shields and spiral bands was accomplished.

In June 1930 an outer entrance system was seen and explored. A wall dating from about 2100 BC, composed of massive blocks, enclosed an acropolis, houses, and part of the palace court. Two round walled pits disclosed sherds dating from the Middle Minoan period. A movable stone altar, with a relief of the sacred horns and double axes, was a notable discovery. These ancient remains were found to have been built over houses of a still more distant period, with stucco pavements, stairways, and household relics in wonderful preservation. Many vessels decorated with snake designs were revealed. Remains of other palaces and shrines have been discovered throughout the is., at Gortyna, Hagia Triada, Zakro, Phaestos, Palaikastro, and elsewhere. See J. Pendlebury, *The Archaeology of Crete*, 1939.

History. The rulers of C. were seakings, and the people who developed the civilisation described above probably came from Asia Minor. There were early relations between C. and Egypt, and the impulse toward civilisation may have come from Egypt early in the 3rd millennium BC. Art may likewise have been influenced from Asia Minor. Besides corn and wine, C. possessed copper mines, and purple dye was extracted from the murex; but her prosperity was chiefly dependent on seaborne trade. Little is known of Cretan religious beliefs; but a nature goddess was worshipped, her symbol was the double axe, and she was later identified by the Greeks with the mother of Zeus. Cretan rule spread over the Aegean is. and the mainland of Greece. But in the 2nd millennium (Knossos (q.v.), Phaestus, and other cities were overtaken by some disaster, whether natural or otherwise is uncertain. At all events there is no trace of foreign invasion, and prosperity returned for a period. However, about 1400 BC Knossos was pillaged by invaders from abroad, and Minoan civilisation ended. The is. was subsequently occupied by Dorians. In the 1st cent. BC the Cretans incurred the enmity of Rome by an alliance with Mithridates, and this was increased when the islanders joined arms with their neighbours of Cilicia in practical expeditions. An attack was made on C., and the is. was subdued in 66 BC by Q. Metellus, thence surnamed

Creticus. It then continued as a Rom. prov. till the year 823, belonging, after the div. of the empire, to the Byzantine emperors. During this latter period it formed part of the prefecture of Illyria. In 823 it was taken by the Saracens, under whose rule it became a slave market and a centre of piracy. In 960 it was recaptured by Nicephorus Phocas and remained under the Byzantine sovereignty until 1204. Then, on the capture of Constantinople by the Latins, and the estab. of the Lat. empire, C. was allotted to Boniface, marquis of Montserrat, who sold it to the Venetians (1205). The Venetian rule in C. was oppressive, and many revolts took place but none were successful. During this period Candia was made cap. of the is., to which it gave the official title in the Venetian language of 'Candia,' a name which the is. still retains among the Italians. In 1645 the Turks made an attack on the is., and the discontent of the Cretans made their conquest an easy one. Only the cap. held out for long, and the siege of this city, though intermittent, is said to be the longest on record. It lasted for 24 years. From this time until the Gk revolution C. remained subject to Turkey. The first of a regular series of revolts broke out in 1770, but this was ruthlessly put down before it could spread far. The gov. grew worse rather than better, and fresh rebellions occurred in 1813 and 1821. The great powers (France, England, and Russia) refused to allow the cession of C. to Greece, and for 10 years the is. was under the rule of the Egyptian governor. Further revolts occurred, but in 1878, after the treaty of Berlin, when fresh insurrections stirred up by Greece were in progress, the pact of Halepa was drawn up, largely by the efforts of the Brit. consul in the is. This pact gave the is. almost entire autonomy, but party struggles were so fierce and the intrigues so persistent that the condition of the country grew gradually worse. In 1889 Turkey sent a military governor to the is., whose rule practically abrogated the former treaties. In 1894 the powers persuaded Turkey to appoint a Christian governor. But in the years since 1889 large sums of money had been drawn from C. to Turkey, and financial troubles followed. In 1897 a Gk force landed in C. and attacked the Turks. The is. was again in open revolt but Greece and C. were alone, for the great powers sided with Turkey. Complete autonomy was granted, but annexation by Greece was declared impossible. In 1898 the Turkish forces were withdrawn from the is., and Prince George of Greece was nominated high commissioner of the is. A section of the people disliked his arbitrary policy and raised a revolt in 1905, proclaiming the annexation of the is. to Greece. This insurrection was put down by the powers. In 1906 the powers gave to King George of Greece the right to propose the high commissioner, and he appointed Alexander Zaimis. In 1911 it was announced that no more high commissioners would be appointed to office. On 14 Oct. 1912 Cretan deputies were admitted to the Gk

Chamber, and the is. was annexed by Greece. The treaty of London, 1913, confirmed this act and C. has ever since been under Gk rule. C. was the scene of two Venizelist revolts against the monarchy, in 1917 and in 1935. In the Second World War C. was captured by the Germans between 20 May and 2 June 1941, who held the is. until late 1944. See also succeeding article. See R. Pashley, *Travels in Crete*, 1837; T. A. B. Spratt, *Travels and Researches in Crete*, 1867; J. H. Froese, *Short Popular History of Crete*, 1897; J. Baikie, *The Sea-Kings of Crete*, 1913; Sir A. Evans, *The Palace of Minos at Knossos*, 1921-36; G. Glasgow, *The Minnows*, 1923; J. Charbonneau, *L'Art égyptien*, 1929; and H. T. Bossert, *The Art of Ancient Crete*, 1937.

Crete, Battle of (May-June 1941). With characteristic speed the Germans attacked C. only 3 weeks after the Brit. evacuation of Greece in the Second World War (see GREECE, SECOND WORLD WAR, CAMPAIGNS in 1941). They captured the is. within the space of 13 days (20 May-2 June) and by 3 June the Brit., Anzac, and Gk garrison had evacuated the is., leaving some 18,000 men behind. The brief campaign was a triumph of Ger. thoroughness in organisation and ingenuity. It afforded the first instance in modern warfare of the capture of a country exclusively by airborne troops, dropped by parachute, and opposed by a strong garrison and a navy in full control of the sea. The Mediterranean Brit. fleet played its part successfully in so far as it was able to disperse Ger. convoys, sink many boatloads of Ger. invading troops, and prevent any landing from the sea in force on Cretan soil. But its losses were grave, comprising 2 cruisers and 4 destroyers; and later the cruiser *York*, which was being repaired in Cretan waters, was also sunk. The lack of fighter support and the narrow waters in which the ships were engaged made them an easy target for the attacks of Ger. bombers.

By the aid of hundreds of dive-bombers, operating from the captured and newly organised airfields in Greece, only 80-100 m. from Crete, the Germans were able not only to give adequate protection to their airborne troops, which were 'ferried' over in a ceaseless stream of transport planes and gliders, but to crush the spirit of the people and deliver annihilating attacks on the garrison. It was found impossible to give the garrison any adequate protection from the air, and such fighter planes as had been operating from Maleme aerodrome in Crete were withdrawn owing to the weight of the attacks on the aerodrome.

The Germans landed their airborne troops regardless of losses. Most of a force of 3000 men who dropped in the Suda Bay region and in the Candia area were killed, as well as a detachment which reached the outskirts of Canea, 20 May. The next day came more swarms of Ger. paratroops. Ger. bombers sprayed the is.'s airfields with explosives for hours at a stretch. Troop-carriers landed on the beaches. Yet for some time the Brit. and

Anzac troops, under Freyberg (q.v.), and aided by Gk soldiers and Cretan hillmen, held the airfields with desperate courage. Great numbers of paratroops were killed and many troop-carriers and gliders were destroyed by gunfire in the air. After another day's intense fighting, the Germans gained a foothold at the one important aerodrome, at Maleme, 10 m. SW. of Canea, and also in the tn of Heraklion (Candia), 70 m. E. of Canea. There were further smaller landings of airborne Ger. troops in the succeeding days. The R.A.F. delivered heavy attacks on enemy positions and aircraft in Crete, and Brit. heavy bombers attacked the aerodrome at Maleme as soon as it had fallen into Ger. hands.

It is probable that the Brit. resistance was unexpectedly prolonged in the eyes of the Germans, for, having failed to capture the three chief ports, Canea, Retimo (Rethymnon), and Heraklion, at the start of the invasion, they bombed these tns for sev. hrs (24 May). King George of the Hellenes and the Gk Gov., who had arrived in Crete on 23 April, when the Germans were overrunning Greece, had, in the meantime, left the is. and reached Egypt. On 26 May the Germans, flinging in fresh troops and always regardless of heavy losses in men and aircraft, renewed their offensive, concentrating their attack on the Maleme area in a drive towards Canea. But, despite the severe losses inflicted by the R.A.F., airborne reinforcements continued to reach the Germans. All were supported by the most sustained and intense bombing by dive-bombers, and this co-ordination was impressively assisted by a revolutionary use of wireless. The Ger. forces in the is. were now enlarging their penetration into the Brit. defences, so that, in the area W. of Canea, the defending forces were compelled to withdraw to new positions. Two days later the Brit. forces had withdrawn to the E. of Suda Bay in the face of new attacks by a still more heavily reinforced enemy.

But the end was now in sight; for the Germans had captured the port and aerodrome at Heraklion and were threatening the vital position of Suda Bay. Already the Brit. command was learning a lesson in modern warfare demonstrated in practice. The Ger. paratroopist was a man superior in small arms. He usually had a Tommy-gun. This he could use solely for defence, but it was primarily used for offence. He was continuously protected, supported, and directed by Ger. aeroplanes. As in Norway, Finland, France, and Greece, experience was proving the superiority of the bomber used as front-line artillery. It had become obvious that the Germans contemplated the task of taking Crete as principally a matter for aeroplanes and Tommy-guns. Apart from landing heavy mortars and light field-pieces, the Germans broke the ground with Tommy-guns and planes.

After a week of what till that date had been the fiercest fighting in the war, it was clear that Crete could not be held, for the Brit. naval and military forces could not

operate indefinitely in and near the is. without more air support than could be provided from the bases in Africa. Apart from Gk soldiers and some civilians who were taken with the Brit. imperial forces, some 17,000 Brit. troops had been evacuated by the beginning of June, and nearly half the garrison had become casualties. Continuous patrols of R.A.F. and S. African fighters protected the warships and merchantmen in the task of evacuating the troops. Other aircraft dropped food and medical supplies to units isolated in the is., while heavy bombers continued to destroy Ger. planes on the ground in Maleme and elsewhere.

sea, while they did not foresee that airborne troops, aided by dive-bombers, could not be overcome without adequate supplies of tanks and heavy guns. This criticism has never been fully answered. The greater anxiety was felt at the outcome of this historic battle not only because of its effect on the defence of Egypt, but because of the opinion that the invasion of Crete was, in some sort, an illustration of, perhaps a try-out for or prelude to, an invasion of Britain. It is, however, important to see the B. of C. in its correct perspective. It was 'only one part of the very important and complicated campaign which was being fought

Imperial War Museum

CRETE DURING THE EVACUATION

This photograph shows the reason why the enemy made it impossible for shipping to stay in Suda Bay.

Thus ended, in a phantasma of incredible scenes, the epic battle for Crete. The chances of the defence succeeding against a ruthless airborne invasion covered by dive-bombers inevitably turned upon a copious supply of heavy equipment, and this it was apparently impossible to grant. The dive-bomber, in fact, smothered the small artillery and anti-aircraft equipment. It was objected by contemporary critics that, inasmuch as the Brit. authorities had been in occupation of the is. for 7 months before the invasion, they ought to have had a longer-sighted appreciation of the kind of attack that they would have to meet, and that they too lightly assumed that the Germans could not succeed without the heavier material that could come only by

in the Middle E., and to select one particular sector of our widely extended front' for criticism and debate was a 'misleading method of examining the conduct of war' (Churchill in the Commons, 10 June 1941). Had the Brit. long-range bomber-fighters been able to take part in the battle from the start the result might have been different; the margin of defeat was in fact a narrow one. But even at this time the Ger. air force greatly outnumbered the Brit. and Allied air forces, and, striking from the centre, was able to concentrate overwhelming strength at any point on the periphery of the Reich's defences.

Yet it was not all gain on the one side and all loss on the other. The 13-day interval helped the Brit. to regain control

in Iraq (q.v.), in addition to which it gave time for the arrival of further reinforcements in the Near E. A pusillanimous refusal to defend Crete would have had, too, as lamentable an effect on Amer. public opinion and on that of other neutrals as a refusal to defend Greece. It was probably sound strategy to compel Germany to fight for every inch of the soil she coveted and to make her victories as costly as possible. Some 5000 Germans were drowned in trying to cross the sea, and at least 12,000 were killed or wounded on the is. The Ger. Luftwaffe suffered extraordinary losses. Above 180 fighter and bomber aircraft were destroyed, and at least 250 troop-carrying aeroplanes, and that at a time when Brit. air strength was overtaking the Germans. Immediately, however, the strategic situation in the E. Mediterranean was changed, to the disadvantage of the Allies. The navy now had to operate in narrower waters, and the effect upon Germany's use of the Dardanelles was likely to be serious. With Crete athwart the Aegean entrance, it would be easier for the Germans to develop coastal traffic through the Dardanelles and Gk territorial waters up to Trieste. But, in the sequel, it became evident that Germany's main pre-occupation was the protection of the right flank of her armies, which were now being disposed for attack along the whole Russian frontier from Finland to Rumania. See A. Moorehead, *Mediterranean Front*, 1942; and C. Buckley, *Greece and Crete*, 1941, 1952.

Crétineau-Joly, Jacques (1803-75), Fr. historian whose *Histoire de la Vendée*, 1840-2, is still a standard work. He was regarded by contemporaries as an authority on the relations between the Rom. Catholic Church and the State.

Cretenism, congenital disease, causing idiocy or arrested mental development, together with bodily deformity, always associated with absence or atrophy of the thyroid gland. The connection between goitre (q.v.), myxoedema (q.v.), and C. is close. Myxoedema, however, comes on in adult life, and is associated with a destructive change in the thyroid gland, although the removal of the gland will bring on a similar condition. C. is really a congenital myxoedema. It is found largely in the lower valleys of the Alps and Pyrenees, and other mountainous parts of Europe, and is probably associated with a lack of iodine in the soil and therefore in the drinking water. It is rarely met with in altitudes above 3000 ft. Cretons are usually dirty, obscene, and shameless, and have large open mouths with protruding, large tongues. They have receding foreheads, large hands and feet, and rickety limbs, while they usually have a dwarfish body, with thick, dry, loose skin, and a protuberant abdomen. The treatment consists in the administration of thyroid. See GOITRE and MYXOEDEMA.

Cretonne (perhaps from Creton, a vil. in Normandy, where linen goods were manufactured) was originally a Fr. fabric, strong and white, with linen weft and

hempen woof. The material known as C. to-day is a stout cotton cloth, with a crape, basket, or wave figure produced on the loom, and a pattern printed sometimes on both sides, when the two designs usually differ. It is unglazed, and was introduced about 1860 as a substitute for the thinner chintz, which was largely used for curtains and for covering chairs, etc. Inferior qualities have a weft of cotton waste and patterns printed in bright, fugitive colours.

Creusa: 1. Daughter of Hecuba and Priam, king of Troy. Wife of Aeneas, and mother of Ascanius, she was parted from them after the tumult in the fall of Troy, but saved by the goddess Cybele, who made her a priestess. Another tradition states that she perished on the night of the city's capture. In Virgil C. appears as a phantom before Aeneas, prophesying his disasters and eventual glory in Italy.

2. (**Glaucē**). A daughter of Creon, king of Corinth. Jason loved her, and Medea, his wife, being jealous, sent her as a wedding gift a poisoned garment which caused her agonising death.

3. Daughter of Erechtheus, king of Athens, and mother of Janus and Ion by Apollo. She exposed Ion at his birth and married Xuthus, to whom she bore no child. The Delphic oracle told them to adopt Ion, who had been brought up in the shrine at Delphi. Suspecting his identity C. determined to poison Ion, but he discovered her plot, and she only escaped death by fleeing to Apollo's altar.

Creuse: 1. Fr. riv. Rising near Aubusson, and flowing NW. through a deep valley, it joins the Vienne 12 m. N. of Châtellerault. Length 150 m.

2. Dept of France, formed of part of the anc. prov. of Marche, and small parts of Poitou, Bourbonnais, Limousin, and Berry. It is watered by the R. C., is mountainous, and its soil is thin and unproductive. In the S. hilly dist. there are wide stretches of pasture. The climate is moist, and very cold in winter. Stock rearing is most important, but potatoes and some cereals are produced. There are a few coal-mines, and gold is found. Carpets, textiles, wooden shoes, and hats are manuf. The prin. tns are Guéret (the cap.) and Aubusson (qq.v.). Area 2163 sq. m.; pop. 172,700.

Creusot, Le, Fr. tn in the dept of Saône-et-Loire. It is in a coalfield, and has neighbouring iron-mines. There are numerous metallurgical and engineering works, including the great Schneider-Creusot armament works. These were heavily bombed by the R.A.F. while in Ger. occupation during the Second World War. Pop. 25,200.

Creutz, Gustav Philip, Count (1731-85), Swedish poet and diplomat, b. Anjalagård, Finland. He had a brilliant career and became ambas. in Paris in 1772. His literary fame rests on his pastoral idyll *Atis och Camilla*, 1761. It possesses, like C.'s other rococo pastoral, *Daphne*, 1762, a grace of style and melody which led admiring critics to call the author 'the last artificer of the language.' See G. Castrén, *G. P. Creutz*, 1917.

Cruzer, Georg Friedrich (1771-1858), Ger. classical philologist, prof. in the univ. of Marburg (from 1802) and Heidelberg (1807-45). Wrote *Symbolik und Mythologie der alten Völker, besonders der Griechen* (4 vols., 1810-12). Its main theory is that the origins of Gk mythology go back to an original monotheistic religion. This theory, accepted by Schelling, Hegel, and Bachofen, was pulled to pieces by G. Hermann, J. H. Voss (*Antisymbolik*, 2 vols., 1824-6), and C. A. Lobeck (*Aglaophamus*, 1829). C. ed. Plotinus (Oxford), 1835, and other texts, and wrote an autobiography (*Aus dem Leben eines alten Professors*), pub. in 1858.

Cruznach, see KREUZNACH.
Crevalcore, It. tn, in Emilia-Romagna (q.v.), 19 m. NW. of Bologna (q.v.). Pop. 13,000.

Johnsbury, Vermont, founded 1785, was named in honour of C., who was Fr. consul at New York and a benefactor of Vermont. Lives by Robert de Crèvecoeur (Paris), 1889; J. P. Mitchell (New York), 1916.

Crèvecoeur (Fr. for heart-breaker), Dutch stronghold, which was important in hist. from 1587 to 1794, commanding a central strategical position at the confluence of the Dieze and Maas, 4 m. NNW. of Bois-le-Duc (s Hertogenbosch), in N. Brabant.

Crèvecoeur-le-Grand, Fr. vil. in the dept of Oise, 12 m. N. of Beauvais. It possesses an old castle with picturesque gardens. There are manufs. of woollen goods and pottery. Pop. 1800.

Crevillente, Sp. tn in the prov. of Alicante, near the Mediterranean coast. It

 The railway viaduct is 166 ft high and 1000 ft long

Crèvecoeur, Michel Guillaume Jean de (pseudonym, J. Hector St John) (1735-1813), Amer. writer, b. Caen, Normandy, and educ. at a Jesuit school, also spending some time in England. He went to New York in 1759 and became naturalised as an Amer. citizen in 1765, having acquired a farm near Chester, New York. His fame rests on his *Letters from an American Farmer* (first pub. in England 1782), a series of charming essays giving a farmer's reactions to the life and issues of the times. These *Letters*, with their glowing descriptions of the Amer. frontier, are said to have had an appreciable influence on emigration to America. Other works were *Voyage dans la haute Pensylvanie et dans l'état de New York* (3 vols., Paris), 1801; *Sketches of Eighteenth Century America*, 1925. The township of St

has Rom. remains, and manufs. flour, rope, and *espadrilles*. Pop. 12,000.

Crew (probably from *accrue*, reinforcement, from O.F. *accrue* and *accrotte*, to increase) is used of a body of men who associate together to carry out some special work, and especially of men employed in a ship, that is, of the petty officers and seamen, exclusive of the captain and commissioned officers. In the royal navy the C. is divided into over 175 grades, the largest being that of the able-bodied seamen. In merchant ships C.s are now smaller than they were in consequence of rapid improvements in masting, rigging, etc., in mechanical appliances, and generally in the economy of work and power. The Merchant Shipping Acts (q.v.), especially the elaborate statute of 1894, protect the

rights of seamen. Brit. consuls in seaports abroad have numerous duties with regard to Brit. merchant shipping. Thus a consul may make inquiry into all agreements and accounts of the C.s and into all offences and misdemeanours. Further, he must provide subsistence for shipwrecked, discharged, or abandoned sailors, and listen to any complaints with regard to food, etc. Since the repeal of the Navigation Acts a master has been able to man his ships with sailors irrespective of qualification, nationality, age, or strength.

Crews, Robert Offisy Ashburton Crews-Milnes, first Marquess of (1858-1945), statesman, the son of Baron Houghton, and educ. at Harrow and Trinity College, Cambridge. In politics he was a Liberal. In 1898 he was appointed secretary of state for the colonies. In 1910 he was secretary of state for India, and was ambas. to France 1922-8. Secretary of state for war, 1931. He was leader of the Liberal party in the House of Lords 1936-44. During his tenure of office as secretary of state for India he was responsible for the important changes announced at the Delhi Durbar, including the removal of the cap., and the abandonment of the partition of Bengal. He was created earl of C., 1895, and marquess, 1911.

Crews, municipal bor. and important railway junction of Cheshire, England, 28 m. SW. of Manchester and 153 m. NNW. of London. It connects with the S. the main railway lines feeding the N. of England and Scotland, and is a junction for the lines passing through the mining dists. of Wales and the Black Country of Staffordshire. From C. it is possible to go direct to Liverpool and Manchester, Holyhead and N. Wales, N. Stafford, and Hereford, besides London. C. owes its commercial importance to the fact that it is a locomotive building centre; the majority of the pop. is in the service of the railway. The old London Midland and Scottish Railway Company (now part of Brit. Railways) gave the town schools, a mechanics' institute (including science and art classes), and a library, and also Victoria Park. The company further provided an electric power station, a number of subterranean roads to facilitate goods traffic, and a series of postal offices in which the mails for Scotland and Ireland are sorted. At the beginning of the century C. was still a small vil.; now the railway works are the largest in the world. Pop. 52,415.

Crewel Work, embroidery worked in coloured worsted yarns called crewels. This kind of wool is especially suitable for larger pieces of needlework, such as tablecloths, tapestries, and various furniture covers. Finer silks have tended to supplant crewels in the field of artistic needlecraft.

Crewkerne, tn of Somerset, England, in a fertile valley, 20 m. SE. of Taunton. Manufacts. of webbing, sail cloth, shirts, pyjamas, and gloves are carried on. The grammar school was founded in 1499. Pop. 4000.

Crib Biting, see HORSE (DISEASES).

Cribb, Tom (1781-1848), champion pugilist, started life as a bell-hanger, and became in turn dock labourer, sailer, and coal porter. The important years of his life were given up to fighting, and throughout his many contests he sustained only one defeat, that being at his second fight in 1805. Among his more famous adversaries were Jem Belcher, whom he defeated twice (in 1807 and 1809), the second time at Epsom, when the stakes were 200 guineas; Bob Gregson and Molincaux, the Amor. coloured champion, whom also he worsted on two occasions (in 1810 and 1811). His great fighting days over, C. retired to the position of publican in the Haymarket, whence he twice emerged into public notice, once when he sparred in Pall Mall before the Emperor of Russia, 1814, and again when in the dress of a page he guarded Westminster Hall at the coronation of George IV.

Cribbage. This game is usually played by two persons with a pack of 52 cards. Sixty-one points constitute a game, and these are scored by means of 2 pogs on a board containing 61 holes. The value of the cards is as follows: the kings, queens, knaves, and tens all count as ten, the rest of the cards having their face value, the aces counting as one only. The points of the game are scored by means of fifteens, sequences, pairs, by the knave being turned up (usually this point is termed 'one for his nob'), and by making thirty-one, or getting nearest to that number ('one for the go'). The cards are shuffled and cut in the usual way; the player cutting the lowest card wins the cut and proceeds to deal. This he does by dealing out 5 cards to each player alternately; the non-dealer has the right to score 3 points at any period of the game to make up for the advantage of the deal. The players having reviewed their cards now proceed to place 2 from their hand on the table: this is called making the 'crib.' The remainder of the pack is then cut by the non-dealer, and the top card turned up. The cards are then played alternately, starting with the non-dealer, and each card is 'called' as it is played, e.g. A, the non-dealer, plays a five, and calls five, the dealer B plays a six and calls eleven. A then plays a four and calls fifteen (for this he scores 2 points). B then plays a ten and calls twenty-five. A, finding that he cannot play without exceeding thirty-one, calls 'go' and B scores 'one for the go', since he also cannot play without exceeding thirty-one, or, on the other hand, plays a four (or a card of a value which will not make the total score thirty-one), and scores 'one for the go' just the same. Should the scores reached be exactly thirty-one, the player first reaching that score marks 2 points for game. The non-dealer then counts up his score (if any) from his hand, and then the dealer counts first his hand and then, turning up the crib, the crib. The card which has been turned up earlier in the game is a neutral card and counts to the non-dealer or dealer, whichever can use it. Pairs are

reckoned up in the hands, or at the end. Sequences: any 3 cards or more forming a sequence count 1 point for each card. Also if, by replacing one card already counted by another in the same hand of similar value but different denomination, another sequence can be reckoned, this is done, e.g. three (hearts), four, and five count as a sequence, whilst if the player holds also a three (clubs), this forms another sequence and is counted. Fifteens are counted during the play, whenever the value of all the cards played comes to fifteen, and are also counted in the hands or the crib afterwards; in the hands or the crib any combination of cards which amounts to fifteen may be scored, 2 being counted for each combination. A flush is counted only in the hands or in the crib. In the hands if all the cards are of the same suit this counts a flush, and 1 is counted for each card, whilst if the card turned up is of the same suit also, 1 more is counted. In the crib, however, the flush does not count unless the cards in the crib are of the same suit as the card turned up.

Criccieth, picturesque vil. with ruined castle and fortress, situated on Cardigan Bay in Caernarvonshire, Wales. It is a favourite seaside resort. Pop. 1500.

Crichton, James (1560-? 85), commonly called **The Admirable**, Scottish scold. Romance and tradition have been so busy with his name that it is difficult to form any just estimate of either his life or his character. He was b. Ellick, Dumfriesshire, Scotland, and educ. at the college of St Salvator, St Andrews, under Buchanan, where he had the young king for a fellow pupil. In 1577 he went to Paris where he served in the army for a short time, and in the univ. of Paris is said to have issued a universal challenge to all men upon all things, to be held in 12 different languages. In spite of spending the interval in music and dancing, on the appointed day he vanquished all his opponents. From Paris he went to Genoa, and repeated the feat, and thence to Venice in 1580. In Venice he won the friendship of the grandson of the famous printer, Aldus Manutius, and challenged all the scholars to feats not only of learning, poetry, and linguistic fluency, but of swordsmanship as well. In 1584 he pub. an elegy on the death of the archbishop of Milan, Cardinal Borromeo, and odes in honour of his successor and of the Duke of Savoy, and in 1585 he pub. a vol. of Lat. poems. In the same year he was appointed as the tutor to the Duke of Mantua's son, but was stabbed—possibly by his pupil; whether through jealousy or in a drunken brawl is unknown. That he was a prodigy was acknowledged by men of some weight, although the actual extent of his learning is unknown.

Crichton-Browne, Sir James (1840-1938), physician and psychologist. b. Edinburgh, where he received his medical education and qualified M.D., 1862. In 1871 he founded a pioneer school of neurology at the W. Riding Lunatic Asylum, Wakefield, from which he pub. valuable *Reports*; he was later medical

superintendent of Crichton Royal, an institution for mental disease at Dumfries. From 1875 he was lord chancellor's visitor in lunacy. He was elected F.R.S. in 1883 and was knighted in 1886. Besides work on neurological subjects, he pub. sev. vols. of popular and humorous reminiscences: *Victorian Jottings*, 1926; *What the Doctor Thought*, 1930; *The Doctor's Second Thoughts*, 1931; and *The Doctor's Afterthoughts*, 1932. Even after the age of 90 he was an imposing figure, with his large dundreary whiskers: even at that age he preferred stairs to lifts.

Cricket, name applied to members of the family of orthopterous insects known as Gryllidae, which is very closely allied to locust family. The species are noted for their long and slender antennae, hind legs formed for jumping, wings folded closely lengthwise, tarsi usually three-jointed, and a long ovipositor in all the females but those of the sub-family Gryllotalpinae. Many of the species are wingless, and it is the males only which make a chirping sound by rubbing the wing-covers on one another. They are widely distributed, and all are herbivorous but the carnivorous Gryllotalpides, *Gryllus campestris*, the field C.; *G. domesticus* or *Achetia domestica*, the house C. (Milton's 'cricket on the hearth'); and *Gryllotalpa vulgaris*, the common mole-cricket, are well-known representatives of the family.

Cricket, outdoor game played on grass with a wooden bat and hard ball, normally between 2 teams of 11 players. There is no limit to the size of the ground. Two wickets are pitched 22 yds apart, each measuring 9 in. wide and consisting of 3 stumps 28 in. high, surmounted by 2 balls each 4½ in. long. The ball, composed of layers of cork bound with worsted yarn and covered with hide, weighs 5½-5½ oz. and measures 8½-9 in. in circumference. The bat may not measure more than 38 in. long by 4½ in. wide. The captains toss for the choice of innings. The teams bat in turn; the winner is the side making the most runs. One of the batting side occupies each wicket and a run is made when they change ends, each having to make good his ground by placing his bat or person over a crease drawn 4 ft in front of each wicket. In matches of more than one day's duration each side has 2 innings. A side may declare their innings closed even though the whole team has not batted. The fielding side consists of a wicket-keeper and 10 other fielders of whom one bowls. The remaining fielders are placed at the discretion of the captain to suit different bowlers, whose deliveries vary in speed, flight, and spin (see diagram of fielding positions). The ball is bowled alternately from each wicket in series of 6 deliveries (in Australia 8) called *overs*; a *maiden over* is one in which no run is scored. A player may not bowl 2 consecutive overs. The batsman receiving the ball tries to strike it so as to make as many runs as possible before it is retrieved. A hit to the boundary counts 4 runs; clean over the boundary, 6. Runs may be conceded by the fielding side by

byes and leg-byes, or by the bowler delivering wides or no-balls. A batsman may be out in 9 different ways: (1) bowled: the wicket is broken by the bowler's delivery, or the batsman plays the ball on to his wicket; (2) caught: the fielder takes the ball direct from a stroke off the bat or hand before it touches the ground; (3) if he handles the ball in play; (4) if he wilfully hits the ball twice except in defence of his wicket; (5) if he hits his wicket; (6) l.b.w.: if he intercepts with his body a ball which, in certain conditions, would have hit the wicket; (7) if he obstructs the field; (8) run out: if, before he has made good his ground in attempting a

run, the wicket is broken by the ball held or thrown in by one of the fieldsmen; (9) stumped: if in receiving a ball his wicket is broken while he is out of his ground otherwise than in attempting a run. If a player is injured a substitute may field in any position at the discretion of the opposing captain, but he may not bowl or bat. A disabled batsman may have a runner. There are 2 umpires who are the sole judges of play. They may order a player out only after an appeal by the fielding side. The laws of C. are constantly under review; a new code was approved in 1947 and amended in 1952 and 1957. The current official code may always be obtained from the M.C.C.

History of cricket. Its name probably originated from the Anglo-Saxon word *crice*, meaning a shepherd's staff, and the first players were the shepherds of SE. England, who used their crooks as bats and the wicket gate and movable ball of the sheep pens as a target for the bowlers. Early C. was a rural pastime mainly confined to boys. At Guildford court in 1598 a witness testified that C. was played by

FIELDING POSITIONS FOR A RIGHT-HANDED BATSMAN

The diagram is not a field setting, but shows the positions in which the nine fieldsmen, apart from bowler and wicket-keeper, can be disposed.

WK, wicket-keeper; FSL, forward short leg or silly mid-on; SMO, silly mid-off.

run, the wicket is broken by the ball held or thrown in by one of the fieldsmen; (9) stumped: if in receiving a ball his wicket is broken while he is out of his ground otherwise than in attempting a run. If a player is injured a substitute may field in any position at the discretion of the opposing captain, but he may not bowl or bat. A disabled batsman may have a runner. There are 2 umpires who are the sole judges of play. They may order a player out only after an appeal by the fielding side. The laws of C. are constantly under review; a new code was approved in 1947 and amended in 1952 and 1957. The current official code may always be obtained from the M.C.C.

the boys of the grammar school there about 1550; by 1657-8 it had advanced sufficiently for a mention by Edward Phillips in his *New World of Words* and in *The Mysteries of Love Eloquence*, while the biographer of the Rev. Thomas Wilson complains that c. 1640 Maldstone was a 'very prophane town' because C. and other sports might be seen there 'openly and publickly on the Lord's Day.' About this time C. attracted a certain amount of litigation, for matches were played for high stakes and had to be regulated by articles of agreement. The *Foreign Post*, 7 July 1697, contains the earliest extant press notice, reporting a match in Sussex. In 1706 Wm Goldwin

pub. a poem in Lat. describing a game whose conditions differed little from those settled by the committee who laid down the first universal code of laws in 1744. The first 'county' match was between Kent and London in 1719; in 1735 the Prince of Wales and Lord Middlesex promoted 2 matches for £1000 each. In 1744 the earliest 'grand' match of which the full score survives, was played between Kent and All England at the Artillery Ground, Finsbury. At that time Kent and Sussex vied with each other for cricketing honours, but about 1750 Hants came to the fore when a club was founded at Hambledon which, supported by the great patrons of C., took the lead in ruling and developing the game. Hambledon produced David Harris and Wm Beldham, the best bowler and the best batsman of the 18th cent. In those days runs were recorded by notches cut on a stick. The wicket consisted of 2 stumps (the third stump was added in the late 1770's). Until about 1770 bats retained the curve of the early shepherds' crooks, but with an advance in technique to counter the invention of 'length' bowling, they gradually straightened. Modern C. bat blades are made of willow (*Salix caerulea*) with handles of compressed cane and rubber, but the early bats were in one piece. In 1787 the Marylebone Cricket Club was founded on a ground procured by Thomas Lord in Dorset Fields. In 1808 he leased a second ground at Regent's Park, to which the club moved in 1811, but in 1814 the Regent's Canal project necessitated a final move to St John's Wood. From its formation M.C.C. assumed control of the game and Hambledon fell into decline. M.C.C. is still responsible for alterations in the laws of C., which, after consultation with overseas bodies, must be approved by two-thirds of the members at a special meeting. Despite its responsibilities M.C.C. remains a private club of which membership is acquired by proposal after the age of 17; such is the demand that election may take some years. A number of distinguished players are honorary cricket members. The first major alteration in the laws for which M.C.C. was responsible was the licence given to the bowler to raise his arm as high as the shoulder and bowl round-arm. Formerly he was compelled to deliver the ball underarm and the new method had for years been the subject of heated argument. The concession, however, was but the prelude to the legalising of overarm bowling in 1864. The early Victorian period saw the introduction of protective clothing and a great advance in technique and organisation and in the status of the professional cricketer. The first of the modern co. clubs (Sussex) was formed in 1836; in 1845 *I Zingari*, first of the wandering clubs, was founded, and a year later the earliest 1st-class touring side, the All England XI, took the field under Wm Clarke of Nottingham. In 1859 Clarke's successor, George Parr, joined with John Wisden in leading a pioneer tour to N. America, which foreshadowed regular

international C. Visits of Eng. teams to Australia in 1861-2 and 1863-4 were reciprocated in 1868 when a team of Victorian aborigines toured England. By 1877 a representative Australian XI playing at Melbourne in the first test match were strong enough to beat an Eng. side under James Lillywhite, and this encouraged the Australian C. authorities to send an official team to England in 1878. This team dismissed a strong M.C.C. side at Lord's for 33 and 19 runs, but no test match was played; the first test in England was in 1880. Australian visits followed biennially and in 1882 her splendid but unexpected victory at the Oval inspired a journalist to write a mock obituary notice of Eng. C., in which he coined the term *the Ashes* (a.v.). In 1909 the Imperial Cricket Conference was set up with England, Australia, and S. Africa as founder members, and these countries played a series of triangular tests in England in 1912. The conference now includes W. Indies, New Zealand, India, and Pakistan, who all play test C. In England test teams are selected by the Board of Control for Test Matches in England; since 1903 official Eng. tours overseas have been the responsibility of M.C.C. The test series in Australia in 1932-3 was marked by the so-called 'bodyline' bowling controversy caused by the England fast bowlers, notably H. Larwood, bowling to a packed field on the leg side. This resulted in the introduction of legislation against the persistent bowling of fast short-pitched balls at the batsman standing clear of his wicket.

Of recent years alterations in the laws have been concerned mainly with the l.b.w. and no-ball laws. The provision of a new ball in 1st-class C. has also been under review.

Organisation of first-class cricket. A first-class match is one of 3 or more days' duration between 2 teams of eleven players officially adjudged first class. Test matches are played between the 7 countries composing the Imperial Cricket Conference and are of 5 or 6 days' duration according to the playing hours in the different countries. The governing body in each country decides which teams are first class. In England, Oxford and Cambridge Univs., Gentlemen and Players, and other representative sides are first class, and there are 17 first-class cos. which compete in the co. championship. These are: Derbyshire, Essex, Glamorgan, Gloucester, Hants, Kent, Lancs, Leicester, Middx, Northants, Notts, Somerset, Surrey, Sussex, Warwick, Worcester, and Yorks. The co. championship was instituted in 1873, when 9 cos. competed. The most successful co. has been Yorks; Surrey is the only co. which has won more than 4 years in succession. Each co. plays 28 matches. The result of the Championship is decided on a points system which is revised from time to time: 12 points are scored for a win; 6 to each side for a tie, and 6 to the side batting in the 4th innings in a drawn match in which the scores are equal. Points are also

awarded to the losers if they led on the 1st innings and to the side leading on the 1st innings in a drawn game. In 1957 an experimental rule awarded bonus points to the side leading on the 1st innings if they scored more runs per over than their opponents. In a match limited to 1 innings the leading side scores 3 points. All games are included in the Championship Table even though no play has been possible. Players must qualify to play for their co. by birth, by residence, or by special registration. The minor counties championship, played between the remaining co. and 2nd elevens of some first-class co., is not first class, the matches being of 2 days' duration. In 1904 the Advisory County Cricket Committee was formed to consider matters arising out of co. and other C. In all countries matches of 3 or more days' duration by official touring sides or by sides representing states or provs. affiliated to the governing body against other first-class sides are deemed first class. So are matches for the Sheffield Shield (Australia), Currie Cup (S. Africa), Plunket Shield (New Zealand), Ranji Trophy (India), and Quaid-i-Azam Trophy (Pakistan).

Overseas Cricket: Australia. Governing body, Australian Board of Control for International Cricket; original member of Imperial Cricket Conference (1909). First-class matches are played between New S. Wales, Victoria, S. Australia, Queensland, and W. Australia for the Sheffield Shield (presented by Lord Sheffield in 1892 and originally competed for by New S. Wales, Victoria, and S. Australia). Australian C. is highly organised in grades, so that by promotion any cricketer may reach the highest grade and attract the notice of state or international selectors. The earliest inter-state match was between New S. Wales and Victoria at Melbourne, 1858. Melbourne also staged the first test match against England in Mar. 1877. Test matches are now played at Melbourne, Sydney, Adelaide, and Brisbane. In 173 matches (1877-1956) England has won 62, Australia 70, and 41 have been drawn. In V. Trumper (q.v.), brightest of a galaxy of stars in the early 1900's, and Sir Donald Bradman (q.v.), C.'s most prolific run-getter, Australia has produced two of the world's finest batsmen. Other great batsmen have been W. L. Murdoch (like Bradman also a fine captain), S. E. Gregory, V. Ransford, C. G. Macartney, W. Bardsley, W. H. Ponsford, A. Jackson, W. M. Woodfull, S. J. McCabe, A. L. Hassett, and the left-handers C. Hill, J. Darling, A. Morris, and R. N. Harvey. F. R. Spofforth (q.v.), the 'Demon Bowler,' has been ably succeeded by such players as Turner and Ferris, H. Trumble, C. V. Grimmett, A. G. Mailey, E. A. McDonald, W. J. O'Reilly, W. A. Johnston, and R. Lindwall, and such great bowlers as G. Giffen, M. A. Noble, W. W. Armstrong, J. M. Gregory, and K. Miller have also been notable batsmen. The leading wicket-keepers have been J. M. Blackham, J. J. Kelly, H. Carter, and W. A. Oldfield, whose 90 test dismissals

are nearly double those of his nearest Australian rival.

South Africa. Governing body, South African Cricket Association; original member of the Imperial Cricket Conference (1909). C. is said to have been introduced in 1790. At the time of the visit of the first Eng. team in 1888-9, Sir Donald Currie presented a cup for the team which showed the best form against the visitors. This cup is the prin. S. African C. trophy and is now competed for by Natal, Transvaal, W. Prov., Orange Free State, E. Prov., Rhodesia, Border, N.E. Transvaal, and Griqualand W. The first match between England and S. Africa was in 1888-9, but though the first S. African team visited England in 1894 no tests were played in England until the visit of the great S. African side of 1907. The record between the two countries (1888-1955) is: 89 matches; England won 42, S. Africa 17, 30 drawn. Test grounds are at Johannesburg, Cape-town, Durban, and Port Elizabeth. Johannesburg has had 3 test grounds: the old Wanderers' ground, taken over for railway development after the Second World War, Ellis Park, in use until 1956, and now the new Wanderers' ground outside the city. Against England at Durban in 1939 S. Africa staged the longest test match ever played. The game was unfinished after 10 days, when the Eng. team had to leave for home (scores: S. Africa 530 and 481; England 316 and 654 for 5). Early in the present cent. S. Africa produced some outstanding bowlers, including R. O. Schwarz, E. A. Vogler, G. C. White, and G. A. Faulkner, early exponents of 'googly' bowling. Leading batsmen have been A. D. Nourse (father and son), H. W. Taylor, H. B. Cameron, and B. Mitchell.

West Indies. Governing body, West Indies Cricket Board of Control; joined the Imperial Cricket Conference, 1936. For geographical reasons early C. was very localised. First intercolonial match was played at Bridgetown between Demerara and Barbados, 1865. In 1866 a W. Indies team visited N. America and encouragement was given by the visits of the two teams from England in the late nineties. The first W. Indies team toured England in 1900 under R. S. A. Warner. A quadrangular tournament is played between Barbados, Trinidad, British Guiana, and Jamaica. W. Indies played her first test in 1928. Test grounds are at Bridgetown, Port of Spain, Georgetown, and Kingston. C. personalities include L. S. Constantine and his son L. N., and the prolific batsmen G. Headley, C. L. Walcott, F. M. Worrell, and E. Weekes. Many leading W. Indies players appear in Eng. league C.

New Zealand. Governing body, New Zealand Cricket Council; joined the Imperial Cricket Conference in 1926. C. was played there before 1835; the first inter-prov. match, Wellington v. Auckland at Wellington, was in 1860. In 1864 the visit of George Parr's Eng. team inspired a C. fête at Dunedin, where

teams from Southland, Canterbury, and Otago played against the visitors; 1878 saw the first visit of a team from Australia, and a New Zealand tour in Victoria. In 1906-7 Lord Plunket presented a shield for competition among the major associations, those now competing being Auckland, Wellington, Canterbury, Otago, and Central dists. In 1910 Lord Hawke presented a cup for competition among minor associations. New Zealand played her first test 1929-30; her test grounds are at Christchurch, Wellington, and Auckland. In C. S. Dempster, M. P. Donnelly, and B. Sutcliffe she has produced 3 outstanding batsmen.

1932; test grounds are at Bombay, Calcutta, Madras, New Delhi, and Kanpur. The development of Indian C. owes much to the success of her leading player, K. S. Ranjitsinhji (q.v.), whose nephew, K. S. Duleepsinhji, followed in his steps. The Nawab of Pataudi was a fine batsman who distinguished himself for Oxford and captained the 1946 team in England. V. Hazare and V. Merchant, also fine bats, have each played in 30 tests, and V. Mankad, who is seen in Lancs league C., has represented India 35 times.

Pakistan. Governing body, Board of Control for Cricket in Pakistan; joined

Sport and General

WORCESTERSHIRE V. SOUTH AFRICANS AT WORCESTER

A general view of the match in progress, with Worcestershire batting.

India. Governing body, Board of Control for Cricket in India; joined the Imperial Cricket Conference in 1926. C. was introduced into India by the military in the 18th cent. Parsees were the first of the Indian peoples to take to the game and they formed the Oriental Club in Bombay in 1841; in 1861 the Hindus formed the Bombay Union. Two Parsee teams visited England in the 1880's, and in 1892-3 Lord Hawke took an Eng. team to India. In 1907 the first triangular tournament was played between Parsees, Hindus, and Europeans; the tournament was enlarged in 1912 to include the Mohammedans. An inter-prov. tournament for the Ranji Trophy was instituted in 1934. India played her first test in

the Imperial Cricket Conference in 1952. Played first series of official tests v. India 1952-3; toured England 1954. In 1953-4 a national championship was estab. for the Quaid-i-Azam Trophy. Test matches have been played at Karachi, Lahore, Dacca, Bahawalpur, and Peshawar.

Other Countries. Although the first Eng. overseas tour was to N. America, C. there has not attained a wide popularity, though a fair amount of club C. is played, especially in Canada. The services have introduced the game in many other parts of the commonwealth; in Ceylon, especially, it has taken root. In Europe C. is played in Holland and Denmark.

Great Cricketers and Records. The most famous cricketer remains Dr W. G. Grace

(q.v.), who dominated the C. field for upwards of 40 years. His 126 centuries and 54,896 runs in first-class C. have been surpassed, but in his day his achievements outstripped all other batsmen's; as a bowler his 2876 wickets have only been exceeded by 6 other players. J. B. Hobbs (q.v.), Surrey, the greatest scorer in first-class C. made 61,237 runs and 197 centuries; he is followed by F. E. Woolley (q.v.), Kent, with 58,969 runs and 145 centuries (Woolley also took 2068 wickets); E. Hendren, Middx; 57,610 runs; C. P. Mead, Hants, 55,060; W. G. Grace, Gloucester, 54,896; W. R. Hammond (q.v.), Gloucester, 50,493; and

Sport and General

PETER MAY

H. Sutcliffe (q.v.), Yorks, 50,135. The most prolific scorer outside England was D. G. Bradman, whose 28,067 runs (117 centuries) were made in the lighter C. programmes of Australia. His score of 452 for New S. Wales v. Queensland, 1929-30, is the highest in first-class C. The individual record in England is A. C. MacLaren's 424 for Lancs v. Somerset, 1895. B. B. Ninbalkar made 443 not out for Maharashtra v. W. India States in 1948-9, and W. H. Ponsford (Victoria) twice exceeded 400. The record for a test innings is L. Hutton's (q.v.) 364 v. Australia, 1938. The world partnership record is 577 for the 4th wicket by V. Hazare and G. Mahomed for Baroda v. Holkar, 1946-7; the Eng. record is 555 for the 1st wicket by P.

Holmes and H. Sutcliffe, Yorks v. Essex, 1932; for Barbados in 1945-6 F. M. Worrell and C. L. Walcott made 574 for the 4th wicket. B. Sutcliffe and D. D. Taylor (Auckland) made opening stands of 220 and 286 v. Canterbury, 1948-9. Two separate hundreds in a test match have been made by H. Sutcliffe, C. L. Walcott, and G. Headley. W. R. Hammond made 2 separate hundreds in a first-class match 7 times; he also holds the record for runs scored in tests (7249) and for the number of tests played (85). L. Hutton made 6971 runs in 79 tests. Players who have exceeded 1000 runs in a season more than 20 times are W. G. Grace, F. E. Woolley, C. P. Mead, J. B. Hobbs, E. Hendren, W. G. Quail, H. Sutcliffe, D. Denton, W. R. Hammond, and W. Rhodes. Other leading batsmen have been: G. Parr, A. Shrewsbury, and G. Gunn of Notts; R. E. Foster (Worcester), who made 287 for England v. Australia, 1903-4; R. H. Spooner (Lancs), who made 189 in his first test v. S. Africa, 1912; G. L. Jessop (Gloucester), whose feats of rapid scoring included 101 in 40 min. v. Yorks, 1897; C. B. Fry (q.v.) (Sussex), whose 6 successive hundreds in 1901 is a record equalled by D. G. Bradman in 1938-9; K. S. Ranjitsinhji (q.v.) (Sussex); F. S. Jackson (q.v.) (Yorks); P. F. Warner (q.v.) (Middx); R. Tyldesley and E. Tyldesley (Lancs); A. Sandham (Surrey), who shared with J. B. Hobbs opening partnerships exceeding a hundred 63 times; and L. Ames (Kent), who also holds the wicket-keeping record for the most stumpings (413) and the most dismissals in a season (127). The Surrey wicket-keeper, H. Strudwick, holds the overall record of 1493 dismissals (1235 caught). F. E. Woolley's 913 catches are the most by a fielder other than a wicket-keeper. In bowling, J. C. Laker's achievement in taking 19 wickets in the 4th test v. Australia, 1956, is unlikely to be bettered. This was the first time a bowler had taken all 10 wickets in a test. Laker also holds the record of 46 wickets in a test series; another Surrey bowler, A. V. Bedser, took 39 v. Australia in 1953, and his 236 test wickets are the most so far recorded. S. F. Barnes took 189, including 17 in one match v. S. Africa, 1913-14; M. W. Tate took 155, H. Verity 144, including 15 in one match v. Australia in 1934. W. Rhodes took 15 against Australia at Melbourne, 1903-4. Rhodes also heads the bowling aggregates with 4187 wickets; 23 times he exceeded 100 wickets in a season and he achieved the 'double' 16 times. His Yorks colleague, G. H. Hirst, was the only player to make 2000 runs and take 200 wickets in a season (1906); J. H. Parks (Sussex) is the only player to exceed 3000 runs and 100 wickets (1937). The most wickets taken in a season were 304 in 1928 by A. P. Freeman (Kent), whose career aggregate was 3776. Other players with more than 3000 are C. W. L. Parker (Gloucester), 3278, and J. T. Hearne (Middx), 3061. Parker is one of the few who performed a hat-trick twice in a match, the others being A. Shaw (Notts), T. J. Matthews

(Victoria), R. O. Jenkins (Worcester), and A. E. Trott (Victoria and Middx), whose 4 wickets with 4 balls followed by 3 with 3 balls in the same innings (Middx v. Somerset, 1907) is unique. The record for hat-tricks is held by D. V. P. Wright (Kent). One of the most remarkable analyses was H. Verity's 10 wickets for 10 runs (Yorks v. Notts, 1932); G. Geary took 10 for 18 (Leicester v. Glamorgan, 1929). Other notable bowlers have been B. J. T.

Sport and General

J. C. LAKER BOWLING AGAINST THE AUSTRALIANS

Bosanquet (Middx), inventor of the 'googly'; F. R. Foster (Worcester), who took 32 Australian wickets in the 1911-12 tests; J. Briggs (Lancs); G. Lohmann (Surrey); R. Peel (Yorks); C. Blythe (Kent); A. S. Kennedy (Hants); T. W. Goddard (Gloucester); and the Notts fast bowlers, H. Larwood and W. Voce. The highest innings total in first-class C. is 1107 by Victoria v. New S. Wales, 1926-7; in England the highest is 903 for 7 wickets by England v. Australia, 1938;

Australia's highest test score is 729 for 6 at Lord's, 1930. The lowest score is 12, by Northants v. Gloucester, 1907, and by Oxford (1 man absent) v. M.C.C., 1877. Victoria were dismissed for 15 by M.C.C. in 1903-4.

Crickhowel, tn of Breconshire, Wales, situated in the Usk valley. It possesses a Norman castle, now under the trusteeship of the parish council, and is the centre for a considerable area of the Black Mts, with fine scenery and many good walks. About 2 m. N.E. of the tn is a hill named Crug-Hywel, from which the name C. is derived. Pop. tn 1400; rural dist. (for which C. is administrative centre) 7600.

Cricklade, mrkt tn of Wilts, England, situated on the Thames at the commencement of the navigable riv., on the Rom. Ermine Street, 7 m. NW. of Swindon. It was formerly an important tn, having Anglo-Saxon associations. The industries are purely agric. It is endowed richly with charities, and possesses sev. educational establs. It is the only par. council in the kingdom to bear arms. Pop. 1500.

Crieff, police burgh of Perthshire, Scotland, lying 18 m. to the W. of Perth. Previously woollen, cotton, and linen goods were manufactured here; now the tn is the centre of a fertile and prosperous agric. area, but it is known chiefly as a health and pleasure resort because of the purity of its air. Many tourists visit the terraced lt. and Dutch gardens of Drummond Castle, the keep of which was built in 1490. Up to 1770 a great cattle fair was held at C., when its 'kind gallows' punished the highland cattle lifters. Pop. 5500.

Crikvenica, resort on the Adriatic, in Croatia, Yugoslavia. It has a fine beach. Pop. 5150.

Crillon, Louis des Balbes de Berton de (c. 1541-1615). Fr. soldier, called 'le Brave,' served his apprenticeship for war under Francis, Duke of Guise. The valour displayed by C. at the siege of Calais and the taking of Guines became almost legendary. At Dreux and Montcontour he again distinguished himself, and at the battle of Lepanto, in spite of wounds, he was chosen to bear the tidings of victory to the king. He fought at the siege of La Rochelle, 1573, and subsequently under Henry IV.

Crime. A C. may be defined as an act prohibited by law which is punishable by some sanction applied by courts of criminal jurisdiction (e.g. central criminal courts, quarter sessions, magistrates' courts). Some criminal acts may also be the subject of civil proceedings; for instance, a motorist found guilty of dangerous driving may subsequently be sued for damages for negligence in a civil court. No act, however anti-social, may be punished as a C. unless it is prohibited by law (*nulla poena sine lege*). This fundamental principle of Eng. criminal law, which is complementary to the maxim that ignorance of the law is no excuse, is not to be found in the Soviet legal system, under which acts no

expressly forbidden by law but regarded as inconvenient to the authorities, may be punished as 'crimes against the people.' Although the detailed content of their legal systems may vary, all states treat as C.s those acts which they regard as subversive of public order and stability. Thus, treason, insurrection, stealing, and physical assault are criminal offences in all highly developed political communities. Although their methods may change, the thief and robber are criminals to be found in all ages. In the modern Eng. magistrates' court, which deals with the majority of offences, the motorist whose activities affect the public safety, engages much of the attention of the criminal law. An act does not constitute a C. according to its heinousness, which merely determines the penalty for its commission. Despite the widely differing punishments which they attract, murder, larceny, dangerous or careless driving, adulteration of milk, and riding a bicycle without lights are all C.s. If the number of offences increases at any given time, it should not be assumed that a 'crime wave' is in progress. The increase may be accounted for by a burst of enthusiasm by the traffic police, or improved methods of C. detection. Governmental action may affect C. statistics; whereas the abolition of petrol rationing released more motorists on to the roads, thus giving greater opportunities for traffic offences, the removal of food rationing put 'black marketeers' out of business. Even so, a detailed examination of the criminal statistics for England and Wales for 1955 will reveal that the number of C.s involving dishonesty has increased since 1938.

In order to see the complete pattern of criminal activity in England and Wales, it is necessary to examine not only detailed statistics of different types of C. and the number of persons found guilty, but also the number of offences known to the police. In 1955 the total number of persons found guilty of all offences in England and Wales was 735,288. Traffic offences tried summarily (i.e. by magistrates) accounted for 407,815 or 55.5 per cent of the total. In 1938, there were 238,220 indictable offences (i.e. those triable by a jury) known to the police, of which 50.1 per cent were cleared up. In 1955, however, of 438,085 such offences, only 48.7 per cent were cleared. This disturbing discrepancy between the numbers of offences known and those cleared up suggests that in 1955 over 51 per cent who committed C.s 'got away with it,' but as the number of unpunishable C.s per person cannot be assessed, the percentage of persons concerned might be considerably reduced. Moreover, a person found guilty of an offence frequently asks the court when passing sentence to take into consideration other offences committed by him but for which he has not been prosecuted; he is not later charged with these offences, which are wiped off the police record of offences which have not been cleared up. The overall increase of C. since 1938 is alarming, even

allowing for the unsettling conditions of war-time and of the immediate post-war years. Although the numbers of offences declined as the life of the nation returned to normal, they have never fallen to their pre-war level.

TYPES OF CRIME.—Although traffic offences accounted for 55.5 per cent of the 735,288 persons found guilty in 1955 of offences of all types, this article deals only with those C.s involving dishonesty or violence. The most common offence was larceny of which 63,438 persons (9.3 per cent of the total) were found guilty. Offences of larceny known to the police in 1938 numbered 199,951 and increased to 295,035 in 1955. Although shortages of most goods stimulated thefts during the war, the numbers rose alarmingly in the post-war years, reaching a peak in 1951. In 1938 56,092 persons were found guilty of larceny and similar offences, and in 1955, 68,438. It is particularly disturbing to note that in 1955 1 in every 7 persons found guilty of larceny was convicted of theft from his employer. The number was 9431, compared with 3597 in 1938. Shoplifting has shown a marked increase on pre-war figures (1938, 7956; 1955, 10,512). In both years, the figures for other simple and minor licences accounted for about 50 per cent of the total in this category of offence. The comparable figures for offences of 'breaking and entering' known to the police and cleared up show a similar upward trend; 1938, 49,184; 1955, 74,907. The highest figure was 112,665 in 1948. In 1938, 10,853 persons were convicted, and in 1955, 16,411. Two major factors in the post-war increase in larceny and similar C.s are probably (a) a general lowering of moral standards induced by shortages of food, clothing, etc., and (b) a growing desire to 'get rich quick' with the minimum of effort, an attitude typified by the 'spiv.' The shortage of lead in the immediate post-war years explains a startling increase in lead-stealing (the stripping of lead from roofs became a profitable C.). The decline in this class of offence is probably due not so much to the severity of sentences imposed by the courts, but to the improved legitimate supply of lead which has consequently caused a slump in demand for the 'black market' product. The offence of receiving goods knowing them to have been stolen has increased its popularity among criminals since 1938. The offences known to the police have increased from 3433 in 1938, to 76,016 in 1955. In the latter year, 4366 persons were convicted. This is a surprisingly small number considering that if a person is found in possession of goods which are proved to have been recently stolen, the presumption (which he has to rebut) is that he received them, knowing them to have been stolen. This is contrary to the usual principle in Eng. criminal law that the prosecution must prove positively all the ingredients in the C. C.s involving fraud or false pretences have risen from 16,097 in 1938 to 22,956 in 1955; in those years the number of persons convicted were

2749 and 3511 respectively. The peak post-war years for these so-called 'white collar crimes' were 1948, 1951, 1952, and 1953. Those who commit this class of offence tend to have a standard of intelligence rather higher than that of the average criminal. Offences of violence against the person have increased steadily from 2721 in 1938 to 7884 in 1955. Although this type of offence is only a small proportion of all C.s committed (the percentage of those convicted in 1955 was 0.7 per cent of the total), the steady, unaltered increase in numbers is alarming. In 1938 10 per cent of the offenders found guilty of this type of C. was in the 17-21 age group; by 1955 the percentage had risen to 19. The number of persons convicted in 1955 for malicious wounding and like offences is nearly 4 times as great as that in 1955. The growth of the 'teddy boy' cult is frequently blamed for C.s of violence. In recent years an increasing number of working-class boys have affected an exaggerated Edwardian style of dress and a foppish hair-cut. The vast majority are, in fact, law-abiding citizens, seeking escape from the tedium of drab surroundings by adopting a form of self-expression copied from their film-star heroes. Yet because some gangs of youths dressed in this fashion have committed C.s of violence, the term 'teddy boy' has become to connote a young criminal. It is perhaps too early to determine whether hooliganism is, like calf love, now one of the symptoms which afflict certain adolescents in every age, or is merely a malady peculiar to a generation unsettled in childhood by war-time disturbances and in adolescence by the prospect of national service. Another factor which cannot yet be accurately assessed is the damaging effect of the high divorce rate just after the war on the children of broken marriages.

Although murders attract considerable newspaper publicity, they are comparatively rare. The number known to the police has remained curiously consistent over many years; in 1955 it was 125. Two of these were reduced to manslaughter as the result of court proceedings in 1956. The number of offenders known or suspected to have been concerned in 121 of the remaining 123 murders was 101, the murderers in the other 2 cases being undetected. One suspected murderer was detained in a mental hospital and was not prosecuted, and 32 committed suicide before arrests could be made; these 33 persons were suspected of being concerned in the murder of 46 victims. Of the persons proceeded against, 1 was certified insane before trial, 12 were found insane on arraignment, and 27 were found guilty but insane. These 40 persons were responsible for 47 of the victims. During 1955, 9 persons were executed. From 1955 until July 1957 no person found guilty was hanged because of the passage by the Commons of a private member's bill to abolish cap. punishment. The bill was rejected by the House of Lords, and, because of the bitter controversy aroused

by this rejection, the gov. sponsored Homicide Act, 1957, was passed. The provisions of this act are described in the article CAPITAL PUNISHMENT; *see also* MURDER.

The number of sexual offences known to the police has increased from 5018 in 1938 to 17,078 in 1955.

AGE GROUPS OF OFFENDERS FOR PRINCIPAL INDICTABLE OFFENCES IN 1955.—34 per cent of the persons found guilty of larceny were over 30 years of age, and 20 per cent were in the 21-30 age group. 20 per cent were between 8 and 14 (no child under 8 can be charged with a C.). Petty pilfering no doubt explains this surprising large juvenile contribution to the total quota of larcenies. Only 12 per cent of the persons found guilty of 'breaking and entering' were over 30 years of age; 30 per cent being between 8 and 14 years and 22 per cent between 14 and 17; mischievous propensity, the desire for adventure, and nimbleness of limbs must surely explain the attraction of the very young to this type of offence. Receiving stolen property entails less risk but requires a ready market for disposal if the C. is to achieve its purpose. It is not therefore surprising that 48 per cent of convicted receivers of stolen property were over 30 years of age. Only 7 per cent were in the 17-21 age group, but 26 per cent were between 8 and 17 years of age. Frauds and false pretences require experience and the greater opportunities of successful accomplishment more readily available to older men. 69 per cent of those convicted were over 30 and 23 per cent between 21 and 30. The 3 age groups between them contributed a modest quota of 8 per cent.

Robbery (q.v.), which requires the audacity and physical strength of younger men, was largely the province of young men. Only 13 per cent of offenders were children under 14; 17 per cent were between 14 and 17 and 20 per cent were between 17 and 21. 38 per cent were between 21 and 30. The offence has apparently lost its allure for men over 30 (only 12 per cent were in this age group). Men with a number of previous convictions and committed to a career of C. no doubt realise that they can expect long sentences if found guilty of this particular offence. Of persons found guilty of other offences involving violence against the person, the percentages for the 17-21, 21-30, and over 30 age groups are respectively, 19, 36, and 36.

TREATMENT OF OFFENDERS.—Criminologists differ as to the emphasis to be placed on the retributive, deterrent, and reformatory aspects of punishment. The theory that punishment is intended merely as expiation is not subscribed to by the more progressive penologists. Heavy sentences are often imposed by judges in the hope that potential offenders may be deterred. The most positive theory of penology is aimed at the reform of the criminal. The most optimistic criminologists are forced to admit that modern methods have so far failed to influence persistent offenders. The Crim-

inal Justice Act, 1948, which provided extended forms of imprisonment for such offenders, has launched what the report of the prison commissioners for 1955 described as 'a new and two-pronged attack on the problem of recidivism.' The 'prongs' are *corrective training* and *preventive detention*, which are described in the section of the Criminal Justice Act in the article on CRIMINAL LAW. In order to deflect persons of the 14 to 17 and 17 to 21 age groups from a life of C., they may be sent to a detention centre (at present available for males only) where they receive a 'short, sharp shock' for up to 6 months in 'glass house' conditions. The lesson is likely to be more salutary if the detention centre is the offender's first experience of institutional treatment. The act curiously makes no provision for compulsory after-care of those who have served a term in such a centre. Borstal training (q.v., see also CRIMINAL LAW) is available for young persons aged 16-21. Prediction studies of Borstal boys were recently made by Dr H. Mauheim and Leslie Wilkins, and pub. by H.M.S.O. They selected a sample of 1 in every 3 entrants to Borstal institutions in 1946-7, the total sample consisting of about 700 cases of which they used 385 to build the prediction equations. The success rate among those recommended by the Prison Commissioners for Borstal training was 49 per cent, whilst it was 46 per cent among those sent to Borstal against the recommendation of the Commissioners. The authors, without claiming the individual judgment of the court in deciding sentences, do suggest that such tables which condense so much information covering a wide field could serve as a useful adjunct.

During 1955, 16,547 males and 1127 females were imprisoned; the comparable figures for 1938 were 12,554 and 1074 respectively. In 1938, 11,737 males and 2176 females were fined; in 1955 the figures were 30,962 and 4711.

The number of persons placed on probation (q.v.) has shown no significant change in the years under review. In 1938, 21,820 males and 3525 females were placed on probation, compared with 21,340 and 4552 in 1955. It is disappointing that probation has not been more widely used, having regard to the expansion of the probation service and the greatly improved calibre and ability of the officers. The probation system, which was introduced by the Probation of Offenders Act, 1907, was designed to allow many of the persons appearing before the court to have 'another chance.'

CAUSES OF CRIME.—Various explanations have been offered at different times of the reasons for C. Poverty has, in the past, often been pointed at as a cause of C., but the benefits of the welfare state and full employment have not reduced the volume of offences. 'Penny dreadfuls,' the cinema, and 'horror comics' have been successively blamed for juvenile C. Emotional and mental instability have also been selected as possible causes. Sir

Cyril Burt has suggested that C. is never due to one single cause but to a number of factors, all of which also conduce to the behaviour of non-criminals. Human behaviour springs from a complex pattern, and not from the artificial isolation of 1 act. It was suggested in debate in the House of Commons in June 1957 on penal reform that the gov. should sponsor scientific research into the cause of C. and the curing of offenders. Unless and until C. is treated as a mental disease, offenders must, if sane, continue to be held legally responsible for their criminal acts and to suffer the consequences. See also CRIMINOLOGY (and books quoted at the end of this article); PENOLOGY; POLICE; PRISONS.

Crimea (Tatar and Russian *Krym*), oblast of the Ukrainian Rep. comprising the peninsula of the same name (ancient *Taurica Chersonesus*), almost completely surrounded by the Black Sea and the Sea of Azov and connected with the mainland by the narrow isthmus of Perekop. It consists of lowland steppe in the N., with the Crimean Mts (highest peak Roman-Kosh, 1545 ft) along the S. coast, which has a Mediterranean climate. There are large iron-ore and salt deposits. Area 10,000 sq. m.; pop. c. 1,000,000, Russians and Ukrainians (before 1940's also Tatars, Jews, Germans, Greeks, and Bulgarians). C. has metallurgical, engineering, and food (fishing, fruit-canning, wine) industries. Wheat and tobacco are cultivated, and viticulture and horticulture practised; there is also sheep breeding. There are many health and holiday resorts (500,000 patients and tourists yearly in 1930's). The prin. tns are Simferopol' (cap.), Sevastopol', Kerch', Yevpatoriya, Feodosiya, Yalta. C. was inhabited in antiquity by Cimmerians, Taurians, and Scythians. From the 7th cent. bc the S. Crimea was colonised by Greeks (see CHERSONESE; BOSPORAN KINGDOM), and it later belonged to Rome and Byzantium, and from the 13th cent. to Venice and Genoa. From the 3rd cent. N. C. was subject to invasions by Goths (who survived there till the 16th cent.), Huns, Avars, Khazars, Pechenegs, Cumans, and in 1239 Tatars (see GOLDEN HORDE; CRIMEAN KHANATE). In 1475 S. C. was conquered by Turks, who in 1478 estab. suzerainty over the Crimean Khanate which lasted till 1774. In 1783 C. was annexed to Russia and included in New Russia (q.v.). The majority of Tatars emigrated to Turkey. In the Crimean War (q.v.) the Allies landed in C. and took Sevastopol'. In 1917-20 C. had sev. Tatar nationalist, as well as Russian Communist and anti-Communist, govs., was under Ger. occupation (1918), and witnessed many battles of the civil war. In 1921 the Crimean (Tatar) Autonomous Rep. was formed within the Russian Federal Rep. C. was again occupied by the Germans, 1941-3, and was the scene of bitter fighting (Sevastopol', Kerch', Perekop). The C. Autonomous Rep. was abolished in 1945 after the deportation of the Tatar pop. to Asiatic Russia for alleged collaboration with the Germans. The Crimean oblast was transferred to

the Ukraine in 1854. The 1957 decree on rehabilitation of deported peoples did not include Crimean Tatars. See W. Kolarz, *Russia and Her Colonies*, 1952; R. Pipes, *The Formation of the Soviet Union*, Cambridge, Mass., 1954.

Crimean War (1853-6) was brought about largely through the aggressive policy of Tsar Nicholas I of Russia, who had visions of a Russian empire embracing the whole of SE. Europe, and determined to win Constantinople. Using as his pretext an obscure quarrel in Jerusalem between Gk and Lat. Christians, Nicholas boldly claimed from the sultan a protectorate over all the Gk Christians in the Ottoman dominions, thereby hoping to make the impending war a struggle between Cross and Crescent. But the sultan issued a solemn edict to the Christians, promising them full religious liberty, and appealing to France and England for help. Both powers responded to his request, the former because it was anxious to avenge Moscow, the latter because it feared its E. possessions would be menaced were Russia allowed to reach the Mediterranean. The Manchester leaders, Cobden and Bright, courageously denounced the war in the face of a bellicose people. The actual war extended from 1853 to 1856, being terminated by the unsatisfactory Peace of Paris. There were some naval engagements in the Baltic, but the true interest of the war is concentrated round Sevastopol, the Russian stronghold in the Crimea. The allied forces were at first mustered in Varna, but in 1854 were transported to Eupatoria, after having suffered terribly through cholera. By the victory of the Alma in Sept. 1854, when the brunt of the fighting fell on the Eng., a way for the allies was cleared to Sevastopol. It was during an Oct. attack by the Russian general Menshikov upon Balaclava, the Eng. H.Q., that the Light Brigade won fame by its fatal if valiant charge through N. Valley. In Nov. the Eng. Guards and troops on the hill of Inkermann beat back the assailing Russians, but in spite of their victory dared not attempt to capture Sevastopol by storm. Accordingly the allies settled down to a winter siege. Tempests wrecked the transports bearing clothing, ammunition, etc., so that the soldiers were totally unprepared to endure the snows and bitter cold, and Florence Nightingale (q.v.), who did noble work as nurse, bore vivid testimony to the acute sufferings and deprivations and also to the patience and courage of the soldiers. Early in 1855 the Eng. commander-in-chief, Raglan, and Nicholas d. In Aug. the Fr. and Sardinians, who had joined in the war, defeated the Russians at the battle of the Chernaya, and the former captured the Malakov redoubt, though the Eng. were driven back from the Redan. In Sept. the Russians surrendered Sevastopol. By the provisions of the treaty the Russians abandoned their claim to a protectorate over the Christians, and agreed not to build any more forts on the Euxine, but recovered Sevastopol. The great powers assumed

responsibility for seeing that the Porte fulfilled its guarantees to the Christians. Navigation on the Danube was thrown open. This war demonstrated to England the folly of attempting to rehabilitate Turkey, and the crying need for reform in military organisation. See L. Tolstoy, *Sevastopol*, 1863-87; A. W. Kinklake, *The Invasion of the Crimea*, 1899; C. F. MacMunn, *The Crimea in Perspective*, 1935; and H. W. V. Temperley, *England and the Near East*, vol. 1, *The Crimea*, 1936.

Crimes, War. The laws of peace remain in force despite the state of war, though they are subject to exceptions which operate in certain circumstances and certain conditions. War sanctions by its very existence the use of force, the use of lethal weapons, the destruction of life and property. Hence many modern states have long reached an agreement by which they decided to introduce order into the chaos of war, or, in other words, to make 'laws of warfare' by way of providing a solution of the age-old conflict between brute force which knows no limits and force controlled by rules. These laws of warfare are a great compromise resulting from the conflict between the command of law and the necessities of war. Though they have been disregarded flagrantly in certain instances, they have over the past cent. done much to minimise the necessary suffering which war entails. But in recent years the emergence of such weapons of destruction as the atom and hydrogen bombs, and the rise to power of states such as Communist China, which have never formally accepted the rules laid down in earlier declarations, have made them less effective in practice.

Long before the world wars there were numerous written laws of warfare—conventions, regulations, protocols, etc.—and these together form the body of the international (written) laws of warfare. Among them are the declaration of Paris, 1856 (q.v.); the Geneva Convention, 1864, for improving the conditions of wounded soldiers; 13 Hague conventions, signed between 1899 and 1907, and various Hague declarations, e.g. that of 1899, concerning projectiles diffusing asphyxiating gases (which is confirmed and extended by the protocol of 1925); the Geneva Convention of 1929 on the treatment of sick and wounded and of prisoners of war; and the London Protocol of 1936 relating to the use of submarines against merchant vessels. But the mere fact that this body of laws does not expressly cover all crimes does not mean that the rules of warfare approve of such omitted crimes. The Fourth Hague Convention, 1907, covers omissions by saying that the powers 'are inspired by the desire to diminish the evils of war' and that 'the right of belligerents to adopt means of injuring the enemy is not unlimited' (Article 22). In short, the lack of written law is only a formal deficiency and altogether the rules of warfare must be sought in (a) the written international rules of warfare embodied in international agreements; (b) the unwritten international law, as

defined in the Hague conventions and Article 38 of the Statute of the Permanent Court of International Justice; and (c) municipal legislation—for it seems obvious from passages in the international conventions that the signatory powers undertook to translate the stipulations of the respective agreements into the language of municipal law, by their penal codes, military codes, or special legislation; and this applies not only to the contractual obligations of the signatories which form the subject of the international conventions, but also to all those rules or international laws of war which result from the 'usages established between civilised nations, from the laws of humanity, and the requirements of the public conscience,' for they are the 'silent' rules of warfare. A war crime therefore does not necessarily differ from any other crime, though a typical list of 'war crimes' was drawn up by the 'Commission on Responsibility,' which was charged with the task of investigating the matter of atrocities committed by the Central Powers during the First World War (see *American Journal of International Law*, vol. xiv, 1920). Obviously some W. C. could only be committed through the opportunity offered by war conditions; but, substantially, this does not differentiate a crime of violence committed during war from one committed in peacetime. One authority lists various elements as the essentials for qualifying 'war crimes': 'They are acts of violence (both positive and negative violence); they are committed under specially favourable circumstances created by war; committed by a special group of persons in connection with the war (e.g. army commanders, police in occupied countries, commandants of prisoner-of-war camps); committed during war; and are not covered by the exceptions provided by the international laws of warfare' (M. Lachs). Certainly the element of violence was emphasised by the Inter-Allied Conference at St James's Palace (Jan. 1942), whose delegates signed a declaration in which they affirmed that acts of violence perpetrated by the Germans and their allies and associates against the civilian pops. were at variance with accepted ideas concerning acts of war and political offences as these are understood by civilised nations, and placed among their principles the punishment of those guilty and responsible for these crimes; and they expressed their determination to see that the guilty, whatever their nationality, were sought for and handed over to justice, and that the sentences pronounced were carried out.

The defect in the past in these prohibitive provisions of international law has been that there was no court with power to try and to punish the transgressor. 'It is,' wrote Lord Simon, on the Nuremberg trial, 'the creation of the court, not the enunciation of the law, that is the novelty; and few people will feel their sense of justice outraged because when Germany collapsed the Allies decided to create such a court rather than to let those who were

guilty of such deeds violate the law with impunity.' The outcome of this decision was a charter constituting the tribunal which tried and condemned the leading Nazi criminals at Nuremberg (see NUREMBERG TRIAL). In that trial Lord Justice Lawrence disposed of the *ex post facto* pleas of the defendants, particularly as such pleas affected wars of aggression regarded as crimes. For the defendants it was urged that a fundamental principle of all law—international and domestic or municipal—is that there can be no punishment of crime without a pre-existing law. *Nullum crimen sine lege, nulla poena sine lege*. It was submitted that *ex post facto* punishment is abhorrent to the law of all civilised nations, that no sovereign power had made aggressive war a crime at the time the alleged criminal acts were committed, that no statute had defined aggressive war, that no penalty had been fixed for its commission, and no court had been created to try and punish the offenders. Lord Justice Lawrence, in delivering the judgment of the court, said that the maxim *nullum crimen sine lege* is not a limitation of sovereignty, but is in general a principle of justice. 'To assert,' he said, 'that it is unjust to punish those who in defiance of treaties and assurances have attacked neighbouring states without warning is obviously untrue, for in such circumstances the attacker must know that he is doing wrong, and so far from it being unjust to punish him, it would be unjust if his wrong were allowed to go unpunished. Occupying the positions they did in the government of Germany, the defendants, or at least some of them, must have known of the treaties signed by Germany outlawing recourse to war for the settlement of international disputes; they must have known that they were acting in defiance of all international law when in complete deliberation they carried out their designs of invasion and aggression. On this view of the case alone, it would appear that the maxim has no application to the present facts.' It was also submitted on behalf of most of these defendants that in doing what they did they were acting under the orders of Hitler, and therefore could not be held responsible for the acts committed by them in carrying out these orders. 'The fact that the defendant acted pursuant to order of his government or of a superior shall not free him from responsibility, but may be considered in mitigation of punishment' (Article 8 of the International Military Tribunal). 'The provisions of this article,' said Lord Justice Lawrence, 'are in conformity with the law of all nations. That a soldier was ordered to kill or torture in violation of the international law of war has never been recognised as a defence to such acts of brutality, though, as the charter here provides, the order may be urged in mitigation of the punishment. The true test, which is found in varying degrees in the criminal law of most nations, is not the existence of the order, but whether moral choice was in fact possible.'

Trials of war criminals began shortly

after the end of hostilities, and even in 1955 isolated cases were still being heard. Exact figures of trials and sentences are not known, since the Soviet Union has never disclosed her statistics on the subject, but some 30,000 persons were tried in Europe (excluding Russia) and the Far E., and death sentences passed on over 2000.

The evidence of repatriated Amer. and Brit. prisoners of war proved that acts of calculated cruelty and brutality were carried out by N. Korean and Chinese soldiers during the war in Korea; and in Oct. 1953 the U.S.A. asked the U.N. to examine atrocities committed by the Chinese and N. Koreans against Allied prisoners during the war. On 3 Dec. the assembly passed a resolution (opposed only by the Soviet bloc) condemning war atrocities in general and expressing grave concern at reports of such atrocities in Korea. But the perpetrators of these atrocities have, of course, never been brought to trial.

Criminal Appeal, Court of, was estab. in England by the Criminal Appeal Act, 1907. The judges eligible to sit in the court are the lord chief justice and the judges of the Queen's Bench Div. (appointed for the purpose by the lord chief justice with the consent of the lord chancellor for such period as he thinks desirable in each case). The number of judges at any sitting is three. By the above-mentioned Act the right of appeal is given to a person (a) against conviction on ground of appeal involving a question of law; (b) with the leave of the court or upon the certificate of the judge who tried the prisoner that it is a fit case for appeal, against conviction on any ground of appeal involving a question of fact alone, or a question of mixed law and fact, or any other ground which appears to the court to be a sufficient ground of appeal; (c) with the leave of the court against the sentence unless the sentence be one fixed by law. The court in any such appeal shall allow the appeal if they think that the verdict of the jury should be set aside on the ground that it is unreasonable or cannot be supported on the evidence, or that the judgment of the court before whom the appellant was convicted should be set aside on the ground of a wrong decision on any question of law, or that, for any reason, there was a miscarriage of justice. The court may, however, dismiss the appeal, notwithstanding that they are of opinion that the point raised in the appeal might be decided in favour of the appellant, if they consider that no substantial miscarriage of justice has actually occurred. On an appeal against sentence the court shall, if they think that a different sentence should have been passed, quash the sentence passed at the trial and pass such other sentence (more or less severe) warranted in law by the verdict, and this implies a power to increase the term of imprisonment given in the court below. The court shall, if they allow an appeal against conviction, quash the conviction and direct a judgment and verdict of acquittal to be entered. The principle upon which the court act is that of

attaining the end of substantial justice. They will not quash a sentence upon a mere technicality, but require proof that there is a doubt whether, had the proceedings been conducted differently, the jury would have found another verdict. In this connection it is to be noted that the court have decided that the prisoner is entitled to have his defence, however weak or improbable, included by the judge in his summing-up, and the omission of this duty by the judge is sufficient to upset the verdict on appeal. The appellant is entitled to be present on the hearing of an appeal against conviction, but not an application for leave to appeal.

Criminal Investigation Department (C.I.D.). A detective branch of the police force was formed at Scotland Yard

John H. Stone
C.I.D.

The building of the Metropolitan Police at New Scotland Yard, from the Victoria Embankment, London

as early as 1842, but the status of a separate 'department' was not given until 1878, when the C.I.D. was created under the director, Howard Vincent. The C.I.D. now operates both at New Scotland Yard and at dist. police H.Q. It is subdivided into numerous branches, among which are the Special Branch, which is concerned with the protection of State personages and with crimes directed against the State; the Central Office; the Criminal Record Office; the Finger Print Bureau; and the Flying Squad. The strength at the end of 1955 was 1442. Officers have to have at least 2 years' service in the uniform branch before appointment to the C.I.D. The C.I.D.

is noted for its excellent team work and operates far beyond the bounds of London. In 1955 Metropolitan Police C.I.D. officers made 12,065 inquiries at the request of provincial forces and 392 on behalf of overseas forces.

Criminal Justice, see CRIMINAL LAW.

Criminal Law. The object of C. L. is the prevention of crimes by the threat of punishment. Crime has never been satisfactorily defined, but it may be said to have the following characteristics: '(a) it is a harm, brought about by human conduct, which the sovereign power in the State desires to prevent; (b) among the measures of prevention selected is the threat of punishment; (c) legal proceedings of a special kind are employed to decide whether the accused did in fact cause that harm, and is, according to law, to be held legally responsible for doing so' (C. S. Kenny, *Outlines of Criminal Law*). An act such as an assault or damage to property may be both a crime punishable as a wrong to the community and a tort giving rise to payment of damages to the individual whose private right has been violated. Some crimes, such as treason and perjury, do not form the subject matter of civil actions. Conduct although socially reprehensible or even immoral is not a crime unless recognised as such by statute or the common law. The courts have on rare occasions declared certain anti-social acts to constitute public mischief. The general principle of Eng. C. L. is that the courts will not abrogate legislative functions and will not impose punishment for any act unless it is specifically forbidden by law.

Classification of Crimes

In Eng. C. L. crimes are indictable (triable by a jury) or non-indictable (triable summarily by magistrates without a jury). Indictable offences include (i) treason, (ii) felonies (other than treasons), and (iii) misdemeanours. (i) Treasons are felonies aimed at the safety of the State (*see* TREASON); (ii) felonies (other than treason) are the more serious crimes such as murder, manslaughter, burglary, larceny, rape, and bigamy; (iii) misdemeanours are usually, but not necessarily, less heinous crimes such as perjury, conspiracy, false pretences, riot, and assault. The distinction between felonies and misdemeanours is less important than formerly. In feudal times a felony (the price of a fief) signified any offence for which the offender was liable to forfeit his fief or land to the lord of the fee. Later the term was extended to crimes punishable by forfeiture of goods. In the 18th cent. most felonies were capital offences. Acts which are felonies are either so described in statutes defining offences or are so by virtue of the common law. Felonies and misdemeanours differ mainly in their consequences: a suspected felon may, under certain conditions, be arrested without a warrant, but not so a misdemeanant; felonies must be tried on indictment (q.v.), whereas misdemeanours are triable on indictment or information; a person charged with a

misdemeanour may be released on bail (q.v.), but not so a person accused of a serious felony; a felon must be prosecuted before a person injured by the felony can sue for damages in the civil courts, but this does not apply to misdemeanours. Scottish C. L. does not distinguish between felonies and misdemeanours.

Crimes may also be classified according to their nature, i.e. offences against the public or state, offences against the person, offences affecting property.

(i) *Offences against the public* include these: (a) against the sovereign and gov., e.g. treason, sedition, and coinage offences; (b) against religion, e.g. blasphemy (q.v.); (c) against public justice, e.g. perjury, champerty (q.v.), maintenance (q.v.), breach of prison (*see* BREACH), and compounding (q.v.) offences; (d) against public peace, e.g. riots, libels, unlawful assembly; (e) against public trade, morals, health, and good order, e.g. smuggling, bigamy, indecency, incest, adulteration, and keeping gaming houses.

(ii) *Offences against the person* include murder, manslaughter, rape, wounding, assault.

(iii) *Offences against property* include larceny, burglary, embezzlement, obtaining by false pretences, receiving stolen goods.

Criminal Responsibility

The usual rule in Eng. C. L. is that no one is a criminal unless he has a guilty mind. Motive is irrelevant. Criminal intention, a guilty mind, and malice are synonymous in C. L., and indicate not ill-will against a particular person, but that a wrongful act has been done intentionally without just cause. Malice is an essential element unless an act is specifically or implicitly declared to be criminal without proof of guilty intention. For example the adulteration of food, even if accidental, can be an offence under the Food and Drugs Acts, and offences can be committed in connection with the sale of intoxicating liquors, without any guilty intent. In general, ignorance of the law is no excuse, although sometimes mistake of facts may be. A man cannot plead innocence on the ground that he was unaware that larceny is illegal. But he will not be guilty of larceny of an article if he can show that he honestly believed that he had a lawful claim to take it. A person is presumed to be responsible for criminal acts unless he is within one of the following categories:

(a) *Infancy.* Infants under 8 years of age are presumed to be absolutely incapable of crime. Children between 8 and 14 years of age are not criminally liable unless proved to have guilty knowledge.

(b) *Insanity.* An insane person is incapable of criminal responsibility. Sanity is presumed unless rebutted by proof that the accused at the time of committing the act was labouring under such a defect of reason, such disease of the mind, as not to know the nature and quality of the act he was doing, or, if he did know it, that he did not know that he

was doing wrong (*see* CRIMINOLOGY). Where the insanity is partial, i.e. where the delusions cover one or more matters only, the test of responsibility depends on whether, assuming the facts to be as the accused in his delusion supposed them, the act was nevertheless contrary to the law, and also whether the accused knew the act was contrary to the law.

(c) *Drunkenness* is no excuse for crime, although it may be relevant in considering the motive or intent with which the accused committed the act; and chronic drunkenness, causing a degree of madness temporary or permanent, may render the accused criminally irresponsible. The test of criminal responsibility in the case of drunkenness is not the same as for insanity, and where the defence sets up only drunkenness and not insanity, the judge will not direct the jury on the question whether, even if the prisoner knew what he was about, he knew that he was acting unlawfully. The House of Lords, confirming these principles in the case of *Rex v. Beard* in 1920, also held that evidence of drunkenness which makes the accused incapable of forming the specific intent essential as an ingredient in the crime with which he is charged should be considered with other facts proved so as to determine whether he had such intent.

(d) *Duress*. Persons committing acts otherwise criminal, under the threat of death or grievous bodily harm, are, in general, deemed irresponsible for such acts. This does not, however, apply to murder.

(e) *Marital coercion*. A woman, charged with a crime, other than treason or murder, shall have a good defence if she can prove that she committed it in the presence of and under the coercion of her husband.

Parties to a Crime

(a) *Principal in the first degree* is the actual offender in whose guilty mind lay the last blamable mental cause of the criminal act. Usually this is the person who commits the crime itself, but even if he does so through an innocent agent such as a 6-year-old child having no blamable intention, he is himself the principal in the first degree.

(b) *Principal in the second degree* is one who aids and abets the perpetrator of a felony at the time of its commission. For example, if 2 men are engaged in a robbery and one kills the person being robbed, the other is equally punishable as a principal in the second degree.

(c) *Accessory before the fact* is one who procures or counsels another to commit a felony. There can be no accessory to treason or misdemeanour, all participants being principals (*see* ACCESSORY).

(d) *Accessory after the fact* is one who, knowing that a felony has been committed by another, receives, relieves, comforts, or assists the felon (*see* BREACH).

Courts of Criminal Jurisdiction.

In England criminal cases are heard by the central criminal court (q.v.), assize courts, county or quarter sessions (*see*

COUNTY SESSIONS), and magistrates' courts. The queen's bench div. has a jurisdiction in all criminal cases, but rarely exercises it. Since the abolition in 1948 of peers' right to be tried on indictment by the House of Lords, that House is no longer in practice a court of first instance. Criminal appeals are heard by the court of criminal appeal and, in cases certified by the attorney-general as being of exceptional public importance, by the House of Lords. The divisional court of the queen's bench div. has an appellate jurisdiction on points of law on a case stated by quarter sessions or magistrates' courts. Quarter sessions can hear appeals on law or fact from decisions of magistrates' courts.

Punishment of Crime

Crimes, according to their gravity or the age of the offender, are punishable by hanging, imprisonment, Borstal (q.v.) or approved school training, or fines (q.v.). Until 21 Mar. 1957 the crimes of murder, high treason, piracy with violence, and setting fire to her majesty's ships and dockyards, etc. carried the penalty of hanging. For the present position, *see* CAPITAL PUNISHMENT. Imprisonment is imposed for a wide range of offences. The persistent offender can be sentenced to a term of corrective training or preventive detention. If a person not under 21 is convicted on indictment of an offence punishable with 2 or more years' imprisonment and has been twice previously convicted since he attained 17 years of age of offences similarly punishable, the court may, with a view to his reformation and the prevention of crime, in lieu of any other sentence, pass a sentence of corrective training of not less than 2 nor more than 4 years. This period of training is to be followed by a period of supervision if the offender is released before the expiration of his sentence. If the persistent offender is not less than 30 and has been convicted on indictment on at least 3 previous occasions since 17 years of age, and was on at least 2 of those occasions sentenced to Borstal training, imprisonment, or corrective training, the court may sentence him to a term of preventive detention of not less than 5 nor more than 14 years.

Children under 17 may be sent to an approved school (*see also* below). Persons convicted of an indictable offence punishable with imprisonment, who are 16 but under 21 on the day of conviction, may be sentenced to a period of Borstal training.

No court may impose a sentence of whipping. But under the Criminal Justice Act, 1948, a male prisoner may be ordered by a visiting committee to receive 18 strokes (12, if he is under 21) of a cat-o'-nine-tails or birch rod for mutiny, incitement to mutiny, or gross personal violence to a prison officer.

The Crown, through the home secretary, may exercise the prerogative of pardon, or reprieve a person convicted of murder by commuting the death sentence to a term of imprisonment.

Criminal Justice Act, 1948, embodied considerable penal reforms and procedural changes in the C. L. It abolished sentences of penal servitude, hard labour, and whipping (except as above). It amends the law relating to the probation of offenders, provides new methods for dealing with persons liable to imprisonment, and modifies the treatment of young criminals.

(a) *Procedural changes.* Privilege of peerage in criminal proceedings is abolished. The right of peremptory challenge of jurors is abolished, but an accused person is protected by his right to challenge a juror 'on cause shown.' Certain powers of arrest without a warrant conferred by the Vagrancy Act, 1824, have been restricted.

(b) *Probation.* For an offence for which sentence is not fixed by law, the court may, instead of imposing a term of imprisonment, having regard to the character of the offender and the nature of his offence, place him under the supervision of a probation officer for a period of not less than 1 and not more than 3 years. In order that the offender may not be influenced by undesirable associates, a probation order may require him to reside in an approved hostel or home. An offender who, although not certifiable as being of unsound mind or mentally defective, is, in the opinion of the court, in need of and likely to respond to mental treatment, may be required under a probation order to submit to such treatment as a voluntary patient. A probationer will not be deemed to have failed to comply with such a requirement merely because he has refused to undergo any surgical, electrical, or other treatment, if the court considers that his refusal was reasonable. An offender who disobeys a probation order may be dealt with by the court in any manner in which it could have dealt with him if it had just convicted him of his original offence. A young offender may be required to attend an 'attendance centre' for a specific number of hours.

(c) *Young offenders.* A young person who, at the time when he committed a capital offence, appeared to a court to have been under the age of 18, may not be sentenced to death but shall be ordered to be detained during her majesty's pleasure. A court of summary jurisdiction may not impose imprisonment on a person under 17 years of age, and a court of assize or quarter sessions may not impose imprisonment on a person under 15 years of age; a person under 21 shall only be sentenced to imprisonment if the court is satisfied that there is no other appropriate method of dealing with him. The alternatives to imprisonment are probation orders, detention in a detention centre, and training at a Borstal institution, but a court may not order a person to be detained at a detention centre if he has previously been sentenced to imprisonment or Borstal training, or if he is not less than 17 years of age and has previously been ordered to be so detained since reaching that age. A court of sum-

mary jurisdiction inflicting imprisonment on a person between 17 and 21 must record its reason for its opinion that no other method of dealing with the offender is appropriate. The Act contemplates that a young offender discharged from prison shall be under adequate supervision to assist his rehabilitation and to deflect him from crime. The Act, therefore, provides that offenders under 21, sentenced to 12 months' imprisonment or more, shall, in approved cases, be licensed at the time when ordinarily due for discharge as remission for good conduct. The licence provides for the supervision of the offender, who for the remainder of the period is liable to recall. Some important changes in Borstal training are made by the Act. The age limit is fixed at 21 and qualification for Borstal training has been widened so that a court is empowered to order it, if satisfied of its efficacy, having regard to the circumstances of the offence and the character and previous conduct of the offender. The actual period of detention in a Borstal institution may not exceed 3 years or be less than 12 months. See APPROVED SCHOOLS, REFORMATORIES AND INDUSTRIAL SCHOOLS; BORSTAL TRAINING; CHILDREN AND YOUNG PERSONS, WELFARE OF.

Scots Law.—Scottish C. L. in its essentials closely resembles the Eng. but differs in its terminology, which is borrowed from civil law (q.v.), although often applied with a different shade of meaning, e.g. criminal intent or malice is known as *dole* (Lat. *dolus*, fraud, deceit); and small petty offences are generally called *delicts*. By Scots law no private party except the person injured or his next of kin can accuse criminality; and in order to do so he must obtain the Lord Advocate's consent to the prosecution with a right of appeal to the High Court of Justiciary should such consent be refused.

See J. F. Stephen, *Digest of Criminal Law*, 1877, 1926, and *History of the Criminal Law of England*, 1883; S. F. Harris, *The Principles and Practice of the Criminal Law*, 1899, 1936; P. Howard, *Criminal Justice in England*, 1931; A. M. Wilshire, *Elements of Criminal Law and Procedure*, 1935; H. Mannheim, *The Dilemma of Penal Reform*, 1939; C. S. Kenny, *Outlines of Criminal Law*, 16th ed. by J. W. C. Turner, 1952.

United States.—The principles underlying the C. L. of the U.S.A. are those of the Eng. common law. Most of the maxims familiar to the student of Eng. C. L. obtain in the Amer. system, e.g. the maxim, *neminem ignoranta eorum quae quis scire tenetur excusat*, i.e. every person is bound and is presumed to know the law at his peril. The C. L., whether common or statute, is imperative with reference to the conduct of individuals; so that where a statute forbids or commands anything to be done, any act of omission or commission contrary to the prohibition or command is an offence at common law and indictable in the U.S.A. as in England. An offence which may be the subject of criminal procedure is

defined in the classic Amer. authorities as an act committed or omitted in violation of a public law either forbidding or commanding it (144 U.S. 677). As respects the sources of Amer. C. L., it is an accepted principle that when a statute punishes a crime by its legal designation, without enumerating the acts which constitute it, then it is necessary to resort to the common law for a definition of the crime with its distinctions and qualifications; hence if an act is made criminal, but no mode of prosecution is directed or no punishment provided, the common law comes into operation, prescribing the mode by prosecution or by indictment. This is the common law of England, but might now be properly called the common law of the U.S.A. (Baldwin's *Century Edition of Bouvier's Law Dictionary*, 1926). Many if not all the cardinal principles of the Eng. and Amer. systems of C. L. are identical, e.g. that every one is presumed to be innocent till the contrary is shown; that the question of guilt is to be determined without reference to a prisoner's general character; that the prisoner cannot be required to criminate himself; but this principle is subject to the position that where the prisoner testifies in his own behalf he may be cross-examined like any other witness, just as in Eng. criminal procedure under the Criminal Evidence Act, 1898. Though the states owe their law to the one common source, the common law of England, it cannot be said that one *corpus juris* of C. L. prevails in the U.S.A. as a whole; for in the administration of the C. L. each state has its exclusive jurisdiction as a sovereign independent community; each with its own judges and its own separate procedure, subject always to the overriding restrictions imposed by the Amer. Constitution. As in England, the div. into felonies and misdemeanours prevails, but by the operation of statute law it occasionally happens that a crime may be a felony in one state and a misdemeanour in another; but generally the more serious crimes are felonies. In state codes or systems of C. L. crimes are further divided into the usual categories of crimes against the person and against property, other main categories being crimes against the public peace (e.g. riots), against trade (e.g. offences against the customs laws), against decency, against the law of nations (e.g. piracy). There are various 'degrees' of culpable homicide (see MURDER); while as regards treason, the sole kinds recognised in the U.S.A. are levying war against the State or adhering to its enemies. As to the ingredients of any particular crime, the general principles are the same in the U.S.A. and for the different states as in other matured legal systems; and the same observation applies to the analysis of criminal responsibility, e.g. the rule in *McNaughten's case* on insanity as a defence (see MCNAUGHTEN CASE), and again as to the validity or otherwise of drunkenness as a defence. In one vital particular criminal procedure in the U.S.A. is in advance of Eng. procedure, in that in a prosecution for a crime in which

there is no question of vindicating the public wrong proceedings are initiated by a state official, variously styled the State attorney or dist. attorney, who takes the place of the private prosecutor in England. The summary jurisdiction in the U.S.A. follows much the same course as in England, and similar stages of procedure. Again, as in England, there are juvenile courts for the trial or correction of young children or young persons. As regards appeal the accused can, in all the states, petition the trial court for a new trial, which, however, will be granted only if the court thinks the conviction cannot stand in law. Generally, too, the accused may appeal to a court of higher instance both on a question of law and on a question of fact; but there is this cardinal difference from the practice that prevails in the Eng. court of criminal appeal, that the Amer. court cannot hear new evidence nor vary the sentence, but is restricted to either quashing the conviction or remitting the case for re-trial.

Criminal Responsibility, see CRIMINAL LAW.

Criminology. C., the study of the causes and nature of crime, must start with a consideration of what is meant by crime. There is a widespread tendency to equate crime and sin, but there are many offences against the law that are not regarded as sins by the accepted moral codes of the day and many sins which are not criminal since they are not forbidden by law. In electing to prohibit certain actions, the State cannot ignore the ethical standards of the day, but the determining factors are primarily concerned with the harm the community may suffer through a particular action, rather than with moral issues, taking into account also whether the offence can be detected in a sufficient number of cases for the law to be workable.

C. may be regarded as having its genesis in the work of Lombroso, the founder of the Anthropological School of C., who pub. his *L'Uomo Delinquente* in 1876. Lombroso regarded criminality as an inborn characteristic, associated with certain physical signs of degeneracy: e.g. a receding forehead, small cranium, and projecting ears. In later eds. he did admit the possible influence of environment, but his work is still associated with his original conception of the criminal born.

There were many critics of his work, notably Dr Goring of the Eng. prison medical service, who showed that Lombroso's so-called stigmata of degeneracy were found with equal frequency amongst non-criminal persons. It is now recognised that no convincing study of criminals is possible without a study of non-criminals as control groups.

Although Lombroso's views are no longer accepted, his influence was very great, as he was the first person to break away from a purely moral attitude to crime and to attempt to discover its causes by scientific investigation. His idea that there is a connection between physique and criminality has been supported by certain aspects of modern research, though in very different forms.

S. and E. Glueck, the leading Amer. criminologists, have shown that a certain stocky physical type is more common amongst delinquents than amongst non-criminal youth. But this is recognised as only one factor amongst many and certainly not indicating a 'born criminal.'

Other modern investigators who are interested in the physical make-up of criminals have stressed the influence of the endocrine glands. Others have applied the electro-encephalograph (the E.E.G.) which measures the electrical activity of the brain. Applied first to epileptics, it was found that their E.E.G.s showed abnormal rhythms with much greater frequency than was the case in the normal control group. This is also true of the aggressive psychopath and to a lesser degree of the passive psychopath. A study of a group of delinquent boys admitted to an approved school showed a high proportion with an abnormally slow rhythm of a type which has been found to be connected with the immature personality.

At the other end of the scale are the criminologists who ignore personal characteristics and hold that all crime is a reaction to economic circumstances. Statistics show an undeniable close connection between crime and poverty; e.g. crime increases in times of unemployment and falling standards of living, as during the depression of the '30s. One school of criminologists concentrating on ecological studies have found that crime is most common in the central industrial dists. of a tn where housing conditions are poor, but their conclusions are now seen to be not so universally applicable as they held. Recent investigations (Mannheim in Cambridge and Bagot in Liverpool, for example) have shown that the worst criminal areas may be the new housing estates, not the central slums. Clearly sociological and personal factors must be relevant as well as material conditions.

The extreme Marxian view that thinks in terms only of economic conditions makes no attempt to explain why, given a certain environment, some persons become delinquent and others do not. It also assumes without question that because crime and poverty frequently go together the latter must be the cause of the former. But the connection need not be a causal one. Both criminality and poverty may be due to the same weaknesses of character in the individual.

The modern criminologist, like Lombroso, has again turned to the study of the individual. *The Individual Delinquent* by the Amer. criminologist, W. Healy, 1915, set the pattern of a new approach. But, unlike Lombroso, the modern criminologist is not concerned solely with physical characteristics. These may be important in some cases, but they account for only a part of the whole personal make-up. Psychological factors have also to be taken into account, and the reactions of the individual to his family and to his educational and social background.

It was inevitable that the teaching of Freud, Jung, and Adler should pro-

foundly affect the study of criminal behaviour. The stress placed by the modern psychologist on the child's earliest years and his relationship to his family as determining his later attitudes to society has a deep significance for the criminologist, since the development of a social conscience is built up in the first instance by the child's desire to please the mother, whilst his later attitude to authority may be a reflection of his attitude to his father (see CHILD STUDY). Modern psychological research has also shown that the power to feel affection cannot develop normally unless in the early years affection is received from the mother (or some substitute for her). Dr Bowlby and other psychologists have found that prolonged separation from the parents at an early age may render a child unable to form emotional relationships. The result may be the affectionless criminal, whom it is almost impossible to influence since there is no emotional line of approach.

The Amer. criminologists Healey and Bronner, who compared the hist. of a large number of delinquent children with the hist. of a non-delinquent brother or sister, found that nearly all the delinquents were very unhappy in their life circumstances, owing to a lack of affection, jealousy or disharmony in the home, or to a sense of inadequacy and failure, or to other emotional and deep-seated trouble. There were at most only 13 per cent of the non-delinquents who had had the same experiences, and in every instance they had been able to find counterbalancing satisfactions, whereas the delinquents had no legitimate alternatives.

The sense of failure referred to in the last paragraph is of significance in relation to the question of the intelligence of criminals. It has for long been generally accepted that the average intelligence of the criminal was below that of the general population. The latest research suggests that this difference has been much over-estimated, if it exists at all. It is, however, certain that young offenders are generally backward in the sense that they are not up to the standard which one would expect in view of their age and natural intelligence. Their backwardness may produce that sense of failure which turns them to crime as a compensation. But the causal connection may not be so clear cut as this. The offender's backwardness may be accounted for by certain qualities that also tend to produce delinquency—inability to stick to a job as evinced here by truancy, lack of application, and an unwillingness to accept authority. Probably the two sets of causes react on each other.

This difficulty in disentangling cause and effect is something that is frequently found in the study of criminals. The pattern formed by the offender's characteristics, physical, mental, and emotional, and his reactions to his personal and social environment, is infinitely complicated and there is room for many cross currents. Modern research has shed much light on the different aspects of

criminal behaviour, but it has also shown that there is never just one cause and that the picture is much more complicated than earlier criminologists had realised.

The modern emphasis on the emotional and mental factors in the causation of crime has produced a school of thought which, like the Marxian, tends to regard the criminal as made by circumstances, though it stresses a wholly different set of circumstances. In this view the criminal is someone in need of psychiatric treatment rather than punishment. That such treatment has a role to play is now widely realised, but the more responsible psychiatric thought recognises its limitations. Nevertheless modern psychological work has made it clear that persons do exist who without being certifiably insane or insane in the sense laid down by the McNaughten Rules (see McNAUGHTEN CASE) are none the less not fully responsible for their actions, though the doctrine of lessened responsibility has not yet been recognised by Eng. law. See C. Hurt, *The Young Delinquent*, 1925; W. Healy and A. Bronner, *A New Light on Delinquency*, 1935; J. Bowlby, *Fourty-Four Juvenile Thieves*, 1946; S. and E. Glueck, *Unraveling Juvenile Delinquency*, 1950; S. Hurwitz, *Criminology*, 1952; H. Jones, *Crime and the Penal System*, 1956; W. A. Elkin, *English Penal System*, 1957.

Crimmitschau, see KRIMMITSCHAU.

Crimp, one who deceived men into the naval or military (but especially naval) service. Apparently the usual method employed was to ply a man with drink and then induce him to sign articles of service. Section 111 of the Merchant Shipping Act, 1894, provides that only a person who holds a licence from the Board of Trade, or who is the owner or master or mate of a ship, or is the servant and in the constant employment of the owner of a ship, or is a superintendent, may engage a seaman to be entered on board any ship in the U.K. There is a further provision that no one may receive any seaman to be so entered if he knows that the seaman has been engaged in contravention of the Act. The penalty is a fine not exceeding £5 for each offence.

Crinan Canal, Argyll, Scotland, connecting C. Loch on the Sound of Jura with Loch Fyne at Ardrishaig. It is about 9 m. long and 24 ft broad, and was completed in 1801.

Crinkle, in horticulture, a term indicating virus diseases which cause puckering of plant leaves, as in strawberry C.

Crinoidea (Gk *krinon*, lily; *eidos*, form), beautiful class of echinoderms containing about 800 living species and more than 2000 fossil forms; the extinct crinoids are usually spoken of as stone-lilies, and the existing species as sea-lilies. In general structure they resemble other echinoderms, such as the starfishes, but they have many features peculiar to themselves. Some of the best-known species are *Antedon rosacea*, the feather-star, *Rhizocrinus lofotensis*, which occurs at great depths of the Atlantic, and *Pentacrinus asterius*, which is found in the Pacific.

Crinoline (Lat. *crinis*, hair, *linum*, flax, linen), name given to a stiff horsehair fabric formerly used to distend women's skirts. A wired structure worn beneath the gown to widen the garment at the hem was also called a C. The name too, is often applied alike to the Elizabethan

CRINOLINE (c. 1855)

farthingale (q.v.), the later hooped petticoat used in the 18th cent., and to the 19th-cent. bustle with a petticoat 4 or more yds wide at the hem. The hoop was first made of wood, then of whalebone or steel. A fabric made of horsehair known as C. has, at various times, been used for millinery.

Crinum, genus of Amaryllidaceae, contains nearly 100 handsome plants, many of which form the greatest ornaments of our gardens. They are naturally tropical and subtropical, but they will grow well in England. *C. asiaticum*, the poison bulb, is a native of the E. Indies; its bulbs are powerfully emetic and are used in Hindustan to produce vomiting when poison has been taken. *C. amabile* is another beautiful native of the E. Indies.

Cripples. Where crippling has not been caused by accident or as an effect of war, it usually has its origin in poliomyelitis or infantile paralysis, in tuberculosis, or in some congenital disease.

In 1890 Mrs Humphry Ward made provision for C. in her settlement in Tavistock Place, London, being a pioneer in this matter. Good work was later performed by Mrs Grace Kimmins, wife of a late chief inspector of the L.C.C. Education Dept. As founder of the Heritage Schools of Arts and Crafts for Crippled Boys and Girls, 1901, at Chailley, Sussex, she trained thousands of children from 3 to 16 years of age to become self-reliant citizens, in many cases able to earn their own livelihood by such work as cabinet-making, tailoring, shoemaking, or embroidery. This institution was taken over by the State in 1948 as part of the

National Health Service. In 1908 the Lord Mayor Treloar Cripples' Hospital and College was founded by Sir Wm Treloar at Alton and Hayling Is., to afford curative treatment for children up to 12 years of age suffering from tuberculous diseases of bone or joints, and technical education for boys from 14 to 18 years of age. This also became part of the National Health Service in 1948. The C. home and industrial school at Winchmore Hill trains girls over 8 years of age in dressmaking, while the Fine Needlework Association for Invalid Women and Girls, in Kensington, London, employs embroidresses and needleworkers above the age of 15 years. The Stratford-on-Avon weaving school provides a means of whole or partial support for crippled girls. In 1920 a bureau of information, the Central Council for the Care of C., was estab. In Great Britain, the Invalid Children's Aid Association and the Central Council for the Care of C. have had considerable influence on progress in local welfare. Educational and propaganda work is done by both societies to inspire practical efforts in solving problems relating to persons handicapped by physical defects. To mention these works on behalf of C. is but to indicate in outline the growing volume of effort, both voluntary and by public authorities, in aid of these sufferers since the beginning of the cent. Since 1948 the care of C. has almost entirely become the responsibility of the State through the agency of the National Health Service and its many orthopaedic hospitals, and of the education authority and its school medical service. See J. Colson, *The Rehabilitation of the Injured*, 1944.

Cripps, Sir Stafford (1889-1952), politician and lawyer, son of Sir Alfred C., first Baron Parmoor, whom he followed into the ranks of Labour politicians; educ. at Winchester and Univ. College, London. He became a lawyer, and was called to the Bar, 1913; K.C., 1927. He became a Fellow of Univ. College, 1930. C.'s legal practice became one of the most lucrative in the country. He was solicitor-general in the second Labour Gov., 1930-1, and was elected Labour M.P. for W. Bristol, 1931. He went into opposition on the formation of the National Gov. and resigned from the Labour party's executive when the party supported economic sanctions against Italy. Recalled to the party's executive, he advocated a united front with the Communists, but this was rejected by the party conference of 1937. Later he began a campaign for a popular front composed of Socialists, Liberals, Communists, and Independent Conservatives, and was expelled from the Labour party, 1939; but on coming up the campaign he was readmitted. In June 1940 he was appointed Brit. ambas. to Moscow, staying in Moscow until 1942. In the same year he became Lord Privy Seal, leader of the House of Commons, and a member of the War Cabinet. In 1942 he went to India to try, unsuccessfully, to persuade the Indian leaders to agree to Britain's terms for future Indian self-gov.

He went on another political mission to India in 1946. From 1942 to 1946 he was Minister of Aircraft Production; and in the Labour Gov. which took office in that year C. was successively President of the Board of Trade, Minister for Economic Affairs, and Chancellor of the Exchequer. He held this last post from 1947 to 1950, and his rigid policy of export priorities, and stringent anti-inflationary measures, involving heavy taxation, became known as the 'austerity' policy. Ill-health forced his resignation in Oct. 1950, and he d. some 18 months later. His sincerity and ability won him the respect of his most bitter opponents. C. was all his life a convinced high churchman. See life by C. Cooke, 1957.

Crisa, see **CRISSA**.

Crisana, a dist. formerly of E. Hungary awarded to Rumania in 1920 with Maramureş (Hungarian *Máramaros*), the dist. to the N. of C. Both were returned to Hungary by the Vienna award, 1940, but confirmed as Rumanian by the peace treaties of 1947. C., area 8400 sq. m.; pop. 1,500,000; Maramureş, area 1350 sq. m.; pop. 150,000.

Crispi, Francesco (1819-1901), It. statesman, b. Ribera in Sicily. He was an advocate at Naples when the Palermo revolt broke out in 1848. Taking a leading part in this, he had to escape to Piedmont, where he earned a scanty living as a journalist. Expelled in 1853 as a republican conspirator, he fled to France, was again expelled, and joined Mazzini in London. In 1859 he returned to Sicily to foment rebellion against the Neapolitan Gov., and in 1860 helped Garibaldi in the expedition which swept the Bourbons out of S. Italy. He was appointed to important posts, first in Sicily and afterwards in Naples, but in 1864, recognising that only the monarchy could unify Italy, he became a supporter of Victor Emmanuel, remaining all his life anti-Fr. and anti-clerical. In 1867, when Garibaldi attacked the papal states, C., foreseeing that the movement would certainly fail and injure the national cause, tried to check his former leader, but without success; the catastrophe came, and led to the retention of a Fr. garrison at Civita Vecchia. During the Franco-Prussian war, however, this was withdrawn, and C. and his followers practically forced the It. Gov. to occupy Rome. When the Liberals came into power, 1876, C. became president of the Chamber, and in 1877 went on an important political mission to London, Paris, and Berlin, holding negotiations which prepared the way for the formal estab. of the new kingdom in 1878, when on the death of Victor Emmanuel of Savoy his son was crowned as Umberto I of Italy. In 1878 he joined the Depretis ministry, but had to retire when charges of personal misconduct (later proved false) were brought against him. In 1887 he succeeded Depretis as premier, warmly promoting the views of the Triple Alliance, and treating France with decided coldness. His party was overthrown in 1891, but in 1894 he was again premier. In 1898 the

disaster of Adowa, where an It. army was annihilated by the Abyssinians, ruined his gov., and he never resumed office. See G. Salvemini, *La Politica Estera di Francesco Crispi*, 1919; and B. Croce, *Storia d'Italia*, 1871-1915, 1928.

Crispin, Saint (d. c. 287). With his brother Crispinian he is said to have left Rome for Gaul, and to have carried on the trade of a shoemaker, thus becoming the patron saint of shoemakers. The two brothers were martyred at Soissons; their feast is on 25 Oct. Cf. Shakespeare's *Henry V*, iv, 2.

Crissa, or **Crisa**, tn of anct Greece in Phocis, was situated SW. of Delphi near Mt Parnassus, remains of its old walls still being in existence. Some people have identified it with Cirrha, but the general opinion is that Cirrha was the port, although the two were intimately connected in anct hist. Owing to large tolls having been levied on pilgrims visiting the oracle, war was declared by the Amphictyons at the beginning of the 6th cent., and both tns were destroyed. Cirrha was afterwards rebuilt and became the port of Delphi.

Cristofori, **Bartolommeo** (1655-1731), b. Padua. He was a maker of harpsichords, and, after carrying on his business in Padua for some time, was eventually asked by Ferdinando de' Medici to go to Florence, where he remained until his death. He was the first one to employ 'hammers' in the mechanism of his instruments and thus became the inventor of the pianoforte.

Critchett, **Richard Claude**, see **CANTON**.

Criterion Theatre, London, opened in 1874, was originally joined to Spiers & Pond's Hotel, being built underground. In 1875 Charles Wyndham obtained a share in the management of the theatre and in 1884 it was re-opened under Wyndham's management after having been reconstructed. *Brighton and The Candidate* both proving successes. In 1886 Wyndham appeared with Mary Moore in *David Garrick*, one of his greatest successes. Henry Arthur Jones's *The Case of Rebellious Susan*, 1894, and *The Liars*, 1897, were performed here. Long runs include *A Little Bit of Fluff*, 1915, with 1241 performances; *French without Tears*, 1936, with 1039 performances; and *Traveller's Joy*, 1948, with 954 performances. Recent productions there include *Waiting for Godot*, 1955, and *The Walts of the Toreadors*, 1956.

Critias, pupil of Socrates, who ceased to follow his doctrines, at any rate after he had passed from the sphere of Socrates's personal influence. In Athens he led the oligarchical party, and in 404 Bc he was one of the appointed Thirty Tyrants, practising in that capacity many excesses and cruelties. In the same year he fell in the battle of Munychia, fighting against Thrasybulus. He was also a writer of poetry, and is said to have written a work on politics.

Critical Temperature, that temp. below which it is possible to liquefy a gas by applying pressure. Air must be cooled below -140° C. at a pressure of 39

atmospheres, and hydrogen below -241° C. under 15 atmospheres, before they can be liquefied. All gases have now been liquefied, the most difficult to liquefy being helium. See **GAS AND GASES**, *Liquefaction of Gases*.

Criticism, **Biblical**. A certain study of the sacred text has always existed, but the growth of biblical studies in the 19th cent. has led to a classification into 2 separate depts, which have been named (1) Lower or textual C., and (2) Higher C.

(1) The variations found in the early scriptural texts show that the first people who made an effort to prepare an ed. of the O.T. and N.T. practised this art in some degree. In the last cent., however, such great strides have been made in this subject that the term is generally reserved to the work of this period. The autographs of the scriptures are no longer extant, and in the various copies that remain there are many differences of text. These differences have arisen in various ways, some from the errors of copyists, some from the interpolation of glosses or marginal comments into the text. It is the work of the textual critic to collate all the texts at his disposal and all parallel documents which may throw light on the subject. From these he attempts to find out the original autograph readings. The field for the N.T. C. is widened by the great number of MSS. that have come down to us (see **BIBLE**). The most useful text of the N.T. is E. Nestle's *Novum Testamentum Graece et Latine*, 1906. The groundwork for this ed. had been laid by Westcott and Hort's excellent *New Testament in the Original Greek*, 1881, and the text of Tischendorf.

(2) Higher C., on the other hand, does not try to establish the text, but examines minutely internal evidence in order to reach conclusions as to the date, authorship, and nature of the book, studying also external evidence in order to place the book in its historical setting. The higher critic must discuss the books of the Bible literally, historically, and theologically. Of primary importance is the dating of the various writings, and the question of their authorship. Higher C. was first applied to the O.T. by Jean Astruc, a Fr. physician, whose work, entitled *Conjectures sur les mémoires originaux dont il paroît que Moïse s'est servi pour composer le livre de la Genèse*, was pub. in 1753 with some doubt by this devout Catholic lest it should become an instrument in the hands of the free-thinkers. In this work he points out the distinction between the two sources (Jahvistic and Elohist) of the book of Genesis, and his position has been supported and extended by modern critics. The next important name in O.T. C. is that of Eichhorn, who applied Astruc's system of examination to the rest of the Pentateuch. The introduction of these methods of historical study into the realms of sacred thought was viewed with horror by the ultra-orthodox, and vigorous attempts were made to stop it. In N.T. C. the extreme radical views of certain Ger. and Dutch scholars have now been

generally rejected, and although there is no sign of a general return among Protestants to the traditional idea of the verbal infallibility of the N.T. writers, the general historical accuracy of the synoptic gospels (i.e. Matthew, Mark, and Luke) is reaffirmed by the majority of competent critics. The historical character of the fourth gospel is still in dispute. The authenticity of the Pauline Epistles is accepted, with reservations in the case of Ephesians and the Pastoral Epistles.

In consequence of new material that has come to hand in the last cent., our knowledge of the N.T. has become more accurate and scientific, and we have passed to a new stage in C. Whereas in the 19th cent. (and down to 1914) N.T. scholarship had concerned itself largely with critical analysis of documents, and through such analyses with problems of authorship, date, principles of composition, sources, derivations, and the like, these questions no longer stand at the centre of interest. The tendency now is to examine further questions in the light of what the different schools of thought consider proved. The new C. is less analytical than synthetic. The true use of the Higher C. has been finely summed up by Strachan in his article 'Criticism' (O.T.) in the *Encyclopaedia of Religion and Ethics*. 'Since all light and truth are of God,' he says, 'biblical science can bring the churches and nations nothing but good. It is inevitable that the art of criticism should sometimes be practised by men of little faith, or of no faith, and that in their case the critical spirit should be captious rather than sympathetic, the critical weapon destructive rather than constructive. The fault is not in the instrument but in the user.'

Higher C. developed later in England than on the Continent, and on the whole has followed conservative lines, as may be seen from the above quotation. Among the moderate critics may be cited J. B. Lightfoot, W. H. Sanday, and R. F. Westcott. Cheyne and Black, of the *Encyclica Biblica*, are more radical. See Anderson, *The Bible and Modern Criticism*, 1893; Höpfl, *Die Höhere Bibelkritik* (2nd ed.), 1905; Vigouroux, *Les Livres Saints et la Critique Rationaliste*, 1886; C. Gore, *A New Commentary on Holy Scripture*, 1928; B. Orchard and others, *A Catholic Commentary on Holy Scripture*, 1953. See also T. K. Cheyne, *Founders of Old Testament Criticism*, 1893; J. Wellhausen, *Prolegomena zur Geschichte Israels*, 1899; G. A. Smith, *Modern Criticism and the Preaching of the Old Testament*, 1901; A. Robinson, *The Study of the Gospels*, 1902; B. H. Streeter, *The Four Gospels*, 1924. For separate books of the Bible see the vols. of the *International Critical Commentary*, Westminster Commentaries, and Clarendon Bible, especially works by Rawlinson, MacNeil, Barnard, and Balmforth.

Criticism, Literary, see LITERARY CRITICISM.

Critolaus (2nd cent. BC), Gk philosopher and rhetorician, b. Phaselis in Lycia. He succeeded Ariston of Ceos as head of the

Peripatetic school. In 155 BC he accompanied Carneades (q.v.) and Diogenes the Babylonian on an embassy from Athens to Rome.

Crittenden, John Jordan (1787-1863), Amer. politician, b. Versailles, Kentucky. He was a senator, 1835-41. In 1841 he became attorney-general in the Cabinet of President W. H. Harrison. From 1848 to 1850 he served as governor of his state. In 1850 he served in the Cabinet of President Fillmore as attorney-general, and from 1855 to 1861 again in the Senate. In the Civil war his influence was marked in keeping Kentucky from seceding from the Union. In 1861 he was elected to the National House of Representatives, where he stoutly upheld the gov. in its war-making policies, but bitterly opposed dividing Virginia into two states and the enrolment of Negro slaves as soldiers. He d. at Frankfort, Kentucky.

Crivelli, Carlo (active 1457-93), It. painter, who seems to have been the pupil of Antonio Murano. B. Venice, he lived and worked at Ascoli. The National Gallery has the best collection of his work and notably the 'Annunciation,' sumptuous in detail. See F. Drey, *Carlo Crivelli*, 1927.

Crnagora, see MONTENEGRO.

Croagh Patrick, 2510 ft. Ireland's holy mt, rising above Clew Bay, co. Mayo. Each year on the last Sunday in July a national pilgrimage is held, in which thousands, some barefooted, climb the mt to attend the series of Masses celebrated in the oratory at the summit.

Croatia (Serbo-Croatian *Hrvatska*; Hungarian *Hörvátország*): 1. Anct dist. of Europe in the N. of the Balkan Peninsula (q.v.), extending from the Adriatic to the R. Sava (q.v.). For long it formed with Slavonia (q.v.) the prov. of C.-Slavonia, and it is now part of the republic of C. Yugoslavia (see 2, below). The prin. tn is Zagreb (q.v.).

2. Constituent republic of Yugoslavia, consisting of the old dist. of C. (see 1, above), Slavonia (q.v.), and part of Dalmatia (q.v.). It extends from the Adriatic to the R. Drava, and encloses Bosnia-Herzegovina on three sides.

The Croats (*Chrvatsi*, mountaineers), a Slav tribe (see SLAVS), overcame the Avars (q.v.) in Pannonia (q.v.) in the 7th cent., and soon held most of Slavonia, the old dist. of C., NW. Bosnia, and Dalmatia. In the 9th cent. they adopted Latin Christianity, and c. 900 a kingdom was estab. and proclaimed independent of the Byzantine emperor. This kingdom lasted for nearly 2 cents. From the close of the 11th cent. to the middle of the 15th cent. the hist. of the region was closely linked with that of Hungary. It then came largely under Turkish domination until the beginning of the 18th cent. In 1809-13 part of the region was in Napoleon's Illyria (q.v.), and in 1848 the region was declared independent of Hungary, and the governors (see BAN) received their instructions from Vienna; at this time Jellachich (q.v.) was *ban* of (the old dist. of) C. In 1881 the joint Austrian crown-land of C.-Slavonia was formed. After

the collapse of the Austrian empire during the First World War, the region became part of the newly-formed kingdom of the Serbs, Croats, and Slovenes—later Yugoslavia. There was, however, Croatian opposition to the centralist gov., and there were attempts to make C. Slavonia autonomous. The Croat leader, Stjepan Radić, was assassinated in 1928, and in the following year King Alexander (q.v.) abrogated the constitution and united the country under a royal dictatorship (see YUGOSLAVIA, *History*). In 1941 the Gers., after their occupation of Yugoslavia, set up a puppet state of C. despite the protests of the Yugoslav gov., and C. was recognised as an independent country by

Yugoslav Embassy

WEAVING AT HRASTOVICE, CROATIA

The woman wears the traditional dress of her village.

all the Axis states. There were, however, Croats in the partisan forces of Marshal Tito (q.v.). At the end of the war, the People's Republic of C. was set up as part of the federal republic of Yugoslavia.

C. is very mountainous, and contains wooded offshoots of the Julian and Styrian Alps (2000–4000 ft). It has part of the Karst (q.v.), and other mountainous dists. are the Zagreb highlands, and the coastal region of the Great and Little Kapela and the Velebit Planina (c. 3700 ft). There are also alluvial and diluvial plains, fertile valleys and forests of oak, beech, elm, and pine. The lower parts of Slavonia are marshy. Off the coast there are numerous large is., of which the prin. are Krk, Cres, Rab, Pag,

Brač, Hvar, and Korčula (qq.v.). The climate is, in general, moderate, and Mediterranean on the coast. The N. coast-lands, however, suffer from the *Bura*, a cold wind coming from the Karst. C. is predominantly agric. Cereals, potatoes, hemp, tobacco, and fruit are grown, and horses, sheep, swine, and other livestock are reared. Some wine is produced, and the plum-brandy 'šljivovitz' is well-known. Coal, iron, zinc, lead, and copper are mined, though not in large quantities, and there are textile, glass, and metallurgical industries. The inhabs. are mainly Rom. Catholic. The prin. tns are Zagreb (the cap.), Rijeka, Osijek, Split, Karlovac, and Pula (qq.v.). Area 21,730 sq. m. Pop. 3,913,800. See R. W. Seton-Watson, *Absolutism in Croatia*, 1912; C. Battorich, *The Martyrdom of Croatia*, 1920; J. Buchan (ed.), *Yugoslavia*, 1923; G. Ellison, *Yugoslavia, Country and People*, 1933.

Croce, Benedetto (1866–1952), It. philosopher and critic, b. at Pescasseroli, Aquila. Began education at Catholic boarding-school in Naples. In 1883, by the earthquake of Casamicciola in the is. of Ischia, C. lost his parents and only sister, and was buried for hours under ruins and severely injured. Afterwards he lived at Rome with his uncle Silvo Spaventa, a Conservative leader. Returning to Naples in 1886, he became known as a local antiquarian. His philosophical disquisitions arose out of his historical studies and began in 1893. He also devoted attention to the economic doctrines of Marx. According to C. the Absolute is found to be a beginningless and endless Activity; reality is exhausted by the four pure concepts—Beauty, Truth, Usefulness, and Goodness. C. was made a senator in 1910, and minister of education from June 1920 till July 1922. Unlike Giovanni Gentile (q.v.), C. not only refused to co-operate with the Fascists but was active with his pen against their anti-liberal forces. But his repute and standing were so high that even Mussolini did not take drastic measures against him. It is remarkable that C.'s book *History as the Story of Liberty*, which contained one of the profoundest expositions of the ideals for which the United Nations were fighting in the Second World War, should have been pub. in Fascist Italy in 1938. His concept of truth as hist. substitutes for the 'melancholy picture of a blind humanity groping in darkness the heroic picture of mankind rising from light to light.' His other works are most voluminous. *Filosofia dello Spirito* consists of three parts: *Estetica come scienza dell'espressione e linguistica generale*, 1902; *Logica come scienza del Concetto puro*, 1904; and *Teoria e Storia della Storiografia*, 1912. He wrote also *Storia d'Italia da 1871 al 1915*, 1928, and *Storia d'Europa nel secolo decimono*, 1932. He pub. his *Autobiography* in 1918 (new ed. 1926, Eng. trans. 1927). See H. W. Carr, *The Philosophy of Benedetto Croce: the Problem of Art and History*, 1917; and A. M. Fraenkel, *Die Philosophie Benedetto Croces*

und das Problem der Naturerkenntnis, 1929.

Crochet (Fr. *crochet*, or *croc*, meaning hook), kind of knitting which consists of loops made with a hooked needle, one loop being drawn through another to form an open or solid fabric. Materials generally used are wool, cotton, mercerised cotton, pure or synthetic silk, and fine gold thread (for filigree work, etc.). The hook used must be sized according to the material and pattern. Hooks are made of steel (sizes from 2 to 7), composition, or bone (sizes 6 to 12). For over a hundred years C. has been intermittently popular, enjoying its greatest vogue during Victorian times, which was followed by an almost total eclipse. It has now regained a certain and well merited return to favour. Although blouses, slippers, handbags, shawls, bed covers, etc. may all be worked in C., its prin. uses remain those in which its beautiful, delicate, lacy effect can be appreciated to greatest advantage, as on altar cloths, the edgings of surplices and church linen in general, on table-cloths and mats, tray-cloths, and in the edgings of all kinds of linen, such as handkerchiefs, collars, trolley-cloths, etc. From the many and beautiful traditional designs of crosses, letters, grapevines, and flowers seen in church C. down to the simplest 'using up of odd wool scraps' in the making of pram and cot covers, C. has a fascination all its own. It is easy to learn and lends itself to short spells of work at odd moments, since much of it can be worked in small squares or lozenges and afterwards joined together. Designs of exquisite and intricate beauty are nowadays available to the C. worker on the chart principle which enables the pattern to be followed very easily. Two chief kinds of C. are Ger. and Victorian: *German* consists of sev. different kinds of stitches, including chain stitch, single stitch, double stitch, treble stitch, etc.; *Victorian* or *Tunisian C.* is sometimes known as C. knitting because all the stitches of a row are held on one hook, a row of chain is worked to form the base, and each stitch is then looped on the hooked needle to the end. The thread is then twisted round the hook and passed through one loop, then round again and through two loops, and thus all the stitches are worked off. This kind of C. results in a soft, pliable fabric suitable for bed covers, etc.

Many books and booklets on C. will also give instructions for allied crafts such as hairpin work, tatting (*frivolité*), knitted lace, braidwork (Bosnian C.), Tenerife lace, etc. See James Norbury, *Crochet Book*, 1952; Helen Crosier, *Crochet and Tatting and other Needlework Crafts*, 1953, and innumerable leaflets obtainable at all needlework shops or depts.

Crocidolite, mineral occurring in fibrous or asbestos-like filaments, belonging to the amphibole group. Chemically it is an iron sodium silicate. It varies in colour, sometimes being of a golden yellow, and at others of a dull red or blue-green tint. The ornamental stone has a beautiful silky lustre. When of a blue

colour it is called hawk's-eye, and when of rich golden-brown, tiger-eye. C. occurs in seams, associated with iron ores in Griqualand W. and Cape Province. It is also found in some other places, but only in small quantities.

Crockett, a carved ornament much used in Gothic architecture on the inclined sides of gables, pinnacles, canopies, spires, etc. Its design varied according to period, but invariably suggested a bud, or bunch of curved leaves, springing from a winding stem; treatment was very conventional.

Crockett, David (1786-1836), one of the classical types of Amer. woodsmen, hunters, pioneers, and fighters, b. Greene co., Tennessee. Largely self-taught. In 1813-14 he served under Gen. Andrew Jackson in the war with the Creek Indians. He entered politics and from 1821 to 1824 served in the state legislature. He served in the National House of Representatives from 1827 to 1831 and 1833 to 1835. He was a notable figure in Congress on account of his racy stories, smacking of the soil. After his last defeat for Congress he moved into the then ter. of Texas, was soon in the thick of the fighting with the Mexicans, and lost his life as one of the defenders of the Alamo at San Antonio, 6 Mar. 1836. In the days before the Civil war 'Davy' was a hero to every Amer. boy, and a revival of this hero-worship occurred in the mid 20th cent.

Crockett, Samuel Rutherford (1860-1914), novelist, b. Little Duchae, Kirkeudbright. Educ. at Cowper's School, Castle Douglas, and Edinburgh Univ., he studied theology and in 1886 became minister of Penicuik, Midlothian. In 1893 he pub. *The Stickit Minister*, a series of sketches, and in the following year 2 novels, *The Raiders* and *The Lilac Sunbonnet*, which were so successful that he retired from the ministry and devoted himself to writing. Among some 40 books the best-known are *The Men of the Moss Hags*, 1895, *The Grey Man*, 1896, *Kil Kennedy*, 1899, *The Loves of Miss Anne*, 1904, and *The White Plumes of Navarre*, 1909. One of the leaders of the so-called Kaillyard School, C. was much admired by R. L. Stevenson, who dedicated to him one of his best-known poems. See M. M. Harper, *Crockett and Grey Galloway*, 1907.

Crockford's, see CLUBS.

Crocodile River, see LIMPOPO.

Crocodylia (Gk. *krokodēilos*, properly an Ionic word, = (1) a kind of lizard, (2) the crocodile or alligator of the Nile), order of reptile characterised by a huge, lizard-like body, and recalling in many ways the giant Saurians with which the earth was peopled during a previous period of its existence. The whole of the existing members of the order are included in a single family, which may be subdivided into sev. generic groups; of these the most specialised are the caimans and alligators (q.v.). Common peculiarities of the Crocodylidae are a long and powerful tail; a vertical longitudinal crest on the upper surface of the body, consisting of a series of horny lobes, double in the basal

half of the tail and single beyond; and a protective armour, consisting of rows of quadrangular, horny shields of varying sizes, which overlap at the edges. The teeth, which are conical and may be of very large size, are confined to the margin of the jaws, where they are implanted in distinct sockets, and while in use are continually being replaced by fresh ones growing from beneath. A remarkable feature of the existing form of crocodile is the extremely backward position of the aperture of the internal nostrils, this being due to the development of special plates by the bones of the palate, which grow beneath the nasal passage so as to form a floor to it, and thus completely cut it off from the cavity of the mouth. (It is of particular interest that the nostrils, eyes, and external ears are situated on the upper surface of the head, so that even when a crocodile is swimming the senses associated with these structures are not

CROCODILE

impaired.) As the summit of the windpipe is continued upwards into this posterior aperture of the nostrils, crocodiles are able to breathe while their mouths are wide open and filled with water. The stomach is globular, with a pair of tendinous centres like those of birds; the digestion is rapid and powerful. As regards reproduction crocodiles lay about twenty eggs, of the approximate size of those of a goose, and covered with a hard, white shell. These are deposited in some hollow in the sand of the bank, where, after being covered to a greater or less depth, they are left for twelve to thirteen weeks to hatch. Whether the parent always assists in the incubation is not certain. The true crocodiles comprise rather less than a dozen species ranging over Africa, S. Asia, N. Australia, and tropical America. The Indian crocodile, known to natives as the mugger and erroneously to Anglo-Indians as the alligator, ranges over India, Ceylon, Burma, and the Malay peninsula and Is. It is a freshwater variety inhabiting only rivers, lakes,

and marshes, and in its characteristics most nearly approaches the caiman and the alligator.

Crococite, see CHROME YELLOW.

Crocus, genus of hardy cormous plants of the Iridaceae, about 70 species, of temperate parts of Old World. *C. nudiflorus*, Autumnal C., *C. purpureus*, Purple C., *C. biflorus*, Scotch C., and *C. flavus*, Golden C., have been naturalised in Britain. *C. sativus*, Saffron C., of Asia Minor, is cultivated for the dried stigmas, or saffron, used in medicine and as a colouring agent. The tin of Saffron Walden takes its name from its cultivation of the species. *C. chrysanthus*, *C. imperati*, *C. speciosus* and *C. tomasinianus* are garden species.

Croesus, the last king of Lydia (560-546 bc), of the Mermaid dynasty, son of Alyattes. He conquered the Ionian, Aeolian, and other neighbouring tribes, till his empire finally extended from the S. N., and W. coasts of Asia Minor to the R. Halys on the E. and the Taurus Mts in the S. His enormous wealth was proverbial, and the phrase 'a Croesus' still survives. For the legend of his interview with Solon see Herodotus, i. 29. After the overthrow of the Median empire (549), the kings of Lydia and Babylonia leagued together against Cyrus of Persia. The Delphic oracle gave C. the ambiguous answer that if he marched against the Persians 'a great empire would be overthrown.' This proved to be his own. He was utterly defeated near Sardis and taken prisoner, 546. His life was spared by the conqueror, and he is said to have accompanied Cambyses into Egypt (525 bc). The circumstances of his death are obscure.

Croft, or **Crofts**, William (1678-1727), composer, organist of St Anne's, Soho, from 1700; of the Chapel Royal, 1707; of Westminster Abbey, 1708. His *Musica Sacra* (thirty anthems and a burial service) appeared in 1724. St Anne's and St Matthew's psalm-tunes are also attributed to him, and a single chant in B minor for the Anglican service. In early life he composed overtures and airs for various plays.

Crofter. A C. is defined by the Crofters (Scotland) Act, 1955, simply as the tenant of a croft. A croft is a holding of land in the crofting cos. to which the Land-holders Acts applied or which is registered under the Act of 1955 as a croft. The crofting cos. referred to are Argyll, Caithness, Inverness, Orkney, Ross and Cromarty, Sutherland, and Zetland. Under the 1955 Act a C.s Commission was appointed which is responsible for the reorganisation, development, and regulation of crofting and promoting the interests of C.s. The commission has powers of control over the letting, assignment, sub-division, and bequest of crofts and has power to let vacant crofts and remove absentee C.s. From the barrenness of the Highlands of Scotland the condition of C.s was for long an unenviable one. Many of them, however, eked out a scanty livelihood by combining with their tillage fishing or some other occupation. The Crofters Holdings (Scotland) Act of 1886 and other

amending Acts were passed as the result of much agitation to remedy the grievances of C.s, more especially in regard to security of tenure. For some time prior to the Act of 1886 there had been numerous evictions of the C.s from their holdings, and the ensuing agitation, culminating in sev. royal commissions and many statutes, owed its strength to the belief held by the C.s themselves that their tenancies were practically perpetual. Since the Act of 1886 the C. has had a perpetual tenure, and under the 1955 Act the landlord cannot evict him unless his rent falls into arrear for one year; or he attempts to assign his tenancy; or becomes bankrupt; or is in default in other ways specified in the Act.

Crofts, Ernest (1847-1911), artist, *b.* Leeds and educ. Rugby School. He studied painting first in London and afterwards at Düsseldorf, and was elected R.A., 1896. Historical scenes of the Napoleonic and Cavalier periods were his speciality. Among his pictures are 'Cromwell at Marston Moor,' 'Marlbrough after the Battle of Ramillies,' 'Charles I. on his way to the Scaffold,' and 'Napoleon and the Old Guard at Waterloo.'

Crofts, Freeman Wills (1879-1957), detective story writer, *b.* Dublin. A railway engineer, he wrote *The Cask* in 1919 during a long illness, and it was so successful that he devoted himself to mystery stories of a similar matter-of-fact realistic kind, of which *The Pit-Prop Syndicate*, 1922, and *The Loss of the Jane Porter*, 1936, are typical. See DETECTIVE STORY.

Croisic, or Le Croisic, seaport in Loire-Inférieure, France. It is a watering-place and has fisheries; salt is produced here. Pop. 3400.

Croix, Fr. tn in the dept of Nord. It has textile and chemical manufs. Pop. 17,300.

Croix de Guerre, personal decoration for award to soldiers, sailors, or airmen of the Fr. and Belgian forces mentioned in dispatches during the two world wars. It was instituted in both countries in 1915. 'Mentions' were usually made for individual acts of gallantry, devotion to duty, or similar feats. The decoration is, of course, different in the two countries.

Croker, John Wilson (1780-1857), politician and man of letters, *b.* Galway, educ. at Trinity College, Dublin, and later called to the Irish Bar, where he rapidly made headway. In 1807 he was returned to Parliament as Tory member for Downpatrick. Perceval in 1809 appointed him secretary to the Admiralty, a position he held until 1830. He was an admirable debater, and more than once overthrew Macaulay, once referring to a speech made by the historian as 'vague generalities handled with that brilliant imagination which tickles the ear and pleases the fancy without satisfying the reason.' There is no doubt that these disquisitions had much to do with Macaulay's venomous review of his adversary's ed. of Boswell's *Johnson*, 1831. An autocratic person, he made

many enemies, and was contemptuously and unfairly depicted as 'Rigby in *Coningsby*, and, with as little justification, as Wenham in *Vanity Fair*. See L. J. Jennings, *Memoirs and Correspondence of the Right Hon. John Wilson Croker*, 1884.

Croker, Richard (1841-1922), Amer. political boss, *b.* Clonakilty, co. Cork, Ireland. His parents emigrated when he was 2 years old, and he settled in New York, where he received a common-school education. In 1868 he was elected alderman. He afterwards filled various municipal offices, ending as city chamberlain in 1890; meanwhile he had acquired great influence in Tammany Hall, and in that connection had fought Tweed in 1870. Soon after the death of Tweed's successor, John Kelly, in 1886, C. became Tammany Boss. After his resignation in 1902 he returned to Ireland. He trained horses; and one of them, Orby, won the Derby in 1907.

Croker, Thomas Crofton (1798-1854), Irish writer, *b.* Cork. At a very early age he spent his time in collecting legends of the Irish people. His chief works are *Researches in the South of Ireland*, 1824; *Fairy Legends and Traditions of the South of Ireland*, 1825-28; and *Legends of the Lakes*, 1829.

Crole, or Croleus, Robert, see CROWLEY.
Croly, George (1780-1860), author and clergyman, *b.* Dublin. Educ. at Trinity College there, he took orders in the Church of England and eventually became rector of St Stephen's, Walbrook. His pubs. show great variety, and include a novel, *Salathiel: a Story of the Past, the Present and the Future*, 1829; a tragedy, *Catiline*, 1822; and a vol. of verse, *Paris in 1815*, 1817.

Cromagnon Race, primeval European race which entered Europe in the upper palaeolithic age. The name was given by Paul Broca to a number of skeletons discovered in 1868 in the C. grotto at Les Eyzies, in the Dordogne. Other typical bones come from Wales and Mentone. Tall and long-headed, the C. R. is regarded as one of the mother-races of the Nordic and Mediterranean races.

Cromarty: 1. See ROSS and CROMARTY.
2. Parl. and municipal burgh, seaport, vil., and par. of Ross and Cromarty, Scotland, 5 m. from Invergordon. It was the bp. of Hugh Miller, the geologist, to whom a statue was erected in 1859. Pop. (par.) 1600.

3. C. Firth, one of the finest bays in Britain, is a land-locked inlet of the N. Sea, on the N.E. coast of Scotland, N.W. of Moray Firth. It is 18 m. long, 3 to 5 m. broad, 5 to 35 fathoms deep. It is entered by a narrow strait between the N. and S. Sutors, and there is a lighthouse at the entrance. The Three Kings Reef is about ½ m. from land. Miller discovered fossil fishes (Pterichthys, Osteolepis, and others) in the Red Sandstone near by.

Cromdale, par. in Morayshire, Scotland, on the Spey, 3 m. from Granton. Historically interesting on account of defeat inflicted on Jacobites by King William's troops in 1690. Pop. 3000.

Crome, John (1769-1821), usually known as **Old Crome**. Founder of the Norwich school of artists. He was b. at Norwich of humble origin. The son of a weaver, he first became an errand boy; then he was apprenticed to a house painter. Mr T. Harvey of Catton, observing his genius in his sketches from nature, which he painted in his leisure moments, procured him a post as drawing master, and from then onwards C. was able to give up a great part of his time to the subject he loved. His drawing of trees, meadows, sky, and clouds was very faithful to nature. He also made a particular study of Dutch pictures, and earned for himself the title 'English Hobbema.' In 1805 the Norwich Society of Artists assumed definite shape, and in 1808 he was elected president. His work received scant remuneration during his life. It was only after his death that the full value of his work became recognised. His best known productions are 'Mousehold Heath,' 'Poringland Oak,' and 'Moon Rise on the Yare' (all in the National Gallery, London). He also made a series of etchings of his own favourite Norfolk scenery. See D. Turner, *Sketchings by John Crome*, 1838; L. Binyon, *John Crome and John Sell Cotman*, 1908; and C. H. C. Baker, *John Crome*, 1921.

Crome, John Bernay (1794-1842), landscape painter, son of John C.; his style is very similar to that of his father, and his pictures have consequently been sold as being the productions of the older and greater painter.

Cromer, Evelyn Baring, first Earl of (1841-1917), administrator, b. in Norfolk. He entered the Royal Artillery in 1858; was aide-de-camp to Sir Henry Stokes in the Ionian Is. in 1861; and was appointed private secretary to the viceroy of India during the years 1872 and 1876. He later gained great fame for his administration of Egyptian affairs. Appointed commissioner of the Egyptian public debt in 1877, and later controller-general in Egypt, he changed the gov. from a state of threatened bankruptcy into a flourishing condition. Amongst other appointments he acted as agent and consul-general in Egypt during the years 1883-1907, being the effective ruler of the country for most of that time. He was made Baron C. in 1892, viscount in 1898, and earl in 1901. It was during his administration that the Sudan was restored to the rule of Egypt and the Brit. Empire, when the battle of Omdurman (1898) settled the question. See life by the Marquess of Zetland, 1932.

Cromer, par. and seaside resort of England, situated on the N.E. coast of Norfolk, 20 m. N. of Norwich. It is beautifully sheltered on the land side by hills and woods, and has become famous as a watering-place on account of the fine bathing which can be obtained, and the splendid beach. The extensive golf-links add to its popularity. The sea has greatly encroached on parts of the coast; the cliffs are protected by sea-walls. Fishing is the chief industry. There is a light-house visible for 23 m. Pop. 4800 (1954).

Cromlech (from the Welsh *crom*, crooked, and *llech*, a (flat) stone) was the name given by an earlier generation of antiquaries to those megalithic structures consisting of a flat stone supported horizontally on two or more uprights. In France this name is still given to a circle of standing stones. It is not now in general use in archaeological terminology.

Crompton, Samuel (1753-1827), greatest improver of cotton manuf. through his invention of the spinning mule, for which, however, he received little recognition. B. Bolton, Lancs, he lived a hard-working life as farmer and weaver. It took him 5 years' ceaseless toil to invent the machine which was to produce the finest yarn ever woven. His spinning mule became the most popular one on the mkt., and was used in preference to the machines constructed by Arkwright and Hargreaves.

Crompton, urb. dist. of Lancs, England, 2½ m. from Oldham, with cotton spinning and general engineering. Pop. 12,590.

Cromwell, Henry (1628-74), son of Oliver the Protector, under whom he served towards the end of the Civil war. He went to Ireland as a colonel in 1650, and in 1653 he was one of the Irish representatives in the Little (Barebones) Parliament. He was made lord-deputy of Ireland in 1657, and his relatively moderate policy seems to have made him popular. After his brother Richard's fall from power he returned to England (1659), retiring into private life. C. was easily the more competent of Cromwell's sons, but appears to have had little public ambition, although he discharged the duties he was given with ability.

Cromwell, Oliver (1599-1658), Lord Protector of England, b. Huntingdon, descendant of a nephew of Thomas C. (q.v.). He was educ. at Huntingdon Grammar School and Sidney Sussex College, Cambridge, and later studied law at Lincoln's Inn. He married Elizabeth Bourchier, daughter of a London merchant, and settled in his native co., leading the life of a typical country gentleman of the time, of Puritan leanings, but of no particular distinction. He sat for Huntingdon in the Parliament of 1628, and for Cambridge in the Short and Long Parliaments, 1639 and 1640. He is mentioned by Sir Philip Warwick in Nov. 1640 as 'being very much hardened to.' It seems that C. was by this time beginning to gain a parl. reputation; he was never a fluent speaker, but his ponderous earnestness and obvious sincerity gained him an eager audience among the parl. extremists. But while Pym (q.v.) and Hampden (q.v.) lived, and while the struggle was merely a battle of words and parl. tactics, C. remained relatively in the background, a loyal supporter of parl. supremacy, but not a leader; it was the Civil war (q.v.) itself which was to bring him into real prominence and give him eventually the supreme power in the country.

When war broke out C. contributed generously to parl. funds, helped to form the E. Association, which secured E.

Anglia for the parl. party, and joined the army as a captain. Impressed by the superiority of the Royalist horse at Edgehill (1642), he conceived the plan of encountering his opponents' enthusiasm with Puritan zeal and strict discipline. Raising a troop of 'godley men' in his own dist. and training them himself, they proved so efficient that the whole parl. army was gradually remodelled on the same lines (see NEW MODEL). At Marston Moor C.'s Ironsides turned defeat into victory, and at Naseby (1645) he won the decisive battle of the entire campaign. He was now recognised as the greatest soldier in England; his administrative abilities and tactical genius are still admired, and are all the more remarkable in a man who, before 1642, had had no military training or experience.

C. took part in the abortive negotiations between Charles I and Parliament, but gradually became convinced that the deposition and execution of Charles were not only politically expedient, but divinely predestined. Though in later years he was assailed by many doubts, his actions with regard to Charles I never seem to have troubled him conscientiously. He was one of Charles's judges, and signed the king's death-warrant.

The Irish campaign, with the massacres of Drogheda and Waterford, waged under C.'s command to crush Royalist resistance in Ireland, has left a permanent stain on C.'s character. Though he has often been acclaimed as unusually tolerant in an intolerant age, his savage and indiscriminate butchery of the Irish Royalist garrisons and of ordinary Irish Catholics can only be explained, though hardly justified, by C.'s conception of himself (which he certainly seems to have had, at least in moments of crisis) as a servant of the Lord sent to purify the people and root out papistry and episcopacy by any means necessary.

Returning to England, C. put an end to the Scottish alliance with Charles II by his victories at Dunbar (1650) and Worcester (1651), which increased his military reputation still further. It seemed that the Stuarts were gone from England for ever. But in 1653, impatient of the mismanagement and intrigue of the Rump Parliament, which was disregarding the demands of the army which had ensured its supreme position, and which now seemed on the verge of converting itself into a permanent oligarchy, C., on behalf of the army, forcibly dissolved the House and set up what was in practice a military despotism.

C. and the army officers made various attempts to broaden their gov. system. Firstly, they tried the experiment of calling a Parliament of selected members, the Little or Barebones Parliament (q.v.); but this, apparently so ideal to the convinced Independent in theory, proved quite unworkable in practice, and subsequently, under a written constitution, 'The Instrument of Government,' C. was installed as lord protector of England, Scotland, and Ireland. Though the Instrument gave the protector vast

executive powers, it did provide for an elected parliament, though with safeguarding clauses intended to exclude former or prospective opponents of the administration from membership. But C.'s first Parliament (1654-5) concentrated its efforts on trying to limit the protector's powers, with the result that he dissolved it as soon as he could, and for the next 18 months the administration of the country was in the hands of the major-generals. This was the period when the most concentrated attempts were made to introduce on a national scale the features for which C. is perhaps best remembered—a relative tolerance of religious observance (for Protestants of varying views, so long as they were not in favour of episcopacy) and the suppression of cock-fighting, horse-racing, Sunday sports, etc. It is also the period in which former Royalists suffered most severely materially. The major-generals were generally unpopular; in 1656 C. suspended them, and summoned his second Parliament, which offered him the crown and revived a second chamber. It is fairly certain that C. would have accepted the crown but for the objections of the army; in fact, after the dissolution of this Parliament in Jan. 1658 he was king in all but name, and in practice it is clear that his gov. since 1653 had been virtually free of parl. restraints, the prin. curb on his arbitrary rule being the equally arbitrary decisions of the powerful clique of army officers.

His foreign policy was aimed at Eng. commercial greatness and Protestant supremacy, and in the interests of the former aim he was quite prepared to ally with a Catholic state, France, to fight another Catholic state, Spain. Under C. and his admiral, Blake (q.v.), the Eng. navy became a great striking force; a council of trade was estab. and a charter granted to the E. India Company. Though C. himself did not live to see it, his policy did, in fact, secure the W. Indies for Britain.

C. d. in Sept. 1658 and his gov. began to crumble almost immediately, an indication of the fact that it was ultimately based on C.'s exclusive personal rule. He was buried in Westminster Abbey, but at the Restoration his body was disinterred and hanged at Tyburn. Of his 6 children who survived infancy Richard (q.v.) succeeded him as Protector, but proved entirely ineffective; Henry (q.v.) had a successful career in Ireland; Bridget married first Gen. Ireton and then Gen. Fleetwood; Elizabeth, C.'s favourite, who predeceased him, married John Claypole; Mary married Lord Fauconberg; and Frances married first a grandson of Lord Warwick and then Sir John Russell. Historical judgments on C.'s personality and achievements vary widely. He has been portrayed as merely one more ruthless dictator; but it is fairly clear that his progress to supreme power was not accomplished without sev. sincere attempts to find some workable alternative, and certainly not without considerable painful heart-searching on

C.'s part. If his career presents constant contradictions, this can be explained by the conflict within C. himself between the various facets of his complex character—the political theorist and Puritan idealist, the fighting man of action, and the opportunist statesman. His military achievements in the Civil war in the long run ensured the permanent defeat of monarchical absolutism and the survival of Eng. parl. institutions, though had his own despotism survived his lifetime it is doubtful if this would have been the case. See T. Carlyle, *Letters and Speeches of Oliver Cromwell* (ed.), 1850; S. R. Gardiner, *History of England*, 1884; *A History of the Civil War 1642-60*, 1893; and *The Constitutional Documents of the Puritan Revolution* (latest ed.), 1910; and lives by C. H. Firth, 1923, J. Buchan, 1934, M. Ashley, 1940, and R. S. Paul, 1955.

OLIVER CROMWELL

Engraving after the painting by Robert Walker.

Cromwell, Richard (1626-1712), Lord Protector of England, eldest surviving son of Oliver C. He served in various Parliaments under his father, and on Oliver's death in 1658 was proclaimed Protector. He had little capacity for, or interest in, gov. and was in effect deposed by the army in 1659. At the Restoration he went to the Continent, returning to England about 1680, and living in retirement until his death. See life by R. W. Ramsey, 1935.

Cromwell, Thomas, Earl of Essex (c. 1485-1540), statesman and courtier, b. Putney of humble parents. He served in the Fr. army in Italy, but returned to England about 1513 and engaged in cloth-dressing, money-lending, and legal practice. From about 1514 he was in Wolsey's service, serving him faithfully, and speaking in his defence in the House of Commons in 1529. He had entered Parliament in 1523. He became privy

councillor, 1531, and Henry's chief minister after Wolsey's fall, being one of the king's chief agents in bringing about the Eng. Reformation and in strengthening Tudor absolutism. He advocated Henry's divorce from Catherine of Aragon by exercise of royal supremacy. In 1533 he was chancellor of the exchequer; in 1535 vicar-general to enforce the carrying out of the Act of Supremacy (1534). To him was largely due the suppression of the monasteries and confiscation of their property as a means of securing revenue, which earned him the nick-name *Malleus monachorum* (hammer of the monks). C. became lord privy seal, 1536; lord chamberlain, 1539; and Earl of Essex, 1540. His influence with the king at one time was very great, and he was deservedly dreaded by and unpopular with both nobles and clergy. His foreign policy was less successful. He was anxious to link England with the Protestant states of Europe, and to this end arranged the marriage of Henry and Anne of Cleves (q.v.). His failure was partly responsible for his downfall; but, in any case, by 1540 C. had outlived his usefulness to the king, who had used him and been influenced by him, but had never liked him. In 1540 he was accused of treason, found guilty and beheaded, protesting that he d. a Catholic. See M. Drayton, *Historie of the Life and Death of Lord Cromwell*, 1609; R. B. Merriman, *Life and Letters of Thomas Cromwell*, 1902; and life by P. Wilding, 1935.

Cronin, Archibald Joseph (1896-), doctor and novelist, b. Cardross, Dumbartonshire. Educ. at Dumbarton Academy and Glasgow Univ., he practised medicine in Wales and London. The great success of his novel *Hatter's Castle*, 1931, enabled him to give up medicine for writing. Others of his books are *Three Loves*, 1932, *Grand Canary*, 1933, *The Stars Look Down*, 1935, *The Citadel*, 1937, *The Keys of the Kingdom*, 1941, *The Green Years*, 1944, *Shannon's Way*, 1948, *The Spanish Gardener*, 1950, *Beyond This Place*, 1953, and *Crusader's Tomb*, 1956. *Jupiter Laughs*, 1940, is a play.

Cronje, Piet Arnoldus (1835-1911), Boer gen. of Huguenot extraction, was at one time member of the executive council of the Transvaal Republic and chief native commissioner. He led his men against the Brit. at Doornkop and Majuba Hill; was also responsible for forcing the garrison of Potchefstroom to capitulate, purposely suppressing the news of the armistice (1881). In 1895 he made the Jameson raid of no effect. On the announcement of the Transvaal war, he joined in the hostilities against the Brit., but was defeated in his attack on Kimberley. Gained a victory over Lord Methuen at the Modder R., and later at Magersfontein. Was forced to retreat before Gen. French in the siege of Kimberley. In spite of the efforts of the 2 Boer generals, De Wet and Botha, to come to his aid, he was forced to surrender with a force of 4000 men and 6 guns at Paardeberg on 27 Feb. 1900, the anni-

versary of the battle of Majuba. He was sent to St Helena, but was allowed to return at the end of the Transvaal campaign.

Cronstadt, see **KRONSTADT**.

Cronus (the Rom. **Saturnus**) was the son of Uranus, one of the Titans, and of Ge (or Gaea), the earth. He married Rhea, by whom he had many children, among them Hera (Juno), Hades (Pluto), Poseidon (Neptune), and Zeus (Jupiter). He dispossessed Uranus of the throne of heaven, and was himself dethroned in turn by his son Zeus.

Crook, George (1828-90), Amer. general, b. Ohio. Made himself famous both in the Civil war and in his resistance to the attacks of the Indians in Idaho during the years 1866-72, and again 11 years later in Arizona.

Crook and Willington, urb. dist. of co. Durham, England, some 9 m. from Durham city, a coal-mining area. Pop. of urb. dist. 27,606 (pop. of C. 12,800; of W. 8100).

Crooked Islands, two is. of the W. Indies, belonging to the Brit. group, Bahamas. They consist of Acklin, or Great Crooked Is., and Little Crooked Is. To the westward of Great Crooked Is. is Castle Is., upon which is a lighthouse, whose light is visible at a distance of about 18 m. Another lighthouse is situated on Bird's Rock, W. of Little Crooked Is. The Spaniards took possession of the is., but they were restored to England in 1783. The pop. of 1300, mostly Negro, is engaged in cotton and banana production.

Crookes, Sir William (1832-1919), physicist and chemist; b. Loudon, eldest son of Joseph C., a tailor. He was first a student at the Royal College of Chem. under Hofmann; then made superintendent of the meteorological dept of the Radcliffe Observatory, and gave lectures on chem. at the Science College. F.R.S., 1863; and vice-president of the Chemical Society, 1870. Obtained a prize of 3000 francs and a gold medal from the Fr. Académie des Sciences. An authority on all sanitary questions. Made many original discoveries in chem. and physics; viz. of the metal thallium (1861), and of the rare earth monium or victorium. An expert in electricity; invented the radiometer and C's tubes. In addition to various technical works he wrote a standard treatise on *Select Methods in Chemical Analysis*, 1871, and a small book on *Diamonds*, 1909, a subject to which he had devoted some study during visits to S. Africa. Knighted in 1897, president of Brit. Association in 1898, O.M., 1910. Amongst the many contributions made by C. is his theory that all the elements have evolved from one primordial stuff, 'protyle.' See F. d'Albe, *Life of Sir William Crookes*, 1923.

Crookhaven, fishing vil. in the co. of Cork, Rep. of Ireland, 30 m. distant from Skibbereen. It is the most southerly vil. in Ireland. Pop. 150.

Crooks, William (1852-1921), politician, b. Poplar. One of the earliest of the Labour leaders, he became mayor of Poplar in 1901. He entered the House of

Commons in 1903, and in 1916 was made a privy councillor.

Crookstown, small tn with milling industries in co. Cork, Rep. of Ireland, between Bandon and Macroom.

Crop, term used in speaking of certain dilatations of the alimentary canal of some animals. It is situated in an anterior position to the true stomach, and serves as a reservoir for food. In birds it is often called the *craw*, and is noticeable especially in predaceous and granivorous species; in the C. of the pigeon are 2 small accessory sacs. Insects also have these dilatations immediately preceding the proventriculus. In some, e.g. bees, the food can be disgorged from the C. for the benefit of the young.

Cropedy and Cropedy Bridge, par. in Oxon., England, 4 m. distant from Banbury. C. Bridge is memorable for the victory gained by Charles I over Waller, 1644. Pop. 430 (1951).

Crops. This general term for the agric. produce of the soil, the return of the farmer's labour, has been classified in many ways. Thus we speak of white C., that is of those plants such as wheat or barley and other grain which turn white as they ripen; of green C., those which are harvested green, such as clover, grasses, including also roots, potatoes, etc.; so too we have black C., especially used of beans and peas. A more convenient and more useful classification is now usually adopted, that of *cereal*, *leguminous*, and *root C.* The cereals include wheat, barley, oats, rye, maize; the leguminous clover, beans, peas, vetch, sainfoin, lucerne; the roots turnips, swedes, and mangels, and often also cabbage, kail, carrots, and potatoes. Further, there are special C. of importance to the world production of the soil, such as rice and its congeners, and the industrial cotton crop. Farmers in very early times knew that the planting of the same crop in the same ground, year in year out, exhausted the soil; thus it is that in primitive times we find the 'shifting' system prevailing in which, after a piece of land was exhausted, the farmer moved on and exhausted another. Sometimes we find primitive peoples moving as a community as the soil was exhausted—nomad agric. communities like the early Teutonlo peoples mentioned by Tacitus and Caesar. Virgil's *Georgics* exhibits a knowledge of rotation of C., for he bids the farmer either lay his ground fallow every alternate year, or let the rotation of spelt or pulse vetch, or lupine, prevent the exhaustion of the soil; and he combines copious manuring with rotation. The more full development of crop rotation took place in England when the old common-field system of farming by small tenants still prevented any but the large landowner from making use of the scientific rotation of which Lord Townshend was the pioneer. By the beginning of the 19th cent. rotation was nearly everywhere in force, and numerous systems, differing according to the nature of the soil, climate, altitude, and general situation, etc., were to be found. In

countries such as Italy a very wide selection of following C. is made use of, and there a 6 or even 8 years' system is found. In modern Brit. farming roots or leguminous C. alternate with the cereals. It must be remembered that cereals are exhaustive, for not only do they not accumulate the nitrogenous and mineral constituents of the soil, but they are not used on the farm, and all they have taken from the soil is sold off, while roots and clover, as feeding stuffs for stock, return these constituents as manures. The famous 'Norfolk' four-course system, roots, barley, clover, wheat, is typical of the rotation system. The root crop is also useful for allowing cleaning of the ground by hoeing between the rows. C. mainly exhaust the soil of phosphoric acid, nitrogen, and potash, but different C. each do this to a different extent, and in some

non-sterilised soil, the leguminous plants developed nodules at the roots and flourished without manure; these nodules are found in all leguminous plants growing in natural, non-sterilised soils, and are caused by micro-organisms, *Rhizobium radicicola*, which absorb nitrogen from the air through the nodule, break down, and in turn are absorbed by the plant. See also AGRICULTURE, Crops; ROTATION OF CROPS; NITROGEN CYCLE, THE. See L. Bailey (ed.), *Cyclopaedia of Farm Crops*, 1922; H. G. Sanders, *An Outline of British Crop Husbandry*, 1949; H. I. Moore, *Crops and Cropping*, 1949; W. Fream, *Elements of Agriculture*, 1955.

Croquet. Antiquarians have traced the descent of this game from Pell Mell or Pall Mall, Fr. *paille-maille*, which was fashionable at the end of the 17th cent. in London, and was played with hoops, a

High Commissioner for Canada

CROPS AT INDIAN HEAD, SASKATCHEWAN

cases stock consume the C. and return some of the minerals to the soil. These are the main losses of minerals by the growth of C., and must be replaced by mineral manures. Leguminous crops are valuable as they accumulate much nitrogen in the soil. It is this fact that makes a crop like red clover such a splendid preliminary for a cereal crop. This has been known as a practical fact by farmers in times long past (see Pliny, *Natural History*, viii); its reason was not known till the experiments of Hellriegel and Wilfarth in Germany in 1888. Experiment had shown that a piece of land laid down for a long time in pasture and then sown for 15 years with lupines contained three as much nitrogen as it contained before, which could only have come from the air. The test was made with leguminous plants in sterilised soil side by side with oats and barley. They were both obliged to be fed with nitrogenous manures. With a mixture of

ball, and mallet, the object being to run a ball through the hoops and strike a peg in the fewest strokes. The game, somewhat as it is played to-day, seems to have been first played in Ireland in 1852, and it became popular before 1860. As then played, there were 10 hoops with a double hoop or cage in the centre. In 1868, the All England C. Club was formed, and championship games were played at Wimbledon. For some years C. was played everywhere where a lawn was available, but it was a family or garden party game. Lawn tennis practically killed it, and a revival in a new form did not take place for some 20 years. In 1897 was formed the C. Association, the ruling body, with the centre of the game at Roehampton. The new C. is very scientific, and the utmost skill and care are exercised in the laying of lawns, in the selection of mallets, and the making of the balls.

The ground is a level grass lawn 35 yds.

long by 28 yds. wide; in the centre of the court is a peg; there are 6 hoops of iron rods, $\frac{1}{2}$ to $\frac{3}{4}$ in. in diameter, 12 in. from the ground when fixed, $3\frac{1}{2}$ in. wide. The hoops are placed thus (the unit of measurement from line 1, etc.): Nos. 1, 2, 3, and 4 are placed 7 yds distant from the base and side lines; Nos. 5 and 6 are placed in the centre 7 yds from the peg. The order of playing hoops is as follows: 1, 2, 3, 4, 5, 6, then 2, 1, 4, 3, 6, 5, and winning peg. No. 5 is the 'rover' hoop. There are 4 balls, $3\frac{1}{2}$ in. diameter, and 15 oz to 16 oz in weight. Composition balls are now used for match play. Two, playing 2 balls each, or 4, playing 1 ball each, are the number of players, blue and black against red and yellow; after the game has begun and all 4 balls are in play, a player may play with either ball of his side. Each player has a metal clip, coloured as his ball, which must be placed on the hoop or peg next to be passed through or struck. The mallets must have wooden heads with straight faces exactly alike, the head usually weighing about 3 lb. The points of the game are scored by each ball passing the hoops and striking the peg in order, and the winning player (or 2 players in partnership) is he who makes all possible points with both balls. The ground is marked with a white chalk band round base and side lines and a spot 3 ft. from the lines is placed at each angle. The start of each player is made from any point between the centre of the base line and the left corner at either end of the ground. Two terms used in the game need to be explained: roquet is to strike another ball with one's own; croquet is, after making a roquet, to take up the striking ball, place it against the ball struck wherever it may have rolled, and then play so that both the balls in contact are moved. If a player fails to make a point, i.e. to pass through a hoop or strike the peg (or both, in, of course, the proper order as stated above), or if he fails to roquet another ball, he ends his turn, and the next player in turn plays. If he succeeds in making a point, he has another stroke; if he roquets, he then takes croquet, plays the stroke or has another stroke after the balls have been struck or croqueted. In the old game, the player could place his foot on his own ball, but this has been disallowed for many decades. Also opponents' balls could be driven out of play; now no ball must be croqueted across the boundary line; if it is, the player does not play his second stroke and loses his turn. The ball out of bounds is replaced 3 ft. from the line where it crossed.

With a true lawn and a knowledge of tactics the game can be as skilful in combination and in power of leaving balls for the next stroke or strokes as billiards. Special attention must be given to the various strokes made in making roquets. If the player wishes to take his second stroke at some distance he rushes the object ball, that is, strikes it so hard that it travels a considerable distance. A skilful player can, with his

ball, cut the object ball so that it goes off at an angle; he may by striking his ball on the top make a follow through as in billiards. Wiring an opponent, i.e. leaving his ball so close to a hoop or peg that he has no free stroke at an object ball, is another test of skilled play. If, however, an opponent is wired so that no object ball is possibly available, he may lift his ball and go back to the starting point or baulk. The best way of holding the mallet and standing has been much discussed. A swing or pendulum stroke is from every point of view the best, and it may be made either by standing facing across the ball and swinging the mallet between the legs, or by standing with one foot or both in a line parallel with the ball and swinging the mallet with the right hand lower down and the left at the top; but the methods of grip are as various as those of golf. There is an elaborate system of handicapping for tournaments by means of bisques, which are extra turns. The game is very popular in Australia, New Zealand, and S. Africa, and since 1925 a series of test matches has been played between most of these countries for an international shield, won in 1956 by Great Britain. The address of the C. Association is 4 Southampton Row, London, W.C.1. In the U.S.A. the older form of C. has survived but a special form, known as roque, extremely scientific answers more to the scientific modern Eng. C. It is played not on grass, but on an artificially prepared ground which is 60 ft by 30 ft, with 4 corners cut off 6 ft in length, thus making a hexagonal court. There are 10 hoops and 2 pegs which stand 12 in. and 18 in. out of the ground respectively. The most marked difference in the game is the rubber-faced board surrounding the ground against which a player may strike his ball and cause it to rebound into play, as off a billiard cushion; this stroke is called a *carom*. See the C. Association's *Laws of Croquet*, and periodical *Croquet*. There are many good books on the hist. and scientific methods of play, notably Lord Toller-mache *Croquet*, 1914; and M. B. Reckitt, *Croquet To-day*, 1954. See also C. D. Locock, *Modern Croquet Tactics*, 1907.

Croquill, Alfred, see FORRESTER, A. H.
Crore (Hindu *karor*), word used in both India and Pakistan for 10,000,000 or 100 lakhs (usually) of rupees. The value of a C. of rupees, at an exchange of 1s. 6d. to 1 rupee, is about £750,000.

Crosby, Bing (real name Harry) (1904-), Amer. singer, actor, and radio performer, b. Tacoma, Washington, educ. Gonzaga College. He left school to be a vocalist with a dance orchestra; he sang with Paul Whiteman's band, later becoming a featured performer on the radio. He appeared in a number of short films when sound was first introduced, then in the feature film *The Big Broadcast*. His best-known films are probably *Pennies From Heaven*, *Holiday Inn*, *Going My Way* (for which he won the Academy Award for the best male performance of 1944), *The Bells of St Mary's*, *Blue Skies*, *White Christmas*, and *High Society*. He

also made a famous series of 'Road' films with Bob Hope (*Road to Singapore*, etc.). Latterly he has attempted more serious roles in *Little Boy Lost* and *The Country Girl*. He has written *Bing and Call Me Lucky*, 1953, also popular songs.

Crosby, Frances Jane (1820-1915), Amer. hymn-writer, b. Southeast, Putnam co., New York. Blinded in infancy, she entered New York Institution for the Blind in 1835, and was a teacher there from 1847 to 1858. In the latter year she married Alex Van Alstyne, a blind music teacher, who d. in 1902. Her hymns had worldwide popularity, the best-known being 'Safe in the arms of Jesus.'

Crosby, Howard (1826-91), Amer. preacher, b. New York. He graduated at the univ. of the City of New York (now New York Univ.); was prof. of Greek there in 1851, and at Rutgers College, New Brunswick, New Jersey, 1859. He was chancellor of the univ. of the City of New York 1870-81, and in 1873 moderator of the Presbyterian general assembly. He took a prominent part in politics and social reform. His son, *Ernest Howard C.* (1856-1907), a social reformer, was b. in New York and graduated at the univ. of the City of New York in 1876. He was president of the Social Reform Club of New York City and the New York Anti-Imperialist League. He pub. many works in the manner of Walt Whitman.

Crosby, municipal bor. on the NW. coast of Lancs, England, between Liverpool and Southport, mainly residential with a large rural area. C. was granted a charter of incorporation in 1937, when the anct tn of Great C. and the more recent Waterloo-with-Senforth (dating from about the time of the battle of Waterloo) were amalgamated. The Merchant Taylors' School (1620) is at C. C. Hall, Little C., has been the home of the Blundell family for many cents. C. also includes Blundellsands. Pop. 58,362.

Crosier, or Crozier, originally the bearer of the episcopal crook (*crociarius*); finally the crook itself was called C. It is the pastoral staff, part of the insignia of the bishop, carried by bishops and, in a slightly different form, by abbots. Probably derived from the *lituus* of Rom. augurs. See O. Taylor, *Archaeologica*, 52. 'On the Use of the Terms Crosier, Pastoral Staff, and Cross.'

Cross, Mary Ann, or Marian, see ELIOT, GEORGE.

Cross, Richard Assheton, first Viscount (1823-1914), politician, b. near Preston, and educ. at Rugby and Trinity College, Cambridge. He first entered Parliament as a Conservative in 1857, and in 1868 defeated Gladstone in S. Lancs by 313 votes. Although of comparatively untried ability he was appointed by Disraeli in 1874 to the post of home secretary with a seat in the Cabinet, and was responsible for carrying through much notable social legislation. He was made a viscount in 1886.

Cross, riv. which rises in the Cameroons in W. Africa. This riv. is navigable for three-quarters of its course and enters the Bight of Biafra.

Cross (Lat. *cruz*), in anct times a common means of punishment, Phoenician in its origin, and used by Indians, Persians, Medes, Greeks, and Romans. Originally crucifixion was by fastening or impaling the victim on a stake, the *cruz simplex*. But the various forms of the *cruz compata* (made of 2 pieces) are better known. The *cruz commissa*, known also as the Tau (from the Gk capital T) and C. of St Anthony (the name for the Lat. C. in the Middle Ages), consists of an upright with the C.-piece at the top. In the *cruz immissa*, or Lat. C., part of the upright extends above the C.-piece. This is the form best known in the W.; the Gk C., with 4 arms of equal length, is a variant of it. The *Celtic C.* is the Lat. C. with a circle round the head. The *cruz descussata*, saltire, or St Andrew's C. (traditionally St Andrew suffered martyrdom on a C. of this shape) has 2 beams crossing obliquely. From these 4 varieties countless smaller types have been evolved by Christian symbolism. Even before the time of Christ the C. was also in use as a religious emblem. By the anct Egyptians the *cruz ansata* was regarded as the symbol of life, and in Gaul as a symbol of the sun. The Sp. conquerors of S. America were astonished to find the C. venerated there as the sign of the god of rains. In the reign of Constantine, the sign of the C. in the form known as the *labarum* became the official standard of the empire. In 325 St Helena, mother of Constantine, went to Jerusalem to seek the true C. and found 3 C.s; by the advice of Macarius, patriarch of Jerusalem, a sick woman was laid on them in turn. When laid on the third she regained her health, and the miracle identified the C. of Christ. Relics of the C. (most of them extremely minute) spread through the world, and the feast of the Invention or Finding of the C. is celebrated in the W. Church on 3 May. The feast of the Exaltation of the C., celebrated E. and W. on 14 Sept., commemorates its recovery by Heraclius (AD 628) after capture by the Persians. The veneration paid to relics of the C. in early times led to the great iconoclastic controversy. The iconoclasts (q.v.) wished to do away with such veneration, but the Church decreed that *latreia* (relative veneration) might indeed be paid to the wood of the C., though the worship is referred back to the person of the Crucified. In the W. Rite the Veneration of the C. takes place in the Liturgy of Good Friday. At the singing of the anthem, 'Behold the wood of the cross on which hung the Saviour of the world,' a crucifix is kissed with great reverence by the clergy and people. The sign of the C. used as an act of confession of faith or of prayer and blessing was made in the early Church with the thumb on forehead or mouth. In the E. Church it is made with the first 2 fingers and the thumb, from forehead to breast, then to the right shoulder and then to the left. The general W. use is from left to right with open hand, though Lutherans use only the thumb. The C. or crucifix on the altar is common to Rom. Catholics,

Anglicans, and Lutherans alike. *Processional C.s* head eccles. processions. *Pectoral C.s* are worn on the breast by bishops and abbots. In the case of metropolitans, an *archiepiscopal C.* takes the place of the bishop's crosier (q.v.).

In architecture *sanctuary C.s* marked the verge of a sanctuary. These and the *boundary or monumental C.s* consist of an upright pillar or obelisk set in a heavy socket level with the ground. Some marked boundaries, but most of them the grave of some king, bishop, or important hero. The oldest of these *C.s* are Scandinavian and, bearing inscriptions in runes, are known as *runic C.s*. The Ruthwell *C.* is a good example. The Is. of Iona once contained 360 monumental *C.s*, but only one, that of St Martin, is now standing. The famous *Eleanor C.s* were erected in 1290 by Edward I at each place where the body of his wife Eleanor rested for a night. That of Charing was destroyed in the 17th cent., the present *C.* in the courtyard of Charing C. railway station in London being a modern copy. *Town or market C.s* were pulpits whence sermons and addresses might be given. At Chichester and at

consisting of a short stout winged shaft with metal point, was laid in a groove at the top, and the string was released by a trigger. The larger *C.s* may almost be considered as engines of war, so cumbersome were they. See Sir R. Payne-Gallwey, *The Crossbow*, 1903.

Cross Country Running developed from steepchases held at such schools as Rugby, Shrewsbury, Eton, etc. At Rugby the Crick Run was instituted in 1837 and is still held annually. A race organised in 1867 by the Thames Rowing Club as part of their winter training programme led to the formation of C. C. clubs. The first National Championship was staged in 1876 at Buckhurst Hill in Epping Forest, but the race was declared void as the competitors lost their way. The 1877 championships were more successful and Thames Hare and Hounds, a club which is still in being, were the first team winners. In 1880 Birchfield Harriers (Birmingham) won the championships for the first time, since when they have been successful on 27 occasions, a record unequalled by any other club. An international race was first instituted in 1903 between England,

CROSS-BOW AND QUARREL

Cheddar they consist of open vaulted structures. Paul's *C.* was erected by Henry III in 1259. It was demolished in 1643 as an offence to the Puritans. The present *C.*, surmounted by a picture of St Paul, was erected in 1911 and has a pulpit for giving addresses. The Scottish *tn C.s* early lost their religious character, and were used for royal and civic proclamations. See G. de Mortillet, *Signe de la croix avant le Christianisme*, 1866; J. Stuart, *Sculptured Stones of Scotland*, 1867; E. Bunson, *Das Symbol des Kreuzes bei allen Nationen*, 1878; G. F. Browne, *The Ancient Cross Shafts at Newcastle and Ruthwell*, 1916; W. G. Collingwood, *Northumbrian Crosses of pre-Norman Age*, 1927; and R. Guénon, *Symbolisme de la croix*, 1931.

Cross, Southern, see SOUTHERN CROSS.

Cross-bow, or **Arbalest**, weapon used chiefly during the 12th and 13th cents., after which it gave place in England to the less cumbersome long-bow. It consisted of a bow, made of wood, iron, or steel, attached to a wooden stock, similar in shape to the butt of a musket. The bowstring was pulled back by a lever which in the smaller instruments was worked by hand or foot, and held in position by a notch. The bolt or 'quarrel,'

Scotland, Ireland, and Wales. France first took part in 1907, Belgium in 1923, Spain, Italy, Switzerland, and Luxembourg in 1929, Holland in 1950, Yugoslavia in 1953, and finally Portugal was admitted to the circle in 1956. An Englishman, Alfred Shrubbs of S. London Harriers, was the first individual winner, and in the year 1957 another Englishman, Frank Sando, won the event. In the years preceding England provided the winner on 27 occasions, France 10, Scotland 2, Belgium 2, Ireland 1, and Yugoslavia 1. D. A. G. Pirie, K. L. Norris, F. D. Sando (England) and A. Mimoun (France) are among the best C. C. runners of recent years. In 1928 the C. C. race was omitted from the Olympic Games programme as an unsuitable event for a summer meeting. The sport is comparatively unknown outside Europe, where it is most widely practised in France and Belgium. See ATHLETICS.

Cross-examination, see EVIDENCE.

Cross-talk, interference between 2 telephone lines running parallel to one another for a long enough stretch to make the inductive effect noticeable.

Crossbill, bird of the genus *Loxia*, native of Europe, Asia, and N. America, chiefly in pine forests. The *C.* gains its

name from its curious bill, in which the upper mandible crosses over the lower one at the point. This enables it easily to tear and break the scales of the pine cones on which it chiefly feeds. The common red C. (*L. curvirostra*) is the best known, and occurs sometimes in Scotland. The plumage of the female is orange-green or grey-green. The C. only occurs in Britain as a migrant.

Crossen, see KROONO.

Crosshaven, seaside resort, 13 m. S.E. of Cork, Rep. of Ireland, on the wooded estuary of the Owenboy R. It has boat-building and a yacht club. Pop. 850.

Crosshead. The C. in an engine is the block which, fixed at the end of the piston-rod, works between parallel guides, and so takes up the sideward thrust due to the obliquity of the connecting-rod, thus enabling the piston-rod to work in a straight line. It is generally made of cast iron, but is also of wrought iron or cast steel, and the slide bars between which it works are of wrought iron or steel with bearing surfaces of brass.

Crossing, in architecture, the space formed in a cruciform church by the intersection of the E.-W. arm (nave and choir), with the N.-S. arm (transepts). In medieval churches it was often crowned with a central tower; at St Paul's Cathedral it lies under the dome.

Crossley, Ada (1874-1929), famous Australian contralto; b. Tarraville, Gippsland, Victoria. Educ. at Port Albert, Gippsland; taught music by Alberto Zelman and Fanny Simonson. In London, after 4 months under Sir Charles Santley, sang first at Queen's Hall, 18 May 1895.

Crossley, Sir Francis (1817-72), b. Halifax, Yorks, and became a celebrated carpet manufacturer. He accumulated an enormous fortune, which he bestowed very liberally on the Congregational Church and on various charities connected with his native tn. His business success was obtained by the introduction of steam instead of manual labour and to the system of patenting new inventions. He was created a baronet in 1863. After retiring from business he purchased Somerleyton Hall, Lowestoft.

Crossopterygians, members of the subclass Choanichthyes (or bony fishes with internal nostrils) and sometimes called fringe- or lobe-finned fishes because of an extension of the flesh and internal skeleton into the paired fins. The body was covered with cosmoid scales and the skull with dermal bones. They had functional lungs and internal nostrils, and were closely related to the lungfishes. The pointed teeth show labyrinthine infoldings of enamel, of particular interest because identical teeth occur in the primitive amphibians known as labyrinthodonts (q.v.). The crossopterygians are thus probably the stock from which land vertebrates arose. They are mainly Devonian and Carboniferous in age, but one group, the coelacanth (q.v.), has persisted until the present day.

Crossword Puzzle, offshoot or variant of the acrostic. The C. P. consists of a diagram which comprises blank and blocked-

in squares, the blank squares ultimately to contain letters and the blocked-in spaces to show the beginning or termination of a word. When the letters are all filled in they help to form words arranged horizontally and vertically. Clues to the words are given with the diagram, and may be either straightforward or deliberately ambiguous. The most usual diagram consists of a square of 15 spaces each way, the blanks forming a symmetrical pattern, but oblongs and pictorial shapes are often used, and in some cases a thickened line takes the place of the blocked-in space. Crosswords of a childish sort were not unknown to the nursery magazines of the last century, but the vogue did not start until the early 1920's, when a New York publisher took hold of what at that time was a little noticed feature of a Sunday newspaper and brought out the first crossword puzzle book. Its success was remarkable. Crosswords began to appear in newspapers and magazines, and the Amer. public was captured. In England they then met with a general and enthusiastic welcome, and soon became almost as familiar in a paper as the title-page. The crossword puzzle has lasted a remarkably long time in England, practically all newspapers and many magazines supplying crosswords for their readers; the daily *Times* succumbed to them in 1930, after holding out for seven years. The majority of crosswords have simple solutions, but those in *The Times*, *Sunday Times*, *Observer*, *New Statesman* and *Nation*, *Spectator*, etc., give scope for research. Various periodicals have organised crossword competitions, usually with alternative solutions for many words, only chance directing the right choice of solution. The *jeu de mots croisés* attained a certain popularity in France, and the *Morning Post* pub. sev. C. P. in Fr. for Eng. readers. *The Times* has issued sev. in Lat. The C. P. has been used with success for commercial advertising purposes.

Crotalus, genus of ophidian reptiles or pit-vipers, a sub-family of Viperidae. There are about eleven species, characterised by the presence of a tail rattle and the covering of small scales on the top of the head. All are to be found in America, and are known as rattle-snakes. *C. durissus*, a native of the U.S.A., is the common rattle-snake (q.v.).

Crotch, William (1775-1847), composer, b. Norwich. At the age of four he played the organ in London. In 1786 at the age of eleven he became assistant organist to Randall at Trinity and King's Colleges, Cambridge. Three years later he wrote an oratorio, *The Captivity of Judah*. After some time as a theology student at Oxford, he finally in 1790 turned again to music, and was appointed organist in Christ Church Cathedral. He became Prof. of Music at Oxford in 1797, took his D.Mus. in 1799, and in 1822 became first principal of the Royal Academy of Music in London. He wrote for the organ, piano, and voice, and was the author of a work *Elements of Musical Composition and Thorough Bass*.

Crotchet, character or note in music, equal in duration to a quarter of a semi-breve or two quavers. Amer. terminology, following Ger. instead of Eng., now uses 'quarter-note' for C., but this is illogical and confusing, since a semi-breve, as its name implies, is itself one half of a larger unit, the breve, which would make the C. aa 'eighth'; and there is moreover the possibility of confusion with 'quarter-tone,' which is a matter of pitch, not of time-value. A C. rest indicates silence for the duration of a C.

Croton, riv. of New York, U.S.A., and a trib. of the R. Hudson, into which it flows when about 35 m. distant from the city of New York. The new C. Dam impounds C. Lake, whose waters are carried to New York City by C. Aqueduct.

Croton, large tropical genus of Euphorbiaceae, contains many species with important medical properties. *C. cascarilla* is a native of Santa Domingo and Florida, and yields the cascarilla bark. *C. tiglium*, an inhab. of the Moluccas and Ceylon, is one of the most active and drastic of purgatives, woods, leaves, and fruit all containing the property. The seeds were formerly called grains of Tilly or Molucca grains, and the oil expressed from them is the powerful C. oil. The oil consists of a mixture of fatty acids and their glycerides, notably acetic, butyric, valeric, and methyl crotonic acids; the purging quality of the oil seems due to crotonic acid. A single drop administered internally acts as a drastic purgative; its action is too powerful for ordinary use, but it is employed with good effect in the case of unconscious or insane patients. *C. laciferum* furnishes a very fine lac and a brilliant varnish. *C. sanguinum* yields a deep red resinous substance resembling dragon's blood (q.v.); *C. balsamiferum* is aromatic and the liqueur called *eu de Mantes* is distilled from it.

Crotona, or **Croton**, Gk colony founded from Achaea (710 bc) in Calabria, Italy. It is the modern Crotona on E. Coast of Calabria. By 510 bc it was strong enough to destroy its neighbour, Sybaris. It was famous in antiquity for the school of Pythagoras, a school of medicine, and as the bp. of Milo, the athlete. Later it lost its independence, and became part of the Rom. empire. See CROTONE.

Crotona, or **Coirone**, lt. fort. seaport, in Calabria (q.v.), on the E. coast of the Calabrian peninsula, 30 m. NE. of Catanzaro (q.v.). It is on the site of the ant. *Crotona* (q.v.). It has a cathedral, and a fine citadel. There are zinc-smelting and chemical industries. Pop. 31,600.

Crotophaga, sub-family of the family Cuculidae (cuckoos), peculiar to the New World, including sev. species. The chief member is the Ani, Black Parrot, or Savannah-bird, which extends from the S. States of N. America throughout most of S. America. Its plumage is glossy black, and its strange shape has also gained it the name of the Black Witch.

Crouch, riv. of Essex, England, flowing into the North Sea at Foulness. Burnham-on-C. is a favourite yachting centre. Length, 24 m.

Croup, inflammatory condition of the larynx, with swelling of the vocal cords and consequent narrowing of the laryngeal aperture, causing a typical harsh, barking type of cough and, in severe cases, rasping breathing. Before diphtheria immunisation became the rule, this infection was a common and dangerous cause of croup.

Crow, bird of the genus *Corvus*, of the family Corvidae. The family is distributed over almost the whole of the globe, though there are very few species in the E. part of Australia or in S. America. They include C.s, magpies, jays, and choughs, and may be subdivided into a large number of species. The colour of the true C. is black, generally a glossy black, often tinged with white at the edges of the feathers. But more distant members of the family are brownish: the Jackdaw has grey at the back of the neck, and the hooded C. (*C. cornix*) is grey on the back and under parts. The choughs also vary from the common black in their red feet and red or yellow bills. The Corvidae have strong and generally straight bills, with no notch in the upper mandible. The wings are long and pointed, except in the jays and magpies, where they are shorter. The tail is long and graduated, usually with twelve rectrices, of which the middle ones are longer than the others. The C. is regarded by all naturalists as the highest family of birds. The intelligence of all of them is great in the extreme, and innumerable stories are told of their craft and cunning. Many of them vary their own disagreeable notes by imitating those of other birds. Among these the Amer. blue jays are the most noted. They may also be taught to imitate the human voice. C.s are omnivorous, eating animal, fish, and vegetable foods indifferently. They show themselves very adaptable to circumstances, and devour almost anything edible.

Crow Indians, aboriginal Amer. Indian tribe of Siouian linguistic stock, living mainly in Montana. They number about 2000. See R. H. Lowie, *The Crow Indians*, 1935.

Crow Steps, see CORBIE STEPS.

Crowberry, or *Empetrum nigrum*, species and genus of Empetraceae which grows chiefly in the N. temperate zone and in the Andine Mts. The plant is an evergreen shrub with small crowded leaves, and the fruit is a black edible berry of a juicy nature, sometimes used in making wines. The fruit owes its name to its reputation for attracting crows, and in rookeries it is often used for decorative purposes.

Crowd, musical instrument, see CRUTCH.

Crowfoot, see RANUNCULUS.

Crowland, or **Croyland**, par. and tn of Lincolnshire, England, close to the R. Welland, 9 m. N. of Peterborough. There are the ruins of an ant. abbey, part of which is now the par. church. The original abbey was built by Ethelbald in 716, in keeping with a promise made to St Guthlac, patron saint of the present church. The Danes destroyed the abbey in 870, and it has a considerable history of

burning, sacrilege, and rebuilding. There is also a 14th cent. bridge, bearing a statue. The exact identity of the figure is unknown, the three most probable suggestions being Our Lord holding a loaf of bread, Ethelbald, or Alfred holding a crown. Pop. 3500.

Crowle, par. and tn of Lincolnshire, England, situated in the Isle of Axholme, 5 m. ESE. of Thorne by rail. Pop. 3010.

Crowley, Crole, or Croleus, Robert (c. 1518-88), archdeacon of Hereford in 1559, and four years later prebendary of St Paul's. He produced the first printed metrical version of the psalter and also brought out an admirable typographical ed. of the *Vision of Piers Plowman* in 1550.

Crowley, cap. of Acadia par., Louisiana, U.S.A. Centre of a rice-growing country. Pop. 12,800.

Crown, in architecture, either (i) the highest point of an arch, vault, or dome; or (ii) a type of steeple formed by curved buttresses converging on to a central pinnacle, and thus resembling a crown; as at Newcastle (cathedral, St Giles' Cathedral (Edinburgh), etc.

Crown, paper size, see PAPER.

Crown (Lat. *corona*), known from very ancient times as a headdress for kings, priests, or warriors. C.s were used by the Egyptian kings, often very elaborate in style, but extremely simple at the time of the Ptolemys. In classical times the C. was usually a circular ornament of metal, in the form of a chaplet of leaves or flowers, worn on solemn and festive occasions. Among the Greeks it was an emblem of office (as in the case of the archons), or frequently a reward for victors in the Hellenic games (Olympic, Isthmian, etc.). As a reward for exceptional services to the State it was a much-prized honour among the Romans. Among the various kinds were the 'corona obsidionalis' of grass or wild flowers, given to the general who rescued a besieged army; 'corona civica' of oak-leaves and acorns, given to the soldier who saved a fellow citizen's life in battle; 'corona navalis', a gold circlet ornamented with beaks of ships for the winner of a naval victory; 'corona muralis', similarly adorned with battlements, for the first who scaled the walls of a besieged city; 'corona vallaris', with palisades, for the first to break into the enemy's camp; 'corona triumphalis', awarded to the general who was granted a triumph. Among the emblematical C.s were the 'corona sacerdotalis', worn by those engaged in sacrifice; 'corona funebris' or 'sepulchralis' for the dead; 'corona convivalis' of banqueters; 'corona nuptialis' or bridal C. In Germany, Norway, and medieval England the bridal wreath or C. was often of metal. As used in modern times for an emblem of sovereignty the C. was borrowed from the diadem (fillet of silk or wool) of oriental origin. Alexander the Great adopted this from the Persian kings. Rom. emperors are represented with the diadem, laurel C., or radiating C. (symbolising the deification of the emperors). The diadem of Constantine the Great was replaced in

the 6th cent. under Justinian by the 'stemma,' an elaborated golden fillet. Still more elaborate C.s succeeded this in turn, until the present arched C. became the usual form. At the Norman Conquest a circle of pearls set in gold was the C. of Eng. kings. In the 12th and 13th cents. this was heightened by strawberry leaves or trefoils. That of Henry IV had strawberry leaves and fleurs-de-lis alternately, with 16 small groups of pearls. Edward IV's was arched over with jewelled bands of gold closing under a mound ensigned by a cross pattee, crosses pattee replacing the strawberry leaves, and roses or fleurs-de-lis the pearl clusters. The Brit. sovereign now uses 2 C.s. 'St Edward's' C. is used only for the actual ceremony of coronation. On all other occasions the Imperial State C. is worn. This latter is magnificently jewelled; it was made originally for Queen Victoria in 1838. (See Wickham Legg, *English Coronation Records*, 1901.) The Pope's C. is a high uncleft mitre (see TIARA). The C. of the former Austrian empire was cleft in the centre, but resembles the mitre in appearance. This style was adopted by Maximilian II in 1570. A single arch surmounted by mound and cross rose from the cleft. The C. of Scotland, discovered in 1818 with other regalia in Edinburgh Castle, probably dates (with the exception of its arches) from the days of Robert Bruce. The iron C. of Lombardy, restored to the King of Italy, 1866, was a gold circle with a thin fillet of iron inside, said to have been hammered from a nail of the true cross, and alleged to date from the time of Pope Gregory the Great (AD 590-604). The C. of the Ger. Empire had 8 shields, the larger bearing the cross, the smaller the imperial eagle. There were 4 arches surmounted by mound and cross. C.s are often seen in heraldic bearings or coats-of-arms. (See M. Holmes, *Crowns of England*, 1937; and M. Bowen, *Crowns and Sceptres*, 1937.)

In constitutional law and practice, 'the C.' is a comprehensive symbolical expression denoting the members of the legal sovereignty in whom is vested the supreme executive power. The executive gov. of the Brit. Commonwealth (except those member states which are reps.) is carried on in the name of the C., and all its public acts are theoretically done by right of the royal prerogative. But all public acts of the C. are also done on the advice of the ministers of the C., with the result that the formerly personal prerogatives of the sovereign have become the privileges of the executive, which by the conventions of our unwritten constitution are in their turn a reflection of the privileges of the people. The C. as a term connoting the sovereign and his or her ministers expresses the responsibility of the latter for every public act of the former, and the expressions 'descent of the C.' or 'succession of the C.' therefore mean the devolution of the paramount executive power from one monarch or titular head to his or her successor. The result of the constitutional limitations on the monarch's theoretical sovereignty is

that the prerogative of the C., which Blackstone defines as 'a special pre-eminence which the king hath over and above all other persons, and out of the ordinary course of the common law in right of his royal dignity,' has become gradually narrowed in its content. The term prerogative, as indicating the ancient customary powers of the C. springing from the early character of the kingship as a tribal chieftaincy, and later the feudal overlordship, is in these days better regarded, in Prof. Dicey's words, as 'nothing else than the residue of discretionary or arbitrary authority which at any given time is legally left in the hands of the Crown.' It is a term which has caused much perplexity to the constitutional lawyer, but the various rights, privileges, and attributes composing the prerogative are clear. The common law prerogatives of the C. or the privileges of the executive comprise various legal attributes of sovereignty, privileges resulting from those attributes together with certain powers which may be said either to be inherent in any sovereign entity, or which are merely the survivals of more ancient times. The attribute of perfection of judgment expressed in the maxim that 'the king can do no wrong' puts the C. above the law, but results in the practice that ministers are liable for all royal acts, and that no administrative act can be done by the C. without the counter-signature of some responsible minister. The maxim is subject, however, to the curious interpretation that when the sovereign makes an illegal grant or wrongfully confers a franchise, he has merely been 'deceived in his grant,' with the consequence that the grant can be upset as contrary to public justice. The C.'s claim asserted by the Stuarts to suspend or dispense with estab. laws and vested rights was formally denied by the Bill of Rights, 1689—nor can the C. violate the common law. With such limitations as these it becomes clear that the maxim has lost its original force, and serves rather to demonstrate the transfer of legal liability to ministers rather than the moral perfection of the sovereign's judgment. But the personal immunity of the sovereign from liability finds expression in the fact that no subject can sue the king in his own courts, but must sue the gov. dept responsible for the act complained of (Crown Proceedings Act, 1947). An equally important attribute of the sovereign is his traditional perpetuity expressed in the maxim that the king never dies. The C., indeed, is a corporation (q.v.) sole with perpetual succession. The common law terminated all appointments held 'during pleasure' on the demise of the C., but the statute of 1 Ed. VII, c. 5, by providing that such offices shall not be affected by a demise, brought the practice into accord with the maxim. Other prerogatives concerning the royal authority *per se* are that lapse of time cannot bar the right of the C. to sue or prosecute; the subordination of the right of the subject when it conflicts with that of the sovereign; the immunity of the

sovereign from any statutory obligation unless bound by express language or by necessary implication; and the privileges flowing from the theory that the sovereign is never a minor.

But there are numerous limitations on these prerogatives also, e.g. the right of the C. to claim real property as against the adverse possession of the subject is barred after 50 years; succession duty cannot be claimed by the C. after 12 years from the date of the death giving rise to the succession, or where the Inland Revenue authorities have 'slept on the C. rights'; and indictments for treason, other than cases of attempted assassination of the sovereign, cannot be preferred after 3 years from the commission of the crime. Again, royal minorities are always provided for by statute, and it is generally conceded that the sovereign is bound, whether named expressly or by necessary implication or not, by, *inter alia*, statutes for the preservation of public rights, statutes for the public good, or for the suppression of public wrongs. Other prerogative powers include the right to receive and send ambas. from and to foreign countries; the power to make treaties, leagues, and alliances with foreign nations; the power of issuing letters of marque and reprisal where not abrogated by treaty; the power of declaring war and making peace; and the power of granting safe conducts to alien enemies. But there is considerable doubt whether the C. can cede land to a foreign state during the time of peace, or interfere with the position of the subject without Parliament's sanction, and the House of Commons can stop supplies for the payment of a war declared by the C. The prerogative of the C. to assent to and dissent from Bills sent up for the royal assent is now reduced to a shadowy veto which has never been exercised since the reign of Anne. As the fountain of justice the sovereign can create common law courts for the empire beyond the seas and pardon offenders (*see also* CRIMINAL LAW); as *parens patriae* he has the nominal custody of all infants and lunatics, as the arbiter of commerce can erect markets and coin money, and as the fountain of honour confer titles of nobility. The royal prerogative touching revenue matters confers on the C. the ownership of waifs, strays, treasure trove, wrecks, and the personal estate of intestates dying without next of kin, and enables the C. to levy customs, excise, stamp and death duties, and income tax. As the orthodox head of the Estab. Church, the C. appoints, on the recommendation of the Prime Minister, archbishops, bishops, and other dignitaries of the Church, and entertains appeals from eccles. courts through the judicial committee of the Privy Council. Wherever the term 'king' is used in the foregoing remarks, it is, of course, to be understood equally of a queen regnant. (For the Councils of the Crown, *see* CABINET.) *See* L. G. W. Legge, *English Coronation Records*, 1901; G. J. Youngblood and C. Davenport, *The Crown Jewels of England*,

1919; and G. Williams, *Crown Proceedings*, 1948.

Crown, name of various coins which represent different values in different countries, but all with a crown as reverse. The origin of the word C. is to be found in the Fr. word *couronne*, the name of a gold coin issued by Philip of Valois in the early 14th cent. Towards the close of the same cent. another Fr. king, Charles VI, issued a coin called the *écu de la couronne*. The C. did not appear in England until the reign of Henry VIII, and then it was a coin consisting of a mixture of gold and silver, the value of which represented 5s. It was in the reign of Edward VI that the image of the king appeared on the large silver coin, seated on his horse bearing the royal shield of arms. Queen Elizabeth appeared crowned on the later coins. The C. of Charles II's reign was covered with 4 shields typifying England, Scotland, Ireland, and France. At the present time the C. is worth 5s. in England. The

many public bodies overseas. The C. A.'s principals now include the govts. of Ceylon, Ghana, Iraq, and Libya, and a great many municipalities, local gov. authorities, corporations, and other public bodies. They also act on behalf of the United Nations Korean Reconstruction Agency, and for the U.K. Gov. in the supply of stores under the Technical Co-operation Scheme of the Colombo Plan (q.v.). The present title of the organisation was adopted in 1954 in consequence of the extended range of their activities. The income of the C. A.'s organisation is derived from fees on the business transacted, and not from public funds, although the numbers and remuneration of the staff are controlled by the secretary of state. The office is non-profit-making, and the fees for its services are adjusted from time to time in accordance with this principle. The staff of approximately 1500 includes professional engineers and executives of experience in many fields of business.

CROWN OF CHARLES II

C. of Denmark, Norway, and Sweden is very small in value and represents the sum of a little over 1s.

Crown Agents. In the 18th cent. the governors of Brit. colonies appointed their own agents in the U.K. to act as intermediaries between themselves and the Crown and to perform a variety of commercial and other services. In 1833 the business of a number of the separate agents was consolidated in one estab. under 2 'Joint Agents General for Crown Colonies' appointed by the Treasury. In 1863 the title was changed to 'Crown Agents for the Colonies' and in 1880 the Treasury ceased to exercise control. Since that date and up to the present time (1957) the C. A. have been under the general supervision of the secretary of state for the colonies, who is not however concerned in the detailed execution of business, on which the C. A. take instructions direct from their oversea principals.

The C. A.'s services are available not only to colonial govts. attaining independence but to certain foreign govts. and

The services which the C. A. provide as financial and commercial agents for their principals include inspection, shipment, and insurance of plant, equipment, and stores to a value of £70 million annually; advisory and consultant service in engineering matters; the recruitment of staff for certain gov. appointments overseas, the booking of passages and payment of salaries and pensions; and the management of cash and invested funds and (in the case of colonies) the floating of loans and the function of registrars of stock.

The C. A.'s offices are at 4 Millbank, London, S.W.1. There are branch offices in the City of London, in other cities of the U.K., and in Washington, D.C.

Crown Cases Reserved, Court for. Before the institution in 1907 of the court of criminal appeal the C. for C. C. R., consisting of the judges of the high court, or 5 of them at least, of whom the lord chief justice had to be one, was the tribunal to which was reserved any question of law that might have arisen in a criminal trial, whether at the central

criminal court (q.v.), the assizes, or quarter sessions. Unlike the court of criminal appeal, which replaced the C. for C. C. R., the latter court could not hear appeals on questions of fact, or mixed law and fact.

Crown Colony, see OVERSEAS TERRITORIES.

Crown Debts, those debts which are due to the Crown, e.g. fines, penalties, and which are contradistinguished from debts due to the subject principally by reason of the priority they enjoy in the administration of the estate of a deceased person who has *d. insolvent*. The old common law allowed the Crown (q.v.) to recover C. D. summarily by a writ of *extant* against the debtor's land and goods, and to follow that property into the hands of whomsoever it went. Apparently the Crown still has this power, but it cannot take copyholds in execution. The Crown's lien on the debtor's property as against a *bona fide* purchaser for value of the debtor's property only extends to specialty debts (i.e. created by deed), and debts of record (judgment debts, recognisances, and others, see DEBT); it does not extend to a simple contract debt. Rates and taxes, so far as they can be said to be C. D., are preferential debts in the administration of the estate of a bankrupt, but otherwise C. D. have no priority over other debts when an estate is administered in bankruptcy. In the administration of the estate of a deceased person, debts due to the Crown by record or under a bond or covenant are paid first, where the estate is solvent, but simple contract debts due to the Crown merely enjoy priority over all other kinds of simple contract debts. Where the estate is insolvent C. D. enjoy a like priority where the estate is administered by the legal personal representative or by the chancery div.; but where it is administered by the court of bankruptcy, C. D. are, it seems, payable *pari passu* with other debts due under judgments, specialties, and simple contract. In winding-up proceedings of a company, C. D. are allowed. C. D. stand in the same position as in the bankruptcy of an individual.

Crown Derby, see DERBY.

Crown Estate, lands enjoyed in right of the Crown, the profits from which form part of the hereditary revenues of the Crown, or revenue which the Crown has had from time immemorial. Since 1760, when George III. surrendered those and other revenues for a fixed sum or civil list and for other considerations, they have been collected on the public account. At the time of the surrender the gross revenues amounted to about £89,000, and the net return to about £11,000. In the year ended 31 March 1956 the total receipts were £2,890,000, and the net return was £2,270,000. At the present day the C. E. comprises one of the largest landed estates in the United Kingdom. The C. E. includes all Mines Royal, i.e. mines of gold and silver. The Crown title to foreshore or land between high and low water-mark, and the bed of the sea and navigable rivers, is limited by the public

rights of navigation and fishing from boats and rights incidental thereto. The C. E. is exempt from taxation in the absence of express or implied words to the contrary in the Acts imposing the different burdens. The head office of the C. E. commissioners is in Whitehall.

'Crown News,' see ARMY NEWS SERVICES.

Crown Office, dept. of the central office of the supreme court of judicature. Its official head is the clerk of the Crown in the queen's bench (q.v.), now generally entitled the queen's coroner and attorney and master of the C. O. The work of this office relates to the administrative business on the Crown side of the queen's bench div., and also of the divisional courts of that div. The duties of the queen's coroner, which are very numerous, are *inter alia* to issue informations in the nature of *quo warranto* for misdemeanours in agreement to the order of the court; to attend at the sittings of the divisional courts, so as to inform the judges on questions of practice and procedure, and take minutes of the proceedings; to administer the oath of allegiance to judges or magistrates on their appointment; and to keep in safe custody the records of the C. O. pending removal to the record office (see CUSTOS ROTULORUM). The judicial business of the Crown side of the queen's bench is transacted either in court or before the judges or the master of the C. O. in chambers. The ministerial business as conducted in the C. O. includes a great number of matters, including, especially, the issuing of writs of *habeas corpus*, writs of subpoena and attachment, and orders of prohibition, mandamus, and certiorari.

Crown Point, tn in Essex co., in New York, U.S.A., and 36 m. distant from Burlington. It is situated on Lake Champlain, and contains the ruins of a Brit. fort captured by the Americans in 1775. Pop. 1660.

Crown Solicitor, see TREASURY SOLICITOR.

Crowne, John (c. 1640–c. 1703), Brit. dramatist, b. Nova Scotia. He began a literary career in England with his romance *Pandion and Amphigenia*, 1665, one of the few Eng. heroic romances after the manner of Scudéry. Though of no very striking talent as a dramatist, he found favour at Charles II's court, and his plays were successful, some being acted in the 18th cent. Among them are *The Country Wit*, 1675; *The Destruction of Jerusalem by Titus Vespasian* (2 parts), 1677; *Thucydides*, 1681; *City Politiques*, 1683; *Sir Courtly Nicc*; or, *It Cannot Be* (his best work), 1685; *The Married Beau*; or, *The Curious Impertinent*, 1694; *Caligula*, 1698. His dramatic works were pub., with a memoir, by J. Maidment and W. H. Logan, 1873–7, and a bibliography by G. P. Winship, 1922. See A. F. White, *John Crowne, His Life and Dramatic Works*, 1922.

Crowther, Samuel Adjai (1809–92), missionary bishop of Africa, b. in Yoruba and sold as a slave in 1821. He was rescued with his comrades in 1822, and sent to

Sierra Leone. The Church Missionary Society took an interest in him; he became a convert to Christianity and came over to England to the Church Missionary College at Islington. He was ordained by Bishop Blomfield, and on returning to his own country he trans. the Bible and Prayer Book into Yoruba and other dialects. Was created bishop of the Niger ters, in 1864, and d. in 1892 after a life of strenuous labour and great piety.

Croydon (Domesday *Croindene*; formerly *Croydene*, saffron valley), par., municipal, and co. bor. of Surrey, England, 10 m. from London, in the diocese of Canterbury. The par. of C. is 25 m. in circumference. C. sends three members to Parliament. It owes its growth and popularity to general trade, attractive residential quarters, and proximity to London. The par. church dates back originally to about AD 960, was rebuilt probably by Archbishop Courtenay (d. 1396), and again after the fire of 1867 (see below). The archiepiscopal palace, now used by the Kilburn sisters as a girls' school, was the residence of the primates until 1757. The Whitgift Hospital was founded in the reign of the first Elizabeth. Archbishop Whitgift's endowment also endows the grammar and middle schools. Others were endowed by Archbishop Tenison, 1714. Adult education is provided at the C. Polytechnic and the C. School of Art. The prin. assembly hall is the civic hall, formerly the hall of the N. End Brotherhood. It has accommodation for 871 people. Before its acquisition it was badly damaged in air raids, an oil bomb having brought down half the roof. It was restored as far as war conditions allowed. There is a fine tn hall, a theatre, public libraries, and barracks. There are a number of light engineering and other factories, and a clock and bell foundry. The world's largest carillon of 72 bells for the Riverside Church, New York, was cast at this latter factory. The airport covers 400 ac. and cost £267,000. Extensions of the C. General Hospital costing £80,000 were opened in 1927. Warrlingham Park Hospital has accommodation for 1121 patients and is noted for progressive and modern methods of treatment of those suffering from mental and nervous disorder. The C. crematorium was opened in 1937, with a chapel built in the Gothic style. In 1896 the central library was opened in Katharine Street, which, as part of the architectural pile of the tn hall, possesses premises as imposing as those of any public library in the S. of England. The library was one of the earliest to adopt the 'open access' system. The branch library in Brigstock Road, Thornton Heath, was opened in 1914. In 1926 provision was made for numerous other branch libraries, but the Second World War arrested completion of the scheme. The large electricity undertaking suffered considerable damage in 1940, when a 500-kilo bomb hit the power station, and in 1944 a flying bomb exploded in the engine room; but by 1947 practically the whole of the damage had been made good. The new electricity showrooms and

offices at Wellesley Road were occupied in 1941. The present programme of the electricity undertaking includes a new generating station, partially completed, with an ultimate capacity of 310 MW. There are numerous parks and recreation grounds and open spaces covering a total area of 2165 ac. Addington Hills is a natural park of 130 ac., consisting of a plateau of 460 ft altitude with heather and fir trees. Other parks are New Addington (94 ac.), Beaulieu Heights (19½ ac.), Ashburton Park (18½ ac.), Selsdon Wood (200 ac.), Grangewood (on Norwood Hills), a 30 ac. park on a commanding site; and Norwood Grove (3½ ac.), noted for its trees, flowers, and birds.

From the evidence of relics which are preserved in the tn hall, C. seems to have been the very centre of the SE. Saxon settlement. Legend has it that the original par. church was founded by the Christian soldiers of Aulus Plautius, but this is not verifiable; when the 13th-cent. church was built portions of an early Saxon church were discovered. An early document by which Archbishop Æthelred exchanges C. land with Duke Ælfred is the first extant reference to the age-old connection of the archbishops of Canterbury with C. The Domesday Survey shows that (c. 1085) the manor of C. (later known as the archbishops' palace and to-day as the old palace) was in the lordship of Archbishop Lanfranc, and that there was a church and some 200 inhab. From the time of Lanfranc the archbishops occupied this manor as their summer residence. The archbishops gave C. its first fair and first market (1276), their purpose being, it is said, to supply the needs of the pilgrims passing through C. to the shrine of St Thomas at Canterbury. Among famous guests at the manor were James I of Scotland, the prisoner-guest of Archbishop Arundel, in 1412; Catherine of Aragon, who after her divorce sought refuge there; Mary Tudor; and Elizabeth Tudor, who made several visits to C., the first in 1573 as the guest of Archbishop Parker. Whitgift, the most intimate name in the record of the archbishops at the palace, founded the hospital of the Holy Trinity, known as the Whitgift Hospital, in 1596, for the use of the aged poor of Lambeth and C. The archbishops withdrew from the palace in 1757; in 1808 they bought Addington Palace, which became their residence outside London until 1896. It has since been bought by the C. Corporation, and is leased to the Royal School of Church Music, which removed there from Canterbury in 1953. Grindal, Whitgift, and many other archbishops are buried in the par. church of St Mary, Addington. The eccles. par. of C. still remains in the diocese of Canterbury, and the B. of Croydon is one of the suffragans of the archbishop, who is bishop of the diocese. One of C.'s most famous citizens was Lord Howard of Effingham, who lived and died at Haling House, the site of which is now occupied by Whitgift School. Addiscombe House, later called Addiscombe Place, built by the son-in-law of John Evelyn, was the home of Lord Liverpool in the early nineteenth

century. In 1809 this house became the military seminary of the E. India Company, where, among others, Lord Napier of Magdala, Lawrence of Lucknow, and Lord Roberts of Kandahar received their training. At the beginning of the nineteenth century the pop. of C. was 6000. With the opening of the London to C. railway to traffic, the pop. was increased to 16,000. This enhanced the difficulties of local government, and C. was the first to adopt the Public Health Act, and to constitute a local board of health. Among the chairmen of the board were Cuthbert Johnson, who, in his spare time, compiled an extensive MS. history of C. (to be seen in the C. reference library), and Wm. Drummond. Among its most noted officers was Baldwin Latham, the engineer who not only built the water tower at Park Hill (now disused), but designed

reason, the charter was never received or made operative. C. had to wait 200 years before, in the year 1883, the charter of incorporation was granted by Queen Victoria. In 1889 C. was granted the powers and duties of a co. bor., with control of its own highways, education, and public health services. The town now has its own bor. courts and quarter sessions. Pop. 249,592.

Crozet Islands, group of volcanic is. situated in the S. Indian Ocean at almost equal distances from each other between the Cape of Good Hope and Kerguelen Is. The names of the prin. is. are Possession, East, and Penguin. Sixteen is. are uninhabited. The C. I. are a Fr. dependency of Réunion, and have an area of 200 sq. m.

Crozier, Francis Rawdon Moira (c. 1795-1848), naval officer, b. in Ireland. He made 3 voyages with Capt. Parry to the

H. M. King Ltd., Croydon

WHITGIFT SCHOOL, CROYDON: MAIN QUADRANGLE

waterworks at Vienna and elsewhere in Europe. C. was a pioneer in air transport, with the building of the aerodrome at Waddon in 1916; Lindbergh landed there from Paris after his solo crossing of the Atlantic. Until the Second World War C. was the airport of London, not, as it is to-day, one of the airports of the metropolis reserved for charter aircraft. The first bombs that fell in the London area in 1940 fell upon C., some months before the continuous attack on C. and London began. In the flying-bomb period it was the most bombed tn in England, and suffered great devastation. The death-roll was, however, low owing to evacuation and good shelter accommodation.

It is on official record that Queen Mary II in council actually approved a charter as a bor. to C. (21 May 1691), but that, owing to the default of the secretary of state (probably the second earl of Nottingham) or for some now undiscoverable

Arctic regions in 1821-7, went to the Antarctic Ocean with Capt. Ross in the *Terror* in 1839-43, and sailed as second officer in Franklin's last expedition in 1845 to discover the NW. Passage, dying in the polar regions. The party was not heard of till Capt. McClintock found a record (signed, April 1848, by Capt. C.) on King William Is. in 1859, stating that the explorers were about to start for Great Fish (now Back) R. under C.'s command. See Sir F. L. McClintock, *Fate of Sir J. Franklin*, 1859.

Crozier, John Beattie (1849-1921), Canadian historian and philosophical writer, b. of Scottish parents in Ontario. Among his works, written from the viewpoint of the evolutionist, are *The Religion of the Future*, 1880, and *Civilisation and Progress*, 1885. A civil-list pension was granted him in 1894, and doubled later to enable him to carry out his studies. Other pubs. are *Lord Randolph Churchill: a*

Study of English Democracy, 1887; and *History of Intellectual Development on the Lines of Modern Evolution*, 1897-1901.

Crozon, seaport of France, in Finistère, on Douarnenez Bay, 10 m. from Brest, with sardine fisheries. There is a fine beach at Morgat near by. Pop. 7700.

Crucian Carp, or *Carassius carassius*, fresh-water fish of Europe and Asia, closely allied to the goldfish. It is a member of the Cyprinidae, or carp family, and differs from the carp chiefly in having no barbels. It sometimes bears the name of Prussian carp.

Cruciferae, family of ann. to perennial herbs in 220 genera, about 1900 species, dicotyledons; with alternate leaves, perfect flowers, usually with 4 sepals, 4 petals forming a cross, 6 stamens, 2 stigmas, superior ovary usually 2-celled, and a pod-like fruit, usually dehiscent. Contains important food plants, especially of the *Brassicæ* genus, and many ornamental plants, as well as weeds, but no poisonous plants. *Alyssum*, *Arabis*, *Aubrieta*, *Brassica*, *Cheiranthus*, *Cochlearia*, *Draba*, *Erysimum*, *Iberis*, *Lunaria*, *Matthiola*, *Nasturtium*, *Raphanus*, *Sinapsis*, *Thlaspi*, and *Vesicaria* are well-known genera.

Crucifix (Lat. *cruci fixus*), literally 'the Crucified One,' a cross with the effigy of Christ upon it. The C. began to replace the plain cross in churches in the reign of Constantine (d. A.D. 337). The Gk Church did not acknowledge them, and they were not commonly used in the E. till the close of the 8th cent. They were general in the W. by the Carolingian period. The earliest C.s presented Christ clothed, with open eyes, but pierced by 4 nails. The symbolic sacrificial lamb often figured on the cross, with a medallion bust of Christ, as in the Vatican cross. Later Christ appears naked except for a loin-cloth, fastened by 3 nails.

Cruden, Alexander (1701-70), scholar, b. Aberdeen, son of a bailie. He was educ. at Marischal College, Aberdeen, and then for a time confined for symptoms of insanity, finally coming to London (c. 1722) as tutor and bookseller. He became bookseller to the queen, 1735. His *Complete Concordance to the Holy Scriptures of the Old and New Testament* (including a concordance to the Apocrypha) appeared in 1737. Later he acted as a press reader, and called himself 'Alexander the Corrector' of national morals. His *Scripture Dictionary* was pub. in 1770.

Cruden, par. and coast tn of Aberdeenshire, Scotland, 8 m. from Peterhead. A battle between Malcolm II of Scotland and Canute (later King of England) is supposed to have been fought here. Pop. 3000.

Cruelty to Animals, see ANIMALS.

Cruelty to Animals Act, 1876, designed to protect animals from unnecessary suffering when used for experimental purposes (vivisection). This act permits experiments on animals for the advancement of science. Persons engaged in such experiments must be licensed and when pain is likely to be caused the use of an anaesthetic is compulsory unless the

object of the experiment would thereby be defeated. See PROTECTION OF ANIMALS Act.

Cruelty to Children, see CHILDREN, NATIONAL SOCIETY FOR THE PREVENTION OF CRUELTY TO.

Cruikshank, George (1792-1878), caricaturist and artist, b. London, the son of Isaac C. (c. 1756-c. 1811) and the younger brother of Robert C. (1789-1856), both of whom also achieved success as caricaturists. George C. had no training in art, though he once made an abortive attempt to enter the academy schools, but he was a born artist, and began to sketch as a child. Some of his drawings at the age of 7 have been exhibited. In 1811 he began to contribute to the scurrilous periodical *The Scourge*, and within a few years he was on the staff of other papers, and had begun to illustrate books. He issued many cartoons after the style of Gillray, and the subject of a considerable number issued in 1814 and 1815 was, naturally enough, Napoleon. In the latter year he became associated with Wm Hone, the author and bookseller, and his illustrations to Hone's lampoons on George IV and the managers of the queen's trial, such as 'The Queen's Matrimonial Ladder,' 'Non mi ricordo,' and 'The Man in the Moon,' attracted much attention. These squibs against George IV were reissued as *Facetiae and Miscellanies*, 1827. In 1818 he issued the first of his pictorial sermons, the famous 'Bank Restriction Note,' through which he claimed, with some reason, to have caused the death penalty for forgery to be abolished. Subsequently he issued a series of 8 plates, 'The Bottle,' 1847, and an oil-painting, 'The Worship of Bacchus,' 1862, in which he preached temperance and showed the downward path of the drunkard. Of these, perhaps, he was more proud than of any others of his work. Other temperance prints were 'The Gin Bottle,' 'The Gin Trap,' 'The Gin Juggernaut,' 'The Drunkard's Children,' and 'Sunday in London.' His other oil-paintings include 'Titania and Bottom,' 'Cinderella,' 1854 (now in the Victoria and Albert Museum), 'The Fairy Ring,' 'Grimaldi Shaving,' and 'Disturbing the Congregation.' In later years he devoted himself largely to the illustration of books, and in this direction he was particularly successful with Dickens (*Oliver Twist* and *Sketches by Boz*), Almsworth (*The Tower of London*, and 6 other books), Thackeray (*The Legend of the Rhine*), Fielding, Smollett, and Sterne. His industry was prodigious and his output enormous. He contributed largely to the *Comic Almanack*, 1835-53, the forerunner of *Punch*. Among the popular books of the period illustrated by C. are Grimm's *German Popular Stories*, 1823-6 (containing possibly his best work), and *Fairy Tales*, 1827; Scott's *Waverley Novels*; *Memoirs of Grimaldi*, 1838; *Don Quixote*, 1833; *Points of Humour* (2 vols.), 1823-4; *Bentley's Miscellany* (containing his illustrations of Almsworth's *Jack Sheppard*). *The Table Book* and *The Omnibus* were magazines

of his own. His last known work, a frontispiece to Mrs Blewitt's *The Rose and the Lily*, was done when he was 83. Three years later he d., and was buried at Kensal Green, but shortly afterwards his remains were removed and interred at St Paul's. In caricature (q.v.) he carried on the work of Rowlandson and Gillray, but without their ferocity and coarseness; in humorous drawing he stood alone, and as an illustrator he has not been excelled. He was at his best, in this last branch of art, in depicting the grotesque and terrible. See W. B. Jerrold, *The Life of George Cruikshank*, 1883; W. M. Thackeray, *An Essay on the Genius of George Cruikshank*, 1884; A. M. Cohn, *George Cruikshank: a Catalogue Raisonné*, 1924; R. McLean, *George Cruikshank*, 1948.

capacity was greatly improved. After these came the protected C., to which class belonged the *Edgar*, launched in 1893, having a displacement of 7350 tons and a speed of 19 knots. This was followed in 1895 by the *Powerful* type (displacement 14,200 tons, speed 22 knots). Later on came the class of armoured C.s of the *Cressy* type, launched in 1901, which was followed by the *Monmouth* type in 1903; the *Devonshire* type in 1905; and the *Minotaur* in 1908. The *Minotaur* had a displacement of 14,600 tons, a speed of 23 knots, and carried 4 guns of 9.2 in., and 10 of 7.5 in. The armoured C. was greatly favoured at the beginning of the present cent. to the prejudice of the battleship, but a reversal of opinion subsequently took place, and later naval

Comic Almanack

CRUIKSHANK'S CONCEPTION OF ST VALENTINE'S DAY

Cruiser (Dutch *kruiser*, to cross), war vessel primarily built for speed. It existed as early as the 16th cent. and was used for scouting, conveying, and carrying dispatches. At first it was a pinnae of small dimensions, but the operations against the pirates in the 17th cent. caused a bigger class of vessel to be built, provided with oars as well as sails and carrying heavier armament. By the middle of the 18th cent. it had developed into the frigate of 700 tons carrying 28 or 32 guns, and was improved during the naval wars with France until it reached some 1500 tons. The introduction of iron shipbuilding greatly affected the C., as it enabled speed to be developed parallel with strength of armament. The development was, however, slow. At first there was the corvette (q.v. for the modern vessel), with small steaming capacity but high sailing qualities. This was followed by unprotected C.s in which the steaming

opinion favoured the building of bigger battleships of the Dreadnought and super-Dreadnought types. This movement also led to the introduction of a new class known as the battle C., whose armament is only slightly inferior to that of the strongest battleships. To this class belonged ships of the type of the *Invincible*, launched in 1909 (displacement 17,250 tons, speed 27 knots), and the *Queen Mary* (displacement 27,500 tons, speed 28 knots), with 8 guns of 13.5 in. calibre, which was sunk at Jutland. The *Hood* (42,100 tons with 15-in. guns), which was sunk in the Second World War (see 'HOOD,' THE), and *Renown* (32,000 tons with 15-in. guns) were also battle C.s. In the First World War there was always need for a swift vessel carrying heavy armament, such craft being highly suitable for attacking warships of substantial magnitude, while at the same time being able to make wide enveloping

movements for the purpose of operating in the rear of a hostile fleet or threatening its retreat. These were essential functions of the battle C., and an excellent opportunity for the exercise of the battle C.'s powers was afforded in the battle of the Falkland Is. (q.v.), where 2 Brit. battle C.s destroyed Adm. von Spee's Ger. squadron. At the battle of Jutland, however, Brit. and Ger. battle C.s fought each other, and their powers of speed were not used in any exceptional manner. The terms of the Washington Treaty (q.v.) of 1921, however, practically sealed the doom of this type of vessel. The Washington Treaty had for a time a very important influence on the design of all types of war vessels, and in the case of C.s

increasing the total number of C.s to 70, of which 60 would be under age and 10 over age. In the naval programme for 1939 it was proposed, *inter alia*, to build 4 large 6-in. C.s. At present the Brit. Navy has (1956-7) 21 C.s. Those of the *Swiftsure* class (completed 1944-5) are of 9000 tons displacement, have 9 6-in. guns and 10 4-in. anti-aircraft guns, and a speed of 31 knots. Other classes are the 'Colony' class, *Kenya, Jamaica*, etc. (1940-5); they are of 8000 tons, have 9 6-in. guns and 8 4-in. anti-aircraft guns; the *Dido* class (1939-41), 5750 tons, 8 or 10 5.25-in. and 2 to 12 40-mm. anti-aircraft guns. The last two classes have a speed of 33 knots. Then there is the *Southampton* class, named after the big

Admiralty Photograph: Crown Copyright
H.M.S. 'SUPERB'

a limit of 10,000 tons displacement, with guns up to a maximum of 8 in., was fixed. Now generally the term C. (as distinct from Amer. battle C.s or 'large cruisers') refers (since the Washington limitations) to a light C. of not more than 10,000 tons displacement. C.s are built for speed, their function being to convoy merchant vessels and transports, pursue enemy armed ships and merchant ships, and undertake police duty on Commonwealth trade routes. The R.N. generally names them after Brit. cos., tns, dominions, and colonies. Three Brit. C.s of the *Leander* class, completed in 1934, were intended to become the standard type for large vessels, but subsequent international events made it necessary to increase the displacement. In 1938 the R.N. had 13 'Washington' and 44 other modern C.s. The Gov.'s defence plans, as expressed in the White Paper of 3 Mar. 1936, provided for

cities. They were completed in 1937-9 and vary from 9100 to 10,000 tons and have 9 6-in. guns (*Belfast* has 12) and 8 4-in. anti-aircraft guns. The only remaining 'County' class C. is *Chumberland* (10,000 tons), which fills the role of trials C. and tests all types of new equipment. The 8 *Daring* class ships, all completed since 1952, although not classified as C.s, are as large as the light C.s of earlier days. With their 6 4.4-in. guns, 10 21-in. torpedo tubes, anti-submarine mortars, and close-range weapons, the *Darings* are among the most powerfully armed ships of their size in the world.

Work on the 3 *Tiger* class C.s, which was suspended in 1946, was restarted 10 years later. Amongst other new equipment in these ships will be an automatic 6-in. gun turret, in which the rate of fire per gun will be three times that of the old-type gun. It can be expected that the

R.N. will in due course have C.s equipped to fire guided missiles (*see* GIRDLE NESS).

The Royal Canadian and New Zealand Navies have 2 C.s each. The Indian Navy also has 2 and the Pakistan Navy 1. The U.S.A. has (1956, built or building) a total of 77 C.s, ranging from the *Alaska* class of 27,500 tons to the *Janeau* class anti-aircraft C.s of 6000 tons. The total includes 2 C.s in commission which have been converted to fire guided missiles and more under construction, and one 11,000-ton C. under construction which will be driven by nuclear power. The Fr. Navy has 4 C.s (8000 tons) and 1 anti-aircraft C. of the same tonnage under construction. The U.S.S.R. has, built or building, 22 *Sverdlov* class C.s, each of 12,800 tons nominal and with 12 6-in. and 12 3.9-in. guns. Other C.s include 5 of the *Chaparin* class (11,500 tons) and 7 of the *Kirov* class (8800 tons). *See* G. Holman, *The King's Cruisers*, 1948; and *Jane's Fighting Ships*.

Crummock Water, lake (2½ m. long and ½ m. wide) of Cumberland, England, belonging to the National Trust, to the NW. of Buttermere (q.v.), with which it is connected by a stream. To the SW. is Scale Force (q.v.).

Crusades, or **Wars of the Cross** (Fr. *croisade*). The objects of these religious wars carried on by European nations against Mohammedanism between the 11th and 13th cents. were originally (1) to ensure the safety of pilgrims visiting the Holy Sepulchre, and (2) to set up Christian rule in Palestine. Later on the attacks were directed against Egypt and even Constantinople, and in the 14th cent. the conquests of the Ottoman Turks turned crusading into a defensive movement. Actually the movement was continuous for over 2 cents., hardly a decade passing without one or more expeditions. Only the most successful or the most disastrous of these, however, have taken prominent place in hist. In the 11th cent. affairs stood as follows: The mild rule of the first Moslem conquerors had for cents. allowed a Christian protectorate, first estab. under Charlemagne, to exist in Jerusalem, and Christian pilgrims were allowed to come and go quite freely. But this state of affairs was ended in 1010 by the fanatical caliph, Hakim, who destroyed the sanctuary. The protectorate passed in 1021 to the Gk Church, and in 1071 the Saracens were themselves overcome by a rougher tribe, the Seljukian Turks. Christian pilgrimage became difficult and dangerous, and in 1095 the appeals of Pope Urban II, seconded by the preaching of Peter the Hermit, led to the undertaking of an enterprise which in various forms had already been proposed by more than one pope. The turbulent feudal knights of Europe received a new outlet for their energies. Instead of being restrained by the Church with peaceful admonitions, as in the institution of the Truce of God, their warlike ardour was encouraged, organised, and dedicated to what was proclaimed to be the highest and holiest service. The *Deus vult* of Clermont found its echo in the hearts of

both princes and commoners. In 1095 sev. undisciplined hosts, including those of Walter the Penniless and Peter the Hermit, set out for the E. but perished on the way. In 1096-7 a great army under Godfrey de Bouillon, Bohemund of Otranto, and other leaders, concentrating on Constantinople, fought its way through Asia Minor, taking Antioch in 1098, and Jerusalem in 1099. A Christian kingdom was estab. with Godfrey as its first head, his brother Baldwin as prince of Edessa (Upper Mesopotamia), and Bohemund ruling at Antioch. Godfrey d. in 1100 and was succeeded by Baldwin; Bohemund was captured by the enemy, and a great Fr. expedition sent for the relief of Antioch was almost entirely destroyed. During the next half-cent., in spite of reinforcements, including fleets from Genoa, Norway, and Venice, the Christians in Syria were hard-pressed. To assist in the defence of Jerusalem the orders of Hospitalers of St John and Knights Templars were formed. In 1144 Edessa was lost, and the second crusade, under Louis VII of France and Conrad III of Germany (1146-8), ended disastrously, and its failure for a time discouraged European effort, while Muslim pressure increased on all sides.

Saladin (q.v.), sultan of Egypt, having captured Damascus in 1174 and Aleppo in 1183, now swept down through Galilee with an immense force, defeated the Christians at Tiberias and Hattin, and took Jerusalem, Oct. 1187. The news was received in Europe with consternation and rage. Fresh C. were set on foot, of which the most important was that led by Philip of France, Frederick of Germany, and Richard I of England (1189). The Germans went through Asia Minor, losing their emperor on the way by drowning; the Fr. and Eng. journeyed by sea to Acre, which had already been besieged for nearly 2 years by Guy de Lusignan. Richard distinguished himself in the capture of the city, but quarrelled with his allies, who left him to carry on the war alone. After a year of brilliant but useless exploits, he made a truce with Saladin, and returned to Europe. Another crusade, starting from Venice in 1202, became involved in Venetian and Byzantine intrigues, and instead of reaching Jerusalem assisted the deposed Isaac Angelus to regain the Gk throne: a few months later Constantinople was stormed and sacked by the Crusaders, and a Lat. empire estab. there under Baldwin of Flanders, 1204. In 1212 sev. thousand children were allowed to go on a crusade, many dying on their way from France and Germany to the It. coast. The rest embarked, but those who reached Alexandria were promptly sold into slavery. A crusade under Andrew of Hungary and others (1217-21) against the Moslem power in Egypt was a failure, but that of Frederick II, undertaken in 1228 while he was under the ban of the Church, was successful. By diplomacy, not fighting, he regained Jerusalem and the S. of Palestine, which remained in Christian hands until 1238, when it was

finally lost. The crusade led by Louis IX of France (St Louis) in 1249 was, like that of 1217, directed against Egypt, and proved even more disastrous. Louis, with the greater part of his army, was captured, and had to pay 800,000 pieces of gold as a ransom. Even after this, in 1270, he headed another crusade, but *d.* at Carthage. Among those who joined this expedition was Prince Edward of England (afterwards Edward I), who a few months later led his own followers to Acre, but achieved no results. He was the last royal crusader, except Peter of Cyprus, who in 1365-7 carried on a holy war in Egypt and Syria, but was assassinated. Though later on sev. popes preached united war against the infidels, nothing came of it. Even when Constantinople was captured by Mohammed II in 1453 Pius II failed in trying to raise a crusade for its recovery. The Templars were suppressed, but the Hospitallers, at Rhodes and afterwards at Malta, continued to be a bulwark against Turkish advance in the Mediterranean.

Though the C. failed in effecting the spiritual objects for which they were intended, they benefited Europe indirectly in a number of ways. Trade between Europe and Asia Minor was greatly stimulated; the merchants and mariners of the Mediterranean, especially of Venice and Genoa, found the demand for their shipping increased manifold, both for the transport of armies and for the bringing of new and rare commodities from the E. European craftsmen, and soldiers learned valuable lessons from Saracen skill in art and in war. Sugar, cotton, and many other articles now of everyday use first became known in Europe through the C. In addition, the cultural contacts which the C. maintained (and even fostered) between Europe and the E. had a stimulating effect on the medieval learning of Europe, and to some extent anticipated and paved the way for the Renaissance (q.v.). See T. Archer and C. H. Kingsford, *The Crusades*, 1894; S. Lane-Poole, *Saladin and the Fall of the Kingdom of Jerusalem*, 1898; Villehardouin and De Joinville, *Memoirs of the Crusades* (Everyman's Library), 1908; E. Barker, *The Crusades*, 1923; S. Runciman, *A History of the Crusades* (3 vols.), 1951-4.

Crusca, Accademia della, one of the most famous of the many It. academies, founded at Florence, 1582, by Grazzini, and still in existence. 'Crusca' means the bran which remains after the bolting of flour. The A. d. C. or Furfuraturum aimed at purifying and cultivating It. language and literature. Its arms were a bolter with the motto 'Il più bel fior ne coglie.' Its *Vocabolario degli Accademici della C.* (1st ed. 1612) is still a model for works of the kind. The Fr. Academy was modelled on this one. Eng. residents in Florence who pub. inferior sentimental poetry and prose about 1785 were nicknamed the Della Cruscan school. In England many of their productions appeared in the *World* and the *Oracle*. Popular for a time, their work received its deathblow from the criticisms of

Gifford, in his *Baviad* and *Maeviad*, 1851. The Della Cruscans included Topham, Mrs Plozzi, and James Boswell.

Crusius, Otto (1857-1918), Ger. classical philologist, b. Hanover. Prof. at Tübingen Univ. in 1886, at Heidelberg in 1898, and Munich in 1913. In 1888 he became editor of the *Philologus*. He produced *De Babrii aetate*, 1879 (and ed. the text of Babrius, 1879); *Analecta ad Paroemiographos Graecos*, 1883; an ed. of *Plutarchus de proverbii Alexandrinorum*, 1889-94; *Zur handschriftlichen Überlieferung der Paroemiographen*, 1891. Other works are *Beiträge zur griechischen Mythologie und Religionsgeschichte*, 1886; *Untersuchungen zu den Mimetiden des Herondas*, 1892 (ed. this text and trans. it into German, 1893; new ed., by Herzog, 1926); *Die delphischen Hymnen*, 1894; a 4th ed., enlarging it, of the anthology of Gk lyric poetry compiled by Bergk and Hiller, 1897; and a biography of Erwin Rohde, 1902.

Crustacea (Lat. *crusta*, crust, referring to the incrustation of the external skeleton with lime in the larger species), large and greatly varied class of animals, classed with insects, spiders, and myriapods (centipedes and millipedes) in the phylum Arthropoda. The astonishing variety in common characteristics will be recognised when it is seen that the group includes crabs, crayfish, lobsters, barnacles, acorn-shells, water-fleas, woodlice, pill-bugs, sand-fleas, and shrimps, and is composed of both terrestrial and aquatic animals, the latter being either marine or fresh-water species. The features which are shared by all are few, and in degraded forms some of the chief characteristics are lost. Nearly all breathe by means of gills, the head has 5 pairs of appendages (namely 2 pairs of antennae and 3 pairs of jaws), the thorax bears numerous appendages which are usually biramous, and the segmented abdomen also frequently has limbs. Reproduction is sexual, the sexes being nearly always distinct, and all crustaceans are oviparous; the female carries her eggs with her under the abdomen or thorax until they hatch, when a series of extraordinary metamorphoses generally takes place. The distribution of C. is very wide. They frequent the sea at all depths, occur in fresh-water lakes and rivers, and a few dwell under the bark of trees; the extinct species date from the Cambrian period. They function as scavengers of the sea, are used as bait for fish, and by some people crabs, lobsters, prawns, shrimps, and crayfish are regarded as food. About 23,000 living species have been classified, the grouping being based upon the character and number of the segments and appendages. The Trilobita were formerly classed with the Entomostraca, but are now generally considered as distinct arthropods, and the two sub-classes are known as the Entomostraca and Malacostraca. The Entomostraca contains four orders of small aquatic animals: (1) Branchiopoda (q.v.) or Phyllopus, e.g. the brine-shrimps and water-fleas; (2) Ostracoda, e.g. the genus *Cypris*;

(3) Copepoda, e.g. Cyclops and fish-lice; (4) Cirripedia (barnacles), e.g. the barnacle-goose and acorn-shell. The Malacostraca contains sev. orders of which the chief are the Decapoda, e.g. the crab and lobster; Amphipoda, e.g. the sand-hopper; Isopoda, e.g. the wood-lice; Stomatopoda, e.g. *Squilla*; Cumacea, e.g. *Cuma*.

Crutched, or **Trinity Friars**, order of friars who came to England from the Continent in 1244, called *Fratres cruciferi*, or *croisiers*, from the staff, bearing a cross on the top, which they carried in their hands. This name was in England corrupted into 'Crouched,' or 'Crutched,' F., and is still preserved in Crutched-friars, Mark Lane, E.C. They belonged to the Trinitarians who followed the Augustinian rule. Later they wore a scarlet cross on their habits, changed to a blue cross in 1460 by Pope Pius II. They had monasteries in London (between Old Jewry, Aldgate, and Mark Lane), Oxford, and Reigate, and also in Scotland and Ireland at the Reformation. They were suppressed by Pope Alexander VII in 1656.

Cruveilhier, Jean (1791-1874), Fr. pathologist, b. Limoges. He studied medicine at Paris, graduating in 1816. He was prof. of surgery at Montpellier (1823-5) and Paris (1825-36). In 1836 a new chair of pathological anatomy was created for him at Paris Univ., which he held for 30 years. His best work, *Anatomie Pathologique du Corps Humain*, 1829-42, is a sumptuous atlas with beautiful coloured plates, perhaps the best of its kind ever pub. It includes the first description of disseminated sclerosis (see *SCLEROSIS*). See *Das Leben Jean Cruveilhiers*, 1931.

Crux, see *SOUTHERN CROSS*.

Cruz, St Juan de la, see *JOHN OF THE CROSS*, ST.

Crwth, or **Crowd**, obsolete lyre-shaped musical instrument with 6 strings, 4 being played with a bow and 2 plucked by the thumb. It is very ancient in origin, probably the oldest stringed instrument played with the bow, mentioned about AD 609 by Venantius Fortunatus, bishop of Poitiers, in some elegiacs as 'chrotta.' The C. trithant had only 3 strings. Bow instruments probably came originally from India, but the C. was apparently the first of the viol family in Europe. It was an especial favourite in Wales, and was heard there as late as 1801. In England, Ireland, and Brittany it was also much played. The sound-holes were circular, the bridge slanted to the right, its left foot passing through the sound-hole and resting on the back of the instrument, thus doing the work of a sound-post. The C. is frequently mentioned in T. Watts-Dunton's romance *Aylwin*, 1898.

Crying Bird, see *COURLAN*.

Cryolite, mineral with a shimmering pearly lustre, found in abundance on the W. coast of Greenland. It is composed mainly of the fluorides of aluminium and sodium (3NaF·AlF₃). It is largely employed in the production of aluminium.

Cryophorus, apparatus invented by Wollaston to demonstrate the loss of

heat due to evaporation. The instrument consists of a bent glass tube provided with a bulb at each end; it is prepared by introducing a small quantity of water, which is boiled until the tube and bulbs contain only water and water vapour, when the apparatus is hermetically closed. Calling the bulbs upper and lower, for convenience, all the water is passed into the lower bulb, the upper bulb being surrounded by melting ice which condenses the vapour as rapidly as it is formed in the lower bulb. The absorption of heat soon cools the water in the lower bulb to freezing point and finally it becomes ice. It should be pointed out that the water in the lower bulb can be a little above the temp. of 0° C. because it is exposed to a pressure less than 1 atmosphere and water freezes above 0° C. under such circumstances.

CRWTH

Crypt (Gk *kryptos*, hidden), subterranean, vaulted structure under a church (especially directly beneath the choir or chancel), used for sepulture, or (rarely) as a chapel. Originally it was a subterranean chapel in the catacombs. C.s, when large enough for an altar and having room to worship the relics, grew out of the confessions or underground tombs designed to receive the bodies of saints, martyrs, and church dignitaries. C.s were most usual between the 9th and 13th cents., but were not common after the Romanesque period. One of the finest examples is that of the cathedral at Glasgow. In England there are good examples under the cathedrals of Canterbury (1096), St Paul's (London), Winchester, Worcester, Hereford, and Gloucester. Others are under Chartres Cathedral; cathedral of Otranto; St Mark's, Venice; St Eutrope, Saintes; and St Peter's, Rome.

Cryptogamae (Gk *kryptos*, hidden, *gamos*, marriage), name given to the 24th class of the Linnaean system of

plants. It is used to distinguish the plants which do not possess perianth, stamens, pistil, or any floral parts like the *Phanerogamæ*. They are mostly reproduced by spores. The C. consists of 3 groups, the Thallophyta, e.g. seaweeds and fungi; the Bryophyta, or mosses and liverworts; the Pteridophyta, e.g. ferns and selaginellas.

THE CRYPT, CANTERBURY CATHEDRAL

Cryptography (from Gk *kryptos*, hidden, secret; *graphein*, to write), or writing in cipher, the art of writing messages in such a way that they can be read only by those possessing the key to the cipher. Plutarch tells of a system in use among the Spartan generals (c. 450 bc), known as the *scytale*, from the staff used to write and to decipher their messages. The writer wrapped a long strip of parchment or a narrow belt round his staff, so that the edges touched all the way round. The message was then written along the joined edges, so that each letter was written half on one side of the join and half on the other. The strip was then unrolled and sent to its destination. It could only be read by rolling it on a staff similar to that used by the sender, so that the letters again became whole. This method, known as the *transposition cipher*, was excellent, combining a system of cipher with a method of concealment; but it was useless once the secret was known, as a suspicious strip of parchment or belt needed only to be tried on different sizes of staff to break the message. Then there is the *substitution cipher*: Julius Caesar (c. 50 bc) made use of such a cipher, by which the 4th letter of the alphabet stood for the 1st, the 5th for the 2nd, and so on. A cipher formed by reversing

the order of the alphabet was in use among the Jews, as we learn from Jeremiah xvi. The Eng. friar Roger Bacon (c. 1214–94) described sev. cipher systems of a fairly elementary nature. His actual knowledge of the subject, however, seems to have been great; indeed, a book ascribed to him is written in a cipher which has never been broken. A *Liber Ziferarum*, written c. 1380 by Gabriele de Lavinda, chief papal cryptographer, gives instructions for the breaking of simple substitution ciphers. Nearly a century later, Cicco Simonetta (1410–80), cryptographer to the duke of Milan, wrote an important manual, *Regule ad Extrahendum Litteras Ziferatas sine Exemplo*. The first comprehensive writer on the subject was John Trithemius (1462–1516), abbot of Spohnheim. At the request of the duke of Bavaria he composed *Polygraphia* (1500). The same prelate may also be the author of *Stenographia*, pub. some 50 years later at Lyons. Giovan-Battista della Porta (1535–1615), a Neapolitan mathematician, pub. in 1568 *De Furtivis Litterarum Notis*, dealing also with a double substitution. More comprehensive is the *Traité des Chiffres*, 1586, by the French Blaise de Vigenère (1523–96). During the period of the Civil war in England (1642–9), most of the important messages from the leaders of both parties were sent in cipher. The Royalists especially made free use of this means. Charles I and his queen were adepts at the art, and a large number of their letters and papers remained untranslated until the 19th cent. Of particular interest is the *Great Cipher* of Louis XIV, which was used in France in the late 17th and early 18th cent. Its author was Antoine de Rossignol, head of the *Chambre Noire* (the Fr. cryptographic dept) from 1627 to 1678. During the 18th cent. the practice of C. regressed steadily, but in the 19th cent. new methods were invented. Adm. Sir Francis Beaufort (1774–1857) devised the Beaufort cipher. Sir Charles Wheatstone (1802–75) devised the Playfair cipher (which during the First World War was generally adopted for military communications). Edgar Allan Poe (1809–49) was a very able cryptanalyst. Interesting are the Kasiski method of cipher-analysis, pub. in 1863 (F. W. Kasiski was a Major of the Russian General Staff), and the Bazeries Ciphering (cylinder invented in 1899 (Étienne Bazeries was head of the Fr. cryptographic bureau). In recent times electric ciphering machines have been introduced.

The various different techniques of C. fall mostly under the following heads: (1) Writing with invisible ink which becomes visible when the paper is heated; (2) the insertion of superfluous words and letters, where it is agreed upon that words at regular intervals form the message, the rest being padding; (3) the misplacing or rearrangement of words or letters; (4) reading vertically or diagonally; (5) the substitution of letters; (6) by stencil plates or papers which are placed over the cryptogram, the words which

then appear forming the message; (7) the use of 2 or more letters (Bacon's system); (8) the employment of numerals instead of letters, a system often used by Charles I; (9) by a special key containing an arbitrary code; (10) the use of specially arranged counterpart tabulations, which vary at different stages in the message. A description of Hogg's secret code will give some idea of a cipher of this latter class. It consists of 2 columns, 1 fixed and containing the letters of the alphabet, another sliding by the side of the first column and containing 2 alphabets, 1 continuing below the other. A key word is agreed on by the correspondents, and this word is repeated again and again until the message be ended. The working may be best explained by an example. Suppose the key-word be *Edna*. The sliding column is then moved so that the *E* on its upper alphabet comes opposite the *A* on the fixed alphabet. Each letter on the sliding alphabet is used as a substitute for its equivalent on the fixed alphabet. With the columns in this position the 1st letter of the message is written down. Then the 1st of the sliding scale is moved opposite the fixed *A* and the 2nd letter written down. Then *N* is moved opposite *A* and the 3rd letter written. The 4th letter does not change. For the 5th letter the *E* scale is again used, and so on. Thus, with the key-word given above, the sentence 'Send help at once' would appear as 'Whad thyp ew bugh.' The first work of the decipherer in cases of this kind is to see the letter which is used most frequently. In Eng., this will correspond to the letter *e*. The letters which are most frequent after *e* are the following: *t, a, o, n, i, r, s, h, d, l, c, w, u, m, f, y, g*, etc. All the single letters must be either *A, O, or I*. The double letters which recur most frequently are *ci, oo, ff, ll, ss*, and the commonest words of 2 letters are, roughly speaking, *of, to, in, it, is, be, he, by, or, as, at, if, etc.* A special study of the subject will discover a great number of symmetrical combinations of letters which occur with greater or less frequency in all languages, and which will materially aid in the work of solving cryptograms. See P. Thiéckesse, *Treatise on the Art of Deciphering and of Writing in Cipher*, 1772; A. Langie, *Cryptography* (trans.), 1922; A. Fagl, *Système des chiffres*, 1926; W. F. Friedman, *The History of Codes and Ciphers*, 1936; L. Sacco, *Manuale di crittografia*, 2nd ed., 1936; R. Badouin, *Éléments de la cryptographie*, 1939; A. d'Agapeyeff, *Codes and Ciphers*, 2nd ed. 1942.

Cryptomeria, small genus of evergreen coniferous trees, family Pinaceae, of which *C. japonica*, Jap. cedar, 120 to 150 ft. of China and Japan, is valued for its fragrant timber; and has many varieties, of which the dwarf forms are esteemed for rock gardens.

Cryptoprocta Ferox, species and genus of Viveridae, or civets, is the fossa of Madagascar and constitutes in itself the family Cryptoproctidae. In appearance

it resembles a large pole-cat, 3 ft in length, and in colour it is reddish-brown. It is active, carnivorous, and when attacked is said to produce a skunk-like smell from its scent glands.

Crystal Palace, the main feature of the Great Exhibition (see EXHIBITION) of 1851, re-erected for popular entertainment at Sydenham and opened by Queen Victoria in 1854. From 1855 to 1901 the famous C. P. Saturday concerts (symphony concerts) were held there under the direction of August Manns. From 1859 to 1912 the Handel festival took place at the C. P. every 3 years. It was destroyed, except for 2 towers, by fire in 1936. To prevent their providing a landmark for enemy aircraft the towers were pulled down in the Second World War. See also ALEXANDRA PARK; SYDENHAM.

Crystalline Rocks, a geological term for rocks with a coarsely crystalline structure. As usually employed the term describes 2 groups of rocks: the coarsely crystalline intrusive igneous rocks, such as granite; and the coarsely recrystallised metamorphic rocks, which represent sediments and igneous rocks altered by increased temp., pressure, and the action of circulating solutions at depth in the earth. The formation of the C. R. within the earth contrasts with the breakdown of rocks due to weathering at the surface of the earth. The latter process forms new sediments, whereas the former gives new metamorphic and igneous rocks. Strictly speaking the evaporites, the rocks such as salt and gypsum beds, formed by evaporation of sea-water can be classed as C. R., but in practice the term is rarely applied to them.

Crystallisation, see CRYSTALLOGRAPHY.

Crystallites, stages in the formation of crystals which occur in volcanic rocks. When examined under the microscope, these rocks consist largely of a glassy base, and through this base are scattered great numbers of tiny crystals and C. C. may be produced by allowing a solution of sulphur in carbon disulphide, mixed with Canada balsam, to evaporate slowly, and the development of the C. can then be noted on a microscope slide.

Crystallography (Gk. *krystallos*, ice; *graphein*, to write), the study of the form, structure, and properties of crystals. When matter passes into the solid state from the liquid or the gaseous state, it may take an amorphous (shapeless), or a crystalline form, when there is a remarkable similarity between crystals of the same substance. The formation of crystals appear to be favoured by a gradual transition from the fluid to the solid state, as when a substance in solution is deposited by the gradual cooling or evaporation of the liquid or when the transition occurs directly from the gaseous to the solid state. The molecules then tend to arrange themselves so as to form polyhedra, and this tendency is encouraged by the presence of a crystal of the same, or of a similar, substance. Most organic and inorganic substances can be obtained in a crystalline form: sugar, salt, and alum readily crystallise from solution; metals

such as cast iron and zinc solidify from fusion in a crystalline form; but the most perfect examples are those resulting from the gradual cooling of the earth's crust. The science of C. deals mainly with minerals thus crystallised, and may therefore be regarded as a sub-div. of the science of mineralogy. When the object of study is the form of crystals, it is known as *Morphological* or *Geometrical* C.; the structure and properties are studied under the name of *Physical* C.

There are 3 principles which characterise the crystalline form; they are indicated by the terms constancy of angles, symmetry, and nationality. Although there may be irregularities and imperfections of form in crystals of the same substance the angles between their faces are invariably the same. The symmetry of crystals is not necessarily one of position, but is one of direction; that is, the edges and faces may be arranged so as to give the same direction with respect to certain axes or planes without correspondence in linear dimensions. A cube is symmetrical about its central points; that is, its faces are arranged in parallel pairs about that point. It is also symmetrical about certain axes: the lines joining opposite corners (4 axes); those joining the middle points of diagonally opposite edges (6 axes); and those joining the middle points of opposite faces (3 axes), giving a total of 13 axes. A cube may also be divided into 2 symmetrical halves by certain planes: those passing through 4 corners (6 planes), and those passing through the middle points of 4 edges (3 planes); giving a total of 9 planes. A cube therefore is symmetrical with respect to 23 elements altogether. Other crystalline forms display fewer types of symmetry. The principle of rationality depends on certain systems of notation by which the directions of the faces are indicated. Suppose 3 edges formed by the intersection of 3 faces be taken as axes of reference. Any face can now be defined by the intercepts cut off by it on these 3 axes. As the direction, but not the dimensions, of the face is required, the ratio of these intercepts is sufficient for the purpose. It has been found empirically that these ratios are simple numbers, as 1 1 2, 2 3 1, etc., and they can never involve incommensurable surds as $\sqrt{2}$ or $\sqrt{5}$. The system of notation indicated is known as Weiss's, but it has been to a great extent superseded by Miller's, in which the reciprocals of Weiss's figures are used. Thus the Weissian index (231) becomes, according to Miller, $\frac{1}{2} \frac{1}{3} 1$, or 3 2 6.

Systems.—According to the number and nature of the axes of symmetry, crystals may be divided into 6 groups or systems: (1) Cubic or isometric system, where the 3 crystallographic axes of reference are at right angles to each other and are equal in length. (2) Tetragonal or pyramidal system, where the 3 axes are all at right angles to each other, but only 2 are equal. (3) Rhombic, orthorhombic or prismatic system, where the axes are all at right angles, but are of different lengths.

(4) Oblique or monoclinic system, where 2 of the axes are at right angles and the 3rd oblique, all the axes being of different lengths. (5) Anorthic or triclinic system, where the angles between the axes are all oblique and the axes of different lengths. (6) Hexagonal system, where there is 1 prin. axis of symmetry, and 6 axes of symmetry at right angles to it. Where all the planes or faces required by the complete symmetry of the system are present, the form is said to be holohedral. Sometimes only half of the full number of faces are present; the form is then said to be hemihedral, and when only a quarter are present the form is called tetrahedral.

Crystals corresponding exactly to the types as set down in the systems are comparatively rare, imperfect or multiple development rendering it often necessary to assume the existence of faces which cannot be observed. Where a prism is terminated by pyramids, it often happens that 1 end only is complete, the other forming the surface of attachment to the rock. Occasionally *hemimorphism* is met with; this is a condition in which the ends belong to different forms. Crystals are often massed together to form a group. *Parallelism* then occurs, in which 2 crystals are compounded so that a line joining their centres lies along a crystallographic axis or is parallel to it. Alum commonly shows this phenomenon. In *twin-grouping* 2 crystals have a common face. If the crystals be regarded as penetrable, and the faces in contact are looked upon as moved parallel to themselves each through the other crystal, a form is obtained which is known as a penetration twin. There may be 3 or even more individuals in such a group, when their identification by form may become somewhat difficult. Many other irregularities occur, such as are commonly produced in the laboratory when a fairly regular individual is introduced into a solution to promote the deposition of the solid. Certain faces are developed at the expense of others, producing a distorted condition. When imperfections are so numerous as to disguise the crystalline structure of a mineral completely, it is said to be *massive*.

Physical Crystallography.—There are certain physical properties characteristic of the crystalline form. By *cleavage* is meant the tendency of a crystal to split along certain planes when subjected to a wedging force. These planes are always parallel to a face or a possible face of the crystal. When a crystal is broken to pieces by a crushing blow, the fragments usually are bounded by a few planes only, showing the tendency to break in particular directions. When a crystal is struck by a sharp point, percussion lines are produced which agree in number and direction with the symmetry of the face. A crystal immersed in a solvent is acted upon in a manner which shows differing degrees of resistance according to the symmetrical arrangement of the particles. Etched figures are produced which beautifully illustrate the simple form of

the particular crystals. The hardness of a crystal face depends on its direction.

The optical characteristics of various crystals are often used as an aid to identification. They may be classified primarily as opaque, translucent, and transparent. Opaque crystals do not allow light through at all, translucent crystals allow light to pass without allowing definite outlines to be seen, just an oiled paper and ground glass act. Transparent crystals allow

ray. Crystals which possess 1 such axis are called *uniaxial*; to this class belong hexagonal and tetragonal crystals. Those with 2 optic axes are known as *biaxial*; such are rhombic, oblique, and triclinic crystals. The colour of crystals may be due to their own inherent absorptive qualities, when they are known as *idiochromatic*; or may be due to adventitious substances, when they are called *allochromatic* crystals. The behaviour of crystals

Cubic System: 1. Relation of Cube to Octahedron; 2. Cubic Octahedron. *Tetragonal System:* 3. Square Octahedron (obtuse). *Rhombic System:* 4. Rhombic Octahedron (obtuse); 5. Rectangular Prism. *Monoclinic System:* 6. Prism in which 2 edges are truncated by the face and producing an oblique 6-sided prism. *Triclinic System:* 7 and 8. Oblique Rhomboidal prisms. *Hexagonal System:* 9. Double 6-sided pyramid.

light to pass through, but the direction of the ray is bent or refracted. Crystals of the cubic system are isotropic, that is, they refract singly. Other crystals are doubly refracting, the ray being split into 2. This property is best illustrated in calcite, or Iceland spar. It is found, however, that the difference in direction of the transmitted rays varies according to its direction with respect to an optic axis. When the ray travels parallel to an optic axis, it is transmitted as a single

with respect to heat corresponds to their optic properties; the conductivity is greatest along the optic axes. Expansion by heat also varies in different directions, producing change of form.

Substances identical in chemical composition may crystallise in 2 different forms, see DIMORPHISM. An example of trimorphism is *Silica* crystallised in the hexagonal (tetartohedral) system as quartz, in the hexagonal (holohedral) system as tridymite, and in the rhombic

system as *asmanite*. Minerals of analogous constitution often have similar crystalline forms. Such a condition is termed isomorphism, q.v. See A. E. H. Tutton, *Crystallography and Practical Crystal Measurement*, 1922, and *Natural History of Crystals*, 1924; A. Joffé, *The Physics of Crystals*, 1928; D. B. Briggs, *The Study of Crystals*, 1930; and A. W. Wooster, *A Text Book on Crystal Physics*, 1938.

Crystallomancy (Gk *krustallos*, crystal; *manieia*, prophecy, divination), means of divination by gazing fixedly into a crystal, mirror, or pool of ink. This practice has been followed in all ages as a means of foretelling the future. A beryl was most often used. The operator, having muttered certain formulas over it, handed it to a pure youth or maiden, who was then supposed to be able to reveal the future. The desired knowledge was obtained by means of written characters on the crystal, or by the appearance there of the spirits invoked. Dr Dee was a noted adept at C. 2 of his 'magic mirrors' being now in the Brit. Museum. See Shorthouse, *John Ingleseant*, 1881; books on crystal-gazing by Melville, 1903, and Thomas, 1905.

Crystals, Etching of, see ETCHING.

Csába, see BÉKÉSCSABA.

Csárdas (Hungarian *csárda*, tavern), Hungarian national dance, consisting of 2 movements, *andante* and *allegro*, in 3 or 4 time throughout. The 2 parts are called the *lassu* and the *friss*, the former being mostly in the minor mode, the latter in the major. Any number of couples may dance it, all doing different steps and figures.

Csepel: 1. Is. of Hungary, enclosed by 2 arms of the Danube (q.v.), just S. of Budapest (q.v.). It is 30 m. long, and is a rich market-gardening dist.

2. Industrial suburb of Budapest, at the N. end of C. is. It is a busy riv. port, has engineering industries (machine-tools, motor-cycles, bicycles, sewing-machines) and an oil refinery, and manufs. paper and felt. Pop. 20,000.

Csokonai (Csokonay) Vitéz, Mihály (1773-1805), Hungarian poet and prof. at Debrecen. He was above all a lyricist, and inspired by the Hungarian folk-songs he helped to develop the national poetry. Among his most popular works may be mentioned *Magyar-Musa*, 1796; *Ananyt-lás*, 1803; *Dorottya*, 1804 (similar in style to Pope's *Rape of the Lock*); *Andkeoni Dalok*; *A Pásztor Király*, 1806. His collected works first appeared in 1844-7.

Csoma de Kőrös, Alexander (Sandor) (c. 1798-1842), Hungarian traveller and orientalist, educ. at Nagy-Enyed College, then at Göttingen. His life-long ambition was to discover the real origin of his race—the Magyars—supposed to have come from Asia, but he d. leaving the problem unsolved in spite of all his efforts. While journeying to Tibet and China to continue his researches, he d. at Darjeeling. See life by T. Duka, 1885.

Csongrád, mrkt in Hungary, in C. co., on the Tisza (q.v.), 24 m. NNW. of Hódmezővásárhely (q.v.). It has flour and brick industries. Pop. 26,000.

Csongrád County, see HÓDMEZŐVÁSÁRHELY.

C.S.R., see CZECHOSLOVAKIA.

Ctenophora (Gk *kteis*, comb; *phoros*, bearing), large div. of the Coelenterata (q.v.) which consists of free-swimming marine animals, gelatinous in structure, and usually phosphorescent. *Cestus veneris*, Venus's girdle, is a beautiful example.

Ctesias (fl. c. 400 BC), Gk physician and historian, native of Chidus, Asia Minor. He accompanied the expedition of the younger Cyrus against Artaxerxes, and was captured by the Persians at the battle of Cunaxa, 415. For about 17 years he then remained as physician at the court of Artaxerxes Mnemon. A contemporary of Herodotus, his jealous mind is revealed in his attempt to depreciate that historian's work. Fragments of his *History of Persia*, in 21 books, and *Treatise on India* are extant, and there are abridgements of each by Photius. He is more important as a source of remembrance than as a serious historian. Fragments of his works have been ed. by C. Müller (appendix to C. Dindorf, *Herodotus*, 1844). See J. Mahaffy, *History of Greek Literature*, 1895.

Ctesibius (c. 150 BC), Gk physicist of Alexandria, famous for various mechanical inventions, such as the force-pump, hydraulic organ, and other machines. C. was first to discover the elastic force of air and to apply it as a motive power. Hero of Alexandria was his pupil and helper.

Ctesiphon (Gk *Ktésiphōn*), anct city of Mesopotamia, on R. Tigris, 20 m. SE. of Bagdad, materials for which city were supplied by its ruins. Mentioned by Polybius (v. 45) and Ammianus (xxiii. 6), it rose to importance under the Parthian, and later Persian, empire. Strabo describes it as the winter residence of the Parthian kings, and Tacitus (*Ann.* vi. 12) calls it 'redes imperii.' The modern equivalent is Tak-i-Kesra, while the ruins of anct C. and of Seleucia (on opposite bank) are together called Al Madain (the two cities) by the Arabs. It was captured by various Rom. emperors between AD 116 and 362. In the 4th cent. C. was the cap. of the Sassanian dynasty. Yazdgerd surrendered it to the conquering Arabs, 637. The facade and arched hall or throne-room of a marvellous palace, said to have been built by Chosroes I., are included in the ruins left. During the First World War an important battle was fought here between the Turks and the Brit. In the summer of 1915 Gen. Sir Charles Townshend advanced up the R. Tigris, capturing Amara and Kut-el-Amara. Pushing on from here with an inadequate force he advanced towards C. and on 21 Nov. drove the Turks from a strong position at Laji and then prepared for an assault on their position at C. itself. He attacked on the night of 22 Nov.; but, though he met with some initial success, the Turkish reinforcements were so overwhelmingly strong that Townshend was compelled to withdraw to Kut-el-Amara, where he eventually surrendered. See

S. W. G. Benjamin, *Persia and the Persians*, 1887; and O. Reuter, *Die Ausgrabungen der deutschen Ktesiphons-Expedition im Winter 1928-9* (with bibliography), 1930.

U.N.A.

THE PALACE OF KTESIPHON

The parabolic vaulting has a span of 86 ft. On the left is the façade of the east wing of the palace.

Cuanhuahuac, *see* GUERNAVACA.

Cuba, largest is. of the W. Indies, an independent rep., at the mouth of the gulf of Mexico, 130 m. from Florida, separated from it by Florida Strait. Lies between 74° and 58° W. long., and 19° and 23° N. lat. Separated from Haiti on the E. by Windward Passage, from Jamaica on the S. by the Caribbean Sea, from Yucatan (Mexico) on the W. by Yucatan Channel. Length from Cape Maisí (E.) to Cape San Antonio (W.) 730 m.; breadth 20-90 m.; area (with Is. of Pines and many others) 44,218 sq. m. The coast-line is mostly abrupt and steep; a large marshy depression (*trocha*), 45 m. wide, connecting Morón and the S. coast, divides C. into two distinct parts, E. and W. There is a series of terraces on the E. The coasts are very dangerous owing to reefs and shallows extending nearly 24 m. out to sea, but there are many good harbours and bays, as at Havana (cap.). Guantánamo, Santiago de Cuba, Manzanillo, Bahía de Jagua, Cabañas, Padre, Nuevitás, and Matanzas. The prin. ranges are the Sierra Maestra (culminating in Pico Turquino or Monte Azul, about 6600 ft), the Sierra de los Organos (Pico de Guajabon, about 2000 ft), and the Sierra de Trinidad. The rivs. are not very large, the chief being the R. Cauto, flowing into Manzanillo bight; others are R. Saza, draining the swamps (*ciénegas*) to the N. of the Zapata peninsula, and Sagua la Grande. The climate is tropical, average temp. 77°, rarely falling as low as 50°. Chief rainy season, May to Oct. Earthquakes are more frequent in the E. than in the W. The numerous forests contain mahogany, ebony, cedar, fustic

wood, besides yielding dye-woods, fibres, gums, and resins. Flowers and shrubs also abound, including the royal palm. Bats, agoutis, and the solenodon are the only indigenous mammals. Birds are very numerous. The crocodile and caiman are found in the marshes. Other reptiles are the boa and iguana. C. is famous for scenic beauty, the Yumuri valley being one of the most lovely dists. of the is.

The chief products are sugar (over half the cultivated area being planted with sugar-canes, especially in Santa Clara and Matanzas, which supply one-quarter of the world's crop), and aromatic tobacco in Pinar del Río, particularly in the dist. of Vuelta de Abajo, the finest being produced on the banks of the San Sebastian, and made into the famous Havana cigars. Coffee-planting is now of minor importance, and none of the crop is exported. Henequén fibre, however, represents one-eighth of world output. Other products are Indian corn, maize, rice, cacao, indigo, potatoes. There are many fruits (oranges, bananas, lemons, shaddockes, figs, etc.) and vegetables; mallochia grass and cassava are grown largely for the U.S. markets; cattle and poultry breeding are carried on, and wax and honey produced. Over 1,000,000 tons of sugar were produced in 1909, largely exported to the U.S.A., while in 1953-4 exports alone reached 5.4 million tons. In the same year the tobacco crop was 90,000,000 lb., coffee 435,000 bags (each 132 lb.). In 1954 the U.S.A. sent 75 per cent of imports and received over 68 per cent of the exports. Exports are mainly sugar, hemp, molasses, and tobacco; imports food, beverages, textiles, and machinery. Values in 1954 were: imports, £175,000,000; exports, £193,000,000.

Iron-ore is mined by Amer. companies near Santiago and Juragua. There are also manganese deposits, still some copper in the Sierra del Cobre, asphaltum in the bay of Cárdenas, and salt. Gold and silver are exported in small quantities. There are 6000 m. of railway, admirably managed (public services 3000 m., private lines on plantations and in mining areas, 3000 m.). There are about 2040 m. of roads. Automobiles are much used, and electric street cars run in most tns. Hotels are generally good. There is no colour bar. Spanish is the language of the is., but Eng. is widely understood. There is not a State Church. Education is free and compulsory. In 1861 only 19 per cent of the pop. could read and write, in 1925 85 per cent; but the percentage of illiterates rose in 1945 to 35.6. In 1950 only half the children of elementary school age were actually attending the 6250 schools provided. There are 21 gov. secondary schools, plus a commercial school and a normal school in each of the 6 provs. The Havana Univ. was founded in 1721, but until its enlargement under Amer. auspices in the first quarter of this century no broad advance was made in secondary or higher education. Cock-fighting is a popular national sport. Bull-fights were abolished in 1899. In

1922 the first broadcasting station in Lat. America was installed at Havana. Chinese coolies and Negroes are much employed for labour. Chief tns: Havana (cap.), Holguin, Camagüey, Santa Clara, Santiago de Cuba, Sancti Spiritus, Cienfuegos, Guantánamo, Bayamo, Manzanillo, Ciego de Avila, Pinar del Río, and Matanzas; the 6 provs. are Havana, Oriente, Santa Clara, Camagüey, Matanzas, and Pinar del Río.

History. C. was discovered by Columbus during his first voyage, in Oct. 1492; he saw sev. of the natives going about with fire-brands in their hands, and certain dried herbs, which they rolled up in a leaf and, lighting one end, put the other in their mouths, puffing out the smoke. A roll of this kind they called a *tabaco*. C. was colonised by Spaniards about 1511, Negroes replacing the Indians as slaves early in the same century; it was a Spanish possession till 1898. (The is. was actually under Brit. rule for one year, 1762-3, when it was returned to Spain in exchange for Florida.) In the 17th cent. C. was harassed by raids of Eng., Fr., and Dutch, who built the primitive fortifications of Havana and Matanzas as defences. The slave trade was abolished early in the 19th cent., and in 1880 the Sp. Cortes passed an Act to abolish slavery. The slaves were emancipated between 1880 and 1886. During 1868-78 there was war against the Spaniards for Cuban independence. The separatist and autonomous movement culminated (1895) in rebellion, and although the Madrid Gov. showed a conciliatory spirit the agitation was continued. In 1898, during this second war for independence, the U.S. Gov. carried out their threat of intervention by sending the battleship *Maine* to Havana. On 15 Feb. of that year the *Maine* was blown up in Havana harbour; war with Spain followed. C. was under Amer. military control, 1899-1902. New educational measures were enforced, 1900. In 1901 a republican form of gov. was estab., the first president being Estrada Palma. The 'Platt Amendment' contained guarantees against foreign interference. In 1903 a commercial convention was signed between C. and the U.S.A. In 1906 a rebellion against the president was quelled by the U.S.A. Mr Taft, U.S. secretary of war, was sent by President Theodore Roosevelt as mediator and became provisional governor, being succeeded by Magoon. Amer. troops were finally withdrawn on 1 April 1909, and henceforth affairs ran more smoothly. Apart from the sugar boom during the First World War, the country has depended largely on U.S. investments. Revolutions (1917, 1924, 1931) continued. In 1933 a revolution was followed by provisional gov. until May 1936, when a constitutional gov. was elected. Following the Socialist-Democratic victory at the general election of 1940 Col. Batista assumed the presidency (July); a new constitution had been adopted in June. According to this constitution the Cabinet is responsible to Congress; if it receives a

vote of no confidence, the Cabinet must resign in 48 hrs. C. declared war on the Axis (q.v.) on 11 Dec. 1941. The president for 1944-8 was Ramón Gran San Martín; but Batista is now again dictator-president. The pop. is 5,800,000 (census 1953), of whom many are of mixed parentage.

See W. J. Clark, *Cuba and the Fight for Freedom*, 1896; I. E. Canini, *Four Centuries of Spanish Rule in Cuba*, 1898; J. B. Atkins, *The War in Cuba*, 1899; J. H. Leslie, *Official History of the Spanish-American War*, Washington, 1899; A. G. Robinson, *Cuba and the Intervention*, 1905; L. A. Wright, *The Early History of Cuba, 1492-1536*, 1917; C. E. Guggenheim, *The United States and Cuba: a Study in International Relations*, 1934; H. Strode, *The Pageant of Cuba*, 1935; R. H. Fitzgibbon, *Cuba and the United States, 1500-35*, 1935; R. G. Sánchez, *Manual de Historia de Cuba*, 1938; H. E. Friedländer, *Historia Económica de Cuba*, 1944; and International Bank, *Report on Cuba*, 1951.

Cubango, Okavango, or Kubango, riv. of W. Africa, about 1000 m. long, rising near the Quanza's sources. E. of Benguela, forming part of the boundary between SW. Africa and the Portuguese Angola. It flows in a SE. direction, and into Lake Ngami, under the name Tloge or Tonke (Taukhe).

Cubature, process of finding the volume of a solid. The word is parallel to quadrature, which means resolving an area into a number of squares, while C. means resolving a volume into a number of cubes. To find the value of a volume from particular data is an arithmetical problem in the case of parallelepipeds and is usually dealt with under the name of *mensuration* (q.v.). Where figures are bounded by curves the process is usually analytical, and is based on the theorems of Pappus of Alexandria, which state: (1) If any plane curve revolve about any external axis which lies in its plane, the volume of the solid generated is equal to the product of the area of the revolving curve and the length of the path described by the centroid of the revolving area. (2) In the same circumstances the area of the solid thus generated is equal to the product of the perimeter of the revolving curve and the length of the path described by the centroid of the curve.

Cube, regular solid bounded by 6 square plane faces, opposite sides being parallel, in such a way that 3 edges always meet at right angles to each other. In arithmetic the C. of a number is found by multiplying it by itself 3 times; thus the C. of 2 = $2 \times 2 \times 2 = 8$. Similarly the C. root of any number is that number which multiplied by itself 3 times gives the original number; thus the C. root of 64 is 4. The volume of a C. is measured by the C. of the length of a side; thus the volume of a C. with sides 2 in. long is 8 cubic in.

Cubebæ, berries of *Piper cubeba* and *P. guineense*, family Piperaceæ. Picked unripe and dried for medicinal use in cases

of urinary and bronchial diseases. C. yield the oily compound cubebene and a resinous compound, cubic acid.

Cubic Measure, see METROLOGY.

CUBE

Cubism. This term, applied to a school of art arising from Post-Impressionism, is said to have been first used by Henri Matisse in 1908 in reference to a picture by Braque: 'Encore des cubes! assez de cubisme!' But scorn and derision could not kill the movement, and three years later exhibitions of Cubist art were held in Paris and Brussels, with a wide-spreading effect on painters in many lands. The actual founder of C. was the Sp. artist Pablo Picasso (b. 1881), follower of Paul Cézanne, the great Fr. Post-Impressionist, and Georges Braque was a close runner-up of Picasso. Cézanne had formulated the theory that 'everything in nature is modelled on the sphere, the cone, and the cylinder; one must first understand how to paint these simple figures, and one can then paint anything.' The discovery of comparable essentials of form in negro and primitive art (c. 1907-8) had a reinforcing influence. The Cubist makes no attempt to give an exact reproduction of any objects visualised, but seeks to interpret in his own way the structure underlying surface appearance. C. as a rigid theory did not long outlast the First World War, but its repercussions have been great. It led to the abstract art practised to-day, as well as to the 'style mécanique' and interest in machine forms of Leger and the Futurists. Some of its chief exponents are Fernand Leger, Albert Gleizes, Jean Metzinger, Francis Picabia, Juan Gris, and the Russian sculptor Archipenko. See also PAINTING. See G. Apollinaire, *Les Peintres Cubistes*, 1913; A. J. Eddy, *Cubists and Post-Impressionism*, 1915; A. Gleizes, *Du Cubisme*, 1920; F. Rutter, *Evolution in Modern Art*, 1926; R. H. Wilemski, *Modern Movement in Art*, 1927; and C. Giedion-Welcker, *Moderne Plastik*, 1937.

Cubit (Lat. *cubitum*, elbow), primitive linear measure employed by the ancients, equal to the length of the arm from the elbow to the tip of the middle finger. There is much discussion as to the exact length of the Heb. C., now generally fixed at 17 to 18 Eng. in. or 45·72 cm. The Rom. C. was about 17½ in., and the Egyptian C. ('C. of Memphis') about 20·7 in.

Cubitt, Sir William (1785-1861), civil engineer of Norfolk. He was known as an inventor of machines, such as self-regulating sails for windmills, and the treadmill (1818, soon introduced into the jails of Great Britain). C. came to London, 1826, becoming engineer of the SE. railway. He constructed the canal at Oxford, docks at Bute, Cardiff, and Liverpool, the Berlin waterworks, and various bridges. He also superintended the erection of the Crystal Palace in Hyde Park, 1851, and was knighted for this service.

Cuchullin, Cuchulinn, or Cuchulainn, name of the chief warrior and hero in the Conchobar-Cuchulinn heroic cycle of Ireland. He is usually styled son of Sualdam, an Ulster warrior, but seems to stand in a special relation to the god Lug. C.'s earliest name was Setonta, and he was brought up at Dun Imbrith (Louth). At the age of 6 he went to the court of Conchobar, king of Ulster. He slew the hound or watch-dog of Culann the smith, becoming for a time guardian of his domain instead, hence his name Culann's hound (Cú-ch'ullinn). Later the warrior slew the 3 sons of Necht, hereditary foes of the Ulstermen. At the age of 17 he defended the Ulster frontier against the forces of Medb of Connaught. He was killed some 10 years later by Lugaid and the children of Calatin Dána. Some place the date about the beginning of the Christian era. See Eleanor Hull, *The Cuchullin Saga in Irish Literature*, 1898; and A. Nutt, *Cuchulainn, the Irish Achilles*, 1900.

Cuckfield, small tn of Sussex, England, 12 m. NW. of Lewes. In medieval times C. was a market tn; it has a fine church, largely Early English, and some interesting 16th and 17th century houses. Pop. of urb. dist. (which comprises Cuckfield, Haywards Heath, and Lindfield) 17,010; of par. 24,371.

Cuckoo, member of the family Cuculidae, containing nearly 200 species. The name

CUCKOO

is derived from the note of the common European C. (*Cuculus canorus*), which

appears in England in the spring, migrating again to warmer climes as early as Aug. Most species are remarkable for their parasitic habits. There is no permanent attachment of male to female, and no nest is built. When the female has laid an egg on the ground she takes it in her bill and puts it in the nest of some other bird; or the egg may be directly laid in the nest. The egg is then hatched, and the young bird is fed, by the owner of the nest. When the young *C.* attains sufficient strength (and it early does this) it expels its foster-mother's young from the nest by working itself under them and jerking them out. The yellow-billed *C.* (*Coccyzus americanus*) incubates its own eggs.

Cuckoo Flower, see CARDAMINE.

Cuckoo-spit, or Frog-hopper. *Cercopidae*, ranked under the homopterous sub-order of the Hemiptera (bugs). The name frog-hopper refers partly to the form of their body, partly to their great powers of leaping. The common frog-hopper is *Aphrophora spumaria*; another species frequently met with in gardens is *A. bifasciata*. The larva of these insects, which, except in the lack of wings, resembles the perfect insect in most respects, envelops itself in a froth resembling human spittle. This is often observed on plants.

Cuculidae, family of the order of birds Cuculiformes. It includes the cuckoos (q.v.) and their kin. They are found in greatest variety in the Indian regions. (Cuculinae is Swainson's name for the sub-family of the *C.* which comprises the true cuckoos. The voice of the female is a mere clattering, and it is the male which utters the familiar call-note in the breeding season.)

Cucumber, or *Cucumis sativus*, species of Cucurbitaceae, which is largely cultivated. It is a kind of trailing ann., and the unripe fruit is used for salads and pickles. The finest specimens are obtained from shaded plants growing in a warm, damp atmosphere, and therefore developing rapidly. When fine and long fruit are desired, the plant should not be allowed to bear early, and the female blossoms should be destroyed until the plant has become vigorous and well rooted in the bed.

Cucumis, genus of Cucurbitaceae, is indigenous to the tropics and to sub-tropical lands. In this genus the stamens are free and the tendrils are believed definitely to be modified leaves. *C. melo*, the melon (q.v.), is a valuable plant of which the native country is unknown, and with *C. sativus*, the cucumber (q.v.), has been in cultivation for centuries. Tartary is sometimes assigned to the cucumber as its home.

Cucurbita, family Cucurbitaceae; genus of trailing annuals, natives of warm regions of Africa, America and Asia. Leaves are large, lobed; flowers monoecious, and fruits large. *C. pepo* is the vegetable marrow; *C. maxima*, the pumpkin; and *C. moschata*, the squash of America.

Cucurbitaceae, widespread family of dicotyledonous plants, most of which are of a trailing or climbing habit. Many of

the species are useful or remarkable, for the order comprehends such plants as the melon, gourd, cucumber, colocynth, and bryonia. The fruit is generally fleshy, and is often very large; the melon is typical, with a berry-like fruit called a *pepo*; the seeds are exalbuminous. Some of the prin. genera are *Cucurbita*, *Cucumis*, *Lagenaria*, *Luffa*, and *Bryonia*.

Cúcuta, or San José de Cúcuta, city and cap. of Norte de Santander dept. Colombia. 10 m. from the Venezuelan frontier. The tn was largely destroyed by an earthquake, 1875. *C.* is a riv. port and trading centre, coffee, tobacco, and cattle being prin. products. Coffee and hides are sent by road to Maracaibo for export. Pop. 95,150.

Cud, sodden bolus of hastily swallowed fodder which ruminants drive back from the paunch into the mouth to be leisurely chewed, when semi-fluid is formed which repasses into the stomach.

Cuddalore, Madras State, India, 15 m. from Pondicherry on the Coromandel coast. It is the site of Fort St David, founded by the Brit. in 1690, and was the scene of considerable fighting between the Brit. and Fr.

Cuddesdon, vil. and par. of Oxon., England, 6 m. from Oxford. The palace of the bishops of Oxford is here, and an Anglican theological college.

Cudworth, Ralph (1617-88), philosopher and clergyman, son of a chaplain of James I. b. at Aller in Somersetshire. He graduated at Cambridge, becoming fellow and tutor of Emmanuel College in 1639. In 1642 he pub. *Discourse Concerning the True Nature of the Lord's Supper* and *The Union of Christ and the Church shadowed or in a Shadow*, the first causing much controversy long after his death. In 1645 he was appointed master of Clare Hall, and in the same year regius prof. of Heb. *C.* was at one time rector of N. Cadbury, Somersetshire (1650). In 1654 *C.* was elected master of Christ's College; in 1678 he became prebendary of Gloucester. His chief work, *The True Intellectual System of the Universe*, also appeared in 1678. It displays great learning, liberality, and independence of mind. This famous work attempted to confute all the reason and philosophy of atheism, and to demonstrate its impossibility. *C.* favoured the Platonic philosophy, and in physics adopted the atomic theory. From their views the group of which he was leader were known as Cambridge Platonists. His *Treatise Concerning Eternal and Immutable Morality* was pub. in 1731. A number of his unpub. MSS. are in the Brit. Museum. See C. E. Lowrey, *The Philosophy of Cudworth*, 1884; F. J. Powicke, *The Cambridge Platonists*, 1926; W. C. de Pauley, *The Candle of the Lord*, 1937.

Cue, tn of W. Australia, chief in the Murchison goldfield dist. It is connected with Geraldton by rail.

Cue, in billiards, see BILLIARDS, *English Billiards*.

Cuenca: 1. Sp. prov., in Castilla la Nueva (q.v.), partly in the former prov. of La Mancha (q.v.). In general a dry

plateau, it has sev. fertile riv. valleys and a mountainous region, the Serranía de C., which has large coniferous forests. Area 6,639 sq. m.; pop. 336,350.

2. (Rom. *Conca*) Sp. tn, cap. of the prov. of C., built on a spur of the Serranía de C. between the deep gorges of the Júcar and the Huecar. It is an old tn, with seven gates and eight bridges, a fine Gothic cathedral, a ruined Moorish castle, and a 16th cent. bishop's palace. Near by is the Ciudad Encantada, a 500 acre rock formation eroded into the appearance of a ruined city. C. is a mkt tn. It was once famous for its silverware. Pop. 24,900.

3. Cap. of the prov. of Azuay, Ecuador, S. America, some 8470 ft above the sea. It is Ecuador's third largest city, and possesses a cathedral, a univ., and impressive public buildings. It is 19 m. from the Quito-Guayaquil railway (at Azogues). It trades in sugar, maize, coffee, fruit, cattle, etc. The making of Panama hats is a declining industry though still important. The new tyre and tube factory uses local sulphur deposits. Pop. 46,400.

Cuernavaca (formerly *Cuanhuahuac*), city of Mexico, cap. of Morelos state, 36 m. from Mexico City. It is finely situated, and has a cathedral, an agric. academy, the palace built by Cortés, and a co. hall with murals by Rivera. Brewing, cement-making, sugar-refining, paper- and cigar-making are carried on. It is popular as a week-end resort for inhabitants of Mexico City. Pop. 14,336.

Cues, Nicolaus von, see *CUNA, NIKOLAS OF*.

Cuesmes, tn in the prov. of Hainaut, Belgium, 3 m. from Mons. It has coal-mines and railway workshops. Pop. 11,000.

Cuesta, name given by Amer. geologists to a certain land formation consisting of an unsymmetrical ridge with a strong escarpment on one side and a gentle slope on the other. Of Sp. origin, the name is used in New Mexico and SW. U.S.A. for low ridges of this kind. The Cotswold and Chiltern Hills are C.s or scarp ridges.

Cueva, Juan de la (c. 1550-1607). Sp. playwright and poet, b. Seville. He wrote lyrical and epic poetry, and his plays are important for their departure from the classic model and their more romantic style. He was one of the founders of the Sp. national drama. Among his works are *Primera Parte de las Comedias y Tragedias*, 1588; the epic *Bélica*, 1603; and *El Exemplar Poético*, 1605, the first Sp. didactic poem. See J. P. Wickershaw Crawford, *Spanish Drama before Lope de Vega*, 1937; M. Menéndez y Pelayo, *Ideas Estéticas*, 1940.

Cuevas de Vera, or *Cuevas de Almanzora*, Sp. tn in the prov. of Almería, on the Almanzora. It is the mkt tn of a rich agric. dist., and has industries based on the silver and lead mines of the Sierra Almagra. Pop. 12,000.

Cui, César Antonovich (1835-1918), Russian military engineer and musical composer, b. Wilno, son of a Fr. officer, a survivor of Napoleon's army, who was

unable to follow the retreat from Moscow (1812). C. was educated at the Wilno 'Gymnasium' and studied music with Moniuszko. He soon entered the military college at St Petersburg (1850), later becoming prof. of fortification there and elsewhere. His operas include *The Captive in the Caucasus*, 1857-82, *William Ratcliff*, 1869, *Angelo*, 1876 (on Hugo's drama), *Le Flibustier*, 1894 (on Richépin's comedy), and *Mam'zelle Piff*, 1903 (on Maupassant's story). See Countess de Mory-Argenteau, *César Cui*, 1888.

Cuiabá, city and cap. of the state of Mato Grosso, Brazil, on the C. R., a riv. port shipping cattle, ipecacuanha, and other products. The gold-mines, which have been worked since 1719, are declining in importance. The traffic is chiefly in the exchange of gold for iron and other implements. The tn is well built and in it stands the obelisk marking the centre of South America. It has a military hospital, arsenal, palaces for the governor and the bishop, and collegiate schools. It is an important and rapidly developing distributing centre, altitude 770 ft. The temp. varies between 104° and 50°. Pop. 24,100.

Cuinchy, vil. in N. France, to the SW. of La Bassée. In the First World War, C. came within the area covered by the battle of Loos, Sept. 1915 (see *LOOS, BATTLE OF*). The main advance took place on 25 Sept. This was preceded by a two days' bombardment. Although the Brit. had used gas, the atmospheric conditions proved unfavourable for its employment; but the Brit. success on other parts of the front caused the Ger. forces to give way eventually at C.

Cuirass (Lat. *corium*, leather), originally a jerkin or leather garment for soldiers. In medieval times the name was applied to metal plate armour protecting the body, front and back, from the neck to the waist. The name 'Cuirassiers' was given to heavily armed cavalry of the first half of the 17th cent., whose armour extended from the head to the knee, and later to troops wearing a helmet and breast and backplate only. After Waterloo certain historical C.s were adapted for modern use. See also *ARMOUR*.

Cuirassiers, name of a kind of heavy cavalry, a survival of the men-at-arms of feudal armies and of the troopers of the 16th and 17th cents., who wore cuirasses and helmets. The first Austrian corps of 'kryssiers' was formed in 1484 by Emperor Maximilian; by 1705 there were twenty such regiments. The Prussian C. were so called under Frederick William I, playing a prominent part in the wars of Frederick the Great. In France C. date from 1666. Until comparatively recent years both Fr. and Ger. armies had twelve cuirassier regiments each, the Russian four. The Life Guards and Royal Horse Guards had steel cuirasses given them in 1821. They are worn on ceremonial and guard duties.

Cujas, Jacques (Latinised name *Cujacius*) (1522-90), Fr. juriconsult, b. Toulouse. He studied law under Arnaud Ferrier. His great reputation as a jurist

was gained through his lectures on Rom. law as studied from the originals instead of from the works of commentators. He had an enormous library of old Rom. MSS., of which the greater part have unfortunately been scattered and lost. Besides his lectures on Justinian, he pub. notes on the *Receptae Sententiae* of Paulus and *Paratita*, or summaries of the *Digest*, particularly of the Code of Justinian. The best collection of his works is that pub. by Fabrot at Paris (1658) in ten vols.; republished at Naples and at Venice with additions (1758-83) in eleven vols. See J. Berriat Saint Prix, 'Mémoires de Cujas,' appended to his *Histoire de Droit Romain*, 1821.

Culasi, or **Colasi**, tn of the Philippine Is. It is situated on the coast of Panay, and is noted for its fisheries. It produces also rice and sugar. Pop. 20,601.

Culbin, see MORAY.

Culdees (Celtic *ceile De*, a companion of God), anct religious communities once found in Ireland and Scotland. Their origin and early hist. are very obscure. It is probable that they originated when the rule of St Chrodrigang, archbishop of Metz (d. 766), was introduced into Ireland. The rule, originally instituted for secular priests under no monastic vows, was extended to include the anchorites (q.v.), and the order of C. became a sort of annex to the regular monasteries. They never attained to great importance in Ireland, but when they crossed to Scotland at the end of the 8th cent. they found their opportunity awaiting them because of the gap left by the expulsion of the Iona monks by Nechtun, king of the Picts, in 717, and the inadequacy of the Rom. monks from Northumbria who had come to fill their place. Their life henceforward was very similar to that of the secular canons in England. The chief Culdee houses were at St Andrews, Dunkeld, Loch Leven, Monymusk, and Abernethy. In the reforms inaugurated by St Margaret and carried out by her son David I the C. became canons regular or were absorbed into the regular religious orders. By the beginning of the 14th cent., the C. as a separate body had disappeared in Scotland. See J. Jamieson, *Historical Account of the Ancient Culdees*, 1811; Wm Reeves, *The Culdees of the British Islands*, 1864; and W. F. Skene, *Celtic Scotland*, 1876-80.

Culebra, or **Passage Island**, is. of the W. Indies in the Virgin group, 20 m. from Cape San Juan, Puerto Rico.

Culemborg, see KULENBURG.

Culiacán, city and cap. of Sinaloa state, Mexico. It stands on the R. C., 180 m. WNW. of Durango, connected to Altata, its port, by railway. It has leather and textile industries, and is an agric. centre. The tn, now extensively modernised, was founded in 1531, and is the seat of a bishop. Pop. 50,000.

Culicidae, the dipterous insects known to us familiarly as the mosquito, midge, and gnat family are widely distributed, and in Britain they are represented by about a dozen species. The eggs are laid on substances floating in stagnant water,

and the larvae live on the surface. *Culex pipiens* is a mosquito frequently found in Britain, and it also inhabits the E. Indies.

Cullion, community of nearly 5000 lepers on a small is. to the N. of Palawan prov., Philippine Is. They elect their own council and supply the policemen and other subordinate officials. Many have been completely cured.

Cullen, Paul (1803-78), Irish Rom. Catholic prelate; educ. in Rome, and rector of the Irish college there, and of the Propaganda College in 1848, securing Amer. protection to prevent confiscation of its property during the revolution under Mazzini. Pius IX made Dr C. Archbishop of Armagh and primate of Ireland in 1849. He was translated to the archdiocese of Dublin in 1852, and was created a cardinal in 1866, being the first Irishman to attain to that dignity. Cardinal C. aided O'Connell, and helped the Brit. Gov. to suppress Fenianism. At the Vatican Council he advocated the definition of papal infallibility. C. was the reputed author of a treatise to prove that the earth did not move. He disapproved of the clergy taking an active part in politics. He estab. numerous schools, convents, hospitals, and churches in Ireland.

Cullen, William (1710-90), physician, b. Hamilton, Lanarkshire. He was M.D. Glasgow (1740), and prof. of medicine there (1751). In 1755 he left for Edinburgh where he was successively prof. of chemistry (1755), physiology (1766), and medicine (1773). Famous as a teacher, he was one of the founders of the Glasgow Medical School. His chief works are *Synopsis Nosologiae Medicæ*, 1769, in which he classified diseases by their symptoms; *First Lines on the Practice of Physic*, 1776-84; and *Treatise on Materia Medica*, 1789. See life by J. Thomson, 1859.

Cullen, seaside resort and burgh of Scotland, in the co. of Banff, situated on C. Bay. Since 1200 it has been a royal burgh. There is a fine mrkt.-place, with a council chamber, assembly hall, and court-room. It possesses a good harbour. Cullen House, home of the Countess of Seafield, is near by, and is open to the public 2 days a week. Pop. 1555.

Cullera, Sp. tn in the prov. of Valencia, on the estuary of the Júcar (q.v.). It has a ruined castle and anct walls, and a trade in agric. produce. Pop. 15,000.

Cullinan Diamond, also known as the **Star of Africa**, largest known diamond, found in the Premier Mine, E. of Pretoria, Transvaal, in Jan. 1905, and called after Thomas C., the chairman of the company owning the mine. Uncut, its weight was about 3106 metric carats, 3 times heavier than that of any other one known. The gem measured about $4\frac{1}{2}$ by $2\frac{1}{2}$ by 2 in., and its girth was $8\frac{1}{2}$ to $11\frac{1}{2}$ in. It had fine cleavage planes, as though only a portion of a larger crystal. The colour for so large a stone was exceptionally pure. It was valued at from \$2,500,000 to \$5,000,000.

Culloden, moor (known to Highlanders as Drummossie Moor) in Inverness-shire,

Scotland, famed for a victory gained in 1746 by the Duke of Cumberland over the Pretender, Charles Stuart. The victors cruelly massacred the wounded Highlanders. This was the last battle fought in Britain; a calm and green mounds mark the soldiers' burial-places.

Cullompton, tn of Devon, England, on R. Culm, 12 m. from Exeter. It has an old church in the Eng. Perpendicular style, with a tower 100 ft high. Pop. 3400.

Cullum, Ridgwell (1867-1943), novelist, b. London. At the age of 17 he joined in the Transvaal gold rush; later he went fur-hunting on the Yukon, then cattle-ranching in Montana. He wrote fast-moving adventure stories with a Canadian background, which was then a novelty. They include *The Brooding Wild*, 1905; *The Night Riders*, 1906; *The Twins of Suffering Creek*, 1912; *The Heart of Unaga*, 1920; and *The Child of the North*, 1926.

Culm (geology), rocks of Upper Carboniferous age occurring in Cornwall and Devon. They are merely barren coal-measures. In mining C. denotes an inferior grade of small steam coal or anthracite. In brewing C.s are the rootlets which form on the cereals used after steeping and are subsequently removed for use as cattle food or manure.

Culmination (Lat. *culmen*, summit), astronomical term for the passage of a heavenly body when it crosses the meridian. There are 2 C.s in the course of 24 hours, the upper, above the pole of the heavens, and the lower, below the pole.

Culpeper (Culpepper), Nicholas (1616-1654), medical writer and astrologer, b. London. A supporter of the Parliamentarians and religious sectarians. In 1640 he set up as astrologer and physician in Red Lion Street, Spitalfields. *A Physical Directory*, 1649, his unauthorised trans. of their *Pharmacopoeia*, excited great indignation among the College of Physicians against C. for infringing the monopolies of medical writers. Other works are *Scmeistica Uranica*, 1651, and *The English Physician*, 1653. The latter has been reissued in various eds. ever since, the last in 1932. C.'s works were ed. by G. A. Gordon in 1802. See L. Powys, *Thirteen Worthies*, 1923.

Culross, par. and burgh of Fifeshire, Scotland, on the N. side of the Firth of Forth, WNW. of Edinburgh. It contains the ruins of a Cistercian abbey which was founded in the 13th cent. Its former deep submarine coal-mines are exhausted. Pop. 4500.

Cultivated Plants. It is almost impossible to say when plants were first cultivated, but it is known that millet, rice, and figs are among some of the very oldest of our present-day products. Investigation has proved the original habitat of most plants, and the wild form has in many cases ceased to exist. At the present day cultivation has reached such a pitch that the form in which we know the plant varies very much from the original wild one, and there are various devices known for the further improve-

ment or development of the plant in question. Some plants are cultivated for their seeds, such as all cereals, peas, beans, mustard, etc.; others for their leaves, such as cabbage of all kinds, spinach, tobacco, tea, water-cress, etc.; others again for their flowers, such as cauliflowers, cloves, etc.; some for their young shoots and stems, as asparagus and rhubarb; and some again for their fruits, such as plums, oranges, gooseberries, all kinds of nuts, cucumber, tomatoes, etc.; and last but not least is that large class of plants of great service to man cultivated for their roots and tubers. There are many useful products from certain plants which are much cultivated for various purposes apart from edible uses, e.g. starch, vegetable acids, such as citric and oxalic, gums, rubber, all the numerous narcotics, such as opium, morphia, etc.

Cultivation, or Tillage (Late Lat. *cultivare*, to cultivate, from Lat. *colere*, to till; O.E. *teolian*, *tilian*; Gothic *tilon*, to strive for), denotes the process of cultivating soil for the purpose of agriculture. It consists of digging, ploughing, harrowing, rolling, spading, hoeing, etc., all of which operations tend to increase the goodness of the soil, and thus to increase its fertility. For surface tillage harrows, weeders, and other agric. instruments of the fork and spade variety are used. Pulverisation of the soil is essential for the root growth of plants. Breaking up the soil and removing stones and impedimentary matter facilitates the free development of roots and also the free passage of earth and air which increases the health of the plants. Deep ploughing is generally done in the autumn, as during the winter months the changes in temp. affect the soil, causing expansion or contraction according as the weather is wet or frosty. Pulverisation also favours the activity of beneficial organisms in the soil (see NITRIFICATION), and promotes the solution of mineral matter. It also brings about the destruction of weeds and insects which are injurious to the development of cultivated plants. 'Cultivators' are the best instruments for destroying weeds. They are also called grubbers, and a special variety is called a scarifier. The cultivator consists of a triangular or rectangular iron frame, with fixed teeth or tines. Harrows and rollers are useful in separating the weeds from the soil. When the weeds have been removed the earth is well ploughed, and manure dug deep into the soil. Sub-tillage, or sub-soiling, forms a very important part of C. Below the surface clay, chalk, and gravel are found, and it is the aim of the agriculturist slowly to cultivate his soil to a greater depth. Heavy clay soil needs constant turning over, and manure should be worked into it. Inter-tillage is carried on while the soil is still occupied by a crop. Trenching and draining also form an important part of C. See AGRICULTURAL MACHINERY; AGRICULTURE; GARDENING; PLOUGHS AND PLOUGHING.

Culverin (Fr. *coulverine*; more remotely Lat. *colubra*, snake), term applied loosely

to any small gun in the early days of firearms. In the 16th cent. it meant the heaviest gun in ordinary use, throwing an 18-lb. shot. It was so called from its serpent-shaped handle. Culver and whole C. (as distinguished from demi-C., a smaller piece of ordnance) were variations of the name.

Culverwell, Charles, see WYNDHAM, SIR CHARLES.

Cumae, anc. city on the W. coast of Campania; founded in 750 BC, and therefore the earliest Gk colony in Italy or Sicily. It was the parent of Neapolis (Naples) and Putcoli, having already assisted the Chalcidians to found Zancle (Messina) in 721 BC. As an independent city-state C. attained considerable power and enjoyed great prosperity, notwithstanding repeated attacks by the Etruscans and other people. In 417, however, it was taken by the Samnites (see SAMNITUM), and afterwards became subject to Rome (c. 340 BC). In the second Punic war it resisted a Carthaginian siege (Livy xxiii), and continued to flourish until imperial times when its prosperity faded. Its geographical situation was of great strategic value: it was garrisoned by the Goths, and was the last place in Italy to hold out against Narses. C. was the traditional residence of the earliest sibyl.

Cumaná, city and cap. of Sucre state, Venezuela, situated about a m. from its port, Puerto Sucre, near the mouth of the Gulf of Cariaco. Bp. of Bolívar's great lieutenant, Antonio José Sucre. It claims to be the oldest European settlement (on grounds of continuous habitation) in S. America. There is a trade in sugar, cacao, tobacco, etc. The climate is hot, and earthquakes often occur: C. was almost completely destroyed by an earthquake in Jan. 1929. Pop. 50,000.

Cumania, see KUMANIA.

Cumans (Russian *Polovtsy*), warlike Turkic-speaking people of the Middle Ages. They appeared in the S. Russian steppes in 1054, and often raided the Kievan State (see KIEVAN RUSSIA) and Byzantium. They were routed by the Tatars in 1238 (see BATU).

Cumberland, Ernest Augustus, Duke of, and King of Hanover (1771-1851), fifth son of George III. He made the army his career. In 1810 he was found wounded in his bed, and his valet, Sellis, dead in an adjoining room. The coroner's jury accepted the view that Sellis had tried to murder his master and had then committed suicide; but public opinion believed that the duke had murdered Sellis. On the accession of Victoria he became King of Hanover.

Cumberland, Richard (1632-1718), moral philosopher and Bishop of Peterborough, b. London, and educ. at St Paul's School and Magdalene College, Cambridge. Among his college friends was Samuel Pepys. C. won a great reputation for learning both in science and philosophy and for his simple and upright life and fulfilment of his episcopal duties. Among his works is *De Legibus Naturae disquisition in qua Elementa Philosophiae Hobbianae refutantur*, 1672 (trans. 1727), written in reply to

Hobbes and upholding the utilitarian principle of the public good being the end of morality. He dedicated his *Essay on Jewish Weights and Measures*, 1686, to his old friend Pepys. See *Pepys's Diary*.

Cumberland, Richard (1732-1811), dramatist, b. Cambridge. He was educ. at Westminster and Trinity College, Cambridge. On leaving the univ. he became private secretary to Lord Halifax at the Board of Trade, the office being almost a sinecure. He wrote more than 50 plays, the first to be produced being *The Summer's Tale* in 1765, and the most successful *The West Indian*, brought out by Garrick 6 years later at Covent Garden. C. now moved in literary circles, but his sensitiveness to criticism prevented his ever becoming popular. He quarrelled with Goldsmith, and Sheridan, whom he had offended, caricatured him as Sir Preful Plagiary in *The Critic*. He wrote many poems and prose works between 1754 and 1811, of which *Memoirs of Richard Cumberland Written by Himself*, 1806-7, is best known. He was buried in Westminster Abbey. See S. T. Williams, *Richard Cumberland, his Life and Dramatic Works*, 1917.

Cumberland, William Augustus, Duke of (1721-65), soldier, third son of George II, then Prince of Wales. He entered the army, and at the age of 21 he was gazetted major-general. Two years later he was appointed to the command of the allied forces in the Netherlands, with Königsegg as his adviser; and in 1745 the office of captain-general of the Brit. land forces at home and in the field, dormant since Marlborough's day, was revived in his favour. He took an active part against the rising of '45, and after the battle of Culloden in 1746 treated the rebels with such severity that he was nicknamed Butcher. See life by E. Charters (2 vols.), 1913 and 1920.

Cumberland, the most N.W. co. of England, bounded on the W. by the Irish Sea and Solway Firth, on the N. by Roxburgh and Dumfries, on the S. by Westmorland and Lancs. and on the E. by Northumberland and Durham. After the withdrawal of the Romans, who left many relics, coins, altars, and inscriptions, C. became part of the Brit. kingdom of Strathclyde. In 875 the first reference is made to the kingdom of the Cumbrl, and in 945 it was ceded by Edmund to Malcolm of Scotland. Henceforward, until the union of the crowns, it was part of the battleground over which the quarrels between the two nations were fought. The small landowners in the co., whose lands have been in their families for centuries, are known as 'statesmen,' but most of such small estates have now been absorbed by the large landowners. The greater part of its surface is mountainous. The SW. half is taken up by the beautiful Lake Dist. (q.v.), shared with the neighbouring co. of Westmorland. Here are the Cumbrian Mts, with the peaks of Scafell (Scafell Pike, 3210 ft. the highest point in England), Scawfell (the lower summit, but the finer peak, 3162 ft.),

Skiddaw (3058 ft.), and Helvellyn (3118 ft.); and Derwentwater with the falls of Lodore, Bassenthwaite, Ennerdale, Buttermere, and Crummock Water. Westwater, Thirlmere, and, on the Westmorland border, Ullswater. From the Lake Dist. a network of valleys runs N., W., and S. to a wide coastal plain, and the valley of the Eden divides it from the Pennine Chain, which reaches its highest point in this co. in Cross Fell (2930 ft.). The N.W. portion, bordering on the Solway Firth, is low and flat. The chief rivs. of C. are the Eden, the Liddel, the Esk, the Derwent, and the Uddon. Considerable tracts of land and mts are owned by the National Trust.

The climate is mild except on the uplands during the winter. The rainfall of the Lake Dist. is the heaviest in England.

of manufs., including iron, steel, engineering, chemicals, textiles, scientific instruments, and plastics. The atomic plant at Windscale was the first in the country to produce plutonium, and other plants are in course of erection near by for the production of electrical power. Large quantities of salmon are caught in the Solway. The chief tns are Carlisle (the cap.), Cockermeuth, Whitehaven, Workington, Maryport, Wigton, Penrith, and Keswick. C. is part of the diocese of Carlisle, and is divided into 3 parl. divs.: Penrith and the Border, Whitehaven, and Workington, each returning 1 member. The municipal bors. are Carlisle, Whitehaven, and Workington. Area 968,598 ac.; pop. 273,000.

Cumberland: 1. Co. seat of Allegheny co., Maryland, U.S.A., situated on the

CRUMMOCK WATER, CUMBERLAND, ENGLAND

On the left is Mellbreak (1688 ft); on the right Grassmoor (2787 ft)

In the mountainous dists. the soil is mainly thin and poor in quality, but in the plains dry loam predominates, and produces large quantities of oats and turnips, and a little wheat and barley. In the hill pastures cattle and sheep are reared, the Herdwick variety of the latter being peculiar to the co. C. is rich in minerals, coal being worked extensively round Whitehaven, Maryport, and Workington, with much accompanying iron ore, which is also found in the S. near Millom. Gypsum, anhydrite, zinc, and lead are mined, and limestone, granite, and slate are quarried. A little silver is still found, but the copper mines near Keswick and the plumbago works near Borrowdale have been closed. Manufs. include biscuits, engineering, metal containers, and textiles at Carlisle and in the surrounding neighbourhood; and pencil mills at Keswick. The W. of the co. is the most highly industrialised, with a wide range

R. Potomac, NW. of Baltimore, in mt scenery. It is the state's second largest city. It stands on sev. railways, among them the Baltimore and Ohio Railway, and is also situated on the Chesapeake and Ohio Canal. Chief industries: iron and steel, glass, railway cars and locomotives, rayon, clothing, tyres, dairy products, and beer. It has railroad shops, lumber mills, and an airport, and exports large quantities of coal and limestone. A fort was built here in 1754. Pop. 37,680.

2. Tn in the co. of Providence, Rhode Is., U.S.A. It includes 10 vils., which manuf. cotton and silk goods, nuts, bolts, wire products, and shovels. Pop. 12,842.

'Cumberland,' Brit. cruiser (class A.C., 9800 tons displacement), completed in 1904; and a Kent class Brit. cruiser of the same name, completed in 1928, a 10,000-ton ship carrying 8 8-in. and 4 4-in. anti-aircraft guns. This ship joined

Commodore Harwood's S. Amer. Div. off Montevideo after the Battle of the Riv. Plate. She was present when the Ger. pocket battleship *Graf Spee* scuttled herself on 17 Dec. 1939. Ships of this name figured largely in the 18th and 19th cents., as at the capture of Calcutta, 1757. A Federal war vessel of this name, commanded by Lt Morris, was sunk by the Confederate ram *Merrimac* in Hampton Roads, March 1862.

Cumberland Gap, pass in the C. Mts (alt. 1700 ft.), is situated in the SW. of Virginia, U.S.A. Its chief importance during the time of the Civil War lay in its position. It was held alternately by the Confederates and the Federals. The National Historical Park here was authorised by Congress.

Cumberland Lodge, in Windsor Park, Berkshire, England, was formerly the residence of the ranger. It was enlarged by Wm Augustus, duke of Cumberland (q.v.), who resided there.

Cumberland Presbyterian Church, Amer. religious sect organised in 1810 in Kentucky and Tennessee. It was the outcome of a great 'revival,' when there was a dearth of fully trained preachers to meet the public demand, and men without the usual high standard of theological and educational training demanded by the Presbyterians were ordained. In 1813 the C. Synod adopted a confession of faith based on the Westminster Confession with certain additions and amendments, and this was again revised at a later date. The doctrines of predestination and unconditional election were eliminated, and the universality of the atonement was accepted. In 1826 a college was estab. in Princeton, Kentucky, but it was transferred to Lebanon in Tennessee in 1842, becoming the C. Univ. In 1906 the majority of the members rejoined the Presbyterian Church in the U.S.A.; but the minority maintained the name and the organisation, with a membership in 1949 of 80,000. The Coloured C. P. C. was an offshoot of the original C. Church, establishing a separate identity in 1869, soon after the Civil War; its membership in 1949 was 30,000.

Cumberland River, U.S.A., trib. of the Ohio, rises in the C. Mts in Kentucky. Its course assumes a SW. direction and then a NW. one till it joins the Ohio R. at Smithland, 12 m. ENE. of Paducah. The riv., which is navigable as far as Wolf Creek Dam (461 m. upstream), is 693 m. long.

Cumberland Valley, in Pennsylvania, U.S.A., a fertile piece of land watered by the tribs. of the Susquehanna R., its position being between that riv. and Maryland. It is a continuation of the Shenandoah valley.

Cumrnauld, par. in Dunbartonshire, Scotland, 14 m. NE. of Glasgow. Nearby are the remains of Rom. fortifications. Pop. 5300.

Cumbrae, Great and Little, are two is. in the frith of Clyde, Scotland. They belong to the co. of Bute. The tn of Millport is on the G. C. On the smaller is. are a modern lighthouse and eccles. and castle ruins. Pop. 2200.

Cumbrae, La, see USPALLATA.

Cumbrae Pass, see USPALLATA.

Cumbrian Mountains, group of mts in England, stretching from Fell Top, Cumberland, to the slate quarries in Lancashire, about 40 m. from N. to S. Scafell Pike (3210 ft.) (q.v.) is the highest point.

Cumbrian Rocks, forming the C. Mts of England, consist in the N. and E. of Lower Carboniferous (shale and grit) rocks, with limestone beds. In the S. are volcanic ashbeds and lavas. A few species of Graptolites and Trilobites have been found, but fossils are rare.

Cumene, or **Isopropyl Benzene**, liquid obtained by distilling cumalic acid with soda-lime, or by boiling benzene and isopropyl chloride in the presence of anhydrous aluminium chloride. It has an agreeable odour and on oxidation gives benzoic acid.

Cumiana, lt. tn. in Piedmont (q.v.), 15 m. SW. of Turin (q.v.). Pop. 5000.

Cumin, or **Cummin**, fruit of a plant which grows wild near the Nile and is cultivated in S. Europe and India. The fruit, improperly called seed, is greyish-yellow, strongly aromatic, and the taste is bitter and disagreeable. These C. seeds were formerly used in ordinary medicine, but they are now employed only in veterinary practice except when forming an ingredient of curry powders or flavouring for liqueurs, cheese, and breads. C. is mentioned in the Bible.

Cumming, see COMYN.

Cummings, Bruce Frederick, see BAR-BELLION, W. N. P.

Cummings, Edward Estlin (1894-), Amer. poet, b. Cambridge, Massachusetts. He was educ. at Harvard, where his father had been a lecturer. In the First World War he volunteered as an ambulance driver in the Fr. army and wrote of his experiences in *The Enormous Room*, 1922. After the war he studied art in Paris, returning to New York in 1924. His *Tulips and Chinneys* had appeared in 1923, and in 1925 he won the Dial award for distinguished service to Amer. literature. After some further years in Paris he settled down in Greenwich Village. An ultra-modernist, he indulged in typographical oddities, preferring to write his name 'e. e. cummings,' and used jazz rhythm and a slang dialect. He has been described as one of the few successful verse-experimenters of his time. His works include *XLI Poems*, 1925, &, 1925, *Is 5*, 1926, *Viva*, 1931, *Eimi*, 1933, *No Thanks*, 1935, *Tom*, 1935, *V 20*, 1936, and *I x I*, 1944; his *Collected Poems* appeared in 1938. He also wrote *him*, 1928, a phantasmagoria in 21 scenes, and *Santa Claus: a Morality*, 1946; *six non-lectures*, 1953, is a critical work.

Cummins, Maria Susanna (1827-66), Amer. novelist, b. Salem, Massachusetts. Her chief works are *The Lamplighter*, 1854; *Mabel Vaughan*, 1857; *El Furcudis*, 1860; and *Haunted Hearts*, 1864.

Cumnock, tn and police burgh of Ayrshire, Scotland, in the par. of Old C., at the junction of Lugar and Glaisnock Waters. Industries include coal mining, and wool

spinning and manuf. Considerable developments are taking place. Pop. (burgh) 5000; (with development area) 9000. 5 m. SE. is the vil. of New C.

Cumnor, vil. in Berkshire, England, 3½ m. WSW. of Oxford. Here was C. Hall, the house where Amy Robsart, the ill-fated wife of Robert Dudley, earl of Leicester, met her death. It is described by Scott in *Kenilworth*, but has since been destroyed. Part of the church dates from the 13th cent., and contains a chained Bible, and a statue of Queen Elizabeth, said to have been erected at the hall by Leicester. Pop. (1954) 1500.

Cumyn, see COMYN.

Cunard, Sir Samuel (1787-1865), ship-owner, b. Halifax, Nova Scotia, where he began life as a merchant. In 1839 he left for England, and founded the Brit. and N. Amer. Royal Mail Steam Packet Company to carry the Atlantic Mails, which later became the Cunard Line (q.v.), the first regular Atlantic steamship line.

propelled. In 1884 came the *Umbria* and *Etruria*, among the highest powered single-screw steamers ever built, which broke all existing speed records on their appearance, but were surpassed in 1893 by the first twin-screw ships of the C. Line, *Campania* and *Lucania* (12,950 tons). In the *Lucania* in 1901 Signor Marconi carried out many of his early experiments in wireless transmission, which led in 1903 to the pub. on board the *Lucania* of the first ship's newspaper to appear daily with news received by wireless. In 1907 came the famous sister ships, *Mauretania* and *Lusitania* (31,000 tons). One of the outstanding ships of the cent., the *Mauretania* held the record for the fastest Atlantic passage for twenty-two years. On war service between 1914 and 1918 C. liners carried nearly a million troops and ten million tons of cargo. Twenty ships totalling more than 200,000 tons were lost, including the *Lusitania*. An extensive building programme was begun after the

Cunard Steamship Co. Ltd

THE 'QUEEN ELIZABETH'

In 1859 C. was made a baronet. See CUNARD STEAMSHIP COMPANY.

Cunard Steamship Company, founded by Sir Samuel Cunard (q.v.), merchant of Halifax, Nova Scotia, and owner of sailing vessels plying between Halifax, Nova Scotia, Boston, and Bermuda. His original idea was a regular service of steamships which could do the journey across the Atlantic in less time than the Gov. sailing packets which usually carried the mails. On arriving in England in 1839 he obtained the help of George Burns and David MacIver and founded what is now known as the C. Line—at the same time obtaining a contract from the gov. to carry the mails. The first ship was the *Britannia* (1150 tons), which sailed from Liverpool for Halifax, Nova Scotia, and Boston on 4 July 1840, and she was followed by a succession of famous ships. The *Persia* (3300 tons) (1856) was the first mail service Cunard to be built of iron, and the *China* (2529 tons) (1862) was the first mail service ship of the line to be screw-

armistice, and by 1925 thirteen ships totalling 214,000 tons had been completed. Plans for a weekly transatlantic service maintained by two ships instead of three resulted in the building of the *Queen Mary* (81,237 tons) and *Queen Elizabeth* (83,673). The *Queen Mary* (length 1020 ft; beam 118 ft) entered service in 1936, and made record Atlantic passages in Aug. 1938. The *Queen Elizabeth* (length 1031 ft; beam 118 ft), the world's largest liner, sailed in secrecy on her maiden voyage to New York in 1940 without passengers. Led by these two great liners the C. fleet carried over 4,400,000 passengers (mostly troops), handled 11,000,000 tons of cargo, and steamed 5,360,000 m. between Sept. 1939 and Dec. 1945. The two 'Queen' liners alone carried over a million and a half passengers on war service. Reconditioning, conversion, and new building were again necessary on a large scale when the war ended. Eight ships were put back into service after reconditioning, including the *Queen Elizabeth*, which made her first

sailing as a passenger liner in Oct. 1946. Since then 15 ships of a total gross tonnage approaching 200,000 have been built. These include the *Caronia* (34,183 tons), and 4 22,000-ton liners for the Canadian service, *Sazonia*, *Ivernia*, *Carinthia*, and *Sylvania*, the largest Cunarders to be specially built for the St Lawrence route. In 1934 the North Atlantic fleets of the C.S.C. and the White Star Line were amalgamated under the name of Cunard White Star Limited, but in 1950 the Company reverted to its original title of the Cunard Steamship Company Limited. The gross tonnage of Cunard and subsidiary companies totals over 990,000.

Cunas, tribe of Amer. Indians living in the isthmus of Darien. They formerly had a stratified class society, but today are much altered and have a simple culture and organisation. See J. H. Steward, *Handbook of South American Indians*, vol. IV, 1948.

Cunaxa, anct. tn about 60 m. from Babylon. It was here that a battle was fought in 401 bc between Artaxerxes and Cyrus the Younger, in which Cyrus was killed—the story of the battle being related by Xenophon.

Cundurango, see CONDURANGO.

Cunego, Domenico (1727-94), celebrated It. engraver, b. Verona. He studied as a painter under Francesco Ferrari, but deserted painting for engraving and settled in Rome, 1761. He engraved 22 plates for Gavin Hamilton's *Scota Italica*, among which were some of the frescoes of Michelangelo in the Sistine Chapel, 'La Fornarina' of Raphael, and also his 'Galatea'.

Cuneiform Writing is probably the earliest known system of writing. The name cuneiform, from Lat. *cuneus*, wedge, was suggested about 250 years ago by Thomas Hyde, regius prof. of Heb. at the univ. of Oxford, and is given to scripts once in use among the peoples of Mesopotamia and neighbouring countries. The characters of these scripts were formed of combinations of strokes having the shape of a wedge, cone, or nail, and called, by the anct users, fingers. This peculiar form of the characters was not a device deliberately chosen, but came about more or less by accident. The chief writing material of Mesopotamia was clay of a particularly fine but coherent kind, which was found in the alluvial soil of that country. The early users of this clay for the purpose of writing soon discovered that one could draw the characters in the moist clay much better and more quickly by impressing them than by scratching. As curves and fine lines could not be impressed satisfactorily, C. W. consists of short, straight, vertical, horizontal, or oblique strokes or angles. Naturally the strokes impressed were thick on the top and on the left, thus giving birth to a series of wedge-shaped characters. These were impressed, line by line, with a special instrument, now known as a stylus, and called by the users tablet-reed. Indeed normally it was made of reed, although sometimes the wooden stylus was employed. During the long period of over

3000 years for which C. W. remained in use the characters naturally underwent considerable transformation. Indeed at the beginning the writing was not cuneiform at all. The characters may have been purely pictorial, the picture symbols representing various objects, animate and inanimate. However, even the earliest extant written tablets (from Uruk IV, see below) do not represent the primitive stage in which all the signs in use were fully pictorial. It is therefore disputed whether such a stage ever existed, the Uruk IV tablets representing instead the actual first essays at writing *ex nihilo*, and already containing many schematic signs, so far conventionalised that the objects depicted cannot be identified at all. At a later stage the script became linear; curved lines began to disappear and to be replaced by straight lines set at angles to one another. Finally the strokes were converted into wedges, and the objects originally depicted, except in the rarest cases, became nothing but unrecognisable symbols.

The exact date of the invention of the C. W. is unknown. The aforementioned earliest extant written tablets, numbering about 570, were discovered in the fourth or lowest archaeological stratum of Warka (known as Uruk IV), the biblical Erech, and generally are assigned to the middle of the fourth millennium bc. It is also uncertain what people invented this writing, but it is generally believed that they were the Sumerians, the non-Semitic creators of the most anct civilisation of Mesopotamia.

The development of the C. W. was parallel in some respects with that of the Egyptian, Chinese, and other analytic scripts. In other respects the C. W. was perhaps unparalleled; for instance, during the transition period from pictograph to cuneiform signs, perhaps about 3200 bc, there was a complete change of the direction of the signs. The reason of this change is thus explained. The earliest tablets were small enough to be held in the palm of the left hand, and the characters were impressed vertically. When the tablet increased in size it could not be so held; it was then laid on a table at right angles to the body. The signs were written as before, but when read in the turned position of the tablet the symbols appeared to be lying on their back, i.e. turned at an angle of 90 degrees. Afterwards the symbols were always drawn in this position. In inscriptions on stone or metal the old position of the signs persisted for a few centuries more, but in the course of time the practice came into line with that followed on clay tablets. As in the Egyptian and Chinese scripts, the range of expression of cuneiform signs was very wide. In the first place the signs represented concrete objects; at a second stage the use of the signs depicting concrete objects was extended to express concrete concepts and abstract ideas related in meaning; for instance, the solar disk also came to indicate the ideas of day and time. The characters thus were ideographic word-signs or ideograms.

At a later stage, introducing the phonetic principle, the C. W. became a *rebus*-script; many signs became phonograms, i.e. signs representing sounds. Without any regard to their original meaning they also were taken to represent syllables, which could be used in writing a word either consisting of that syllable or of which that syllable was a component element. This device was particularly used to indicate grammatical relations (such as pronouns, adverbs, prepositions), prefixes and affixes, foreign words, place-names and personal names, and so forth. On the whole, the Sumerian cuneiform script mainly consisted of word-signs, while the Mesopotamian Semitic peoples mainly employed the syllabic value of the characters (without, however, eliminating the use of old ideographs as word-signs). The highest achievement of the users of C. W. was to isolate the vowels and represent them by distinct signs, but there was never shown any tendency towards an alphabetic system, including the representation of the consonants by distinct signs. There were two exceptions to this general rule, the cuneiform alphabetic writing of Ugarit and the Early Persian script. The former was a script (of the 16th to 13th cents. bc) connected only in the external form of the characters with the cuneiform systems of writing; the latter was a semi-alphabetic and semi-syllabic script, also including 4 ideographs, and was perhaps suggested by the Aramaic alphabet.

The employment of the cuneiform characters, with both their ideographic and phonetic values, on the one hand, and their adaptation to the needs of languages belonging to different linguistic groups, had the result that many signs became *polyphones*, i.e. representing many sounds; others were *homophones*, having similar phonetic values, but representing entirely different objects. In order to remove ambiguities and confusion in the interpretation of the texts, two devices were introduced: (1) *determinatives*, that is signs which were not pronounced and were placed before or after the ideograms to be determined; these determinative signs defined the meaning of the ideograms by denoting the class to which the ideogram concerned belonged, such as deities, men and women, animals, plants, countries, numbers, plural, and so forth; (2) the use of syllabic signs as phonetic complements, consisting of a consonant and a vowel, which were placed after a polyphone sign ending with the same consonant.

The hundreds of thousands of clay tablets extant, written in cuneiform characters, are couched in the following languages: Sumerian, Babylonian, Assyrian, Cassite, Elamite, Early Armenian (also known as Chaldean or Urartu), Hittite, Mitannian, Hurrian, and Canaanite. Their importance for the knowledge of the ancient world is paramount. They reflect the classical age of Babylonian literature and science of Hammurabi (18th or 17th cent. bc), or the period when C. W. and the Accadian language were the

lingua franca of the ancient world (middle of the 2nd millennium bc); they are the remains of the rich libraries of the Assyrian kings (9th to 7th cents. bc). The decipherment of the cuneiform scripts was the achievement of the 19th cent. Maj. (later Maj.-Gen. Sir) Henry C. Rawlinson, who in 1846 pub. a trans. of the Early Persian part of the famous Behistûn (or Bisitûn) trilingual inscription, may be considered as the father of modern decipherment of the cuneiform scripts.

Ryckmans, *Grammaire accadienne*, 1938; D. Diringer, *The Alphabet, a Key to the History of Mankind* (pp. 41-57), 1948; G. R. Driver, *Semitic Writing from Pictograph to Alphabet*, 1948; R. Labat, *Manuel d'épigraphie akkadienne*, 1948; J. B. Pritchard and others, *Ancient Near Eastern Texts, etc.*, 1950; D. Diringer, *The Hand-produced Book*, 1953.

Cunene, riv., some 720 m. long, in Angola. Portuguese W. Africa. It rises on the tableland of Benguela, and descends in a series of rapids and reaches the sea with a westerly course, its mouth being blocked by sandbanks. The C. drains an area of 42,800 sq. m.

Cuneo: 1. Prov. of Italy, in SW. Piedmont (q.v.). It is generally high-lying, with peaks of the Maritime Alps (q.v.) in the W. and SW. The Tanaro, a trib. of the Po (q.v.), crosses the prov. S.-NE. The prin. tns include C., Mondovì, ALB, Saluzzo, and Cherasco (qq.v.). Area 2722 sq. m.; pop. 568,000.

2. (Fr. Coni) It. tn. cap. of the prov. of C., 45 m. SSW. of Turin (q.v.). It stands at the foot of the Maritime Alps, at the confluence of the Stura di Demonte and the Gesso. It was once strongly fortified and has been many times besieged. In general the tn is modern with line streets and squares. The cathedral has a 19th-cent. façade. C. is an important centre of communications, has a livestock and chestnut mkt, and has silk and cotton industries. Pop. (tn) 21,900; (com.) 39,200.

Cunha, Nuno da (1487-1539), Portuguese commander, distinguished himself by the capture, in 1529, of Mombasa (q.v.), now in Kenya. In the same year he superseded Sampeyo as viceroy of the Indies, and on his way out took Ormus, one of the E. Indies, which had rebelled and massacred the Portuguese, and dispatched the traitor Xaref, who had encouraged the revolt, to Lisbon. Without firing a shot C. succeeded in gaining possession of Diu, a stronghold on the Gulf of Cambay, which it was necessary to secure for the safety of his country's settlements. In 1537 he was bravely defending Diu with a garrison of 700 against the assaults of Soliman, the Turkish admiral, when he was recalled home.

Cunha, Tristão da (1460-1540), Portuguese navigator and discoverer. In 1504

he was nominated the first viceroy of Portuguese India, but a temporary attack of blindness prevented him from filling the post. Two years later King Emmanuel entrusted C. with a fleet of 16 vessels, 5 of which formed a squadron under the command of Alphonso D'Albuquerque. With this detachment C. discovered a group of 3 volcanic is. in the S. Atlantic, which still bear his name (see TRISTAN DA CUNHA), visited Madagascar and Mozambique, defeated the Arabs in Brava, and took possession of Sokotra (1507). His object was to gain control of all the trade with the E., and as an aid to this he built a fort at Coco (Tamarida). In 1514 the king chose him as envoy to Pope Leo X, who received homage from C. for the new Portuguese lands.

Cunningham, Sir Alan Gordon (1887-), soldier, educ. at Cheltenham and Royal Military Academy, Woolwich. Entered army, 1906. Served on W. front in First World War, and five times mentioned in dispatches. Instructor, machine-gun school, 1928-31. Commander Royal Artillery, 1st Div., 1937-8. Major-general, 1938. Commander-in-chief of the victorious imperial troops which conquered It. E. Africa, 1940-1 (see ITALIAN EAST AFRICA, SECOND WORLD WAR, CAMPAIGN IN (1941)). Commanded imperial troops which advanced into Cyrenaica, Nov. 1941; replaced by Maj.-Gen. Ritchie the same month after armoured actions at Sidi Rezegh (see AFRICA, NORTH, SECOND WORLD WAR, CAMPAIGN IN). Commandant, Staff College, Camberley, 1942. Lieutenant-general, 1943. General officer commanding N. Ireland, 1943-4. General officer commanding in chief E. Command, 1944-5. High Commissioner and commander-in-chief for Palestine and High Commissioner for Transjordan, 1945-8. Col. commandant R.A., 1944-54. General, 1945.

Cunningham, Sir Alexander (1814-93), authority on Indian archaeology, was a son of the poet, Allan C. Many years of his life were spent in the Brit. Army in India, and his various writings on Indian statistics and architecture are the fruits of a wide experience. His *Archaeological Survey of India* appeared in 1871.

Cunningham, Allan (1784-1842), poet and biographer, b. near Dalswinton, Dumfriesshire. He was apprenticed to his uncle, a builder, but in 1810 he went to London and wrote for the press. In the same year appeared *Remains of Nithsdale and Galloway Song*, pub. by Cromek, most of which were composed by C. In 1814 he became secretary to Sir Francis Chantrey, the sculptor. In 1822 he pub. his drama *Sir Marmaduke Maxwell*, and in the same year *Traditional Tales of the English and Scottish Peasantry*. In 1825 he ed. *The Songs of Scotland, Ancient and Modern*, and in 1829-33 he pub. *Lives of the Most Eminent British Painters, Sculptors, and Architects*, in 6 vols. His epic poem in 12 parts, *The Maid of Elvar*, appeared in 1833. In 1834 he pub. an admirable ed. of Burns's works in 8 vols., with a biographical preface containing many new

and interesting facts of the poet's life; this was followed in 1836 by *The Life and Correspondence of Robert Burns*. Just before his death C. had a paralytic stroke, the effects of which are obvious in *The Life of Sir David Wilkie*, pub. in 1843, after his death. C.'s songs were for the most part in the manner of Burns, and still retain some popularity. See D. Hogg, *The Life of Allan Cunningham*, 1875.

Cunningham, John (1819-93), church historian, whose fine scholarship renders his *Church History of Scotland*, 1859-82, an invaluable book of reference.

Cunningham, Peter (1816-69), author and editor, b. Pimlico, son of Allan C. (q.v.). Educ. at Christ's Hospital, he worked from 1834 to 1860 in the Audit Office. His chief pub. was a *Handbook of London*, 1849, to which later guides are much indebted. He wrote lives of Inigo Jones, 1848, and Nell Gwynn, 1852, and ed. the works of Drummond of Hawthornden and Johnson's *Lives of the Poets*. He also ed. his father's *Life of Sir David Wilkie*, 1843, and *Poems and Songs*, 1847.

Cunningham, William (1805-61), theologian. During the conflict preceding the foundation of the Free Church in 1843, C. threw himself heart and soul into the controversy, giving the whole force of a fine intellect and the full moral support of a splendid character to the non-intrusionist principles he had adopted. In 1847 he was appointed principal of New College, Edinburgh. A founder of the Evangelical Alliance, he was moderator of the General Assembly in 1859.

Cunningham, William (1849-1919), theologian and political economist, b. Edinburgh, educ. at Edinburgh Academy and Cambridge. He was chosen Hulsean lecturer in 1885, and in 1899 gave a course on economic hist. at Harvard Univ. Became Archdeacon of Ely, 1907. Among his valuable textbooks and hist. may be cited *The Growth of English Industry and Commerce*, 1882, 1925-9; *Use and Abuse of Money*, 1891; *Western Civilisation*, 1894; *English Industrial History*, 1895; *Modern Civilisation*, 1898; *Rise and Decline of Free Trade*, 1904; *Growth of English Industry and Commerce in Modern Times*, 1907; *Cure of Souls*, 1908; *Christianity and Social Questions*, 1910; *Cure against Free Trade*, 1911; *Efficiency in the Church of England*, 1912; *Christianity and Economic Science*, 1914; *English Influence on the United States*, 1916; *Progress of Capitalism in England*, 1916; and *Increase of True Religion*, 1917.

Cunningham of Hyndhope, Sir Andrew Browne Cunningham, 1st Viscount (1883-), admiral, son of Prof. D. J. C. and brother of Sir Alan Gordon C. (q.v.). Educ. at Edinburgh Academy, Stubington House, Fareham, and H.M.S. *Britannia*. Entered R.N. 1898 as a midshipman on cruiser *Doris*, which operated off S. Africa during the Boer war. Before he was 30 he was in command of his own ship, the 900-ton *Scorpion*. Won distinction in the Gallipoli campaign, 1915. Commanded a destroyer in the Dover patrol. As a rear-admiral commanded destroyer fleet in the

Mediterranean, 1933-6. In 1937 he was made vice-admiral in command of the Mediterranean battle cruiser squadron, and second in command of the Mediterranean fleet. Lord commissioner of the admiralty and deputy chief naval staff, 1938-9. Famous for his brilliant aggressive strategy in the Second World War, in which he began his war service in command of the first cruiser squadron in the Mediterranean and then, from Oct. 1939, in the N. Sea, where his ships took part in the N. patrol, blockading Germany. His flagship, *Droonshire*, brought King Haakon and the Norwegian Gov. to Britain, after playing a gallant part in the ill-starred campaign in Norway. The Fr. Foreign Legion, whose forces he landed there, and subsequently took far S. to Duala after the ill-planned venture at Dakar (q.v.), bestowed a much-valued honour for his leadership. Under his direct command as commander-in-chief Mediterranean fleet were the naval forces, both surface vessels and fleet air arm, which crippled Italy's fleet at Taranto, the battle of Calabria, and the battle of Cape Matapan (q.v., and see also NAVAL OPERATIONS IN SECOND WORLD WAR). Made admiral, G.C.B., 1941. Was in general command of the immense convoy of more than 800 vessels which landed the Brit.-Amer. expeditionary forces on the Algerian and Moroccan coasts on 8 Nov. 1942. In the matter of transporting, supplying, and maintaining the enormous invasion forces in many parts of the world he proved a great Fourth Sea Lord. Head of the Brit. Admiralty delegation to the U.S.A., 1942. Promoted admiral of the fleet, Jan. 1943. As commander-in-chief Levant he mounted a great part of the assault forces for the attack on Sicily at a time when the R.N. in the E. Mediterranean was heavily engaged in the Dodecanese operations. It was he too who planned and commanded the—brilliantly successful Auzio landing and the still greater undertaking—the assault on the S. of France in Aug. 1944. From 1943 to 1946 he was First Sea Lord and chief of the naval staff at the Admiralty. He was created a baron in 1945; viscount, 1946. His autobiography *A Sailor's Odyssey* was pub. 1951.

Cunninghame Graham, Robert Bontine (1832-1936), travel and fiction writer, b. London, son of a Scottish laird. He was brought up by a Sp. grandmother and then went to Harrow, but before he was 17 he went to the Argentine and travelled in S. America. In 1879 he married a Chilean poetess, Gabriela de la Balmondière. In 1884 his father d.; he inherited the family estate of Ardoch in Dunbartonshire, settled there, and entered politics. From 1886 to 1892 he was M.P. for NW. Lanarkshire, and along with Keir Hardie (q.v.) he organised the Scottish Labour Party: in 1887 he was imprisoned for leading the mob in the Trafalgar Square riots. In 1897 he went exploring in Morocco and for a time was a prisoner of one of the kaid's there. In

1928 he became the first president of the Scottish National Party. He d. in Buenos Aires. Looking always like a Sp. don, he was of the same line of adventurous travellers as Burton and Doughty. His travel books include *Mogreh-el-Acksa*, 1898, which tells of Morocco, *El Rio de la Plata*, 1914, and *Cartagena and the Banks of the Sinu*, 1920. *A Vanished Arcadia*, 1901, is a hist. of Paraguay. He also wrote some biographies, but was best known for his stories and sketches, vols. of which are *Thirteen Stories*, 1900, *Success*, 1902, *Faith*, 1909, *Hope*, 1910, *Charity*, 1912, and *Scottish Stories*, 1914. See H. F. West, *A Modern Conquistadore*, 1932; A. F. Tschiffely, *Don Roberto*, 1937.

Cunninghamia, genus of evergreen conifers, family Pinaceae, of 3 species, 2 only being in cultivation: *C. lanceolata* (synonym *sincensis*) of China grows to 150 ft. and is prized for its light, durable, fragrant wood, used by the Chinese for coffins; and *C. konishii* of Formosa, which grows to 80 to 100 ft tall; neither is fully hardy outdoors in Britain.

Cunobelin, Brit. king (fl. AD 40) of the Trinovantes, father of Caractacus (q.v.). Coins bearing his name have been found. His cap. was at Colchester (*Camulodunum*). He seems to have been the original of Cymbeline who appears in Shakespeare's play of the same name, in which he is the father of Imogen.

Cunoniaceae, sub-tropical family of shrubs and trees, about 120 species; leathery, evergreen, opposite or whorled leaves, small flowers, and 2-celled ovary; fruit a capsule, drupe, or nut. Genera include *Acrophillum*, *Cunonia*, *Weinmannia*.

Cup and Ring Marks are found on stone monuments and on portable objects over a very wide geographical area from India to Ireland. They have magic or ritual significance, and are often thought to be stylised or very degenerate representations of the human form. Many occur on Irish megaliths and cists and others are known in Scotland; it would appear that both are connected with early prehistoric metal-working in the N. of Spain, for exactly comparable markings are seen on the Iberian megaliths.

Cupar, or **Cupar-Fife**, royal, municipal, and police burgh and the co. tn of Fife, Scotland, on the lt. Eden, 10 m. SW. of St Andrews, 30 m. NNE. of Edinburgh. Its chief industry is linen-weaving, and there is a beet sugar factory and a large corn mrlt. The chief buildings are the tn hall, corn exchange, and Duncan Institute. The anc. seat of the Macduffs, earls of Fife, is now a school. In front of it in 1552 there took place one of the earliest performances of Sir David Lyndsay's *Ané Sayer of the Three Estates*. Pop. 5400.

Cupellation, process for the separation of precious metals from lead, in which the alloy is heated on a cupel (hearth of porous, refractory material like Portland cement or marl) in air, whereby the lead is oxidised and removed as litharge, and the precious metal left behind. See also ASSAYING.

Cupid (Lat. *cupido*, desire), or Amor, Rom. name for the god of love (Gk *Eros*). He is generally represented as a winged, naked boy, joyous and mischievous, with bow and arrows, and sometimes a torch and quiver, and blindfolded. The arrows he aimed at the hearts of both men and of the gods to kindle them into love. He was the son of Venus by Mars, Jupiter, or Mercury. For C. and Psyche, see PSYCHE.

Cupola (It., from Lat. *cupula*, small vault or cask), in architecture, a hemispherical vault or dome. In domestic architecture a C. is generally of glass.

Cinchona cuprea, a tree of S. America. From the same bark quinine is also obtained, the C. being separated from the mixture of the 2 alkaloids by treatment with ammonia and boiling ether.

Cupressus, see CYPRESS.

Cura, or Ciudad (Villa) de Cura, in in Aragua state, N. Venezuela, 50 m. SW. by W. of Caracas, almost destroyed by an earthquake in 1900. It is an agric. and stock-raising centre; copper is found locally. It was founded 1730 by Juan de Bolívar. Pop. 13,000.

Curaçao, or Curaçao, most important of the Dutch W. Indian Is., or Dutch Antilles,

P. H. Hiss: Netherlands Information Bureau

CURAÇAO: THE BEACH AND TOWN OF WEST POINT

Cupping, obsolete remedial measure designed to relieve inflammation by blood-letting. In dry C. the blood is withdrawn from deep-seated regions to the surface. In wet C. the blood is withdrawn from the body through a number of incisions made by a special instrument. The apparatus used is a glass cup with rounded or roughened edges, designed to adhere to the skin. The glass is heated by being warmed in a flame or by burning spirit within it. It is applied while hot and the subsequent cooling causes a contraction of the contained air which so diminishes the surface pressure that the blood is drawn from the lower vessels to the skin.

Cupreine, alkaloid in the bark of

lying 40 m. from the N. coast of Venezuela. C. is 37 m. long by 7 m. wide, and has a total area of some 174 sq. m. The soil is largely unproductive: sisal, citrus fruits, and divi-divi are cultivated in some fertile tracts, and salt, phosphates, livestock, and straw hats are exported. C. liqueur was originally made here from a special variety of orange found on the is. The leading industry is now petroleum, centred on Willemstad which lies on Sint Anna Bay, and is the cap. not only of C. but of the neighbouring is. of Aruba, Bonaire, St Eustatius, Saba, and the S. part of St Martin (the N. part of which belongs to France). These is., together with C., form the Dutch Antilles (see WEST INDIES). C. was discovered by

Spain in 1527, but has been held by the Dutch since 1634, except for a short interval during the Napoleonic Wars when it was in the hands of Great Britain. The official language is Dutch, but Spanish, English, and a lingua franca, Papiamentu, are also spoken. Pop. of the whole ter. 150,000 (C. 95,000). See K. Martin, *West-Indische Skizzen*, 1887; de Veer, *La Colonie de Curaçao*, 1899; and P. H. Hiss, *Netherlands America*, 1944.

Curaçao, see LIQUEUR.

Curare, **Curara**, or **Urari**, vegetable extract obtained from *Paullinia curare* and members of the Strychnos family. It is used by the natives of S. America as an arrow poison. Its active principle is curarin, and it has been used hypodermically in hydrophobia and tetanus. It is a dangerous drug, causing paralysis of the motor nerves and eventually death through paralysis of the respiratory organs.

Curassows, or **Cracidae**, family of birds belonging to the order Galliformes, sub-order Galli. They are found in tropical America from S. Texas to N. Argentina, where they inhabit forests within reach of the coast or wooded hills near rivers. They live on leaves and fruit. The nests are carelessly constructed on the level branch of a tree or bush. The C. vary in colour from black to blackish-green. The *Penelopinae* are brown or olive-green in colour and number 15 species. The *Oreophasianae* contains only the Guatemalan pheasant, a splendid bird with soft greenish-black plumage, brown at the side and below. The feet are vermilion.

Curate (from the Lat. *curare*, to care for), originally 'one with a cure of souls,' i.e. souls in his charge. In former times benefices were sometimes entrusted to religious houses, which might transfer them to laymen. Such laymen were styled impropriators and had to get a licence of the ordinary to allow a priest to take over the cure or par. in question. These clerks were called perpetual C.s, because the impropriators could not remove them, but an Act of Parliament of 1863 allowed all perpetual C.s to use the title of vicar. The incumbent in a par. where the tithes are impropriated and no vicarage has ever been endowed is still legally a perpetual C.; he is not removable, and the impropriators are under the necessity of maintaining him. On the Continent (cf. Fr. *curé*, It. *curato*, etc.) the word corresponding to C. is the title of the par. priest. In England the word used to be applied to deputies for incumbents who never visited their parishes but the word has now come to mean an unbeneficed clergyman, i.e. really an assistant C. The bishop of the diocese licenses and admits the C. to the par., and assesses the amount of his salary.

Curator (Lat., one who has charge of a thing—a guardian), in Rom. law the guardian or caretaker of a person over age who for some reason—for instance, if he be a spendthrift or of unsound mind—is unable to take charge of his own affairs. In civil law a C. is the guardian or caretaker of the property of a minor.

Under the Rom. Empire the title was given to those who occupied public official positions of trust. In modern times the name is generally given to the caretaker of a museum or public gallery, but it is still retained with something of its old significance at the univ.

Curb, term used in masonry to describe any fence or wall designed to keep a mass of earth in its place. It is applied to various enclosing borders, being originally limited, as the word itself suggests (curb from Lat. *curvus*, crooked), to the framework or border of something circular. Thus it is still used of the framing round the top of a brewer's copper, of the cylindrical ring of iron or wood forming the foundation of a brick shaft, and of the wall or coaming round the top of a well. But its most common application is to the stone or other durable material placed edgewise along a sidewalk to separate it from the road, and to form a finish to the path or pavement.

Curb, in horses, see HORSE (DISEASES).

Cureuma, genus of Zingiberaceae. *C. angustifolia* is a native of the forests of India and *C. leucorhiza* grows in the forests of Bahar. From the tubers of both species E. Indian arrowroot is obtained. *C. longa*, the common turmeric, is cultivated all over India, and also very largely in China; the Chinese sort is more esteemed for its superior richness in colouring matter. The rhizome of this plant is dried and then ground, when it yields the yellow dye known as turmeric. *C. zedoaria*, the broad-leaved turmeric, has aromatic tubers used by the Hindus as a stimulating condiment, as a medicine, and as a perfume. Colic, cramp, and torpor are some of the diseases it alleviates in the E.

Curel, François de (1854–1928), Fr. dramatist, b. Metz. Being descended from a wealthy family, he was able to devote himself to literature. His first plays, *L'envers d'une sainte*, 1892, *Les Fossiles*, 1892, *L'Intruite*, 1893, were produced with success by Antoine at the Théâtre Libre. The majority of his dramas are problem plays, although he never deals with abstract ideas, but with the passions and conflicts aroused by the ideas. His greatest popular success was *L'Âme en folie*, 1920; but his more characteristic plays, such as *La Nouvelle Idole*, 1899, *La Fille Sauvage*, 1902, *Le Coup d'aile*, 1906, found perhaps more favour with the critics than with the general public. He was elected to the Fr. Academy in 1919. His *Théâtre complet* was pub. in 6 vols. in 1919–24. See P. Blanchart, *F. de Curel*, 1924; E. Ponier, *La Vie et l'œuvre de F. de Curel*, 1934.

Curepipe, favourite and fashionable residential quarter, connected by rail with Port Louis, and situated at an elevation of some 1850 ft in the interior of the is. of Mauritius. Pop. 28,000.

Cures, Sabine city, 25 m. from Rome, on the l. b. of the Tiber, legendary bp. of Numa. It was probably destroyed by the Lombards in AD 589, but the site remains, namely a hill with two peaks, which were crowned formerly by the citadel and

neopolis respectively. It was from C., so the story goes, that Titus Tatius led to the Quirinal the Sabines, with whom the Romans, in time coalesced to form the Quirites.

Curetes, demigods in the is. of Crete, to whom Rhea entrusted her son, the infant Zeus, when fleeing from the wrath of her husband Cronus. They were honoured in Greece with Pyrrhic dances. The name was also given to the priests of Rhea, and, when she was identified with Phrygian Cybele, to her eunuch Corybantes (q.v.) or Galli.

Curfew (Fr. *couvre-feu*). The custom of ringing a bell at sunset in summer and eight o'clock in winter to warn all householders to extinguish their lights and fires is said to have been introduced into England from the Continent by Wm the Conqueror, but it probably existed in England earlier. It was probably not intended as a tyrannical decree, but was a caution against leaving fires burning at a time when all houses were built of wood. The formal practice of ringing a bell at a stated hour is still continued in some dists. It is still resorted to in periods of civil unrest as, e.g., in Cyprus during the E.O.K.A. disturbances, 1956.

Curia Muria Islands, see KURIA MURIA.

Curia Regis, or **Aula Regis**, king's council, estab. at the Norman Conquest. It was at first much the same as the committee of the *commune concilium*, known as the permanent council or *concilium ordinarium*. The C. R. gradually, however, assumed a position distinct from this council or committee owing to the continuity of its existence—whence its alternative name, continual council—and to its members being available for consultation at any moment, instead of at only three stated periods in the year, as in the case of the national council. By degrees the term C. R. or *aula regis* began to be used to denote the king's council in its capacity of a supreme court of justice with the king at its head, and in the reign of Henry I appear traces of a definite organisation and staff. The C. R., which at this time always followed the king, was occupied at first more especially with financial business, in which capacity it was called the Exchequer (q.v.). Its members were the great officers of the household, such as the constable, chamberlain, steward, marshal, and butler, and such officials as the justiciar and chancellor and treasurer, who were appointed by the king to help carry on the work of government. In its judicial capacity the C. R. acted as a court of appeal from the local courts and as a court of first instance in cases in which the powerful tenants-in-chief were concerned. The C. R. also was in close communication with the local courts by means of its travelling justices who, in Henry I's reign, began to make circuits of the country for the purposes of finance and justice. In 1178 the increased business of the C. R. had caused the number of judges to become so large that the king appointed five of them to sit regularly *in banco* to hear all complaints

and to transact all the business which subsequently fell to the three courts of common law, while at the same time the appellate jurisdiction was transferred to the *concilium ordinarium*. This limited body of judges was the origin of the courts of king's bench and common pleas. The system was slightly modified in 1179. The C. R. still continued in theory, though not in practice, to transact its business in the presence of the king and continued to follow him, to the great inconvenience of all concerned, and was shortly after broken up into the three courts of common law, namely the court of exchequer, court of common pleas, and court of king's (now queen's) bench.

Curia Romana, name used to denote the collective judicial and administrative institutions by means of which the pope carries on the general government of the Church. It is also used in a secondary sense, to mean either the persons who form part of the general government of the Church or the Holy See itself. There is no separation of powers in the C. R., each dept, besides performing the business entrusted to it, having a share in the legislative, judicial, and administrative power. All depts derive their powers directly from the pope, and exercise them in the papal name, while the pope is responsible officially for all the acts of the C. R. The decisions of some depts must in nearly every case be referred to the pope for his ratification, but there is not the same necessity for ratification in others. Acts performed directly by departmental heads are generally called Acts of the Holy See, while those of the pope himself are designated Pontifical Acts, e.g. bulls, briefs (q.v.), and encyclicals. In all cases, however, the disciplinary authority is the same, though Acts which concern individuals have not the force of general law.

The component parts of the C. R. are (1) the tribunal and offices, and (2) the permanent commissions of cardinals, known as the Rom. Congregations. The former have been in existence for centuries, but the latter, though of much later institution, have taken precedence, and now perform a great many of the transactions formerly in the jurisdiction of the former. The Congregations consist of the highest dignitaries of the Church, and are practically subdivisions of the Consistory, in which latter council the entire Sacred College takes part. The old machinery of the eccles. administration of the tribunals and offices still exists, but the prelates who once were at the head of these depts have been replaced by cardinals. The tribunals are (1) the *forum internum*, the Penitentiary, (2) the Rota (*forum externum*), and (3) the papal Signatura, the two latter being for judicial matters.

The offices are (1) the Chancery which sends out papal bulls, (2) the Apostolic Dataria, which transacts matters of grace, like nominations to benefices; (3) the Apostolic Chamber, which administers the property of the Holy See; (4) the papal secretaries, the chief of whom, the cardinal secretary of state, deals with

the political affairs of the Church; (5) the pontifical family, of domestic prelates of the household, one of whom presides over the arrangement of audiences, while another revises books pub. at Rome; and (6) the pontifical chapel, or papal court for religious worship.

Curicó: 1. Small central prov. of Chile, stretching from Argentina (Mendoza) to the Pacific, between the provs. of Talca and Colchagua. Except for salt deposits on the coast, minerals are as yet undeveloped. Irrigation has greatly assisted agriculture, and vines, wheat, and barley are cultivated. Area 2214 sq. m.; pop. 89,391.

2. Tn, cap. of above prov., situated on the Mataquito R. 114 m. SW. of Santiago. It is an agric. centre with a cattle trade, flour milling, and distillery. There is a very fine main plaza. Pop. 19,200.

Curie, Marie (Marya Skłodowska) (1867–1934), physicist and chemist, b. Warsaw,

Hulton Picture Library

MADAME CURIE

daughter of Prof. Skłodowska. Educ. at the Lyceum of Warsaw; went to Paris and studied with Pierre C. (q.v.), whom she married in 1895. It was she who carried out the many experiments necessary to obtain the atomic weight of radium, the element they had jointly discovered. She succeeded her late husband as prof. of physics and director of the physical laboratory at the Sorbonne in 1906, being the first woman prof. to be appointed to that univ. Besides the honours gained in common with her husband, she obtained the medal of the Royal Society of Arts (England) in 1910, the Nobel prize for chem. in 1911, having already shared with her husband and Henri Becquerel the Nobel prize for physics in 1903. She visited the U.S.A., and her admirers there raised a fund with which they purchased a considerable portion of radium so that she could more easily carry on her investigations. The Marie Curie Skłodowska Institute of Radiology was opened in Warsaw in 1932. Pubs.: *Recherches sur la propriété magnétique des aciers trempés*,

Recherches sur les substances radioactives, 1903; *Traité de radioactivité*, 1910; *Les Progrès de la physique moléculaire*, 1914; *La Radiologie de la guerre*, 1921; *Radioactivité et phénomènes connexes*, 1923; *L'Isotopie et les éléments isotopes*, 1924; and *Pierre Curie*, 1924. See *Eve Curie, Madame Curie*, 1935 (Eng. trans. 1938).

Curie, Pierre (1859–1906), Fr. physicist, b. Paris, was educ. at the Sorbonne, Paris, where from 1900 he held the chair of physics. In time he was chosen as *chef des travaux* at the school of physics and chem. in Paris, and in 1895 was appointed prof. at the same institution. In his earlier years he carried on some valuable research into piezo-electricity and the magnetic properties of substances at various temperatures. But his greatest service in the field of science was the discovery of two new elements, polonium and radium. Already, in 1896, Henri Becquerel had pub. his observations on the radioactivity of uranium—a property manifested in a still higher degree by the compound known as pitchblende. M. and Mme C. (see CURIE, MARIE)—for his wife took a full and equal share in the whole of C.'s laboratory work—immediately began to subject pitchblende to fractionation, hoping thereby to bring to light some hitherto unknown substance which must be radioactive to a still greater extent than uranium. Their hopes were fully realised, and resulted in the discovery of radium and its transformation product, polonium. In 1903 the C.s received the Davy medal of the Royal Society and also half of the Nobel prize for physics, the other part being awarded to Becquerel. A year after his election to the Academy of Sciences (1905), C. was killed by a dray which ran over him. His investigations were pub. in the *Journal de Physique et le Radium, Annales de Physique*, and other scientific records.

Curie, a unit of radioactivity (q.v.) initially defined (1910) as the quantity of radon found in equilibrium with 1 gm of radium. Careful measurements indicated that this was 0.66 mm³ at normal temp. and pressure, and was associated with 3.7×10^{10} disintegrations per sec. This number is a more convenient unit and in 1948 it was agreed to define the C. as that quantity of any radioactive substance which suffers 3.7×10^{10} disintegrations per sec. The millicurie (mC) and microcurie (μ C) are one thousandth and one millionth of the C. respectively.

Curio, Gaius Scribonius: 1. Rom. politician; consul in 76 BC. As governor of Macedonia (75–73) he led a successful expedition against the Dardanians, and was the first Rom. general to reach the Danube. C. d. in 53 BC.

2. Son of the above, transferred his allegiance from Pompey to Caesar after his tribuneship in 50 BC. After mustering troops for Caesar in Umbria and Etruria on the outbreak of civil war, he more than held his own against the Pompeians in Sicily (49), and was finally slain by Juba, the Numidian king, whilst crushing the Republican cause in Africa.

Curisches Hafl, see KURISCHES HAFF.

Curitiba, or **Curityba**, city and cap. of the state of Paraná, Brazil. Situated on a pleasant plateau, 3000 ft above the sea, it is watered by the Iguaçu, an affluent of the Paraná, and is connected by rail with its seaport, Paranaguá, 50 m. to the E. There is a univ. (founded 1912), theatre, and library, and large Ger., It., and Slav. colonies. Its staple exports are maté tea, coffee, and timber; industries include paper, furniture, textiles, tobacco, sugar, etc. Pop. 141,350.

Curium, see TRANSURANIC ELEMENTS.

Curius Dentatus, Manius, see DENTATUS.

Curlew, shore bird of the genus *Numenius*. It is found in the Old World, and is remarkable for its very long and decurved bill, and its elongated legs. It breeds especially on moorlands, the nest being quite exposed. The plumage is pale brown, with dark bars, the under and lower parts being mainly white. It is found on Brit. shores from autumn to spring, and feeds on insects, worms, and berries.

Curling, game like bowls, played on ice; it has been a popular Scottish sport during the last 3 centuries and has now found a home in most parts of the world where the climate is favourable, especially Canada and Switzerland. The stone, which takes the place of the bowl, is a block of granite or whinstone rounded to the shape of a Dutch cheese and polished smooth. On the top is an iron handle by which the player grips it. The stone may be thrown in various ways, according to the direction in which the player wishes to send it. The weight varies from 35 to 40 lb., but 44 lb. is the maximum allowed. By giving it a rotary motion to a greater or less degree it may be made to go in more or less of a curve, hence the name 'curling.' The place of the jack at bowls is taken by a fixed mark called the tee. The ice is swept clean and 2 tees are constructed, 38 yds apart, 1 at each end of the rink. With the tee as centre, a circle of 7 ft radius is then drawn at each end. Behind each tee a line is drawn back from the tee to a distance of 4 ft, these being called the *centrallines*. At the hinder extremity of the central lines *foot-scores* are drawn at right angles to them, 18 in. long, on the left hand on the central line as one faces the tee. With part of the foot-score as diameter and with their centres 6 in. from the central line, small circles 3 in. in radius are drawn. On these players must place their left feet when casting their stones. The scoring is as in bowls. Those stones which are inside the tee circle and nearest to the tee count for the score, and a game consists of a number of 'heads' or 'ends,' after each of which the players change ends. Seven yds from each tee a wavy line is drawn, known as the hog-score, and any stone which does not cross this is called a *hog* and removed from the rink. Midway between the tees a straight *middle* line is drawn. The rink having been prepared according to the above rules, each side chooses its captain or *skip*. A side generally consists of 4 players with 2 stones apiece, and the skip is an autocratic director, giving minute direction

to the other players where they must send their stones. The leader is generally directed by his skip to send his stone straight towards the tee, but on no account to go beyond it. The skip of the opposing side may then direct his 1st player either to send down a shot to remove his adversary's stone, or to try to get his own stone nearer. The 2nd and 3rd players are similarly told exactly what to do. The skip generally plays last, though this is not obligatory, and he himself is directed by a player, generally the 3rd, whom he has picked out for this purpose. As a rule when one good shot has been made it is customary for the following players to be directed to lay their stones as *guards* to protect this one. All the players are provided with brooms and a right judgment in 'sweeping' (sweeping) forms no small part of the skill of the game. The broom is used to sweep away any particles of ice or snow that seem likely to impede the progress of the stone, and is used only on the skip's orders. The player's party may sweep from the middle line to the tee, so long as they do not disturb either the running stone or any of those at rest. An umpire is generally chosen to settle disputed points. The rules for C. are made and issued by the Royal Caledonian C. Club.

Much effort has been exerted to find the origin of the game, but it seems impossible finally to settle this point. The balance of opinion inclines to give it a Dutch or Flemish origin, but there are many references to the game in the early 17th-cent. Scottish records. Camden in 1607, speaking of the Orkney Is., says, that they supply 'plenty of excellent stones for the game called curling.' The game at first bore a much closer resemblance to *quoits* than it at present does. It was for a long time known as *coiling* or *kuling*, and the old name still survives in many parts. At this time the stones were much smaller, weighing only a few pounds, and the impulse was given by the fingers, to receive which a small hole was made in the top of the stone. Then for a short time the stones were of enormous weight, 70 or 80 lb. each, and slaying was not carefully attended to. With an increase in the symmetry of the stones came a decrease in their size. In 1834 an attempt to revive the ancient sport was made by the Amateur C. Club of Scotland, attended with but little success. In 1838 the Grand Caledonian C. Club was formed on more professional lines, and this club, which took the title of Royal from Queen Victoria in 1842, extended the game to Canada and the U.S.A., where it is played under slightly different conditions. See J. Ramsay, *An Account of the Game of Curling*, by a Member of the Duddingston Curling Club, 1811; J. Taylor, *The History of Curling, and Fifty Years of the Royal Caledonian Curling Club*, 1890; and J. G. Grant, *The Complete Curler*, 1914.

Curlil, Edmund (1675-1747), notorious London bookseller, b. London. He is responsible for the origin of the word *Curlicism*, having achieved a reputation for issuing obscene literature. He lived

chiefly by piratical publishing, and Arbuthnot said of his biographies that they added a new terror to death. He quarrelled, in 1718, with Alexander Pope, the poet, in consequence of which Pope pilloried him in his work, the *Dunciad*.

Curly Coated Retriever, see RETRIEVER.

Curragh, see CORACLE.

Curragh, The, a large unenclosed plain in co. Kildare, Rep. of Ireland. The C. is the headquarters of Irish racing.

Curragh Incident, name by which the dramatic and unexpected gesture made at C. Camp by Gen. Hubert Gough (q.v.) and other officers under his command came to be known. On 20 Mar. 1914 they tendered their resignations as a protest against the likelihood of being sent to enforce Home Rule upon N.E. Ulster. This action caused the Brit. Gov. to give up all idea of coercing Ulster into Home Rule, at any rate for the time being. The officers in question subsequently had their commands restored to them. See also HOME RULE. See A. P. Ryan, *Mutiny at the Curragh*, 1936.

Curran, John Philpot (1750-1817), Irish judge and orator, won in 1769 a sizarship at Trinity College, Dublin. He was called to the Irish Bar in 1775, and in 1782 he was created king's counsel; in the following year he entered the Irish Parliament as member for Kilbeggan. A staunch support of Grattan, his fervid and sarcastic speech nevertheless failed to secure for him in the House that pre-eminence which he enjoyed in an Irish court. C. was a convinced Protestant, but when the oppressed Catholics of his country were goaded at length to open rebellion, he threw himself wholeheartedly into the defence of their leaders in the series of state trials which followed. Thus he exerted himself to save Archibald Rowan (1794), the Rev. Wm Jackson (1795), Peter Finnerty (1797), the brothers Sheares (1798), Napper Tandy (1800), and a host of other victims of gov. persecution. C.'s last years were darkened alike by the political outlook and by domestic troubles. The union, which he had prophesied would be 'the annihilation of Ireland,' was to the last degree abhorrent to him; his wife eloped with a clergyman, and Sarah, his daughter, d. in Scilly after the execution of her lover, Robert Emmet, who rebelled in 1803. From 1806 to 1814 C. served the Whig Gov. as master of the rolls in Ireland.

Currant, term applied properly to species of *Ribes*, a genus of Grossulariaceae which flourishes in N. lands and has four representatives in Britain. *R. rubrum* is the red C., a plant remarkable for the mixture of sweetness and acidity in its fruit and for the beauty of its semi-transparent red or yellow berries. *R. nigrum* is the black C., in the fruit of which a powerful and agreeable aromatic principle takes the place of acidity. *R. sanguineum*, the flowering C., is well known in Brit. shrubberies for its beautiful pendant racemes of flowers, which are white when very young, and gradually become rose-coloured. The C.s sold in grocers' shops are the dried berries of a small kind of

grape which is cultivated chiefly in the is. of the Mediterranean and in Corinth, the word C. being a corruption of the name of this tn. Various plants of different genera and orders are named C.-trees and C.-bushes, but they bear no true resemblance to species of *Ribes*.

Currant Wine, inferior vintage made from a seedless variety of the *Vitis vinifera*, or grape-vine, which is cultivated chiefly in Zante, Cephalonia, and Ithaca, and near Patras in the Morea. The fruit is grown on the lower hills and in the valleys, the higher slopes being left for the cultivation of the grape-vine.

Currency (Money), that which is current or in circulation, as a medium of trade. The word is generally applied to coins and what is termed paper money, comprising bills issued by authority and bank-notes, or notes issued by a gov. Money may be defined as the means by which 2 persons are enabled to enter into transactions. Some common measure of value must necessarily be adopted to facilitate exchange. Various substances have been used in different countries to serve as money, e.g. the Chinese formerly used cubes of tea, and auct classic nations used cattle. But as the precious metals, gold and silver, and in a lesser degree copper, have been for long the universal substances selected for the purpose by reason of the possession of their qualities of intrinsic value, durability, susceptibility to div., and portability, it is unnecessary to consider any other kinds.

The original meaning of the word coin was a wedge-shaped disk for stamping money. Etymologically, *coin* is a doublet of *coign*, from Lat. *cuneus*, wedge; the Fr. word means also 'stamp.' Neither the Bible nor Homer gives any evidence of the use of coins in very early times. Herodotus ascribes the invention of stamped money to the Lydians, and the *Parian Chronicle* to the Aegietans in the 9th cent. bc. Numismatic research points to the silver coins of Aegina, stamped with a turtle, as the most auct known, while those of Lydia probably come next, followed by the gold and silver Darics of the Persian Empire in the 5th cent. bc. Metal was very early used as a medium of exchange, but was weighed out by scales. The monetary systems of most European nations can be traced back to the pound of silver, still represented in the Eng. pound. A few instances are known of coins of other than circular shape, but convenience and the prevention of the depreciation of the coin by clipping or shearing portions from the edges have tended to the universality of the round metal disk. The integrity of the coin as regards weight is also protected by milled and raised edges, and by the inscriptions and designs on its surface; all of which make mutilation easily perceptible. The designs, etc. stamped on coins are usually symbols of the authority by whom they are issued, and the lettering confirms this and generally includes the date of issue of the coin. Among the numerous minor Grecian states, and in early medieval Europe, a tremendous number of coins

were made, separate coinages being issued not only by individual nations, but also by cities and even by families (see *also* **TOKENS and TRADE TOKENS**). Such local coinage was valid only within a restricted area, and the gradual centralisation of power led to the adoption of certain standard coins for international circulation.

In modern times the right to coin money is a State monopoly, and coins are issued of 2 kinds: standard, where the weight of metal is equivalent to the face value of the coin, and token, where the actual value of metal is less than the face value of the coin, as in the case of copper coinage. Gold, silver, bronze, and nickel are the chief metals used for coins. In Great Britain the silver coins are for 6d., 1s., 2s., and 2s. 6d. Threepenny pieces are occasionally seen, but the present 12-sided threepenny piece is a nickel-brass coin. The existing bronze coins are penny, half-penny, and farthing. Gold coins have disappeared. Five-pound and 2-pound gold coins are issued on special occasions; but the sovereign and half-sovereign were withdrawn from circulation during the early days of the First World War. The 5s. silver crown and the double florin have also been discontinued. In the Brit. Empire, New Zealand uses the Brit. coinage; Australia, S. Africa, and Eire use the same units, but with their own designs; Canada has the dollar and various cent pieces, and India the rupee. In Sept. 1946 the Brit. Gov. announced that the existing silver coinage was to be replaced by one of cupro-nickel. The process of withdrawal is to be made over a period of years, and for some years both types of coin will circulate side by side. The reason for the withdrawal is a world shortage of silver and the dearness of the metal. Further, Britain received about £75,000,000 worth of silver from America under Lease-Lend and that has to be repaid. In 1946 the price of silver was 4s. 7½d. an oz., compared with 2s. during the war. In 1920 the price of silver rose to such a height that the silver in a half-crown cost 3s. In those days our coins contained 92½ per cent of pure silver, but the gov. passed the Coinage Act of 1920, which reduced the silver content by nearly half. The old rich alloy, 92½ per cent, had been in use for 350 years. The coins that resulted from this reduction contained half silver and about half copper, and they turned red, green, and yellow. Some years later, however, the Mint changed the alloy again and called in the earlier coins. All the pre-1920 coins were called in too, but it was not until 1938 that the withdrawal was practically complete.

In addition to its function of acting as a medium of exchange, money performs the no less essential functions of serving as the measure of the value of all other substances and as a means for effecting credit (q.v.). The former policy of the laws and trade of Great Britain was to retain as much money as possible, and hence to discourage imports and encourage exports (see **CAPITAL; CUSTOMS**

DUTIES; and FREE TRADE). As a general rule it may be said that the value of money, that is to say its purchasing power, varies inversely with general prices. The complex industrial organisation of a country cannot be properly carried on unless there is at any given time an adequate quantity of money in that country. The value of money is regulated by the same laws as those which determine the value of other mineral produce: hence the causes which determine that value are, though complicated, reducible to the law of supply and demand. 'Supply' of money means the total amount of money in circulation at any given time, and 'demand' for money the total quantity of goods offered for sale. But the factor of supply is itself complicated by the varying rates of circulation, or what is termed the 'efficiency' of money. Furthermore, demand in this context is to be taken to indicate not so much the total quantity of commodities as the number of sales to which any particular article is subject before it ultimately gets to the hands of the consumer. The net result is that the value of money varies inversely with its total amount in circulation multiplied by its 'efficiency.' As men economise to the fullest possible extent the machinery of production, so do they economise as far as they can the machinery of exchange, or money. If actual money in the primary signification of current coin passed on every mercantile transaction, the trouble and difficulties of the social organism would be enormously increased; in all probability it could not be carried on at all as at present constituted. In a word, some system of credit has to be adopted (see **CREDIT**), and as a corollary civilised communities attain to the idea of what is known variously as paper money and representative money in the shape of bank-notes, promissory notes, and bills of exchange (which latter term legally comprises cheques). These paper instruments are therefore a substitute for money. In most modern countries that form of promissory note known as a bank-note is part of the ordinary C. Notes are made legal tender provided they are issued by the State or by a State bank. When once in circulation such notes discharge debts as completely as current coin, in spite of fluctuations in value; promissory notes issued by bankers may of course be refused as payment of a debt, and can only be circulated with the entire concurrence of those who receive them.

The outbreak of the First World War in 1914 necessitated an early departure from the C. practice which had been estab. for years in Great Britain. The Currency and Bank Notes Act authorised the Treasury to issue C. notes of the value of £1 and 10s. These were to be legal tender for any amount, the holder of a C. note being entitled to obtain on demand at the Bank of England, London, payment of the note at its face value in legal tender gold coin. Another provision of the Act was the power given to the Bank of England and to any Irish or Scottish bank to issue notes in excess of the limits fixed by the

law. For a very short period the Bank of England did exceed the issue limit of uncovered notes fixed by the Act of 1844. C. notes were obtainable by bankers from the Bank of England up to 20 per cent of their liability on deposit and current accounts. The first issue of C. notes by the Treasury was made in 1914, and the value of outstanding issues grew rapidly until 1920, when the figure against outstanding C. notes and C. note certificates was returned at £367 million. The great utility of the C. note issue was made manifest during the period 1914-18 covered by the First World War when the national finances had to be treated with marked care. The banks were able to meet continuous and increasing demands for C. by the public. The Bank of England was enabled to conserve the gold stocks in the country. Credit was extended and this led to inflation. The gov. found the issue of C. notes of the greatest use, inasmuch as it was provided with a loan of nearly £400 million to help to carry on the war. In 1918 the Cunliffe Committee was appointed to consider the problems which would arise in connection with C. and the foreign exchanges during the period of reconstruction. Among its recommendations were that an early return should be made to the gold standard and that gov. borrowings should cease at the earliest possible moment. It was also advocated that an adequate sinking fund should be provided out of revenue, so that there might be a regular ann. reduction of capital liabilities. The important recommendation was made that in order to reduce the C. note issue the actual maximum fiduciary circulation in any year should become the legal maximum for the following year. The committee also recommended that the principle of the Bank Charter Act, 1844, should be maintained, namely that there should be a fixed fiduciary issue beyond which notes should only be issued in exchange for gold. The Macmillan Committee on Finance and Industry, which was appointed in 1929, found, however, that the return to the gold standard had fallen short of expectations, and emphasised that the only purpose of a gold reserve was to meet deficits in international payments until equilibrium was restored. In 1931 there were heavy withdrawals of borrowed capital in a brief space of time, such withdrawals being met partly from gold and also from foreign C. held by the Bank of England, and partly from credits secured from Paris and New York. In consequence the National Gov., which succeeded the Labour Gov. in that year, introduced a Bill to suspend the gold standard; and the gold standard has never since been restored. The Monetary and Financial Commission of the World Economic Conference, 1933, resolved that it was in the interests of all that gold should be re-estab. as the international measure of exchange values, the time and parity being for each country to determine. It was realised that in modern conditions monetary gold was required not for internal circulation but as a

reserve against central bank liabilities and, above all, to meet external demands for payments caused by disequilibrium on the foreign account. In 1939 the amount by which the value of the Bank of England's gold reserve exceeded the total note issue was transferred to the Exchange Equalisation Fund (see GOLD AND DOLLAR RESERVES).

U.S.A. An attempt to provide a sound and uniform C. was made by the estab. of a U.S. bank in 1791, which was closed in 1811, and of a second in 1816, which was closed in 1832 owing to President Jackson's opposition. The bimetallic standard (the 'dollar,' without decision as to whether it was to be of gold or silver, having been made the unit) caused speculation in gold and silver coin, and in 1834 the ratio of coinage was changed from 15:1 to 16:1. Between 1837 and 1844 sev. state banks collapsed and Federal credit was so impaired that payment for land was ordered to be made in specie. Some of the states repudiated their public debts. Radical experiments ensued. An independent U.S. treasury was estab. in 1846, and also a sub-treasury. Treasury notes were made receivable for public debts, and selected cities were named as centres of deposit for gov. funds. In 1861 a panic occurred, specie payments being suspended, and in 1862 secretary Chase issued legal tender notes, founded on specie support (greenbacks), though owing to the rise of prices and depreciation of notes specie payment of notes was later suspended. In 1863 the National Bank system was estab.; a national C. was provided for, secured by U.S. bonds, the banks being allowed to issue C. up to 90 per cent of gov. bonds deposited. In 1869 occurred the gold panic of 24 Sept. due to the attempt of Jay Gould and others to corner the Amer. gold market. This was foiled when the gov. threw \$5,000,000 of gold into the mkt. The day of the break was known as Black Friday. In 1893, after a period of depression, a serious political agitation led by W. J. Bryan arose for the re-estab. of a bimetallic standard. In 1900 the Currency Act was passed, definitely making gold the standard, and creating more favourable conditions for national banks. The 1907 panic was followed in 1908 by the Aldrich Currency Bill, allowing banks to issue C. on security of other than gov. bonds. The Owen-Glass Bill in 1913 (the Federal Reserve Act), passed by Congress under the impulsion of President Wilson, was intended to replace the outworn system of the Civil war days. The Federal Reserve Banking system is under the control of a board of 7 directors, including the secretary of the Treasury, the comptroller of the Treasury, and 5 members named by the President of the U.S.A. Instead of 1 central bank there are 12 regional banks, located in important cities scattered all over the country. Banks holding state and not Federal charters may join, but are not compelled to do so. Each regional reserve bank is under control of 9 directors, under orders from the central board of 7, whose

headquarters are in Washington. Each regional bank is supplied with large gov. deposits and with its own very considerable reserves. At all times it can supply its member banks with all the money that is needed, especially in crop-moving time. These regional banks also issue paper money in the shape of Federal Reserve treasury notes which are legal tender. The object of President Wilson was to place the money power in the hands of the gov. itself and take it away from the Wall Street bankers, who had hitherto controlled the money market. The system showed its great value when the U.S.A. entered the First World War and the gov. was compelled to borrow huge sums from the people. The great panic and business depression of the winter of 1929-30, which extended up to the time of President Roosevelt's election in Mar. 1933, resulted from the huge stock speculation in which the Amer. public had indulged, from overproduction of manufactured goods, and from general bad economic conditions throughout the world, rather than from any inherent defects in the Federal Reserve Act. See also GOLD and DOLLAR RESERVES; MINT; MONEY; NUMISMATICS.

Currency, Foreign, see METROLOGY.

Currency Bonds, gov. bonds of the U.S.A., which are so called because they form part of the monetary system. They interchange with the notes of the national banks, as a security for which they are deposited by the gov. with the Treasury.

Current Electricity. About 1786 Galvani noticed that the leg of a frog contracted under the influence of a discharge from an electrical machine. He thought that it was due to some property of the animal. In 1800 Volta showed that this was not so, and also invented a pile known by his name. The Volta Pile consists of a series of little disks of zinc, copper, and paper moistened with brine, placed one on top of the other, starting with zinc and finishing with copper. This is really a primitive primary battery. Faraday was the first to show that the current got from such a pile is the same as an electrostatic current, save that the former is a huge quantity of electricity driven under a small difference of potential, whilst the latter is generally a small quantity of electricity driven under a very large difference of potential.

Magnetic effects of a current.—In 1820 Oersted discovered that a compass needle was deflected when brought near to a wire through which a current is passing. This showed that the current gave rise to a magnetic field surrounding the wire. The so-called Corkscrew Rule gives the direction of the magnetic field due to a current in a wire. The lines of force due to a current in a straight wire encircle the wire, such that the directions of the current and of the lines of force correspond to the directions of motion and rotation of an ordinary right-handed corkscrew. Ampère and Weber experimented on coils, and showed that they acted like magnets of the same shape and size as the coils, and of suitable strength. Thus, a long helical coil, called a solenoid, when

carrying a current and suspended so as to swing freely in a horizontal plane, sets like a magnet of the same length and shape. As the length of the solenoid is shortened, the length of the equivalent bar magnet is shortened also. Finally, for a single turn of wire the equivalent magnet is a disk magnetised perpendicularly to its plane. Such a disk is called a *magnetic shell*. If this single coil is held so that its face is perpendicular to the line of sight, and if the current appears to pass round the coil in the clockwise direction, then that face will have S-seeking polarity (Fig. 1). The opposite face will have N-

FIG. 1

seeking polarity. This relation between a magnetic shell and a coil carrying a current holds for a coil of any shape and size, the equivalent shell being of the same size and form as the coil and having its edge coincident with the wire carrying the current. The effect of a bar magnet at external points depends on its moment (see MAGNETISM). The strength of a shell is defined as the magnetic moment per unit area. The electro-magnetic unit of current can be defined as the current that is equivalent to a magnetic shell of unit strength. If 2 circular coils carrying currents are placed parallel to each other it is obvious that they will attract each other if the currents flow in the same direction, and repel if they flow in opposite directions. The potential (q.v.) of a magnet of moment M at a point distant r from the magnet is $\frac{M \cos \theta}{r^2}$

(where θ is the angle which the magnetic axis makes with the line joining the point and the centre of the magnet). Let S be the strength of a shell, i.e. magnetic moment, per unit area. Then V , the potential at a point, is equal to $\frac{S a \cos \theta}{r^2}$

(where a is the area). But $\frac{a \cos \theta}{r^2}$

is the solid angle subtended at the point by the shell. Thus $V = \Omega$ (where Ω is the solid angle). Unit current has been defined as equivalent to a shell of unit strength. Thus the magnetic potential due to a coil carrying a current, i , at a point is $V = i\Omega$. Consider a point, P , very near the plane of the coil on the side which has N-seeking polarity, and Q , a point on the opposite side of the plane. The solid angle subtended at P by the coil, or its equivalent shell, is 2π , and that at Q is -2π . Therefore the difference of potential between P and Q is $4\pi i$. Thus the work done in taking a unit pole

from P to Q by a path around the edge of the shell is $4\pi i$, i.e. the work done in taking a unit magnetic pole around a circuit once is $4\pi i$. It should be remembered that a unit magnetic pole is never found in nature. It is a useful fiction for theoretical discussion. Magnetic poles always occur in pairs, but electric charges are found singly.

Field inside a solenoid.—Let a unit magnetic pole be taken along PQ (Fig. 2)

FIG. 2

parallel to and inside the solenoid. Then let it be brought out perpendicularly to PQ between the coils along QR, then along RS parallel to QP, and finally along SP, through the coils, back to P. The work done for each turn of wire is $4\pi i$; thus, if there are n turns in unit length, the work done is $4\pi ni$ (where $l = PQ$). The lines of force due to a solenoid are similar to those of a magnet, and are crowded inside the coil. If the coil is long, the number in the region of RS is small and the work done from R to S can be neglected. There is no work done along QR and SP because these lines are normal to the lines of force. Therefore, if H is the intensity inside the solenoid, Hl is the work done along PQ and is equal to $4\pi ni$. Thus $H = 4\pi ni$.

Field due to straight wire carrying a current.—Suppose the current is flowing along an infinite straight wire of which AB (Fig. 3) is a portion. Imagine a circle drawn around AB, and a unit pole taken around this circle. The lines of force surrounding AB are circles, since the magnetic field of the equivalent shell is perpendicular to the surface. The plane of these circles is perpendicular to AB. The work done in traversing the circle DEF with the unit pole is $4\pi i$. The intensity H is constant around the path since DEF is a line of force. Thus the work done is also $2\pi rH$. Therefore

$$H = \frac{2i}{r} \quad (\text{where } r \text{ is the radius of the circle}).$$

The electro-magnetic unit of current has been defined as that current flowing in a coil which has an equivalent magnetic shell of unit

FIG. 3

strength. It may also be defined, in a more practical form, as that current which, flow-

ing in unit length of wire bent into an arc of unit radius, exerts unit mechanical force on a unit positive magnetic pole placed at the centre of the arc. Thus the force at the centre of a circular coil of radius

r is $\frac{2\pi i}{r}$ and is perpendicular to the plane of the coil. It can be shown that the force at a point P on the normal to the coil, through the centre O, is $2\pi i \frac{(r^2 + x^2)^{-3/2}}{r^2}$ (where $x = OP$). The practical unit of current is the ampere; 10 amps = 1 e.m.u.

Galvanometers.—See separate article for discussion of moving magnet, moving coil, ballistic and alternating current galvanometers. See also ELECTRIC METERS.

Electromotive force (E.M.F.) and resistance.—To produce a steady electric current in a wire it is necessary to maintain the ends of the wire at a steady difference of potential. A device to do this, such as a voltaic cell, is said to produce an E.M.F. The E.M.F. of a cell (in volts) is defined as the work (in joules) done by the cell in driving unit electric charge (1 coulomb) around a circuit that includes the cell as the sole source of E.M.F. A coulomb is the charge transferred per second by unit current (10 amps), and a v.-lt is 10^8 e.m.u. of potential (q.v.). If no energy is dissipated in the cell, the E.M.F. is measured by the potential difference (P.D.) across the cell, and this condition holds when the cell has negligible internal resistance and also when the current through the cell is negligibly small, e.g. when it is on open circuit. In 1827 Ohm found that the current strength in a wire is proportional to the applied P.D. Ohm verified this by showing that along a homogeneous linear conductor the rate of fall of potential is constant. If C is the current and E the electromotive force, then by Ohm's law $i = GE$ (where G is a constant known as the conductivity of the conductor). In

other terms $i = \frac{E}{R}$ (where R is a constant, called the resistance of the conductor, which depends on the nature, dimensions, and temp. of the conductor, see OHM'S LAW). It became possible at once to measure 2 resistances by applying the same electromotive force and comparing the currents produced. The unit of resistance must evidently be defined as the resistance in which unit E.M.F. produces unit current. If electro-magnetic units of E.M.F. and current are employed, the electro-magnetic unit of resistance follows. If practical units are employed, viz. the volt and ampere, then the practical unit of resistance, called the ohm, follows. The ohm is 10^9 times the electro-magnetic unit.

Resistance in series.—Suppose AB, CB (Fig. 4) are a number of conductors joined together in series. Let E_1, E_2 , etc., be the potential differences between the ends of the different conductors, r_1, r_2 their resistances. The current, i , must be the same for all, since

electricity does not accumulate. Therefore $i = \frac{E_1}{r_1} = \frac{E_2}{r_2} = \dots$. If R is the effective resistance of the combination, then $i = \frac{E}{R}$ where $E = E_1 + E_2 + \dots$. Thus $iR = (r_1 + r_2 + r_3 + \dots)i$.
 $\therefore R = r_1 + r_2 + r_3 + \dots$

FIG. 4

Resistances in parallel.—Suppose the beginnings of all the conductors were joined together, and all their ends (Fig. 5). They are then said to be in parallel. The current, i , flowing in at A, must equal $i_1 + i_2 + \dots$, the sum of the currents

FIG. 5

in the resistances r_1, r_2 , etc. Now $i_1 = \frac{E}{r_1}, i_2 = \frac{E}{r_2}$, and so on, since the potential difference E between the ends is the same for all the branches.

$\therefore i = E \left(\frac{1}{r_1} + \frac{1}{r_2} + \frac{1}{r_3} + \dots \right) = \frac{E}{R}$. If R is the effective resistance of the whole combination. Thus $\frac{1}{R} = \frac{1}{r_1} + \frac{1}{r_2} + \frac{1}{r_3} + \dots$

Kirchhoff's laws allow a complete analysis of any complex network of conductors. They are: (1) *The algebraic sum of the currents which meet at any point is zero.* (2) *In any closed circuit the algebraic sum of the products of the current and resistance in each of the conductors in the circuit is equal to the E.M.F. in the circuit.*

Heating effects of electric currents.—The conversion of energy from an electrical form into that of heat takes place when current flows through a conductor, the incandescent lamp being a particular example, in which case approximately 95 per cent of the power is dissipated as heat and only 5 per cent converted to light energy. The power, in watts, dissipated by a circuit is the product of the current in amps, and the voltage in volts. This may be expressed by the expression $W = EI$. The energy, in joules, absorbed by this circuit in t secs. $= EIt = I^2Rt$, since 1 joule = 1 watt second. If no mechanical work is done, all this energy is transformed into heat, and in the process a certain amount of energy is expended. There is a relation between energy expended and heat produced; if

4.2×10^7 ergs, i.e. 4.2 joules, of work is done, a quantity of heat is developed sufficient to raise the temp. of 1 grm. of water by 1°C . This is known as the calorie or metric unit. The Brit. thermal unit or the Brit. heat unit is the quantity of heat required to raise the temp. of 1 lb. of water by 1°F , and is equivalent to 778 ft./lb. of work. Now I^2Rt is measured in joules, hence the quantity of heat (H) developed in t secs. in a circuit of which the resistance is R ohms and the current I amps is given by: $H = \frac{I^2Rt}{4.2} = 0.24 I^2Rt$ calories. This is known as Joule's law, and the heating as Joule's effect.

See also CELLS, VOLTAIC; GALVANOMETERS; WHEATSTONE BRIDGE; POTENTIOMETER; THERMOELECTRICITY; ELECTROLYSIS. Books for further reading are listed under ELECTRICITY AND MAGNETISM.

Currents, Oceanic, see ARCTIC, ATLANTIC, INDIAN, and PACIFIC OCEANS; GULF STREAM.

Currie, Sir Donald, see UNION-CASTLE LINE.

Currie, Sir William Arthur (1875-1933), Canadian general, b. Napperton, Ontario, Canada. He quickly came to the fore in the First World War, and proved himself an able administrator as well as general. He took the field in command of the 1st Canadian Div. in 1914, and then of the Canadian Corps in 1917. His many military decorations include the Légion d'Honneur, Grand Officier de l'Ordre de la Couronne de Belgique, the Fr. and Belgian Croix de Guerre, and Amer. Distinguished Service Medal. Principal of McGill Univ. from 1920 until his death. See life by H. M. Urquhart, 1950.

Curry, Indian dish, seasoned with C. powder or paste. C. is a concoction of pepper, ginger, turmeric, coriander, caraway, tamarind, and many spices and condiments, and has the power of stimulating appetite.

Curse of Scotland, nine of diamonds, which resembles the coat of arms of the Earl of Stair, who was partly responsible for the massacre of Glencoe in 1692.

Cursor, L. Papirius, distinguished Rom. general in the second Samnite war, was 5 times consul, and twice dictator (325 and 309). He frequently defeated the Samnites, but his greatest victory over them was gained in his second dictatorship. Although an able commander, he was not popular with his troops on account of his severity.

Cursor Mundi, 14th cent. verse homily of some 30,000 lines in N. M.E., purporting to give a hist. of the world from its creation to its ultimate destruction. The poem is based on Bible hist., but, in a very attractive manner, the author incorporates in the scriptural narrative any legendary story he may know, such as that of the *Three Trees*. The work was very popular but the author is unknown. See the ed. of Dr Morris, pub. by the Early Eng. Text Society.

Cursus, a prehistoric field monument the origin and purpose of which are not yet

known. It consists of a long and narrow area enclosed by small banks, and was so named by William Stukeley, the 18th-cent. antiquary, who thought that it was used in funeral races and ceremonies. There are several in the Thames Valley and in Wessex which have been located on air photographs, but the most famous is that at Stonehenge, the example known to Stukeley.

Curtain, term used in fortification with regard to the part of a rampart which connects one bastion with another. See **BASTION**.

Curtatone, It. tn, in Lombardy (q.v.), 4 m. W. of Mantua (q.v.). It was the scene of an Austrian victory over the Italians in 1848 (see **ITALY, History**). Pop. 9000.

Curtia de Arges, tn and episcopal see of Rumania, in prov. of Pitești, on the R. Arges, a trib. of the Danube. It was the cap. of Wallachia, 1330-83. The fine cathedral, dating from the 16th cent., is of great interest. There are sev. fine churches, including one built in 1512 by Prince Neagoe. Pop. 6500.

Curtsey (also *Courtesy*). The right of a husband to enjoy for life, after his wife's death, the freehold lands of which his wife was solely *seised* (i.e. possessed) in her lifetime, provided such issue of the marriage was *b.* as might by possibility inherit as the heir of the wife, made the husband, on the right accruing, *tenant by the C. of England*. From the passing of the Married Women's Property Act, 1882, tenancy of the C. only attached to lands of which the wife died intestate. Abolished in England in 1925.

Curtin, Andrew Gregg (1817-94), Amer. statesman, *b.* Bellefonte, Pennsylvania; was secretary to the commonwealth of Pennsylvania in 1855, and governor (Republican) 1860. During the Civil war he strongly supported Lincoln, and Pennsylvania, under C., furnished approximately 390,000 men to the N. army.

Curtin, John (1885-1945), Australian statesman, *b.* Creswick, Victoria, and educ. in state schools. Began work as a printer's devil. From 1911 to 1915 he was secretary of the Timber Workers' Union. During the First World War he became secretary of the Anti-Conscription League, and, in that capacity, came into conflict with the law and was imprisoned. From 1927 to 1928 he was editor of the *West Australian Worker*. In 1928 he was elected to the House of Representatives for Fremantle, and held the seat (except from 1931 to 1934) till his death. In 1935 he was elected leader of the Federal Labour party in succession to Scullin. On 3 Oct. 1941 Fadden's administration, after being in office for only a month, fell on a vote of censure on the budget and C. was summoned by the governor-general to form a gov. When Japan opened hostilities in 1941 C. confronted the gravest crisis in Australian hist. and turned to the U.S.A. for aid, writing in the *Melbourne Herald* that Australia looked to them 'free from any pangs as to traditional links or kinship with the United Kingdom.' In Feb. 1942 his

Cabinet ordered for the defence of Australia the complete mobilisation of all the human and material resources of the country and, with Brit. consent, secured the repatriation of the Australian Imperial Force, entrusting the supreme direction of the war in the Australian zone to the Amer. general MacArthur. C. himself assumed the title of defence minister. In Nov. 1942 he obtained the backing of his own party in negotiating for the service of the A.I.F. and the militia as a homogeneous army in the SW. Pacific area. In Aug. 1943, after the Jap. threat to Australia had passed, he secured at the election a two-house victory for Labour with a working majority. In March 1944 he visited London to attend

Press Portrait Bureau

JOHN CURTIN

the prime ministers' conference and won a reputation there as a commanding and whole-hearted leader of the Australian people. He differed, though, from Mr Mackenzie King in regard to his own suggestions for improved machinery of consultation within the empire. His health, however, began to deteriorate at the end of 1944 and he *d.* in July of the following year. C. had a simple strength and directness of character and utterance which helped him, as neither mere brilliance nor astuteness could have helped him, to fill the position of national leader demanded by the exigencies of a desperate crisis in Australian hist. Hist. may justly hold of him that in her most fateful emergency he served his country with an entire fidelity and an ability which were no small factors in her

victory and in winning recognition of Australia in the war councils of the Allies in Washington and London. See A. Chester, *John Curtin*, 1943.

Curtis, George Ticknor (1812-94), Amer. lawyer and historian, b. Watertown, Massachusetts; graduated at Harvard in 1832; admitted to the Bar, 1836; practised in Worcester, Boston, New York, and Washington, appearing before the U.S. supreme court in the Dred Scott case. He wrote a *Life of Daniel Webster*, 1870, and other political biographies.

Curtis, George William (1824-92), Amer. man of letters, b. Providence, Rhode Is. He began life as a clerk in New York, and after having spent over a year with the Brook Farm community (q.v.), 1842, he travelled on the Continent and in Egypt and Syria. On his return to America in 1850 he pub. his travels, and soon acquired a reputation. He was appointed editor of *Putnam's Monthly* in 1852. In 1857 he became editor of *Harper's Weekly*, and contributed serially to many magazines. C. was well known as a lecturer and public speaker, and was a keen member of the anti-slavery movement. His chief pub. are *Nile Notes of a Howadji*, 1851; *Lotus Eating*, 1852; *Potiphar Papers*, 1853; *True and I*, 1856; *Eulogy on Wendell Phillips*, 1884; and *Party and Patronage*, 1890. His letters to Dwight were pub. in 1898, and his *Orations and Addresses* in 1893-4. See life by E. Cary, 1894.

Curtis, Sir Roger (1746-1816), admiral, b. Downton, Wilts. He entered the navy in 1762, and as a lieutenant was sent out to Newfoundland in 1771. He later served in the flagship under Lord Howe, and in 1780 commanded the *Brilliant* at the siege of Gibraltar. He took part, under Howe, in the action of the 'glorious 1st of June', 1794, was sent home with the dispatches, and in July was raised to the rank of rear-admiral, and was created a baronet. In 1798 he joined Lord St Vincent at Cadiz, and in the following year became commander-in-chief at the Cape of Good Hope. He was made admiral in 1804, commander-in-chief at Portsmouth in 1809, and G.C.B. in 1815.

Curtius (Quintus Curtius Rufus), Rom. historian who probably lived towards the end of the first century AD. He wrote a hist. of Alexander the Great in ten books, of which the first two and portions of others are lost. This work, though long a standard schoolbook, is of no great historical value. See the ed. by P. Dansté, 1897. There is an Eng. trans. by P. Pratt, 1821.

Curtius, Ernst (1814-96), Ger. archaeologist, b. Lübeck. He became prof. of archaeology and philology at Göttingen (1856-63), and of anc. hist. at Berlin, 1868. C. superintended the Ger. excavations at Olympia. His writings include *Peloponnesos*, 1851-2, *Griechische Geschichte*, 1857-61; and *Altische Studien*, 1863-4.

Curtius, Georg (1820-85), Ger. philologist, prof. in the univs. of Prague (1849-1854), Kiel (1854-62), and Leipzig (1862-1885). His chief pub. are *De nominum graecorum*, 1842; *Die Sprachvergleichung*,

1845; *Griechische Schulgrammatik*, 1852; 50 years later, 1902, appeared the 23rd ed.; *Gründzüge der griechischen Etymologie*, 1858-62; *Zur Chronologie der indogermanischen Sprachforschung*, 1867; and *Das Verbum der griechischen Sprache*, 1873-6.

Curtius, Manlius, hero of a Rom. legend invented to explain the existence of a pond (*lacus Curtius*) in the Forum. It was said that in 362 BC a large chasm appeared in the Forum, which the sooth-sayers announced, could only be filled by throwing into it 'Rome's greatest treasure.' Thereupon C. proclaimed that there was no greater treasure than a good citizen; mounted his horse fully armed; and rode into the abyss, which immediately closed over him.

Curule Chair (Lat. *sella curulis*), used by the higher magistrates and later by the emperors in anc. Rome. It was made like a folding stool with curved legs and no back, and was inlaid with ivory or precious metals. The name 'curule' is derived from *curvus* (a chariot), which leads to the supposition that the C.C. was originally set up in the magistrate's chariot.

Curvature, Circle of, see RADIUS OF CURVATURE.

Curvature of the Spine, see SPINE.

Curve. A C. can be described as a line which is continuously changing its direction. A plane C. may be regarded from two points of view: (a) as the locus of all the points which satisfy a given condition, the simplest example of which is the circle (q.v.); (b) as the locus of a point moving subject to given conditions, the best known example of which is the C. described by a projectile in the absence of atmospheric resistance. This is the parabola (q.v.). Under (a) are included a large number of C.s, such as the cycloid, which is the path described by a point on the circumference of a circle rolling on a fixed right line; the ellipse, the lemniscate, the tractrix, and many others (q.v.). Under (b) are included conic sections (see GEOMETRY, *Higher Pure G.*), which are described by the planets around the sun under the condition that the force of attraction varies directly as the product of the masses of the sun and planet and inversely as the square of their distances apart (see GRAVITATION). Another example is the brachystochrone, which is the curve of quickest descent under the action of gravity from one given point to another given point (see VARIATION, CALCULUS OF).

Another type of C. is derived from a given C. and is called the *evolute* of the original C. If the centres of the circles of curvature (q.v.) be taken for the original C., we get a new C. called the *evolute* of the original one. The original C., considered with respect to its evolute, is called an *involute*. See also CATENARY; SINE, CURVE OF.

Curved Space, a term used in expositions of the theory of relativity (q.v.). It is essentially metaphorical; the 'space' referred to is a four-dimensional continuum, and the 'curvature' is a certain

function of the four co-ordinates which happens in a very special case to reduce to the curvature of a normal three-dimensional surface.

Curwen, John (1816-80), musical educationist, *b.* Heckmondwike, Yorkshire. He developed and improved the 'tonic sol-fa' system, invented by Sarah Glover. He founded the Tonic Sol-fa College at Plaistow in Essex (1875), and started a publishing house in London, which brought out his *Tonic Sol-fa Reporter*.

Curzola, *see* KORČULA.

Curzon, George Nathaniel (first Marquess Curzon of Kedleston) (1859-1925), statesman, the eldest son of the fourth Baron Scarsdale, *b.* Kedleston, Derbyshire, and educ. at Eton and Balliol College, Oxford. In 1885 he became private secretary to the marquess of Salisbury. He entered Parliament as Conservative member for Southport the following year, and retained his seat till 1898. He was under-secretary of state for India (1891-1892); and, on the return of Salisbury to office in 1895, he became under-secretary for foreign affairs, which appointment he held till 1898. In that year he went out to India, viceroy and governor-general, as first Baron C. of Kedleston in the peerage of Ireland. C. worked with untiring energy for the interests of India; and, though his tenure of office was completed in Aug. 1903, it was extended in order that he might carry out his schemes for reform. His autocratic disposition was frequently the subject of criticism. In 1905 Kitchener, commander-in-chief of the forces, objected to the dual control, civil and military, in the Indian Army, and, though his view was opposed by C., the gov. at home supported Kitchener. This led to C.'s resignation. On his return to England he became a prominent member of the Opposition under the leadership of Balfour and afterwards of Bonar Law. He was elected chancellor of Oxford Univ. in 1907, and lord rector of Glasgow in 1908. In the latter year he was elected to the House of Lords as an Irish representative peer. He supported the policy of Lord Lansdowne in allowing the Parliament Bill to pass in 1911. In that year he was made Earl C. of Kedleston, Viscount Scarsdale, and Baron Ravensdale. He thus became a peer of the United Kingdom. In May 1915 he became lord privy seal in Asquith's reconstructed ministry, a member of the war committee and president of the air board. In Dec. 1916, on the formation of the Lloyd George Gov., he became lord president of the council, leader of the House of Lords, and member of the War Cabinet. In Oct. 1919 he succeeded Balfour as foreign secretary; and he remained so under Bonar Law and Baldwin. In 1922-3 he was at Lausanne to negotiate peace with Turkey. On Bonar Law's retirement in 1923 C. had hoped to succeed him as premier; but the office went to Baldwin. C. never really recovered from the personal disappointment of this. He retired at the beginning of 1924, having earned the reputation of being a great viceroy, a great foreign secretary, and one

of the finest orators of his times. In 1921 he had been created marquess. His pubs. include: *Russia in Central Asia*, 1889; *Problems of the Far East*, 1894; *Modern Parliamentary Eloquence*, 1913; *Subjects of the Day*, 1915. *See* Lord Ronaldshay (Marquess of Zetland), *The Life of Lord Curzon*, 1927-8; and H. Nicolson, *Curzon, The Last Phase*, 1934.

Curzon Line, proposed E. frontier of Poland recognised by the Allies in Dec. 1919 on suggestions by Lord Curzon (q.v.), but not adopted as a boundary between Poland and Russia in consequence of the former's victory over the latter in 1920. The line ran N. from the old frontier of Russia and Austria-Hungary to Brest-Litovsk, then by the course of the R. Bug to Namirov, Jalkova, and Grodno. The line became a virtual reality as Poland's E. frontier in 1945, having been accepted as a basis for the future demarcation (with some minor modifications in Poland's favour) at the Teheran Conference in 1943 by Russia, Great Britain, and U.S.A. *See also* POLAND, HISTORY.

Cusa, Nikolaus of, or *Nikolaus Cusanus* (1401-64), proper name of Chryppf, a Ger. cardinal and philosopher; *b.* Cues (or Cues) on the R. Moselle, in the diocese of Treves, of humble origin. He was educated at the univ. of Padua, became archdeacon of Liège, and sat in the council of Basel (1431-49). For the council he wrote *De Concordantia Catholica*, opposing the papal claims; but in 1440 he changed his views, entered the papal service, and was made a cardinal in 1448. Two years later he was appointed bishop of Brixen in the Tyrol and papal legate for Germany. C. broke away from the prevailing scholasticism and indulged in mystical speculations which have been described as pantheistic--unjustly, however, for while asserting that the Spirit of God breathed over the world, he adds that the Divine Being never became part of the world. He was also a mathematician and believed in the revolution of the earth round the sun. In 1436 he suggested the reform of the Julian calendar. *See* F. A. Scharpf, *Der Cardinal und Bischof Nikolaus von Cusa*, 1871; Schang, *Cardinal Nikolaus von Cusa als Mathematiker*, 1872; J. Lanz, *Die Doctrina Ignorantia des Nikolaus von Cues*, 1923; and G. Kallen, *Nikolaus von Cues als politischer Erzieher*, 1941.

Cuscuta, *Phalaris*, genus of marsupials. There are five species, all of which are about the size of a cat, and these inhabit Australia and the E. Indies. They have a prehensile tail, an opposable big toe, and in habit they are arboreal. *P. maculatus* is known as the spotted C. or tiger cat; *P. ursinus* and *P. celebensis* are natives of the Celebes.

Cush (Heb. *Kūsh*), according to the genealogy in Gen. x the eldest son of Ham, and the eponymous ancestor of the Cushites or Ethiopians.

Cushat, *see* WOOD-PIGEON.

Cushing, Caleb (1800-79), Amer. politician, *b.* Salisbury, Massachusetts, and educated at Harvard. He was called to the Bar in 1822 and practised at Newburyport. He contributed legal articles to the

North American Review, and in 1825 was elected to the state legislature, and in the following year to the state senate. He was elected to Congress in 1835, and under the presidency of Tyler became the first Amer. minister plenipotentiary to China. In this capacity he made a treaty between his own country and China in 1844, which opened up China to Amer. missionaries and Amer. trade. From 1874 to 1877 he acted as the United States ambas. in Spain. Author of *The Practical Principles of Political Economy*, 1826; *Review Historical and Political of the Late Revolution in France*, 1833; *Reminiscences of Spain*, 1833; *The Growth and Territorial Progress of the United States*, 1839. See Livingston, *Portraits of Eminent Americans*, 1851, and biography by Claude M. Fues, 1923.

Cushing, Harvey Williams (1869-1939), Amer. neurological surgeon, b. Cleveland, Ohio, son of Henry Kirke C., a physician and son and grandson of physicians. Educated at Yale (graduated 1891) and Harvard (A.M. and M.D. 1895). Began practice in 1895. Associate prof. of surgery at Johns Hopkins Univ., 1902-11; also pursued study abroad, at Berne and Liverpool. From 1911 prof. of surgery at Harvard. He was responsible for some outstanding advances in the field of nerve and brain surgery. He bequeathed his great collection of old medical works to Yale Univ. Author of sev. medical works and *The Life of Sir William Osler*, 1925. Biography by J. F. Fulton, 1946; bibliography of his writings, 1939.

Cushion Capital, in Romanesque architecture, a cubical capital with its lower part and corners truncated or scalloped out, producing some resemblance to a cushion.

Cushman, Charlotte Saunders (1816-76), celebrated Amer. actress, b. Boston, of Puritan descent. She made her debut as an opera singer in 1834 in *The Marriage of Figaro*, but her voice suddenly failed, and in the following year she appeared as Lady Macbeth, to the end of her life her greatest role. She played in comedy parts, but excelled mainly in tragedy. Her chief parts, besides Lady Macbeth, were Romeo, Rosalind, Meg Merrilees, and Ophelia. See E. Stebbins, *Charlotte Cushman: Her Letters and Memories of Her Life*, 1878; and C. E. Clement, *Charlotte Cushman*, 1882.

Cusp, in Gothic architecture, one of the foliated points which terminate the internal curves of the trefoiled, cinquefoiled, etc. heads of pointed windows.

Cusset, Fr. tn in the dept of Allier, near Vichy. It is a spa, and manufs. linen and paper. Pop. 9700.

Custard-apple, or **Bullock's Heart**, popular name of the species *Annona reticulata*, a deciduous tree, native to tropical America and allied to the Cherimoyer (q.v.). See ANNONACEAE.

Custer, George Armstrong (1839-76), Amer. soldier, b. New Rumley, Ohio, U.S.A. He fought with distinction through the Civil war, serving successively under Kearny and McClellan. As major-

general of the volunteers he defeated Gen. Early at Waynesboro in 1864. In 1867-8 he took part in Hancock's expedition against the Cheyennes. He sev. times defeated other hostile Indians in the W., and was finally killed with his men by a body of Sioux near the Little Horn in Montana. He wrote *My Life on the Plains*, 1874. See F. W. Whittaker, *Life of General George A. Custer*, 1876; Mrs Custer, *Boots and Saddles, or Life with General Custer in Dakota*, 1885; M. Merington, *The Custer Story*, 1950; F. Hunt, *I Fought with Custer, the story of Sgt Windolph*, 1953; E. I. Stewart, *Custer's Luck*, 1955; W. A. Graham, *The Custer Myth*, 1955.

CUSTARD-APPLE

Customs Duties consist for the most part of taxes levied upon goods and produce brought for consumption from foreign countries, but may include taxes on certain exports. The term also embraces taxes on goods and produce passing from one port to another of the same country, like the Fr. *octroi* system. At the present time there is no duty on goods exported from the U.K., that on coal, which was the last maintained, having been abolished in 1845, though for a short period, 1902-6, there was a small impost of 1s. a ton on coal to help meet the cost of the Boer war.

Historically C. D. sprang from the royal prerogative of regulating all commercial matters, and the liability of imports to a charge levied by the king is of very remote date. According to Sir Win Anson, customs originated in a charge intended by way of repayment to the king for the cost incurred in maintaining the ports and keeping the sea clear from pirates. Later the charges were increased and embraced prisage, i.e. the royal right to 1 cask of wine out of every 10 in the ship's cargo, at 20s. a cask; customs on general merchandise; and on wool, fish, salt, and leather. Then merchants began to complain of the levy of 'evil tolls,' with the result that by Magna Carta they were being allowed to trade without being subject to any but 'ancient and statute customs.' In 1275 Edward I, in a statute

which was probably the earliest passed in the U.K. whereby the Crown was authorised to levy C. D., was granted in exchange for the 'ancient and lawful customs' (*antiqua custuma*) of the charter an export duty of half a mark on every sack of wool, and 1 mark on the last of leather. In 1303, by the *Carta Mercatoria*, foreign merchants were charged 40 pence on every sack of wool and half a mark on the last of leather in consideration of certain privileges. This charge was known as the *nova custuma*, and was refused by the representatives of the burgesses (q.v.). The *antiqua* and *nova custuma* remained, however, together with prisage and butlerage upon imported wines, a part of the hereditary revenues of the Crown until their absorption in the subsidies of tonnage and poundage made to the Crown at the beginning of each reign or Parliament. The word *tonnage* in the early statutes was applied to a specific duty charged on the importation of each ton or tun of wine and the exportation of each tun of beer; the word *poundage* was applied to other articles.

James I made unconstitutional and illegal impositions, and in 1608 issued a Book of Rates imposing a number of new and heavy duties. Years of bitter controversy followed. The resistance of the merchant Rate to the imposition of the added duty on currants, and the judgment by servile judges of the Court of Exchequer in favour of the Crown, form an epoch in the constitutional hist. of the U.K., and confirm the celebrated aphorism of Hallam that our liberties were purchased by the money of our forefathers. The Petition of Right, 1628, declared these impositions illegal. The first Book of Rates agreed upon by the House of Commons is generally believed to be that compiled in 1642 by a committee of the House. In 1660, at the restoration of Charles II, the C. D. were consolidated and the principle of poundage was altered in regard to certain articles, upon which specific duties were imposed instead; but the old system of affixing a value on each article was adhered to in regard to the bulk of the articles, the time-honoured distinctions between *antiqua* and *nova custuma* were abolished, and rates were classified under 3 heads, viz. tonnage on wine, poundage on imported and exported goods, and a duty on woollen cloth, which last duty was repealed in 1700.

In the reigns of William III and Anne many additional specific rates were imposed in place of the valuation for the subsidy. This course of substitution was pursued from time to time, until in 1747 there were as many as 39 prin. branches of C. D. with subdivisions applying to different kinds of goods, the whole constituting an endless embarrassment to traders. In 1787 Pitt effected a new consolidation of C. D., and the entire revenue derived therefrom was to be paid into a single fund, called the Consolidated Fund, thus doing away with the old practice of allocating each duty to a specific purpose. Sev. Consolidation Acts

have been passed since that time, and new imposts created.

In 1853 the solicitor for the customs was employed on a work of complete consolidation. The result of his labours was a condensation of the various Acts into a clear methodical arrangement which formed the basis of the Customs Consolidation Act of 1853. Under that Act provision was made for the first time for the acceptance of general or covering bonds in lieu of the immense number of separate or special bonds, which previously involved many thousand attendances per annum of merchants and their sureties. Between 1842 and 1853, however, a salutary change had come over the financial policy of the U.K. With the advent of Peel came the initiation of the policy that was carried on by Gladstone and other statesmen after him, and which was in substance the fiscal policy of the country up to the year 1932, when a protective tariff was re-introduced. That policy, which was twofold, was directed to the simplification and cheapening of the collection of revenue by means of a reduction of the number of articles or commodities on which duty was leviable; and to the strengthening of home industries by the abandonment of all taxes on raw material imported into the country.

By about 1872 all foreign products were free from duty on importation, with the exception of 10 leading articles, cocoa, coffee, currants, figs, raisins, spirits, sugar, tea, tobacco, and wine—and even these were allowed very considerable reductions. Until 1869 corn and flour contributed to the revenue at nominal rates, corn at 3s. and flour at 4d. per cwt. After 1869 both were admitted free, and it is hardly an exaggeration to say that the decision of the electorate in favour of the maintenance of a free trade policy was a decision due as much to fear that some corn duty might be imposed as to the fear that food prices would rise as an indirect result of tariffs proposed on imported manufs.

In 1915 McKenna imposed a duty equal to 33½ per cent *ad valorem* on motor cars, motor bicycles, motor tricycles, with their component parts other than tyres; musical instruments, including gramophones, pianolas, and similar instruments; and clocks and watches, with components, imported into Great Britain or N. Ireland. The 1925 Finance Act was noteworthy for introducing empire preference in respect of sugar, molasses, glucose, and saccharin produced within the empire. Preferential rates of duty were fixed at three-quarters of the full rate on tobacco, at five-sixths of the full rate on silk and artificial silk, and so on.

A fundamental change was introduced by the National Gov. of 1931, which, soon after coming into office, passed emergency legislation to check dumping in anticipation of its projected reversion to protection. Under the Abnormal Importations (Customs Duties) Act, 1931, the Board of Trade was empowered to levy C. D. up to 100 per cent *ad valorem* on foreign manufs. imported into the U.K. in abnormal

quantities. The Act was to continue in force for only 6 months, but that interval was sufficient to allow the passing of the Import Duties Act, 1932, which provided for the imposition of a general *ad valorem* duty of 10 per cent on all imports (except those already dutiable) subject to a free list, comprising chiefly foodstuffs and raw materials. This free list is, however, subject to amendment by Order in Council. The Act also provided for the imposition of 'additional duties' (i.e. over and above the general *ad valorem* duty) on articles of luxury. The principle of empire preference was followed by exempting dominion goods and the goods of the colonial empire absolutely.

The Customs Consolidation Act, 1876, which, with the various amending Acts passed since that time, may be regarded as the prin. statute relating to C. D., contains a great number of provisions dealing in detail with the collection and management of duties; disputes and inquiries respecting C. D.; drawbacks; bonds and securities entered into by persons for the due performance of any condition relative to the customs; penalties for signing false declarations relating to the customs; prevention of smuggling; and legal proceedings, civil or criminal, under the various Customs Acts. A drawback is an allowance made by the commissioners to merchants on the re-exportation of imported goods liable to duties. In some cases it consists of the whole, in others of a part, of the C. D. paid. The effect is that goods can then be sold in a foreign mkt at their normal cost in the home mkt. See also EXCISE DUTIES.

Customs or Usages. In a general sense, C. or U. may be said to be the source or basis of all principles of law. In England C. or U. are said to be either general or local; the former have prevailed from time immemorial, and form the foundations of the common law, while the latter are peculiar to certain dists. only, and in their nature form exceptions to common law principles. The 'Law Merchant,' or C. of merchants, furnished an instance of local or particular C., but by reason of the subsequent universality of their application gradually became engrafted into the common laws. To be valid C. or U. must have existed from time immemorial (the time of legal memory is fixed as not going beyond 1189). In addition, they must be shown to have been continuous; universally acquiesced in; reasonable, i.e. not contrary to any known principle of law or public morality; definite; and, in the opinion of those among whom the custom is alleged to exist, binding. See also COMMON LAW.

Customs Union, a federation of independent states or nations with the object of assimilating their arrangements for the collection of duties on imports. The term was of especial significance in relation to Germany, for the consciousness of a national unity among the Ger. peoples was ultimately traceable to the estab. of the Zollverein (Zoll, toll, verein, union)

between Prussia and some of the smaller states shortly after the Napoleonic wars. The political condition of the numerous sovereign states was one of confusion. The Zollverein was organised as the outcome of a general reform of the existing tariff conditions, which imposed tariffs on 2800 classes of goods in various parts of Prussia, while in others there prevailed free importation. From the time Hesse joined the union in 1828 the hist. of the Zollverein to 1871 was one continuous process of the absorption of one state after another until, in that year, the Ger. Empire itself was founded, and the Prussian Zollverein was finally transformed into the Ger. Zollverein. Hamburg and Bremen were included in 1888; before then Germany's economic policy had been one of free trade, but in that year a hard and fast protective system was introduced which, with subsequent modifications in the shape of commercial treaties (q.v.) with some of the neighbouring nations and most-favoured-nation treatment for Great Britain, continued until recent years. A somewhat parallel case is the development of the C. U. formed between Cape Colony, the Orange Free State, and Brit. Bechuanaland towards the end of last cent., and joined shortly afterwards by Basutoland. The question of the adoption of some kind of C. U. or Zollverein for the different members of the Brit. Empire was before the Brit. public in a more or less urgent form from the time of the tariff reform campaign of Joseph Chamberlain in 1903. But the proposals put forward by the dominion premiers at the Imperial Conference, 1930, for a tariff on foreign foodstuffs were rejected by the Labour Gov. in London. An approach to a C. U. of the Brit. Commonwealth of Nations was implied in the combined operation of the Import Duties Act, 1932, and the Ottawa Trade Agreements concluded in Aug. 1932 between the U.K. and the dominion govts. and between the dominion govts. *inter se*. A C. U. has existed between Belgium and Luxembourg since 1922, with the exception of 5 years during the Second World War. The Netherlands on the one hand, and Belgium and Luxembourg on the other, agreed on a C. U. in 1944, and this was brought into force, with certain reservations, in 1948 (see BENELUX).

A C. U. is distinguished from a free-trade area. The common mkt projected in 1956 by the 6 Messina Powers (France, Italy, Germany, Belgium, Netherlands, Luxembourg) postulated: (1) complete free trade between its members, i.e. abolition of all tariffs, quotas, and other trade restrictions; (2) common tariffs and other terms for goods imported from non-member states. The free trade zone, which the U.K. indicated it was ready to consider joining, postulated: (1) free trade within the zone; (2) freedom for individual member-countries to determine their own tariff policies towards non-members. The double goal was to be achieved in a series of stages lasting 12-15 years. The U.K. belief was that the zone

as a bargaining unit would probably secure better trading terms from the common mkt countries than if each member were left to make arrangements with the common mkt bilaterally. The total pop. of the 6 common mkt countries was 161 million. With the U.K. and the Scandinavian states the total free trade area would have numbered 240 million; with the Scandinavian states, but without the U.K., 190 million. The 2 latter figures exceed the U.S.A. or the U.S.S.R. pop.

Another project—the European Commodities Plan—was submitted by Switzerland and the Benelux and Scandinavian states (the 'low tariff club'). Under it each member would list the goods which it imported overwhelmingly from within the O.E.E.C. (q.v.) group. Tariffs on these goods would be cut or repealed, and in this context the most-favoured-nation clause would be retained. See FREE TRADE; IMPERIAL PREFERENCE.

Custos Brevium, the title until 1831 of officers responsible for the custody of all writs returnable in the courts of king's bench and common pleas.

Custos Rotulorum, see KEEPER OF THE ROLLS.

Custoza, or **Custoza**, It. vil., in Veneto (q.v.), 10 m. SW. of Verona (q.v.). In 1848 Radetzky (q.v.) defeated the Piedmontese here, and again in 1866 the Austrians here defeated an It. army (see LA MARMORA). Pop. 700.

Cutch, formerly the largest of the Western India states, now a Chief Commissioner's prov. administered direct by the gov. of India. C. lies to the N. of Kathiavar, now Saurashtra, and is itself bounded on the N. by Pakistan. In between C. and Pakistan lies the Rann of C., a large morass which in dry weather becomes two salt lakes 7000 sq. m. and 2000 sq. m. in extent. A new port, Kandla, is being developed.

Cuthbert, Saint (c. 635-87), monk and bishop, was b. probably in Northumbria, of Lowland Scottish parentage, and was originally a shepherd. In 651 he had a vision of a choir of angels bearing the soul of St Aidan to heaven, and in the same year joined the monastery of Old Melrose. On the death of St Boisil, in 661, he was chosen prior, with St Eata as his abbot, whom he later accompanied to the monastery of Lindisfarne. In 676 he felt that he was called to a sterner and simpler life, and became a hermit on House Is., off Farne Is., where he built his hut with his own hands. Egfrid, king of Northumbria, and Trumwin, bishop of the Picts, persuaded him, in 684, to accept the bishopric of Hexham, which he subsequently exchanged for that of Lindisfarne. Two years later he resigned his bishopric, and once again withdrew to his cell, where he d. within a year. His body was removed from Lindisfarne in 875 for fear of its being desecrated by the Danes, and for a time remained first at Chester-le-Street and then at Ripon, ultimately finding its resting-place in Durham Cathedral. His feast is on 20 March. See Bède, *Historia Ecclesiastica Gentis Anglorum*, and lives by T. Raine, 1828, and C. Eyre, 1849.

Cuticle, see SKIN.

Cutler, Manasseh (1742-1823), Amer. clergyman, scientist, physician, and coloniser. He took a leading part in drafting the ordinance of 1787 for the gov. of the NW. Ter.

Cutlery (O.F. *cotellier*, Lat. *cultellus*, a little knife), term applied originally to cutting instruments of many kinds. The word is often extended to include all types of table implements, so that forks, etc. may be added. Knives were not placed on the table till the early 16th cent., diners being expected to carry on their persons such pocket-knives as they might require. Forks were introduced from Italy in the reign of James I. Sheffield was famous for its C. as early as the 14th cent., but lost some of its pre-eminence by the 17th cent., when Birmingham was regarded as the centre of the trade. But since 1800 Sheffield has increased in industrial prosperity, and its C. wares have now a world-wide fame. The term C. also applies to penknives, razors, and scissors.

Cuttaek, tn and temporary cap. of Orissa state, India. C. is situated at the head of the Mahanadi Delta, and is also the centre of a network of canals. It was founded 1000 years ago and is known for filigree work in gold and silver. A decision has been taken to move the state cap. to Bhubaneswar (q.v.).

Cutter, Charles Ammi, see CATALOGUES AND CLASSIFICATION.

Cutter, name given to a boat, part of the equipment of a warship. Cs are used for sailing or rowing, and are carried amidships or at the davits. The name is also given to a vessel with a single mast, a mainsail, a fore-staysail, and a jib at the bowsprit end.

Cuttle-fish, sometimes regarded as the name of any mollusc of the class Cephalopoda (q.v.), but more usually applied to the species of the genus *Sepia*. The species, of which *S. officinalis*, the common C. of Britain, is an example, has two gills, eight arms, and two long tentacles, a broad, flattened body, an ink-bag, and narrow and elongated fins; and the calcareous shell, called the cuttlebone, is internal. In length a C. may be from 6 to 10 in., and its colour varies from grey to brown. The genus is widely distributed and is notable as producing the pigment known as sepia.

Cutts, John, Baron Cutts of Gowran, Ireland (1661-1707), soldier, probably b. Arkesden, Essex. He was educ. at Catherine Hall, Cambridge, and joined the suite of the duke of Monmouth. He later served under Charles, duke of Lorraine, against the Turks, in Hungary, and in 1686 played a prominent part in the capture of Buda. He then served in Holland under William of Orange, whom he accompanied to England and with whom he fought in Ireland at the battle of the Boyne and the siege of Limerick (1690). For his services he was created Baron C. of Gowran. During the following twelve years he did brilliant service, being present

at the battles of Steenkerque (1692), Brest (1694), Namur (1695), at the capture of Fort St Michael (1702), and was third in command at Blenheim (1704). C. sat in Parliament for sev. years, from 1689 to 1691, and again from 1702 to 1707. Besides being a soldier, he was a scholar and versifier. He was a friend of Steele, who addressed to him his *Christian Hero*, but was made ruthless fun of by Swift, particularly in his somewhat scurrilous lampoon, *Ode to a Salamander*, 1703. See S. S. Swartley, *The Life and Poetry of John Cutts*, 1917.

'Cutty Sark,' one of the most famous tea-clippers, engaged, with the *Thermopylae*, *Flying Cloud*, *Arcturion*, and others, in

Preservation Society, with the Duke of Edinburgh as active patron, was formed to acquire the vessel with a view to permanent preservation. This object was fulfilled in June 1957, when the *Cutty Sark*, fully restored in a concrete dry berth at Greenwich, was opened to the public by the Queen. The 'Cutty Sark' ('short shirt') is worn by Nannie, a character in Burns' *Tam o' Shanter*. See also CLIPPER. See Alan Villiers, *The 'Cutty Sark'*, 1953.

Cutworm, name given to the larvae of many species of Noctuidae, or owl-moths, from their displeasing habit of cutting off the young shoots of plants cultivated by agriculturists. They belong

National Maritime Museum, Greenwich

THE 'CUTTY SARK'

the China tea trade during the last century. She was built at Dumbarton in 1869 for Capt. John Willis. With the opening of the Suez Canal in the same year, the tea trade was rapidly lost to the steamers, and in 1879 the *Cutty Sark* was transferred to the Australian wool trade. With Capt. R. Woodget as master (1885-95) she regularly made fast passages, averaging 80½ days outward and 82½ days homeward. In 1895 Capt. Willis sold his ship to the Portuguese, and she remained under the Portuguese flag until 1922, when she was purchased by Capt. W. H. Downman (for £6000) and restored. She was then largely used as a training ship at Falmouth. On the death of Capt. Downman his widow presented the ship to the Thames Nautical Training College (H.M.S. *Worcester*). In 1952 the *Cutty Sark*

to the genus *Agrolis*, and are allied to the army-worm and cotton-worm. *A. mesoria* is a common species in America.

Cuvier, Georges Léopold Chrétien Frédéric Dagobert, Baron (1769-1832), anatomist and naturalist, writer, and educational reformer, b. Montbéliard, Doubs, France, then under the rule of the king of Württemberg. He studied at the Carolinian Academy at Stuttgart, where he distinguished himself in every branch of study. At the age of nineteen he became tutor to the only son of Count d'Héricy near Caen, where he was enabled to study the animals and fossils of the shore and rocks. It was here that he pursued the researches which enabled him to reorganise the classification of invertebrate animals. In 1795 he went to Paris, and by the exertions of his friends,

Tessier and Geoffroy St-Hilaire, became prof. at the Jardin des Plantes. In 1798 he began to publish his papers on the fossil bones of Montmartre, which led later to his great work, *Recherches sur les ossements fossiles des quadrupèdes*, 1812. In 1800 he was appointed prof. of natural hist. in the Collège de France. Here he came under the notice of Napoleon, who, struck by his administrative ability, appointed him one of the inspectors of the lycées in the prin. tns of France, and later employed him in reorganising the educational institutions all over Europe, in N. Italy, Holland, and finally in Rome. In 1814 the emperor appointed him a councillor of state, which appointment was confirmed by Louis XVIII. In 1822 his services to the Protestant faith were acknowledged by his appointment as grand master of the faculties of Protestant

BARON CUVIER

theology in the Univ. of Paris. In 1832 Louis Philippe made him a peer, but he d. of paralysis the same year in Paris. In spite of the valuable results of his researches, C.'s mind was essentially cast in the mould of an older school. His method was to construct from facts or materials which he could himself observe; he had no patience with the speculative theories of his contemporaries, and was bitterly opposed to the dawning theory of evolution. In addition to the work already mentioned he wrote *Le Règne animal*, 1816, a book which summarised his observations on the structure and habits of the animal kingdom, and was long the standard work on zoology; *Mémoire pour servir à l'histoire et à l'anatomie des mollusques*, 1816, in which he followed out a classification of the Mollusca, indicated by Adamson, founded upon the structure of the animal rather than the shell; *Rapport historique sur les sciences naturelles*, 1789-1808; *Histoire*

naturelle des animaux, 1798; and many others. See H. D. de Blainville, *Cuvier et Geoffroy Saint-Hilaire*, 1890; and H. Dandín, *Cuvier et Lamarck*, 1926.

Cuxhaven, Ger. seaport in the Land of Lower Saxony (q.v.), at the SW. end of the Elbe (q.v.) estuary, 108 m. NNW. of Hanover. Until 1935 it was the forward port of Hamburg (q.v.). As well as being a port for ocean-going ships it is an important fishing tn and has a tourist industry. Pop. 50,000.

Cuyabá, see CUIABÁ.

Cuyahoga Falls, city of Ohio, U.S.A., near Akron, with manufs. of machinery and rubber goods. Pop. 29,200.

Cuyapo, municipality of Nueva Ecija prov., Luzon, Philippine Is., growing corn, rice, and tobacco. Pop. 28,923.

Cuyo Islands, volcanic archipelago in Palawan prov., Philippines. The chief is. is Cuyo. Coconuts and rice are grown. Pop. 22,445.

Cuyp, Aalbert, or Aelbert (1620-91), Dutch painter, b. Dordrecht. He was the son of Jakob Gerritsz C., a portrait painter, with whom he began his study of painting. C.'s sunset pictures have been compared favourably with those of Claude. He painted, almost entirely, scenes of outdoor life—fields, camps, markets, and the like. His reputation has increased greatly since his death, England being among the first to recognise his genius. There are 8 of his works in the National Gallery, London, and he is also represented in the Wallace collection and in Dublin and Dulwich. Among his best pictures are 'The Meuse near Dort' and 'Banks of a Lake.' See T. Cole, *Old Dutch and Flemish Masters*, 1902.

Cuyp, Benjamin (1612-52), Dutch painter, a cousin of Aalbert C. (q.v.). His landscape and biblical pictures show the influence of Rembrandt, and his familiar scenes that of Teniers. 'Joseph in Prison' and 'The Visit of the Magi' are among his best known works.

Cuyuni, or Cuyuwini, riv. of Brit. Guiana, rising in Venezuela; a trib. of the Essequibo which it joins near Bartica. It is navigable for most of its 350 m. and has gold- and diamond-bearing tribs.

Cuzco: 1. Dept. 2nd largest in Peru, mountainous and forested. Grain is grown in the upper valleys; sugar, cotton, coffee, chinchona, etc. on the lower slopes. Cattle are grazed and sheep, alpacas, vicuñas, and llamas are reared for wool. Area 55,731 sq. m.; pop. about 540,450 (plus some 25,000 tribal Indians). See Sir C. Markham, *The Incas of Peru*, 1910; Ena Dargan, *The Road to Cuzco*, 1948; and C. Sendeman, *A Wanderer in Inca Land*, 1948.

2. Cap. of the above dept, situated in a small valley some 11,200 ft above sea level and nearly enclosed by mts, 360 m. ESE. of Lima. Seat of an archbishop. It was the cap. of the Incas, but inhabited long before their coming, and was captured by Pizarro in 1533, to be superseded later by Lima as the Sp. cap. The chief buildings are the cathedral, the Dominican priory and church (built on the foundations of the Inca sun temple of Coricancha),

the univ. (1672), and a college of arts and sciences. The climate is cool and bracing. C. trades in wool, hides, cacao, rubber, and gold. Cotton and woollen goods, leather goods, soap, and confectionery are manuf. In the NW. of the city, on the hill Sacahuaman, are the ruins of a great fortress of the Incas. C. is connected with the coast and La Paz, the cap. of Bolivia, by a branch line from Juliaca on the Mollendo-Puno railway. Near by are other ruined Inca centres, notably Kenou and Tambo Machay. Pop. 45,150, mainly Indian.

Cuzzoni, Francesca (1700-70), lt. singer, b. Parma. She was trained and made her debut in Italy, but her first success was in London, where she appeared in Handel's *It. Opera Company* in 1722. Her jealousy was aroused by Faustina Bordoni (afterwards the wife of the composer Hasse), whom Handel engaged in 1726, with the result that she retired in 1728. She went to Vienna and soon after to Venice, where she again encountered Bordoni. In 1734-6 she was back in London, where she reappeared in 1750 with no voice left and without success. She d. in great misery and poverty at Bologna.

Cyanamide, $\text{NH}_2\cdot\text{CN}$, is a white crystalline solid melting at 40°C . Its chief point of interest is its power of forming metallic derivatives in which the two hydrogen atoms are replaced by an atom, or atoms, of a metal. The prin. metallic C. is calcium C. or 'Kalkstickstoff,' $\text{CaN}\cdot\text{CN}$, which is made by heating calcium carbide to a high temp. (about 1100°C .) in a current of nitrogen: $\text{CaC}_2 + \text{N}_2 = \text{CaN}\cdot\text{CN} + \text{C}$. The crude substance is black in colour, owing to its contamination with the carbon produced at the same time. It contains about 20 per cent of nitrogen, all of which is ultimately liberated as ammonia by the action of water. This reaction explains the use of calcium C. as a fertiliser, since the bacterial soil flora are able to convert the ammonia into nitrates, which are vital to plant growth. Agric. practice has shown that calcium C. is best adapted to soils that contain plenty of lime. Calcium C. is also used to some extent in the manuf. of ammonia for chemical purposes. In this case the calcium C. is decomposed by steam. It is further employed in the industrial preparation of other chemicals, e.g. urea and sodium cyanide, though its agric. use is by far the most important. The conversion of atmospheric nitrogen into a nitrogenous compound, such as calcium C., is known as the *fixation* of nitrogen, and since natural supplies of nitrates (e.g. Chile saltpetre) will become exhausted at no very remote date, the world's food supply will then depend upon fixation methods, as indeed it already largely does.

Cyanae Insulae, two rocky is. at the entrance of the Thracian Bosphorus into the Euxine. They were called *Planctae* and *Symplegades* because they were floating is. which struck together against ships, thus destroying them. They became stationary after the Argonauts had sailed safely past them.

Cyanic Acid ($\text{HO}\cdot\text{CN}$), strongly acid liquid which can hardly be prepared in a free state, since it decomposes at temps. above 0°C . Forms salts known as cyanates, the most interesting being ammonium cyanate, which gives urea on heating. The formation of urea in this manner by Wöhler in 1828 was the first formation of organic compounds from inorganic sources.

Cyanide of Potassium, see POTASSIUM.

Cyanides are salts of hydrocyanic, or 'prussic,' acid, HCN . Prussic acid itself is hydrogen cyanide. It was discovered in 1782 by the Swedish chemist Scheele. Technically it is prepared indirectly from molasses, but in the laboratory the usual method adopted is the action of dilute sulphuric acid on potassium cyanide, KCN . Prussic acid is a colourless volatile liquid, boiling point 26°C ., with a characteristic smell recalling that of almonds. It is excessively poisonous. Among the C., potassium cyanide and sodium cyanide are the most important. Potassium cyanide is made by the action of ammonia upon a molten mixture of potassium carbonate and carbon, while sodium cyanide is the result of fusion of a mixture of metallic sodium and sodium ferrocyanide. Both are exceedingly poisonous and must be used with the greatest possible caution. Potassium cyanide is used in entomological killing-bottles and also in chemical processes. Sodium cyanide finds application chiefly in the extraction of gold in S. Africa, etc. *Complex C.* are known, including potassium ferrocyanide and potassium ferricyanide (yellow and red prussiates of potash). Those important are the complex silver and gold C. used (in solution) in silver and gold electroplating as the electrolytic liquid. Prussic acid itself is extensively used, under suitable restrictions, for killing pests, e.g. noxious insects, rats in ships, plague germs, etc. For this purpose it is marketed in steel or iron cylinders.

Cyanogen (C_2N_2), colourless poisonous soluble gas, with a smell like that of bitter almonds, produced by heating mercuric or silver cyanide. It occurs as an acid radical in a series of salts called cyanides (q.v.).

Cyanometer, instrument for comparing the shades of the sky, with small variations in construction. The first one was made by Horace Benedict de Saussure (1740-99), a Swiss physicist, and later Arago designed one which consisted of an arbitrary scale of blues on a strip of porcelain. The blue of the sky was compared with the blues of the instrument, but, as might be expected, subjective errors were inevitable. Zollner's photometer, or some modification of it, is more satisfactory. In this a patch of white surface can be illuminated by any colour or combination of colours, and comparison can then be made with the sky or any desired object.

Cyanosis, lividity of complexion accompanied by an engorgement of the capillaries and small veins of the face and lips especially. It is applied especially to the colour in certain cases of congenital disease

or malformation of the heart. Temporarily it may be caused by extreme cold preventing circulation in the exposed parts. It is usually due, however, to some organic effect which prevents perfect oxidation of the blood. Thus in some cases, because the foramen ovale remains open, some blood can pass from the left auricle direct to the arteries without passing through the lungs, or again, a perforation may allow blood to pass from the right to the left ventricle; while C. may be caused by an obstruction in the pulmonary artery or in the lungs, or by heart failure.

Cyanuric Chloride, *see* CHLOROCYANIC ACID.

Cyathea, the genus of ferns which gives its name to the order Cyatheaceae, is to be found in its most highly developed state in tropical climates. The species are arborescent, the stems are often beautifully marked with the scars of fallen fronds, and the plants are a peculiar feature of the vegetation of many lands. *C. arborea*, the common tree fern, is a native of the W. Indies; *C. bulbularis* and *C. dealbata* both grow in New Zealand, and contain a starchy matter used by the natives as food.

Cyaxares (Gk *Kuaxarēs*) (625-585 bc or 634-594 bc), king of the Medes, grandson of Deioces, the founder of the Median Empire. He organised a powerful and well-trained army, with which he waged war against the Assyrians, the Scythians, and the Lydians.

Cybele, **Agdistis** or **Dindymene**, goddess-lover of Attis (q.v.) who was worshipped in Phrygia, and many parts of W. Asia. Her priests were called Corybantes (q.v.). Curetes (q.v.), or Galli. Being the wife of Cronus, and mother of Zeus, Poseidon, and Hades, she was worshipped as the mother of the gods. In Asia Minor she was a nature goddess, or universal mother, and worshipped with wild orgies. In Greece she was identified with Rhea, whose worship originated in Crete. Her cult was introduced into Rome in 204 bc, where she was identified with Ops (Plenty), the mother of Jupiter.

Cybiium, a species of mackerel-like fishes, is also known as *Scomberomorus*, and belongs to the family Scombridae; the tunny and mackerel are near relatives of the species. Fossil remains occur in the Eocene, Oligocene, and Miocene.

Cycadaceae, family of Gymnosperms containing about 75 species of living plants which have a long primary taproot, an unbranched stem covered with leaf-scars, a crown of leathery, often spiny-tipped, leaves at the apex of the stem, and flowers usually arranged as cones. The species are found only in tropical and sub-tropical countries, and the chief genera are *Cycas*, *Zamia*, *Encephalartos*, *Macrozamia*, and *Dioon*.

Cyclades, is. group which forms a dept or *nomos* of Greece. The is. extend SE. from Attica and Euboea and are named after the Gk word for a ring, forming a rough circle round the little is. of Delos. In antiquity a very famous sanctuary of Apollo. The chief is. are Andros, Tenos,

Syros, Myconos, Paros, Naxos, Amorgos, Cos, Cythnos, Seriphos, Siphnos, Melos, Ios, and Thera. Some are of volcanic origin. In appearance they are barren but there are valleys which are intensively cultivated. Wine, cheese, olives, and vegetables are produced; sponge fishing has now declined. The largest tn and only industrial centre is Hermoupolis on Syros. The C. were not affected by the Slav migrations. In the 13th cent. Venetian and Genoese adventurers estab. numerous local, feudal dynasties in the is., which were later taken by the Turks. The latter interfered little and did not settle in the C., which were incorporated in Greece in 1832. Racially the people are among the purest Greeks, and their customs and beliefs are of great interest. Area about 1050 sq. m.; pop. 126,000. *See* J. T. Bent, *The Cyclades*, 1885.

Cyclamen, small genus of primulaeous plants, consisting of about 16 herbs with very handsome flowers; all are to be found in Europe or on the borders of the Mediterranean. *C. europaeum*, the common C., is abundant in Sicily, and is often called sowbread, from the delight it afforded the wild boar as a food. It has been found wild in Britain, but it is probably only an escape from gardens. The plant has an underground corm, and the lobes of the corolla are reflexed. After fertilisation the flower-stalks twist round until they bury the capsular fruits in the ground, where the seeds ripen and germinate and produce other plants. *C. persicum* has a stalk which bends over instead of twisting in the burying of the fruit; *C. hederifolium* is a species the flowers of which exhale a pleasant fragrance. *C. neapolitanum* flowers in summer and autumn in Britain; *C. corymb* and *C. ibericum* in autumn and winter; the ruby crimson *C. repandum* in spring, and *C. europaeum* in summer. Thus C. may be seen in flower in gardens all the year round.

Cyclanthaceae, family of monocotyledonous plants, palm-like in habit and found in tropical America. The chief genera are *Cyclanthus*, *Ludoria*, and *Carludorica*, the latter genus being of interest to Europeans from the fact that the real Panama hats are manufactured from the bleached leaves of *C. palmata*.

Cycle (Gk *kuklos*, circle), in astronomy and mathematical chronology, a period of time in which certain phenomena repeatedly occur in the same order. C.s have been invented as a means of measuring time. The chief are the solar, that of the sun, and the lunar or metonic, that of the moon. *See* CHRONOLOGY; *see also* CALENDAR; INDICATION.

Cycles and Cycling. *History and Development*. It is hard to fix definitely the origin of an invention that has had so continuous a development as the cycle. Velocipedes and machines driven by hand, with 3 or 4 wheels, were known in England at the close of the 18th cent. The earliest 2-wheeled device in the nature of a bicycle appeared in Paris in 1808, while an improvement of the same invention was introduced into England in

1818 by a Baron von Drais, of Mannheim, Germany, and was known as the 'draisienne' and more popularly as the 'dandy-horse.' It consisted of 2 wheels, about 30 in. in diameter, one running in the track of the other, and connected by a wooden beam, which supported the saddle. The front of the beam sustained an arm-rest. Propulsion was obtained by the rider sitting astride over the beam, resting his arms on the arm-rest and

THE 'HOBBY-HORSE,' 1818

alternately striking against the ground with his right and left foot. This machine, however, speedily became the butt of comic writers and caricaturists, among others George Cruikshank, and succumbed to their ridicule. The dandy-horse was developed, however, by Kirkpatrick Macmillan, a blacksmith of Dumfriesshire, who affixed cranks to the axle of the rear wheel and actuated them by long levers. This invention dates from

THE 'BONESHAKER,' 1870

1840 at latest; but Macmillan's claims were hardly known in his life-time, and the credit of being the originator of the first 2-wheeled single-track mechanically propelled machine was given to Gavin Dalzell, a cooper of Lesmahagow in Lanark, who in 1846 produced a copy of Macmillan's machine. The next development of the cycle took place in the sixties. In 1864 a Frenchman, Pierre Lallement, fitted cranks and pedals to the front wheel of the dandy-horse. The necessity of maintaining balance naturally

led to the introduction of the movable head, which enabled the relative positions of the front and rear wheels to be changed and equilibrium maintained. This invention culminated in the high bicycle known as the 'boneshaker,' on account of the vibration caused by its frame being of wood and its wheels shod with iron tyres. At the same time numerous other devices, including tricycles of various types, were placed on the market under the name of velocipedes. The boneshaker attained a widespread popularity and was used extensively by the upper and middle classes of society. It had, however, little advantage over walking, and its discomfort and danger threatened to cause it to be relegated to the long list of obsolete inventions when a new direction was given to its development. Instead of a front-wheel-driven machine, a reversion was made to rear-driven C., with power transmitted by a chain. This was the origin of the modern safety bicycle, and credit for it is due to J. K. Starley, of Coventry, who produced the type in 1885.

THE 'ORDINARY' BICYCLE, 1887

The greatest step of all was perhaps the invention of the pneumatic tyre by Thompson in 1846 and its 're-invention' in 1888 by J. B. Dunlop, a veterinary surgeon, which secured permanently the position of the bicycle as a vehicle for transport and pleasure. Steadily increasing in popularity, the bicycle underwent an extraordinary boom in the years 1896 and 1897, when company after company was floated. The result, however, was overcapitalisation of the industry, which seriously affected the position of affairs for many years. It would be impossible to record all the innumerable contrivances, many ingenious, many ridiculous, that have been thought of for improving the efficiency of the bicycle. The chain-driven machine was threatened by the bantam bicycle, with front-wheel drive, and by the chainless rear-driven machine. Advocates were found for exceptionally long cranks and exceptionally short cranks. Such devices made no permanent headway, but others firmly established themselves. The tangent spoke diffuses the stress throughout the wheel, and has quite ousted the old direct spoke. Plunger or tyre brakes have given way before the

modern rim and hub brakes operated either by fixed rods or cables. Most cyclists who ride to business and for pleasure use a free wheel. Some time trialists and all track cyclists have a fixed wheel, but for massed-start racing on the open roads and on circuits, variable gears are used and are usually of the derailleur type. Hub gears are popular with many non-racing cyclists as this type of gear usually gives 3 or 4 alternative ratios. With the derailleur gear up to 5 ratios can be obtained with a single chain ring, and with a double one twice the number. In practice, many racing cyclists have 10 gears by fitting a double chain ring with 5 sprockets on the rear hub. Various models of saddle are available, the choice

the practice to fit this tube horizontal. Finally in the shape of the frame was a long time in being reached, but even now novel shapes are still produced in an endeavour to make a better frame. The tubes of a frame can either be welded together or joined by lugs which are used on a brazed frame. From the engineer's point of view the lady's machine is less satisfactory, as an open frame is used. Only keen women cyclists use frames similar to those used by men. Tandem cyclists and tricyclists are still to be seen in varying numbers. Their machines are usually used for touring and racing as they are unsuitable for business riding.

Manufacture. Most cycles used in this country are of Brit. manuf., although some

The Raleigh Cycle Co. Ltd.

A MODERN CYCLE

Gent's Sports Tourist Model.

of saddle depending on the rider. Some saddles are narrow and hard, others are broad and well sprung. According to law, 2 brakes must be fitted to every cycle and a fixed wheel is deemed to constitute a brake. Front and rear lamps must be fitted during the hours of darkness together with a reflector, all of which must conform to the existing regulations. Tubular tyres are often fitted to the wheels of racing cycles instead of the normal tyres and inner tubes. A tubular is a tyre with the inner tube contained inside it, the whole being sewn so that it can be quickly taken from or fitted to wheels. The diamond frame has become so familiar that it is possible to regard it as the permanent form; originally made with the top tube sloping upwards towards the head, it has now long been

racing cyclists prefer Continental machines and accessories. At the end of the last cent. an attempt was made to place large quantities of Amer. machines on the Brit. mkt., but without success. Now the U.S.A. provides Brit. manufacturers with one of their main export mkrts. The cycle industry in this country is mainly based around Nottingham and Birmingham, and the machines produced are exported throughout the world and are renowned for their high quality.

Cycling as a Sport. With the development of the motor industry cycling declined in popularity, but in recent years it has gained in importance. The internationally recognised governing body for cycling in this country is the National Cyclists' Union (N.C.U.), founded in 1878 and the oldest cycling body in the world.

It has almost 30,000 members throughout the Brit. Isles; these include the members of the Scottish Cyclists' Union and the N. Ireland Cycling Federation, which are affiliated to the N.C.U. It governs road and track racing and has an agreement with the Road Time Trials Council (R.T.T.C.) which controls time trialling. National championships are promoted by the N.C.U. and R.T.T.C. at various distances, and records can be estab. for performances for various distances or times as laid down in the rules of each body. Although the N.C.U. caters for touring, a large number of tourists are members of the Cyclists' Touring Club, also founded in 1878. Professional racing has never fl. in this country, although it is a major sport on the Continent, where many 'classic' races are held annually on road and track. The most famous professional stage-race in the world is the Tour de France, which lasts for almost a month. In 1933 the Frenchman Louison Bobet won the event, winning again in the 2 following years. Bobet was also world professional champion in 1934. Many professional tours are held all over the world, but next in importance is the Giro d'Italia. The 1956 race, won by Charly Gaul (Luxembourg), has gone down in cycling hist. as the most gruelling ever held owing to severe cold and snowstorms in the mts. In 1956 Reg Harris (Great Britain) won 5 of the 6 major sprint Grand Prix; the remaining one was won by the other Raleigh professional cyclist, Cyril Peacock (Great Britain). The Peace Race, held from Warsaw through Berlin to Prague one year, and in the reverse direction the next, lasts for almost a fortnight and is recognised as one of the most arduous stage-races. In Aug. of each year a series of world championships is held in one of the European countries. Amateur and professional riders each have their own sprint, pursuit, and road-race titles; there is also a professional motor-paced race, together with cyclo-cross and cycle ball championships. At the end of 1956 all women's world records were held by Russians and most of the men's records by It. riders. Many countries are now showing an interest in cycle racing, amongst them the U.S.A., the Rep. of I., and Russia, and competition may shortly be greater than ever before. The professional winner of a world championship receives more and better contracts, and the amateur rider gets a chance to break into professional cycling. The amateur riders produced in Great Britain in recent years have demonstrated that the standard of riding is steadily improving and that Britain is once again considered to be a leading cycling nation. Apart from the achievements of Reg Harris and Cyril Peacock as professionals, Norman Shell was pursuit champion in 1955, and at the 1956 Olympic Games Great Britain won 1 silver and 2 bronze medals.

World champions for 1956 were as follows:

Sprint: Professional, A. Maspes (Italy); Amateur, R. Rousseau (France).

Pursuit: Professional, G. Messina (Italy); Amateur, E. Baldini (Italy).

Road Race: Professional, R. Van Steenberghe (Holland); Amateur, F. Mahu (Holland).

Motor-paced: Professional, G. French (Australia).

Cycling in Warfare. The cyclist before 1914 proved his military value rather by experience gained in manoeuvres than in actual warfare. His value was considerable where good roads were to be found, and an early type of army machine was the quadricycle which had a machine-gun mounted on it. At the commencement of the First World War the War Office realised the value of the cycle, and what had hitherto been a section attached to an infantry unit became the Army Cyclist Corps. In the Second World War sev. armies produced folding cycles for the use of their paratroops after making a landing in enemy ter.

Wright, Everybody's Cycling Law, 1903; W. F. Grew, The Cycle Industry, 1921; G. H. Stancer, Tips for Cyclists, 1925; W. Fitzwater Wray, The Kikkos Papers, 1927; J. T. Lightwood, The Romance of the Cyclists' Touring Club, 1928; K. Thorenfeldt, Round the World on a Cycle, 1929; H. W. Bartleet, Bartleet's Bicycle Book, 1931; N. Spencer, The Art of Cycling, 1948; H. H. England (ed.), The Second Patterson Book, 1952; Reg C. Shaw, Cycling, 1953; C. R. Woodward, Scientific Training for Cycling, 1954. Journals are Best Sport (ann. review of the National Cyclists' Union); Courreur (bi-monthly); Cycling (weekly); Cycling Manual (ann.); Cyclists' Touring Club Gazette (monthly to members); Kikkos, the Cyclists' Annual; Wheelsport (National Cyclists' Union, monthly).

Cyclic compounds, see RING COMPOUNDS.

Cyclitis, inflammation of the ciliary body. See EYE.

Cyclobarbitone, see BARBITURATES.

Cyclograph, also Arcograph or Curvograph, instrument for drawing a curve without reference to the centre. It is usually formed of an elastic strip, which is adjustable to a given curve, and serves to transfer the latter to another plat or another place on the plat.

Cyclone, region of low barometrical pressure. In modern meteorological usage, the word is restricted to the intense 'revolving storms' of the tropics, and in temperate lats. areas of low pressure are called depressions or lows (see METEOROLOGY). The term C. covers storms in the Indian Ocean, the Bay of Bengal, and the Arabian Sea; but such storms are called hurricanes (q.v.) in the Gulf of Mexico, the W. Indies, the Florida coast and the U.S.A. generally, typhoons (q.v.) in the China Sea and around Japan, and baguios in the Philippines. The tropical C. is characterised by a sharp fall of pressure from

the outer edge of the storm to the centre, with nearly circular isobars. Winds of great strength blow counter-clockwise, in the N. hemisphere (clockwise in the S. hemisphere), around the central area, or 'eye', where for a few square miles calm prevails. C.s are seasonal, developing chiefly towards the end of the hot seasons, but the number reported varies considerably from year to year. For details see HURRICANE, TORNADO, and TYPHOON.

Cyclopean Masonry, in primitive Gk architecture (e.g. at Tiryns and Mycenae), archaic masonry composed of enormous and irregular blocks, fancifully attributed to the mythical race of giants, the Cyclopes; also a loose term for any masonry composed of large and irregular blocks.

Cyclopes (Gk 'round-eyed'), according to Homer a lawless band of Sicilian shepherds, gigantic in size, who despised Zeus and caught and devoured human beings. Their king, Polyphemus, had only one eye; hence the whole race were so described by later writers. According to Hesiod they were three, Arges, Brontes, and Steropes. They were the sons of Uranus and Gaia and were Titans. They were hurled into Tartarus by Cronus, but delivered by Zeus, whose servants they became, forging his thunderbolts and armour. They also made a shield for Pluto and a trident for Neptune. Ultimately they were destroyed by Apollo, for forging the thunderbolt with which Zeus killed Aesculapius. In a later tradition, owing to their connection with certain volcanoes they were regarded as the servants of Hephaestus (Vulcan), in whose workshops in Aetna, Lemnos, and Lipari they worked. The C. were worshipped as gods, and a temple dedicated to them stood in Corinth. The walls of Mycenae and other Gk towns were called 'cyclopean' on account of their strength. According to Strabo, the C. were builders from Thrace or Lycia, who settled in Argolis.

Cyclops, genus of copepod crustaceans, represents the fresh-water family Cyclopidae. The species are very numerous and minute.

Cyclopteridae, the family name of the fishes known popularly as lump-suckers from the frequent presence of a sucking disc formed from the united ventral fins. *C. lumpus*, the cock-and-hen paddle, is found on Brit. coasts.

Cyclostomata (Gk. *kuklos*, circle, *stomata*, mouths), or **Marsipobranchii**, name given to a class of vertebrate animals usually grouped with the fishes, but separated from them by various characteristic features. The species are eel-like and generally marine, with a gristly skeleton, persistent notochord, scaleless skin, jawless suctional mouth, straight intestine, simple heart, with the gill filaments set on the inner walls of a series of gill pouches and with a single, median nasal opening. The smooth skin is very slimy, and the suctional mouth is used as an organ of attachment when the C. fix themselves to their prey. They dwell in the depths of the sea or in rivs., and many are parasitic

in habit. After attachment to their prey (generally other fishes) the flesh is rasped off by the piston-like movements of a toothed, muscular tongue. The 2 best known species are *Myxine glutinosa*, the common hag-fish, and *Lampetra fluviatilis*, the fresh-water lamprey. They occur in temperate regions of both hemispheres, and in length vary from a few in. to 2 ft.

CYCLOPS

Cyclotron, machine devised by O. E. Lawrence and Livingston in 1931 for producing a stream of electrically charged atoms or nuclei travelling at a very high speed. It consists of an evacuated enclosure lying between the flat, circular pole pieces of a large electromagnet. Within this enclosure are two 'dees', rather like the two halves of a flat closed tin of polish which has been divided along a diameter, i.e. shaped like the letter D. An alternating electric field is set up between the dees, and charged atoms are released between them. The electric field accelerates each atom to a high speed, and after the atom has passed out of the region between the plates it enters the dee itself where there is no electric field but where the magnetic field causes it to travel in a circular path about the axis of the pole pieces of the magnet. After it has traversed a semi-circle the atom is again in the space between the plates, and if the electric field is now reversed the atom is not retarded, but is further accelerated. It now traverses another semicircle of larger radius because of its increased speed, returning to the space between the plates at a time when the electric field has again been reversed, and receiving a further impetus. The time to traverse one half-circle depends only on the nature of the particle and the (fixed) magnetic field. In this way the speed of a stream of charged atoms is gradually built up until their velocity is enormous, and they are travelling near the edge of the circular enclosure. The stream is allowed or caused to pass out at one point near the edge, and to fall on a target of a

suitable material, where it may produce atoms of other elements (see ATOM, ATOMIC STRUCTURE). Many of the atoms formed by the collisions at the target are radioactive. In this way radioactive types of elements such as phosphorus can be produced. These are of value for the information they afford about processes occurring in living organisms, for if they are mixed with food the subsequent hist. of the atoms can be followed by observing their radioactivity. Concentrated radioactive materials can also be accumulated for other purposes such as the treatment of cancer, etc. The cyclotron can be used to produce protons with energies up to about 10 MeV (see ELECTRON VOLT), for pole piece diameters of about 60 ins., without undue difficulty. Near this energy, the relativistic increase of mass of the accelerated particle becomes significant and the faster particles get out of step with the slower particles. The time to traverse one half-circle is $\pi m/Hc$, where m is the mass and e the charge of the particle, and H the magnetic field, and clearly depends on m . Machines have been designed to overcome this difficulty using magnetic fields that vary together with the frequency of the electric fields. See SYNCHROCLOTRON; SYNCHROTRON; BETATRON.

Cygnus: 1. Son of Apollo, changed into a swan.

2. Son of Poseidon, father of Tenes and Hemitheu, and king of Colonus in Troas. His second wife, Philonome, fell in love with her stepson; repelled by him, she accused him to his father, who threw both him and his daughter in a chest into the sea. But the chest was driven to the is. of Leucophrys; the inhab. elected Tenes king, and he called the is. Tenedos after his name. In the Trojan war C. was slain by Achilles.

3. Son of Sthenelus, king of the Ligurians, and a friend and relation of Phaethon, changed by Apollo into a swan, and placed among the stars.

Cydnus, riv. of Cilicia, rising in Mt Taurus and flowing through Tarsus into the Mediterranean. C. was famous for the coldness of its waters, through bathing in which while overheated Alexander the Great nearly lost his life. Frederick Barbarossa was drowned in one of its tributaries (1190).

Cydonia, quince, family Rosaceae, a genus of one species, *C. oblonga*, a deciduous tree, which came to Britain in 1573 from the Mediterranean region, though its ultimate origin is doubtful. See CHAENOMELES.

Cydwel, see KIDWELLY.

Cygnus ('the Swan'), constellation, comprising about 200 stars visible to the naked eye, which lies between Pegasus and Draco. The N. Cross is formed by 8 of the prin. stars in C. The constellation, the brightest star of which is α Cygni (magnitude 1.3), contains many objects of interest, not the least being the star 61 Cygni, a star of the fifth magnitude. This star was the first to have its parallax (i.e. its distance from the earth) calculated, by Bessel in 1838, who announced for it

a parallax of 0.32", since reduced to 0.24", which corresponds to a light-year distance of about 13 $\frac{1}{2}$.

Cylinder, in reciprocating steam and internal combustion engines (q.v.), chamber in which the heat energy of the steam or fuel is transformed into the kinetic energy of the piston. It is usually of cast iron or steel, but in modern i.c. engines the very high temps. make the use of special alloys necessary. A particular problem arises from the alternate heating and cooling during the stroke which, owing to the high frequency of alternation, is confined to a thin skin of the inner surface. In steam engines the C. is surrounded by a steam jacket, in water-cooled i.c. engines by a water jacket; in air-cooled engines the outer surface is provided with metal ribs.

Cylinder, surface traced out by a line moving parallel to its original direction and always passing through the circumference of a curve. The term is also applied to the solid contained by the surface and two parallel planes intersecting it, and in particular to a right circular C. which may be described by the revolution of a rectangle about one of its sides. The C. is a developable surface, i.e. it may be rolled out to form a plane surface. The section of a right C. formed by cutting the solid by a plane at right angles to the parallel surfaces is a circle; an oblique section gives an ellipse. The volume of a right C. is obtained by multiplying the area of the circular base by the height, that is, volume = $\pi r^2 h$, where r = radius of base, and h = height. The area of the curved surface is obtained from the formula $2\pi r h$, or the circumference of the base multiplied by the height.

Cyllarus, a centaur, killed at the wedding feast of Pirithous. The horse of Castor was likewise called C.

Cyllene: 1. The highest mt in Peloponnesus, on the frontiers of Arcadia and Achaea, sacred to Hermes, who had a temple on the summit, was said to have been *b. there*, and was hence called C.

2. Seaport tn of Elis (q.v.).

Cylon, Athenian who lived in the seventh century bc. He was victor at the Olympic games (640), and tried (630) to make himself tyrant of Athens, taking possession of the Acropolis during a festival. He and his followers were closely besieged, however, and finally fled to the altar of Athena for refuge. Megacles persuaded them to leave this altar, to which they are said to have attached themselves by a string. On doing so, all except Cylon (who escaped) were murdered by their enemies at the altar of the Eumeides.

Cymbals (Lat. *cymba*, hollow vessel), pair of thin, round, metal plates, hollowed in the centre, with a leather strap attached by which to hold them. The sound is obtained not only by clashing them together but by rubbing their edges. It can be loud and harsh, but is also capable of producing a kind of soft swish. The C. are indefinite in pitch. They are often used with the bass drum, esp. in military bands. The original C. were probably

very different in tone, with more of a bell-like sound. Their use is very ancient; they were known among the Egyptians, and were used by the Gks in the worship of Cybele.

CYMBALS

Cymbeline, *see* CUNOBELIN.

Cyme, in botany an inflorescence in which each branch is stopped in its growth after producing a single flower, when it is forced to form lateral branches, which are themselves stopped after forming one flower.

Cynaegirus, brother of the poet Aeschylus, distinguished himself by his valour at the battle of Marathon (q.v.). According to Herodotus, when the Persians were endeavouring to escape by sea, C. seized one of their ships to keep it back, but fell with his right hand cut off.

Cynanchum, family Asclepiadaceae, genus of twining herbs, pollinating their flowers by trapping and holding insects for a time. *C. acuminatifolium*, the Mosquito Plant, or Cruel Plant, of Japan, *C. acutum*, S. Europe, are hardy, white-flowering border plants; *C. formosum*, Peru, a greenhouse climber with pale green flowers.

Cynara, Mediterranean genus of composite plants, contains the two well-known plants, the artichoke and the cardoon. *C. scolymus*, the artichoke, has long been cultivated as a kitchen garden plant. *C. cardunculus*, the cardoon, is eaten like celery.

Cynnewulf (8th cent.), poet, *b.* probably Northumbria. Nothing definite is known of his life, but it is clear that, unlike Cedmon (q.v.), the other prin. early Eng. poet, he was an educated man, familiar with the liturgy and literature of the Lat. Church of his day, and his poetry shows considerable imaginative power. He wrote alliterative verse in the Northern dialect of O.E. Formerly many poems were attributed to him, but it is now agreed that only 4 are certainly his. They are *Elene* and *The Fates of the Apostles*, preserved in the Vercelli Book at Vercelli in N. Italy; and *The Ascension* and *Juliana*, found in the Exeter Book, which is in the possession of Exeter Cathedral. In all of these C.'s runic 'signature' is interwoven with the verse. The former 2 poems were ed. by G. P. Krapp, 1932, and the latter 2 by G. P. Krapp and E. V. K. Dobbie, 1936. Of them all, the finest is *Elene*, which describes the finding of the Cross by the Empress Helena, mother of Constantine the Great. *The*

Ascension is the 2nd part of a long work, *Christ*, which is commonly held to be the work of 3 different authors. *See* C. W. Kennedy, *The Poems of Cynewulf translated into English Prose*, 1910; K. Sisam, *Cynewulf and his Poetry* (Brit. Academy lecture), 1933.

Cynics, The, sect of Gk philosophers deriving from the school of Antisthenes (q.v.). Their name has been said to have arisen from the Cynosarges (q.v.), where Antisthenes taught; but it is more probably based upon the nickname (*kuōn* = dog) of Diogenes of Sinope (q.v.). For the early Cynics (e.g. Diogenes, Crates, and Zeno) virtue was the highest good, learning and pleasure to be despised. Later members of the school (e.g. Demetrius and Demonax) forgot the saving grace of self-control and degraded human life to a mere brutish level. *See* R. Dudley, *A History of Cynicism*, 1937.

Cynodon, a small genus of Gramineae, found in S. Africa and Australia. *C. dactylon*, the dog's tooth, or Bermuda grass, is, however, world-wide in distribution, and in England grows on the shores of Devon and Cornwall. *C. linearis* is the durtgrass of the E.

Cynoglossum, family Boraginaceae; genus of cosmopolitan biennial or perennial herbs. *C. officinale*, hound's-tongue, and the more rare *C. germanicum*, green hound's-tongue, are native to Britain and Europe; both biennial, with disagreeable, mouse-like smell, and onetime medical uses against scrofula. *C. amabile*, China, is a popular garden biennial.

Cynoidea, one of the sections of the Carnivora (q.v.), consisting of dog-like animals. There is a single family, the Canidae, and the species is distributed over the whole world, with the exception of New Zealand, and many of their fossil remains have been found. The fox, wolf, dingo, prairie wolf, and all varieties of dogs, wild or domesticated, belong to this group.

Cynomorium Coccineum, the single species of its genus in the family Balanophoraceae, is a Mediterranean plant. By old herbalists it was called *Fungus melitenensis*, and was valued for its astringent properties, but it is now a rarity and an object of curiosity to botanists. The discovery of the medicinal properties of this parasitic plant dates from remote times, and in 1740 the knights of Malta set so high a value on it that they guarded the passage to the spot where it grew with the strictest jealousy.

Cynosarges, gymnasium, sacred to Heracles, outside Athens, for the use of those who were not of pure Athenian blood; here taught Antisthenes (q.v.). *See* CYNICS.

Cynosephalae (dogs' heads), two hills of Thessaly in Greece, near Larissa. Here in 197 BC the Rom. consul, Flaminius, defeated Philip of Macedon.

Cynossema, 'Dog's Tomb,' promontory in the Thracian Chersonesus, so called because it was supposed to be the tomb of Hecuba (q.v.), who had previously been changed into a dog.

Cynosure (Gk *kynosoura*, a dog's tail), name for the constellation of the Little

Bear, which contains the Pole Star. The Phœnician mariners steered their course by this constellation, while the Greeks steered by the Great Bear. The name has been transferred to anything attentively observed.

Cynosurus Cristatus, the crested dog's-tail grass, or gold-seed, is a well-known pasture-grass of the old world, and flourishes in Britain. The roots grow deeply and the plant thus remains green in dry weather when other grasses are burnt.

Cynthia, one of the many names of the Grk goddess Artemis (q.v.), taken from Mt Cynthus (q.v.).

Cynthus, mt of Delos, celebrated as the bp. of Apollo and Artemis, who were hence called Cynthius and Cynthia respectively.

Cyparissus, son of Telephus, who inadvertently killed his favourite stag, and, seized with immoderate grief, was changed into a cypress.

Cyperaceæ, family of about 3000 glumaceous monocotyledons, having much the appearance of grasses. In England a large number of the species are called sedges, and are employed in the manuf. of 'rush' mats and bottoms for chairs. Genera include *Carex*, *Cladium*, *Cyperus*, *Eriophorum*, *Blysmus*, *Hypolytrum*, *Scripus*, *Isolopis*, etc.

Cyperus, genus of the family Cyperaceæ, which contains about 500 species of rush-like plants found in all warmer regions but not in cold. *C. esculentus*, chufa, of S. Europe, India, etc., is grown for its edible roots. *C. papyrus*, the Egyptian paper reed, is the source of the papyrus of ant. times. *C. longus*, galingale, and *C. fuscus* are natives of Britain.

Cyphal, see CHERTERIA.

Cypræides, family of gastropod molluscs which contains the cowry (q.v.). The species are often large and beautiful, and most of them dwell in warm seas. Besides the existing species, of which there are 2 or 3 hundred, fossil remains have been discovered from the Upper Jura.

Cy-près, term used in connection with charitable trusts or uses (q.v.). Where an instrument creating a trust discloses an intention to benefit charitable purposes generally, or, as it is called, 'a general intention of charity,' without mentioning any particular charity or charitable purpose; or specifies a particular charitable purpose which either cannot be carried out, as for example where an institution intended to be benefited has ceased to exist, or which does not exhaust the whole of the trust fund, the chancery div. will itself declare the charitable purpose to which the trust fund or surplus (as the case may be) is to be devoted; and in so doing it will efface the settlor's intentions as nearly (cy-près) as possible. Where it is impossible to carry out any charitable purpose approximating to that in the mind of the settlor, the court may construe the settlor's intention by the light of other charitable trusts (if any) in the same settlement. See Snell, *On Equity*; and Hanbury, *Modern Equity*.

Cypress, or *Cupressus*, genus of coni-

ferous plants, of which all the 12 species are evergreen shrubs or trees, and are natives of N. America, the Mediterranean, and Asia. *C. sempervirens*, the common or upright C., is a plant of gloomy aspect but fragrant smell; it is sometimes cultivated in Britain, but the climate is too damp and cold for it to flourish. It has been identified as the C. of the Scriptures, and the cross of Christ is believed by some to have been made from this tree; but, on the other hand, the Heb. word for the C. of Scripture, *terzah*, is derived from *taraz* connoting 'strength,' so that there is means of identifying it, and indeed the Heb. word for C. is *berosh*, often trans. cedar or fir. The variety *C. horizontalis*, the spreading C., is a more hardy plant than the common C., and its graceful spreading branches make it a beautiful object. *C. lusitanica*, the cedar of Goa, is a drooping species, and its leaves have a singularly glaucous colour. *C. funebris* is a native of China and bears weeping branches; *C. lawsoniana* grows in Upper California and yields good timber; *C. fragrans* is often cultivated, but occurs wild in N. America; *C. macrocarpa*, the Monterey C., is a hardy species found in California; *C. nootkatensis* (from Nootka Sound) grows in N. America, attaining a height of over 100 ft. See FORESTRY.

Cyprian (Cyprianus) Thascius Caecilius (c. AD 200-58), St and Father of the Church, was b. of heathen parents, but in 245 was baptised. Thereupon he gave all his wealth to the poor, so that the 'acclamation' and 'friendly violence' of the whole city obliged him in 248 to accept the bishopric of Carthage. When Decius began his ruthless persecutions in 250, C. was greeted everywhere with pagan cries of '*Cyprianum ad leonem*' so that he sought safety in flight. At Gallus's accession he returned to Carthage, 251, and was soon drawn into the question of the re-baptism of heretics and the readmission into the Church of those who had fallen away during the recent persecutions. C. was inclined to lenience, whereas Novatian wished their entire exclusion. From C.'s letters the reader obtains a lively picture of the struggle of the early Church and the bitter animosities aroused by questions of doctrine and discipline, also an insight into the poetic feeling and tenderness of the writer. C. did not hesitate to dispute with his 'brother' Pope Stephanus, and in 256, at a synod in Carthage, he openly declared that he recognised no judicial authority of the Rom. over the other Christian bishops, who were substantially his equals. On the proclamation of Valerian as emperor in 258, C. once more had to flee. In the same year he bravely and gladly suffered martyrdom. 'God be thanked!' he cried on hearing his sentence, faithful to his saying that 'a priest of God . . . may be put to death but cannot be overcome.' His *De Catholicæ Ecclesiæ Unitate* is of peculiar interest and importance in the history of the papal claims, though the authenticity of the passages favouring them is disputable. See E. W. Benson, *Cyprian, His Life, Times and Work*, 1897;

E. Leigh-Bennett, *Handbook of the Early Fishes*, 1920.

Cyprinidae, a very large and much subdivided family of fishes of the order Ostariophysi, is typified by the carp. The family are bony fishes with scaly bodies, naked heads, and toothless mouths. They are to be found in fresh water of the old world and N. America, and about 1300 have been classified. Their diet is chiefly vegetarian, but a few are animal-feeders. The carp, goldfish, minnow, dace, loach, chub, roach, tench, and fresh-water bream are a few well-known representatives of the family.

Cyprinodontidae, a family of fishes of the order Microcyprini, somewhat resemble carps, but have teeth in both jaws, no barbels, and the head and body are covered with scales. The most curious genus is *Anableps*, in which the iris of the eyes has 2 pupils; the fishes swim with the head half out of the water, and the lower pupil is adapted for sight in water, the upper for aerial vision.

Cypripedium, a genus of the Orchidaceae, contains over 50 species of graceful and beautiful plants, mostly inhab. of N. America and N. India. They have a curious method of pollination, which is effected usually by bees. *C. calceolus*, the lady's-slipper orchid, is found rarely in woods of N. England. It has a creeping rhizome, broad ovate leaves, and the perianth is reddish-brown in colour. The labellum, however, is yellow and slipper-like, the edges being turned inwards.

Cyprus, 3rd largest is. in the Mediterranean, 60 m. W. of Latakia in Syria and 46 m. S. of Cape Anamur in Turkey, lies between N. lat. 34° 34' and 35° 42', and E. long. 32° 16' and 34° 36'. Its length is 138 m., average width 45 m., area 3584 sq. m. It is an attractive country of plains and mts surrounded by blue seas and wide horizons. The NE. headland, Cape St Andrews, forms the extremity of a long and narrow peninsula. The fertile plain of the Mesaoria stretches across the centre of the is. Once covered with forest it is now almost treeless. The surface is broken here and there by tablelands of rock, 100 to 200 ft. high. There are 2 mt systems. The N. coastal chain, or Kyrenia mts, of which the highest peak is Kyparissovouno (3357 ft), is steep and craggy rather than lofty; its height diminishes steadily towards the E. The mts in the SW. extend over a third of the is. Among them are Chionistra (6403 ft), the highest point in C., Adelphi (5305 ft), Papoutsa (5124 ft), and Machaira or Chionia (4674 ft). Holiday resorts have been developed among these mts and the Gov. of C. moves to Troïdos during the hot weather. The climate of C. is Mediterranean in character and is healthy, though the heat of the plains has always been notorious. Winter, from Oct. to Mar., is the wet season. Rainfall varies from 14 in. in the plain to 40 in. in the mts, the mean ann. precipitation being 19 in. The mean maximum temp. is 78.5° F., the mean minimum 54.7°, and the average ann. temp. about 69°. C. is subject to earthquakes; the most recent

(1953) did severe damage in the Paphos dist. The rivs. are muddy torrents in winter and are dry or reduced to stagnant pools in summer. The largest, the Pedias, on which Nicosia stands, and the Ialías, flow N. and then E. through the plain. There are salt lakes near Larnaca and Limassol. The only other lake of any size, Paralimni near Famagusta, has been drained. Malaria was once prevalent but has recently been eliminated. Locusts formerly did great damage but have been brought under control; there has been no serious visitation since 1915. In antiquity C. was very rich in timber, which was in great demand for shipbuilding. By 1878 wanton destruction, forest fires, and grazing by goats had caused severe deforestation. The British have consistently aimed at re-afforestation, 18 per cent of the area of C. is now forest, mostly Crown reserves. The chief tree is the Aleppo pine.

Geologically C. is not old; the underlying rocks are probably Cretaceous and early Eocene. At times the is. has been submerged and at others joined to the mainland. Limestone and sandstone provide plentiful good building stone. The N. mts contain excellent marbles. The plain is alluvial. Sheet erosion is serious in places, gully erosion less so, and terrace cultivation has long been practised. Agriculture is somewhat backward and is hampered by fragmentation of holdings, water shortage, and primitive methods. Recently much attention has been given to agric. education, improving stock, irrigation, and the development of vil. co-operatives. There is a considerable wine, spirit, and soft drinks industry. C. wine resembles Madeira; the Madeira wine was derived from Cypriot stock. There is little fish in the sea off C. In antiquity C. was famous for copper, a word that may be connected with the name C. The chief exports (annual value about £18½ million) are cupreous concentrates, iron pyrites, cupreous pyrites, asbestos, carobs (used for cattle food), wheat, oranges, potatoes, raisins, chrome, wine, and wool. Imports now cost about £30½ million annually. The budget is about £13½ million and has risen rapidly in recent years. Expenditure on development is about £1 million a year. In 1955 the Brit. Gov. approved a development plan to cost £38 million. Internal communications are mainly by road and there is an extensive motor bus service. The railway from Famagusta through Nicosia to Evrykhon is now disused. There are regular shipping services to the prin. Mediterranean ports. Nicosia airport is an important junction for Middle E. air routes. Cable lines connect Larnaca with Egypt and Syria. The old Turkish weights and measures are in common use. The C. £ is equal to the £ sterling and is divided into 1000 mils.

The prin. tns. which are the capitals of the administrative dists., are Nicosia, the seat of gov. (estimated pop. in 1954, 43,000), in the centre of the plain; Famagusta, the chief port, on the E. coast (20,900); Limassol (27,300) and Larnaca, (16,600), ports on the S. coast; Paphos

(6600) and Kyrenia (3400). There are 10 rural municipalities and 617 vills. Of the latter most are inhabited by Greeks, about 100 by Turks and about 150 by both Greeks and Turks. Vill. affairs are controlled by mukhtars and councils nominated by the gov. The pop., estimated at 527,000 in 1957, consists mainly of Greeks. They belong to the Church of C., an autocephalous branch of the E. Orthodox Church, subject only to the archbishop of C., under whom are the metropolitans of Paphos, Citium (Larnaca), and Kyrenia. In the vil. a distinctive dialect of Gk is spoken. 18 per cent. of the people are Turks and Muslims, mostly descended from immigrants from Asia Minor who came with or soon after the Ottoman conquest. They speak Turkish or, in some vills, Greek. Their religious leader is an elected Mufti. There are also some Armenians, principally in Nicosia, most of whom came as refugees from Turkey, and Maronites, originally Arabic speaking immigrants from Lebanon.

C. is of great archaeological interest, being very rich in Bronze Age, Hellenistic, Rom., and medieval remains. The superb Gothic cathedrals of Nicosia and Famagusta are now mosques. The 16th cent. walls of both tns survive, and in the Kyrenia mts are the ruins of 3 medieval castles and the great abbey of Bellapais. There is an excellent museum in Nicosia.

Nothing is known of Palaeolithic C. In Neolithic times the W. coasts were inhabited by a short-headed race. In the Bronze Age, which began about 2600 BC, a long-headed race akin to the people of Asia Minor had flourishing settlements in the E. half of C. Greeks began to colonise the is. before 1200; Phoenicians followed between 1000 and 800. At the time unknown languages were spoken in C. and a distinctive script, which is still undeciphered, was in use. C. was divided among petty rulers of whom one of the most important was the priest king of Paphos. The is. was subject in turn to Egypt, Assyria, Persia, and Alexander the Great. Hellenisation was completed under the Ptolemies. C. followed Egypt into the Rom. Empire. Paphos became the cap. and chief port; Cicero and Cato the younger were among its Rom. governors. Paul and Barnabas visited C. and converted the proconsul Sergius Paulus. Because of this apostolic foundation the Church of C. is independent; the Archbishop is consecrated by his suffragans. In the 7th cent. the coasts suffered much from Arab raids; the Muslims levied tribute but did not colonise C. Richard I of England conquered C. during the Third Crusade. He sold it to Guy de Lusignan, former king of Jerusalem, whose successors ruled C. as independent kings. Feudalism and the Latin Church were estab. In the 13th and 14th cent. C. was very prosperous. In 1426 the Mamelukes of Egypt invaded C., defeated and captured King Janus, pillaged Nicosia, and made C. tributary. In 1489 Venice compelled Queen Catherine Cornaro, widow of James II, to cede C. The Turks conquered the is. in 1570-71, besieging and

taking Nicosia and Famagusta. Turkish rule was uneventful. The serfs were freed and the Orthodox Church restored, but taxes were oppressive and with the decline of the empire there was much misgovernment. The pop. declined until the 18th cent., since when it has risen steadily. The Gk archbishop was usually the most powerful person in C. but in 1821 the governor, frightened by the Gk rebellion, executed the archbishop and metropolitans. The Church regained much influence later. In 1878 Disraeli forced the Sultan, then in imminent danger from Russia, to cede to Britain the administration but not the sovereignty of C. In 1914 C. was annexed. Turkey recognised the annexation by the Treaty of Lausanne (1923) and in 1925 it was made a Crown colony. There had been a movement for

Nancy Jenkins

VILLAGE SCENE IN CYPRUS

A priest of the Autocephalous Church.

union with Greece (*enosis*) before 1878, though there was no armed resistance to the Turks. Many Greeks and some Brit. hoped that Britain would grant C. to Greece as had been done with the Ionian Is. The *enosis* agitation was always strenuously opposed by the Turks both in C. and in Turkey. In 1915 C. was offered to Greece in return for armed intervention in Serbia. The offer was rejected and withdrawn. In 1931 Gov. House in Nicosia was burnt by demonstrators. Troops were sent to C., 2 metropolitans were banished, and the partly elected legislative council was suppressed. There was much popular sympathy with the movement in Greece but the Gk Gov. remained aloof from the dispute. In C. the authorities assumed wide powers to ban newspapers and forbid meetings. In 1946 the Brit. Gov., though refusing to discuss *enosis*, summoned a consultative assembly to discuss a constitution. The

Gk Cypriots were divided. The Left Wing parties, as well as the Turks, were willing to accept the Brit. proposals. The Right Wing, led by the Church, rejected everything but *enosis*. The assembly was dissolved in 1948. In 1949 the Communists of C. decided to abandon the demand for self-gov. and to support the Right Wing claim. In 1950 the Church organised a plebiscite to show the strength of popular demand for *enosis*. Agitation, encouraged by Athens radio, increased steadily and in 1954 Archbishop Makarios III (q.v.) persuaded the Gk Gov. to take the question to U.N.O. The failure of this move led to minor disorders in C. In Dec. 1954 began the transfer of the H.Q. of Brit. land and air forces in the Middle E. from the Suez Canal Zone to C. In April 1955 an organisation called EOKA (initials for Gk words meaning Revolutionary Organisation of Cypriot Struggle) began a campaign of sabotage and murder which still continues. Active terrorists are few and are thought to be led by Grivas, a Gk army officer of Cypriot birth and an extreme reactionary. The Brit. Gov. summoned Greece and Turkey to an abortive tripartite conference in London. In Sept. 1955 Field-Marshal Sir John Harding was made Governor and in Nov. a state of emergency was proclaimed, which continues. In March 1956 the Archbishop was deported to the Seychelles. Documents have since been pub. showing his association with EOKA. Brit. troops have caused considerable casualties to the terrorists whose victims have mostly been not British but Cypriots suspected of pro-British sympathies. In Sept. 1956 the Brit. Gov. sent Lord Haddiffe (q.v.) to C. to prepare a scheme for self-gov. within the Commonwealth which would reserve to the Governor external affairs, defence, and internal security. The proposals were presented in Dec. and accepted by the gov. They provide for a cabinet responsible to an assembly of 36 members, of whom 6 would be elected by the Turks of C. on a separate electoral roll, 6 would be nominated and would include representatives of the small minorities, and the rest would be elected by the non-Turkish Cypriots. Legislation affecting Muslim institutions would require the assent of 4 of the Turkish members. The Governor would nominate a minister for Turkish affairs who would always be a member of the cabinet. Greeks and Turks would be equally represented in the Supreme Court and the control of non-communal education. The Gk Gov. expressed its dissatisfaction. The Turkish Gov. has stated that it would accept the partition of C. into Gk and Turkish areas. In April 1957 Archbishop Makarios (q.v.) was released from exile in the Seychelles. Cypselus, tyrant of Corinth (657-627 bc), was, on his mother's side, connected with the family of Bacchladae, who, having learnt from the oracle that this child was to bring about their downfall, sent messengers to murder him. They were unsuccessful, however, and he eventually succeeded in overcoming them and in making himself tyrant, ruling at Corinth for 30 years.

Cyr, or **Cyrio**, see **GIRG**.

Cyrano de Bergerac, see **BERGERAC**.

Cyrenaica, 1 of the 2 ters., Tripolitania being the other, of which Libya is formed, with an area of about 75,000 sq. m. (excluding the Cupra hinterland zone) and a habitable area of some 14,000 sq. m. Though it has no precise natural boundaries, the ter. which the Italians named C. is a natural unit. Its core is a limestone plateau welded on the S. to the Libyan desert and projecting in a wide arc into the Mediterranean. This core is the Jebel Akhdar, and constitutes the essential C. To the S., E., and the W. are transitional regions which, as they decline down to the level of the desert, gradually take on its character. Though the country is mostly desert, it is generally arable near the coast. The native inhab. are almost all Arabs and Berbers, and the total pop. in 1954 was about 391,328. The inland natives, mostly pastoralists, are distinguished by their general adherence to the Senusiya order of Islam, an order not peculiar to them, though they form by far the most numerous and most compact Senussi group. The Italians were greatly attracted to Jebel Akhdar, and after a provisional administration which lasted from their annexation of Libya in 1912 until 1923, they embarked on a policy of colonisation which proved extremely costly. Olives are cultivated in places, and there are date-palm oases. Great numbers of cattle, sheep, and camels are reared, and barley is grown and exported to Eng. maltsters. C. fl. in antiquity owing to the trade with Central Africa. In 1930 80,000 Arabs with 600,000 head of cattle were forcibly transferred from the inland dists. In 1931 the It. campaign against Senussi Muslims was successfully concluded with the capture of Cupra, the rebel leader, Omar el Mukhtar, being executed. The It. colonisation scheme involved the forcible displacement of the Bedouin by Gen. Graziani, achieved after ruthless fighting in about 1934, by which time the native pop. had fallen from 400,000 to 200,000. The herds suffered even more, the number of sheep being reduced between 1926 and 1933 from 800,000 to

98,000, ~~camels~~ from 75,000 to 2600, goats from 70,000 to 25,000. Not only did the Italians take over the most fertile land of the Jebel Akhdar and coastal plains, but they closed many of the traditional grazing grounds of the Arabs. Scattered over the Jebel and the W. littoral there sprang up thousands of It. farms, ranging from small white houses, with a few ac. of land, to estates of as much as 30,000 ac. C. has an erratic rainfall of 12 in. to 16 in., with a drought every 7 years. There is some well water, and catchments are constructed. The Italians partly completed an ambitious pipe-line to carry water throughout the Jebel from Ain Marra, a spring, to the W. of Derna. In

salve as much as possible of the It. colonisation achievements; but it did not prove easy to induce the Bedouin to follow a settled existence, though the attempt was most successful with Senussi exiles returning from Egypt, where they had shed their nomadic way of life. But in general the majority of the Cyrenaicans have neither the knowledge nor the inclination to continue the work of the It. colonists. Of the total revenue, including grants-in-aid, £1,420,000 (1956) was allocated to C. See R. di Lauro, *Tripolitania*, 1932; K. Holmboe, *Desert Encounter*, 1936; and G. Casserly, *Tripolitania*, 1943.

Cyrenaics, The, school of philosophers,

CYRENE—THE EXCAVATED TEMPLE OF APOLLO

E.N.A.

the Second World War C. became a battle-ground, first between the It. and Brit. forces and later between combined Italo-Ger. forces and the Brit. (For full details and description of the battles in Libya see AFRICA, NORTH, SECOND WORLD WAR, CAMPAIGNS IN.) When C. thus became a theatre of military operations, the It. pop. in tn and country either fled or were removed to Tripolitania, from fear of Senussi vengeance. By the time the Brit. military administration was set up in 1943 normal life had ceased in the colonised areas. The port tns, Tobruk, Derna, and Benghazi, had been wrecked, and irrigation and water pipe-lines destroyed. The administration's first care was the welfare of the natives, and this involved removal of the debris of 2½ years' battles. The next task was to

so called because their founder, Aristippus (q.v.), was a native of Cyrene, where also their peculiar tenets were developed. Their school lasted down to the beginning of the 4th cent. BC. Their articles of belief were drawn up, as it were, by Aristippus the younger. They denied the excellence of virtue, and, as they regarded knowledge as immediate sensation, considered all logic and physical science waste of time. The C. were hedonists, after the manner of the Cynics. It was their pessimism which deterred men from accepting their ideals. Theodoros of Athens, Hegesias, who advocated suicide, and Arete, Aristippus's wife, were adherents of this school.

Cyrene, cap. of the anct Cyrenaica, Africa, was situated near the modern vil. of Grenna, SE. of Cape Ras, a few m. from

the Mediterranean. The anct ter. of C., called also Cyrenaica, included also the Gk cities of Barca, Teuchira, Hesperis, and Apollonia, the port of C. Under the Ptolemys Hesperis became Berenice, Teuchira was called Arsinoë, and Barca was entirely eclipsed by its port, which was raised into a city under the name of Ptolemais. The country was at that time usually called Pentapolis, from the 5 cities of Cyrenaica—Cyrene, Apollonia, Ptolemais, Arsinoë, and Berenice. C. was founded c. 630 BC by a colony from Thera. Their leader, Battus (see BATTIADAE), and his descendants ruled there for 8 generations, after which C. became a rep. Under Augustus Cyrenaica, with the is. of Crete, became a Rom. prov., and the miserable party struggles of the cap. were effectually quelled. In the days of its prosperity C. numbered over 100,000 inhab., had a flourishing medical school, and was noted for its intellectual activities, and as the bp. of Callimachus, the poet, Carnendes and Aristippus, the founder of the Cyrenaics, Eratosthenes, and the elegant Christian writer, Synesius. C. ruins of which (including those of a number of temples) remain to attest its former greatness, carried on a considerable trade with Egypt, Greece, and Carthage.

Cyrenius, Græcised name of Publius Sulpicius Quirinius, who twice held office in Syria, the first occasion being in association with Sentius Saturninus in 9-6 BC. At that time Judea was under Herod, but to all intents and purposes was part of the Rom. world, so that when Augustus ordered a general census it might well have been included. According to St Luke the census that caused Christ to be born at Bethlehem was begun under Quirinius, though he did not personally conduct it. It was made no doubt by native officials, and by the method used it would have taken a long time to complete. Augustus certainly instituted a fiscal reform with especial regard to abuses in the provs. He set out to discover the exact financial resources of the empire and left a written account at his death in AD 14 (Tacitus, *Annals* I, ii; Suetonius, *Augustus*, 28). A census for the purpose was held in Gaul in 12 BC, and in Egypt in 9 BC. There is no reason to doubt the testimony of Luke that such a census was going on in Syria and had reached Judea by the time Christ was born (between 6 and 4 BC). See W. M. Ramsay, *Was Christ born at Bethlehem?*, 1898.

Cyreschata, or **Cyropolis**, city of Sogdiana, on the Jaxartes; the most easterly of the colonies founded by Cyrus, and the extreme city of the Persian Empire. It was destroyed, after many revolts, by Alexander.

Cyril, **Saint** (315-86), was ordained bishop of Jerusalem in 351. It was the time of the Arian controversies, and as C. attempted to steer a middle course he was deposed in 358 by his metropolitan, Acacius, bishop of Caesarea, an action which was ratified 2 years later by the synod at Constantinople. But he was reinstated in his bishopric on the accession of Julian in 361. Expelled again by

Valens in 367, he finally returned to Jerusalem in 378, and attended the second ecumenical council at Constantinople and accepted the Nicene formula there promulgated. His *Catechesis* (Instructions to Catechumens) contains a series of discourses addressed to candidates for baptism and a few to the newly baptised.

Cyril, **Saint** (c. 376-444), of Alexandria, a father of the Church. After some years in the Nitrian desert, he succeeded his uncle, Theophilus, as patriarch of Alexandria in 412. Some measure of the responsibility for the atrocious murder of Hypatia has been attributed to C. by historians, though not by contemporaries. Nestorius, who refused to acknowledge the Blessed Virgin Mary as the Mother of God, was the object of C.'s ceaseless opposition. Anathematised in 430, he was condemned in 431 at the ecumenical council of Ephesus. C. himself was condemned by John of Antioch for his harsh treatment of Nestorius, both depositions, curiously enough, being ratified by the emperor, but C. was soon reinstated. A number of C.'s homilies are extant, besides his defence of Christianity (433). His feast is on 9 Feb. He was declared a Doctor of the Church by Leo XIII. See E. Weigl, *Die Heilsschre des Cyrillus*, 1905; and H. du Manoir, *Docteur et spiritualité chez St Cyrille*, 1944.

Cyril (827-69) and **Methodius** (d. 885), **Saints**, 2 Christian apostles of Thessalonica. C. (Constantine Cypharus), surnamed the Philosopher, and the Apostle of the Slavs, was sent to preach to the Chazars, and later to the Bulgarians. He founded a school at Buda. While in Bulgaria he was taken prisoner, but was released about 862 by the intervention of M., his brother, whom he then accompanied to Moravia. The two invented the Slavonic alphabet, and are said to have been summoned to Rome for employing the Slavonic tongue in the church services. After an understanding had been arrived at with Pope Adrian II, C. remained at Rome, but M. returned to Moravia as archbishop of the church there. He appears to have become involved in quarrels with the Ger. clergy, in consequence of which he was again summoned to Rome in 879 and 881. After the latter date nothing is heard of him, and, in fact, the accounts of the lives of both C. and M. are meagre and contradictory. Their feast is on 7 July.

Cyrnos, Gk name of the is. of Corsica, from which is derived the adjective *Cyrneus*, used by the Lat. poets.

Cyrus the Great (d. 530 BC), founder of the Persian Empire, was the son of Cambyses I and of Mandane, daughter of the Median king Astyages, and the grandson of Cyrus I, and the fourth of a line of kings over Anshan. He thus belonged to a branch of the royal house of the Achæmenides. His boyhood is shrouded in a mass of legend. A grandson of Astyages, king of Media, C. in 550 BC captured Astyages and gained possession of his cap., the anct Ecbatana. Three years later he was face to face with a great

coalition of Egypt, Lydia, Babylon, and the little Gk state, Sparta. But although the famous King Croesus of Lydia had forestalled him by invading Cappadocia, C. early inflicted a crushing defeat on Croesus, captured his cap., Sardis, made Lydia a prov. of his Persian Empire, and, according to Herodotus, was only prevented from burning the Lydian king alive by his admiration of his philosophy. C.'s next step was the subjugation of the Carians, Lycians, and Ionians of Asia Minor, who nevertheless offered a stubborn and gallant resistance. C. then turned to the E. and reduced Drangiana, Arachosia, Margiana, and Bactria; the Jaxartes, along which he built fortified tns, becoming the N.E. limit of his state. In 538 bc the great Babylonian empire crumbled to pieces before the Persian conqueror. King Nabonidus of Babylon had been wont to pass year after year in idleness at his cap., whilst his son led the army in Akkad (N. Babylonia). It was in Akkad alone that C. met any serious opposition, for Babylon fell without resistance. Nabonidus *d.* almost immediately after this, and C. took the title 'king of Babylon, king of the land.' With Babylon fell also the Babylonian provs. in Syria, so that the Jews were now under C.'s sway. In pursuance of his policy of religious conciliation he allowed the latter to return to Palestine and to rebuild their temple at Jerusalem, and for this generous act of deliverance from captivity he is referred to in the O.T. as 'the Shepherd and the Anointed of Jehovah.' Pressure from nomads on the E. frontier forced C. to resume operations against them. After putting his son, Cambyeses, in charge of preparations for an expedition against Egypt, he set out for the E. and was shortly afterwards killed in battle. The empire founded by C. extended from the confines of Egypt to the banks of the Indus and Jaxartes, from the Persian Gulf to the S. of the Caucasus and Caspian on the N. C. was a splendid warrior and no mean statesman: in his humanity he far outstripped his contemporaries, for he never sacked a city, and spared alike captives, kings, and people. The Greeks honoured his memory. Xenophon chose him as the hero of a treatise, and to the Persians he was always the father of the people. See L. Vivien de Saint Martin, *Mémoires sur l'éclipse de Thalès et sur l'époque de la prise de Sardes par Cyrus*, 1836, and P. Kieper, *Die neu entdeckten Inschriften über Cyrus*, 1882.

Cyrus the Younger (424-401 bc), second son of Parysatis and Darius, king of Persia. At sixteen he became satrap of Asia Minor. He attempted to assassinate his brother Artaxerxes II at the latter's coronation, but was pardoned on the intercession of his mother, Parysatis, and allowed to return to his satrapy in Asia Minor. Shortly afterwards he set out at the head of a large army, including 10,000 Greeks, to make another bid for the throne. He joined battle with his brother at Cunaxa, near Babylon, but was slain in the moment of victory. Artaxerxes allowed the 10,000 Greeks to return to

Greece via Armenia. Xenophon in his *Anabasis* speaks highly of C., of his prudence, generalship, and liberality, as well as of his enthusiasm for Gk philosophy.

Cysoing, Fr. tn in the dept of Nord, 9 m. from Lille. It has a 9th cent. abbey church, and the ruins of a Merovingian castle. There are textile manufs. and brewing. Pop. 3,200.

Cyst (Gk *kustis*, bladder), term used in various ways for bladderlike formations. In zoology it is applied to the protective covering formed by lower animals at such times as a period of drought or immediately before passing into the resting stage. The C. in which a young tapeworm usually becomes enveloped when in process of becoming a cystic or bladder-worm is formed from the connective tissue of the animal in which it is residing. In medicine, the term cyst is applied to any tumour (q.v.) containing fluid.

Cystids, an extinct class of stemless pelmatozoan echinoderms with a globular skeleton made up of numerous calcareous plates lacking symmetry. The plates are perforated by tiny pores, and the food grooves lie on the surface of the calyx. They lived from Ordovician to Permian times.

Cystopteris, genus of Alpine and Arctic ferns in the family Polypodiaceae. *C. fragilis*, the brittle or bladder fern, is common on rocks and walls in limestone dists. of Great Britain; *C. montana* is found on hills of Scotland. *C. bulbifera* has buds on the petioles which break off and give rise to new plants.

Cythera, anc. name of the is. of Cerigo (q.v.).

Cytinaceae, a family of dicotyledonous plants, estab. by Bentham and Hooker; it comprises the Rafflesiaceae together with the Hydnoraceae. All the species are leafless parasites without chlorophyll, and the flowers are either solitary or borne in a small, compact inflorescence. *Cytinus hypocistis* is a parasite found growing on the roots of certain kinds of cistus in S. France, and in Fr. pharmacy the condensed juice of the fruit is used as a styptic.

Cytisus, genus of hardy papilionaceous shrubs, natives almost exclusively of Europe and the temperate parts of Asia, bearing ternate leaves and almost always yellow flowers. *C. purpureus* is an exception to the yellow-flowered species, and has lilac-coloured flowers. *C.* (synonym *Sarothamnus*) *scoparius* is the broom-plant so well known and loved on our heaths for the brightness of its golden blossoms; the leaves of the plant are greatly reduced, and the fruit has an explosive mechanism. *C. battandieri*, a vigorous N. African silvery shrub, *C. demissus*, a prostrate dwarf, and the hybrids *C. × beaultii*, *C. × Porlock*, *C. × praecox*, the Warminster Broom, and *C. × versicolor*, are good garden plants. *C. canariensis*, Canary Is., is the 'Genista' of florists. The C. of Virgil was the *Medicago arborea* of botanists.

Cytology, branch of biology which deals with the structure and individual behaviour of cells (q.v.), the minute units

which make up the bodies of living organisms. The special relationship of cell structure to heredity is *cyto-genetics*. C. involves the most advanced techniques in microscopy (q.v.), in cutting fine sections of living or carefully preserved material (see *MICROTOME*), and their treatment with dyes, specially chosen because of their affinity for specific substances which typify cell components. In *cyto-chemistry*, the chemical nature of living material is investigated, thus bringing biology into contact with chemistry and bio-chemistry. For some account of the general findings of C. see *CELL*; see also *BIOLOGY*; *HISTOLOGY*. See L. Doncaster, *Cytology*, 1920; E. B. Wilson, *The Cell in Development and Heredity*, 1925; C. D. Darlington, *Recent Advances in Cytology*, 1932; L. W. Sharp, *Introduction to Cytology*, 1934; and R. A. R. Gresson, *Essentials of General Cytology*, 1948.

Cyturus, or **Cytorum**, tn on the coast of Paphlagonia. A commercial settlement of Sinope, it stood on a mt. of the same name, celebrated for its box-trees.

Cyzicenus, see **ANTIOCHUS**.

Cyzicus, anct name of a peninsula, about 9 m. in length, jutting out from the S. coast of the sea of Marmora, 70 m. SW. of Constantinople. Once an is., it was famous in anct times for the splendid city of C., described by Strabo, which was finally destroyed by the Arabs in 675. Originally C. was colonised from Miletus, in 756 BC. As late as 1444 there were still standing thirty-one columns of the magnificent temple built by Hadrian and M. Aurelius. The Turks call its mts (2500 ft.) Kappu-Dagh. Earthquakes have repeatedly devastated C., notably in the reign of Justinian, when marbles from the temple were used in the building of S. Sophia at Constantinople.

Czar, see **TSAR**.

Czarniecki, Stephen (1599-1665), Polish general. In 1654 Poland was invaded, and C. distinguished himself by strenuously defending Cracow, which he was compelled eventually to surrender to Gustavus Adolphus. He was victorious, however, in successive battles against the Russians and Swedes, notably at Kozeniec, and finally gained a decisive victory at Polonka, 1660. He was rewarded for these services, being placed in a position of high honour by the king, but d. very shortly afterwards while on a campaign against Russia. C. is sometimes known as the Polish du Guesclin.

Czartoryski, Adam Georg, Prince (1770-1861), Polish statesman and revolutionary, b. at Warsaw; spent part of his boyhood in England and studied at the univ. of Edinburgh. In 1793 he returned to Poland and enlisted under Kosciusko. Subsequently C. was sent to Russia as a hostage, where he gained the favour of the Grand Dukes Alexander and Paul, who later made him ambas. to Sardinia. In 1801, on the accession of Alexander, he became assistant to the minister of foreign affairs, and in this capacity in 1805 signed the treaty of alliance with Great Britain. In 1830, at the outbreak of

the Polish revolution, he joined the Poles and devoted himself to their cause. He was appointed president of the provisional gov. In Jan. 1831 the Diet, having declared the Polish throne vacant, made C. head of the national gov. He was excluded from the amnesty which was proclaimed on the Russian victory, and escaped to Paris, where he d.

Czechoslovak Architecture, see **GERMAN ARCHITECTURE**.

Czechoslovakia (Czech. *Československá Republika*), rep. of central Europe, bounded N. by Germany and Poland, E. by Russia, S. by Hungary and Austria, and W. by Germany. The Czechoslovak Rep., as recognised by the treaty of St Germain-en-Laye (q.v.) of 1919, consisted of the lands of Bohemia, Moravia, Slovakia, and Austrian Silesia (qq.v.); to these was added Subcarpathian Ruthenia (see **RUTHENIA**). The ters. of the state disintegrated during the period 1938-44 (see *History*, below), but the Czechoslovak state was again estab. after the Second World War. Subcarpathian Ruthenia, however, was ceded to the Soviet Union by the treaty of Moscow of 29 July 1945. The present area of C. is 49,381 sq. m.

Geography. The valley of the R. Morava divides the country into 2 main sections: in the W. are Bohemia and W. Moravia, and in the E. are E. Moravia and Slovakia. In the W. section, the basin of the Upper Elbe and the Vitava (qq.v.) slopes N. to the Erzgebirge and the Riesengebirge (qq.v.): in the SW. of this part of the country is the Forest of Bohemia (q.v.), and in the E. is the Moravian plateau. The E. section of the country contains the W. range of the Carpathians (q.v.), and slopes SW. from the High Tatras to the plain of the Danube (q.v.).

The climate of the country is, in general, of the continental type, with hot, dry summers and cold winters. There is much forest land, chiefly of mixed and coniferous forests, and in the low-lying dists. there are steppes. Wild life is plentiful, and the bear and wild boar are still found.

Constitution. The constitution was promulgated on 9 June 1948. The Czechoslovak state is declared to be a people's democratic republic, and is a unitary state of 2 Slav nations, the Czechs and the Slovaks, which have equal rights. There is a national assembly of 1 chamber (consisting of 300 members) in which is vested supreme legislative authority. Executive power resides in the gov., which is appointed and recalled by the president of the rep. In Slovakia there is a separate legislature, the Slovak National Council (consisting of 100 members): executive power is vested in the board of commissioners, which is appointed and recalled by the gov. of the rep.

Local Administration and Justice. By a decree of Dec. 1948 the old provs. were abolished, and were replaced by 19 *krajs*, or regions. They are: Prague, České Budějovice, Plzeň, Karlovy Vary,

Ústí nad Labem, Liberec, Hradec Králové, Pardubice, Jihlava, Brno, Olomouc, Gottwaldov, Ostrava, Bratislava, Nitra, Banská Bystrica, Žilina, Košice, Prešov (q.v.).

A new code of criminal law came into force in Aug. 1950; it is similar to the Russian code. Serious crimes against the state are dealt with by the state courts; lesser crimes, whether against the state or against individuals, are dealt with by committees, of which there is one for each community of more than 500 inhab.

Population, Religion, Education, Chief Towns. The pop. in 1955 was 13,157,000, of which some 70 per cent was Rom. Catholic. It is estimated that there are over 1,000,000 Protestants, and there are about 950,000 members of the Czechoslovak Church and 50,000 Jews. The administration of all churches is under state control, and the salaries of practising clergymen are paid by the state. The education act of April 1948 provides for a uniform state system of education. There are about 12,400 elementary and secondary schools, and there are over 100 institutions of higher education. Univs. are situated at Prague, Brno, Olomouc, and Bratislava. The prin. tns are Prague, Brno, Ostrava, Bratislava, Plzeň, Olomouc, Košice, Ústí nad Labem, Liberec, and Hradec Králové.

Agriculture. Agriculture is highly developed. Over 40 per cent of the total land area is arable land, and over 15 per cent is grass and pasture. By the end of 1955, 42 per cent of all farm land had been collectivised, and there were over 6600 collective farms. The chief crops are wheat, rye, barley, oats, maize, potatoes, and sugar beet. Hops, tobacco, and fruit are also valuable products, and there are rich forests. Cattle, pigs, sheep, goats, horses, and poultry are raised.

Industry and Commerce. C. is essentially an industrial country with extensive mineral deposits: soft and hard coal, iron, graphite, copper, lead, silver, garnets, and uranium, as well as other minerals, are found. The nationalisation of industry is decreed in the constitution. There are important manufs. of textiles, chemicals, porcelain, cement, steel products, glass, leather, paper, and beer (Plzeň). Much hydro-electric power is generated. There is a state monopoly of foreign trade. The prin. countries from which C. imports are the Soviet Union, Great Britain, Yugoslavia, the Netherlands, Poland, and Sweden; and exports go mainly to the Soviet Union, Poland, Yugoslavia, the Netherlands, Great Britain, and Germany.

Communications. There are excellent roads and railways, and riv. communications are well developed. Air transport is operated by the Czechoslovakian airline, C.S.A. The prin. airports are at Prague, Brno, Bratislava, Olomouc, and Košice.

Defence. There are 3 army regions, with H.Q. at Prague, Brno, and Bratislava. Military training is on Russian lines. Service lasts for 2 years, after which the soldier remains on the reserve until the age of 50. The strength of the army in 1956 was estimated as

175,000 men. Together with air and security forces, the total was estimated as about 300,000 men.

Currency. The unit of currency is the *koruna* (Kčs), or crown, of 100 *haler*.

History (1914-39). The early history of C. is that of Bohemia (q.v., see also CZECHOS.), and the memory of that former political unity, the kingdom of Bohemia, was the urge to such men as Masaryk, Beneš, Kramář, and Štefánik to found a similar political unity on the lines of a modern republic. At the outbreak of the First World War the Czechoslovaks (this joint name had been in current use since about 1880) found themselves pressed into the service of Austria, while their sympathies were with the Allies, their political ideals being opposed to a pan-Ger. domination of Central Europe. Many Czech detachments in the Austrian Army went over to the side of the Serbs, and the exploits of the Czechoslovak Army in Siberia commanded the admiration of Europe. It was Thomas Masaryk (q.v.) who began the formation of Czechoslovak legions which served voluntarily with the Allied armies, and this together with Masaryk's own writings and speeches convinced England, France, Italy, and America of the reality of the Czech claims to national independence. A Czech National Council was formed in Paris, and at the peace conference this was recognised as the responsible gov. of a belligerent nation with a right to be represented. The union of the 2 Slav races had for long been an ideal, and after the collapse of the Hapsburg monarchy it became an accomplished fact. An all-constituent assembly, held in Prague in Jan. 1918 was followed in April by a congress of oppressed nationalities which met in Rome. In Oct. a bloodless revolution placed the administration of Prague in the hands of the National Council, and an assembly, convened on 14 Nov. in Prague, elected Masaryk as president of the new rep., Karel Kramář (1860-1937) as premier, and Edouard Beneš (q.v.) as foreign minister. A provisional constitution was drawn up, and the National Assembly, formed after a general election on 29 Feb. 1920, passed this constitution and formally ratified President Masaryk's election for a period of 7 years. In 1927 he was re-elected. During the period 1918-38 C. made considerable social, industrial, and cultural progress. Beneš represented C. at the peace conference and pleaded successfully for the recognition of C. as a national unity. The Slovaks, the former victims of Magyar domination, had free and equal rights with the Czechs under the new constitution. The most backward of the races formerly governed by Hungary were the Ruthenians, inhabiting sub-Carpathian Ruthenia, a part of Little Russia. In 1918 they petitioned for an autonomous union with C., and this was ratified at the peace conference. A 'Little Entente' was formed and renewed in 1929 between C., Yugoslavia, and Rumania to resist possible Magyar or Bolshevik aggression and to promote

trade on the Danube. An agreement with respect to common interest was made in 1924 between France and C. The Ger. and Magyar minorities in C. enjoyed equal citizenship with the Czechoslovaks.

The German Invasion and Annexation of 1939. By 1937 the problem of the Sudeten-Ger. minorities in N. C. was causing friction and anxiety. These minorities were mainly descendants of Ger. colonists invited by the last rulers of the Premised dynasty in the Middle Ages. They numbered 3,232,000, or one-fifth of the whole pop. of C., and held 40 per cent of the country's industries. They were generally hostile to their inclusion in the new state of C. formed after the First World War by the treaty of Versailles, and their deputies consistently pursued a policy of separatism and obstruction, with the exception of the Ger. Clerical party, which joined the gov. bloc. In 1936 the Nazi-controlled Henlein became the Sudeten Gers.' political leader. Beneš, who was then president of C., admitted that the Sudeten Germans had grievances—an admission which was later to receive some support from Lord Runciman in a Brit. Gov. White Paper—but he refused to entertain the idea of giving them national autonomy within the state of C. In 1938 the outlook for C. grew ominous by reason of the Ger. absorption of Austria, which left the Czechoslovak rep. surrounded on 3 sides by Ger. ter. It was fairly obvious that the next Nazi step towards the consolidation of the Ger. race would be attempted against C. During the summer of 1938 the Nazi party in the Sudeten Ger. lands, vigorously supported by their kinsmen, pressed ever more aggressively for an increasing series of privileges, which in the end became incompatible with the sovereignty of the rep. This time there was a brief respite, during which the Czech Gov. invited a Brit. statesman to study the question at issue on the spot and endeavour to mediate. Lord Runciman, however, found himself thwarted by rising passions on both sides, the Sudeten Germans accepting one concession only to demand another, the Czechs protesting that their national existence was threatened and invoking the treaty binding France to their support. Behind the Sudeten Germans now loomed the might of Germany. Hitler had roused his followers to frenzy by a furious oration at a Nazi rally at Nuremberg. The League of Nations was powerless, for its authority was acknowledged only by one side to the dispute. It was a supreme test of the Brit. prime minister's policy of appeasement. Meanwhile Lord Runciman reported that the claim of the Sudeten Germans was substantially justified. The problem ought, therefore, to have been referred to the orthodox machinery of boundary negotiation through diplomatic channels. But Hitler claimed the right to erect by force of arms a frontier the Czechs contended to be ethnographically unjustified and one that must leave their country defenceless. It was at this stage that Chamberlain, the Brit. prime minister,

travelling by air, sought a direct interview with Hitler in his home at Berchtesgaden. Having thus induced Hitler to negotiate he consulted his own cabinet and made a further flight to Germany in order to secure the acceptance of a plan agreed upon by Great Britain and France. This plan called upon C. to make heavy sacrifices in the cause of peace and was only accepted by the Czech Gov. under severe pressure. At the eleventh hour, within 3 days of the date when he had announced his intention to invade C., Hitler accepted the negotiated settlement. Many averred that the cause of C. had been betrayed by a pusillanimous trucking to the dictators, through the Munich agreement of 30 Sept. concluded at a conference between the Brit. and Fr. premiers and Hitler and

LACE-MAKING IN CZECHOSLOVAKIA

Mussolini (*see* MUNICH PACT). President Beneš resigned and the truncated rep. of C. set about the task of adapting policy and institutions to harmonise with the desires of the Reich. In March 1939 Hitler, in flat defiance of his Munich pledges, proclaimed the annexation of the remainder of C., accompanying his proclamation with such a display of military force as made resistance impossible.

History of Czechoslovakia during the Second World War and after. Following the Ger. occupation (15 March), to which the army and people, on instructions from President Hacha's pro-Ger. gov., offered no resistance, Hitler issued a proclamation declaring Bohemia and Moravia a protectorate of the Reich, von Neurath (q.v.) being appointed protector. The Czechoslovak National Bank, together with its gold reserve of 2,500,000,000 crowns, was taken over by Ger. bank

officials; the Czech Army was disbanded and all political parties were merged in a single party led by the puppet president. Slovakia, which, under Father Tiso, had acquired autonomous gov., was allowed to retain her nominal independence and military forces; but in fact her autonomy was useless, for the Germans, later in the year, in preparation for the invasion of Poland, sent large bodies of troops into the country and declared martial law. On the secession of Slovakia, Carpatho-Ukraine, the third component of the Czechoslovak state, also declared its independence, but the existence of this new state was short-lived, Hungarian troops having marched into the ter. even before the Germans occupied Moravska-Ostrava by way of forestalling Polish action in that very important strategic position. The process of Germanising Bohemia-Moravia was carried on relentlessly by von Neurath and his coadjutor, the Sudeten Ger. Frank, assisted by the Gestapo. Hacha was left with the title of president, but wielded no power, and despite his pro-Ger. efforts the people remained bitterly hostile to the Germans. Systematic sabotage led to arrests and deportations of Czechs to concentration camps, where they often suffered death and torture. A cruel blow to the Czech spirit was struck by the closing of the Czech Univ. The economic subjection of the country was completed by the setting up of a customs and monetary union with the Reich, under which all diplomatic trade agreements were to be concluded by Germany, and the National Bank in Prague ceased all international dealings. Abroad the Czech provisional gov., with H.Q. in London, directed the efforts of some 2,000,000 Czechoslovak citizens abroad in co-operation with Great Britain and the Brit. Empire in all spheres. The Czech Army and Czech pilots both rendered useful service to the Allies from 1940, both in Great Britain and the Middle E. But Slovakia, under the puppet president Tiso, continued to co-operate with Germany, and late in the year became a junior member of the Axis (q.v.).

Following the Ger. declaration of war against Russia, the armament industries and transport facilities of C. acquired an added importance for the Germans. There now occurred, through sabotage by Czech patriots, an unusual number of serious railway accidents, explosions in armament factories, and similar incidents. Production at the Skoda works fell by two-fifths. Von Neurath was succeeded by the notorious Gestapo chief Heydrich (q.v.), who promptly initiated a reign of terror in C. Slovakia's adherence to the Axis brought her no benefits; but in Oct. 1941 Tiso visited Hitler to receive an assurance that Slovakia, on condition of putting her forces at Germany's disposal, would not be asked to yield any more ter. to Hungary. In the succeeding period a number of pro-Nazis were introduced into the re-formed Czech cabinet, with a view to speeding up the Nazification of Bohemia-Moravia. In May 1942 Heydrich announced that the

entire youth of the country was to be conscripted. Next day a bomb was thrown at his car, and he was fatally wounded. The outcome was a new reign of terror, the brutality of the Germans culminating on 10 June in the stark horror of the destruction of the vil. of Lidice (q.v.), with the shooting of all the men and the sending of all the women to concentration camps. Executions continued until the end of the year.

On 5 Aug. 1941 the Brit. Gov., in order to obviate misunderstanding, pub. a White Paper confirming the undertaking given to Dr Beneš (11 Nov. 1940) that in the post-war settlement Britain would not be bound by any arrangements made at Munich in 1938 regarding the frontiers of C. Shortly before this the Czech legation in London was raised to the rank of an embassy, and the Brit. minister to the Czech Gov. (in London) also became an ambas. Despite persecution the underground movement in the country intensified its activities, and notwithstanding the efforts of the puppet premier, Krejci, the people were as bitterly anti-German as ever. Early in 1943 the mobilisation for war work of all men up to 65 and women up to 45, proclaimed in Germany, was extended to Bohemia-Moravia, with the object of obtaining 500,000 persons for slave labour in Germany; but transport difficulties, aggravated by Allied raids, made it impossible for the Germans to move more than a portion of the 550,000 persons registered.

The corruption and unscrupulousness of the pro-Nazi gov. of Slovakia were now beginning to reap their harvest by driving ever greater numbers of Slovaks into the underground resistance movement. In May-June 1943 Beneš, president (in London) of the Czech rep., visited the U.S.A. and Canada, thereby demonstrating both to the Czech people and to the Germans and Hungarians that the Czech Gov. of London enjoyed the full confidence and support of the U.S.A., a fact which was confirmed by the raising of the Czechoslovak legation in Washington to the status of an embassy. Beneš addressed a joint session of both Houses of Congress and, in Ottawa, he addressed members of both Houses of the Canadian parliament. Later in the same year he went to Moscow to witness the signing of a treaty of friendship, collaboration, and mutual assistance between C. and Soviet Russia, the culmination of negotiations which had been in progress for many months. Czechoslovak infantry and artillery formations, which had participated in the Syrian and Libyan campaigns of 1940-2, were transferred to Great Britain, and merged with the Czechoslovak independent brigade into an armoured brigade. The first Czechoslovak independent brigade in Russia fought before Kharkov (March 1943), and won sev. decorations. A second Czechoslovak brigade was formed by Czechs, Slovaks, and sub-Carpathian Ruthenians, who had succeeded in deserting from Axis fighting formations or labour detachments.

The Czechoslovak armoured brigade in Great Britain left for the Continent in Aug. 1944, and took part in the siege of Dunkirk, while Czech fighter and bomber squadrons of the R.A.F. were among the air forces covering the landings in Normandy. There was formed in Russia a Czech air force regiment of parachutists which took part in the subsequent Slovak rising against the Axis forces. This rising was well prepared in co-operation with the gov. of Beneš during the latter's visit to Moscow. The Slovak Army was instructed to rise, and the civil authorities to restore the Czechoslovak republic on Slovak soil as soon as the Russian armies reached the Carpathian passes leading into E. Slovakia; and in preparation for the rising great quantities of munitions were stored in the mts of central Slovakia. In Bratislava there was fighting between guerrillas and parachutists on the one hand and Ger. S.S. battalions on the other. The Ger. high command thereupon told the Slovak Gov. that they were about to occupy Slovakia by their military forces 'as provided in the Ger.-Slovak treaty of March 1939.' The Slovak National Council promptly countered this announcement by calling on the country to resist and proclaiming the puppet Slovak state to be abolished and the Czechoslovak rep. restored on Slovak ter. Some regular troops and guerrillas succeeded in hampering the occupation of Slovakia by the Ger. Army, thereby leaving a flank in Germany open to Allied attack from Poland and Rumania. In the central region, where most of the fighting took place, the Ger. Army and Gestapo burnt down vils. and slaughtered the people. It is estimated in Bratislava that the loss of life during and after the rising—which was premature in view of the fact that the Russian Army was nowhere near the NE. Slovak border—was some 25,000–30,000. Hence the Czech forces withdrew from the area of Banská-Bystřica into prepared positions in the mts, where organised resistance was carried on pending the arrival of the Russians from Hungary.

During 1944 Allied aircraft launched a dozen heavy raids on C., which caused damage to the Skoda works and the great synthetic oil plants at Most, and in the Bruo-Adamov dist., where a great armament combine was attacked. After the Allies had landed in Europe unrest increased in C., whereupon Frank threatened the people that Germany might change the legal position of Bohemia-Moravia by incorporating both ters. in the Reich, and steps in this direction were gradually taken. Following the conspiracy of the Ger. generals against Hitler's life total mobilisation of man power was ordered in the 'protectorate' of Bohemia-Moravia, and by the middle of 1944 some 500,000 Czechs were working outside their own country. Under the Ger. occupation the internal indebtedness of the protectorate had increased to more than 60 billion crowns, while the note circulation reached 24 billion crowns as against 7 billion in the whole of C. before the war.

Carpathian Ukraine (sub-Carpathian Ruthenia) was the first of the provs. of C. to be freed by Soviet and Czechoslovak troops. Early in Oct., following the collapse of Rumania, Russian forces were able to press their attack against the Ger.-Hungarian armies from a S. and SE. direction and overrun all the Hungarian lines of defence. Prague was the last European cap. to be liberated. At the end of 1944 Koniev's armies entered C. from Hungary and Poland, but some months elapsed before they reached the cap. After being joined by the Czech Army Corps of Gen. Svoboda, the combined Allied forces liberated Košice and Prešov (20 Jan. 1945) and Poprad (17 Jan.) beneath the Tatras Mts. But then Ger. resistance stiffened and it was not till the middle of March that Banská-Bystřica and Zvolen, in the Lower Tatras Mts, fell to the Allies. On 4 April Bratislava, cap. of Slovakia, was occupied by Russian troops, who had fought their way along the Danube from Hungary. The capture of Hodanin in S. Moravia followed. A week later Gen. Patton's Amer. troops of the 50th Div. marched into C. at a point NW. of Asch, and simultaneously the Czech Gov., now back on Czech soil, appealed to the populace to rise against the Gers.—an appeal which met with swift response. There ensued savage fighting in NW. Slovakia and S. Moravia. On 5 May the people of the cap. rose against the Ger. occupying troops and a fierce battle lasting 4 days took place between poorly armed Czech patriots and the Germans, in which 2000 Czechs and nearly 100 Germans were killed. Amer. troops who entered Plzeň on 6 May were only 50 m. from Prague on 7 May, when they refrained from marching further in accordance with the Yalta agreement (q.v.), which delimited the zones of occupation between the Allies. This standstill on the part of the W. Allies has subsequently been much criticised. In the result it put C. behind the 'iron curtain.' On 7 May the Ger. garrison of Prague surrendered to the Czechoslovak National Council which had organised the rising, and the last remnants of Ger. resistance were wiped out by Russian troops who entered the city on 9 May, the day following the final capitulation of the Ger. forces in Germany. Ters. taken by Germans, Poles, and Hungarians were restored to Czechoslovak sovereignty between Nov. 1944 and June 1945. Sovereignty over sub-Carpathian Ruthenia was transferred to the Soviet Union by the treaty of Moscow, 29 July 1945. Beneš and his associates reached Slovakia in April, where they set up a provisional gov. of the National Front of 16 Czechs and 6 Slovaks pending the meeting of the constituent national assembly which was to consist of a single House of 300 members. The nationalisation of the means of production in industry, of agriculture and commerce, and of banking and insurance became the chief item in the gov.'s programme. Another fundamental change in the structure of the Czechoslovak rep. which took

place in 1945 was its change from a multi-national into a Slavonic national state. Ger. and Hungarian minorities were transferred variously to Germany and Hungary and later to the Amer.-occupied zone of Germany. The Czechoslovak Gov. at length agreed to retain in C. the rest of the Ger. pop., without, however, restoring the minorities statute of the peace treaties of 1919-20. The ensuing purge resulted in retribution for the chief quislings. Thus Hacha *d.* in imprisonment, while the chief collaborator with the Germans, Col. Emanuel Moravec, committed suicide. Sudeten Ger. Nazis who had helped organise the Ger. reign of terror were handed over to the Czech authorities by the Amer. Army in the occupation zone. Heiden took his own life on being arrested by the Amers. Tiso was brought to trial in Bratislava and condemned. Von Neurath was one of the accused at the Nuremberg trial, charged with responsibility for the murder of Czech students in Prague in Nov. 1939 and for war crimes committed under his authority.

The first post-war election in C. took place in 1946. As in most of the liberated countries, the election was really a trial of strength between the E. and W. concepts of democracy. Russian influence in C. was by now considerable and the comparative strength of the Right-wing parties in the election surprised many observers. In the result the Left-wing parties obtained 152 seats (Communists, 114) and the Right 148. It remained to be seen whether the Communists, commanding a minority of votes and seats, could now consider themselves strong enough to change the constitution adopted after the First World War, when W. influence, and in particular the influence of the Amer. constitution on President Masaryk, was predominant; whereas the Communists stood for the leadership as developed in Russia, for a single-chamber legislature, for making the judiciary an instrument of politics, and for subjecting the individual to strong party discipline. The issue was not left long in doubt.

In Feb. 1948 the Communists, with Soviet backing, secured control of the gov. The new ministry was again headed by Gottwald, a Communist who had been premier in the previous coalition gov.; but this time his colleagues were all either Communists or Communist sympathisers with the exception of Jan Masaryk, the foreign minister. The acceptance of this ministry, which was forced on Dr Beneš, the president of C., was accompanied by a ruthless purge of the civil service and the suppression of sev. newspapers. The papers still favourable to the previous regime of Czech Socialist, People's, and Slovak Democratic parties could not therefore publish the text of the 3-power statement by the Brit., Amer., and Fr. Govs. condemning these events as the 'establishment of a disguised dictatorship of a single party under the cloak of a Government of National Union' and, in fact, the Czech Communist Gov. banned pub. of the

statement, Gottwald declaring that his cabinet would not accept lessons on democracy from those who were responsible for Munich. Jan Masaryk (q.v.), son of C.'s first president, minister of foreign affairs, subsequently committed suicide, and Beneš, although he did not give up his office as president immediately, virtually retired from public affairs. He resigned on 7 June, being succeeded by the prime minister, Gottwald, and *d.* on 2 Aug. His surrender to the Communist demands had undoubtedly as its sole motive the preservation of the Czech people, for otherwise civil war would almost certainly have ensued.

In May 1948 Russia vetoed a U.N. move to inquire into the Communist *coup* in C. The same year a new constitution declared C. a people's democratic rep.; shortly afterwards local gov. was also reorganised, and in 1950 Czech justice was remodelled on the Soviet pattern. The Catholic Church was subject to continual gov. attacks, and the archbishop of Prague prevented from carrying out his episcopal duties, and kept under circumstances amounting to arrest. The new regime met initially with much hostility and a good deal of active opposition, some of it inspired by Slovak separatism. 1950-1 was a period of Communist party purges in C., and in Nov. 1952 Slansky, former secretary-general of the Czech Communist party, and Clementis, a former Communist foreign minister, were among those tried and executed on charges of treason.

Gottwald, who had been president of C. since June 1948, *d.* suddenly in Mar. 1953. He was succeeded by Antonín Zápotocký (*b.* 1884), a veteran Communist. During the early summer of 1953 the gov. admitted that there was industrial unrest in C. (probably touched off by the hardships caused by a currency reform in May 1953), and strict legislation was enacted to combat absenteeism in the factories. This was repealed shortly afterwards, and Communist pressure eased a little in C., as in the other Communist countries at this time (Stalin had *d.* in Feb. 1953).

The unrest in Poland and Hungary in 1956 did not seem to have any sizable counterpart in C., where the Zápotocký regime was in 1957 apparently firmly in control, and governing on orthodox Communist lines. Some W. observers have, however, detected some liberalisation, for example in the cultural field, since the beginning of 1957.

Language and Literature. Two closely related languages are spoken in C., Czech in Bohemia and Moravia and Slovak in Slovakia. (Hungarian and Ukrainian are also spoken in some dists. of Slovakia.) Originally there was only 1 language—Czech, divided into sev. dialects. In the 14th cent. a W. Czech dialect was chosen for the literary language, and in the course of many centuries of political separation (Slovakia was part of Hungary until 1918) a demand grew up for a separate Slovak literary language. This eventually came into being more or less in its present form in the middle of the 19th cent.

Czech and Slovak belong to the W. group of Slavonic languages, whose gen. characteristics they share. The noun has 7 cases (the vocative is in everyday use), and the verb has the typically Slavonic 'aspects' and a number of participles. Czech and Slovak use the Lat. alphabet, varied by diacritical marks. Among their distinguishing features is a system of long and short vowels independent of stress, which always falls on the first syllable (e.g. the name of the composer Dvořák, which is stressed on the short 'o' but has a long vowel, unstressed, in the 2nd syllable). Both l and r can be vowels as well as consonants, and Czech only has the distinctive letter ř, pronounced approximately 'rsh.' Owing mainly to certain characteristic vowel changes, spoken Czech is the most diffi-

written in Czech instead of in Lat. In the reign of his son, the emperor Václav (Wenceslaus). To this period belong the *Book of the Old Lord of Rosenberg*, one of the very early specimens of Bohemian prose, and the *Exposition of the Law*, by Andrew of Duba. Smil Flaška of Pardubice wrote clever satires. The pre-eminent author of the 14th cent. is Thomas of Štítně (1333-1400), who wrote in excellent prose upon religious and moral questions. Among other authors may be mentioned Vavřinec z Brezowa, who wrote a hist. of the Rom. emperors and trans. *Mandeville's Travels*. By the end of this period also the complete trans. of the Bible into Czech had been made. The prevalence of religious disputes caused the Bible to be more widely read and better understood. Hus did much to settle

BOHEMIA: MARIÁNSKÉ LÁZNĚ (MARIENBAD)

cult language for other Slavs to understand, whereas Slovak, in which these changes do not occur, is much easier. Both languages are said to be very well suited to singing, thanks to the purity of their vowels.

Czech literature may be divided into 3 main periods: the 1st extends from the beginning up to the time of Hus, that is to 1409; the 2nd period extends from the time of Hus to about 1774; and from then till the present time forms the 3rd period. The *Chronicle*, in verse, which is generally called after Dalimil, belongs to the 14th cent. The Czechs possess some remains of a collection of national songs, which probably date from 1290. The univ. of Prague was founded in 1348 by Charles IV, who was strongly in favour of the cultivation of the Czech language, and commanded it to be learnt by the sons of the Ger. electors. All decrees were

Bohemian orthography, and his voluminous writings had great influence. Many of his works were in Lat., but a number in Czech. The church service was now read in Czech, the Bible was re-trans., and a great number of religious and controversial works were written. One of the most influential figures of the time is Peter Chelčický, who d. in 1460. He has been styled the Czech Tolstoy, and his writings had much influence in the formation of the Czech Brethren. His chief work is *The Net of Faith*. The first regular printing press was set up at Prague in the year 1487, and the years 1500-1620 may be said to constitute the golden age of Bohemian literature. In Bohemia at this time the cultivation of learning was open to the whole people; all branches of science received attention, and were brought to a very high degree of knowledge for the time. The writers

of the period are too numerous to receive detailed mention, but the names of Václav Hájek z Veleslavín, 1546-99; Liborčan, d. 1553; Bartoš, d. 1539; Sixt of Ottersdorf, 1500-83; Václav, and Vratislav may be mentioned. But in 1620 the battle of the White Mt rendered fruitless the Czechs' efforts to preserve their language. The Czech nation submitted to the conqueror; scarcely any literature was produced in the country, and the decline was such that by the 18th cent. Czech as a written language might be said to be almost extinct. John Amos Comenius, or Komenský, wrote over 50 works, dealing mostly with educational subjects, including the first illustrated book for children. But they were written from exile, Comenius dying in Holland at the age of 78, in the year 1670. Like Comenius, Wenceslas Hollar also escaped to England after the Thirty Years War. His etchings show London before the Great Fire. At the counter-reformation (q.v.) the Hussite literature was exterminated. Very much later, however, in the third period of Czech literature, a revival took place. At that time a deputation of secret Czech Protestants induced the emperor Joseph II to grant religious toleration. This made possible a revival of interest in Czech history and language, a prerequisite of the later literary revival.

The first generation of awakeners (*buditelé* as Czech historians call them) were mainly scholars, not having any special political aim. The most important of these was Josef Dobrovský (1757-1829), founder of the study of Slavonic philology. The Czech language was their special interest, for before any Czech literary revival was possible it was necessary to revive and purify the language, which gradually became debased after the defeat of 1620. A little later Jungmann (1773-1847), also a philologist, and his circle had more frankly political and patriotic aims. Jungmann's most important works were a monumental Czech-Ger. dictionary and his trans. of foreign classics. Typical of the Romantic patriotism of these times was the 'finding' of 2 early Czech manuscripts, later proved to be forged, but about which controversy raged for many years. To this period belong also Jan Kollár, author of *Slovky dcera*, 1824 onwards, a cycle of sonnets on Slavonic solidarity; the historian Palacký; and the ethnographer Safárik. F. L. Čelakovský (q.v.) stands on the borderline between the early Romanticism and the more mature Romanticism of the 30's and 40's. In this latter period the most important figures are K. J. Erben, poet and collector of folklore, and K. H. Mácha, author of *Máj*, the greatest romantic poem in the Czech language, showing Byronic influences (Eng. trans. *May*, pub. 1949). The last important writers who can be called romantic, though they both have as well as a subjective outlook some social and political consciousness, are Božena Němcová (q.v.), writer of country tales and collector of folklore, and J. K. Tyl, whose histori-

cal dramas evoke little of the spirit of the times with which they are concerned, but rather act as a vehicle for the author's patriotic and social ideals. The death-blow to Romanticism was finally dealt by Karel Havlíček (q.v.), who scathingly criticised the sentimental outlook of Tyl and Němcová. The 1860's and 70's are dominated by the 2 contrasting figures of Hálek and Neruda (q.v.). Hálek wrote comfortable, not very profound, middle-class poetry about love and nature, while Neruda's poetry is ironical and analytic. Also to the 60's and 70's belong the countryman poet Heyduček and the best novels of Karolína Světlá, a regional novelist whose plots are mostly concerned with love and marriage and depict the renunciation of selfish passions for some general or particular good. In the rest of the 19th cent. the most important poets are Čech (q.v.), Vrchlický (whose prolific output, including many trans., made some critics call him the Czech Victor Hugo), E. Krásnohorská, and Julius Seyer, reviver of medieval legends. Alois Jirásek (1851-1930) began to write his popular historical novels, and the end of the century saw the beginning of the modern social novel (Rais, Baar, and others) and the critical realism of Masaryk (q.v.), later the first president of C. As in the rest of Europe there was also a group of symbolist poets, who flourished approximately 1890-1914. These include J. Kvapil, Karel, Toman, Otakar Theer, A. Sova, and O. Bězina (q.v., under his real name of Jebavý). Political independence after 1918 gave a great impetus to all forms of literature, which was greater in quantity than ever before. The best-known modern prose-writer is Karel Čapek (q.v.). Many novelists, both of the inter-war years and since 1945, have had left-wing revolutionary views, and their novels deal with social and political problems. The most prominent modern novelists are Ivan Olbracht, Jan Drda, Vladislav Vančura, Anna Maria Tlischová, Marie Majerová, Marie Pujmannová, and Jarmila Glazarová. Rather apart from these stands the humorist Jaroslav Hašek, who is internationally known for his *Adventures of the Good Soldier Schweik*. The best-known poets since 1918 are Jiří Wolker (1900-24), Vítězslav Nezval, S. K. Neumann, J. Seifert, J. Hora, F. Hulaš, and F. Šrámek.

Slovak literature is virtually a creation of the 19th cent., following on the formation of a Slovak literary language. The most important figure in this struggle for a new language was L'udovít Stúr (1815-1856). Stúr gathered round him a circle of poets who fl. about the 1860's. The most important were Ján Chalúpk, Ján Botto, Josef Sladkovič, and Janko Kráľ. After the 1860's Slovak literature suffered a setback, largely owing to political pressure on the Slovaks by the Hungarians to become magyarised, but later on there was a revival, in which the most prominent figures were S. Hurban-Vajanský (1847-1916) and Pavel Országh (1849-1921), who wrote under the pseudonym of

Hviezdoslav and is the greatest Slovak poet. Since 1918 literary output has been much greater than ever before. Among the modern poets may be mentioned Ivan Krasko, Ján Jesenský, and Lačo Novomeský. Prose-writers include I. Nádaši-Jóga, author of the historical novel *Adam Šangala*, Peter Jilemnický, and Janko Alexy.

Architecture. See GERMAN ARCHITECTURE.

Art. Czech art was estab. by the 14th cent., with the illumination of MSS. It was encouraged from the time of Rudolf II but interrupted by the Thirty Years War. Noted painters prior to the 19th-cent. revival are Brandl, Reiner, and Škréta. Joseph Mánes (1820-70) was C.'s first famous creative artist, in landscape portraiture and natural studies. An artist well known for his historical paintings is V. Brožík (1849-1913), who exhibited in Paris. Uprka, the Slovak painter, depicted typical Slovak scenes and life in a

Smetana was the creator of national Czech composition, simple folk tunes being a source of most of his inspiration. He is the composer of many tragic and comic operas, while his cycle of six symphonic poems, *My Country*, are an apotheosis of the historical past of the Czechs. The success of Dvořák, also a creator of modern Czech music, was unusual for a Czech composer. His operas are not so well known as his other compositions, particularly his symphonies and much of his chamber music. Besides these two great classical composers, C. has numerous others, some quite well known outside their own country; Suk, son-in-law of Dvořák, composer of orchestral works and chamber music; Novák, who specialised in symphonic poems such as *Slovak Suite* and *In the Tatras*; Janáček (q.v.) a great modern opera composer; Fibich, creator of modern Czech melodrama; Foerster, writer of symphonies and

PRAGUE, FROM THE VLTAVA

colourful impressionist style. An important modern Czech artist is Max Švabinský, a follower of the Mánes school, which did much to foster art in C. He is also a pioneer in Czech graphic art. Modernism in art has been represented by O. Kubín (Coubine) (b. 1883), Josef Čapek, brother of the writer (b. 1887; d. in Belsen camp, 1945), Bohumil Kubišta (1884-1918), František Muzika (b. 1900), and Antonín Procházka (1882-1945). In sculpture the most noted figure is J. V. Myslbek (1848-1922), whose subjects are mostly founded on Czech hist. Other sculptors are Jan Štursa (1880-1925), whose 'Wounded Man' and a figure of T. G. Masaryk are among his best-known works; Otto Gutfreund (1889-1927); and Emil Filla (b. 1882).

The art of which the nation may be most proud is music. On the foundation of a rich folk-music a national opera was created by Bedřich Smetana (q.v.) (1824-1884), while Antonín Dvořák (1841-1904) remains a composer of the front rank.

operas; Martinů, a living composer who shows western influences; and Weinberger, composer of the opera *Švanda the Bagpiper*.

See F. Chudoba, *A Short Survey of Czech Literature*, 1924; A. Matejcek and Z. Wirth, *Modern and Contemporary Czech Art*, 1924; K. Čapek, *The Origins of the Czechoslovak State*, 1926; T. G. Masaryk, *The Making of a State*, 1927; P. Selver, *Anthology of Czechoslovak Literature*, 1929; R. W. Seton-Watson, *A History of the Czechs and Slovaks*, 1943; S. H. Thomson, *Czechoslovakia in European History*, 1944; H. Ripka, *Le Coup de Prague: une révolution préfabriquée*, 1949; Sir R. B. Lockhart, *Jan Masaryk*, 1951; G. Bolton, *Czech Tragedy*, 1955.

Czechs, Slavic (see SLAVS) people mostly inhabiting the W. regions of Czechoslovakia, where they number some 8,000,000. Once they dwelt along the banks of the upper Vistula (q.v.), but about AD 475 they settled in the country now called Bohemia (q.v.), and

as early as the 9th cent. their name was applied to the entire Slav pop. of Bohemia. In the 19th cent., after cents. of Germanic influence in Bohemia, there were determined efforts to preserve the Czech language and culture. This movement was fostered by the work of Josef Dobrowsky (q.v.), and by the formation of a Czech univ. in Prague in 1882 (*see* MASARYK, THOMAS). C. are found also in Russia and the U.S.A., where there are newspapers in their language. *See also* BOHEMIA; CZECHOSLOVAKIA; and INDO-EUROPEAN LANGUAGES.

Czegled, *see* CEGLED.

Czermak, Jaroslav (1831-78), Bohemian artist, *b.* Prague. He studied art in Antwerp, Brussels, and Paris, and his first pictures dealt with incidents in the hist. of Bohemia, his own country; among these pictures being 'Rudolph II's Begging Court-Poets.' Travel led him to paint such subjects as 'A Montenegrin Woman and Child' and 'The Turks seizing a Herzegovinian Woman.'

Czermak, Johann Nepomuk (1828-73), Czech physiologist, *b.* Prague. Appointed prof. of physiology in Budapest (1858), in Jena (1865), and in Leipzig (1869). At his own expense he built a laboratory and auditorium adapted for demonstrations in experimental physiology. He made improvements in the laryngoscope, and did pioneer work in rhinoscopy.

Czernowitz, *see* CHERNOVITSY.

Czerny, Karl (1791-1857). Austrian pianist and composer, *b.* Vienna, son of a pianoforte teacher, who trained him for that instrument to such good purpose that he began his own career as a teacher at fourteen. He came under the notice of Beethoven, whose pupil he became, and his greatest claim to distinction as a pianist is that he was chosen to be the

first to play Beethoven's E flat major concerto in public. He soon became the most popular teacher of the piano in Vienna, where there were numerous competitors. His pupils included Liszt and many others who became famous. He wrote hundreds of popular pianoforte studies, and his works, which included most kinds of composition, numbered 1000 at the time of his death; but few of them possess high merit, though he was skilful in devising variations for the piano of the display type.

Czerny Djordje (Black George), original name **George Petrović** (1762-1817), also known as **Karageorge**, founder of the Karageorgević dynasty, which later ruled Yugoslavia. A Serbian of humble birth, he led a Serb revolt against the Turks in 1804 and eventually, in 1806, succeeded in making himself master of Belgrade, having been secretly helped by the Russians. He was (1808) recognised as hereditary chief of the Serbs. But in 1813 the Russians were no longer able to aid him, owing to their being involved in war themselves, and he was defeated by the Turks and forced to flee to Austria. His rival during his absence was Miloš Obrenović (q.v.), who, on C.'s return to Serbia in 1817, had him murdered, Obrenović himself having in the interval assumed the leadership of the Serbians.

Częstochowa, tn of Poland, in Katowice prov., 40 m. N. of Katowice (q.v.). It stands on the Warta riv., and is a railway junction on the Warsaw-Vienna route. From 1815 until 1919 it was in Russian Poland. The tn has a famous monastery, in which is a pilgrimage shrine of 'Our Lady, Queen of Poland.' There is an important iron and steel industry, and there are textile, chemical, and other manufs. Pop. 145,000.

D

D: 1. Fourth letter of nearly all the anct and modern alphabets. It is the exact counterpart of the Semitic *dalath* (including modern Heb.) and the Arabic *dal*, as well as of the Gk *delta*. The Etruscans had no use for *d*, but the Romans—who borrowed their script from this race—created their alphabet before the Etruscans had time to reject this letter. The shape of **D** was slightly modified in the course of time. It was originally, in the Semitic alphabet, an irregular triangle (at a later stage, with a tail added to the right) and became a regular triangle in the Gk character, *delta*. In the Rom. alphabet it became rounded, *D*. The minuscule was formed by lengthening a part of it, *d* from *D*. The sound of **D** is the soft dental mute, though really not a true dental in Eng., being sounded by placing the tongue against the top of the gum. See ALPHABET.

2. In Rom. notation, signifies 500, being half of the symbol *CID*, earlier form of *M* (1000).

3. In music, is the second note of the scale of C major. The key of **D** major contains *F#* and *C#*, and its relative minor is *B*. The key of **D** minor has *Bb*, and is relative to the major key of *F*.

Dab, salt-water fluke, or *Limanda*, a fish which is closely allied to the plaice and flounder in the Pleuronectidae, or flat-fish family. The names of sneaker, lemon, or smooth dab are often given to *Solea lascaris*, a sole.

Dabchick, popular name for the lesser grebe. See GREBE.

D'Abernon, Edgar Vincent, first Viscount and Baron, of Escher and Stoke d'A. (1857-1941), diplomat, b. Sleaford, Sussex, educ. at Eton and served in Coldstream Guards for 5 years. In 1882 he was appointed president of the council of the Ottoman Public Debt and in 1884 financial adviser to the Egyptian Gov. In 1889 he became governor of the Imperial Ottoman Bank. He was elected Conservative member for Exeter, 1899; defeated 1906 and again in 1910, when he contested Colchester as a Liberal. He was created a peer in 1914. In 1920 he was chosen to be the first Brit. ambas. to the Ger. rep. His appointment arose out of his experience as a financier, which, it was thought, would be valuable in view of the economic problems confronting Germany. He instigated the conference of experts which initiated the stabilisation of the mark and helped to revise the Dawes Plan (q.v.). Another notable achievement was the Anglo-Ger. commercial treaty of 1924. He was the initiator of the Locarno Pact, for it was at his instigation that Germany suggested the conference of the powers which made that agreement possible and led to

Germany's admission to the League of Nations. In 1926 he was made a viscount. In 1929, 3 years after his retirement, he headed a highly successful Brit. commercial mission to Argentina, and other S. Amer. countries. He pub. 3 vols. of memoirs, *An Ambassador of Peace*, 1929-30.

Daboecia Polifolia, or Saint Dabeoc's Heath, bushy evergreen shrub of small size, well fitted for planting in shrubberies and rockeries. It flourishes in Ireland and the Pyrenees.

Dabrowa Górnicza, Polish industrial city, in Katowice prov., 9 m. ENE. of Katowice. Coal-mining is the prin. industry, and iron and zinc founding are carried on. In 1795 *D.* became Prussian, and in 1815 was made part of Russian Poland; in 1919 it again became part of Poland. Pop. 28,000.

Da Capo, or *D.C.*, in music, placed at the end of a movement as a direction to return to the beginning of the movement and finish where the word 'Fine' is placed. The term is often *Dal Segno* . . . i.e. repeat from a specified sign only.

Dacca, tn of E. Bengal, Pakistan, 270 m. NE. of Calcutta, and cap. of E. Pakistan. It extends for 4 m. along the N. bank of the Buribanga R. There are many important buildings: the palace of the Nawabs of *D.*, the bank, Eng. church, Baptist mission buildings, and the Rom. Catholic cathedral. A mysterious sound called the Barisal guns is said to be caused by a gun lying at the bottom of the riv. calling to its anct mate, which stands on the Buckland Bund. The Lal Bagh fort, built in 1678, is the most picturesque monument of *D.*, which from 1905 to 1912 was the cap. of the prov. of E. Bengal and Assam. Though *D.* is expanding very rapidly, it retains much of its tradition, including the manuf. of muslins and of silver filigree work. *D.* Univ. now caters for 23,000 students.

Dacca, University of (Pakistan), estab. on 1 July 1921 under a Gov. of India Act. Based on the recommendations of the Calcutta Univ. Commission's report, it followed the lines of the later Eng. univs. but with residential facilities. No distinction was made of race, sex, creed, or class, but special attention was paid to the education of Muslims and to Islamic studies. After partition in 1947, when E. Bengal became part of Pakistan, the univ. was made responsible for the recognition and affiliation of all institutions of higher learning in the prov. It retained its teaching functions, however, and to-day has faculties of arts, science, law, agriculture, medicine, and engineering. Set in a fine parkland, the univ. grounds occupy over a sq. m., of which more than 100 ac. are playing fields.

The library holds some 150,000 books, and there are up to date laboratories, 5 halls of residence, 1 of which is for women, 6 constituent and over 50 affiliated colleges. The univ. grants doctors' degrees.

Dace, Dart, or Dare, popular names of the carp-like fish *Leuciscus leuciscus* of the family Cyprinidae, allied to the chub, roach, and minnow. It is a native of Europe and is found in deep, clear water in shoals. The average weight is less than 1 lb. and the length 8 in., but the fish is much sought after by anglers.

Dach, Simon (1605-59), Ger. poet, b. Memel. He studied at Königsberg Univ., where in 1639 he was appointed prof. of poetry. His verse is characterised by warm feeling and sincerity, as in *Das Lied von der Freundschaft*. One of his poems, written in Low German, was the source of Herder's *Änchen von Tharau*.

Dachau, tn in Bavaria, Germany, a few m. NW. of Munich, on the Amper, a trib. of the Isar. Notorious in the Second World War for one of the worst Ger. concentration camps (q.v.). Weiss, the Ger. commandant of the camp, and his 39 co-defendants to the charge of committing atrocities against the inmates were found guilty at a trial in Dec. 1945 by an Amer. military gov. court and duly sentenced. Some of those killed in D. were captured Amer. airmen.

T. Fall

SMOOTH-HAIRED DACHSHUND

Dachshund, badger-dog that came into England from Germany. It is not a fighter, but is a good house-dog. In sport it finds the fox or badger, but does not come to close quarters with them, merely barking incessantly until the hunters come up. The D. has a soft silky coat, and a very long body, the length from the back of the head to the root of the stern being 2½ times the height of its shoulder. Its colour varies, but much white is not desirable. Its other points are head long and narrow, with rather small, very intelligent eyes; ears long, broad, and silky, set low and carried back and close to the head, measuring from 13 to 14 in.; jaw strong and square; chest deep and narrow, with a prominent breast bone; forelegs very short and sturdy, well crooked; hind legs smaller in bone; feet

strong and well padded; skin thick, loose, and supple; coat short and strong; loin well arched and muscular; body long and low but not cloddy. Its weight is about 21 lb., a bitch about 15 lb. There are also long-haired, wire-haired, and miniature varieties of the breed.

Dacia, in anc. times the name of an extensive dist. N. of the Danube, corresponding roughly with the modern Rumania, Transylvania, and part of Hungary. Its inhab., the Daci (see also GETAE), were of Thracian origin. They began to trouble the Romans in the time of Augustus, and in the reign of Domitian, under their king, Decebalus, the Dacians forced their more civilised enemies to buy them off with an ann. payment. After a war lasting from AD 101 to 106, the Emperor Trajan (q.v.) made D. a Rom. prov., but it was abandoned by Aurelian about AD 275.

Dacier, André (1651-1722), Fr. classical scholar, b. Castres, Upper Languedoc. He was made librarian at the Louvre in 1694; became a member of the Academy of Inscriptions (1695), and of the Fr. Academy, being appointed in 1713 perpetual secretary to the latter. His works include eds. of Festus and Verrius Flaccus, and trans. of Horace, Aristotle's *Poetics*, Sophocles, Epictetus, etc. His wife, Anne Lefèvre (1654-1720), also pub. eds. and trans. of many classical authors.

Dacites (from Dacia, q.v.), class of volcanic rocks found in Dacia, Greece, N. America, and elsewhere. These rocks consist largely of felspar mixed with quartz, hornblende, and augite; their structure is sometimes crystalline and sometimes vitreous.

Dacoits (Hindustani *dakait*), members of armed gangs organised for robbery and murder. In 1887 there were reported to be over 9000 professional D. in India, and in one dist. alone (Gwalior) they murdered 46 persons. After the war with Burma (1885) dacoity was prevalent in the country for sev. years.

Da Costa, Isaac, see COSTA.

Dacotah, see DAKOTA.

Dacron, see TERYLENE.

Dacrydium, genus of ornamental evergreen conifers, family Taxaceae, about 17 species native to New Zealand, Tasmania, Australia, Malaya, Philippine and Fiji Is., etc. *D. cupressinum*, the rimu tree of New Zealand, and *D. franklinii*, Huon pine, resembling a weeping cypress, are moderately hardy in Britain. *D. colensoi*, Westland pine, *D. bidwillii*, mountain pine, and *D. biforme*, Manoa, are all of New Zealand, and valued timber trees.

Dactyl (Gk *daktulos*, a finger), in Lat. and Gk prosody, a foot consisting of 1 long and 2 short syllables; in Eng. prosody, 1 accented and 2 unaccented syllables. Dactyls, in prosody, is a name applied to metres which consist of a repetition of D., or of equivalent feet.

Dactylis Glon rata, Cock's-foot Grass, a species of Gram. aeae. It is perennial and common in fields and waste places of Britain, and is also well known over continental Europe, the Mediterranean, and Asia. It has a coarse bluish herbage,

endures drought well, and forms good grass for pasture.

Dactylology, see DEAF AND DUMB.

Dactylopterus, genus of Dactylopteridae, or flying gurnards, remarkable for the immense, fan-like pectoral fins possessed by its species, and used by them when they spring into the air to escape voracious fishes. *D. volitans* occurs in the Mediterranean; *D. orientalis* in the seas of warmer climates.

Daddy-longlegs, see CRANE-FLY.

Dado, in classical architecture, the cube at the base of a pedestal. The name is also commonly applied to the lower part of the wall of a room, from floor-level to the 'dado-rail' or 'chair-rail.' The D. may be panelled, or merely painted; and should be 2 ft to 3 ft high.

Daedalus, mythical Greek associated with the origins of sculpture and architecture. He was said to be a descendant of Erechtheus, King of Athens, but the legends seem to be Cretan in origin. He made a wooden cow for Pasiphaë (q.v.), the lustful wife of Minos, King of Crete, and the labyrinth for the Minotaur. Incurring the displeasure of Minos, D. made wings for himself and his son Icarus to fly with. Icarus fell into the Icarian Sea, but D. reached Italy, and proceeded to Sicily. D. was the reputed inventor of sails for ships. Many buildings and statues were attributed to him. He represents the time when wood was the chief material in use. See L. Cottrell, *The Bull of Minos*, 1955.

Daet, tn in the S. of Luzon Is., Philippines, a port of call at the mouth of the D. R. Pop. 19,880.

Daffodil, see NARCISSUS.

Dafydd ab Gwilym (c. 1320-c. 1380), Welsh nature poet, b. Bro Gynin, Cardiganshire. He developed and perfected the new *cynydd* metre. George Borrow, who trans. some of his poetry, wrote in *Wild Wales* that he had always considered him as 'the greatest poetical genius that has appeared in Europe since the revival of literature.'

Dagami, tn on the Hinahaan R., S. of Tacloban, Leyte Is., Philippines. It is an important centre for traffic. Pop. 20,361.

Dagden, see HUCMAA.

Dagenham, municipal bor. in Essex, England, including the areas known as D. Village, Becontree, Chadwell Heath, and a part of Hainault. The anc. church contains the fine tomb of Sir T. Urswyk, M.P. for London, 1461. A high tide flooded 1000 ac. of land here in Dec. 1707, but most of the area has been reclaimed and developed. The residential dist. comprises mainly houses constructed by the London Co. Council, with an increasing number of corporation houses (including a 'district heated' estate). Industries include motor car manuf. and engineering on a large scale, and pharmaceutical and chemical products. Pop. 114,588 (9000 in 1921).

Dagger, short blade of very anc. origin used for stabbing. In medieval times it was called the *misericorde*, and served to penetrate the armour-joints of an overthrown adversary. It was worn attached

to the sword-belt on the right side; the hilt and scabbard were often richly decorated. Other varieties were the baselard, poniard, dirk, and stiletto. Famous oriental D.s are the Malay *kreese* (*kris*) and the Indian *khullar*.

Daghestan ('Mountainous Country'), autonomous rep. in the N. Caucasus, adjacent to the Caspian Sea. It is situated largely on the NE. slopes of the main Caucasian range, and has oil and natural gas deposits. Area 14,700 sq. m.; pop. under 1,000,000, mostly Caucasian-speaking Avars, Dargins, Lezgians, and many smaller tribes, also Russians, Kumyks (q.v.), Azerbaijanis. There are metalworking, and food industries, and live-stock breeding, agriculture, and horticulture are practised, as well as old crafts (carpets). The cap. is Makhachkala. The area was gradually annexed by Russia 1722-1859 (see SHAMIL). D. Autonomous Rep. was formed in 1920. See W. Kolarz, *Russia and Her Colonies*, 1952.

Dagnan-Bouveret, Pascal Adolphe Jean (1852-1929), Fr. painter, b. Paris, one of the representatives of the *plein-air* school. Early in his career he was 'classical' in his subjects, but presently turned to scenes of everyday life, and his 'Wedding Party', 'Le Pain bénit,' and, above all, his 'Breton Pardon' made him famous.

Dagö, see HNUMAA.

Dago (corruption of *Diego*), nickname given on Eng. and Amer. vessels to Sp., Portuguese, and It. sailors; also in the U.S.A. to It. immigrants.

Dagoba, see TOPE.

Dagobert I. (d. 639), Merovingian king of the Franks from 629, son of Cloaire II. He reunited the Frankish Empire, but it was divided again at his death. He was also a patron of the arts, and a legal reformer. D. made Paris his cap.

Dagon, Philistine deity probably taken over from the Canaanites. He was apparently an agric. deity, his name being derived from Heb. *dagan*, corn. Jewish tradition represents him as half man, half fish, but no evidence supports this; it is probably a legend suggested by the similar Heb. word *dagh*, fish. No more is known of D., except that his temple in Gaza was destroyed by Jonathan Maccabaeus.

Daguerre, Louis Jacques Mandé (1789-1851), Fr. painter, inventor of the daguerreotype, b. Cormeilles, Seine-et-Oise, and in early life was an inland revenue officer. Afterwards he became an artist, and with Pierre Prévost executed a number of panoramic views. In 1822 he estab. a pictorial exhibition called the diorama, which was so successful that he opened another one in London. But his great ambition was to produce permanent pictures by means of sunlight, and in this endeavour he was joined by J. N. Niepce, who had already been working for years at the same problem. Niepce d. in 1833, but D. persevered until he succeeded in producing such pictures on an iodised silver plate, called after him daguerreotypes. He wrote many works on this subject, including *Historique et description*

des procédés de daguerréotypie, 1839. His success was rewarded with the decoration of the Legion of Honour, and annuities for himself and Niepce's representative. See A. Mentienne, *La Découverte de la photographie en 1839*, 1892.

Daguerreotype, see PHOTOGRAPHY.

Dagupan, municipality and port in Luzon, Philippine Is., exports sugar, corn, copra, rice, and salt. Pop. 43,838.

Dahabiyeh, Nile passenger boat, something like a decked barge with a sharp prow, of shallow draught, and carrying one or more sails. Tourist D.s are often propelled by steam.

E.N.A.

A DAHABIYEH NEAR ASWÂN

Dahl, Johann Kristen Clausen (1788-1857), Norwegian landscape painter, particularly fond of striking effects in light and colour. One of his best pictures is an 'Eruption of Vesuvius,' another 'Dresden by Moonlight.'

Dahl, Michael (1656-1743), portrait painter, b. Stockholm. He settled in London in 1688, and obtained considerable patronage. He painted a portrait of Queen Anne, and also a series of portraits at Hampton Court. He was extensively employed by the nobility, but his work is inferior to that of Kneller with whom he has been compared.

Dahl, or Dal', Vladimir Ivanovitch (1801-72), Russian ethnographer and lexicographer, of Dan. family. Under the pseudonym Kazak Lukaniskij he wrote many stories of Russian life. He studied Russian customs, folklore, and dialects and collected Russian proverbs, superstitions, etc. His main work, however, is a great dictionary of the Russian language. The complete collection of his works, in 10 vols., was pub. in St Petersburg in 1897-8.

Dahlak, or Dahalak, is. group off the coast of Eritrea, situated in the Red Sea off the bay of, and about 30 m. E. of the port of, Massowa (Massawa). The group comprises 3 larger is. with numerous rocks, and was known to the Romans for its pearl fisheries. Oil may exist here, and a concession for exploration is being negotiated (1956).

Dahlgren, John Adolphus Bernard (1809-70), Amer. admiral, b. at the Swedish consulate, Philadelphia. Serving in the U.S. Navy from 1826 to 1847, he was then transferred to the ordnance dept. and there invented the gun called by his name. When the Civil war broke out he was placed in charge of the navy yard at Washington, and in 1862 was made Chief of the Bureau of Ordnance. In 1863 he was made rear-admiral, and commanded the blockading fleet off Charleston until the end of the war.

Dahlia, genus of Compositae composed of 12 species of Mexican plants. In Britain sev. have been planted, but only *D. variabilis* has fl., and given rise to very many beautiful varieties known to our gardens. In its wild state it is a bushy, herbaceous plant, 7 or 8 ft. high, with single purple or lilac flowers of no great beauty, but in cultivation it sports endless varieties in stature, leaves, and flowers, and in the double forms both ray and disk florets are ligulate. The name of the plant was given to it in honour of the Swedish botanist Dahl.

Dahlmann, Friedrich Christoph (1785-1860), Ger. historian and politician, b. Wismar, educ. at Copenhagen and Halle. In 1837 he was banished from Hanover for upholding popular rights against the king; in 1848 he propounded a scheme for establishing a constitutional monarchy to include Prussia and all other Ger. states. His chief works were *Quellenkunde der deutschen Geschichte*, 1830; *Politik*, 1835; *Geschichte Danemarks*, 1840-3; and *hist. of the Eng. and Fr. revolutions*.

Dahme, Ger. tn in the dist. of Kottbus, on the D. riv., 35 m. WNW. of Kottbus (q.v.). It has anc. walls and an 18th cent. castle, and has textile and tobacco manufs. Pop. 6,400.

Dahn, Felix (1834-1912), Ger. historian and novelist, b. Hamburg. He studied law in Munich and Berlin, and became prof. successively at Munich, Würzburg, and Königsberg, and finally rector of Breslau Univ. in 1895. He wrote sev. important books on jurisprudence, but is more noted for his hist. and historical romances. The former deal with the very earliest records of Germany, his greatest work, *Die Könige der Germanen* (20 vols.), 1861-1908, ending with the dissolution of the Carolingian Empire. His best known romance, *Ein Kampf um Rom*, 1877, enjoyed great popularity in Germany. Besides these he pub. a good many vols. of poetry, especially ballads, founded on early Ger. legends. A collected ed. of his stories and poems was pub. (21 vols.) at Leipzig. See life by H. Meyer, 1913.

Dahomey, colony in Fr. W. Africa with an area of 43,232 sq. m. and a pop. of 1,614,000 (1955). It is bounded on the E. by the Fr. mandated ter. of Togo, on the N. by the Fr. Sudan, on the E. by the Brit. colony of Nigeria, and has about 70 m. of coast line. For 200 years a Negro kingdom, it was taken by the Fr. in 1892. The native army was famous for its detachment of 800 Amazons. D. is flat near the coast; the interior consists of undulating plains and plateaux, with

occasional stretches of forest. The principal are Porto Novo (pop. 30,400), Cotonu (the chief port and commercial centre), Whydah, all on the coast, and Abomey in higher country. The natives, mostly fetish worshippers, grow maize, manioc, yams, and coffee. Groundnuts and palm oil and kernels are the chief exports. In the N. cattle are reared. Cotton cultivation shows promise of becoming an important industry. The colony is relatively well served by 3238 m. of good roads, of which 871 m. are excellent. There is a metre gauge railway from Cotonu to Parakou, 247 m., and sev. shorter lines. The natives are pure Negro. See J. Baillard, *Peuple noir*, 1935; M. J. Herskovitz, *Dahomey: an Ancient West African Kingdom*, 1938; C. Hanin, *Occident noir*, 1947.

Dai Nippon, see JAPAN; NIPPON.

Daihan, see KOREA.

Dáil Éireann, House of Representatives of the National Parliament (Oireachtas) of Ireland, which also comprises the President and a Senate (Seanad Éireann). D. É. is provided for in the Constitution of Ireland (operating from 29 Dec. 1937), in succession to the Constitution of Saorstát Éireann (Irish Free State), which had operated from 6 Dec. 1922 and provided for a D. É. (originated in Jan. 1919). Members are elected by the votes of citizens of both sexes who have reached the age of 21. Election is by proportional representation (q.v.). The number of its members is 147; a chairman (Céann Comhairle) and a deputy chairman are elected from members. Proceedings are in Irish or Eng. Legislation dealing with finance may be initiated in D. É. only and, on being passed by D. É., is sent to Seanad Éireann for its recommendations, which may be accepted or rejected by D. É., the bill being then deemed to be passed by both houses. The gov. are customarily chosen from the majority party (or parties) in D. É. and are responsible to that house. The same D. É. cannot, by law, continue for longer than 5 years. The President of Ireland summons and dissolves D. É. on the advice of the Taoiseach (Prime Minister), who is appointed by the President on the nomination of D. É.; other members of the gov. are appointed by the President on the nomination of the Taoiseach with the previous approval of D. É. The Taoiseach, the Tánaiste (Deputy Prime Minister), and the minister for finance must be members of D. É.; other gov. members must be members of D. É. or Seanad Éireann, not more than 2 being members of Seanad Éireann.

'Daily Chronicle', former daily newspaper, which came into existence in London in 1855 as the Clerkenwell News, and was originally composed chiefly of small advertisements. In 1877 it was bought by Edward Lloyd and issued as a daily paper of Liberal views. It was purchased in 1918 by Lloyd George. In 1929 Wm Harrison, chairman of the Inveresk Paper Company, bought a controlling interest in the D. C., together with its associate papers. In 1930 it was

absorbed by the *Daily News* (see NEWS CHRONICLE).

'Daily Dispatch', former daily newspaper pub. in Manchester, founded in 1900 by the Hultons. It was amalgamated with the *News Chronicle* (q.v.) in Nov. 1955.

'Daily Express', the leading paper of the Beaverbrook group, estab. in 1900 by Charles Pearson & Company, as a 4d. paper. It was not until it passed into the control of Lord Beaverbrook (q.v.) in 1914 that it made headway against the competition of other popular dailies. It has been calculated that its present circulation of over 4 million copies a day means that the paper is read by about 16,000,000 people. The most successful of the popular papers, it has the highest rate per column inch for advertisement space. In politics the D. E. is Independent, with a strong leaning towards Imperial ideas. Lord Beaverbrook was a prime leader in the agitation for Empire Free Trade. The D. E. is produced simultaneously in London, Manchester, and Glasgow.

'Daily Graphic', see DAILY SKETCH.

'Daily Herald', launched on 15 April 1912 (with a capital of only £200), as Labour's first daily newspaper. During the First World War years it was only found possible to publish weekly. In the days of George Lansbury's editorship (1914-19) the D. H. kept up a high literary standard with one poet, Gerald Gould, as its assistant editor, and another, Osbert Sitwell, writing leaders—often in verse. But unable to support itself, it was (originally on the initiative of Ernest Bevin) constantly subsidised by the Trades Union Congress. Later, Lansbury remained manager while the editorship was given to Hamilton Fyfe, well-known war correspondent of *The Times* and *Daily Mail*, and under Fyfe the circulation rose in 4 years from 130,000 to 450,000. Eventually, in 1929, the T.U.C. sanctioned a scheme for placing the paper on equal terms with its rivals. Retaining 49 per cent of its interest, with control of the paper's political policy, the D. H. passed into the hands of Odhams Ltd. The new paper was pub. on 17 March 1930, under the direction of J. S. Elias (later Lord Southwood), the man who had converted the *People* and *John Bull* from apparent failures into great successes. Popular newspaper 'stars' like Hanneen Swaffer and H. V. Morton were secured from other organisations. H. G. Wells was asked to write on world problems and Edgar Wallace on crime. The circulation jumped to well over a million in a night, and has progressed steadily. Politically, the D. H. has considerably moderated its tone. Not only Labour leaders, but distinguished writers from all walks of life, are regular contributors. In Aug. 1957 the T.U.C. agreed to a scheme which gave Odhams a publishing licence for 25 years; in return Odhams pledged themselves to preserve the original aims of the D. H.

'Daily Mail', newspaper first pub. in London on 4 May 1896, at 4d. The D. M. was the first exponent of modern Journalism. Its founder was Lord Northcliffe (q.v.), at that time Alfred Harmsworth,

and from the beginning his policy with the *D. M.* was to give the public what it wanted, presenting the news of the day in such a manner that it could be taken in at a glance. Lord Northcliffe had acquired previously the *Evening News*, and started the *D. M.* with initial cap. of less than £15,000. Under his direction the circulation of the *D. M.* grew until it was far larger than that of any other paper of the day, and sev. amazing scoops during the Boer war consolidated its position. Until his death in 1922, Lord Northcliffe was the dominant personality behind Associated Newspapers Ltd., the company formed to take over the *D. M.*, *Evening News*, and *Sunday Dispatch*. Politically the *D. M.* is Conservative in principle, but more often than not takes an independent line. The *D. M.* organises many exhibitions, one of the most successful of

latest news in pictures. Politically, the *D. M.*'s history has been chequered. Launched with no apparent political views in 1903, it supported the Liberals for six or seven years, conducted a violent anti-Socialist crusade from 1920-1934, supported a Conservative 'national' Gov. in 1935, and helped put the Socialists in power in 1945. The pattern, which seems eccentric, was due to changes of proprietorship or control. To-day, the *D. M.* is an independent national newspaper of the Left—without party affiliation. Its present daily circulation is nearly 5 million.

'Daily News,' see NEWS CHRONICLE.

'Daily Sketch,' newspaper founded in Manchester in 1909 as a penny picture paper. In 1925 it absorbed the *Daily Graphic* and was later acquired by Allied Newspapers Ltd. Later, under the ownership of Kemsley Newspapers, it changed its name once more to *Daily Graphic* until Dec. 1952, when the paper was purchased by Associated Newspapers Ltd., the Rothermere Group. Since then it has reverted to the title of *Daily Sketch*, and its then circulation of just over 600,000 now approaches one million and a quarter. It is politically independent and has become a 'tabloid' newspaper.

'Daily Telegraph,' the first penny newspaper pub. in London, founded in June 1855. It passed shortly afterwards into the hands of the father of the second Viscount Burnham (q.v.), and remained in that family until 1927, when it was sold to Sir Wm Berry, 1st (later Viscount Camrose, q.v.), Sir Gomer Berry (later Viscount Kemsley), and Sir Edward (later Lord) Liffé. The present proprietors are the second Viscount Camrose and his brother the Hon. Michael Berry. After editorial modernisation in 1930 the price, which had been 2d. for many years, was reduced to 1d. These changes were successful, for the circulation rose from 84,000 to 750,000 by the outbreak of war, and over 1 million as tonnage rationing of newsprint was abolished thereafter. The *D. T.* has always specialised in foreign news, and had many famous correspondents in all parts of the world. It was owing to the enterprise of the *D. T.* that Stanley was enabled to find the Congo, his undertaking having been originated by the paper, which also bore the expense of his search for Livingstone. In the same way, the *D. T.* assisted in the Assyrian discoveries of George Smith, and the exploration of Mt. Kilimanjaro by Sir Harry Johnston. Politically, the *D. T.* is independent Conservative. The new *D. T.* building, erected in Fleet Street between 1928 and 1930, is among the finest newspaper offices in the country. Since 1937 the *D. T.* has been amalgamated with the *Morning Post* (q.v.), the former Conservative daily.

'Daily Worker,' newspaper founded by the Communist Party in 1930 and in continuous publication since, except for a period of 20 months from Jan. 1941 to Sept. 1942 when it was suppressed under Section 2D of the Defence Regulations. In 1945 it was taken over by a co-opera-

LORD NORTHCLEFFE

which is the ann. Ideal Home Exhibition. Pub. simultaneously in London, Manchester, and Edinburgh, its circulation is still one of the largest in the world, well exceeding the 2,000,000 mark. Other eds. of the *D. M.* included one printed in Paris from 1905 to 1953; and an Atlantic ed., printed and pub. on board sev. of the larger liners from 1923 to 1932. The *D. M. Year Book*, founded in 1901, is popular among all classes for reference purposes on general subjects.

'Daily Mirror,' newspaper founded in London as a penny daily for women on 2 Nov. 1903, under the editorship of Mrs Mary Howarth. It was soon obvious that there was no public demand for such a paper and Lord Northcliffe converted it in twenty-four hours into an illustrated newspaper. In 1914 the first Lord Rothermere became chief proprietor, and a year later founded its companion paper, the *Sunday Pictorial*. The object of both papers has always been to provide the

tive society specially formed for this purpose: the People's Press Printing Society Ltd., which now has a membership of over 30,000 individual members and 900 Trade Union, Co-operative and Communist Party organisations. Since 1952 it has been pub. by the Daily Worker Co-operative Society Ltd., a subsidiary of the People's Press Printing Society Ltd. Its present circulation is more than 75,000 copies daily.

Dairiel, Sp. tn in the prov. of Ciudad Real, near a salt lake. It manufs. textiles and brandy. Pop. 71,000.

Daimiōs (great names), the feudal nobles of old Japan, who within their own domains were almost absolute, paying only nominal allegiance to the Mikado; the Samurai were their military retainers. Although the Shogun (temporal ruler) and D. lost their power in the revolution of 1868, the governing classes of Japan are still mostly of Samurai descent.

Daimler, Gottlieb (1834-90), motor pioneer, b. Schorndorf, Württemberg. After gaining experience in Germany and at Whitworth's, Manchester, he assisted Dr Otto in the development of his gas engine (Cologne, 1870), and became director of his factory. Conceiving the idea of increasing the power of oil and gas engines by making the working parts lighter, with greater velocity of rotation, he produced the first motor bicycle in 1885, followed in 1887 by a petrol-driven car. He founded the Daimler Motor Co., at Cannstatt in 1890. Benz of Mannheim, Panhard and Levassor of Paris, and others took up the idea, and D. engines have become universal.

Dairen, or **Dalny**, the customs port for Kwantung, China. At the end of 1937, when the leased ter. of Kwantung was under a Jap. governor-general, the seat of administration was at D. (or Tairend, formerly Dalny). In 1945 the ter., including D., was restored to China. The S. Manchuria Railway connects D. with Mukden, and D. is also connected by rail with Changchun (696 m.). The Chinese name is Talien-Wan. Pop. of tn and dist. (1951) 1,054,000.

Dairy. The word D. is the same as the Middle Eng. *deirie*, which was the place where the *dey* or maid-servant worked. It now denotes the place where the milk in its natural form and the cheese and butter are prepared. The milk of the cow is used all over the world for D. purposes, but in certain regions physiographical conditions have led to the dependence on sheep, goats, reindeer, camels, etc., for milk. In no other dept of agriculture has the celerity of advancement been greater than that in D. farming. In Great Britain the demand for milk and butter made by the people of industrial centres distant from the traditional dairying, or in fact cheese-making, dists., such as Cheshire, Ayrshire, Somerset, and the vale of Glamorgan, resulted in rapid expansion of the D. business. The invention of the centrifugal separator about 1878 created a revolution, whilst smaller progressive reforms may unquestionably be traced to the persistent

exertions of the Brit. D. Farmer's Association and to the D. shows held annually under its auspices since the year 1876. Moreover, this association acted as pioneer in the matter of providing technical instruction in D. farming; for it founded a D. school in the vale of Aylesbury, a school later estab. in Reading under the name of the Brit. D. Institute (now the National Institute for Research in Dairying, under the Executive Council of the Imperial Agric. Bureaux), and its example was followed by many municipalities all over the country.

Improvements in Appliances.—In all modern D.s centrifugal separators are now in use, and these consist essentially of a series of conical plates which revolve in a bowl at high speed. In this way the lighter butter fat is collected to the centre of the bowl, and thence removed through a tube, the watery and heavier portion of the milk being driven out from the outer zone through another tube. Small machines for 10 up to 100 gallons an hour are often still worked by hand, but separators worked by horse or steam power can deal with four or five times that quantity in the same time.

Pasteurisation has made milk 'safe' despite all the vicissitudes of transit. Electricity has brought hot water and refrigeration to the remotest farm. Pasteurisers, so named after the Fr. scientist, Pasteur, have been designed so as to destroy the tubercle and other bacilli which may be communicated to human beings through the medium of milk. Milk can be made completely safe by heating it to 145° F. for 30 min. (the holder method) or by heating it to 161° F. for 15 sec. (the high temp.-short time or H.T.-S.T. process). This latter method of pasteurisation has expanded so enormously in recent years that the classical holder method is already obsolete. The modern H.T.-S.T. process takes place in well-defined stages. *Regenerative heating* involves simply heating up the incoming cold milk by heat transfer from the hot freshly pasteurised milk. This warm milk is then passed on to the *heating section* where the milk is heated further by hot water, the temp. of the milk being raised to 161-162° F. Then it is maintained at this temp. in the *holding section* for 15 sec. Immediately the hot milk is cooled by *regenerative cooling* which is the exact inverse of regenerative heating, the cold incoming milk being used to cool the hot out-going milk. Finally the milk is cooled in a cooler, in which refrigerated brine is the cooling agent, to 38° F. so that it may be issued from the depot at 40-42° F. (a temp. at which milk keeps well). Butyrometers are the most convenient machines for testing the amount of fat in milk. Properly graduated testing tubes are filled with the milk to be tested and fixed on a rimmed metal dish which is then made to revolve rapidly. Standard sulphuric acid and warm water are required, chemical action as well as the principle of centrifugal force being involved in the testing. D.s in most urb. centres bottle their milk for delivery

to householders. See J. G. Davis, *A Dictionary for Dairying*, 1950. See also MILK.

Dairy Factories originated in America and thence spread to Europe. The first was a cheesery founded by Jesse Williams in 1860 in Onelda co., New York. His success in the venture led to the rapid estab. of similar factories and also of creameries, or butter factories, all over the States and Canada. Such was the mushroom growth of these factories that by 1866 there were 500 cheese factories in New York state alone. In England cheeseries were first instituted in 1870, when one was set up in Derby and another in Longford. But the enormous increase in the supply of milk from country to urb. dists. leaves a comparatively small surplus of milk for conversion into butter and cheese, a fact which accounts for the scarcity of D. F. in England relatively to the U.S.A. Moreover, foreign butter from Denmark, etc., and empire butter from Australasia, etc., are superior to the average butter produced in the U.K. The cheese and butter factory system was introduced from America into Denmark, Ireland, France, etc., with surprising success. To-day 1 trained butter-maker can work up in a creamery the cream taken from 700 cows. His product finds a speedy market by reason of its even quality. It is packed in refrigerator cars, and within 2 weeks of its churning can reach a consumer many thousand m. distant. Artificial fats are frequently added to skim-milk to produce a poorer kind of butter, full-milk cheese being manufactured at the same time in the same factory. In 1855 Grimwade first made use of powdered milk in England, and in America a combination of whole milk powder and extract of malt was sold in 1883. Since that time many patented processes have placed a number of dried milks on the market. The first condensed milk plant of America was estab. by Gail Borden in 1856 at Wolcottville, Connecticut. John B. Meyenberg patented his process for supplying unsweetened evaporated milk in hermetically sealed tins in 1884. Yet a further product of America is the factory-made ice cream. In 1851 Fussell of Baltimore estab. a plant for making ice, and afterwards erected other factories in Washington, Boston, and New York. Ice cream which is sold commercially must contain not less than 7-14 per cent of milk fat.

Dairy Farming. The successful management of dairy cows depends to a large extent on good feeding. As milk contains over 80 per cent of water a good supply of pure water is essential; epidemics of contagious diseases have frequently been traced to a polluted water supply. Grass is the cow's natural food and provides the cheapest form of milk production. In winter grass (and clover) conserved as hay or silage is commonly fed, but roots (such as mangolds) and kale are often used in addition. For high-yielding cows at all times, but especially in the winter, concentrated food such as oil-seed cake must be fed so that milk yields are maintained

at a high level. Thirty lb. of dry food a day is a sufficient allowance for the average cow, but the food mixture should be varied as much as possible. Cleanliness is absolutely essential in the cows, their sheds, and the milkers. The cow-houses, moreover, must be well lighted, ventilated, and drained. The milking parlour is preferable to the ordinary cowshed because it saves time in cleaning and washing down, no hay or straw comes into the building when cows are milked, and this makes clean milk production easier. Dust in the air from hay or straw is a frequent cause of dirty milk. Because the cow comes to the milker instead of the milker going to the cow, there is a shorter journey for the milk to reach the cooler, and considerable economy of labour use. The best-designed buildings for a dairy of about 50 cows should consist of 2 covered yards, separated by the milking parlour, the cooling room, and the boiler and sterilising unit. Each covered yard is divided down the centre; and the doors and gates are large enough to admit a cart or wagon to remove the dung or to carry straw. The cows are collected before milking in one yard and, after going through the parlour, go into the other. There are 2 bull pens, a number of calving pens, and calf pens in a third yard.

By seasonal price changes winter milk production has been encouraged by the Milk Marketing Board and now about half the country's milk supply is winter milk. Under this system the cows calve in autumn and so produce the bulk of their milk in the winter months. It necessitates feeding expensive foods and, in the colder and wetter parts, the cows must be housed throughout the winter. However, high prices are paid for the milk and so it is generally more profitable than summer milk production. Cows should remain in the milking herd for about 10 years, but in practice the figure is only 3-4 years. This is due to disease and emphasises the need for a high level of management and regular inspection by a veterinary surgeon. The eradication of tuberculosis is especially important. Normally cows are milked only twice daily, in the morning and evening, but in very high-yielding herds thrice daily milking is fairly common. It may be pointed out that England has no pure dairy breed of cattle to her credit, the dairy shorthorn, our most numerous breed and the pioneer of the dairy revival at the turn of this cent., still serving a dual-purpose standard—which is justified in a European country that must rely for meat on its dairy herd. Records of performance continue to show ann. improvements in yield, and the best Brit. herds already hold their own with dairy cattle in other countries, like Denmark and Holland. The distribution of milk was revolutionised by the growth of huge railway systems all over the country, and also by the invention of refrigerators. The former allow milk to be brought to London daily from places as distant as Derby, Gloucester, Dorset, etc., and even from Scotland, and the latter ensures the

goodness of that milk by increasing its keeping qualities. Also, the bulk carriage of milk in glass-lined containers has overcome the noise and tedium of rolling churns on railway platforms.

Practically all the milk which is brought to London comes from different parts of England; other big towns are similarly supplied. The estimated production of milk for human consumption in England and Wales, according to the Ministry of Agriculture, is almost 2000 million gallons a year, and the estimated value of milk and dairy produce in England and Wales in 1954 was £336,000,000 (excluding poultry and eggs, which were valued at £147,000,000). Practically all the butter and cheese made in this country is used for home consumption, and large imports

ally been abandoned, but the subsidies on milk are still considerable. In 1955 they totalled £72 million, of which school milk accounted for £11½ million, and the Welfare Milk Scheme £33½ million. See also MILK. See H. Wallace and J. Watson, *Farm Livestock of Great Britain*, 1923; B. M. Cookson, *Dairy Cows and their Management*, 1944; F. Garner, *The Cattle of Britain*, 1944, and *British Dairying*, 1948; W. E. Petersen, *Dairy Science*, 1950; V. C. Fishwick, *Dairy Farming*, 1952.

Dais, family Thymelaeaceae, a monotypic genus of a deciduous S. African shrub, *D. cotinifolia*, the bark of which yields a very strong fibre, and is sometimes made into paper.

Dais: 1. In a medieval great-hall, the

United Dairies

DAIRYING: MECHANICAL MILKING

are made annually—butter chiefly from Denmark, New Zealand, Australia, and Ireland; cheese from New Zealand, Canada, the Netherlands, Italy, Australia, and America. The ann. review issued by the Commonwealth Agricultural Bureaux shows that the consumption per head of pop. in Britain of dairy products in 1954 averaged, for butter, 14 lb.; margarine, 18 lb.; cheese, 10 lb.; and eggs, 209. Under the Marketing Acts, 1931 and 1933, a Milk Marketing Board was set up to regulate the purchase and sale of milk. The Board also controls the artificial insemination service which is helping to improve 'the standard of many herds. After the war full marketing powers were returned to the M.M.B. In 1954 and at the same time rationing of butter and cheese was ended. The system of consumer subsidies has gradu-

ally been abandoned, but the subsidies on milk are still considerable.

2. In a college hall, a similar platform for 'the high table.'

Daisy, name given to sev. composite flowers, but in particular to *Bellis perennis*, the little plant which flourishes all over Europe and is common in fields and on lawns. The Fr. call the D. 'marguerite,' from the Gk word *margarita*, a pearl. The head is composed of yellow, tubular, and hermaphrodite florets of the disk, and white, ligulate, and pistillate florets of the ray; in wet weather and at night the surrounding involucre of bracts covers the florets. The dog D. or ox-eye D. (q.v.) belongs to the *Chrysanthemum* genus, and is known technically as *C. leucanthemum*, as also are the midsummer D. and the moon D., while the Michaelmas D. is a Brit. species of *Aster*.

Dajaukku, see DEIOCES.

Dakar, cap. of Fr. W. Africa, and the best port of the W. African coast. By a decree of 1924 D. and its surroundings, including Goree (or Goré) and Rufisque, were formed into a special ter. called *Circonscription de Dakar et Dépendances*. D. is of great strategic importance, being the nearest point in Africa to S. America and midway between S. America and S. Africa. It is an extremely important military, naval, and air base. The H.Q. of the governor-general, D. is a well laid out modern city. It became commercially important with the opening up of the St Louis-Dakar railway, completed in 1885, to top the Senegal Valley. This railway was connected with the Dakar-Niger line in 1923. There is a Pasteur Institute in D., and the Institut Français d'Afrique Noire. Exports through D. include groundnuts, palm-kernels, coffee, groundnut oil, cocoa, and timber. Minerals exported include bauxite and iron ore.

The importance of D.—significantly referred to by President Roosevelt as 'the Atlantic fortress of Dakar'—for the security of the W. hemisphere became obvious in the Second World War. D. commands terrestrially and in the air the immense federation that France created in W. Africa, ters. capable of being utilised against one or other sets of belligerents as reservoirs of men and material and as departure bases of attacks and campaigns. Soon after the collapse of the Fr. forces in France in 1940 Gen. de Gaulle (q.v.), commanding the Free Fr. forces, made an attempt to take D., but had to abandon his campaign there. He had erroneously believed that a large proportion of the Fr. pop. of Senegal would support him, as they had done in Fr. Equatorial Africa. But the Vichy Gov., learning of his project, sent 3 cruisers from Toulon, which unaccountably were allowed to get through the Straits of Gibraltar, and eventually arrived at D. On the morning of 23 Sept. 1940 de Gaulle sent emissaries to land at D., but they met with a hostile reception and were fired upon, while the batteries of the port opened fire on de Gaulle's warships and also on Brit. ships which were standing by to render assistance to de Gaulle. Fire from the Fr. battleship *Richelieu* was joined to that of the shore batteries and was returned, and the Brit. naval commander warned the Fr. authorities that submarines would be engaged if they left harbour. But in spite of this warning 3 Fr. submarines attacked the Brit. ships, with the result that 2 of the attacking submarines were sunk. The forces of de Gaulle tried to make a landing but were not successful, and, when it became evident that only a major operation of war could secure the fall of D., it was decided on political grounds to discontinue hostilities, as it had never been the intention of the Brit. Gov. to enter into serious warlike operations against those Frenchmen who felt it to be their duty to obey the command of the Vichy Gov. Following the Allied landings in N. Africa Adm. Darlan (q.v.) an-

nounced on the Algiers wireless on 23 Nov. 1942 that Fr. W. Africa had put itself under his orders, thus showing that it remained 'faithful to Marshal Pétain' (q.v.). Pop. (1943) 98,661. See D. Whittlesey, 'Dakar and other Cape Verde Settlements', *Geographical Review*, 1941; also *Dakar*, an official pub., 1931.

Dakiki, see DAQIKI.

Dakin, Henry Drysdale (1880–), Eng. chemist; occupied in research work at Herter Laboratory, New York city (1905–1920). During the First World War he made a solution for the treatment of wounds which was developed, in collaboration with Alexis Carrel (q.v.), as the Carrel-Dakin treatment of wounds by regular intermittent irrigation with D.'s solution. Known for researches in biochemistry, especially on enzymes. Awarded the Davy medal of the Royal Society (1941). Co-author of *Handbook of Chemical Antiseptics*, 1917.

Dakota, also called **James River**, from the name Rivière de Jacques given to it by early Canadian voyageurs. It rises in N. D., U.S.A., and flows S. through S. D., reaching the Missouri near Yankton, after a course of 710 m. It is not navigable. Its valley is very fertile.

Dakota, N. Amer. Indian tribe of the Sioulian linguistic family. One of the most famous of the tribes of the Great Plains, they engaged in many wars with other tribes and with the Whites, in 1876 annihilating General Custer and a whole brigade (the 'Custer massacres'). They now live in N. and S. Dakota and nearby states, and number almost 40,000.

Dakota, North, see NORTH DAKOTA.

Dakota, South, see SOUTH DAKOTA.

Dal, or **Dalälven**, riv. in Sweden, 250 m. in length. It is formed by the confluence of the Rs. Oster and Vester Dal Elf, and enters the Gulf of Bothnia about 60 m. from Upsala.

Daladier, Edouard (1884–), Fr. statesman, son of a baker, b. Carpentras, Vaucluse. He became a school teacher; and then served with distinction in the First World War. In 1919 D. was elected as a Radical-Socialist deputy. He held various ministerial posts from 1924; and succeeded Herriot as chairman of the Radical-Socialist party in 1927. D. was premier for some months in 1933, again for a short time in 1934, and from 1936 served as war minister in various Popular Front govts. He was premier again April 1938–March 1940, remaining in charge of the war ministry as well. D. was one of the signatories of the Munich Pact (q.v.), Sept. 1938. He was regarded as France's 'strong man,' ruling by decrees and arranging for a two-year postponement of Fr. elections in July 1939. His subsequent majorities were no longer Popular Front (Communist-Socialist-Radical), but now extended considerably to the Right. When the Chamber became critical of his personal rule and demanded a more vigorous prosecution of the war, D. resigned (21 March 1940). He retained for a time first the war ministry, then the foreign ministry under Reynaud, but was removed

from the gov. in June 1940, and after the Fr. collapse he was detained by the Pétain Gov., and interned by the Gers. He was released in 1945; became a member of the constituent assembly in 1946, and a member of the national assembly in 1947. Pub. *The Defence of France* (1939).

Dalaguete, municipality in the is. of Cebu, Philippine Is. Corn, coffee, cocoa, manila hemp, etc. are produced and fish caught. Pop. 29,353.

Dalai Kul, small is. in Lake Kossol, Kossol Gol, or Kosgol, Mongolia, 130 m. SW. of Lake Baikal. The is. is held by the native Buddhists to be the navel of the earth, and is therefore considered holy ground. Lat. 51° N., long. 100° 30' E.

Dalai Lama, in Tibet the arch priest of Lamaism, revered as the living incarnation of deity, always present on earth in him. See LAMAISM.

Dalai Nor (Holy Sea): 1. Lake of Mongolia, near the frontier of E. Siberia and the great bend of the Argun R., in lat. 49° 10' N., long. 117° 20' E. Also called Kulun Nor. It is fed by the Kerulen R., but is now rapidly drying up, and has ceased to send any water into the Argun.

2. Small lake of Inner Mongolia in lat. 43° N., long. 116° 30' E.

Dalarna (the Dales), or **Dalecarlia**, anct. prov. of Sweden, lying NW. of Stockholm, and stretching from the Norwegian frontier nearly to Gefle on the Baltic. The dist. is now called Kopparberg. The Dalesmen still retain their anct costume and dialect, and have always been noted for bravery and independence. In 1434, led by a miner, Engebrecht, they rebelled against the tyranny of Eric of Denmark, and when, in 1523, Gustavus Vasa freed Sweden from the Danes, his best helpers came from D. The dist. is to a great extent covered with forest, but agriculture is carried on where possible, and there are very productive iron mines, with large works for smelting, blasting, and rolling, also saw-mills and wood-pulp factories. Copper mines at Falun, the chief tn, are almost exhausted. Pop. 276,172.

Dalat, tn situated in the Lang-bieng plateau in Cochinchina (q.v.), on the Kam-ly river about 5000 ft above sea level. There are good hotels and many European-style villas. D. serves as a holiday centre and hill-station for the inhab. of Saigon (q.v.), since the climate is pleasantly cool. It is noted for its unspoiled scenery which includes pine forests, waterfalls, etc.

Dalbottle, burgh and tn of Kirkcudbrightshire, Scotland, situated on D. Burn, 14 m. SW. of Dumfries. There are important granite quarries in the neighbourhood; the materials for the Liverpool docks, Thames embankment, and other public erections have been taken from here. There are also granite-polishing works, and grain and glove and hosiery mills. Small vessels can approach quite close to the tn up the mouth of the burn. John Balliol, founder of Balliol College, Oxford, lived in the neighbourhood. Pop. 3288.

Dalberg, name of a noble Ger. family whose ancestors in the 12th cent. were

hereditary chamberlains of the bishop of Worms. In 1494 Maximilian I. granted them the right of claiming the first knighthood at each coronation.

Johann Dalberg (1455-1503), bishop of Worms, was a great Renaissance scholar; he founded the first Gk chair at Heidelberg.

Karl Theodor von Dalberg (1744-1817), prince-bishop of Mainz, a friend of Goethe and Schiller, ruined his career by siding with Napoleon, who made him prince-primate of the short-lived Rhine Confederation, 1807. The D. family is now extinct, but its last heiress married an Englishman, and her son was created first Baron Acton (q.v.).

D'Albert, Eugène, see ALBERT, EUGÈNE.

Dale, David (1739-1806), philanthropist, b. Stewarton, Ayrshire, was in early life a Lanarkshire weaver. Engaging in the importation of Fr. yarn, he prospered and estab. cotton mills at New Lanark and also the first Turkey-red dye works in Scotland. He seceded from the Church of Scotland and founded the 'Old Independents,' a communion with congregational principles but with unpaid pastors, of which he was chief pastor for the rest of his life. A kind employer, he was a munificent benefactor, especially to Glasgow, and was also interested in educational work. His son-in-law was Robert Owen (q.v.). See memoir in R. Chambers' *Biographical Dictionary of Eminent Scotsmen*, 1835.

Dale, Sir Henry Hallett (1875-), scientist, b. London and educ. at Cambridge and St Bartholomew's Hospital; he graduated 1897 and was M.D. 1903. From 1904 to 1914 he was director of the Wellcome Physiological Research Laboratories and then joined the staff of the Medical Research Council, being director of the National Institute for Medical Research, 1928-42. He was a member of the Scientific Advisory Committee to the War Cabinet, 1940-7 (chairman, 1942-7), and Fullerian prof. of chemistry at the Royal Institution, 1942-6. Since 1936 he has been chairman of the Wellcome Trust. D. was elected a fellow of the Royal Society in 1914, was its secretary (1925-35) and president (1940-5). He was president of the Royal Society of Medicine (1948-50) and has held many other distinguished offices in the medical and scientific world. His contributions to scientific research include the isolation of ergotoxine, the active principle of ergot, studies on the action of pituitrin and acetylcholine, and on the chemical medication of nervous impulses. For this last work he shared the Nobel Prize for medicine in 1936. He has also had considerable success in his endeavours to obtain international agreements for the standardisation of a number of biological preparations. He was knighted in 1932 and appointed to the Order of Merit in 1944. See *British Medical Journal*, 4 June 1955.

Dale, Robert William (1829-95), theologian and Congregational minister, b. London. Educ. Spring Hill College, Birmingham—training ground for the Congregational ministry—and at London Univ. Took part in the political life of

Birmingham as a Liberal until the introduction of Home Rule by Gladstone, when he gave up politics. Took an important part in educational affairs, becoming manager of the National Education League and a leading member of the Central Nonconformist Committee. President of the Congregational Union, 1868-9—an honour for so young a man. In 1877 he accepted the post of Lyman-Beecher lecturer at Yale. Made honorary LL.D. of Glasgow Univ. in 1878. He was a prolific writer, his most important works being *The Atonement*, 1875, a work which gave him a high place among theological writers, and was in its time a text-book in many colleges; *The Jewish Temple and the Christian Church: Lectures in Preaching*; *A Manual of Congregational Principles*; and *Discourses on Christian Doctrine* (the most finished and powerful of his works). See life by A. W. W. Dale, 3rd ed. 1899.

Dale, coast vil. of Pembrokeshire, Wales, situated on Milford Haven, 7 m. W. of Milford. It is noted in hist. as the place where Henry VII landed with his Fr. followers on his way to Bosworth. Pop. 300.

Dalecarlia, see DALAINE.

D'Alembert, Jean, see ALEMBERT.

Dalgarno, George (1626-87), inventor of a deaf and dumb alphabet, b. Aberdeen. He was a schoolmaster in Guernsey and at Oxford. His *Ars Signorum*, 1661, contained ingenious suggestions for a universal language, based on the hypothesis that ideas could be expressed by universal characters. His *Didascalocophus, or The Deaf and Dumb Man's Tutor*, appeared in 1680. See under DEAF AND DUMB, or DEAF-MUTE.

Dalhousie, Sir James Andrew Broun Ramsay, first Marquess and tenth Earl of (1812-60), governor-general of India: educ. at Harrow and Christ Church, Oxford. He entered the House of Commons in 1837, and in the following year, on the death of his father, took his seat in the Lords. In 1845 he was president of the board of trade. In 1847 he went to India as governor-general. Not long after his arrival the second Sikh war broke out, and in 1849 the Punjab was annexed. While the arrangement for the future administration of the new prov. occupied much of this time, D. yet found leisure to introduce many internal reforms in India. Careful to interfere as little as possible with the religious and caste system, there were yet certain abuses that he could not but remove. Notably he legitimated the remarriage of Hindu widows, and used all the means in his power to prevent the old practice of suttee (q.v.). It is to D. that India owes the introduction of the telegraph and the railway. It was during his governorship that the second Burmese war occurred, and that Lower Burma was added to the Brit. Empire. See life by W. Lee-Warner, 1904.

Dalhousie, 1. In E. Punjab State, India, 7687 ft above sea-level, in the Dhauladhar range, close to Kashmir frontier. It is popular as a sanatorium and hill resort.

2. Famous univ. in Halifax, Nova

Sootia. It has over 1500 students in attendance at its regular sessions. Sev. institutions, including univ. of King's College, are associated with it.

Dali, Salvador (1904-), Catalan painter, b. Figueras. Expelled from the Madrid Academy, he settled in Paris, interested himself in psychoanalysis and such forms of (then) unpopular art as 'art nouveau' and Pre-Raphaelitism, and joined the Surrealist group in 1929. His fantastic imagination is seen in smoothly painted but weird pictures like his 'The Persistence of Memory' (Museum of Modern Art, New York) in which a limp watch hangs on a tree. In some later works a religious theme subdues his fantasy, as in 'The Crucifixion,' bought in 1951 by the Glasgow Art Gallery, and 'The Last Supper,' lent to the National Gallery of Arts, Washington, in 1956.

Dalin, Olof von (1708-63), Swedish poet and historian, b. Vinberg, Halland. Being fond of Eng. literature he started (1733) the *Swenska Argus*, on the model of Addison's *Spectator*, and also wrote some satires in imitation of Swift. An historical epic, *Seenska Friheten*, 1742, and a hist. of Sweden, 1747-61, procured him the post of tutor to the crown prince. He composed also plays, epics, and occasional verse. The wit and satirical humour in which he clothed his ideas gained him great popularity. See M. Lamm, *O. F. Dalin*, 1908.

Dalkeith, mkt in 6½ m. SE. of Edinburgh, picturesquely situated on a tongue of land between the N. and S. Esk. It has an important grain market, while iron moulding, carpet weaving, brush making, and brewing are among the industries carried on. Extensive coalfields are in the vicinity. D. Palace (rebuilt in 1700) is a seat of the duke of Buccleuch. Nearby is Rosslyn Chapel (15th cent.), famous for its beautiful stone carving, especially that of the so-called 'Prentice Pillar'. Pop. 9022 (1954).

Dalkey, seaside resort of co. Dublin, Rep. of Ireland, at the entrance to Dublin Bay, 9 m. from Dublin. The ruins of St Begnet's Church stand near the tn hall, and there are remains of 2 of the 7 castles which guarded it and harbour in mediæval times. D. Is. is the largest of a group of rocky is. offshore. Pop. 4500.

Dallapiccola, Luigi (1904-), It. composer, b. Pisino, Istria; studied at the Conservatorio of Florence. First attracted international attention at pre-1939 festivals of the International Society for Contemporary Music. His *Songs of Captivity* were prompted by the Fascist 'racial laws' of 1938 and represent the expression in music of an imprisonment which was as much mental as physical. They consist of settings of the prayer of Mary Queen of Scots, and of passages from Boethius' *De Consolatione Philosophiæ* and Savonarola's *Meditation on the Psalm 'In te Domine speravi'*. His ballet *Marsia*, written about the same time, is on the classical legend of Marsya's contest with Apollo. His *Piccolo Concerto* for piano and orchestra of twenty-six players shows his desire to get the maximum possible variety

of rhythm, colour, and contrapuntal interest within limited resources. For most of his subsequent works he adopted a form of twelve-note technique. The first of these (1942) was three sets of lyrics for soprano and various combinations of instruments to words from the Greek anthology (Sappho, Anacreon, and Alcaeus). Among his recent works are two Studies for violin and orchestra; *Romances*, a dramatic setting for baritone and piano of fragments from the *Chanson de Roland*; and the operas *Volo di notte* (after Saint-Exupéry) and *Il prigioniero* (after *La Torture par l'espérance* by Villiers de l'Isle Adam). D.'s influence and that of his followers is growing in

Character of the War of 1812-1815, 1815. See G. M. Dallas, Life and Writings of Alexander James Dallas, 1871.

Dallas, George Mifflin (1792-1864), Amer. diplomatist and politician, b. Philadelphia. He graduated at Princeton College, 1810, and was admitted to the Bar, 1813; represented Pennsylvania in the Senate, 1831-3; attorney-general of Pennsylvania, 1833-5. In 1837 he entered the diplomatic service, and acted as Amer. ambas. in St Petersburg for 2 years. He was elected vice-president of the U.S.A., 1845-9; ambas. to Great Britain, 1856-61. He wrote *Series of Letters from London, 1869*, and a life of his father, A. J. Dallas, 1871.

Yugoslav Embassy

BUDVA, IN SOUTHERN DALMATIA

Italy, and is a very important factor in the cultural renaissance of that country.

Dallas, Alexander James (1759-1817), Amer. statesman and financier, b. Jamaica, W. Indies, educ. at Edinburgh; practised law in Jamaica, and in 1783, having taken oath of allegiance to the U.S.A., in Philadelphia. He held sev. important positions in the commonwealth of Pennsylvania, and in 1814 Madison made him secretary of the Treasury. D. also served for some months as secretary of war, and during that time reorganised the army on a peace footing. He found the gov. bankrupt, and left it with a surplus of more than \$20,000,000. Among his writings are *The Laws of the Commonwealth of Pennsylvania, 1700-1801, 1793-1801*, and *An Exposition of the Causes and*

Dallas, leading manufacturing city of Texas, U.S.A., with a pop. of 434,500, originated in 1841 with one log hut. Nearly half the cotton gins used in the world are made at D. There are large oil-fields, petroleum refineries, the largest inland cotton market, a municipal airport, 50 parks, and the S. Methodist Univ. with 6000 students. The fair held here is the largest ann. fair in U.S.A. There are Rom. Catholic and Protestant cathedrals.

Dallin, Cyrus Edwin (1861-1944), Amer. sculptor, b. Springville, Utah, where he became familiar with Red Indian life (his principal subject). He studied at Boston and Paris. Among his statues are 'Signal for Peace' (gold medal, Chicago, 1893), 'The Medicine Man'

(Fairmount Park, Philadelphia), 'Sir Isaac Newton' (Congressional Library), 'Don Quixote' (gold medal, St Louis, 1904).

Dallinger, William Henry (1841-1909), scientist, b. Devonport. Author of *Minute Forms of Life*, 1866; *The Creator and what we may know of the Methods of Creation*, 1887; and editor of *Dr. Carpenter's Microscope and its Revelations*, 1901.

Dallmeyer, Johann Hein (1830-83), Ger. optician, b. Loxten, Westphalia; came to London in 1851, and entered the employment of Ross, a telescope manufacturer, inheriting a large part of his business in 1859. He also took up the manuf. of photographic lenses with great success.

Dalmatia, name given to the strip of ter. bordering the upper Balkan coast of the Adriatic. It now forms part of the Yugoslav republics of Croatia, Bosnia-Herzegovina, and Montenegro (qq.v.). D. was in ant. times a part of Illyria (q.v.). In the Middle Ages it fluctuated between the dominance of Venice and Hungary. It passed to Austria in 1797, formed part of Napoleon's prov. of Illyria after 1805, and was returned to Austria by the Congress of Vienna (q.v.) in 1814. By the treaty of Rapallo (q.v.) in 1920, D., with the exception of the tn of Zadar, and the is. of Pelagosa and neighbouring is., was given to Yugoslavia. Following the Ger. occupation of Yugoslavia during the Second World War (see YUGOSLAVIA, *History*) the greater part of D. was acquired by Italy. At the end of the war Yugoslavia recovered its former ter. in D., and by the It. Peace Treaty of 1947 was given also those parts of D. which had been ceded to Italy by the treaty of 1920.

D. has a length of c. 350 m., but it is at no part more than 50 m. wide. The coast is much indented, gulfs and bays alternating with peninsulas and the is. of the Dalmatian archipelago (see CROATIA). The country is largely mountainous, and contains parts of the Dinaric Alps and the Karst plateaux (qq.v.). The majority of the inhab. are Rom. Catholic; they are mainly Slavs (q.v.), but many Italians are to be found along the coast. There is little industry, but there are fine harbours and important fisheries. Inland, the chief occupations are stock-raising and fruit-growing. The prin. tns are Zadar, Split, and Dubrovnik (qq.v.). Area c. 5000 sq. m. See F. H. Jackson, *Shores of the Adriatic*, 1908; P. Digoivi, *La Dalmatie et les problèmes de l'Adriatique*, 1944.

Dalmatian Dog, spotted carriage dog, originally kept in stables. It is active and muscular, a good runner, and a fine watch dog. Its colour should be pure white, with round black or liver-coloured spots bold and evenly distributed over its body. The average size of the spots is that of a shilling, but they vary from the size of a sixpence to the size of a florin. The puppy is b. white, and it is some days before the spots appear. The spots on the head, tail, and limbs are smaller than those on the rest of the body. Its other

points are: head long, with a flat skull, and quite free from wrinkles; muzzle long and powerful; eyes set fairly wide apart, bright and intelligent, black or dark brown in the black-spotted variety, yellow or bright brown in the liver-spotted variety; ears thin, well spotted, and rather small, carried close to the head; nose black or dark brown, according to its other markings; forelegs perfectly straight; hind legs with hocks well let down; feet round and cat-like; tail well spotted, long and tapering, carried with an upward curve; coat short, thick, and glossy. The average weight of a dog is 55 lb., of a bitch 50 lb.

T. Fall
DALMATIAN DOG

Dalmatic, form of old Rom. tunic, with large sleeves, originally worn under the chasuble (q.v.) or paenula by emperors, high officials, and bishops. It was adopted by the 7 deacons of Rome in their administrative duties as their normal dress, and spread to the rest of the W. Church as the distinctive vestment of deacons. It is now usually marked with two vertical stripes from the shoulder to the foot of the garment. It is still worn by bishops in full vestments under the chasuble, and in the E. Church is the special vestment of archbishops (in Russia of all bishops). See G. Dix, *The Shape of the Liturgy*, 1945.

Dalmellington, par. and vil. of Ayrshire, Scotland, 15 m. SE. of Ayr. Coal and iron have been worked from the 11th cent., and D. is a coal mining development area. Pop. 5000.

Dalmeny, vil. and par. of W. Lothian, Scotland, 1 m. SE. of S. Queensferry. Near are D. Park (17th cent.), the seat of the earl of Rosebery, and Barnbougle Castle. Pop. (with Queensferry) 4500.

Dalny, see DALIKEN.

Dalou, Jules (1838-1902), Fr. sculptor, b. Paris. He studied under Carpeaux and Duret. He had held office under the com. in the Louvre, 1871, and was obliged to flee to London, where he was given a professorship in the S. Kensington Museum, 1878; he returned to France in 1879. He always remained a disciple of Carpeaux, but his style is purer and his conception more vigorous. His chief works are 'Mirabeau delivering his famous Address in the States-General,

1789; in relief, which was placed in the Chamber of Deputies; 'The Triumph of Silenus,' 1897, in the Luxembourg, Paris; 'Bacchus consoling Ariadne,' 1892; 'The Triumph of the Republic,' 1900, in the Place de la Nation. He also executed busts of many of his contemporaries.

Dalradian, name given to a series of metamorphic rocks running from NW. Ireland through the Scottish Highlands into NE. Scotland. Called after the anct kingdom of Dalriada in W. Scotland. The D. rocks are younger than the Moine Series (q.v.) which they overlie, but their exact age is uncertain; they are believed to be late Pre-Cambrian or early Palaeozoic. The D. consists of regionally metamorphosed sandstones, limestones, and shales which have been metamorphosed to quartzites, marbles, and a great variety of schists and gneisses. Locally, migmatite complexes have formed. The structure of the D. is of great complexity and includes a huge recumbent fold which has inverted rocks over a tract up to 15 miles wide which can be followed through the Scottish Highlands and probably extends to Ireland. This is the so-called Loch Tay inversion.

Dalriada: 1. The anct name of the N. dist. of co. Antrim, Ireland, now known as the Route. The Dalriads were, by tradition, descendants of Kinda of the Long Wrist, chief of the Gaelic Scots.

2. Anct name of part of Argyllshire, settled by the Dalriads of Ireland about 498. They were defeated at Magh Rath, co. Down, in 637, but in 843 united with the Picts, under Kenneth MacAlpin, and formed the kingdom of the Scots of Alban.

Dalruadhain, *see* CAMPBELLTOWN.

Dalry: 1. Tn of Ayrshire, Scotland, 19 m. SW. of Glasgow, on the r. b. of the R. Garnock. Iron works were established here in 1845, though there is no iron industry at the present day, and the tn has tweed and hosiery mills and brickworks. Pop. 6400.

2. Vil. of Kirkcudbrightshire, Scotland, 4 m. NW. of New Galloway. Pop. 600.

Dalrymple, Sir David, Lord Hailes (1726-92), judge and historian, the great-grandson of the first Viscount Stair, educ. at Eton and Utrecht Univ. He was called to the Scottish Bar in 1748, becoming judge of the Court of Session as Lord Hailes in 1766. He is, however, chiefly remembered for his literary work, his friendships, and his controversies. Johnson, Burke, and Horace Walpole were among his friends. He was a strong traditionalist, especially in religious matters. His chief work is *Annals of Scotland*, 1776, dealing with the period 1057-1371.

Dalrymple, Sir James, first Viscount Stair (1619-95), lawyer and politician. He was prof. of philosophy at Glasgow from 1641 to 1647, when he was admitted an advocate in Edinburgh. He was appointed secretary to the commissioners sent to Charles II by the Scottish Parliament, 1650; lord president of the court of session, 1671. He was created Viscount Stair in 1690.

Dalrymple, Sir John, second Earl of

Stair (1673-1747), soldier and diplomat. He was educ. at the univs. of Leyden and Edinburgh, and in 1701 joined a Scottish foot regiment and served in Marlborough's campaigns. He succeeded to the earldom in 1707, and was made commander-in-chief of the forces of Scotland. He served with distinction at Oudenarde, Malplaquet, and Ramillies, and in 1743 fought at the battle of Dettingen.

Dalsert, vil. of Lanarkshire, Scotland, in Clyde valley, giving its name to a par. which includes Larkhall (q.v.), Ashgill, Netherburn, and D. Pop. of par. 17,500.

Dal'strov (Russian abbreviation for Far Eastern Construction Trust), large state gold-mining enterprise in the Magadan oblast of the Russian Far East, founded in 1930. Until 1953 it was subordinated to the Chief Administration of Corrective Labour Camps. *See also* BERZIN; KOLYMA; MAGADAN. *See* H. A. Wallace, *Soviet Asia Mission*, N.Y., 1946; V. Petrov, *It Happens in Russia*, 1951.

Dalswinton, estate and vil. of Dumfries, Scotland. It is noted as being the place where was launched an early steamboat designed by Symington, Miller, and Taylor (1788).

Dalton, Hugh (1887-), politician, educated at Eton and King's College, Cambridge. He became a lecturer in economics at London Univ. He first entered Parliament as a Labour M.P. in 1924. In Churchill's Coalition gov. he was Minister of Economic Warfare, 1940-2, and President of the Board of Trade, 1942-5. D. was chancellor of the exchequer 1945-7, when he resigned as the result of a Budget leakage. Later he was chancellor of the duchy of Lancaster 1948-50; minister of town and country planning 1950-1; and minister of local government and planning, 1951. His memoirs, *The Fateful Years*, were pub. in 1957.

Dalton, John (1766-1844), one of the greatest of Eng. chemists, b. Eaglesfield, Cumberland. His father was a weaver and Quaker. He himself kept a Quaker school for a time, and was afterwards partner in a school at Kendal. While at Kendal he commenced (1787) a journal of meteorological observations, the results of which appear in his *Meteorological Observations and Essays*, 1793, and other works. In 1793 he became a teacher of mathematics and the physical sciences in the Manchester New College, and it was in the following year (1794) that he made known the results of his investigations of colour-blindness, sometimes called Daltonism, from which he and his brother suffered. In 1801 appeared his important essays, *The Constitution of Mixed Gases* and *The Expansion of Gases by Heat*; and he followed up these researches by developing the atomic theory as an explanation of the facts of chemical combination in a paper read before the Manchester Philosophical Society in 1803. Pub. *On the Absorption of Gases by Water and Other Liquids*, 1805, and *A New System of Chemical Philosophy*, 1808-10. He was elected president of the Manchester Philosophical Society in 1817, received the medal of the Royal Society in 1825

'for his development of the chemical theory of definite proportions,' and was made a foreign associate of the Paris Academy of Sciences in 1830. He was made D.C.L. of Oxford, and LL.D. of Edinburgh. See also DALTON'S LAWS. See W. C. Henry, *Memoirs of the Life and Scientific Researches of John Dalton*, 1854; A. Harden and H. E. Roscoe, *A New View of the Origin of Dalton's Atomic Theory*, 1896; and lives by J. Nevillo-Palley, 1920, and W. A. Tilden (in *Famous Chemists*), 1921.

JOHN DALTON

Dalton, city of Whitfield co., Georgia, U.S.A., 114 m. NW. of Atlanta. It is a bedspread-manufacturing centre and also makes hosiery, yarn, textile machinery, chairs, and lumber. It was an important military centre during the Civil War. Pop. 15,970.

Dalton-in-Furness, par. and tn of Lancashire, England, 5 m. from Ulverston. The ruins of Furness Abbey are in the neighbourhood. It is the bp. of George Romney, the celebrated painter, whose tomb is in St. Mary's churchyard. Pop. 10,394 (1954).

Dalton Plan, experiment in educational reform initiated in 1920 at Dalton, Massachusetts, by Helen Parkhurst. It is similar in conception to the methods of Dr Maria Montessori (q.v.), striving to develop individuality by directing the child in self-chosen occupations and study. See Helen Parkhurst, *Education on the Dalton Plan*, 1922.

Dalton's Laws are two laws relating to the behaviour of gases. The first law is known as the law of partial pressure. It states that, in a mixture of gases, each gas exerts the same pressure as it would if it occupied the total volume: in other words, the total pressure of the mixture is the sum of the partial pressures of each gas. D.'s second law, usually known simply as D.'s law, states that if a mixture of gases is placed in contact with water or any other solvent, then the amount of

each gas dissolved by the solvent is directly proportional to the partial pressure of that gas. D.'s law is an extension of an earlier law stated by W. Henry, viz. that the amount of gas dissolved by a solvent is directly proportional to the pressure of the gas. See DALTON.

Daly, Sir Henry Dermot (1821-95), Brit. soldier, b. Daly's Grove, co. Galway, Ireland. During the Indian mutiny he distinguished himself at Delhi, where he was twice wounded. At the capture of Lucknow he was in command of a regiment of Hodson's Horse, and on the death of Hodson took command of the three regiments in the Oudh campaign. He became a major-general in 1870, lieutenant-general in 1877, and a general in 1888.

Daly, John Augustin (1838-99), Amer. theatrical manager and playwright, b. Plymouth, N. Carolina, U.S.A. He became dramatic critic to various New York papers—the *Sunday Courier*, *Express*, *Sun*, *Citizen*, etc.—from 1859 to 1869, when he opened a theatre, known as Fifth Avenue Theatre. This theatre was destroyed by fire, and in 1874 he opened another D.'s Fifth Avenue Theatre. D. had an excellent and most popular company, Miss Ada Rehan being for many years his leading lady. He toured in England and on the Continent with great success, and leased Daly's Theatre (q.v.), built for him by George Edwardes in Leicester Square, London, in 1893. He was also a clever playwright, and made adaptations from Fr. and Ger. plays. His own plays include *Pique*, *The Great Unknown*, and *The Last Word*.

Dalyell, or Dalzell, Thomas (c. 1599-1635) Scottish soldier. He served at the Rochelle expedition in 1628 and in Ireland following the outbreak of the 1641 rebellion. He fought against the Commonwealth army at Worcester (1651); he also served in the Russian army as lieutenant-general and fought against the Poles and Turks. He returned to Scotland at the Restoration and except for a brief interval in 1679 served as commander-in-chief of the Scots Army from 1661 until his death. He defeated the Covenanters in the Pentland rising, 1666. D. was noted for the eccentricity of his appearance.

Daly's Theatre, theatre in Leicester Square, London, built by George Edwardes and opened by J. A. Daly (q.v.) and his New York company with *The Taming of the Shrew* on 27 June 1893. The theatre was visited by Sarah Bernhardt in 1894, and again in 1895 in Sudermann's *Magda* and Rostand's *La Princesse lointaine*. From 1896 onwards it produced chiefly musical comedies, produced by its manager George Edwardes, which included *The Geisha*, 1896; *The Merry Widow*, 1907; and *The Dollar Princess*, 1909. It was demolished in 1934, and its site is occupied by a cinema.

Dalziel Brothers, firm of engravers, printers, and publishers, comprising George D. (1815-1902), Edward D. (1817-1905), John D. (1822-60), and Thomas Bolton D. (1823-1906), sons of Alexander D. of Northumberland, seven of whose sons

became professional artists. The original partnership was constituted by George, draughtsman and wood-engraver, and Edward, who, besides being an engraver, and who was responsible for extending the business to include publishing and printing. The authentic signature on the engravings of the D. B. is 'Dalziel sc.', only their earlier work being signed individually. Both Edward and Thomas were skilled book illustrators, particularly Thomas, whose best illustrations are to be found in early eds. of Wm Cullen Bryant's poetical works, and Jean Ingelow's poems, and notably in the ed. of *Pilgrim's Progress* pub. by Ward, Lock in 1865; in D.'s *Arabian Nights*, 1864; and D.'s *Bible Gallery*, 1880. Woodcuts by George D., who developed his skill under Charles Bray, the engraver, were also executed for the above works. George, though a skilled craftsman, had not the original talent of Thomas D., but he was a prolific engraver, producing alone or with his brothers numerous block engravings for many well-known pubs., such as the Abbotsford ed. of Scott and Charles Knight's Shakespeare, also for the periodicals *Punch* and the *Illustrated London News*, most of which blocks were made after drawings by contemporary artists of estab. reputation, such as Cruikshank, Doyle, and Leech. Later came engravings for the poems of D. G. Rossetti and of the paintings of Millais, Burne-Jones, and other Pre-Raphaelites; for Tennyson's poems (Moxon's ed., 1857); Lear's *Book of Nonsense*, 1862; and for *Alice in Wonderland*, 1865, and *Through the Looking Glass*, 1872—in which latter connection it may be noted that Edward D. was a fellow student of Tenniel at a London school in early manhood. Other works for which the D. B. made well-known engravings were Staunton's Shakespeare, from illustrations by Sir John Gilbert; *Lalla Rookh* from illustrations by Tenniel; and Goldsmith's works, from illustrations by George John Pinwell. See C. and E. Dalziel, *The Brothers Dalziel: a Record of 1840-90*, 1901; F. Colebrook, *Dalziel and the Dalspriests*, 1909.

Dalziel, par. of Lanarkshire, Scotland, situated on the Clyde, 12 m. S. of Glasgow. It includes part of Wishaw and Motherwell, and forms the chief centre of the Scottish Black Country. Traces of the old Rom. Watling Street are to be found nearby. There are large iron and steel works, and a number of engineering firms. Pop. 50,000.

Dam. Prin. types of D. are (i) masonry or concrete; (ii) rock-filled; (iii) earth. (i) The first type is the most popular for large reservoirs, and, owing to the advance in engineering knowledge during the past century, it is exceedingly stable and also built in the most economical way. It is generally triangular in cross-section, and the width at any horizontal section of the D. is governed by the consideration of stability; this requires that the resultant of the two stresses on any portion of the D., viz. the weight of the

masonry above the horizontal section and the force due to the pressure of the water on the fraction of the D. below it under consideration, shall pass within the middle third of the horizontal section. These D.s are made water-tight by concreting the water-face and the bottom of the D. (ii) The second type is cheaper though inferior to the masonry D. It is concreted on its water-face and its outer face consists of masonry carefully built. The space between the two walls is filled with quarry rock of all sizes. In order to make the D. more water-tight the concrete wall is continued downwards until an impervious stratum is reached. (iii) Earth D.s are the cheapest D.s if suitable material is

British Columbia Government
Travel Bureau

SPILLWAY OF BRILLIANT DAM, BRITISH COLUMBIA

available close at hand. They are rendered water-tight by a core of clay that is carried downward until an impervious stratum is reached. Damage to the earth D. that would be caused by the overflow of the water after heavy rains is avoided by building a concrete waterway through the D. See also RESERVOIRS. See W. F. Creager, J. Austin, and J. Hinds, *Engineering for Dams*, 1945.

Damage to Property, see MALICIOUS INJURIES TO PROPERTY.

Damages, in law, the pecuniary compensation awarded to a plaintiff for the breach of a legal duty owed to him. General D. are those *presumed*, without proof of actual loss, to have been suffered as the result of that breach. Special D. are D.

actually suffered (e.g. loss of earnings) which must be proved. Nominal D. are given for a technical infringement of a legal right not involving actual loss. Exemplary or punitive D. are awarded to punish the offender, in addition to compensating the injured party, and may be given in actions for slander, libel, etc. Apart from cases of this character, the general rule is that the D. must be measured by the loss actually sustained, and that D. must be awarded on the principle that the injured party should be placed as nearly as possible in the position in which he would have been if the wrong had not been sustained. Another rule is that in a case where sev. persons are equally concerned in committing an injury, each is liable for the full amount. D. are recoverable for a breach of contract, a civil wrong, or a delict.

Damaghan, see DAMAGHAN.

Daman, or **Damão**, Portuguese settlement on the W. coast of India, some 100 m. N. of Bombay. Daman was first occupied by the Portuguese in 1558, and was finally ceded by the Marathas in 1780. The Indian Gov. are now pressing for its transfer to their authority together with all other Portuguese settlements on Indian ter.

Damanhur, or **Demanhoor**, cap. of the prov. of Beheira, Lower Egypt, on the Mahmudieh Canal, and on the railway line between Cairo and Alexandria. It has trade in cotton and woollen goods. Pop. 84,900.

Damaraland, ter. forming part of SW. Africa, Ger. until after the First World War, when it was mandated to the Union of S. Africa, together with the rest of SW. Africa. It extends inland from the Atlantic Ocean to the Kalahari desert, and lies between Namaqualand and Ovamboland. Part of the E. dist. is very mountainous; further inland lie well-watered prairies. The chief industry of the Damaras (or Herero), a nomadic tribe of Bantu stock, is cattle raising. Copper is found near Otavi, but the chief products of the country are feathers, skins, and ivory. Walvis Bay is the only good harbour. The chief settlements are Windhoek, Omaruru, Ojimbingue, and Otavi. Pop. about 30,000. See also HERERO.

Damascene, John, see JOANNES DAMASCENUS.

Damascening, or **Damaskening**, word referring to the watered lines on blades of weapons, and also to the gold and silver decorations that are incrustated on blades. The word is derived from Damascus, where the art originated and was discovered by Europeans at the time of the crusades. The watered pattern is produced by the process of forging, welding, and soldering rods of iron. The rods are twisted and then welded into one, leaving a fine watered or damascened surface. The gold and silver incrustations with which blades and hilts are ornamented are a typical craft of India and Persia. Gold or silver wire is laid on to a design which has previously been cut or scratched into the surface, and then the wire is hammered into position. Consult Col. T.

Hendley, *Damascening on Iron and Steel, as practised in India*, 1892.

Damascenus, **Joannes**, known as **Chrysorrhoeas** (the Golden-flowing), see JOANNES DAMASCENUS.

Damascenus, **Nicolaus**, philosopher and historian of the Augustan age and a friend of Herod the Great; the dates of his birth and death are unknown, and almost all our information of him is gathered from Josephus. Eusebius, and others who mention him. He wrote various works in Gk, philosophical and political in character, of which none are extant; an autobiography, of which portions have been preserved by Suidas and Josephus; and a universal hist. in 144 books, of which a few fragments remain. The best ed. of the extant portions of D. is that of J. C. Orelli (Leipzig), 1804.

Damascus (**Esh-shâm**), cap. of Syria. On three sides of the city rise the heights of Anti-Lebanon, whence comes the Barada R., spreading itself in seven branches over the great plain. Two of these branches are identified with the ant. Abana and Pharpar mentioned in the Bible. The plain of D., 500 sq. m. in area, is dotted with tns and vils., and is extremely fertile. The city, with its wooded background, presents a picturesque spectacle, for it has numerous mosques and other public buildings, many of which are of considerable interest. The Great Mosque, with its dome 120 ft high, was originally erected in the beginning of the 8th cent. by the caliph Waliph 'Abd-el-Melik. It took the place of a Christian church, which, in turn, had replaced a heathen temple three centuries earlier. The building has sev. times suffered from fire, notably at the hands of Tamerlane in 1401. 'The Great Mosque is immense; there is a great court, and portico of yellow marble, big as a piazza. The general effect from colours is lovely—the Imams' niches, doors, pulpit, worked in marble and mother-of-pearl, and old blue tiles outside under the columns; yet the general effect is absolutely simple' (Freya Stark, *Letters from Syria*, 1945). In the SW. suburb of Meidan is the Gate of God, through which the hadj (*hajj*), the great pilgrimage to Mecca, sets out. The tomb of Nur ed-Din is among the relics of the city, while another place of interest is the 'street called Straight' (Acts ix. 11), which runs a mile through the city from E. to W. Here, too, is Saladin's tomb. Commercially, D. occupies an important position, being now the centre of communications by road, rail, and air. The chief exports are grain, flour, inlaid wood, silken and cotton manufs., the apricot and other fruits. Its industries include the production of metal work, mother-of-pearl inlaid work, gold and silver work, perfumes, attar of roses, carpets, etc. D. gives its name to damsons (Damascene plums). Pop. about 400,000.

History.—The hist. of D. goes back to the days of Abraham. It was the scene of two great events in human destiny—the conversion of St Paul, and, according to Moslem tradition, a great decisive moment in the life of Mahomet, when he

resolutely turned his back once for all on the pleasures of the world. D. belonged in turn to Assyria, Persia, and Rome, and from 661-750 was the cap. of the Caliphate. After being the centre of struggle between the Moslems and Tatars, D. became the cap. of Syria within the Ottoman Empire (1516). Turkish dominion continued until 1 Oct. 1918, when D. was occupied by the allied troops under Allenby and the Arab troops under the Emir Feisal. Feisal estab. an Arab national state and reigned for nearly two years. Meanwhile the Fr. had obtained the mandatory control of the Syrian seaboard with headquarters at Beirut, and friction between the Fr. and the Arabs led to the occupation of D. on 25 July

and in Lancs; woollen D.s around Bradford and Halifax; and silk D.s near London. The industry was introduced into England in the 16th cent. by the Flemish weavers who fled from the persecutions of the duke of Alva. Originally it was brought from the E. to Byzantium by the Crusaders, thence it passed to Italy, and thence to France and Flanders.

Damaskinos (Damaskinos Papandreou) (1891-), Gk prelate and statesman, b. at Doryvoutsa. Bishop of Corinth, 1918, archbishop of Athens, 1937, leader of the Gk resistance in the Second World War. Appointed regent in the absence of the king, 1944, he handed over the gov. to George II on his return to Greece in accordance with a plebiscite in 1946.

DAMASCUS

E.N.A.

1920. Feisal fled to Bagdad. D. was never content under Fr. rule and several risings took place. Syria having remained under control of the Vichy Fr. gov., D. was taken by combined Brit. and Free Fr. troops on 21 June 1941. On 27 Sept. 1941 the independence of Syria was proclaimed at D., which became the cap.

Damask, name given to certain types of fabric with ornamental patterns. The term originated with the rich figured silks of Damascus, and was formerly applied to silk fabrics only; now the name is used also for woollen, linen, rayon, and cotton stuffs with floral or other patterns woven in the loom. D.s are now chiefly used for tablecloths, curtains, and upholstery coverings. Table linen D.s are manufactured at Belfast, Dunfermline, and Barnsley; cotton D.s at Glasgow, Paisley,

Damasus, the name of two popes: *Damasus I* (366-84), b. in Portugal about 304. He was elected pope by a large majority, but the minority resorted to violence and bloodshed in order to place Ursinus in the papal chair. The Emperor Valentinian I decided in favour of D. D. defended the faith vigorously against various heresies, was instrumental in bringing about Jerome's Vulgate version of the Bible, and did much for the preservation of the catacombs. He was the first of the many popes who were artists and patrons of art.

Damasus II, elected pope on 17 July 1048, but succumbed to malaria 23 days later.

Damavand, Mount, a volcanic cone, the chief summit of the Elburz Mts, situated to the N. of Tehran. It reaches a height of over 18,000 ft and carries a permanent

snow-cap. Sulphur is collected from its crater.

Dambul, or **Dambula**, vil. of Ceylon, situated about 40 m. N. of Kandy. It is famous for its cave temples.

Dames of the Order of the British Empire, see **ORDERS OF KNIGHTHOOD, GREAT BRITAIN AND IRELAND** (9).

Dame's Violet, or *Hesperis matronalis*, family Cruciferae, found in Europe and Asia; the flowers are pale lilac in colour and have no scent until the evening. In Britain the double variety is grown in gardens as a hardy perennial.

Damghan, or **Damaghan**, dist. and tn of Persia, on the S. side of the Elburz, N.E. of Semnan. It was formerly also called **Qumis**. In the vicinity are the ruins of the Parthian cap. Hekatompylos. It contains numerous Islamic monuments. Pistachios are exported. Pop. 12,200.

Damian, see **COSMAS AND DAMIAN**.

Damian, Peter, see **PETER DAMIAN, ST. Damien, Father** (religious name of **Joseph de Veuster**) (1840-89), Belgian missionary, b. near Louvain. Educated for a business career, but as a youth entered the Church, joining the Pious Congregation, a Fr. religious order having missions in the Pacific, and was ordained priest at Honolulu in 1861. In 1873, struck with the pitiful condition of the 600 lepers at Molokai Is.—whither the Hawaiian Gov. transported their lepers—D. volunteered to assume spiritual charge of the settlement at that place. For sev. years he worked alone, though later other resident priests assisted him for a time. In 1885 he himself contracted the disease, of which he ultimately d., though he continued with his work until his death. Some ill-conceived imputations on him by a Presbyterian clergyman evoked a fine eulogy from R. L. Stevenson in an *Open Letter to the Rev. Dr Hyde*, Sydney, 1889. The cause of his beatification was introduced in 1932. See lives by E. Clifford, 1889; F. E. Cook, 1889; Father Pamphile, 1889; and C. W. Stoddard, *The Lepers of Molokai*, 1885.

Damiens, Robert François (1715-57), Frenchman who attempted to assassinate Louis XV. He was b. near Arras, became a soldier, and later a menial servant in Paris. On 5 Jan. 1757, as Louis was stepping into his carriage to leave Trianon, D. stabbed him with a knife. He was caught and sentenced to death. He was executed by the most horrible tortures on 28 March 1757.

Damietta, tn and port of Lower Egypt, on the chief E. branch of the Nile, lying between the r. b. of the riv. and Lake Menzaleh. It is about 10 m. from the sea, but has been superseded as a port by Port Said and Alexandria. It still contains busy bazaars, has a considerable export trade in rice, and manufs. cotton, silk, and pottery. The old tn was fortified by the Saracens, but was sev. times taken by the crusaders. Louis IX captured the tn in 1249. When it was restored to the Saracens in 1250 they razed it to the ground, and it was rebuilt on its present site. Pop. 53,600.

Damiri, **Kemal Ed-din Mohammed Ibn**

Musa (1349-1405), Arabian jurist and naturalist. Spent his life in Egypt, being prof. of tradition at the Rukniyya in Cairo and at the Muslim univ. of El Azhar. Belonging to the Shafite school of law, he wrote a commentary on Nawāwi's *Minhaj ul-Talibin*, but is chiefly remembered for his literary and digressive *Hayat ul-Hayawan* (Life of Animals).

Dammara, name given to 4 species of *Agathis* or *Dammara*, coniferous trees from which much resin is obtained. The *A. australis*, or Kauri pine, produces very hard wood used for paving and masts, and is found in New Zealand.

A. dammaras produces resin and gums which are used as pitch and tar on ships and also in varnish; it has many other chemical derivatives. It is aromatic and is used in the E. as incense. See also **SAL TREE**.

Damme, in the prov. of W. Flanders, Belgium; formerly the port of Bruges, 5 m. N.E. of that city, but now merely a vil. In the Middle Ages D. ranked among the important European ports, the channel Zwyn connecting it with the North Sea. The channel silted up in the 15th cent., and the port was closed, Antwerp, on the R. Scheldt, taking its place. Pop. 1100.

Damnonii, Dumnonii, or **Damni**: 1. Brit. tribe inhabiting the W. peninsula (modern Devon and Cornwall) at the time of the Rom. invasions, and having Isca Dumnoniorum (modern Exeter) as their cap.

2. Aet. tribe of Perthshire, inhabiting the W. part of Fife and Kinross.

Dammum Absque Injura (Lat. 'damage without wrong') denotes damage done to a person for which the law provides no remedy. The complementary legal maxim is *ubi jus ibi remedium*, i.e. where there is a right there is a remedy. The exercise of ordinary rights or the use of one's property may cause other persons great inconvenience or damage without incurring legal liability (D. A. I.), e.g. temporary price undercutting by powerful traders to drive competitors out of business.

Damocles, favourite of the elder Dionysius, tyrant of Syracuse. Dionysius, to illustrate what kind of happiness wealth and birth brought to princes, placed him at a luxuriously spread table with a naked sword suspended over his head by a single horse-hair.

Damodar, riv. of W. Bengal, India, with a length of 350 m. It joins the Hugli close to Calcutta. The most important coalfield of India lies in the valley of this riv. It is now the scene of one of India's biggest hydro-electric projects.

Damon: 1. A Pythagorean of Syracuse, whose name is always associated with that of Pythias, properly Phintias. The latter was condemned to death for plotting against Dionysius I, tyrant of Syracuse, but was allowed to go and settle his domestic affairs while D. remained, pledging his own life for the return of his friend. Phintias came back just in time to redeem D., and Dionysius was so much impressed by their love for each other that he pardoned Phintias. Their love has become proverbial.

2. An Athenian musician and sophist, a teacher and close friend of Pericles. He was banished from Athens about 430 bc.

Dampier, William (1652-1715), mariner and adventurer, b. E. Coker, Somerset. He went to sea at an early age, and after voyaging to Newfoundland, Jamaica, and other places he took part in buccaneering expeditions in Central and S. America. He was marooned on the Nicobar Is. in 1688, but managed to reach Achin (Atcheen), and returned to England in 1691. In 1699 he was sent by the Admiralty to explore around Australia and New Guinea, and he gave his name to the D. Strait and Archipelago. On his way back he was wrecked on Ascension Is., but was rescued two months later. After an unfortunate expedition to the South Seas in 1703-7 he made his last voyage as pilot to Woodes Rogers (1708-11) in a privateering expedition. D. was associated with Alexander Selkirk (immortalised as Robinson Crusoe), who was rescued on his last voyage. *A New Voyage round the World* (1697) was D.'s chief work. D. was a very skilled navigator, and his book gives much valuable information told in the perspicuous style of the born travel writer; but it tells us very little of his doings among the Honduranian buccaneers. We know, however, that he must have taken part in many fights, particularly in the bay of Campeachy, and at Santa Maria and other places on the isthmus of Panama and on the Peruvian coast. He was, however, chiefly concerned, as is shown in his famous *Discourse of Winds* (1699), with natural hist., hydrography, weather, and all the phenomena one would come upon as an ocean traveller; the mere incidents of a buccaneering life did not interest him; he followed the calling chiefly as a means of acquiring navigational experience. There seems but little doubt that his great skill as a sailor inspired fear among the Spaniards. His *New Voyage, Voyages and Descriptions*, 1699, and *Voyage to New Holland*, 1703, 1709, all appear in John Masfield's ed. of the *Voyages* (2 vols., 1906).

Dampier, name of certain places in the E. Indies and Australia, which have been called after Wm Dampier (q.v.): 1. Archipelago off the NW. coast of W. Australia, comprising Enderby, Legendre, Dolphin, Rosemary, Lewis, Delambre, and sev. small rocky is.

2. Dampier's Land, a peninsula of Australia, lying between the Indian Ocean and King Sound.

3. Strait between the is. of Papua and Waigio 70 m. long and 35 m. broad. It affords the safest passage between the Indian and Pacific oceans.

4. Strait which separates Umhoi from the W. end of the archipelago of New Britain.

Dampremy, tn in the prov. of Hainaut, Belgium, 1 m. NW. of Charleroi. Coal is extensively worked. Pop. 11,200.

Damrosch, Walter Johannes (1862-1950), Amer. conductor and composer, b. Breslau, son of Leopold D. (1832-85), whom he succeeded as director of the New York Oratorio and Symphony Societies.

Founded D. Opera Company, 1895. From 1903 devoted himself to New York Symphony Orchestra. Founded school for military bandmasters during the First World War. Composed four operas: *The Scarlet Letter*, 1896, after Hawthorne; *The Dove of Peace*, 1912; *Cyrano de Bergerac*, 1913, after Rostand; and *The Man without a Country*, 1937; a *Manila Te Deum*, 1898; and incidental music to Euripides' *Medea* and *Iphigenia in Aulis*, 1915, and to Sophocles' *Electra*, 1916. Pub. *My Musical Life*, 1923.

Damselfly, see DRAGON-FLY.
Damson (a corruption of damascene), cultivated form of *Prunus insititia*, family Rosaceae. The plant is hardy, propagating largely by suckers, the bark is fragrant, and the fruit is late and abundant. The Damascene plum, as it is often called, is eaten raw, stewed, and preserved. A species of Simarubaceae, the *Simaruba amara*, a native of the W. Indies, is known as the mountain or bitter damson.

Dan: 1. Israelite tribe descended from its eponymous ancestor, D., the son of Jacob and Bilhah. The tribe settled in the valleys of Sorek and Ajalon, but spread northwards to Laish, which it rebuilt as D. (see Gen. xiv. 14, xxx. 5, 6; Judges i. xviii., etc.).

2. The most N. limit of the land of Israel (cf. the phrase 'from Dan to Beersheba'), near the sources of the Jordan. The site is identified with the hill Tel-el-Kadi, 3 m. W. of Banias.

3. Trib. of the R. Roanoke, N. Carolina and Virginia, U.S.A.

Dana, Charles Anderson (1819-97), one of the most famous of Amer. editors, b. Hinsdale, New Hampshire, U.S.A. Studied at Harvard Univ. and then entered journalism, serving on the *New York Tribune* in 1847. In 1849 he became its managing editor, and held that position until 1862, taking a strong line against slavery. On his resignation Secretary of War Stanton employed him on various important missions and made him an assistant secretary in 1864. In 1868 he became editor and part owner of the *New York Sun*. Of queer and fiery temperament, D. was savagely independent. He opposed the impeachment of President Johnson, he favoured Gen. Grant's election in 1868 and opposed him in 1872. He opposed Cleveland for the presidency in 1884 and supported him in 1888.

Dana, James Dwight (1813-95), celebrated naturalist, mineralogist, and geologist, b. Utica, New York; graduated at Yale, 1833. D. went as scientific observer on the U.S.A. exploring expedition under Wilkes (1838-42), visiting the Antarctic and Pacific. With his father-in-law, Silliman, he ed. *American Journal of Science*, 1846, and in 1850, on the resignation of Silliman, he was appointed Silliman prof. of natural hist. and geology at Yale. Among his works are *System of Mineralogy* (one of the most important books written on the subject), 1837; *On Zoophytes*, 1846; *Manual of Mineralogy*, 1848; *Reports on the Geology of the Pacific, 1849*; *On Crustacea*, 1852-4;

Textbook of Geology, 1864; *Coral and the Coral Islands*, 1873; and *Havarian Volcanoes*, 1890. See life by D. Gilman, 1899.

Dana, Richard Henry: 1. (1787-1879) Amer. poet and critic, b. Cambridge, Massachusetts. Educ. at Harvard, he studied law, but abandoned it for literature, and was one of the founders of the *North American Review*. In 1821 he started a periodical, *The Idle Man*, which lasted only 6 months. His first book of verse, *The Buccaneer*, 1827, was followed 6 years later by *Poems and Prose Writings*, and in 1839 he gave lectures on Shakespeare which were popular but were not printed.

2. (1815-82) Amer. author, lawyer, and politician, b. Cambridge, Massachusetts, son of the above. Educ. at Harvard, he was especially distinguished in maritime law, but on his eyesight giving way shipped as a common sailor, and gave his experiences in his sea classic, *Two Years before the Mast*, 1840. Other works were *The Seaman's Friend*, 1841, *Vacation Voyage to Cuba*, 1859; and an ed. of Wheaton's *Elements of International Law*, 1866. See C. F. Adams, R. H. Dana: a Biography, 1890.

Danaë, mythical daughter of Acrisius, king of Argos, great-grandson of Danaus. An oracle having foretold that her son would slay Acrisius, he imprisoned D. in a chamber of brass or stone. But Zeus visited her in a shower of gold, and made her the mother of Perseus. At his birth she was cast adrift with him on the sea in a chest, which eventually made land at the is. of Seriphos, where they were welcomed by the ruler, Polydectes. For the remainder of D.'s story see PERSEUS.

Danaides, the 50 legendary daughters of Danaus, who married the 50 sons of their uncle Aegyptus (q.v.). The 49 who murdered their husbands were condemned in Hades (according to some poets) to pour water everlastingly into sieves or bottomless vessels. See Aeschylus, *Suppliants*.

Danakil (singular Dankall), name now generally used for the many nomad and fisher tribes living on the coast of NE. Africa, from Massawa S. to Tajurrah Bay, and thence SW. to Shoa, in the arid region between Ethiopia and Obock. They are a Hamitic tribe of the Ethiopian branch, well built and slender, with features indicating intermixture of Arab blood. They claim to be Arabs and Moslems, but are really pagans, with a diabolical reputation as slavers. Nowadays they live on their own large flocks and herds of goats and cattle. They are extremely indifferent to the taking of human life, especially in regard to other clans. Victims who are killed by the D. are invariably mutilated, and gruesome relics from these victims are much prized. Their native name is Afar. For language see Isenberg, *Vocabulary*, 1840. See also Scaramucci and Giglioli, *Notizie sui Danachilli*, 1884.

Danaus, mythical son of Belus and grandson of Poseidon, joint-king of Egypt with his brother, Aegyptus. Jealous of

the power of the latter's 50 sons, or terrified by an oracle, he fled to Argos (home of his ancestress, Io), and became king there. He gave his 50 daughters (see DANAIDES) in marriage to his brother's sons, commanding them to kill their husbands on the wedding night (see AEGYPTUS). He was said to have reigned 50 years, and first taught the people to dig wells. D. was reputedly founder of Argos, and ancestor of the Danal.

Danbury: 1. Vil. of Essex, England, 4½ m. SE. of Chelmsford. Here is D. Park, one-time palace of the bishop of Rochester. Pop. 2900.

2. Co. seat of Fairfield co., Connecticut, U.S.A., situated on the R. Still. The most important industry is the manuf. of felt hats, which has been carried on since the 18th cent. D. also manufs. machinery, metal products, silverware, clothing, chemicals, aircraft, and rubber and paper products. It has been the site of D. Fair since the early 19th cent. Pop. 22,067.

E.N.A.
A DANAKIL SHEPHERD

Danby, Francis (1793-1861). Irish landscape and historical painter, b. Co. Wexford. He studied in Dublin and became drawing-master at Bristol between 1813 and 1825. He lived abroad, 1830 to 1842, but exhibited regularly at the Royal Academy. He was noted for imaginative subjects sometimes recalling the work of John Martin, examples being 'The Deluge' (Tate Gallery) and 'The Opening of the Sixth Seal' (National Gallery of Ireland).

Danby, Frank, pseudonym of Julia Frankau (1863-1916). Brit. novelist. She married Arthur Frankau in 1883. Her best novels are *Pigs in Clover*, 1903, *The Sphinx's Lawyer*, 1906, *The Heart of a Child*, 1908, *Let the Roof Fall in*, 1910, and *Joseph in Jeopardy*, 1912.

Dance, George, the Elder (?1700-68), architect to the city of London; designed the Mansion House (1737) and 3 London

churches: St Matthew, Bethnal Green; St Leonard, Shoreditch; and St Botolph, Aldgate.

Dance, George, the Younger (1741-1825), succeeded his father as architect to the city of London; rebuilt Newgate Prison (1770-83); designed St Luke's Hospital, Old Street (1782); and was prof. of architecture at the Royal Academy (1798-1805).

Dance, Sir Nathaniel (1748-1827), sailor, son of James D. (d. 1774), grandson of George D. the elder. He entered the E. India Company's service, 1759, commanding a ship, 1787. While commanding the E. India Company's homeward bound fleet (1804) he defeated a strong Fr. squadron of men-of-war off Pulo Aor, and reached St Helena safely. See Sir A. Markham, *Sea Fathers*, 1832; W. James, *Naval History of Great Britain*, iii. 1860; and F. Marryat, *Newton Forster*, 1865.

Dance-Holland, Sir Nathaniel (1735-1811), painter, son of George Dance the elder. Learned painting under Hayman, the genre-historical painter. Took up residence in Italy, where he came into contact with Angelica Kauffmann, of whom he was a devoted admirer. He produced a number of historical 'quasi-classic' paintings, such as 'Dido and Aeneas' (1763). He settled in London in 1768 and his name figures among the founders of the Royal Academy. In Greenwich Hospital is his portrait of Capt. Cook. Having made a large fortune he abandoned painting, became M.P. for E. Grinstead, and, after being created baronet (1800), changed his name to D.-H.

Dance of Death, name of a dramatic or pictorial allegorical representation of the universal power and supremacy of death over mankind, first presented as a church play (see MIRACLE PLAY and MORALITY), dating from about the 14th cent. It came to be most frequently represented with music and dancing, and all the adjuncts of a festival, to point the contrast all the more sharply. It is supposed that the 7 brothers of the Book of Maccabees (ii. 7) played an important part in a representation of the kind, or else the first representation, which took place at the monastery of the Innocents, Paris, fell upon their festival. Hence the origin of the name Chorea Machabaeorum, or Danse Macabre, by which it is frequently known. The dramatic form consisted of short dialogues between Death and about 24 followers, representing all ranks of mankind. In Spain it appeared as 'La Danza General de los Muertos.' The drama survived till about the 15th cent. In Germany the subject was very often treated. The representations on the cloister walls of the Klingenthal (Basel Convent) date from 1312. There is an example in one of the chapels of the Marienkirche at Lübeck, much resembling one at La Chaise-Dieu in Auvergne of 14th cent. date. In 1425 a series of pictures was painted on the walls of the monastery of the Innocents. A 'Triumph of Death' (wrongly ascribed to Andrea Orcagna) is in the Pisan Camp Santo, dating from the 15th cent. Similar frescoes were executed in

London after 1430. In Henry VI's reign there was one round the cloisters of Old St Paul's. The Tower of London, Croydon Archbishoppal Palace, Hungerford Chapel (Salisbury), Wortley Hall (Gloucestershire), and Hexham (Northumberland) also had examples. Holbein's 52 sketches for engravings are especially famous and original in design—the 'Imagines Mortis' (originals at Leninigrad). The first series was engraved by Lützelburger, 1520; the larger was pub. at Lyons, 1538, in book form. A modern representation is that of A. Rethel (q.v.). Rowlandson's *English Dance of Death*, 1815-16, is an Eng. adaptation. The subject has been treated in music by Saint-Saëns. See E. G. Peignot, *Recherches sur les danses des morts*, 1826; W. Seelmann, *Die Todten Tänze des Mittelalters*, 1893; A. Blackwood, *The Dance of Death, and other Tales*, 1927; P. Rous, *The Modern Dance of Death*, 1929; J. M. Clark, *The Dance of Death by Hans Holbein*, 1949; and *The Dance of Death in the Middle Ages and the Renaissance*, 1950.

Dancetté (from Lat. *dens*, tooth), one of the lines of partition in heraldry, differing from indented only in the greater width and depth of the indentations or notches. The fesse D. has only 3 indentations. They are arranged like the zigzag or chevron moulding, a common ornamentation in Saxon and early Norman architecture.

Dancing (see also BALLET), the oldest of the arts, derives from man's primitive need to give physical expression to strong emotion. When we are happy we jump for joy and shout or sing, frightened we tremble and scream, hurt we writhe and groan. Each of these motor impulses, which cannot altogether be repressed even in the most punctilious drawing room, is nearly always expressed in terms of voice and movement. This link between voice and movement is the beginning of the link between music and D.

Such sounds and movements, moreover, have a distinct quality. A jump and cry which express fear are quite different from a jump and cry which express joy. These distinctions, recognised from earliest times, soon came to be incorporated in religious, tribal, and patriotic ceremonies, like those of the aboriginal Australians, the most primitive of living peoples, which have been recorded for us on films. Here one may see how involuntary sounds and movements expressing particular emotions came to be re-created voluntarily for a special emotional purpose. The warrior going into battle enacts his own courage and the enemy's cowardice; the hunter depicts his stealth, whilst a member of the tribe, wearing the skin of the hunted, reacts as the hunters hope the quarry will react. Imitative actions of this kind, accompanied as always by appropriate sounds and performed collectively, could steel the will and steady the purpose of a tribe or family. They might propitiate friendly spirits, ward off evil ones, and dismay a foe. Always, however, there was the important result that by the collective performance of these

actions something of the emotion represented by the actions communicated itself to the performers. If this was so for them why should it not be true for the enemy? Why should not fear enter his soul? To our ancestors the magical powers of D. were not in question.

As time passed D. and singing, originally performed by the same individuals, began to separate. The dancer, unable because of his exertions to make all the appropriate noises, handed this function to others who sang for him or clapped to emphasise or accentuate the rhythm of his feet. From this developed by long and complicated processes the rhythms and music of the dance to-day. The purely functional purpose of song and dance began to be overlooked and D. ceased to be only communal. There began to be dancers and singers who were watched and heard for their individual excellence. Thus 2 kinds of D., the communal or social dance and the individual (ultimately theatrical or art) dance, began to develop in separate but parallel ways influenced by geographical, racial, environmental, cultural, and historical conditions. These conditions have led in India and much of the Orient to the creation of a dance idiom in which the hands and the upper body play a major role, the fingers being bent back and the head and neck moving laterally from side to side. By contrast, African and Pacific peoples centre their dance movement largely in the pelvic region; and European D. maintains a rigid spine whether the ground is vigorously stamped as in Sp. and, say, Hungarian national D. or touched softly as in ballet.

Everywhere, however, D., because of its origin deep in man's physical and emotional nature, has continued to reflect man's activities and condition. Throughout history and in our own times it has expressed his fears and hopes. Everywhere, for whatever purpose it is performed, it continually exercises its 'magical' power of communication. Thus in recorded religion it has been used for purposes comparable with those intended by our primitive ancestors when they first sought to appease the spirits. The Israelites 'danced before the Lord'; the dance featured in the temple processions of the Egyptians and was cultivated by the Greeks. Even Christianity, which never incorporated D. into any of its rites (rather looking upon it with suspicion), has always used it in ceremonies and religious feasts. To this day a ballet is danced every night before the high altar of Seville Cathedral during the Corpus Christi octave, and much of the Church recognises D. as a suitable form of public rejoicing on the great days of the Christian calendar. In similar ways and for similar reasons the war dances still in the tribal ritual of the Maori, African, and Amer. Indian peoples, the wedding dance in Hungary, the rigadoun in France, the maypole dances in England, and the polonaise in Poland all reflect the ancient purposes of D.

D. in our own time continues to be a response to an emotional need. For this

reason new dances of the communal kind usually spring from the least inhibited sections of society, to be taken up later and modified to suit more restrained tastes. The stately minuet began as a boisterous peasant dance. The waltz, which came from the peasants of Austria and Bavaria in the 18th cent., shocked the ballrooms of the early 19th cent. because the dancers stood face to face. To-day, rock 'n' roll imported from America and adopted particularly by working class youth was first condemned by 'respectable' society. It has now been introduced into our ballrooms in modified form, just as the turkey trot, the bunny hug, and the charleston were before it. Such constant change is characteristic of all D., but especially of the modern social dance which rapid world communications and mechanised entertainment subject to a multitude of foreign influences. The ballroom is thus the home of the folk dance of our international technological society.

The theatrical or art dance shows a similar development from similar origins. It arose to satisfy emotional needs and its steps and ideas are always being informed and rejuvenated by the 'popular' steps created for communal D. Trained dancers perform with special excellence what the ordinary dancer might himself have danced in origin centuries before. D. supplemented the religious and dramatic representations of the Greeks and was developed in one form by the Romans as serious and comic pantomime. This pantomime survived the barbarian invasions of Italy and the Dark Ages to reappear as mummings, masquerades, and interludes during the 14th and 15th cents.

In 1489, for example, a magnificent entertainment arranged at Tortona by Bergonzio di Botto to celebrate the marriage of Duke Galeazzo of Milan to Isabella of Aragon took the form of an interlude. Each dish at the banquet was accompanied by D., singing, and so on. The entertainment, however, was so original and became so famous throughout Europe that it marks a turning point in the evolution of a new art. Other courts copied it and developed its ideas. Within a century ballet had become a recognised entertainment in the courts of Europe quite different in quality from the mummings, the masquerades, and the interludes from which it sprang. Its form and new status were summed up in the *Ballet Comique de la Reine*, commanded in 1581 by Catherine de' Medici at the Fr. court to celebrate the betrothal of the Duc de Joyeuse to Marguerite of Lorraine. From this entertainment, which was written down and described in the first record of a ballet ever printed, ballet as an art form may be said to date. The fame of the *Ballet Comique* rang louder even than that of its predecessor at Tortona a hundred years before. It stimulated immensely the arts whose combination the art of ballet specially demands—poetry (for mood or story), painting (for design and costume), music, and D.

These early ballets, however, whilst

characteristically combining these arts (and singing, spoken lines, and much else besides), were mainly significant as the channel through which the ideas of the It. courts passed to France and took root so deeply that France became the home of ballet.

The art developed gradually under Henry IV (1589-1610) and Louis XIII (1610-43), then took an immense leap forward under Louis XIV (1643-1715), who combined a passion for D. with excellent taste and a sense of theatre. Under him the Académie Royale de Danse was estab. in 1661 and the Académie Royale de Musique in 1669. Ballet ceased to be an entertainment for the court alone; it passed into the realm of public entertainment and developed as opera ballet under the influence of the Eng. masques, another expression of the *Ballet Comique*, especially popular at the courts of James I and Charles I.

The estab. of a formal school of D. at the Académie Royale de Danse centred the new art in Paris. Henceforth its language, the description of its steps and so on, became (and still remain) French. All the early personalities of ballet were French—Beauchamps who first laid down the 5 positions of the feet, Camargo who introduced new steps and liberated women from the restrictions of the floor length skirt, Sallé who further liberated women from the restrictions of dress, and Jean Georges Noverre (1727-1810), creator of the *ballet d'action*, and author of *Lettres sur la danse et les ballets*, the first great text book of ballet.

From Noverre, who worked much outside France, we can trace the spread of the art to other countries. Noverre's pupil Dauberval was the teacher of 2 Italians, Salvatore Viganò, who estab. himself at Milan in 1812, and Carlo Blasis, who became director of the Imperial Academy of Dancing and Pantomime at La Scala, Milan, in 1837. These 2 remarkable men jointly laid the choreographic, technical, and pedagogical basis of ballet as we know it to-day, and a whole school of D. is directly descended from them. It was Giovanni Lepri, a pupil of Blasis, who taught Enrico Cecchetti, ballet master to Diaghilev (q.v.) and teacher of many Eng. dancers to-day.

The fame of Fr. ballet led to invitations from other caps. The Empress Anne of Russia estab. a state school of ballet in 1735 under the direction of Landé. This directorship, and indeed the direction of all the Imperial Ballet in Russia, remained under Fr. influence for nearly 2 centuries. Landé was succeeded in 1801 by Didelot, and he by other Frenchmen until in 1858 Marius Petipa from Marseilles was appointed *maître de ballet*. Petipa's rule, supported by Gustave Johansson, a Dan. teacher trained in the pure Fr. school, only ended with his death in 1910.

Similarly in Denmark a Frenchman, Pierre Laurent, founded the first regular school of D. at the court theatre. His successor Galeotti, though an Italian, had acquired a leaning towards the Fr. style before coming to Copenhagen, and his

successor Bournonville, a Dane who is the father of modern Dan. ballet, was also trained in France.

Russian and Dan. ballet are therefore rooted in the Fr. school and Dan. ballet has continued in this tradition almost up to our own time. Ballet in Russia, however, came under the influence of the It. school of Viganò and Blasis through the virtuosos dancers this school produced. Chief among them were Virginia Zucchi, Pierina Legnani, and Enrico Cecchetti, engaged as *premier danseur* and professor of D. at St Petersburg in 1887. From this It. school of training 20th cent. Russian dancers developed the impressive technique which was among the glories of the Russian Ballet brought to Paris in 1909.

The Russian Ballet with Vaslav Nijinsky, Anna Pavlova, and Tamara Karsavina (q.v.) among its early leading dancers revived ballet in Western Europe after the decline which had followed the great Romantic Period in Paris in the mid 19th cent. It was the memory of the best elements of this Romantic Period, but still more the liberating influence of an Amer. Isadora Duncan (q.v.), who visited Russia at the turn of the century, which animated the work of Diaghilev's prin. choreographer, Michel Fokine (q.v.). Fokine's ballets for the Diaghilev seasons in London and Paris before 1914 revolutionised the art of choreography. In place of artificial mime which told the story interspersed with conventional dance *disenfranchisements* he insisted that incident and emotion should be described through dance alone. Whether a ballet conveys a mood or depicts a drama, the marriage of dance, music, décor, and costumes should be able to convey the librettist's intention without recourse to artificial explanation. He demonstrated his views with *Les Sylphides* and *Petrouchka* and thus re-estab. much of the emotional impact upon the public which ballet had lost. He reminded ballet, however indirectly, of its primitive origins.

After his departure from the Diaghilev Company in 1914 Diaghilev developed a succession of brilliant choreographers and dancers until his death and the end of his company in 1929. The dancers and the choreographers, of course, lived on, settled in different countries, and founded companies of their own, built on his ideas and on the influence of Pavlova, whose D. had won the general public for the art. To this process Britain owes its Royal Ballet under Dame Ninette de Valois. France the personal rule of Serge Lifar at the Opéra, and America its New York City Ballet under George Balanchine. These companies in turn, together with the companies in Russia and Denmark, have produced dancers who have founded other companies in other countries. To-day ballet is growing as a national art throughout Europe, SE. Asia, Japan, S. America, and all the members of the Brit. Commonwealth. Its decisive centre, however, remains in Europe and European Russia.

Parallel with this development has gone the development of other techniques of

stage D., almost all of which owe something to the influence of Isadora Duncan's ideas of 'free dance,' D. which conveys emotion uninhibited by the demands of technique or formal steps. Those who came after her, however, realised the limitations of a style of D. which had no vocabulary and no system of training. They developed their own systems, systems of 'modern' dance which reflected a variety of influences from the folk traditions of Negro America derived from Africa to the movements of the modern proletariat in factory and field, oriental dance traditions, and the educational work of Jacques Dalcroze in music and movement. Some of these systems are so highly personal that they will perish with their inventors. Among the most influential have been Ruth St Denis, Ted Shawn, Hanya Holm, Doris Humphrey, Charles Weidman, and Martha Graham in America, and Rudolf von Laban, Mary Wigman, Kurt Jooss, and Sigurd Leider in Germany. Their methods and ideas, often combining with the ideas and techniques of ballet, have produced what is beginning to be known as 'the technological dance,' the stage dance which reflects the hopes and doubts of our technological society as faithfully as the hoppings and shufflings of primitive man reflected the hopes and doubts of his society. This D. is represented to-day in theatre, cinema, and television by the work of choreographers like Agnes de Mille, Eugene Loring, Fred Astaire, Gene Kelly, and Michael Kidd.

Dancourt, Florent Carton (1661-1725), Fr. actor and dramatist, b. Fontainebleau of good family. He was educ. for the legal profession, but when he appeared at the Théâtre Français in 1685 his gift for comedy at once brought him success as an actor. One of his greatest successes was as Alceste in Molière's *Misanthrope*. He wrote over forty plays, many of which display his genius for depicting peasant characters. Among the best of his plays are *Le Chevalier à la mode*, 1687; *Les Bourgeoises de qualité*, 1700; *Le Galant Jardinier*, 1704. In his later years D. retired to his château in the country, and

devoted himself to writings of a religious character.

Dandelion, or *Taraxacum*, cosmopolitan genus of Compositae with hundreds of forms. *T. officinale* is the common D., *T. laevigatum*, the lesser D., and *T. paludosum* and *T. sputabile* are Marsh D.s. The name is derived from the Fr. *dent de lion*, or lion's tooth, on account of its jagged appearance.

Dandelion Wine, see WINES, HOME-MADE.

Dandie Dinmont Terrier, called after the character in Scott's *Guy Mannering*, who was founded on a Border farmer, Mr. Davidson of Hindlee, Teviotdale, who had helped to introduce the breed. There are two varieties, peppers and mustards, the former being slate-blue in colour, and the latter yellow. It is a strong muscular dog, a fearless fighter, and somewhat unmanageable. It has in it some bulldog blood. The muzzle is deep and the jaws very strong. The coat is moderately long, and the ears feathered to a point. Weight about 20 lb.

DANDIE DINMONT TERRIER

Dändliker, Karl (1849-1910), Swiss historian and professor at the univ. of Zürich. Among his works is *Geschichte der Schweiz*, 1883-8. With J. Müller he wrote *Lehrbuch der allgemeinen Geschichte*, 1891; and *Geschichte der Stadt und des Kantons Zürich*, 1908-12.

Dandolo, Enrico (c. 1120-1205), doge of Venice from 1192 to 1205. He belonged to a famous Venetian family, being its most distinguished member. Though about 72 when he was elected doge, he proved a vigorous and brave ruler. In 2 naval battles he successfully ended the war with Pisa; marched at the head of the Crusaders in 1201, and took Constantinople by storm in 1204. Enrico's eldest son, Fantino, was patriarch of Constantinople; and the second son, Rainieri, was procurator of S. Marco, and was killed in Candia (1213). There were 3 other doges of the D. family: Giovanni, 1280-89; Francesco, elected 1329-39; and Andrea, 1343-54, author of a chronicle of Venice pub. in the *Kerum Italicarum Scriptores* of Muratori and a close friend of Petrarch, some of whose letters to him are extant.

Dandurand, Raoul (1861-1942), Canadian barrister, b. Montreal; son of Oedipe D. Educ. Montreal College,

Laval Univ. (LL.B., 1882; LL.D., 1909), and McGill Univ. Called to Quebec Bar, 1883; K.C., 1898. Assistant attorney-general for Quebec Prov. Called to Senate by Lord Aberdeen, 1898. Speaker of Senate, 1905-9. P.C., 1909. Leader of Senate in govs. of Mr Mackenzie King of 1921 and 1928. President of Assembly of League of Nations, 1925. Wrote *Traité théorique et pratique de droit*, 1890.

Dandy Fever, see DENGUE.

Dandy-horse, see CYCLES AND CYCLING.
Danegeld, land-tax, originally levied by Ethelred II to buy off the Danes. It was thus levied in 991, 994, 1007, and 1012. It was also used as a method of taxation by Canute, and, after being abolished by Edward the Confessor, was revived by William the Conqueror, being levied for the last time in 1163.

Danelaw, **Danelagh**, or **Danelagu**, ter. in England which Alfred the Great ceded to Guthrum in 878, after the battle of Edington. It was largely reconquered by Edward the Elder, but in 940 Edmund I was forced to cede that part of the D. comprising the modern Lincs, Leics, Notts, and Derbyshire to Olaf Guthfrithson, Viking king of Dublin. Edred (q.v.) campaigned vigorously against attempts by the Norsemen to reassert their authority in the rest of the D., and when he d. (955) his rule was acknowledged throughout the region. The D. corresponded roughly to 15 of the modern Eng. cos. in the N. and E., from Northumberland in the N. to Essex in the S., Watling St. being the approximate W. boundary. Dan. customs and a modified Dan. law ran throughout the region, and it contained a large Scandinavian element in the pop., which soon intermarried with the A.-S. inhab. The Dan. element was obviously much stronger in some areas than in others, as can be determined from a detailed study of the place and personal names listed from NE. England and Norfolk and Lincs in Domesday Book.

Danes, name given to Scandinavian tribes, especially to the inhab. of Denmark. In the 5th cent. AD they replaced the Angles and Jutes. They are usually described as a yellow-haired, blue-eyed people of medium height. Tradition points to Zealand as the home of the D.; at a later stage the name D. was applied to all inhab. of Jutland and the is. The old Dan. language occurs in runic inscriptions, 700-1050, the Viking period. Three marked periods in their list. are the Viking period up to Canute (d. 1035), time of Valdemar I and II (1157-1227), and the 14th cent. See also DENMARK. See J. A. Danstrup, *History of Denmark*, 1948; and S. M. Toynce, *Scandinavians in History*, 1949.

Danes' Dyke, see FLAMBOROUGH HEAD.

Dangerfield, Thomas (c. 1650-85), conspirator, son of an Essex farmer. He became a thief, and later a false coiner and perjurer. He pretended to have discovered the so-called Meal-tub Plot against Charles II. He was convicted of perjury in 1685, and d. from a blow shortly afterwards.

Dangerous Trades. This term is used in

a somewhat technical sense, not including all D. T., but principally those in which some form of poison or disease is incidental to the trade itself, as now carried on. The designation is reserved not so much for trades in which sudden injury or death may result from machinery as for those in which the causes of danger and injury are slower acting. It cannot be applied to the poor sanitation and ventilation incidental to many trades. The Factory and Workshops Act, 1883, was the first real attempt to deal with the question. The Act of 1891 gave the Home Secretary power to make regulations for any industry (not domestic) certified to be dangerous to health. By 1898 the inspectors had won 49 out of 56 cases, and these trades were henceforward classed as dangerous. They include, among various others, manufs. of china, earthenware, white lead, lucifer matches, paint, and arsenic, dry cleaning, furrier's work, tanneries, use of grindstones, electric generating works, quarries, bottling, spinning, weaving, and working in compressed air, i.e. at a pressure higher than that of the atmosphere. Of industrial poisons lead and lead compounds are the most dangerous, and they concern about 130 trades, including smelting, painting, plumbing, printing, and the manuf. of earthenware. All chemical workers are liable to various affections, especially of the skin. Ulcers are common to those working in pitch and tar, and anthrax is known as the wool-sorters' disease. The coal-miner is subject to numerous accidents and sev. possibilities of danger, especially from gas-poisoning. Miners, stone-masons, and textile workers are subject to dust diseases of the lungs. Cotton is best operated in a humid atmosphere, and the temp. is apt to become dangerously high. Coughs and asthma, accompanied by fever, are sometimes caused by a mould fungus adhering to raw cotton. The Home Office have in Horseferry Road, Westminster, the Safety, Health, and Welfare Centre (Factory Dept) (open free to the public) devoted to the subject of D. T. In 1917 the U.S.A. made an inquiry into the cotton industry, finding the rate of disability for males was 37.7 per 1000 in May and June and for females 34.4, while in Nov. and Dec. the figures were 18.9 and 17.9 respectively. See Industrial Welfare Society, *Welfare in Industry and Health Service in Industry*, 1942; Dept of Health, Scotland, *Health and Industrial Efficiency*, 1943.

Daniel, Arnaud, see ARNAUT DANIEL.

Daniel, Père Gabriel (1649-1728), Fr. author and theologian; entered the Society of Jesus in 1667. Louis XIV gave him a pension and the title of historiographer of France. He wrote *Histoire de France*, 1713, of which many eds. and abridgments appeared (see Griffet's, 1750-60). Voltaire criticised it harshly. His *Entretiens de Cléandre et d'Eudoxe*, 1694, was an attempt to refute Pascal's *Lettres provinciales*. His *Histoire de la milice française* is well known (1721). D. attacked Descartes's views and doctrines. See C. Sommervogel, *Bibliothèque des*

écrivains de la compagnie de Jésus, II, 1669; P. L. Joly, *Eloges de quelques auteurs français*, 1742.

Daniel, Samuel (1562-1619), poet and dramatist, b. probably near Taunton, Somerset, son of a music master. He was educ. at Magdalen Hall, Oxford, but left without a degree. He then served as tutor in sev. noble families, his patrons including the Earl of Pembroke and Lord Mountjoy. In 1592 he pub. *Delia*, a fine sonnet sequence, and *The Complaint of Rosamond*. About the same time there is a reference to him in Spenser's works as a poet who has recently become known, and tradition asserts that he succeeded Spenser as Poet Laureate in 1599, the year in which he pub. *Musophilus, or A General Defence of Learning*. A weighty poem in 8 books, *The History of the Civil Wars between York and Lancaster*, had appeared in 1595. His *Defence of Rhyme*, pub. about 1602, championed the native Eng. use of rhyme, and was an answer to Campion's *Art of English Poesy*, which advocated classical metre. His plays include *Cleopatra*, 1594, a Senecan tragedy, but his chief work for the stage consisted of masques and pastorals designed for court functions, such as *The Vision of the Twelve Goddesses*, 1604, *The Queen's Arcadia*, 1605, and *Hymen's Triumph*, 1614. He entered the royal service and from 1615 to 1618 was Inspector of the Children of the Queen's Revels, finally retiring to a farm in Somerset. D. is said to have enjoyed the friendship of Marlowe and Shakespeare, and his poetry was praised by such acute critics as Drummond of Hawthornden, Coleridge, and Hazlitt. His complete works were ed. by A. B. Grosart, 1885-96. See W. Oldys, *Life of Daniel*, 1737.

Daniel, Book of, composed during the reign of Antiochus IV (about 165 BC) to strengthen the Jews under persecution during the attempt of Antiochus to substitute Gk religion for the worship of Yahweh. The period it describes is that of Nebuchadnezzar, king of Babylon, and the following kings. The book falls into two subject divs.: (1) chaps. i-vi, which tell how Daniel at the Babylonian court rises to high rank through his power of interpreting dreams; (2) chaps. vii-xii, containing four prophetic visions. Chaps. ii-ii. 4 are written in Hebrew, chaps. ii. 4-vii in Aramaic, the rest in Hebrew. The most probable explanation is that the original Hebrew was trans. into the vernacular Aramaic, and that the trans. was later used to supply missing parts in the original. The prophetic visions clearly refer to events of the reign of Antiochus Epiphanes, and the historical flaws show the date cannot be earlier. It is not however intended as history, but prophecy in a narrative and apocalyptic form. It is important for its influence on Jewish apocalyptic writings, for its revelation of the doctrine of a Resurrection, and for the vision of the Heavenly Son of Man which Christ applied to Himself. See commentaries by R. H. Charles, 1929, and S. R. Driver, 1921.

Daniell, John Frederic (1790-1845),

scientist, b. London. He invented the D. constant battery, a hygrometer in 1820, and a pyrometer in 1830. He was a fellow of the Royal Society (1813), Copley medallist (1836), and was prof. of chem. in King's College, London (1831-45). His writings include *Meteorological Essays*, 1823; and *Introduction to Chemical Philosophy*, 1839.

Daniell, Thomas (1749-1840), painter and illustrator, b. Chertsey, son of an innkeeper there. He was apprenticed to an heraldic painter, a dying trade. A leaning towards archaeology and botany revealed itself in paintings of topographical subjects and flower studies. He spent 10 years in India, publishing, on his return to England, his chief work, *Oriental Scenery* (6 vols.), 1795-1808. He executed many studies of oriental subjects, including temples and jungle scenes. His other illustrated works, executed in aquatint, include *Views of Calcutta*, *Views in Egypt*, and *Picturesque Voyage to China*. R.A. 1799, and fellow of the Royal Society about the same time.

Daniell, William (1760-1837), landscape-painter and engraver, nephew of Thomas D. with whom he went to India. D. entered the R.A. schools in 1799, becoming R.A. in 1822. He pub. *A Picturesque Voyage to India*, 1801-11; he engraved many of George Dance's portraits. His great work, *Voyage round Great Britain*, was completed between 1814 and 1825. Though his subjects were novel and interesting, his artistic merits were not exceptional. See Redgrave's *Dictionary of Artists*.

Daniell Cell. The D. C. consists of a zinc or amalgamated zinc electrode in dilute sulphuric acid or acidified zinc sulphate solution. It forms the negative pole. A copper electrode forms the positive pole and sometimes this is the outer vessel itself, the electrolyte being a concentrated solution of copper sulphate. The two solutions are separated by a porous pot of unglazed earthenware which allows ions to pass through but does not allow the solutions to mix. When the cell is connected to an external circuit, copper is deposited from solution on the copper electrode and the zinc dissolves in the acid. Hence the solution of copper sulphate decreases in strength whereas that of the zinc ions becomes more concentrated. The e.m.f. is approximately 1.1 volts.

Daniels, Josephus (1862-1948), Amer. editor, politician, and diplomat; b. Washington, N. Carolina, and educ. at Wilson (N. Carolina) Collegiate Institute. He became a prominent local newspaper editor and owner. He entered the Cabinet as the nominee of W. J. Bryan, his close friend, whose election publicity campaign he had directed—as he did for Woodrow Wilson in 1912. Like Bryan's, his outlook was narrowed by his strict views on religion, liquor, and pacifism. It was therefore somewhat anomalous that he was destined to put the Amer. Navy—he was secretary of the navy under Wilson, 1913-21—on an equal footing with that of China as the largest in the world. When the Democratic party

returned to power in 1933 under Franklin Roosevelt, his former assistant at the Navy dept. D. was appointed ambas. to Mexico, holding the post during Roosevelt's second term. Pubs. include *Our Navy at War*, 1922; *Life of Woodrow Wilson*, 1924; *Tar Heel Editor*, 1939; *Editor in Politics*, 1941; and *The Wilson Era*, 1944-6.

Danielson, Mrs J. S., see HURST, FANNIE.

Danilevskiy, Nikolay Yakovlevich (1822-85), Russian scientist and thinker, anti-Darwinist. He was the first to develop (in *Russia and Europe*, 1871) a philosophy of hist. as a series of distinct civilisations; this was later built upon by Spengler, Alfred Weber, and Toynbee. As a publicist D. was an exponent of extreme Pan-slavism.

Danilo, Petrović Njegoš (1677-1735), ancestor of the dynasty of Petrović-Njegoš, first hereditary prince-bishop (*vladika*) of Montenegro (1697-1735). He ordered the massacre of all Montenegrins who were Moslems or partisans of the Porte (1702), and carried on continuous wars with the Turks.

Danilo I, Petrović Njegoš (1826-60), prince of Montenegro (1851-60), succeeding his uncle (Vladika Peter II). He belonged to the family from which the prince-bishops of Montenegro had been chosen since 1697. D. was educ. at Vienna. He declared the line of hereditary prince-bishops at an end on his accession, and began ruling as a secular prince. Fierce war was waged with the Turks from 1852 until, after their defeat at Grahovo (1858), D. obtained the nomination of a European commission to mark a definite boundary between Turkey and the principality. He did much to improve the laws and social condition of his people. He was assassinated in 1860.

Danish Architecture, see SCANDINAVIAN ARCHITECTURE.

Dankara, dist. of W. Africa, situated in Ghana, with some gold mines.

Dannat, William T. (1853-1929), Amer. artist, b. New York. He studied at the Royal Academy, Munich, and was later a pupil of Munkacsy at Paris; he is especially noted as a figure- and portrait-painter. His 'Castanet Dance, a Quartette,' 1884, is now in the Metropolitan Museum, New York.

Dannay, Frederic, see QUEEN, ELLERY.

Dannebrog, the Dan. national flag, see FLAG.

Dannebrog, Order of, see ORDERS OF KNIGHTHOOD (DENMARK) (2).

Dannecker, Johann Heinrich von (1758-1841), Ger. sculptor, who became prof. of sculpture at Stuttgart. He executed busts of Schiller, Gluck, Lavater, Metternich, and other notable personalities. His 'Ariadne on the Panther' and his 'Christ' at Leningrad are among his finest work.

Dannemora, tn. of Sweden in the prov. of Upsala. It is the centre of the most important iron field of the country, and the best iron in Sweden is obtained here.

Dannevirke, anc. line of defensive earth-works in Slesvig, built originally by the

Danes under Godfred in the time of Charlemagne (AD 808), N. of the Eider, extending for 10 m. from the Sli to the Trene. It was enlarged in the 10th cent. Later it fell into ruins, but was repaired in the 19th cent. and pulled down by the Prussians after their victory over Denmark in 1864. Its remains, however, have been rich in archaeological finds.

D'Annunzio, see ANNUNZIO.

Dante Alighieri (1265-1321), It. poet, b. Florence, probably in the latter part of May 1265, some nine months before the battle of Benevento. His father, Messer Alighiero di Bellincione de Alighiero, came of an ancient and honourable family of that section of the city named from the Porta San Piero. In *Inferno*, x, 46-50, D. tells us that his family were strenuous adherents of the Guelph cause, and since the Guelphs were almost all in exile until 1266, it is rather difficult to account for his having been b. at Florence. Probably, however, his father, who seems to have been a notary, was of too little importance to be molested. Some few references to his relations are found in the *Divina Commedia*, and these may be briefly mentioned. In the heaven of Mars, among the warriors of the cross, D. meets his great-great-grandfather, Cacciaguida, who other sources tell us to have been b. about 1090, to have married Aldighiera degli Aldighieri, to have been knighted by Conrad III, and to have d. in battle against the infidel. His son, the first to bear the name of Aldighiero or Alighiero, is said by Cacciaguida to be still in the purgatorial terrace of the proud (*Paradiso*, xv, 91-96). The only other member of the family mentioned is Geri del Bello, a grandson of the elder Alighiero and cousin of D.'s father, a sower of discord and a murderer (*Inferno*, xxix, 13-36), whose violent and well-deserved death had not yet been avenged. D.'s mother, Donna Bella, d. soon after his birth, so a certain loneliness marked his life from the beginning. His father married again, Lapa di Chiarissimo Cialuffi, the daughter of a prominent Guelph citizen, and by this second marriage he had a son Francesco, and two daughters, one of unknown name, the other Tana. He himself d. while D. was still in childhood. There is a possible reference to one of D.'s step-sisters in the sonnet, 'A very pitiful lady, very young, in the *Vita Nuova*. The most salient feature of the poet's youth and early manhood is certainly the story of his love of the mystic Beatrice. The whole story is told in the *Vita Nuova* in an allegorical and poetical manner, and to this work reference must be made. Beatrice has generally been identified with Beatrice, the daughter of Folco Portinari, a wealthy Florentine. This Beatrice Portinari married Simone dei Bardi, a rich and noble banker. It is probable that D. did not declare his love, and that they did not meet many times. There are still some, however, who hold that Beatrice was no real woman, but a mystically exalted ideal of womanhood. In the *Vita Nuova* D. tells us that already at the age of 18 he had learnt 'the art of saying words in

rhyme,' but he shows no originality before his sonnet written to Beatrice ('To every heart which the sweet pain doth move'). He was immediately recognised (1283) as a new poet, and received many answers to this sonnet, including one from the most famous It. lyrist of the day, Guido Cavalcanti, henceforth to be the first of his friends. Boccaccio tells us that from 1283 to 1289 D. was engaged in study, but there is nothing to mark the outward course of his life. The lyrics of the *Vita Nuova* bear witness to his growing maturity in art, while the prose narrative shows his acquaintance with the Lat. writers. Boccaccio and Benvenuto da Imola also speak of a visit of D. to the univs. of Bologna and Padua, which can hardly have been so early. He was more certainly engaged in the military campaigns of 1288 and 1289, for Leonardo Bruni tells us that he took a prominent

DANTE ALIGHIERI

Engraving from a painting by Tofanelli.

part in the battle of Campaldino (11 June). This was the crowning triumph of Florentine arms, and the city was given up to great rejoicing. But on 9 or 19 June Beatrice d. and D. lifts up his voice in direct lamentation. It is not easy to get a definite idea of D.'s life during the ten years which followed this event. He seems to have taken refuge in philosophic studies. The poignant reproaches which Beatrice addresses to him when he meets her on Lethe's banks seem to tell us of a serious falling away at this period. Some moral aberration and sensual passion must have called him for a while from the light of reason and the beauty of righteousness. *Tanto giù cadde*, 'so low he fell' (*Purgatorio*, xxx, 136). He became friendly with Corso di Simone Conati, a turbulent and ambitious citizen, and with his brother Forese, a sensual man of pleasure. In sev. sonnets Guido Cavalcanti rebukes his friend for his altered mode of life, while some of D.'s own sonnets seem to

show that sev. women crossed his path. Some time before 1297 D. married Gemma di Manetto Donati, a distant kinswoman of Corso and Forese, and the marriage does not seem to have been entirely happy. Gemma bore him 4 children, Jacopo, Pietro, Antonia, and Beatrice, but she did not share his exile, and was still living in 1332. Upon the abdication of Celestine V in 1294 Boniface VIII was made Pope, an event ominous for Florence. In 1295, the first year of Boniface's pontificate, D. entered the troublous seas of political life. On 23 Jan. 1296 the Pope inaugurated his aggressive policy towards the Florentine republic by a bull denouncing Giano della Bella, a great leader of the popular party, overthrown in 1295, and extolling the prudence of the Florentines in expelling him. Now, although D.'s influence on the policy of the republic has been exaggerated by many, there can be no doubt that from the outset he took a decided attitude in direct opposition to all lawlessness, such as the riot which had overthrown Giano della Bella, and that he opposed any external interference in Florentine affairs whether from Rome, Naples, or France. In 1300 a new div. devastated Florence, originating in the feud between the two distinguished families of the Donati and the Cherchi. The partisans of the former house, consisting mostly of aristocrats and admired by the populace, are known as the Black Guelphs or Nerl, while the Cherchi, all-powerful among the burghers, headed the White Guelphs or Bianchi. On 1 May 1300 the two parties came to blows, and the whole city was divided. From 15 June to 15 Aug. D. was one of the 6 elected priors, and from this period he dates all his woes. The leaders of both parties were at first banished, but the Bianchi, who submitted quietly, were soon recalled. The exiled Corso Donati sought the Pope, whose aggressions had still continued, and that pontiff summoned Charles of Valois to his support. On 1 Nov., after giving solemn pledges to the Signoria, Charles entered Florence with 1200 horsemen, receiving no opposition. His first act was to recall Corso Donati and his allies, and the Bianchi made no attempt to hold their own. Plunder, massacre, and proscription was the order of the day. In Jan. 1302 D. and four other prominent men were accused of a variety of crimes, all of which the poet denies, and were exiled, their property being confiscated. All his early biographers support his denial. The terms of this decree of exile seem to imply that D. had fled from the city some time before its pub. He himself in the *Convivio* thus sums up the earlier portion of his exile: 'Since it was the pleasure of the citizens of the most beautiful and most famous daughter of Rome, Florence, to cast me forth from her most sweet bosom (in which I was born and nourished up to the summit of my life, and in which, with her goodwill, I desire with all my heart to rest my weary soul and to end the time given me), I have gone through almost all the parts to which this language extends, a pilgrim, almost a beggar, showing

against my will the wound of fortune, which is wont unjustly to be oftentimes reputed to the wounded.' We do not know exactly where he went. It may have been either Bologna, Siena, or Verona. In 1303 he was certainly at the latter town, where he found his first refuge at the house of Bartolomeo della Scala. Meanwhile, after several attempts to regain the supremacy, often in alliance with the Ghibellines, the Bianchi party were utterly defeated at Lastra (July 1304). About this time D., who had taken no active steps in the attack on Florence, went to the Studio at Bologna, and between 1307 and 1309 went on to Paris, where he achieved much repute in the schools. Here he probably remained until 1310, when tremendous events put an end to his studies and imperatively summoned him back to Italy. In 1309, after the death of Albert of Austria, who had totally neglected Italy, Henry of Luxemburg was elected emperor with the approval of the Pope. He immediately asserted his position as true king of the Romans and successor of Caesar, and moved S. to join all Italy together under a united church and empire. D., before the end of March 1311, had paid his homage to the new emperor, and had already written the first of a series of letters to the Ita. and Florentines in which he calls on them to submit to the absolute authority of Henry. But Florence was the most perverse of the great cities. She supported all who were opposing the emperor, treated his messengers with contumely, and formed a Guelf alliance against him with King Robert of Naples as her chief ally. D. urged the emperor against Florence (the sick sheep that infects all the flock of the Lord with her contagion), and the probable result of this and other letters was that a new condemnation was pronounced against him in Sept. 1311, making his exile perpetual. For a while Henry besieged Florence, but he had to retreat before the end of 1311, and 2 years later he died when about to renew the attack. And all hope being gone, the poet remained silent. From the spring of 1311 till the end of his days at Ravenna, which may be termed the last period of his exile, D.'s movements are hardly known at all, except by more or less certain conjecture. He had now given up all hope of returning to Florence, and wandered about in great poverty, under the protection of various lords, in different parts of Lombardy, Tuscany, and Romagna. There is a tradition, founded on *Paradiso*, xxi, 106-120, that he retired to the convent of Santa Croce di Ponte Avellana in the Apennines, engaged on the great *Commedia*. He seems at one time to have visited Lucca, and in 1316 an amnesty was offered to him with many other exiles, but on conditions too degrading for him to accept. Towards the end of 1316 he went to Verona to renew his friendship with Can Grande, son of Bartolomeo della Scala, and in 1317 he finally settled at Ravenna. Here ensued a quiet period, for he was treated with honour and

surrounded by congenial companions. Then in 1321 he was sent on an embassy to Venice to settle a quarrel which had arisen between the two cities. He returned sick with fever, and passed away on 14 Sept., the Feast of the Exaltation of the Holy Cross, 1321.

Dante's Works.—Before dealing in detail with the more important of the works, it will be as well to give a general account of his entire production. His works fall into 3 distinct periods. The first is the period of the new life, the epoch of the worship of the real Beatrice, in which the youthful poet beheld many things by his intellect, 'as it were dreaming.' This period includes the *Vita Nuova* with its lyrics, and closes with the promise to write yet more concerning her than has been written before of any woman. The second period is that of passion, political turmoil, and philosophical research, and marks a great advance in almost every direction. It includes the greater part of the *Canzoniere* collection, the 2 unfinished prose treatises—the *Convivio* and the *De Vulgari Eloquentia*—and the political letters connected with Henry VII. The Lat. treatise, *De Monarchia*, may also belong here. It may be observed here that the ideals of the empire of the Ger. Caesars, the papacy, Venice, Spain, and Bourbon France (that is, those empires which preceded the modern Brit. Empire) are completely enshrined in the *De Monarchia*, a work which knits itself closely to Caesarian and to consular Rome. Connecting the second and third periods comes the letter to the It. cardinals on the death of Clement V (1314). The last period is that of the *Divina Commedia*, the return to Beatrice, but now the allegorical Beatrice, as well as the two eclogues and the letters to the Florentine friend and to Can Grande, if these are authentic. Among apocryphal works may be mentioned the *Questio de Aqua et Terra*, in Lat. prose, and the *Seven Penitential Psalms* and the *Profession of Faith* in It. verse. Sev. of his smaller poems, to which he incidentally makes reference in other works, are now lost.

D. acknowledges Guido Guinicelli as his master in poetic art and the founder of the new school of It. poetry (*Purgatorio*, xxvi, 97), whose doctrine of love expounded in the 'Canzone of the Gentle Heart' is the most fitting introduction to the *Vita Nuova* and the *Canzoniere*. The *Vita Nuova* may be considered as a preparation for the *Commedia*, inasmuch as it tells us how the divine singer became a poet, and how she crossed his path who was to be his spiritual pilot over that mighty ocean. It is the most spiritual and ethereal romance of love that exists, but its purity is such that it comes not from innocent simplicity of soul, but from self-repression. It tells the whole story of D.'s love for Beatrice from his first sight of her in their ninth year to a vision which is the anticipation of her final apotheosis. Under the heading of the *Canzoniere* are included all D.'s lyrical poems, together with a few that are more doubtfully attributed to him. They fall

into 4 groups: the first of the *Vita Nuova* period; the second in which allegory is beginning to supplant the real Beatrice; the third expressing passionate love of the other real women; the fourth, canzoni on Rectitude, Nobility, and Gallantry. Just as, after the death of Beatrice, D. collected all his early lyrics in a prose narrative, so in the *Convivium*, or Banquet, he attempts to collect fourteen of his later canzoni, with a prose commentary to the glory of his mystical lady, Philosophy. The work, however, was left incomplete. The first of the Lat. works is the *De Monarchia*, an attempt to solve the burning medieval question of the relations of Church and State, of spiritual and temporal authority. It is divided into three books, and has been described as 'the most purely ideal of political works ever written.' The *De Vulgari Eloquentia* is incomplete, only two out of the four books having been written, the second remaining unfinished. It deals first with the search for the highest form of the vernacular, and secondly, with the application of the vulgar tongue to poetry. Ten Lat. letters are also extant and ascribed to the divine poet, but only that to Henry VII, emperor of Germany, is universally accepted as genuine. One of them, that to Can Grande, is a miniature philosophic treatise in epistolary form, at the same time being a dedication of the *Paradiso* to the young lord of Verona. It is probably authentic, and its date would be about 1319. The eclogues, two delightful pastoral poems in Lat. hexameters, belong to the closing period of D.'s life, when he was engaged on the *Paradiso*. In spite of the testimony of Boccaccio and Leonardo Bruni, their authenticity has been questioned.

Though the *Divina Commedia* must be regarded as the work of his closing years, it is poetically placed in the spring of 1300, before D.'s election to the priorate, and the poet puts himself in the position of a man relating a vision which he had seen 20 years before. Hence all events subsequent to April 1300, such as the faction fight of May in that year, are spoken of prophetically as future events. Approximately the completion of the *Inferno* and *Purgatorio* may be placed between 1314 and 1319, that of the *Paradiso* between 1316 and the day of his death. The poem is a vision of the world beyond the grave, and also an allegory, based upon that vision, of the life and destiny of man, his need of light and guidance, his duties to the temporal and spiritual powers, to the empire and to the Church. In the epistle to Can Grande, the poet tells us that the allegorical meaning is 'Man as by freedom of will, meriting and demeriting, he is subject to justice rewarding or punishing.' The *Inferno* represents the state of ignorance and vice; the *Purgatorio* is the life of converted sinners, obeying Caesar and reconciled to Caesar, doing penance and striving Godwards, after the state of innocence has been regained in the earthly paradise; the *Paradiso* represents the ideal life of action and contemplation, closing in an earthly

foretaste of the Beatific Vision. This may be applied to the moral or spiritual Hell, Purgatory, Paradise of men still united to their bodies in this life, as well as to the essential Hell, Purgatory, Paradise of disembodied spirits. The end of the poem, as the epistle to Can Grande shows, is to remove those living in this life from the state of misery and lead them to the state of felicity. In the individual, this object is attained in the manner described above, in the universality it can only be effected by the restoration of the empire and the purification of the Church. To aid in the attainment of this end D. has two guides: Virgil, representing Reason or Human Wisdom, and Beatrice, representing Revelation or Divine Wisdom. At times Virgil seems invested with the power of the empire, and Beatrice with the authority of the Church. The personal meaning, too, must not be forgotten. The allegory is partly dropped when Virgil leaves Dante in the Earthly Paradise to return to his own sad place in Limbo, and entirely when Beatrice is last seen enthroned in glory beneath Madonna's throne. The metrical structure is complicated. Each of the three Canticas is divided into cantos, the *Inferno* into 34, the *Purgatorio* into 33, the *Paradiso* into 33, thus making up 100 cantos, the square of the perfect number. Each canto is composed of from 38 to 53 *terzine* or *terzette*, written in *terza rima*, thus ABA, BCB, CDC, . . . with an extreme line or *ternello* rhyming with the second line of the last *terzina* to close the canto thus . . . XYZ, YXYX. The *Divine Comedy* is issued in the Temple Classics in 3 vols. with It. and Eng. on opposite sides. Rossetti's trans. of the *Vita Nuova*, with the sonnets of D. and his contemporaries, is to be found in Everyman's Library. The best ed. of the works is the Oxford *Dante* (1894, 1924), ed. by E. Moore. See P. Toynbee, *Dante Alighieri, his Life and Works*, 1893; F. X. Kraus, *Dante, sein Leben und seine Werke*, 1897; E. Moore, *Studies in Dante*, 1896-1917; L. T. Holbrook, *Portraits of Dante*, 1911; E. Gardiner, *Dante* (Temple Primers), and *Dante and the Mystics*, 1912; B. Croce, *La Poesia di Dante*, 1921; E. Gilson, *Dante the Philosopher*, 1948; J. H. Whitfield, *Dante and Virgil*, 1949; U. Cosmo, *Handbook to Dante Studies*, 1950; lives by H. Hauvette, 1930; N. Zingarelli, 1931; and M. Barbi, 1933. See also periodicals devoted to Dante: *Studi danteschi*, and *Deutsches Dante-Jahrbuch*.

Dante da Majano, It. lyrical poet b. at the end of the 13th cent., contemporary of Dante Alighieri. He was a slavish imitator of the troubadours, two of his poems being in Provencal. He had a considerable reputation, but little is known of his life. His reply to Dante's first sonnet (*A ciascun' alma presa*) was very coarse. A collection of his works, entitled *Sonetti e Canzoni di diversi antichi autori toscani*, appeared 1727. A later ed. is that of Bertacchi (1896). Novati (1883) refuted Bolognioni's arguments against the existence of such a poet.

Danton, Georges Jacques (1759-94), Fr. revolutionary, b. Arcis-sur-Aube, of well-

to-do parents. In 1780 he went to Paris, where he practised as an advocate until the outbreak of the Revolution. He took no prominent part in the earlier stages of the Revolution. He first came to notice as founder and president of the Cordeliers' Club, which, though local in origin, soon began to attract the more extreme revolutionaries. D. apparently took no prominent part in the events of 1789—the fall of the Bastille and the forcible removal of the court from Versailles to the Tuileries. In 1790 he was made commander of the battalion of the National Guard in his dist. In 1791 the death of Mirabeau (who had fully appreciated D.'s talents) hastened the downfall of the monarchy. From a minor administrative office, D. was, in 1792, made minister of justice, and from then until his death is one of the leading figures in the hist. of the period. He had no part in the Sept. massacres, but he sought to justify them as inevitable excesses. It was his eloquence that inspired his countrymen to

GEORGES JACQUES DANTON

drive back the Prussians when they sought to restore the monarchy. 'We must dare,' he said, in words that became proverbial, 'and again dare, and for ever dare.' He voted for the death of the king in 1793. He was one of the original members of the Committee of Public Safety, and was frequently sent on special missions. In the convention he became leader of the Mountain, a party so named from the high benches on which its members sat. Under his leadership they overcame the more moderate Girondins, or country party, but when D. decided that it was time to end the Terror and return to the normal processes of civil law, he found he could not control the blood-lust of the party he had led to victory. His enemies persuaded Robespierre that D.'s death would not only be in the public interest, but would also be popular, and D., either careless or disdainful of his enemies, was arrested without difficulty. On 2 April 1794 he was brought before the revolutionary tribunal which he had created a year before, and sentenced to death without

further hearing. He was executed on 5 April 1794 with 14 others, including Camille Desmoulins, his comrade from the early days of the Cordeliers' Club. He was an outstanding orator, and, in spite of his violence and lack of logical policy, is one of the more human and attractive of the revolutionary leaders. See A. Bougeart, *Danton, documents authentiques*, 1861; and lives by A. H. Beesly, 1899; H. Belloc, 1899; L. Modellin, 1914 (trans. 1921), and H. Wendel, 1936.

Dantzic, see GDAŃSK.

Danube (Gk *Isavros*; Ger. *Donau*; Czech. *Dunaj*; Hungarian *Duna*; Serbian *Dunav*; Rumanian *Dunărea*), second largest riv. of Europe, its length of 1740 m. being exceeded only by that of the Volga. It has its origin in two mt. streams, the Brigach and the Breg, which rise in the Black Forest (q.v.) and which unite at Donaueschingen, 2224 ft above sea-level. The riv. then flows NE. through Baden-Württemberg and Bavaria (q.v.), past Ulm (at which point it becomes navigable for cargo-boats) and Ingolstadt, and is joined by the Altmühl (which is connected by canal with the Regnitz, and hence with the Main and Rhine, qq.v.). At Regensburg the D. is joined by the Regen, and turns SE. to Passau, where it receives the waters of the Inn (q.v.). Flowing from here into Austria, it passes Linz and Vienna, between the Little Carpathians (q.v.) and the Leitha mts., and leaves Austria by the mt. gap called the 'Carpathian Gate.' After a short course through Czechoslovakia, passing Bratislava, it enters Hungary. The riv. here forms alluvial is. (the Great and Little Schütt) before turning S. to Budapest, where it again forms is. (e.g. Csepel is., q.v.). After skirting the Alföld (q.v.) the D. enters Yugoslavia, where it is joined by the Drava and Tisza (qq.v.) and, at Belgrade, by the Sava (q.v.). Shortly after receiving the waters of the Morava it forms, for some distance, the boundary between Yugoslavia and Rumania. A series of rapids occurs on this stretch of the riv., the most important being at the Iron Gates (q.v.). Broadening as it reaches the marshy plains, the D. then follows the boundary between Rumania and Bulgaria, draining the country lying between the Transylvanian Alps and the Balkans. From flowing E. it gradually turns NE. and N., skirting the Dobruja (q.v.), and then, after passing Brăila and Galati, it turns sharply E. It is joined here by the Prut (q.v.), and shortly afterwards begins to form its delta, reaching the Black Sea through 3 main mouths. The extreme mouths are 60 m. apart, and the area between them, comprising some 1000 sq. m., is little more than a wilderness of rushes. The area drained by the riv. in the whole of its course is estimated at over 315,000 sq. m. The D. is distinctive among important European rivs. in that it flows from W. to E. It has roughly about 400 tribs., of which about 1 in 4 is navigable. The width of the riv. varies considerably, and at some points the opposite shore is hardly discernible.

Danubian International Regulation. A European commission of the D., with H.Q. at Galatz, was appointed by the treaty of Paris, 1856, after the Crimean war. Its function was to control the navigation of the riv. from Braila to Sulina (at the mouth). Up to the First World War the whole riv. was under its control, but the war conditions of 1914-19 suspended the validity of agreements between European nations. The later International D. Commission, with H.Q. in Belgrade, was created by the treaty of Versailles by a convention instituting the definitive status of the D. signed in Paris (23 July 1921) by all the chief nations of Europe with riparian rights or commercial interests, the convention coming into force on 1 Oct. 1922; and in the following year a 2nd con-

war. For Russia the delta of the D. has always entered into the question of the Black Sea and the Straits. More recently Russia has been concerned, not only with the delta and oversea trade, but also with the upper reaches and trade up and down the riv.

Following the Ger. invasion of Russia in 1941 the whole D. was controlled by Germany for the next 3 years. At the Paris conference of foreign ministers in 1946 Bevin, representing Britain, said he would accept Byrnes's (U.S.A.) proposal that a clause in the peace treaties should stipulate that navigation should be free and on equal terms for all states, 'providing it is also agreed that a Danubian conference can be called within a fixed period after the conclusion of the treaties,' thereby following the precedent of the

THE RIVER DANUBE AT BELGRADE

Yugoslav Embassy

vention was signed (27 May) by riparian powers approving arrangements regarding a permanent technical commission for the D. The convention of 1921 provided that the navigation of the D. should be equally free to all nations from the Black Sea to Ulm and instituted schemes for the improvement of the waterway; it decided that no passenger or goods traffic should receive any preferential treatment in any state. A pilotage and riv.-improvement service was maintained by the commission at the Iron Gates (H.Q. at Orsova), the expenses being met by shipping dues. Receipts of this commission in 1937 totalled 3,500,000 gold francs, and expenses 2,200,000. Much hist. therefore lies behind current discussion of the control of the D. Russia is traditionally hostile to international control of the riv., which, as shown above, originated after her defeat in the Crimean

previous world war when an inter-allied D. commission under Adm. Sir E. Troubridge, which had replaced the D. command, was itself superseded in 1920 by the International Commission. This conference was held in Aug. 1948 at Belgrade, and resulted in the adoption by the conference of a new Soviet-sponsored convention which, while reaffirming in theory the principles of freedom and equality of access for all nations, would limit the membership of the new commission to riparian states (among them the R.S.F.S.R. and Ukraine), conditions of traffic to be controlled by the Soviet-Danubian naval companies. The delegates of the W. powers maintained, however, that the whole new statute was *ultra vires* as the acquired rights of France and Britain could not be abrogated without their consent. For battles on the D. in the Second World War see under EASTERN

FRONT, or RUSSO-GERMAN CAMPAIGNS IN SECOND WORLD WAR, and also BUDAPEST, VIENNA, etc. See C. A. Macartney, *Problems of the Danube Basin*, 1942; and F. Hertz, *The Economic Problems of the Danubian States*, 1947.

Danubian Principalities (Provinces), name formerly given to the principalities of Moldavia and Wallachia. In political discussions it was also sometimes used for Serbia and Bulgaria.

Danum, see DONCASTER.

D'Anville, Jean Baptiste Bourguignon (1697-1782), famous Fr. geographer and map-maker of Paris. He was recognised internationally as the leading geographer, and in 1710 was appointed geographer to the king. He occupied the chair of geography in the Academy of Sciences, 1773. D'A. pub. 211 maps, the chief collections being *Atlas Général*, 1737-80; *Atlas Antiquus Major*; *Orbis Romanus*; *Orbis Veteribus notus*; *Géographie ancienne abrégée*, 3 vols., 1769; and *États formés en Europe*, 1771. See Condorcet, *Éloge de D'Anville*, 1782.

Danville: 1. City, cap. of Vermilion co., Illinois, U.S.A., 123 m. S. of Chicago, on Vermilion R., in an agric. and coal-mining area. There are railway shops and brick and zinc plants. D. manufs. food products, foundry products, machinery, paper boxes, etc. Pop. 37,900.

2. City of Virginia, U.S.A., on Dan R., 55 m. S. of Lynchburg. It is the site of two junior colleges for girls and a boys' school. It is in the yellow-tobacco region, and has a large tobacco trade, cotton mills, and manufs. clothing, furniture, fertilisers, elevators, foundry and lumber products, packed meats, and beverages. Pop. 35,065.

Danzig, see GDAŃSK.

Daphne, a nymph, daughter of the Thessalian river-god Peneus. She fled from her lover, Apollo, and was changed into a laurel tree, which was ever afterwards sacred to Apollo. See Ovid, *Metam.* l. 425-567. Pansausias (viii. 20) and Parthenius (*Erotica*, xv) tell of her pursuit by another lover, Leucippus.

Daphne, famous grove and sanctuary of Apollo, about 5 m. SW. of Antioch, Syria, on R. Orontes. It was founded by Seleucus Nicator (c. 321 BC). The temple contained a statue of Apollo by Bryaxis, and was in the midst of a grove of cypress and bay trees, with beautiful gardens, baths, and porticos surrounding it. It was burnt c. AD 363. The probable site is now called Bêt-el-Mâ.

Daphne, family Thymelaeaceae, genus of shrubs of which *D. mezereum*, mezereon, and *D. laureola*, spurge laurel, are natives of Britain and Europe. *D. cneorum*, garland flower, from S. and C. Europe. *D. odora* and *D. retusa* of China, and others, are grown in gardens or greenhouses.

Daphnin (C₁₅H₁₁O₆), in chem., a bitter glucoside obtained from the bark of *Daphne mezereum* and *D. alpina*, found by Vauquelin. Also a dark green resin, regarded as the essential principle of the mezereon. It can be easily decomposed into sugar and a substance called daph-

netin, whose composition is represented by the molecular formula C₁₅H₁₁O₆. D. may be prepared artificially.

Daphnis, mythical shepherd and hero of Sicily, son of Hermes and a Sicilian nymph. As the reputed inventor of pastoral poetry, he figures largely in the bucolic poetry of the ancients (from the early 3rd cent. BC), and also in more modern imitations, as a conventional figure. He was under the protection of Artemis and was taught music by Pan. D. was beloved by a Nalad, who punished him with blindness for his infidelity to her. See Theocritus, *Idylls*, i; Virgil, *Ecloques*, v; W. Prescott, 'A Study of the Daphnis Myth' (*Harvard Studies in Classical Philology*, x, 1899).

'Daphnis and Chloë,' see LONGUS.

Dapitan, tn situated on the N. coast of Mindanao, an is. of the Philippine archipelago. It is a trading port, and a trade in coconuts, corn, rice, and cattle is carried on. Pop. 37,984.

DAPHNE LAUREOLA: SPURGE LAUREL

Da Ponte, Lorenzo (real name Emanuele Cornegigliano) (1749-1838), lt. librettist, b. at Ceneda on the Venetian mainland. He was of Jewish descent, but was converted to the Rom. Catholic faith by Lorenzo da P., bishop of Ceneda, whose name he adopted according to the custom of the time. About 1780 he was officially appointed by the Austrian Gov. to be poet to the It. Theatre in Vienna. He wrote librettos for Mozart's *La Nozze di Figaro*, 1786, *Don Giovanni*, and *Così fan Tutte*. He lived in London from 1793 to 1805, where he wrote for Drury Lane Theatre *La Capricciosa Corredo*, *L'isola del Piacere*, and *La Scuola dei Maritati*. In the U.S.A. (1805) he was appointed prof. of It. literature, Columbia, from 1825. There he wrote his lively and diverting *Memorie*, pub. between 1823-27.

Daqahlia, prov. of Lower Egypt, with an area of approximately 1020 sq. m. It is one of the most fertile provs. The chief tn is Mansûra. Pop. (1947 census) 1,414,905.

Daqiqi (Dakiki), Abu Mansur, Persian poet and a native of Tus or Bokhara. He was court poet to Prince Nüh II, successor of Mansur I on the throne of Persia (AD 976-7). A few fragments of his lyric verse remain. He was charged by Nüh to turn the Pahlavi *Khadhay-namak* ('Book of Kings') into Persian verse. D.'s labours were abruptly terminated by his assassination, by which time he had written about 1000 distichs. Firdawsi, whose great epic, the *Shahnama* ('Book of Kings'), was the continuation and completion of D.'s work, claimed to have been inspired in dreams by D.

Daquin, or d'Aquin, Louis Claude (1694-1772), Fr. organist, harpsichordist, and composer, b. Paris. At the age of 6 he played the harpsichord before Louis XIV and at 12 performed the organist's duties at the Sainte-Chapelle. Held various posts as organist, including that of the royal chapel. His music includes a cantata, church music, and organ pieces, but he is especially remembered as one of the great Fr. representatives of harpsichord music.

Darab, or Darabjerd, dist. and tn of Persia, in the prov. of Fars. The tn is situated at the base of high hills on a small stream, and is surrounded by orange and lemon groves, date palms, etc. Relics of great antiquity have been discovered in the vicinity. Pop. of tn about 6800.

Daraga, see LIZASPI.

D'Aragona, Tullia (1510-65), It. poetess, natural daughter of Peter Tagliavain d'A., archbishop of Palermo. Her works, which had a considerable contemporary reputation, imitate the style of Petrarch; they include *Rime*, 1547; *Dialogo dell'infinità d'Amore*, 1547; *Il Meschino attraversato detto il Guernino*, 1560.

Daralayeh, or Derayeh, ruined tn of central Arabia. It was at one time the cap. of the Wahabis, in Nejd, being composed of 5 separately fortified divisions. It was destroyed in 1818, after withstanding a siege which lasted about 7 months.

Darbhangha, tn, Bihar State, India. It is situated on the l. b. of the Little Bagmati R., 78 m. N.E. of Patna, and is the residence of the maharaja of D., formerly one of the largest landowners in this part of India.

D'Arblay, Madame, see BURNEY, FRANCES.

Darboy, Georges (1813-71), Fr. prelate, archbishop of Paris, 1863. He upheld the theory of episcopal independence, and, though vehemently opposing the doctrine of papal infallibility, submitted on the adoption of this dogma. At the siege of Paris, while ministering to the wounded, he was seized by the Communists, and shot in La Roquette prison, 1871. He trans. Dionysius (St Denis) the Areopagite, and wrote *Saint Thomas Becket, sa vie et ses lettres*, 1860; *Les Femmes de la Bible*, 8th ed., 1876; *Les Saintes Femmes*, 1877. See J. A. Foulton, *Histoire de la vie et des œuvres de Mgr. Darboy*, 1889.

Darby, John Nelson, see PLYMOUTH BRETHREN.

Dardanelles, or Strait of Gallipoli, anct

Hellespont, narrow channel connecting the sea of Marmara with the Aegean Sea, and thus separating Europe from Asia. It is about 48 m. in length, and varies in width from 1 to 5 m. One of the narrowest parts is between Abydos and Sestos, where, according to the classic story, Leander swam across nightly to visit Hero. This exploit was repeated by Lord Byron in 1810. It was also near this spot that Nereus crossed into Europe with his army (by two bridges of boats) in 480 bc, and Alexander the Great crossed to Asia in 334 bc. Sev. castles are situated on the shores of the strait, including two bearing the name of the D. on the sites of Abydos and Sestos. The chief coast tns include Gallipoli, Lapsaki, Galata, Kilid Bahr, and the fortified seaport of Sultanieh-Kalehsi. Both sides of the strait are strongly fortified, as it is the key to Istanbul. By a treaty of 1841 the European powers agreed that Turkey should be allowed to close the D. in time of war, and this understanding was reaffirmed in 1871 and 1878. In 1904, during the Russo-Jap. war, two Russian volunteer fleet cruisers managed to pass through as merchant ships. The D. were closed to merchant shipping in April 1912 during the Turco-It. war, but were reopened a month later in response to representations from Great Britain and other European powers. The Gallipoli peninsula was the scene of fighting during the second half of the Balkan war, 1913.

Attack on the Dardanelles, 1915.—Shortly after the outbreak of the First World War the Turkish Gov., under Ger. pressure, closed the D. to commerce, as a reply to the allied protest regarding the Ger. cruisers *Goeben* and *Breslau*, which, having taken refuge in Constantinople harbour, were dominating that city with the connivance of the pro-Ger. party under Enver Pasha. Thus Russian grain exports were effectually sealed up in the Russian ports, and a few days later Turkey was openly ranged with the central empires against the Allies. The Allies, realising how great would be the moral and practical effect of taking Constantinople, prepared to force the D. The political and military importance of the straits at this time was almost incalculable: the capture of Constantinople, which would have been the corollary to success, would not only have opened the way to the Russian grain cargoes, but would have thwarted Ger. control of the Bagdad railway, enormously enhanced allied prestige throughout the Muslim world, probably kept Bulgaria out of the war, and, further, by releasing the Russian armies in the Caucasus, have tended to shorten the war. It was, however, recognised that the operation of forcing the D. was hazardous, especially as Ger. experts had superintended the mounting of powerful 14-in. Krupp guns on the shores so as to command all approaches. From 19 Feb. to 15 Mar. a squadron of obsolescent Fr. and Brit. battleships, supported by the *Queen Elizabeth*, *Agamemnon*, and *Inflexible*, and commanded by Vice-Adm. De Robeck, intermittently

bombarded the forts Sedd-el-Bahr and Kum Kale at the entrance of the straits. On 18 Mar. an attempt was begun to reduce all the inner forts, commencing with Kilid Bahr, within a few weeks. The hope was that once the forts were reduced the minefields would be cleared and the way open for the fleet to proceed up to Constantinople, destroy the *Göeben* and *Breslau*, and take the cap. This ambitious plan seems to have been open to many objections (*consult Dardanelles Report*), especially strategic, and it is not surprising in all the circumstances that it failed. The guns of the forts at the entrance were silenced, but the real defences were in the Narrows, less than a m. in width, and commanded by the forts of Kilid Bahr on the W. side and those of Chanak on the E. or Asiatic side. The 15-in. guns of the *Queen Elizabeth* having carried out a bombardment from the gulf of Saros against the Chanak forts, the allied ships, comprising 15 Brit. and 4 Fr. vessels, moved towards the Narrows and concentrated their attack on Kilid Bahr, the impression of the commander being that the Chanak guns had been put out of action. The result was disastrous, for the Fr. ship *Bouvet* was shelled and sank with all on board, the *Irresistible* and *Ocean* were sunk (probably torpedoed) on 18 Mar., and both the *Infleible* and the *Gaulois* were severely damaged. The Brit. loss in personnel was 2000. The rest of the fleet steamed out again on the same day, and no further attempt was made to destroy the forts by a naval attack alone. Later, when the fleet co-operated with the landing force, 3 more Brit. battleships were lost, the *Gothic*, torpedoed off Gallipoli, 12 May, and the *Triumph* and *Majestic*, both torpedoed on 26 May. (For the land attack which was launched in the same year see under GALLIOLI CAMPAIGN). It was not until after Turkey had surrendered that Brit. warships were in fact able to pass up the D. (10 Nov. 1918).

Among the 14 points set forth by Woodrow Wilson in Congress in 1918 was that (No. 12) which insisted on the D. being permanently free to all ships. After the war the internationalisation of the straits became an accomplished fact under the treaty of Lausanne, 1923. A special convention demilitarised zones on both sides of the Bosphorus and sea of Marmara, and prescribed rules for preserving the freedom of the Narrows in peace and war which were applied by a mixed commission of the League of Nations. In 1936 Turkey applied for permission to re-fortify the zone, and this was granted by a new convention signed at Montreux. Turkish troops occupied the area on 21 July 1936. Under this convention belligerent warships may not pass through the straits to the Black Sea. After the Second World War Russia reopened the question of the passage of Russian warships through the D. A Russian note (24 Sept. 1946) carried still farther the diplomatic exchanges which began on 22 Aug., when the Soviet Gov. proposed to Turkey a revision of the regime of the straits which would substitute for

the existing loose but internationally sponsored Turkish control a regional defence arrangement between Turkey and the other Black Sea powers. The W. democracies (America, Britain, and France), expressing substantially similar views, replied that the regime of the straits was a matter of concern, not only to the Black Sea powers, but also to other powers, including the U.S.A. The Turkish reply rejected the Russian suggestions, while agreeing that the time might be ripe for a revision of the Montreux convention, but only by consultation between its signatories, with whom would be included the U.S.A. See H. W. Nevenson, *The Dardanelles Campaign*, 1918; A. Kearsey, *Notes and Comments on the Dardanelles Campaign*, 1934; and E. Chatterton, *Dardanelles Dilemma*, 1935.

Dardania was in ancient geography a kingdom in Mysia, Asia Minor, of which the size and boundaries were uncertain. It is mentioned in the *Iliad*, and was, according to Gk mythology, founded by Dardanus, who swam on an inflated skin from Samothrace to the Troad. The inhab. of D. were the Dardani.

Dardanus, son of Zeus and Electra, daughter of Atlas, was the mythical ancestor of the Trojans, called after him Dardanidae.

Dardanus, Dardanum, or Dardanium, in ancient geography, a city situated on the Hellespont in Mysia, Asia Minor, about 10 m. SW. of Abydos. It was built by Dardanus, who was, in Gk legend, the founder of Troy.

Dardistan (country of the Dards), name of a mountainous dist. in the NW. of Kashmir, India, where the R. Indus bends S.; extended as a geographical name for numerous tribes between Kashmir and Afghanistan, on the S. slopes of the Karakoram and Hindu-Kush Mts. It comprises the frontier dists. of Chitral, Swat, and Kafiristan, now part of Pakistan. The Dards are an Indo-European people, once Buddhists, now mostly Shīte Muslims. They are also called Kanjur. See J. Biddulph, *Tribes of the Hindoo Koosh*, 1880; and G. Leitner, *Hunza and Nagar Handbook*, 1893.

Dare (fish), see DACE.

Dar-el-Beida, see CASABLANCA.

Dares, priest of Hephaestus, mentioned in Homer's *Iliad*, v. 9, and praised for his wisdom. He was said to have been present at the siege of Troy, and an older story of Troy's destruction, supposed to have been written on palm leaves, was attributed to him. There is an extant prose narrative (44 chapters) ascribed to Dares Phrygius, *De Excidio Troiae Historia*, written in very bad Lat., purporting to be a trans. from the Gk by Cornelius Nepos, but apparently belonging to the 5th cent. AD. Guido delle Colonne's *Historia Troiana*, a romance based on the Lat. version in the 13th cent., closely resembles Benoit de Sainte-Maure's *Roman de Troie*.

Dar-es-Salaam (Arabic 'haven of peace'), seat of gov. of the Tanganyika (q.v.) terr., formerly cap. of Ger. E. Africa. Deep-water berths are being constructed (1956),

and vessels of 550 ft can enter the beautiful landlocked harbour. It is a railway terminus and thriving commercial centre of Tanganyika. There is electricity, water-borne sewage, and a good water supply. D. is a progressive, modern tn, beautifully situated. Pop. c. 69,300.

Darfield, par. and tn of W. Riding, Yorks, England, on the Dearne, 5 m. from Barnsley. Coal is worked in the neighbourhood. Pop. 6300.

Dar-Fur, prov. in the Sudan, formerly a centre of the slave trade. It was an independent kingdom until 1874, when it was nominally annexed to Egypt. Subsequently, however, it suffered from the domination of the Mahdi, and his successor, the Khalifa, until the defeat of the latter in 1898. It is inhabited chiefly by Arabs and a negro tribe, the Fur; the cap. is El Fasher (q.v.). The country is an undulating plateau, with flat sandy desert in the N. It produces grain, tobacco, gum arabic, tamarinds, dates, white melons, cattle, and camels. Big game is plentiful. Area 170,000 sq. m. Pop. variously estimated at 1,000,000–1,500,000.

Dargai, hill-range near the Khola Pass, 50 m. from Peshawar, W. Pakistan. During the Tirah campaign the Brit., under Yeatman Biggs, stormed the fortified heights held by Afridis and Orakzais, 1897.

D'Argenlieu, George Thierry (1889–), Fr. vice-admiral and member of the Carmelite order. Called up as a naval reserve officer in Sept. 1939 and rendered distinguished service. He joined Gon. de Gaulle in London as commander in June 1940. Went with the latter's Dakar (q.v.) expedition (Sept. 1940) and was wounded after landing there. Promoted to rear-admiral and sent as Fr. high commissioner to the Pacific. Returned in 1943 to take over the command of the Fr. naval forces stationed in Britain. Promoted vice-admiral (1943). In 1945 he was appointed Fr. high commissioner in Indo-China, being recalled in 1947. Decorated at the Brit. Embassy, Paris, in Nov. 1947. Demobilised in 1948, D. returned to his monastery as Father Louis de la Trinité of the Carmelite order.

Dargomizhsky, Alexander Sergeievich (1813–69), Russian composer, b. Tula. He was of a good family and was brought up on a country estate. His parents, however, had fled from their own home near Smolensk during the Napoleonic invasion of 1812. D. early showed musical talent and between 6 and 8 years of age was taught to play the piano and violin, while at 11 he had made some attempt at composition. Entered the civil service in St Petersburg and, moving in fashionable circles, became well known as an amateur pianist and as a composer of dilettante drawing-room songs. It was his chance meeting with his older contemporary Glinka which gave his talents a more serious bias, and the two composers may be said together to have symbolised the pretensions of Russian musical genius at this period: but whereas Glinka's music was idealistic and lyrical, D.'s was

realistic and dramatic. D., though inferior to Glinka, is a figure of some importance in the hist. of Russian opera: his first opera was *Esmeralda*, 1839, the libretto of which was taken from Victor Hugo's *Notre-Dame de Paris*; but it was not accepted for the Imperial Opera until 1847. This was followed by a cantata on *The Triumph of Bacchus*, a dramatic poem by Pushkin, which D. later converted into a ballet-opera, 1867. Then came the opera *The Russalka*, 1856, or *The Watersprite*, for the libretto of which D. again turned to Pushkin. This opera, though superior to *Esmeralda*, did not prove successful and D. wrote no further operas for some time. Meanwhile he produced *Knighi Errant* and *The Old Corporal*, dramatic ballads for voice and piano. Later D.'s association with Balakirev and his school gave him a leading part in the formation of a national and progressive school of Russian music, breaking with stale conventions and out-moded traditions. The influence of these principles is shown in his last opera, *The Stone Guest*, founded on the story of Don Juan as told by Pushkin. The opera was left unfinished at D.'s death, but was completed, on D.'s directions, by Rimsky-Korsakov, 1872. D.'s own views on opera resembled those of Gluck and Wagner in the adaptation of the music to the dramatic import of the text.

Dariál, see DAR'YAL.

Darién, Gulf of, inlet of the Caribbean Sea, situated in lat. 9° N. and long. 77° W., between Colombia and Panama. On the W. is the isthmus of Darién (q.v.), part of Panama. In the S. are the bays of Choco and Uraba, which receive the R.s. Atrato and León.

Darién, Isthmus of, otherwise E. Panama, part of the narrow neck of land joining central and S. America.

Darién Scheme, project started by a Scotsman, Wm Paterson, in 1695, to form a settlement on the isthmus of Darién for controlling trade between the E. and W. Paterson, the founder of the Bank of England, was a bold and enterprising man. His ostensible purpose was to estab. an E. India trade in Scotland; this finally developed into the plan of forming an emporium on each side of the isthmus of Panama to estab. trade between the opposite continents, and to wrest the keys of the world from Spain. William III was opposed to his scheme, but national enthusiasm carried it through, though it was unable to avert the disastrous fate of the settlement. In 1698 1200 Scottish colonists sailed from Leith to Panama (Puerto Escondido), to lay the foundations of New Caledonia. They made Acta their headquarters, with the name of New Edinburgh, and built a fort, New St Andrews. The Spaniards proved hostile, and the colonists unfitted to endure the climate and hardships of war and disease. The survivors returned home in 1699, and though two more companies had already been sent out to America a similar fate drove them back in 1700. See Sir J. Dalrymple, *Memoirs of Great Britain and Ireland*, 1790; J. Burton, *History of*

Scotland, vii, and *Darien Papers*, 1849; and J. Barbour, *W. Paterson and the Darien Company*, 1907.

Dario, Rubén (pseudonym of Félix Rubén García y Sarmiento) (1887-1916), Sp.-Amer. poet, b. Metapa, Nicaragua. He first came to Spain in 1892, and then settled in Paris. He is the creator of the movement known as the 'generation of '98.' His *Prosas Profanas*, 1896, transposing Fr. symbolist metres into Sp., produced a tremendous effect; and when D. returned to Spain in 1898, he found himself the leader of the 'modernists.' His verse is smooth and melodious, and yet of great rhythmic vitality. Later works include *Cantos de vida y esperanza*, 1905; *El poema del olvido*, 1910; *Canto a la Argentina*, 1910. His *Obras completas* were pub. in 22 vols., 1917-19. See E. K. Mapes, *L'Influence française dans l'oeuvre de Rubén Dario*, 1935; P. Salinas, *La poesia de Rubén Dario*, 1948. See also *La vida de Rubén Dario escrita por el mismo*, 1910.

Darius I (522-486 bc), first and greatest of the Persian kings bearing that name, b. 548 bc. He obtained the throne after the death of Cambyses, but for some time had to contend with rebellion, especially from Babylon under Nidintu-Bel. After obtaining peace within the empire, he proved himself in many ways a wise and enlightened ruler; he divided the empire into 20 satrapies for the purposes of gov., reorganised the system of taxation, and improved the roads. His conquests extended from the Indus valley to Thrace and Scythia. In his expedition of 515 bc he transported, according to Gk sources, 700,000 men across the Bosphorus on a bridge of boats. He conquered Thrace and his general, Megabyzus, subdued Macedonia, after which he pursued the Scythians as far as the Volga, but returned with a depleted army. In 499 bc the Ionians revolted and were helped by the Athenians. After subduing the revolt D. sent two expeditions against the Athenians. The first ended in the wreck of his fleet in 492 bc. The second ended in the defeat of the Persian army at the famous battle of Marathon, 490 bc. He d. while preparing for a third expedition. Rock inscriptions have been left by D. at Bisutun, Naqsh-e Rostam, and elsewhere. See R. Ghirshman, *Iran*, 1954.

Darius II of Persia (424-404 bc), son of Artaxerxes I by a concubine. He succeeded Xerxes II after murdering his own brother, Sogdianus, who had murdered Xerxes II. His reign was only notable for insurrection and misrule. He helped the Spartans in the Peloponnesian war.

Darius III (335-330 bc), last of the Persian kings of the Achaemenian dynasty; most of his short reign was occupied by defending the empire against Alexander the Great, who proved victorious. D. was treacherously slain by two of his satraps.

Darjeeling, tn in W. Bengal State, India, 300 m. N. of Calcutta. D. is famous as a hill-resort for the hot season, being over 7000 ft up, and was formerly the summer

cap. of Bengal. It affords magnificent views of the Himalayas, in particular of Kanchenjunga (28,146 ft), only 45 m. distant. It is a great centre of the tea growing industry.

Dark, Eleanor, see AUSTRALIAN LITERATURE.

Dark Ages, name loosely given to the early period of the Middle Ages between the fall of the Rom. Empire, AD 475, and the revival of learning on the discovery of the Pandects at Amalfi, 1137—roughly 700 years.

Darkhiker, see NEWT.

Darlan, Jean François (1881-1942), Fr. admiral, b. Nérac, Lot-et-Garonne. He entered the Fr. naval school, 1899. As a naval cadet he spent much time on the China station, where he acquired the first rudiments of diplomacy as well as naval and military experience. It was not, however, until 1912 that he was promoted a lieutenant. After that he was for a time instructor aboard the training cruiser *Jeanne d'Arc*. The First World War brought a complete change to his career. He obtained transfer to the army as an expert gunner, fought at the Meuse, Alsace, Salonika, and in the battle of Verdun. After the armistice he went to the Rhineland and, later, returned to the navy. It was only in 1926 at the age of 45, and with the rank of *capitaine de vaisseau*, that he suddenly achieved a position of great influence. Georges Leygues, minister of marine, appointed him assistant *chef de cabinet* on the military side, and, but for a short interruption, he remained there until 1934. Then for 2 years he was commander-in-chief of the Atlantic fleet, returning to the ministry as chief of the general staff in 1936. Throughout the period 1926-39 his authority came to him rapidly. In 1929 he was made *chef de cabinet* and a rear-admiral. Three years later he became a vice-admiral and a grand officer of the Legion of Honour.

In 1939 he was promoted admiral. This made him head of the Admiralty as well as commander-in-chief of all the naval and military forces in France, without regard to seniority. On the capitulation of France in 1940 he became minister of marine in the Pétain Gov. Later he became vice-premier, foreign minister, and minister of the interior, as well as minister of marine. He was now the real power in France, keeping in close touch with Ger. leaders. In April 1942 he began to lose favour with the Gers., and Laval (q.v.) took his place as Prime Minister. D., however, retained command of the armed forces, and, when the Brit. forces took over Madagascar (q.v.), he called on the garrison to resist to the utmost. In Nov. 1942, after the Allies landed in Morocco and Algeria, he ordered cease fire, and himself assumed the role of chief representative of Fr. N. Africa in the name of Pétain. By arrangement with the Amer. commander-in-chief, Gen. Eisenhower, he was allowed temporary political status, which he himself enhanced into that of chief of state in Fr. Africa, with a Fr. Council under him. His status provoked

bitter criticism among the de Gaullists and in the Allied press. Soon afterwards he was assassinated at Algiers (24 Dec. 1942), and the Fr. Imperial Council unanimously chose Giraud to succeed him as high commissioner for Fr. Africa.

Darlaston, tn of Staffordshire, England, traditional centre of the nut and bolt industry. Manufs. include accessories for motor vehicles and aircraft, steel furnishings, and washing machines. Pop. 22,024 (1954).

Darley, Felix Octavius Carr (1822-88), Amer. artist and engraver; son of an actor of Eng. birth. He went to New York in 1848, engraving outline illustrations of Irving's works (*Sketch Book*, *Rip van Winkle*, *Legend of Sleepy Hollow*) for the Amer. Art Union, 1850. D. became a member of the Academy of Design in 1852, and also of the Amer. Society of Painters in Water-colours. He illustrated some of Lossing's many hist. of the U.S.A.; Hawthorne's *Scarlet Letter*, 1879; and novels of Cooper, Dickens, and Simms.

Darley, George (1795-1846), poet, critic, and mathematician, b. Dublin. Educ. at Trinity College there, he went to London, where he pub. his first poem, *Errors of Ecstacy*, 1822. He wrote for the *London Magazine*, in which appeared his story, *Lilian of the Vale*, 1826, containing the well-known song 'I've been roaming.' His poem *Sylvia, or the May Queen* appeared in 1827. Thereafter he joined the staff of the *Athenaeum*, in which he showed himself a severe critic. He was also a dramatist and a profound student of Eng. plays, editing those of Beaumont and Fletcher in 1840. So deeply was he imbued with the spirit of the 17th cent. that his poem 'It is not beauty I desire' was included by Palgrave in the first ed. of his *Golden Treasury* as an anonymous lyric of that age. An accomplished mathematician, he also pub. textbooks on geometry, algebra, and trigonometry. See C. C. Abbott, *The Life and Letters of George Darley*, 1928.

Darling, Sir Charles John, first Baron (1849-1936), judge, eldest child of Charles D., estate manager. A delicate child, he passed his boyhood principally at home—first at St. John's Abbey (Abbey House), Colchester, where he was b.; and then at Langham Hall. Articled to a solicitor in Birmingham, he did not complete his articles. He was called to the Bar in 1874, practised journalism, and went the Oxford circuit. As a Conservative he was returned for Deptford, 1888, and remained its representative until elevated to the Bench. Appointed judge of the high court and knighted, autumn of 1897—his appointment creating indignation in the Liberal party and consternation in the Temple (see Lord Birkenhead's *Contemporary Personalities*, 1924). He became known as the judicial humorist. He presided over the ludicrous 'Black Book' (Pemberton Billing) trial, May-June 1918; and over the committee on courts martial, 1919. Among the trials in which he was judge were the murder cases of Steinie Morrison (1911) and Herbert

Rowse Armstrong (1922). Pubs.: *Meditations in the Tea-Room*, *Scintillae Juris*, 1877; *Seria Ludo*, 1903; *On the Oxford Circuit and other Verses*, 1909; *Crime and Insanity*, *Murder and its Punishment*, *Musings on Murder*, 1925; *A Pensioner's Garden*, 1926; *Reconsidered Times*, 1930; and *Autumnal Leaves*, 1933.

Darling, Grace Horsley (1815-42), heroine, b. in Northumberland; daughter of Wm. D. (1795-1860), lighthouse-keeper on Longstone, one of the Farne Is. At the risk of their lives she and her father rescued 9 people from the *Forfarshire*, sailing from Hull to Dundee, and wrecked near Longstone lighthouse in 1838. Their heroism was warmly appreciated and rewarded, but she d. of consumption soon afterwards. See life by C. Smedley, 1932.

Darling, Sir Ralph (1775-1859), general. As ensign in the 45th Foot he helped to suppress the Negro insurrection under Fédor in 1793 in Grenada. In 1796 he was made military secretary, served in the W. Indies, and was deputy adjutant-general in the Walcheren expedition. Was governor of New S. Wales, 1825-31. Accused of excessive severity, he was recalled and tried, but acquitted and knighted by William IV in 1835; he became general in 1841. Many places (riv., mts, downs, etc.) were named after him in this period of geographical discovery in Australia. See T. Brahm, *History of New South Wales*, i, 1846.

Darling: 1. Australian riv., 1700 m. long, rising as the Macintyre in the Dividing Range between New S. Wales and Queensland. For some way it forms the boundary between the two, then enters S.E. Queensland. It is a trib. of R. Murray, joining it at Wentworth. Other names are the Calewatta and Barvon. It is navigable as far as Bourke at some times of the year, at others being merely a series of shallow lakes. Among its tribs. are R.s Dumaresque, Colgon, Warrego, Gwydyn, Macquarie, Bogan, and Namoi.

2. Range of mts. in W. Australia, running N. to S., parallel with the coast, 20 to 70 m. inland. Sandalwood and other timber abound.

Darling Downs, rich grazing, dairying, and agric. dist. of Queensland, Australia. Centre, Toowoomba (q.v.), 101 m. W. of Brisbane.

Darlington, municipal and parl. bor. in the S. of the co. of Durham, 18 m. S. of Durham and 33 m. from Newcastle, on the Skerne, near its junction with the Tees. It is in the N.E. region of Brit. Railways and on the main N. road from London to Edinburgh, and a network of railway lines branching in or near D. gives access to all parts of the kingdom. Industrially it is close to the coal and iron mining dists. The prosperity of D. began with the opening in 1825 of the Stockton and D. railway, the first railway on which a steam locomotive was used for passenger traffic. The first locomotive so used, built by George Stephenson, now stands on a pedestal at Bank Top station on the former L.N.E.R. D., however

has a long record as an industrial tn; in the days of Bishop Pudsey, more than 700 years ago, dyeing was a flourishing industry in the tn. At the beginnings of the Industrial Revolution the tn was still principally concerned with the textile industry. Carpet weaving was another prominent local industry. To-day the textile industry is represented by the largest factory in the world devoted to the manuf. of knitting wool, and there is also a clothing factory in the tn, although the manuf. of railway engines and other plant and equipment, including rolling stock, signals, signal wire pulleys, rails, and sleepers takes pride of place. Steel and iron forgings and steel castings are made for ships, as well as propeller shafts, rudders, guns, and massive stern frames. There is a great bridge-building industry, and among the bridges which were made at D. are the Blue Nile bridge at Khartoum; the White Nile bridge at Gox Sbu Gourma (1911); the Lower Zambesi bridge (1935); and the Victoria Falls bridge; and, in Britain, the King Edward VII bridge, Newcastle; Chiswick bridge; Tees transporter bridge; and Newport bridge over the Usk. Other industries are agric. implements and tools; are welding; boiler making and heating engineering; bricks and tiles of all sizes and types; constructional engineering; electrical equipment; furnaces; insulating material; wire manufs. of all kinds, including extra high strain wire for ropes and hawsers.

D. is a clean and well-paved tn, and, as is often the case in our older tns, the par. church is the most outstanding feature. The present church was founded by Hugh Pudsey, bishop palatine of Durham and nephew of King Stephen, on the site of an earlier Saxon building (begun 1180), and was restored by Sir Gilbert Scott, R.A., during the 19th cent. The great bells were recast in 1633, and others date from 1755 to 1866. Among its monuments is a carved figure said to represent Berengaria, wife of Richard I—though why the memory of a queen who never visited England should be perpetuated in D. is an unexplained mystery. The tn hall (1863), apart from its handsome tower, hardly does justice to D. Haughton-le-Skene church, dedicated to St. Andrew, is also an architectural feature of the bor. Memorials in the tn include those to Joseph Pease, son of Edward Pease, the Quaker pioneer of public railways and the first Quaker M.P. to sustain in Parliament his right to affirm instead of taking the oath; John Fowler, inventor of the steam plough; Dr. R. Taylor Manson, geologist and botanist; and John Fothergill, the first teetotal doctor. The First World War memorial takes the form of a hospital founded 1926. The public library, opened in 1885, was endowed by Edward Pease and modernised in 1933.

For over 400 years D. was ruled by the bishops palatine. No charter has been found, but it is believed to have become a bor. by prescriptive right in the time of Hugh Pudsey. In 1270 John of D., who assisted in preparing an ed. of the *Con-*

cordances of Hugh of Saint-Omer, issued his *The Greater English Concordance*, probably the first ever issued. He was confessor to Henry III and became archbishop of Dublin. During the Pilgrimage of Grace a number of the men of D. joined in the rising led by Earls Neville and Percy, and suffered execution. In his eccles. survey of the dist. Leland describes D. as 'the best market town in the Bishoprick after Durham.' After the rising the king deprived the bishops palatine of much of their temporal power, though it was not until 1868 that D. was represented in Parliament. James II created his 'friend,' Catharine Sedley, baroness of D. in 1685; the title was revived in 1722 for George I's 'friend,' Madame Kilmansegge; and in 1754 the tn's name was properly incorporated in the peerage when Harry Vane was created Earl D.—a title now extinct. In 1875, on the occasion of the jubilee of public railways, the statue to Joseph Pease was unveiled by the Duke of Connaught. Pop. 83,820 (1954).

Darlingtonia, genus of one species, family Sarraceniacae; a herbaceous perennial, *D. dalicornica*, of California, with curious pitcher type leaves, and whitish or pale green flowers in spring; grown under shady, cool, moist conditions under glass. See PITCHER PLANTS.

Darmesteter, Arsène (1846–88), Fr. philologist. In 1881 he was called to the Faculté de Paris as prof. of the Fr. language and literature of the Middle Ages. His publs. include *Traité de la formation des mots composés dans la langue française*, 1873; *De la création actuelle de mots nouveaux dans la langue française*, 1877; *De Florentine*, 1877; *Glosses et glossaires hébreux-français*, 1878; and *La Vie des mots étudiés dans leur signification*, 1887. With Hatzfeld he wrote *Le XVII^e Siècle en France*. D. began with him also *Dictionnaire général de la langue française*, finished by Hatzfeld and Thomas, 1890–1900. His main articles were collected by his brother James in *Reliques scientifiques*, 1890. The *Cours de grammaire historique de la langue française* was ed. by E. Muret and L. Sudre, 1891–95.

Darmesteter, James (1849–94), Fr. orientalist, graduated from Lycée Bonaparte, Paris, 1867. He was tutor at the École des Hautes Études, 1877; prof. of Iranian language and literature at the Collège de France, 1885. Among his most famous works are *Haurvatat et Ameretat, essai sur la mythologie de l'Avesta*, 1875; *Ormuzd et Ahriman, leurs origines et leur histoire*, 1877; *Études iraniennes*, 1883; *Le Mahdi (The Mahdi, Past and Present, trans. 1885)*, 1885. D. visited India (1886), becoming fellow of Bombay Univ. *Chants populaires des Afghans*, 1888–90, resulted from this visit. He trans. poems by his wife, Agnes Mary F. Robinson, afterwards Mme Duclaux (q.v.), and trans. the *Zend-Avesta in Annales du musée Guimet*, 1892–93; and ed. it for M. Muller's *Sacred Books of the East*, 1892–93.

Darmstadt, Ger. tn in the Land of Hessen (q.v.), at the foot of the Odenwald

(q.v.), 23 m. SE. of Wiesbaden. It became a city in 1330; but, although famous as a cultural centre and an imperial residence, it remained small; at the beginning of the 19th cent. its pop. was only 8000. The rapid growth of the city in the 19th cent. was due to the development of its chemical industry. During the Second World War the centre of the city was almost completely destroyed; since then the city has been largely rebuilt. In the Allied advance to the Rhine in 1945 the 5th Div. of the 12th Corps of Gen. Patton's (q.v.) Amer. Third Army crossed the Rhine S. of Mainz (q.v.) on 22-3 March. The rest of the Corps crossed the riv. and seized D. on the 25th, and then swept on to capture intact the Main bridges at Aschaffenburg (q.v.). D. has a technical univ. (1836), an artists' colony, an institute of music, and sev. museums, including a museum of baroque porcelain and a hunting museum. It has an important chemical industry, and it is a great publishing centre. Among the great names associated with the city are those of Liebig (who was b. here), Weber, Goethe, Herder, and Flotow (q.v.). Pop. 120,800.

Darnel (*Lolium temulentum*), weed found in corn fields thought to be the 'tares' sown by the enemy in the farmer's corn-field as related by Jesus Christ. If the plant is infected with a fungus it becomes poisonous to man and beasts, causing giddiness and loss of sight. Contaminated bread was at one time common, and it was illegal, in ancient times, to add D. to brewing barley, although D. was thought to improve the flavour of the brew.

Darnétal, Fr. tn in the dept of Seine-Inférieure, 2 m. E. of Rouen. It is on the R.s Robec and Aubette. There are manufs. of heavy woollen goods, blankets, etc., and also other textile factories, and engineering works. Pop. 7500.

Darnley, Lord, see LENNOX.

Darnley, anct Scottish barony of Renfrewshire, 4 m. from Paisley, 2 m. from Barrhead. From it Sir John Stewart took the title baron (c. 1461). He later became earl of Lennox; he was grandson of Sir J. Stewart of D. (d. 1429). Henry, Lord D. (1545-67), was a descendant.

Darolipons, see GODMANCHESTER.

Dart, riv. of England, which rises near Cranmere Pool, in the centre of Dartmoor. It is 36 m. long, 10 m. being tidal. It widens into a broad estuary, and is navigable to and from Dartmouth.

Dart (fish), see DACE.

Dartford, industrial tn in NW. Kent, England. It is situated on the Darent, about 2 m. from its entrance into the Thames, and 16 m. E. of London. In 1355 Edward III founded an Augustinian nunnery there, and in 1381 Wat Tyler's rebellion took place. The principal industries are engineering, flour-milling, paper-making, and the manuf. of chemicals. In 1590 the process of rolling and slitting iron was first estab. in England here by a native of Brabant, and in the same reign paper-making was introduced by Sir John Spelman. Richard Trevithick, the inventor of the locomotive steam engine, d. and was buried here in 1833.

The foundation stone of the Livingstone Hospital was laid by Sir H. M. Stanley, the African explorer, in 1894. There is a memorial in St Edmund's burial ground to the martyrs burnt here in 1555. Pop. 40,544 (1954).

Dartmoor, plateau in the SW. of Devonshire, England. Its length is about 23 m. and width 20 m. The mean altitude is 1500 ft. The higher parts are bleak, wild, and rugged, composed of masses of granite, the higher points of which are called tors, Yes Tor, 2028 ft, and High Willhays, 2039 ft, being the most lofty. The lowlands are well wooded and form a beautiful contrast with the bleak moorlands. In the centre of the moor lie the pools and morasses which form the headwaters of the chief Devonshire streams. Of the royal forest which occupied the centre of D. before the Conquest, small oaks and undergrowth in rough tracts alone remain. Wistmans Wood of stunted oaks is notable. The moor abounds in interesting prehistoric antiquities, such as avenues of large standing stones, sacred or sepulchral circles, dolmens, etc. Near Chagford may be found a fine example of a primitive vil. of rude granite blocks. Much of the scenery is exceedingly wild and beautiful, Lydford Gorge being famous. At Princetown (q.v.) is the great convict prison. A good picture of the scenery, atmosphere, and life of D. may be obtained from many of Eden Phillpotts's novels. See S. Baring-Gould, *A Book of Dartmoor*, 1900.

Dartmouth, George Legge, Baron (1647-1691), admiral, eldest son of William Legge, Earl of Dartmouth (c. 1609-1670); he served in the navy during the Dutch war, 1665-7, and held many offices and commands in the navy and army. Entrusted by James II with the prevention of the landing of William of Orange, he did nothing, the disaffection of the fleet being marked. He took the oath of allegiance, but in 1691 was arrested for treason and d. in the Tower before trial.

Dartmouth, seaport and municipal bor. in S. Devon, England, 8 m. SW. of Torquay, and 30 m. SW. of Exeter. The tn is picturesquely situated on the terraces of a craggy hill, near the mouth of the Dart. Many of the streets are narrow, and include some well-preserved timbered houses. The castle, at the entrance to the harbour, dates from the reign of Henry VII, though the original castle was built in the time of Edward IV. The spacious, land-locked harbour has made it a favourite resort of yachtsmen. It formerly had a considerable trade in Newfoundland fisheries, but its present trade is chiefly of a coastal character. The R.N. College (see NAVAL EDUCATION) is situated here. At D. Richard I. embarked with his crusaders for the Holy Land in 1190. Pop. 6000 (1954).

Dartmouth, tn in Nova Scotia, Canada, on the E. side of Halifax Harbour, connected to Halifax City by mile-long Angus L. Macdonald suspension bridge with 165 ft clearance above low water. A commercial centre, it manufs. rope, aircraft

parts, bolts and nuts, and molasses, repairs and builds ships, and has large oil refineries and a naval research estab. Near by is a naval air base, and the commercial airport at Kelly Lake. D. has increased in size owing to expansion of the structures connected with defence services and to 50 per cent increase in population since 1941. Pop. 15,037. See J. P. Martin, *The Story of Dartmouth* (privately printed).

Dartmouth College, institution for the higher education of men, founded, 1769, in Hanover, New Hampshire, U.S.A., and named after the second Earl of Dartmouth. Its spacious campus overlooks the Connecticut River and has a view of the White Mts. Alongside the college are a medical school and schools of engineering

The board is placed so that the centre is 5 ft 8 in. from the ground and the throwing line is drawn 9 ft from the board. The player who throws nearest the centre has first turn, a turn consisting of 3 D. thrown in succession. In doubles, players of opposing sides throw in order and alternately. The method of scoring is by subtraction from the target total—normally 301 for singles and 501 for doubles. A side must score a 'double'—that is, lodge a dart in the outer ring—before beginning to score, and must also finish on a double or a bull, achieving the exact target score. If a player scores more or one less than the target his turn is over, and his score during it is not counted. Under some rules he must at his next turn

DARTMOOR: RIPON TOR AND MOORLAND ROAD FROM HAYTOR ROCKS

and business administration. The teaching staff numbered 382 in 1955; students 2934. The libraries contained 750,000 vols.

Darton, par. and tn of Yorkshire (W. Riding), England, on the Dearne, 2½ m. NW. of Barnsley. It has coal-mines, and manufs. screws and nails. Pop. 11,400.

Darts is essentially a game of the Eng. inn and public house, played on a round board divided by wires into 20 triangular sections of equal size, higher numbers sandwiched between low ones. A dart in the narrow wired outer circle counts double the points scored by a plain throw into the section, and a throw into a narrow wired circle halfway between the outer ring and the bull's-eye counts treble the number. The bull's-eye consists of two small concentric circles counting 25 and 50 points respectively.

try for the score he required immediately before he threw the dart which 'broke' the target. There are many variations of basic D., among the most popular being Round the Clock and Shanghai. In Round the Clock all play against all, with 4 D. to the turn, starting on a double, then throwing to place one dart in each segment from 1 to 20, one in the bull and finish on a treble. A player scoring with the last dart of his turn has another turn of 4 D. Shanghai is played round the board from 1 to 20, each player scoring as many as possible in each segment with his 3 D. Whether or not a score is made in the section aimed at, a player throws for the next section on the following turn. Highest score for the full circuit wins.

Daru, Pierre Antoine Noël Bruno, Count (1767-1829), Fr. statesman and soldier, b. Montpellier; educated at the military

school at Tournon. He was commissary to the revolutionary army, 1793: was imprisoned on a charge of friendliness to the royalists, but was released on the death of Robespierre. He subsequently won rapid promotion, being an outstanding administrator. In 1799 he was employed as chief commissary to the army in Italy by Napoleon. He drafted the treaty of Pressburg after the battle of Austerlitz. He was made secretary of state, 1811, and retired from public life on Napoleon's abdication in 1814. In 1819 he was made a member of the chamber of peers. His writings include hist. of Brittany, and of the Venetian rep.

Darvel, burgh and tn of Ayrshire, Scotland, situated on the Irvine, 10 m. from Kilmarnock. Carpets and lace are manufactured. Pop. 3237.

Darwen, municipal bor. of Lancashire, England, 20 m. NW. of Manchester by rail, situated on the D. There are collieries and stone quarries: the tn is a centre of the cotton trade, and has engineering, plastics and paint industries, paper mills, silk manufs. and fire clay works. Pop. 30,827 (1954).

Darwin, Charles Robert (1809-82), naturalist, grandson of Erasmus D. (q.v.) and son of Robert Waring D. and Susannah, daughter of Josiah Wedgwood of pottery fame, was b. at Shrewsbury and d. at Downe; buried in Westminster Abbey. He early evinced a passion for collecting, and a taste for chem. After leaving Shrewsbury School he went to Edinburgh, and later to Cambridge, Univ. His studies appear to have been comprehensive, but they in no way inclined him, as was intended, to follow his father's profession of medicine. The subjects that fascinated him were zoology and botany, and his active mind and abundant energy manifested itself in a love of sport and the collecting of beetles. The seal on his future career was set by the invitation, through the influence of his close friend Henslow, botany prof. of Cambridge, to join H.M.S. *Beagle* as naturalist on her celebrated voyage in 1831 to S. America and the Pacific. The immediate results of his assiduity on this scientific mission are to be found in his first pub. work, *Journal of Researches into the Natural History and Geology of the Countries visited during the Voyage of H.M.S. 'Beagle', 1839*. From the time of his return, in 1836, he settled down in England for the rest of his life, marrying his cousin, Emma Wedgwood, in 1839. With the aid of his collections from the voyage and a Treasury grant, he then worked on his second book, *The Zoology of the Voyage of H.M.S. 'Beagle', 1839-42*. From this point the preparation of his great constructive theories begins. The industry he displayed in spite of poor health was remarkable. In 1859 his epoch-making *On the Origin of Species by means of Natural Selection, or the Preservation of Favoured Races in the Struggle for Life* was pub., expounding the doctrine now known as Darwinism (q.v.). His later scientific speculations are in the main extensions of this theory. A curious feature in con-

nection with *The Origin of Species* is the fact that its thesis was in its essentials formulated independently by his great friend, Prof. Alfred Russell Wallace (q.v.), while abroad, who submitted his paper on the subject to D. The total absence of jealousy on the part of the two naturalists, and the harmony in which they severally conducted their researches, forms one of the romances of Eng. scientific progress. In 1871 he pub. *The Descent of Man, and Selection in Relation to Sex*, which in some respects excited still more attention than the earlier and greater work, by reason of its searching inquiry into the ancestry of man. In this connection it is curious to note that the prejudice excited in the vulgar mind by D.'s speculations was due in great

N.P.G.
CHARLES DARWIN

The painting by the Hon. John Collier.

measure to the error of supposing that he advanced the theory of man's descent from the ape (see under DARWINISM). The theory of sexual selection as a process in the evolution of man, briefly adumbrated in *The Origin of Species*, was elaborated in *The Descent of Man*, but at the present day it has been very generally discredited. As a man D. possessed a strong frame, was thin and tall, and walked with a slight stoop, but in constitution he was far from robust, ultimately succumbing to some affection of the heart. In character he appears to have been a man of no pretensions and of considerable personal charm and warm sympathetic geniality. A full list of his works is to be found in the works of his son, Sir Francis D. His botanical works include *On the Various Contrivances by which British and Foreign Orchids are*

fertilised by Insects, 1862; *Insectivorous Plants*, 1875; *The Effects of Cross- and Self-fertilisation in the Vegetable Kingdom*, 1876; *The Different Forms of Flowers or Plants of the Same Species*, 1877; and *The Power of Movement in Plants*, 1880, which was a corollary of his *The Movements and Habits of Climbing Plants*, 1865. Among his zoological works are, besides the works on the voyage of the *Beagle* (the most popular of which is *A Naturalist's Voyage*, pub. in 1889), *A Monograph on the Cirripedia*, 1851-3; *Fossil Balanidae and Verrucidae*, 1854; and *The Formation of Vegetable Mould through the Action of Worms*, 1881. His works on geology were numerous, and include *The Structure and Distribution of Coral Reefs*, 1842; *Geological Observations on the Volcanic Islands visited during the Voyage of H.M.S. 'Beagle.'* 1844; and *Geological Observations in South America*, 1846, all of them included in the general work entitled *Geology of the Voyage of the 'Beagle.'* Miscellaneous works include *The Variation of Plants and Animals under Domestication*, 1868, and *The Expression of the Emotions in Man and Animals*, 1872. See Sir F. Darwin (ed.), *Life and Letters of Charles Darwin*, including an Autobiographical Chapter, 1887, and *Autobiography of Charles Darwin*, 1929; and L. Huxley, *Charles Darwin*, 1921. See also DARWINISM; EVOLUTION.

Darwin, Erasmus (1731-1802), scientific writer, poet, and physician, *b.* Elton, near Newark, 12 Dec. Educ. at St John's College, Cambridge, and at Edinburgh Univ., where he took his degree in medicine. He settled as a doctor at Lichfield, and won a high professional reputation, so much so that he was offered, but declined, the appointment of physician to George III. He is said to have been an athletic man and of temperate habits, the advantage of which he seems to have omitted no opportunity of pointing out to those over whom his influence extended, and in this respect he rendered good service to the poor of Lichfield. His writings were varied, yet essentially those of a man of scientific mind, which bins robs his verse of the true poetic quality, full though its subject matter may be of sylphs, nereids of the grot, and gnomes, and dignified with the Spenserian formula of personification. Posterity has largely forgotten his work, yet his *Zoonomia, or the Laws of Organic Life*, 1794-6, a pathological work, together with a treatise on generation, is significant in that, according to his far more famous grandson, Charles D., he anticipated the views of Lamarck. But his literary reputation rests mainly on his poem *The Botanic Garden*, 1789, 1791, a long poem in deasyllabic rhymed couplets, instinct with scientific interest in nature, but, if polished, artificial, stilted, and pompous. In the second part, entitled *The Loves of the Plants*, he follows the system of Linnaeus by personifying each plant; and he appends botanical comments in which the praise of scientific men recurs. In 1800 appeared his *Phytologia; or the Philosophy of Agriculture and*

Gardening, a lengthy work in one vol. All his works excited considerable attention, and by some were extravagantly praised, by others as unreasonably disparaged, but at the present day they are but little read or consulted, though they scarcely deserve to sink into complete oblivion; for they reveal a writer of a highly original turn of mind, well versed in physics, with a rare aptitude for seizing on and illustrating natural analogies. But he was over-fond of tracing false analogies, and showed the faults of a credulous collector and of a fanciful reasoner. As a poet he lacked inspiration. He was a free-thinker and, as implied above, an enthusiastic botanist, possessing an 8-acre botanical garden. Some of his ideas on evolution foreshadow the work of his grandson (see DARWINISM). His first wife *d.*; and to please his second he removed to Derby. By his first wife he was the grandfather of Charles D., by his second of Francis Galton. He *d.* suddenly of heart disease at Beardsall Priory. See S. Butler, *Evolution Old and New*, 1879; C. Darwin, *Life of Erasmus Darwin*, 1887; J. Huxley, *Darwin*, 1921, 1948; H. Pearson, *Doctor Darwin*, 1930; and J. V. Logan, *The Poetry and Aesthetics of Erasmus Darwin*, 1938.

Darwin, Sir Francis (1848-1925), biologist, *b.* Down, Kent, the third son of Charles D. He was in intimate association with his father's work till the latter's death; was editor of his father's biography. In 1884 appointed univ. lecturer and reader in botany to the univ. of Cambridge; president of the Brit. Association, 1908, at Dublin. Pub. *Practical Physiology of Plants* (with E. H. Aceton), 1894, and *The Elements of Botany*, 1895. His admirable *Life and Letters of Charles Darwin*, 1887, was followed by *More Letters*, 1903. He is chiefly remembered by students for the type of potometer devised by him to measure rate of water intake by plants.

Darwin, Sir George Howard (1845-1912), physicist and mathematician, *b.* Down, Kent, the second son of Charles D. After a distinguished career at Cambridge Univ. he went to the Bar, but returned to Cambridge as Plinian prof. of astronomy and experimental philosophy, 1883. He was probably the greatest worker in applied mathematics since Lord Kelvin. His chief work was concerned with the mathematical problem of three bodies—with the attraction of rotating fluid bodies, with the theory of the tides and the estimate of their effects during the separation of the moon from the earth, and the pressure of loose earth. In the historical dept of astronomy, D. was chiefly concerned with the genesis of the moon from the earth. His pub. work is mainly to be found in *Scientific Papers*, Cambridge, 1898. He pub. a popular summary of his work on the tides, *The Tides and Kindred Phenomena of the Solar System*, 1898.

Darwin, port and most northerly tn in Australia, cap. of the Northern Terr., on a fine N. coast harbour. It is an international airport, and the terminal port of regular shipping services from both E.

and W. Australian coast ports. It is connected to Alice Springs (q.v.) by air and by the Stuart Highway. Rapid and continuing development of the Ter's resources is causing D. to expand. Pop. 8550.

Darwin, Mount, in Chile, situated near the S. coast of the main is. of Tierra del Fuego (q.v.); height about 7000 ft. D. Sound (10 m.) is a continuation of Beagle Channel on the SW. of Tierra del Fuego.

Darwinism, or the **Darwinian Theory**, theory popularly but erroneously identified with the dawn of the method of evolution, especially as applied to the genesis of the human species. The D. T. as expounded in Charles Darwin's *Origin of Species*, accepting the preconceived notion of evolution as such, proceeded, by a brilliant extension of the Lamarckian opinion that all species, including man, are descended from other species, to enunciate by the light of a mass of biological facts the law of natural selection, and indirectly to refute the traditional belief in the immutability of species and the expression of that belief in the current theological conception of a special or separate creation by direct divine interposition. D., or more popularly the doctrine of the survival of the fittest through a process of natural selection, is primarily concerned with the fact of the existence of variations in species, as explanatory of the hitherto incomprehensible and marvellous co-adaptation in nature of organic beings. Briefly D. or the D. T. is this: there is no independent creation of organic beings from an archetype, their embryological relations, mutual affinities, and geographical distribution being opposed to any such hypothesis; an investigation of plants and animals shows that man, by a process of artificial selection, conscious or unconscious, has been able to produce for his own ends numerous variations of species. Applying this principle of artificial selection of species under domestication to organic beings in a state of nature, the old distinctions between species and varieties break down; in nature dominant or flourishing species produced the greatest number of varieties, and the slight variations of all parts of an organism furnished in nature itself the material for selection. Those organic beings that vary, however slightly, in a manner profitable to themselves have the best chance of surviving, and therefore of being naturally selected. Natural selection inevitably causes much extinction of the less improved forms of life, and from a consideration of the high geometrical ratio of increase of organic beings to the means of subsistence a struggle for existence must follow, and that struggle is most severe between varieties and individuals of the same species. Hence the process of natural selection leads to the survival of the fittest, or the preservation of favourable individual differences and variations, and the corresponding destruction of those which are injurious.

The Origin of Species also briefly outlines the process of sexual selection, or

'the struggle between the individuals of one sex, generally the males, for the possession of the other sex.' The hypothesis of sexual selection is used by Darwin to explain peculiarities appearing in one sex and becoming hereditarily attached to that sex whether those peculiarities appear under domestication or in nature. *The Descent of Man, and Selection in Relation to Sex* is really an application of the principles expounded in *The Origin of Species* to the human species. In this work Darwin collects evidence to show the descent of man from some lower form, and from the evidence provided by homologous structures and embryological development infers that man and anthropomorphous apes had a common ancestor. The theory of sexual selection has been very generally abandoned at the present day; according to this theory differences in the secondary sexual characters of male and female (e.g. in the plumage of birds) can be explained in terms of selection value during breeding: those male birds with the most brilliant colouring would be selected by the females, so that the colours would be perpetuated and would become more extensive in succeeding generations. Darwin accepted the theory of evolution apart from the existence of its motive cause. But the proof of the existence in nature of the material for variations of species is believed by many to supply a motive cause in itself. There can be no doubt of the almost universal acceptance of D., notwithstanding the prejudice roused at its promulgation, chiefly in religious quarters. The value of the theory in relation to evolution is shown by its application to sociology, psychology, and the growth of political institutions. In the subsequent application of the method of evolution to other sciences, the theory of natural selection not infrequently found less favour than that of Lamarck, who early laid emphasis on the effect of use and disuse of habit in species formation and its hereditary transmission. D. taught that habit, though it played a considerable part in some cases in the modification of the constitution and structure of species, has been in its effects largely combined with and overmastered by the natural selection of innate variations, and the interpretation of D. as establishing the creation of new species from the accumulative power of natural selection has since the controversy over hereditary transmission found very general acceptance. One of the subtlest criticisms of D. was that of T. H. Huxley, who, while championing the theory against dogmatism, himself advanced the objection that man, by artificial selection, could not induce varieties of a domesticated animal which were unable to breed with one another, and that until he could do so, variations were not satisfactorily accounted for by natural selection. The difficulty offered by the existence of unity of type, or the constant fundamental agreement in structure in organic beings of the same class, is met by Darwin himself, who thinks the explanation of the unity lies in the

fact of unity of descent. In the field of philosophical speculation, D. would seem to be inconsistent with any teleological conception of the universe, or the theory of a world created out of chaos by the intervention of a Divine Being proceeding on the lines of a coherent and beneficial plan. It substitutes a purely mechanical conception of organic development based on the mere instinct of self-preservation, which is complete of itself except in so far as the spontaneity of the variations and mutual affinities of species is assumed so as to lead to the inference of some innate organising principle. D. is not avowedly concerned with the absolute origin of life or, as was the teaching of Buffon, with the evolution of the primordial germ. Wallace, who worked out the theory of natural selection independently of Darwin, sees in it no necessary inconsistency with teleology, and the existence through-out evolution of an upward guiding principle from without. It may not be impossible, too, to agree with some Ger. philosophers who regard D. as inculcating a new determinism (q.v.), based on the relativity of all moral ideas in harmony with successive stages of social progress.

Nietzsche, too, criticises D. through a denial of the primary importance of the instinct of self-preservation, saying that 'psychologists should bethink themselves before putting down the instinct of self-preservation as the cardinal instinct of an organic being. A living thing seeks above all to discharge its strength—life itself is Will to Power; self-preservation is only one of the indirect and most frequent results thereof.' Huxley, however, acutely criticises the whole theory of evolution by pointing out that all the laws of physical evolution can never aid us in comprehending the origin of mind. Schaefer has put forward a materialistic theory, not entirely original, that life has originated by a process of evolution from non-living elements, and that we may eventually succeed in building up living protoplasm in the chemical laboratory. But he was careful to distinguish 'life' from 'soul', and the genesis of the latter is as much as ever in the region of the transcendental. It may be conceded, and from the most optimistic standpoint, that D. favours a love of the law of nature, not dissimilar from the Stoic conceptions, and replaces current religious emotions by a love of the aesthetic in nature, and a pantheistic conception founded on the belief of the essential identity of man and the external world. It is an axiom that Darwin's work brought about a revolution in human thought, so that, as Osborn says, 'before and after Darwin' will always be the *ante et post urbem conditam* of biological hist., even though the evolutionary idea is so much older—for this idea goes back to the Gk philosophers, and Darwin himself, in *The Origin of Species*, dealt quite fully with the views of his predecessors. Arising out of D. is the recognition of 'emergence' in organic evolution, or, in other words, the recognition of creativity in many of the steps in such evolution. Modern biologists,

while accepting D. as a whole, concur in the view that there is no irrefutable evidence of the transmissibility of 'definite variations,' or changes in living creatures induced by peculiarities in environment. They accept Weismann's theory that these variations have a germinal origin and not an origin from without. Weismann asserts that the germplasm is continuous, that all reproductive cells are produced directly by other reproductive cells, and are not in any true sense the product of the complex organism which carries them, nourishes them, and allows them to multiply. Botanists, however, are not very enthusiastic about Weismann's 'germplasm' theory; and while Darwin himself was prepared to take an ecological view of the evolutionary problem, the neo-Darwinians for the most part are not.

It does not appear that Darwin knew the work of Mendel (pub. in 1865); at all events he took no notice of it, and it was not taken up until the beginning of the present century, when it was more or less simultaneously rediscovered by De Vries, Correns, and Tschermak. Briefly, the result of Mendel's work on the problem of inheritance in plants was to show that inherited characters are dependent on unit factors derived from both parents, which maintain their identity throughout the life of the plant, and separate only when the sex cells (gametes) are formed. Mendel brought to light facts which have been developed by the mutationist school—a mutation being a discontinuous variation, a more or less wide saltation or sport, which differs from the parent form in one or more well-marked characters. Darwin made many observations on such sports or mutations, but he objected to such 'sudden and considerable deviations of structure' as material for evolution, because he was of the opinion that they would be swamped by inter-crossing; but the Mendelian discoveries have shown that this is not necessarily the case. See also BIOLOGY; EVOLUTION; MAN.

Dar'yal, famous gorge and chief pass in the Caucasus Mts, situated in the central part of the range. The R. Terek flows through it. It has been fortified from very remote times; the ruins of fortifications can still be seen. The Georgian

Military Road runs through it from Ordzhonikidze to Tiflis.

Das, Chitta Ranjan (1870-1925), Indian Swarajist leader, *b.* Calcutta, son of Bhubon Mohan D., a solicitor. Called to the Bar at the Middle Temple, 1892. Returned to India, 1893, and practised at the Calcutta Bar until 1921. He first entered the Indian Congress in 1906, and was elected its president in 1921; but before the Congress met at Ahmedabad he was arrested for unlawfully issuing an appeal for 'volunteers,' and he served a sentence of 6 months in prison. He was president next year, at Gaya, and in Dec. 1923 he entered Bengal Legislative Council. In 1924 he was elected first mayor of Calcutta.

Dasent, Sir George Webbe (1817-96), scholar, *b.* island of St Vincent. Educ. at Westminster, London Univ., and Oxford, he was for sev. years in the diplomatic service at Stockholm. From 1845 to 1870 he was an assistant editor of *The Times*. In 1852 he was called to the bar, and from 1853 to 1866 was Prof. of Eng. Literature and Modern Hist. at King's College, London. His pub. include translations of *The Prose of Younger Edda*, 1842; *Popular Tales from the Norse*, 1853; *The Story of Burnt Njal*, 1861; and *The Story of Gisle the Outlaw*, 1866; he also wrote 4 novels. He was knighted in 1876.

Dash, Comtesse de, the pseudonym of Gabrielle Anne de Cisternes de Courteras, Marquise de Poillon de Saint-Mars (1804-1872), Fr. novelist, *b.* Poitiers. She was a woman in fashionable society, and her numerous novels deal principally with love and intrigue. She is said to have written 5 or 6 vols. in a single year, and the list of her novels is accordingly long. *La Pomme d'Ève*, 1853; *Les Galanteries de la cour de Louis XV*, 1861; *Les Aventures d'une jeune mariée*, 1870; and *Les Bals masqués*, 1882, may be mentioned.

Dashava, natural gas fields, richest in Europe, near Droghobych in Galicia (W. Ukraine), the starting point of gas pipelines to Kiev-Moscow and (under construction) Minsk-Leningrad with branches to Vilnius and Riga.

Dashnaksutun, Armenian national revolutionary party with somewhat Populist (see POPULISM) tendencies, founded in 1890 with the aim of liberating Turkish Armenia by means of terrorising Turkish officials, provoking reprisals, and thus making the Armenian question an international issue. The revolutionary character of D., who were supported by the mass of the Armenian pop., led the Russian Gov. to take a series of anti-Armenian measures in Transcaucasia. D. proclaimed and successfully carried out a policy of civil disobedience in 1903-5, forcing the gov. to retract its measures. They retained a Russophile attitude until the Bolshevik revolution in Russia, after which they became the dominant party in the independent Armenian Rep. of 1918-20. See also ARMENIA; ARMENIANS.

Dashwood, Sir Francis, 15th Baron Le Despencer (1708-81), politician, *b.* London, and educ. at Charterhouse. When still a very young man he became notorious for

his riotous living in an age noted for its moral laxity. After making the grand tour, he was given a minor appointment in the household of Frederick, Prince of Wales. He presently became president of the Dilettante Society, and later founded the infamous brotherhood of the Monks of Medmenham, among the members of which were Bute, Sandwich, Wilkes, Thomas Potter, and Paul Whitehead. Entering Parliament in 1741 as an opponent of Wilkes, he was 21 years later appointed by Bute chancellor of the exchequer, but his general incompetence and his ignorance of financial affairs were so great that his tenure of office did not survive Bute's fall in the spring of 1763. In that year the abeyance into which the barony of Le Despencer had fallen was terminated in his favour, and he became premier baron of England.

Dass, Petter (1647-1708), Norwegian poet, *b.* Nord Herø. From 1689 he was par. priest of Alstahaug. His wonderful power of description in verse has led him to be styled the father of modern Norwegian poetry. His most famous poem, *Nordlands Trompet*, is a vivid description of nature and life in N. Norway. He also wrote lyric and religious verse. The collected writings of D. were ed. by Dr A. E. Eriksen, 1873-7. See H. Midbøe, *P. Dass*, 1947.

Dasyurus, genus of carnivorous marsupials placed near to the bandicoot and opossum genera; the species are called dasyures or native cats. They inhabit the Australian region, are nocturnal in habit, and extremely ferocious. The body of the D. is viverrine in form, dark brown and white in colour, and a hallux is sometimes present.

Datames, distinguished Persian general, a Carian by birth, was satrap of Cilicia under Artaxerxes II (Mnemon), but revolted against the king. He defeated the generals who were sent against him, but was at length assassinated, 362 B.C. Cornelius Nepos, who wrote his life, calls him the bravest and most able of all barbarian generals, except Hamilcar and Hannibal.

Date. The D. palm, or *Phoenix dactylifera*, is a tree of the family Palmaceae, cultivated chiefly in warm countries for its fruit. The stem is generally 20 to 30 ft high, and is crowned at the top by leaves which often split and become pinnate. The inflorescence is enveloped in a large spathe when young. The dioecious flowers are in clusters. The fruit contains a stone which causes the embryo in a mass of hard endosperm. The male and female flowers are borne on separate trees, and as it is impossible to distinguish them before the flowers appear they have to be artificially fertilised. No difficulty is found in the cultivation of the D. palm; plenty of sun, light, and sandy rather than rich soil, and a certain amount of water, are the only conditions required. They commence to bear fruit at 8 years old, and continue to do so for more than a century. The D. is a very important article of food in Arabia, where other foods are hard to obtain. It is eaten raw roasted, or ground and

pressed into cakes. The leaves are used for matting, and the wood for any kind of carpentry in which a light species only is required; the stem-fibre is made into ropes. It is largely exported. It is mentioned in the earliest records of the Assyrians and Gks, and the Jews also used it as a symbol of victory.

Date Plum, name given to sev. species of *Diospyros* in the family Ebenaceae. *D. lotus*, the common D. P., or European lotus, has long shining leaves, white flowers tinged with pink, and fruit almost like a cherry. It is really a tropical tree, but has been naturalised and is cultivated in the S. of England, where the fruit is used for preserves. *D. kaki* is the Chinese D. P., or persimmon.

Datis, Median general who, with Artaphernes, commanded the army of Darius in the expedition he sent against Athens, 490 bc. He succeeded in capturing Eretria, but was defeated by the Athenians under Miltiades at the famous battle of Marathon, and had to abandon any further attempt against Greece.

Datolite, mineral composed of basic calcium and boron orthosilicate, $\text{Ca}(\text{BOH})\text{SiO}_3$. It is found as glassy crystals, or as masses with a granular to compact texture. It is colourless or with a tinge of green and may be transparent or opaque. Hardness, 5-5.5; sp. gr., 3.0. It is found in Norway, Scotland, the U.S.A., and Tasmania.

Datum, or **Datus**, anct Thracian tn. on the Strymonic gulf, subject to Macedonia, with gold mines in Mt Pangaeus in the neighbourhood, whence the Gk proverb, a 'Datum of good things.'

Datura (Arab *tutorah*), genus of Solanaceae. *D. stramonium* is the thorn apple. The plant is found on dunghills and in waste places. It is a violent narcotic and is employed in convulsions and *tic douloureux*. When smoked it palliates the symptoms in asthma. *D. tatula* and *metel* are similarly used. From the species *D. sanguinea* the Peruvians make an intoxicant.

Daubenton, Louis Jean Marie (1716-99). Fr. naturalist. After assisting Buffon at the Jardin du Roi, he became curator and demonstrator in the Cabinet of Natural History, and helped to compile the *Histoire Naturelle*. During the revolution he held the chairs of natural hist. and mineralogy. Elected to the Senate, he was seized with apoplexy at his first attendance, and d. shortly after.

Daubeny, Charles Giles Bridle (1795-1867). Eng. chemist, botanist, and geologist. He was prof. of chem., Oxford, 1822; of botany, 1833; and represented the univs. at the first meeting of the Brit. Association, 1831. He travelled largely and made important studies of volcanic action. His numerous works include *Active and Extinct Volcanoes*, 1826; *Introduction to the Atomic Theory*, 1831; and *Trees and Shrubs of the Ancients*, 1865.

D'Aubignac, Abbé, see AUBIGNAC.

D'Aubigné, François, see MAINTENON.

D'Aubigné, J. H. M. and T. A., see AUBIGNÉ.

Daubigny, Charles François (1817-78), Fr. painter. After 2 years' study in Italy he returned to Paris, and his landscapes, of the Barbizon school, were recognised as masterly. His 'Lock at Optevoz' was bought by the state, 1855, and he was made a chevalier of the Legion of Honour, 1859. His finest landscapes, usually of riv. scenes, were painted between 1864 and 1874. His 'Spring-time' is in the Louvre. See Moreau-Nelaton, *Daubigny raconté par lui-même*.

D'Aubonne, Baron, see TAVERNIER, JEAN BAPTISTE.

D'Aubusson, Pierre, see AUBUSSON.

Daucus, a genus of Umbelliferae, is cosmopolitan but for Australia, and in Britain is represented by *D. carota*, the carrot. In its wild state the root of the plant is hard, wiry, and juiceless, but when cultivated it becomes succulent and nutritious.

Daudet, Alphonse (1840-97). Fr. novelist, b. Nîmes. His father, Vincent D.,

ALPHONSE DAUDET

was a silk manufacturer. D.'s early years were not happy owing to the poverty following on the failure of his father's business. In 1856 he went to Alais as an usher to a boys' school, but the life was impossible, and in 1857 he went to Paris to live with his brother Ernest, who was a journalist. He was some time throwing off the depression of his misery as an usher, and the memory of his wretched experiences haunted him. In 1858 he pub. his first vol. of verse, *Les Amoureuses*, and at once obtained employment on *Le Figaro*. Through this post he was made secretary to de Morin, with whom he remained till the latter's death in 1865. During 1866 he pub. *Lettres de mon Moulin*, and in 1868 *Le Petit Chose*, which contained memories of his early life. He collaborated with others for the stage, and wrote *L'Arlésienne*, 1872. In the same year he pub. the first of the immortal *Tartarins*, *Les Aventures prodigieuses de Tartarin de Tarascon*, in which he satirised, or rather burlesqued, his fellow Provençals. In 1874 he wrote his most masterly

work, *Fromont jeune et Risler aîné*, which struck a new note in Fr. literature, the two successive works showing that he could move to laughter and tears. The story of an illegitimate child, *Jack*, followed in 1876. *L'Immortel*, 1888, contained a savage satire on the Fr. Academy, to which he was never elected. His other novels include *Sapho*, 1884, and 2 more Tartarin books, *Tartarin sur les Alpes* and *Tartarin Voyageur*, 1885. His *Trente ans de Paris*, 1878, and *Souvenirs d'un homme de lettres*, 1888, gave a vivid picture of his literary and social life. He wrote some charming children's stories, the best known being *La belle Nivernaise*, 1886. He was a member of the literary circle of Zola, Flaubert, and the Goncourts, although he never went to the extremes of naturalism. His wife, Julia Allard, shared his literary labours, and their marriage was extremely happy. See E. L. M. Daudet, *Mon frère et moi*, 1882; L. Daudet, *Alphonse Daudet*, 1898, *Quand vivait mon père*, 1940, and (ed.) *Lettres familiales*, 1944; Y. Martinet, *Alphonse Daudet: sa vie et son œuvre*, 1940; G. V. Dobie, *Alphonse Daudet*, 1949.

Daudet, Ernest Louis Marie (1837-1921), Fr. author and journalist, b. Nîmes; an elder brother of Alphonse D. He is the author of *La Terreur blanche*, 1878, and *Souvenirs de la Présidence du Maréchal MacMahon*, 1880, historical works of considerable interest; he also wrote a biography of the Princess Lievin (the Princess de Cadignan of Balzac) entitled *Vie d'une ambassadrice*, 1903. His novels such as *Vénus de Gordes*, 1866, never attained the popularity of his brother's works.

Daudet, Léon (1867-1942), Fr. author, the son of Alphonse D. He wrote sev. satires, notably one upon doctors, *Les Morticoles*, 1894, and another upon republican politicians, *Les Parlementeurs*, 1901. Besides political pamphlets, he wrote sev. novels, partly social, partly psycho-analytical. His works also include *Le Voyage de Shakespeare*, 1896; *Les Idées en Marche*, 1896; *Les Deux Étreintes*, 1900; *Souvenirs des milieux littéraires, politiques, artistiques, et médicaux*, 1914-21; *Le Stupide XIX^e Siècle*, 1922; *Panorama de la III^e République*, 1936; and sev. books about his father, Alphonse D. (q.v.).

Daudin, François Marie (1774-1804), Fr. naturalist, b. Paris. He wrote many books on zoology, the best known being a work entitled *Histoire naturelle générale et particulière des reptiles*, 1802-3, a book of considerable value to herpetologists, as it describes many generic and specific forms for the first time.

Daugava, see DVINA.

Daugavpils (until 1893 Dünaburg, then Dvinsk until 1920), tn in Latvia, on the W. Dvina, an important transportation centre. Founded in 1278 by Livonian knights, it belonged variously to Poland and Sweden; from 1772 it was a Russian fortress. It saw much fighting in 1915. It was the cap. of the Latvian prov. of Latgale, and 1952-3 of D. oblast (abolished). Pop. (1956) under 50,000 (1860, 25,000, 1913, 130,000, 1925, 41,000).

Dauglish, John (1824-86), chemist (M.D. 1855), b. London. He invented a process for the manuf. of aerated bread, which was brought into operation in Great Britain in 1859. Carbonic acid gas was evolved in a generating vessel by the action of sulphuric acid on chalk, and after being purified was forced at high pressure into water which was then used with the flour to make the dough. The great object was to lessen the risks incurred during the ordinary process of fermentation by a variable temp., and to ensure certain and uniform results.

Dauin, small tn situated on the is. of Negros, in the Philippine Archipelago. It was formerly called Buglas Is. Pop. 11,208.

Daulatabad, or **Deogiri**, tn in Hyderabad state, India, 10 m. N. of Aurangabad (q.v.). It is noteworthy for a fine 13th cent. fort set on an isolated conical rock some 800 ft high. It has a perpendicular scarp all round some 100 ft high and entrance is possible only through a passage tunnelled through the rock.

Daulis, or **Daulia**, anct tn in Phocis, situated on a lofty hill, residence of the Thracian king Terps, and scene of the tragic story of Philomela (q.v.) and Procne, both of whom are surnamed Daulias.

D'Aulnoy, Baronne, see AULNOY.

D'Aumale, Counts and Dukes, see AUMALE, COUNTS AND DUKES OF.

Daumat, Jean, see DOMAT.

Daumier, Honoré (1808-79), Fr. caricaturist and painter, b. Marseilles. He became a professional lithographer and, in 1831, joined the staff of *La Caricature*, where his scathing caricatures attracted attention, one of king Louis Philippe as Gargantua leading to his imprisonment (1833). He then drew for *Charivari* until his old age, his social caricatures making artist and paper famous. His *Bon Bourgeois* helped to inspire Flaubert's *Bouvard et Pécuchet*. He was also a serious painter of high rank, whose pictures now attract the attention they deserve. Balzac called him a 'Michelangelo under the skin,' though Rembrandt was his model. He painted in dark but not energetic tones scenes of everyday life—'La Blanchisseuse,' 1861 (Louvre), 'Le Drame,' 1858 (Munich), several versions of the railway third-class carriage, and a series of Don Quixote. He became totally blind in later life and was befriended by Corot. See lives by Arsène Alexandre, 1888, and E. Klossowski, 1908; and L. Deltail, *Honoré Daumier, Description de l'œuvre graphique*, 1926-31.

Daun, Leopold Josef Maria, Count von, Prince of Thiano (1705-66), Austrian field marshal, b. Vienna. He was made a colonel during the war of the Polish Succession (1734-5), general in the war against the Turks (1737-9), and field marshal in the war of the Austrian Succession. His over-cautious generalship was frequently criticised.

Daunii, anct name for the inhab. of Daunian, a region of S. Italy in the N. of Apulia. It now forms a part of the Neapolitan prov. of Terra di Bari.

Dauphin, title formerly borne by the eldest son of the king of France, abolished after the revolution of 1830. The childless Comte de Vienne Dauphiné sold his lands in 1349 to Charles, subsequently (1364) Charles V of France, and Charles's eldest son, b. 1368, the future Charles VI, received the Dauphiné and the title of dauphin at his birth. It had originated as a proper name, but had become the title of the count of Vienne Dauphiné by the end of the 13th cent.

Dauphiné, anc. prov. of France, on the SE. frontier between Provence and Savoy, now comprising the depts of Drôme, Hautes-Alpes, and Isère. Its cap. was Grenoble (q.v.). We first hear of it in the possession of the Allobroges, Caturiges, and various Celtic tribes, and then it was taken into the Rom. Empire. Later it became part of the kingdom of Burgundy (q.v.), and thence passed into the possession of the Franks. The Carolingian empire was split up and redistributed, and D. was taken into the second Burgundian empire of Arles. From the 9th to the 12th cents. it changed its entity, being divided into various principalities. The Burgundian succession failed, and it was willed to the Ger. emperor, in whose possession it remained till 1343, when it was given back to France. In support of political freedom a convocation was held at Vizelle in 1778 to protest against the dissolution of the prov. Parliament. The D. Alps form the N. part of the W. Alpine system of Europe, the highest summits being Les Ecrins (13,462 ft) in the dept of Hautes-Alpes, and the Aiguille du Midi (13,075 ft) in Isère. See also DAUPHIN; ALPS.

Dauphinite, see ANATASE.

Daurat, Jean (1508-88), Fr. poet and scholar, b. Limoges. His original name was Dinemandy. From working as a page in the household of Francis I. he became a learned classical scholar and director of the Collège de Coqueret. Here he founded the famous society of young poets, the Pléiade (q.v.), so called after the group of 7 Gk poets of Alexandria, and played an important role in stimulating the young humanists, and revealing to them the treasures of classical literature. In 1556 D. became prof. of Greek at the Collège Royal.

Dauria, see TRANSBAIKALIA.

Davanzati, Chiaro (c. 1230-78), It. lyrical poet, b. Florence. He commenced by writing lyrics in the style of the Provençals and Sicilians, but later he became a follower of Guitton of Arezzo. To this period probably belong his patriotic *canzone*. D'Ancona's *Antiche Rime*, 1875-88, includes all his best work.

Davao, prov. in SE. Mindanao, Philippine Is., producing lumber, rubber, coconuts, and pineapples. Mineral deposits are found here. The cap. is Davao, a shipping centre (pop. 111,263). In the Second World War Jap. forces held out here until late 1945. Pop. 364,859.

Davenant, or D'Avenant, Charles (1656-1714), writer on political economy, eldest son of Sir Win D. the poet. He practised as a lawyer at Doctors' Com-

mons, was commissioner of excise, 1683-9, and inspector-general of customs, 1705-14. He was secretary to the commission which settled the union with Scotland. As an economist he at first showed some free-trade tendencies, but later adopted the orthodox mercantile theory. A complete ed. of his numerous pamphlets and works was pub. in 1771, ed. by Sir C. Whitworth.

Davenant, or D'Avenant, Sir William (1606-68), poet and dramatist, b. Oxford, son of the proprietor of the Crown Inn. The story that Shakespeare was his real father was fostered by D. himself, but there is no certainty about it. At first he was attached as page to various noble households, but the murder of his patron, Lord Brooke, in 1628 left him without means, and he turned to the stage. He wrote the words for some masques of Inigo Jones, such as *The Temple of Love*, 1634; his earlier plays were *The Tragedy of Albovine, King of the Lombards*, 1629; and *The Cruell Brother*, 1630. His best play, a comedy, *The Witts*, was produced in 1636. In 1637 he succeeded Ben Jonson as poet laureate. He was an ardent royalist, and was knighted for bravery at the siege of Gloucester, 1643. He was captured on a mission to Virginia to establish a colony, 1650, and imprisoned, but was released through the good offices of Milton, whose life, it is said, he saved after the Restoration. In the reign of Charles II he took a prominent part in the development of the theatre, especially in the matter of elaborate scenery and stage effects, at his theatre the Duke's in Lincoln's Inn Fields. His later plays and adaptations are of little interest, and his great epic, *Gondibert*, 1651, is dull, except for some brilliant and quotable passages. His shorter lyrical poems, with the title *Madagascar*, 1638, contain some verses that still live. In 1656 he produced the first Eng. opera, *The Siege of Rhodes*, with Mrs. Coleman, the first actress to appear on the Eng. stage. He was buried in Westminster Abbey. See J. Maidment and W. H. Logan (ed.), *The Dramatic Works of Sir William D'Avenant, with Prefatory Memoir and Notes*, 1872-4, and studies by A. Harbage, 1935, and A. H. Nethercot, 1938.

Davenport, Charles Benedict (1866-1944), Amer. biologist at Harvard Univ. He held the position of instructor of zoology from 1893 to 1899, and was subsequently assistant prof. of zoology at Chicago Univ. From 1898 to 1921 he was director of the Marine Biological Laboratory of the Brooklyn Institute, and in 1904 he became director of the station for experimental evolution of the Carnegie Institution. He made valuable contributions to the study of heredity in man and in animals. His chief pub. are *Experimental Morphology*, 1897-9; *Eugenics*, 1910; *Heredity in Relation to Eugenics*, 1911; *Heredity of Skin Color in Negro-White Crosses*, 1913; *The Feebly Inhibited—Nomadism and Temperament*, 1915; *Naval Officers—their Development and Heredity*, 1919; *Body Build and its Inheritance*, 1923. He collaborated with

A. G. Love in exhaustive inquiries into the physical fitness of men drafted for the First World War, and pub. in this connection his *Defects Found in Drafted Men*, 1920.

Davenport, John (1597-1670), Puritan divine, b. Coventry, educ. at Oxford. He was for 14 years a minister in London, and then fled to Holland under Laud's persecution. He went to America, and was one of the founders of the New Haven Colony in 1638, his co-leader being Theophilus Eaton, who became first governor of the colony. D. became pastor of the New Haven Church. He opposed the Half-Way Covenant, and pub. many theological works.

Davenport, city, cap. of Scott co., Iowa, U.S.A., 160 m. E. of Des Moines, on the Mississippi R. opposite the Illinois cities of Rock Island, Moline, and East Moline.

the son of Jesse the Bethlehemite. As the youngest son his business was to guard his father's flocks. Of D.'s introduction to court two accounts are given, one tracing it to his skill on the harp (1 Sam. xvi. 14ff.), the other to his conflict with Goliath. D. quickly rose to a responsible position, but his prowess raised the royal jealousy. Saul gave him his daughter Michal to wife, but then became so threatening that it was only by the help of Jonathan and Michal that D. escaped with his life. D. hastened southward, and after a short stay at Nob settled in the cave (i.e. hill-fortress) of Adullam. Here he gathered a band of some 400 men, but steadfastly refused to take part in any designs on the 'Lord's anointed.' He subsisted on contributions levied in return for protection against the Philistines, Amalekites, and other foes of Israel. Saul, however,

DAVENTRY TRANSMITTING STATION

B.B.C.

It manufs. locomotives, snow ploughs, washing machines, aluminium sheets and plate, foundry products, and food products. St Ambrose College, Marycrest College, and the Palmer School of Chiropractic are here; at D. too are a municipal art gallery, a public museum, and the Tri-City Symphony Orchestra. Pop. 74,550.

Daventry, municipal bor. and tn of Northamptonshire, England. It is situated near the sources of the Nene and Avon, 12 m. W. of Northampton. The manuf. of boots and shoes is carried on, together with light engineering. It is noted in hist. for the fact that in 1645 Charles I stayed there a week, prior to the battle of Naseby. There is an important broadcasting transmitter, erected in 1925, on Borough Hill. Owing to industrial developments the tn is now expanding. Pop. 4200 (1954).

David ('friend' or 'beloved') (1012-972 BC), 2nd king of united Israel, was

pressed him hard, and he had to retreat. His followers now numbered 600, and he placed them at the service of Achish, king of Gath. From him he obtained the lordship of the frontier tn of Ziklag. Meanwhile both Saul and Jonathan fell at Gilboa, and Israel was in chaos. D. moved to Hebron and was soon acclaimed as king by the men of Judah, while the rest of the country remained in the hands of Ishbual (Ishbosheth) and Abner. On the death of Ishbual all the country fell into his hands. He captured the Jebusite stronghold of Jerusalem and made this central but neutral fortress his cap. The Philistines, whose vassal he had been, now attacked him, and he gained many victories. Then followed wars with Moab, Ammon, and Edom, and D.'s success 'united all the tribes from Dan to Beersheba.' During these campaigns occurred the grievous sin, to the results of which must be ascribed so many of the woes of the latter part of D.'s reign

(2 Sam. xi., xii). Absalom, his favourite son, rebelled and died, and so, later, did his son Adonias, jealous of D.'s intention to leave the crown to Solomon. D.'s faults were outweighed by his humility and his penitence. There is no character in the O.T. whom we get to know so intimately (except perhaps Jeremiah), most of our information being derived from contemporary documents full of the personal devotion which he inspired, even in conquered enemies (cf. the Cherethites and Pelethites); the story of the affection between him and Jonathan is the supreme classic of friendship. As the youngest son who fights the giant and reaches the throne, he is the epitome of romance. His statesmanship in conciliating the N., and choosing Jerusalem as his cap. and centre of worship, his loyalty to Saul, his chivalry, his courage and skill in battle, his great artistic genius as a musician, poet or bard, even his over-indulgent love for his sons, and above all his great devotion to the God of Israel shown in the Davidic Psalms, make him the most attractive of all O.T. heroes. The title for the Messiah, 'Son of David,' accepted by Jesus Christ, is a divine tribute to him. See PSALMS; also V. Zappalà, *David and Saul*, 1921; Mildred Duff and N. Hope, *David the Shepherd who became King*, 1926; F. Meyer, *David, Shepherd, Psalmist, King*, 1935.

David, St. bishop of Menevia and patron of Wales. The 10th-cent. *Annals Cambriae* record him as having d. c. 601. There is also record of his having presided at two Welsh synods. These meagre historical facts have formed the basis of a wealth of legend. St. D.'s Day is 1 Mar.

David I (1084-1153), king of Scotland, youngest son of Malcolm Canmore and St Margaret, sister of Edgar Atheling. He married Maude, daughter of Waltheof, earl of Northumbria, and through her gained the earldom of Huntingdon. On the death of his brother, Edgar of Scotland, in 1107, he received the S. dist. with the title of earl of Cumbria; in 1124 his brother, Alexander I, d., and D. gained the whole kingdom. As an Eng. baron he swore fealty to Matilda, daughter of Henry I., and invaded England on her behalf against Stephen. He was defeated near Northallerton at the battle of the Standard in 1138. After this he returned to Scotland, and devoted himself to the political and eccles. reform of his kingdom. He founded 5 bishoprics and sev. monasteries; Melrose Abbey, Newbattle Abbey, and Holyrood were endowed out of the crown lands. He consolidated his realm, and built up the feudal kingdom of Scotland. The country's trade and agriculture prospered under his rule. Offences against the king's peace were judged by officials appointed by the Crown.

David II (1324-71), king of Scotland, b. Dunfermline, fifth son of King Robert Bruce and Elizabeth de Burgh. He succeeded to the throne in 1329, and was crowned at Scone in 1331. He had been married in 1328 to Joan, daughter of Edward II of England. The victory

of Edward III and Edward Balliol, the pretender to the Scottish throne, at Halidon Hill in 1333 drove D. and his queen to flee to France. He returned in 1341, and in the interests of France invaded England in the absence of the army in France, but was defeated and taken prisoner at Neville's Cross (1346). He remained a prisoner in England for 11 years. By the treaty of Berwick the Scots undertook to pay 100,000 marks as ransom and D. returned to Scotland, but the country was too poor to pay, and much of the sum was later remitted. He secretly offered to treat with Edward III on the basis of making him or his son successor to the Scottish crown. The nomination of the duke of Clarence was refused by the Scottish Parliament, but D. continued secretly making arrangements with Edward.

David, Félicien (1810-76), Fr. composer, b. Cadenet, Vaucluse, learnt music at the cathedral of Aix-en-Provence and from 1825 at a Jesuit college, and began to compose early. He entered the Paris Conservatoire in 1830, travelled in the East in 1833-5, and after his return began to make a name as a composer of quasi-oriental music. He wrote symphonies, chamber music, and songs, but his most famous work was the descriptive symphony *Le Désert*, with which only the operas *La Perte du Brésil* and *Lalla-Roukh* (after Thomas Moore) could compete, although he wrote other picturesque works showing original invention and sensitive orchestration.

David, Gerard (c. 1460-1523), Flemish painter, b. Oudewater, Holland, the last great painter of the Bruges school. Among his many famous and beautiful pictures are the great altar-pieces, of which a fine example, 'The Marriage of St. Catherine,' is in the National Gallery, London. His fine 'Baptism of Christ' and the subjects painted for the Hall of Justice, depicting the arrest and punishment of Sisamnes, are in the Musée Communal, Bruges. See life by J. Weale, 1895; E. von Bodenhausen, *Gerard David und seine Schule*, 1905.

David, Jacques Louis (1748-1825). Fr. painter, b. Paris, son of a well-to-do Parisian merchant, who was killed in a duel when D. was only 9. His earliest instruction was obtained from his uncle, Boucher; afterwards he studied under Vien. His first ambition was to obtain the Prix de Rome, but it was not till after he had made sev. attempts that he was successful, gaining it in 1774. Then he followed his master, Vien, to Rome, where he spent 6 years, chiefly in copying the antique and studying the old masters. When he returned to France his 'Belshazzar,' 1780, secured his admission to the academy. Between 1775 and 1785, inspired by Rome and guided by Vien, he evolved the strikingly neo-classic idiom for which he is famous. He did not invent the neo-classic style but he was its greatest exponent. With his 'Andromache grieving over the dead Hector' he was admitted a full Académicien. His fame was greatly enhanced with 'The Oath

of the Horatii,' 1785—a picture in which he was deliberately rousing in the masses a civic and patriotic sense. At the time of the revolution he became an enthusiastic representative for Paris in the convention and he was also made a member of the committee of public safety. After Robespierre's death he was twice imprisoned and in danger of his life. In 1804 Napoleon appointed him court painter, and made him commander of the Legion of Honour, but when the Bourbons were reinstated he was banished as a regicide to Brussels, where he remained till his death. D. was in his time both the leader of the Fr. school and the most famous artist in Europe. His portraits are now highly esteemed. There are 24 of his pictures in the Louvre, the best known being 'Madame Récamier,' 'The Coronation of Napoleon,' and 'Oath of the Horatii.' His 'The Dead Marat' is at Brussels. See lives by Th. Thoré, 1843, E.-J. Dolecluze, 1855, R. Cantinelli, 1930, and André Maurois, 1948.

David, Pierre Jean (1789-1856), Fr. sculptor, known as David d'Angers, b. Angers, of extremely poor parents. Overcoming family opposition he went to Paris, and by hard work gained a prize at the École des Beaux Arts, and in 1811 the Prix de Rome. He was 5 years in Rome, studying under Canova. He became famous for his busts and medallions. His chief works are a monument to the Gk liberator, Botzaris, the pediment of the Pantheon in Paris, and the statue of 'Philopoemen,' now in the Louvre.

David, Sir Tannatt William Edgeworth (1858-1934), geologist, b. near Cardiff, South Wales, emigrated to Australia 1882. He became assistant geological surveyor for the gov. of New South Wales. In 1890 he was appointed prof. of geology and physical geography at Sydney University. He was a member of the 1896 and 1897 expeditions to Fanafuti, Ellice Is. and, in 1907, of the Shackleton expedition to the Antarctic. D. served in France during the First World War as one of the five geologists employed by the Allies. His main work was the exploration of Australia's salient geological features. These he recorded in his map, pub. with a vol. containing explanatory notes in 1932, and in a more comprehensive book *The Geology of the Commonwealth of Australia*, which was completed after his death by W. R. Browne. See E. W. Skeats, 'Some Founders of Australian Geology,' in the *Geological Magazine*, Jan. 1922; M. E. David, *Professor David*, 1937.

David, city and cap. of Chiriquí prov., W. Panama, on the Río D., in a fertile valley. D. has shoe, soap, textile, sugar, timber, and tanning industries; its seaport is at Pedregal (4 m. S.). Pop. 16,200.

Davidia, a monotypic genus, family Cornaceae, *D. involucrata*, the Chinese Handkerchief tree, being esteemed in gardens for its small flowers surrounded by two large white bracts in May.

David, Thomas William Rhys (1843-1922), Eng. oriental scholar. He was the prin. Eng. authority on Buddhism and

Buddhist literature. Among his works are *Buddhist Sutras*, 1881; *Buddhism*, 1889; *Sacred Books of the Buddhist*, 1889; and *Buddhist India*, 1903.

Davidson, Andrew Bruce (1831-1902), theologian, b. Kirkhill. In the Free Church the advanced critics who filled the college chairs owed their inspiration to D., who went to the Heb. chair in New College, Edinburgh, in 1863. In 1865 he was made prof. of oriental languages, and he was one of the O.T. revisers of the A.V. of the Bible. He pub. various works on Heb. grammar, syntax, etc.

Davidson, George (1825-1911), astronomer, b. Nottingham. When still a boy he went to America, and in 1845 joined the U.S. coast survey. He also engaged in surveying work from Maine to Texas, and on the Pacific coast.

Davidson, John (1857-1909), poet and dramatist, b. Barrhead, Renfrewshire. Educ. at Greenock Academy and Edinburgh Univ., he was a master in Scottish schools, and in 1890 came to London. His early poetical plays, *Bruce*, 1868, *Smith: a Tragedy*, 1888, and *Scaramouch in Nazos*, 1889, attracted no attention, nor did that strange example of his original genius, the romance *Perseid*, 1890. His first success was with *Fleet Street Eclogues*, 1893, 2nd series, 1896; followed by *Ballads and Songs*, 1894. His novels of this period include *Baptist Lake*, 1894, and *A Full and True Account of the Wonderful Mission of Earl Lavender*, 1895. He wrote other poetic plays, such as *Godfrida*, 1898, and *The Theatrical*, 1905. His satiric and didactic works include *The Testament of a Vintsector*, *The Testament of a Man Forbid*, 1901, and *The Testament of an Empire Builder*, 1902. His last book of verse, *Fleet Street and other Poems*, was pub. in 1909, and a dramatic work *God and Mannion* in 1907. An embittered and thwarted genius, he was drowned near Penzance under circumstances pointing to suicide. See H. Fineman, *John Davidson: a Study of the Relation of his Ideas to his Poetry*, 1916.

Davidson, Randall Thomas, Lord (1848-1930), 96th archbishop of Canterbury, b. Edinburgh; educ. at Harrow and Trinity College, Oxford; ordained 1874, and was domestic chaplain to Archbishop Tait, whose daughter Edith he married in 1878. In 1882 he was made dean of Windsor and domestic chaplain to Queen Victoria. He was bishop of Rochester 1891, of Winchester 1895, and succeeded Archbishop Temple of Canterbury, 1903. He was president of the Pan-Anglican Congress, 1908, and of the subsequent Lambeth conference, and crowned George V, 1911. He will be remembered for his practical conception of the great opportunity offered to the Anglican communion in the empire. His W. Canada Fund had a marked effect on the religious life of the prairie provs. In the First World War he occupied himself with the promotion of that spiritual renewal which the strain of the times seemed to demand. He estab. important committees to deal with intellectual problems, with worship,

with social questions, and with church organisations. As a result of these and similar activities, the 'Life and Liberty' movement came into existence as a focus for the younger men of all schools of thought; and with this movement came the Enabling and Constitution Act, which he piloted through the House of Lords and under which the Church Assembly (q.v.) and its subordinate councils were set up. The creation of the assembly provided him, in his later years, with an opportunity exactly suited to his temperament and gifts; and under his guidance legislation embodying sound practical reforms was presented to Parliament. He regarded any real *rapprochement* between Canterbury and the Vatican as outside practical politics. The Lambeth conference of 1920 encouraged inquiry into the possibilities of religious reunion, and it was argued by some that reunion

'The Times'

LORD DAVIDSON

must begin with a movement towards reunion with the Rom. Church; but in the ensuing conversations at Malines with Cardinal Mercier he perforce denied to the discussions the character of negotiations, and the essential obstacles to such reunion remained unassailed. Yet, if these conversations achieved no practical result, D.'s vigilant interest in all that concerned the Orthodox churches not only drew those churches closer to the Anglican communion, but also brought them into contact with other forms of European Christianity. D. was recognised as the champion of E. Christians, whether the oppressor was Bolshevik or Turk. He preached at Geneva on the eve of the third assembly of the League of Nations. His last years brought severe disappointments; his efforts of many years to solve, by settlement, the difficult religious problem in elementary education were at length nullified by eccles. factions. A still greater disappointment came with the

rejection by the House of Commons of the 1927 and 1928 Prayer Book measures; but it would seem probable that, like Cranmer, he had excessive faith in a new Prayer Book as a means of composing differences and restoring discipline within the church. Soon after the second defeat of the Prayer Book measure in 1928 he resigned. The king bestowed a barony upon him, an honour almost without precedent in the instance of one who had been a spiritual peer. He wrote the *Life of Archbishop Taill with Canon W. Benham*, 1891, and ed. the *History of the Lambeth Conferences*, 1889. See life by G. K. A. Bell, bishop of Chichester, 1935.

Davies, Arthur E. (1862-1928), Amer. painter, trained under Dwight Williams and at the Art Institute, Chicago. His 'Spring's Renewal' and 'The Breath of Life' were first shown in New York, and stamped him as a notable adherent of the romantic school. 'The Girdle of Ares,' which was bought by the Metropolitan Museum of Arts, was first exhibited in Philadelphia; and thereafter other notable pictures were 'Visions of the Sea' and 'Children of Yesteryear,' the latter of which is now in the Brooklyn Museum. In 1916 D. was awarded the first W. A. Clark prize and the Corcoran medal.

Davies, Ben (1858-1943), Welsh tenor, b. Pontardawe, near Swansea. He started life in trade, then went to London to study at the Royal Academy of Music. Began by singing in Balfe's *The Bohemian Girl*, and took part in the operas of Goring Thomas, Mackenzie, and Stanford. He sang in the long run of Celler's *Dorothy* in London, and then in Sullivan's *Ivanhoe* at D'Oyly Carte's Eng. opera house. For some years he was a member of the Carl Rosa company. He sang in both Eng. and It. operas. Leaving the stage he took to oratorio and concert singing, and for many years was the leading Brit. tenor. Those who were present at the celebration of his 80th birthday will remember the perfect ease of style with which he still sang.

Davies, Clement (1884-), politician, educated at Llanfyllin, Monmouthshire, and Trinity Hall, Cambridge, and called to the Bar in 1909. Since 1929 D. has been Liberal M.P. for Montgomeryshire, and was leader of the parl. Liberal party 1945-56.

Davies, Mrs David, see KENNEDY, MARGARET.

Davies, Fanny (1861-1934), pianist, b. Guernsey. She went to Leipzig to study music, and became a pupil of Reinecke and also of Oscar Paul. While staying at Frankfurt she studied with Clara Schumann. Played at all the great European festivals, accompanied Joachim, and after her first appearance in 1885 was for many years one of London's popular favourites and an exponent of the true Schumann tradition. But she was also interested in modern piano music, especially Debussy and the Sp. and Czech schools.

Davies, Sir Henry Walford (1869-1941), organist and composer, b. Oswestry; choir boy at St George's Chapel, Windsor, under Sir Walter Parratt; assistant organist to

the latter, 1886-90. Studied at Royal College of Music, 1890-4; pupil of Parry, Rockstro, and Stanford. Organist, St Anne's, Soho, 1891-8; at Temple Church, 1898-1919, with which church his work as organist and choirmaster is specially associated; and at St George's Chapel, Windsor, 1927. Appointed prof. of music at the univ. of Wales, Aberystwyth, 1919, and chairman of the National Council of Music in connection with that univ. He succeeded Elgar in 1934 as Master of the King's Music, and in 1935 organised a great choral concert at the Albert Hall to mark George V's jubilee. He was a prolific composer, especially of vocal music. Probably his best known piece, however, is the *Solemn Melody* for organ and orchestra. His most important contribution to the musical life of his time was less in composition than as teacher, adjudicator, and lecturer.

Davies, Hubert Henry (1876-1917), playwright, b. Woodley, Cheshire. Educ. at private schools, he went in 1893 to San Francisco, and became a journalist and writer of sketches. Returning to England, 1901, he produced plays in London: *Mrs Goring's Necklace*, 1903; *Cousin Kate*, 1903; *Cynthia*, 1904; *Captain Drear on Leave*, 1905; *The Mollusc*, 1907; *Lady Epping's Lawsuit*, 1908; *Bevis*, 1909; *A Single Man*, 1910; *Doormats*, 1912; and *Outcast*, 1914. Work as hospital orderly in France broke his health. He was recuperating at Robin Hood's Bay when his overcoat and stick were found near the cliff edge. He was never seen again.

Davies, John (c. 1565-1618), poet and writing-master, b. Hereford. Said to be the best penman of his age, he numbered Prince Henry among his pupils. His poems are somewhat prolix and tedious, his chief work being *Microcosmos*, 1603, which is based on Sylvester's trans. of the *Semaines* of du Bartas. His *Scurvie of Folly*, 1611, has verses addressed to numerous contemporaries, including Shakespeare. Others of his works are *Wittes Pilgrimage*, 1610, *The Muscs Sacrifice*, 1612, and *The Writing School-master*, 1633. His complete works were ed. by Dr. A. B. Grosart, 1878.

Davies, or Davis, Sir John (1569-1626), poet and lawyer, b. Tisbury, Wiltshire. He was educ. at Winchester and Oxford, and called to the bar in 1595. He seems to have enjoyed a reputation for wit, and wrote many epigrams as well as poems. James I took him into favour, and made him solicitor-general of Ireland in 1603, and 3 years later attorney-general, when he was created serjeant-at-arms. He was appointed lord chief justice shortly before his sudden death. In conjunction with Sir Robert Cotton he founded the Society of Antiquaries. His best known works are the philosophic poems *Orchestra*, in which the world is exhibited as a dance, 1596, and *Nosce Teipsum*, a poem on human learning and immortality, 1599. His works were ed. by Dr. A. B. Grosart, 1869-76. He must not be confused with John Davies of Hereford (q.v.).

Davies, John (1679-1732), classical scholar and critic, b. London. His father was a merchant of Cambridge, his mother being a daughter of Sir John Turtton, a judge of the king's bench. He was educated at Charterhouse School and at Queens' College, Cambridge, and subsequently became president of the college. D. edited several of Cicero's philosophical writings, but his work is marred by too free use of emendation.

Davies, Sir Louis Henry (1845-1924), Canadian jurist and Liberal statesman, b. Prince Edward Is., son of Hon. Benjamin D. He was called to the bar in 1867, solicitor-general, 1869, 1871-2. Leader of opposition in Legislative Assembly, 1873. Premier and attorney-general, Prince Edward Is., 1876-9. Elected to dominion Parliament, 1882. Minister of marine and fisheries, 1896-1901. On commission at Quebec, 1898-9, to settle questions with U.S.A. In London on Behring Sea business, 1899 and 1900. Judge, Canadian supreme court, 1901; chief justice, 1918. Privy Councillor, 1919.

Davies, Mary (1855-1930), mezzo-soprano, b. London. Of Welsh parentage, she was trained as a public singer, and in 1880 created the part of Margaret in the Eng. version of Berlioz's *Faust*. Took part in most of the Eng. musical festivals, and for many years sang at the London ballad concerts as their leading soprano.

Davies, Sarah Emily (1830-1921), feminist, b. at Southampton, daughter of a clergyman, and educ. at home. She was secretary of a committee (1864) demanding access of girls to Cambridge local examinations—a demand granted in 1865; and was honorary secretary of a movement (1867) inaugurating Hitchin College, rehoused at Gilton (q.v.), 1873, D. being mistress there for 2 years. From 1870 to 1873 she was a member of the London School Board. She agitated with success (1874) for London Univ. degrees for women.

Davies, Thomas Witton (1851-1923), Heb. scholar; 1880-91, prof. of classics, Heb., and mathematics at Baptist College, Haverfordwest; 1892-9, lecturer in Arabic and Syriac at Univ. College, Nottingham; 1899-1906, prof. of Heb. and O.T. literature at the Baptist College, Bangor; afterwards, and till 1921, prof. of Semitic languages in N. Wales Univ. Amongst his numerous publs. are *Oriental Studies in Great Britain*, 1892; *Magie, Divination, and Demonology among the Hebrews and their Neighbours*, 1898; *The Scriptures of the Old Testament*, 1900; *Century Bible: Psalms*, vol. ii, 1906; *Welsh Political and Educational Leaders*, 1907; *Ezra, Nehemiah, and Esther*, 1909; *Outstanding Literary and Human Factors in Life*, 1911; and *Bel and the Dragon*, 1913.

Davies, W. D., generally known as Karri Davies, b. at Karridale, Australia. He went to S. Africa and came into public notice during the agitation of the Uitlanders in the Transvaal against the Kruger regime, and was a member of the Transvaal Reform Committee; he was arrested with other members on the failure

of the Jameson Raid in 1897. Sentenced to 2 years' imprisonment and a heavy fine, he and Woods-Sampson alone refused to appeal against the sentences and were retained on the liberation of the other prisoners. He fought in the S. African war (1899-1902), was wounded at Elandslaagte, and was present at the relief of Mafeking.

Davies, William Henry (1871-1940), poet, b. Newport, Monmouth, of Welsh parentage. Apprenticed to a picture-frame maker, he gave up this trade and became a tramp and pedlar. At the age of 22 he went to America and worked at fruit-picking and as a cattle-man. He learned the hobo's art of 'train-jumping,' but while trying this at Renfrew, Ontario, he slipped and his right leg was severed at the ankle. Returning to England he started to write, keeping himself by peddling laces and pins and singing in the streets. His first book of verse, *The Soul's Destroyer*, 1905, was sent to various literary people, who befriended him. Bernard Shaw helped him to become known and Edward Thomas lent him a cottage at Sevenoaks, where he wrote *The Autobiography of a Super-Tramp*, 1907, which made him famous. In 1911 he was awarded a Civil List pension, and in 1926 the Univ. of Wales made him an LL.D. His books of verse number a score, and his *Collected Poems*, 1943, contains over 600 pieces. The contrast between his life and his work is striking, for his lyrics are like the most delicate of Elizabethan verse. He also wrote another autobiographical work, *Later Days*, 1925. See T. Moulit, *W. H. Davies*, 1934.

Da Vinci, see LEONARDO DA VINCI.

Davis, Bette (1908-), Amer. actress, b. Lowell, Massachusetts, educ. Cushing Academy, Mariandene School of Dancing, and John Murray Anderson Drama School. She made her debut in *Broadway*, and after other Broadway shows entered films in *The Man Who Played God*, 1932. She twice won the Academy Award for the best actress: in 1935, for *Dangerous*, and in 1938, for *Jezebel*. She has given many other outstanding dramatic performances in such films as *Of Human Bondage*, *Dark Victory*, *All This and Heaven Too*, *The Letter*, *Now Voyager*, *The Corn is Green*, and *The Little Foxes*.

Davis, Cushman Kellogg (1838-1900), Amer. political leader and lawyer, served during Civil war in the Federal Volunteers; became prominent in state politics as a Republican; from 1874 to 1876 he was governor of Minnesota; from 1887 U.S. senator. Had great influence on Amer. foreign policy, and signed the treaty of Paris after the Sp.-Amer. war.

Davis, Elmer Holmes (1890-). Amer. writer and radio news commentator, b. at Aurora, Indiana, U.S.A. Rhodes scholar, Queen's College, Oxford; B.A., 1912. On editorial staff of *Adventure*, 1913-14, and *New York Times*, 1914-24. News commentator, Columbia Broadcasting System, 1939-42; and Amer. Broadcasting Co. from 1945. Director, Office of War Information, U.S. Gov., 1942-5. President of

council of the Authors' League of America, 1939-41. Pub. *Times Have Changed*, 1923; *Friends of Mr Sweeney*, 1925; *Strange Woman*, 1927; *Giant Killer*, 1928; *Morals for Moderns* (short stories), 1930; *Love Among the Ruins* (short stories), 1935; and *Not to Mention the War*, 1940.

Davis, Henry William Carless (1874-1928), historian, educ. at Weymouth College and Balliol College, Oxford. He was a lecturer at New College, 1897-1899; at Balliol from 1899. In 1925 he became regius prof. of modern hist. at Oxford. D. was an outstanding medievalist. His pubs. include *Charlemagne*, 1900; *England under the Normans and Angevins*, 1905; and *Medieval Europe*, 1911.

Davis, Henry Winter (1817-65), Amer. political leader, b. Annapolis, Maryland. Served in the National House of Representatives as a Know Nothing, 1855-60. After Lincoln's election he became a Republican; he opposed Lincoln's plan for the reconstruction of the S. states, and issued with Benjamin Wade of Ohio the 'Wade-Davis manifesto,' which denounced Lincoln. In 1860 declined nomination to the vice-presidency. Chairman of committee of foreign affairs, 1863-5. Pub. *The War of Ormuz and Ahriman in the Nineteenth Century*, 1853, against the slave-holders.

Davis, Jefferson (1808-89), only president of the confederate states during the Amer. Civil war, b. Fairview, Kentucky. D.'s father Samuel was of Welsh extraction. After attending schools in Kentucky and Mississippi, he studied at old Transylvania College in his native state 1821-4, and then attended the U.S. Military Academy, from which he graduated in 1828. He remained in the U.S. Army for 7 years, and distinguished himself as a young officer in the Black Hawk Indian war of 1833. Marrying a daughter of Col., afterwards Gen. and President, Zachary Taylor, he bought a cotton plantation in Mississippi, where he made a comfortable fortune. He lost his first wife of fever after 3 months, and afterwards married Varina Howell of Mississippi. For a long time thereafter he devoted himself to his books and his plantation. As he treated his own slaves kindly and gave them a large measure of self-government, he became a convinced supporter of African slavery, really believing that all slave-holders treated their human property in as benevolent a manner as he did. He was elected to the National House of Representatives in 1845, but on the outbreak of the war with Mexico resigned this post and went to battle as colonel of a volunteer regiment, the 'Mississippi Rifles.' In the army led by his father-in-law. He served with distinction at the battle of Monterey, and on 22 Feb. 1874 became something like a national hero because he saved the day at the battle of Buena Vista. In the same year he was elected to the U.S. Senate, and was made chairman of its committee on military affairs. He ran for governor of Mississippi in 1851, but was defeated.

President Franklin Pierce made him secretary for war in his Cabinet in 1853. D. energetically improved the army, and pushed the construction of coast defences and the survey of the far W. for future railway lines. Once more elected to the Senate in 1857, he became the leader of the S. democrats. The election of Lincoln as president in the fateful campaign in 1860 caused D. to burn his bridges. In the Senate he passionately asserted the right of the S. slave-holding states to secede from the union and form a separate nation. When Mississippi formally seceded and joined the confederacy, D. fondly hoped to lead Mississippi troops in the coming armed conflict, but to his dismay the S. congress on 9 Feb. 1861 chose him as provisional president of the confederacy. In a later election by the people he was again chosen president, 22 Feb. 1862. In the war D. blundered by retaining the services of generals who had been shown to be unfit for their task. Press and public began to turn against him, and Gen. Lee might have been able to seize supreme power if loyalty to the gov. had not been his first and his last word. When Richmond, the cap., fell into Union hands, D. moved first to Danville, Virginia, thence to Greensboro, N. Carolina, and was finally captured near Irwinville, Georgia, 10 May 1865. Manacled and harshly treated, he was confined in Fortress Monroe, Virginia. Sev. efforts were made to connect him with the assassination of Lincoln and with the harsh treatment of prisoners at Andersonville, but without success. Two indictments for treason were found against him and for two years he was refused trial or bail. This cruelty aroused the sympathy of the people of the S., who looked upon D. as a martyr to their cause, and in large measure reinstated him in the esteem he had lost on account of his blunders. Finally (1867) he was admitted to bail; many of his former political opponents stood as sureties, while Charles O'Connor, a leader of the New York Bar, volunteered to defend him. O'Connor moved to quash the indictment on which D. was brought to trial, but the court of 2 judges was divided. The matter was then certified to the Supreme Court, but no decision of which there is record was ever announced by that tribunal, and meanwhile the administration dismissed the prosecution and discharged D., who went to Canada. He benefited from the general amnesty of 1868 and returned to 'Beauvoir', Mississippi, where he spent the rest of his life quietly, refusing to take any part in politics. He d. suddenly in New Orleans. He wrote sev. books, one of which was *The Rise and Fall of the Confederate Government*, 1881. See also UNITED STATES, *History*. See Mrs Varina Howell Davis, *Jefferson Davis, a Memoir*, 1890; lives by F. H. Alfriend, 1868; E. A. Pollard, 1869; W. E. Dodd, 1907; Allen Tate, 1929; and Robert McElroy, 1937; also W. E. Dodd, *Statesmen of the Old South*, 1929; R. W. Patrick, *Jefferson Davis and His Cabinet*, 1944.

Davis, John (1550-1605), navigator,

considered the father of Arctic discovery, b. Stoke Gabriel, near Dartmouth, Devon. In his early days he made various expeditions around Greenland, and after suffering many reverses of fortune succeeded in pushing through the strait which bears his name to Baffin Bay. His next voyages were in the S. Seas. In 1597 he took a Dutch vessel to the E. Indies, and had trouble in Madagascar. He then undertook a short expedition as major of the fleet. He wrote *The Seaman's Secrets*, 1594, and *The World's Hydrographical Description*, 1595. See life by C. R. Markham, 1889.

Davis, Sir John, see DAVIES.

Davis, Mortimer Barnett (1866-1928). Canadian financier, president of the Imperial Tobacco Company of Canada and chairman of the Canadian Industrial Alcohol Company, besides being a director of the Royal Bank of Canada and a member of sev. other great commercial concerns in the dominion. He was often styled 'the tobacco king of Canada,' and gave munificent amounts to philanthropic concerns.

Davis, Richard Harding (1864-1916). Amer. novelist and journalist, b. Philadelphia, son of L. Clarke D., editor of the *Public Ledger*, and Rebecca Harding D., novelist. Throughout the Sp.-Amer. war he acted as war correspondent. He served in the same capacity during the Boer war in S. Africa. He wrote sev. books relating to these campaigns, as well as a large number of novels; also a play entitled *The Dictator*, produced at the Comedy Theatre, London, May 1905. In 1914 he was in Mexico as war correspondent of the *New York Tribune*. Later he went to Belgium. He wrote *With the Allies and Somewhere in France*, 1915.

Davis, Thomas Osborne (1814-45). Irish poet and journalist. He attached himself to the party of Daniel O'Connell (q.v.), and worked on the committee of the Repeal Association, 1841. In conjunction with J. B. Dillon and Charles Gavan Duffy he started the weekly paper *The Nation*, and his best work appeared in this, comprising some fine lyrics such as the *Lament for Owen Roe O'Neill; The Battle of Fontenoy*, etc., and historical sketches. Trouble arose between O'Connell and the Young Ireland party, as they were called, and D. was attacked on the plea that he was anti-Catholic, but he retained a strong influence on his party until his early death from scarlet fever. See Sir C. Gavan Duffy, *Thomas Davis*, 1896.

Davis, William Morris (1850-1934). geographer and geologist, son of Edward Morris, b. Philadelphia. Educ. at Harvard Univ., he taught geology and geography there in 1876 and 1878 respectively. His prin. pubs. are *Elementary Meteorology*, 1894; *Physical Geography*, 1899; *Elementary Physical Geography*, 1902; *The Triassic Formation of Connecticut and Geographical Essays*, 1909; *A Handbook on Northern France*, 1918; and numerous articles in scientific journals.

Davis Cup, presented by Dwight F. Davis of St Louis in 1900 for competition

among teams of players from different lands. Conditions for D. C. were submitted by United States L.T.A. to the Lawn Tennis Association in London on 16 Jan. 1900. The regulations have since been revised and the competition is now called the International Lawn Tennis Championship. It is a knock-out men's tennis tournament between nations. Singles and doubles are played; ties are drawn for. The challenging nations play off among themselves for the right to challenge the champion nation, and the challenge tie is played in the country of the champion nation. The U.S.A. has held the cup 18 times, Great Britain 9 times, Australasia 14 times, and France 6 times during the years 1900-56. During the Second World War Australia retained the D. C. being unchallenged after their victory in 1939.

Davis Strait separates N. America and Greenland, joining Baffin Bay with the Atlantic Ocean. The name is derived from John Davis, who was the first to explore it in 1585. It is from 160 to 180 m. across at the narrowest point, and the greatest depth is about 950 fathoms.

Davison, William (c. 1541-1608), secretary to Queen Elizabeth I. Of Scottish birth, and a friend of the Earl of Leicester, he was employed on various diplomatic missions by the queen. He became a member of Parliament, a privy councillor, and in 1586 assistant to the queen's secretary, Walsingham (q.v.). He brought the warrant for the execution of Mary Queen of Scots for Elizabeth's signature. Afterwards, the queen alleged that D. had gone beyond his instructions and acted over-hastily. D. was heavily fined and imprisoned for 2 years. After his release he was made clerk of the treasury.

Davison, Clinton Joseph (1881-), Amer. physicist, b. Bloomington. Educ. at Univ. of Chicago and Princeton Univ., 1908-11. Instructor in physics, Carnegie Institute of Technology, Pittsburgh, 1911-17. Member of technical staff of the Bell telephone laboratories, New York city, 1917-46. Known for researches in electricity, magnetism, and radiant energy. Discovered (with L. H. Germer) the diffraction of electrons by crystals, 1927. Comstock prize, 1928; Elliot-Cresson medal, 1931; Hughes medal of the Royal Society, 1935. Shared Nobel Prize for physics with George Paget Thompson, 1937. Member of the National Research Council, 1928-31 and 1933-6. Pub. papers on thermionics, radiation, electron diffraction, and electron lenses in scientific journals.

Davitt, Michael (1846-1906). Irish Nationalist politician, b. co. Mayo. His father having been evicted in 1851, the boy started life in a Lancashire cotton mill, but in 1857 a machinery accident resulted in the loss of his right arm. In 1865 he joined the Fenians (q.v.), and 3 years later was arrested on the charge of importing fire-arms into Ireland, and was sentenced to 15 years' penal servitude. Released after 7 years he returned to Ireland in 1879, and helped Parnell (q.v.) to start the Land League, with the result

that he was re-arrested, but released on ticket-of-leave again in 1882. He was then elected to Parliament as Nationalist member for Meath, but as a convict was not allowed to sit. He was one of the respondents before the Parnell Commission (1888-90), and spoke for 5 days in his defence. He was elected to Parliament on 3 subsequent occasions, but never sat for any length of time. He wrote a good deal and was bitterly anti-Eng. and anti-clerical.

Davos, mt valley in the canton of the Grisons, Switzerland. Its 2 prin. villages are **Davos-Platz** and **Davos-Dorf** (with 11,000 mainly Protestant inhab.), which are 5015 ft above sea level. They are situated 40 m. E. of Chur. The valley is sheltered from the cold winds and enjoys brilliant sunshine, and these facts being noted by Dr Spengler in 1865, he advocated the place for consumptive patients, and the valley has since become a famous winter resort for those suffering from the disease. There are many hotels and sanatoria, and the winter sports attract many visitors.

Davout, Louis Nicolas, Duke of Auerstädt and Prince of Eckmühl (also **Davout** and **Davoust**) (1770-1823), marshal of France, and one of the most brilliant of Napoleon's generals: b. at Annoux. He went through the Rhine campaigns of 1794-5 and on the expedition to Egypt with Bonaparte. After the Marengo campaign he became general of div., and when Napoleon became emperor was created a marshal of France, was in command of the 3rd Corps of the Grande Armée at Austerlitz, and with a single corps won the victory of Auerstädt against the main Prussian Army. He was made Duke of Auerstädt in 1808. After being governor of Poland he took part in the war with Austria (1809), and was made Prince of Eckmühl. He organised the army for the Russian campaign, throughout which he commanded the 1st Corps, and in 1813 he sustained the siege of Hamburg. He retired on the first restoration, joining Napoleon on his return from Elba, when he became minister of war, and was left in command of Paris after Waterloo. His stern discipline made the troops he commanded the most trustworthy in Napoleon's armies, and his severity and extortion in conquered territories were in execution of the emperor's orders. At the second restoration he was deprived of all his titles, but in 1817 they were restored to him.

Davy, Sir Humphry (1778-1829), chemist, b. Penzance, Cornwall. His father was a woodcarver. He was educ. at Truro, studied medicine and set up as a doctor, devoting his leisure to chemical research. The results of his experiments were pub. by Dr Beddoes, who made him superintendent of the Pneumatic Institute. This led to his appointment to the post of assistant lecturer of chem. to the Royal Institution, London, where his brilliant scientific success, his versatility, and originality brought him recognition and fame, which spread abroad. In 1807 he delivered a remarkable Bakerian lecture

on 'Some Chemical Agencies of Electricity,' embodying the results of experiments he had been making for some time. It revolutionised the scientific world, and France bestowed on him the Napoleon prize of 3000 francs. In these experiments he discovered sodium and potassium. He planned the ventilation of the House of Lords, and in 1812 was knighted by the prince regent, the same year marrying Mrs Apreece, daughter and heiress of Charles Kerr of Kelso. With Faraday he visited the Continent, where he met leading contemporary scientists: Ampère, Cuvier (qq.v.), Chevreul and Humboldt (qq.v.). On his return to England his investigations into the causes of fire damp resulted in his invention of the miners' safety lamp. Numerous honours followed. He was made baronet and president of the Royal Society. Failing health necessitated his leaving England, and he d. at Geneva.

SIR HUMPHRY DAVY
An engraving after a painting by
Sir Thomas Lawrence

His collected works were ed. by his brother, John D. (1839-41). See lives by J. A. Paris, 1831; J. Davy, 1836; Sir T. E. Thorpe, 1896; and P. A. Guye, 1907.

Davy, John (1763-1824), musician, b. near Exeter, and d. London. He wrote music for many stage pieces and numerous songs, the best known of which is 'The Bay of Biscay.'

Davy Jones, a sailors' term personifying the depths of the sea in their evil aspect as the grave of drowned men. The second word is probably a corruption of 'Jonah,' from the biblical story, and 'Davy' may have been added as the natural Christian name for a well-known Welsh surname. 'Davy Jones's Locker' is a further elaboration of the figure.

Davy Lamp, form of safety lamp, used especially in mines, which will allow an illuminant to be burnt in it without danger of explosion from the explosive gases often generated in the passages of

the mine. The principle of these lamps is that sufficient air should be allowed to enter to allow the light to burn, while at the same time the flame or gases of combustion should not escape at a temp. which would cause ignition of the explosive gases in the mine. Sir Humphry D. in 1816 invented the lamp which has since then borne his name. It consists of a cylindrical lamp, to which air is admitted at the bottom, and covered by a cage of iron wire gauze, the mesh of which was at that time of 789 apertures to the sq. in. This standard has been reduced. The lamp is in 2 parts, locked together so that once lighted the gauze cannot be removed. Many improved lamps have been made on this system, especially to prevent the inflammable gases, travelling at high velocities, being forced back into the lamp.

Dawes, Charles Gates (1865-1951), Amer. brig.-gen. of engineers and financial expert; b. Marietta, Ohio, son of Gen. Rufus R. D., Comptroller of the currency, 1897-1902. In First World War maj. of engineers in France from 1917, became member of Allied Purchasing Board, in 1918 brig.-gen. Appointed by Reparations Commission to preside over committee for examining Germany's capacity for reparation payments, which sat in Paris Jan.-April 1924, and whose report of 19 April submitted so-called Dawes Plan (q.v.). In 1924 elected vice-president U.S.A. for term 1925-9. Received the Nobel peace prize in 1925. Ambas. to the court of St James, 1929. Pub. *A Journal of the Great War*, 1930. *Reparations*, 1939, and *Journal as Ambassador to Great Britain*, 1939.

Dawes, William Rutter (1799-1868), astronomer, b. London, who made a name by his observations and measurements of the double stars. He made an early observation of the dusky ring of Saturn, 1850, and in 1855 won the gold medal of the Royal Astronomical Society.

Dawes Plan. This was the name given to the scheme evolved by the committee of experts set up to investigate the financial conditions in Germany and to settle the amount of money which Germany could pay as reparation for war damage—such amount to be without prejudice to the balancing of the Ger. budget and the stabilising of Ger. currency. In 1923 the Ger. Gov., forced by severe economic pressure, applied to the Reparations Commission under Act 234 of the treaty of Versailles for an investigation of Ger. economic resources and her capacity to pay. This application was followed by a notification to the effect that for the time being Germany was unable to pay for deliveries in kind. The application was granted and the Reparations Commission decided to appoint 2 committees: (1) the Dawes Committee to investigate and report as above; (2) the McKenna Committee to inquire into, and report upon, the flight of Ger. capital abroad since the armistice. The Dawes Committee was presided over by C. G. Dawes, U.S.A., and the other members were O. D. Young, U.S.A.; R. M. Kindersley and J. C.

Stamp, Great Britain; J. Parmentier and E. Allix, France; A. Pirelli and F. Flora, Italy; E. Francoqui and M. Houtard, Belgium. The gist of the committee's report (which became the basis for the eventual settlement) may be given in these words: 'Beyond the fixed annuity which shall be normally 2½ milliard gold marks there will be no longer any other liabilities arising out of the treaty of Versailles or the world war.' The normal annuity of 2½ milliard gold marks was to be obtained from the following sources:

1,250 million from customs duties and consumption taxes
660 million from the railways
290 million from the transport tax
300 million from industry
2,500 million

And the normal annuity was to be reached in the fifth year. The actual payments made were:

	gold marks (millions)
1924 5	1,000
1925 6	1,220
1926 7	1,500
1927 8	1,750
1928 9	2,500

The standard figure was reached on 1 Sept. 1928, and an additional payment became liable after the close of the year 1928-9 calculated on an index of prosperity, based on certain trade returns, budget receipts, and expenditure, etc. In 1930 the D. P. gave way to the Young Plan (q.v.), but in 1934 Germany's financial position so deteriorated that the Ger. Gov. declared a moratorium on both loans. Thereupon the Brit. Gov. announced that it would be necessary to initiate an exchange clearing arrangement by which holders of the loans might be paid with interest, and an exchange agreement was eventually concluded. See C. Bergmann, *The History of Reparations*, 1927.

Dawkins, Sir William Boyd (1838-1929), geologist who became in his day the doyen of Eng. archaeologists. In 1862 he joined the Geological Survey of Great Britain, and in 1874 became prof. of geology at Manchester. His researches in connection with the cave-dwellers of prehistoric times had great influence on prehistoric studies in Britain. His *Cave Hunting*, 1874, and *Early Man in Britain*, 1880, are classics of his period, and they may still be read with profit as a record of the difficulties with which early students had to contend. His prin. geological pub. was *British Pleistocene Mammalia*, 1866-87. D. had much to do with the Kentish coal-field and the proposed Channel tunnel.

Dawley, urb. dist. of England, in Shropshire, situated on Shropshire Union Canal, and in the Wellington div., 4 m. SE. of that place. Coal and iron are worked. Pop. 8390 (1954).

Dawlish, in and watering-place in Devon, England, 11 m. from Exeter; a stream called Dawlish Water runs through its centre. D. is a great resort for sea-

bathers and invalids throughout the year. Pop. 7512.

Dawn, see TWILIGHT. The colours of the sunrise at D. are not so warm as those of sunset, since the air is clear and there is less diffusion of light rays. The order of D. colours is deep red, then orange, gold, and clear bright yellow, the reverse order of the sunset colours. The duration of D. is shorter than that of twilight.

Dawson, Charles (1886-1938), antiquary, amateur geologist, and, by profession, a solicitor. His name will be remembered for his discovery, between the years 1911 and 1913, of what was known as the Pilt-down man which has recently been shown to be a forgery. See PILTDOWN MAN.

Dawson, Christopher (1889-), philosopher and historian, educated at Trinity College, Oxford. Lecturer in the hist. of culture, Univ. College, Exeter, 1930-6; Forwood lecturer in the philosophy of religion, Liverpool, 1934; Gifford lecturer (Edinburgh), 1947 and 1948. Pubs. include *Progress and Religion*, 1929; *The Making of Europe*, 1932; *The Judgement of the Nations*, 1943; *Religion and Culture*, 1948; *Religion and the Rise of Western Culture*, 1950; *Understanding Europe*, 1952; *Medical Essays*, 1954.

Dawson, George (1821-76), nonconformist divine, b. London. He entered the Baptist ministry and in 1843 went to Tickmansworth, removing in 1844 to Mount Zion, Birmingham. His unorthodox views led him to resign, and his followers built the Church of the Saviour for him. Here for nearly 30 years he drew a large number of people by his eloquence and freedom of thought. Carlyle and Emerson were among his friends.

Dawson, George Mercer (1849-1901), geologist, b. Pictou, Nova Scotia, son of Sir John Wm D. (q.v.). He held the post of geologist and naturalist to the N. Amer. boundary commission (1873), served on the staff of the Geological Survey of Canada, becoming director in 1895. He had charge of the Yukon expedition in 1887, and Dawson City is named after him. He was one of the Behring Sea commissioners (1891), and went to Paris on the Arbitration Board. He wrote *The British Colonies in America*, 1892, and many scientific papers and reports.

Dawson, Henry (1811-78), painter, b. Hull. Had little art training but gained reputation in N. of England for landscape and marine painting. He moved to London in 1850 and had some success with pictures showing the influence of Turner, e.g. his 'Greenwich' and 'Wooden Walls.'

Dawson, Sir John William (1820-99), geologist, b. Pictou, Nova Scotia. He studied at Edinburgh Univ., and on settling down to educational work in Nova Scotia undertook a geological survey of the country, publishing his results in *Acadian Geology*, 1855. The same year he became prof. of geology and principal of McGill College and Univ., Montreal, and in 1862 was elected F.R.S., becoming the first president of the Royal Society of Canada. In 1884 he was

knighted, and in 1893 was nominated emeritus principal, prof., and honorary curator of the Redpath Museum. D. did great service to geology and education. He took a leading part in the movement for the improvement of women's education, and brought the whole school system of the prov. to a higher level of efficiency. Among his numerous works are *Archæia*, 1858; *Story of the Earth and Man*, 1872; *Origin of the World*, 1877; *Fossil Men*, 1878; *Egypt and Syria*, 1885; *The Meeting-place of Geology and History*, 1894; and *Relics of Primeval Life*, 1897.

Dawson City, city of the Canadian Yukon dist. and centre of the Klondike goldfields. The tn was founded in 1896 at the time of the first gold rush, and though partially destroyed by fire in 1899 became a well-established mining city, with places of entertainment and hotels. It enjoys the services of a fleet of riv. steamers and telegraphic communication connecting it with the upper and lower Yukon. In spite of the climate, which tends to extremes, wheat, barley, and oats have been successfully cultivated there. The pop., which has been extremely fluctuating, dwindled from 30,000 in 1898 to 783 in 1951 owing to the exhaustion of the Klondike goldfields.

Dawson of Penn, Bertrand Edward Dawson, first Baron and Viscount (1864-1945), court physician, son of Henry D., F.R.I.B.A., of Purley, Surrey. Educ. at Univ. College and the London Hospital. M.D., London, 1893; F.R.C.P., 1903. Physician-extraordinary to King Edward VII, 1907-10; to King George V, 1910-14. Early became known as an authority on gastric affections—wrote *The Diagnosis and Operative Treatment of Diseases of the Stomach*, 1908. During First World War he was captain R.A.M.C. (T.F.), commandant 2nd London General Hospital, and consulting physician in France. Col. A.M.S. and honorary member Army Medical Advisory Board, 1918, and chairman of the special committee of the Medical Research Council on tuberculosis in wartime. Raised to peerage, 1920; Privy Councillor, 1929. President of the Royal College of Physicians, 1931, and of the British Medical Association, 1932-3, 1943-5. Created a viscount, 1936. Biography by F. Watson, 1950.

Dax (Lat. *Aqua*), Fr. spa, cap. of an arron., in the dept of Landes, on the Adour. Its warm, sulphurous waters have been looked upon as a cure for rheumatism since Rom. times. There are remains of Rom. ramparts. It has a trade in wine, timber, and resin, and manufs. preserves and espadrilles. Pop. 14,100.

Day, Clarence Shephard (1874-1935), Amer. essayist, b. New York. Educ. at Yale, he afterwards fought in the Sp.-Amer. War and contracted arthritis, which left him a bed-ridden invalid. He wrote humorous philosophical essays which were collected as *God and my Father*, 1932; *Life with Father*, 1935; *Life with Mother*, 1937; and *Father and I*, 1940.

Day, Francis (1820-89), ichthyologist,

b. Maresfield, Sussex, who wrote some standard works on the fish life of India and Great Britain. He became interested in this study while surgeon at Madras. His chief works are *The Fishes of Malabar*, 1865; *Fishes of India*, 1875-88; and *The Fishes of Great Britain and Ireland*, 1880-84.

Day, John (1574-1640), dramatist, b. Norfolk. He became a sizar of Caius College, Cambridge, whence he was expelled for theft. He collaborated successfully with Dekker, Haughton, and others between 1598 and 1608. His best-known work is an allegorical masque, *The Parliament of Bees*, 1641, in which all the characters are bees. He also wrote a pleasing comedy, *Humour out of Breath*, 1608. His complete works were ed. by A. H. Bullen, 1881. See A. C. Swinburne, *Contemporaries of Shakespeare*, 1919.

Day, Thomas (1748-89), author, b. London. He inherited in early infancy £200 a year, the greater part of his father's estate. He was educ. at Charterhouse and Oxford, and was called to the Bar, but did not practise. He was eccentric, and educ. 2 girls with the idea of making one his wife, but the experiment failed. With his friend Richard Lovell Edgeworth (q.v.) he made the acquaintance of Jean Jacques Rousseau in Paris. Literature, architecture, politics, and agriculture in turn had his attention. He married Esther Milnes, an heiress. In support of the abolition of the slave trade he wrote a poem, *The Dying Negro*, 1773. He was killed when thrown by a colt near Wargrave. His *Sandford and Merton*, 1783-9, is a typical example of the pedagogic novel. D., like Rousseau, advocated more enlightened methods in education, and offered models of stories and improving talks with children, which were intended to make them realise the value and entertainment of science and virtue. See Sir S. H. Scott, *The Exemplary Mr Day*, 1935.

Day (O.E. *daeg*, Ger. *tag*) usually means the time during which the sun is above the horizon, the period during which it is below the horizon being known as night. In astronomy a D. is reckoned as the time taken by the earth to complete a rotation, but it is necessary to define the object which is used as a reference for this rotation. If a star is used for this purpose the interval between 2 successive passages of the star over the meridian of any place is called a *sidereal day*, which is the true period of the earth's rotation. A *solar day* is the interval between 2 successive transits of the sun's centre over the meridian and is about 4 minutes longer than the sidereal D., but varies in length for the following reasons. Owing to the ann. revolution of the earth round the sun, the sun's apparent motion among the stars is in an easterly direction at the rate of about 1° a D., so that it appears to move through the 12 signs of the zodiac (q.v.) in a year. The earth's orbital motion is not uniform owing to the eccentricity of its orbit (see SOLAR SYSTEM), being a maximum and minimum at perihelion and aphelion respectively (see

APSIDES), and this would be responsible for inequalities in the length of the solar D. Another important consideration is the fact that even if the sun's orbital motion were uniform, its corresponding motion in right ascension would not be uniform because of the inclination of its orbit—the ecliptic—to the equator. Obviously a clock which kept accurate time would not always indicate the same instant when the sun crossed the meridian, and the adjustment is made as follows.

Astronomers postulate a fictitious mean sun moving uniformly in a circle and completing its circuit in the same time as the actual sun does. The connection between the 2 suns can be expressed by saying that the right ascension of the mean sun is equal to the mean long. of the true sun. If a clock keeps correct mean time the equation of time is equal to the sun time—or apparent time—minus the clock time and is zero on or about 15 April, 15 June, 1 Sept., and 24 Dec. About 11 Feb. it is $-14^m 20^s$, and about 4 Nov. it is $16^m 24^s$. These dates fluctuate slightly around those given but never depart far from them. It is easy to verify the discrepancies between clock time and the time when the sun is on the meridian, but it must be borne in mind that the former should be corrected to give mean local time which is faster than G.M.T. by 4 minutes for each degree E. of the (Greenwich meridian and 4 minutes slower for each degree W. of this. The length of the sidereal D. is $23^h 56^m 04.091^s$ mean solar time, and that of a mean solar day is $24^h 03^m 56.555^s$ sidereal time.

Day Lily, popular name for the liliaceous genus *Heimerocallis*, common to Europe and Asia. *H. flava* is a yellow-flowered species cultivated in Britain for its sweet scent, and *H. fulva*, origin doubtful, is a species once given to cattle for fodder.

Day of Atonement (Yôm Hakkippurim) is the holiest day in the Jewish year, and is observed with complete rest from all labour, abstinence from all food and drink, in self-examination and penitence. Yôm Kippur is always the 10th day of the 7th month (Tishri), and the fast begins at sunset on the 9th day, lasting until the evening of the 10th.

Dayaks, see DYAKS.

Dayfly, or Mayfly, see EPTHEMEROPTERA.

Daylesford, agric. tn in Victoria, Australia, 76 m. NW. of Melbourne, a holiday resort with mineral springs.

Daylight Saving. To Wm Willett (1856-1915), a Chelsea builder, belongs the credit for the introduction of the D. S. scheme into England, although his suggestions put forward in 1907 were held up to ridicule. The idea of summertime was first mooted in America by Benjamin Franklin, though its practice is purely an outcome of the First World War. In 1916 Germany instituted a D. S. scheme for purposes of light and fuel economy, and this led to the Summertime Act of Britain being passed on 17 May 1916. On Sunday, 21 May, the clocks throughout the country were for the first time put

on an hour in advance of Greenwich time for the whole of the summer months. Other countries throughout Europe followed suit, and America put the scheme to trial in 1917.

Although originally a war measure, D. S. was considered to have so many advantages that by a series of Acts of Parliament it was continued in England, Col. Lambert Ward being its earnest champion in the House. The royal assent was given to the Summertime Act, making it a permanent measure, on 7 Aug. 1925.

Officially summertime begins at 2 a.m. on the day following the 3rd Saturday in April, unless that is Easter Day, when it becomes the day following the 2nd Saturday of April. It terminates at 3 a.m. (or 2 a.m. Greenwich time) on the day following the 1st Saturday in Oct. During the Second World War the necessity for economising fuel and light, coupled with the inconvenience of the black-out against air raids, led to the beginning of Brit. summertime in 1940 from 25 Feb. and in 1941-4 from 1 Jan. to 31 Dec.; in 1945 the period was reduced to 9 months. Double summertime (i.e. 2 hrs. in advance) was in force during the summer months of 1941-5 and again in 1947.

The number of min. that clocks are moved forward varies from 20 min. in Sarawak and Ghana to 60 min. in Great Britain, Ireland, France, and most other countries. The actual date on which clocks are moved forward is not standard for all countries that have adopted the expedient of D. S.

European countries have used the scheme, abandoned and revived it from time to time, and in June 1930 the Soviet Union introduced it into Russia. In America some of the states favour it, while others refuse to entertain it. The opposition to the scheme comes mainly from agriculturists, who find it inconvenient to begin milking, harvesting, and other work an hour earlier, and from miners and hospital nurses. Mothers state that under D. S. their young children cannot go to sleep early enough in the bright daylight of the summer evenings with the result that the children are tired in the mornings—some educational authorities support this view. Wm Willett d. the year before his idea was put into operation.

Days of Grace, see BILL OF EXCHANGE.

Dayton: 1. City, cap. of Montgomery co., Ohio, U.S.A., on Great Miami R. at mouth of Mad R., 50 m. N. by E. of Cincinnati. It is a leading centre of aviation research and produces cash registers, refrigerators, aeroplane parts, etc. In 1913 D. suffered a destructive flood which brought the estab. of a flood control dist. It was the first large city to adopt the city manager system. Points of interest: univ. of D., D. Art Institute. Pop. 243,900.

2. A city of Tennessee, co. seat of Rhea co., Pop. 3190. In 1925 a teacher of science in the high school was found guilty of having violated a state law

prohibiting the teaching in schools supported by the state of any theories that man is descended from the lower animals. Wm Jennings Bryan, who was briefed by the state of Tennessee for the prosecution, *d.* at D. a few days after the trial. D. is the seat of the Wm Jennings Bryan Univ.

Daytona Beach, popular holiday resort of Florida, U.S.A., on the Atlantic coast, with a motor-racing track on the hard white beach. It is the seat of the Bethune-Cookman College. Pop. 30,187.

D'Azara, Felix, *see* AZARA, DON FELIX DE.

D'Azeglio, *see* AZEGLIO.

D.D.T., *see* DICHLORODIPHENYLTRICHLOROETHANE.

De Aar, tn of Cape Prov., S. Africa, one of the prin. railway junctions of S. Africa, centre of large livestock fairs, with a healthy climate. It is rapidly expanding. White pop. 4192.

Deacon (Gk *diakonos*, an attendant minister), an order in the Christian Church, whose offices and duties have varied greatly in different places and at different times. They are traditionally derived from the Seven (Acts vi.), although the Seven are never specifically called D.s in the N.T., or indeed in any surviving text until the end of the 2nd cent. Allusions to the diaconate, however, occur in the pastoral epistles, and with the development of the monarchical episcopate the D. became peculiarly attached to the bishop. The chief functions of the primitive D., as we may gather from the story of St Laurence, archdeacon of Rome in the 3rd cent., were the care of the poor, the collection and distribution of alms, and personal attendance on the bishop. In time these functions were lost or absorbed by the minor orders, and the D. was left merely a particular part in the church service. In the Lat. and Anglican churches the diaconate is rarely a permanent office, but is considered a step to the priesthood, whereas in the E. it retains more of the old character. In certain Protestant bodies, such as the Presbyterians, the title of D. is given to a layman who has charge of finances, etc. *See Catholic Encyclopaedia*; H. B. Swete, *Early History of the Church and Ministry*, 1918.

Deacon of a Trade, temporary president of certain incorporated bodies in Scotland. These presidents represented their different trades or crafts in the various tn councils before the Burgh Reform Act of 1834. This Act deposed them from their position as official members, but still permitted them to regulate the business affairs of the crafts when appointed by election. *See also* DEAN OF GUILD.

Deaconess, one of an order of women set apart for special service in the Christian Church. In Rom. xvi. 1, and 1 Tim. v. 9 et seq., we find traces of the beginnings of this order, and at the time of the *Apostolic Constitutions* (q.v.) it formed a distinct part of the Church's organisation, and as such is mentioned in the canons of Nicaea and Chalcedon. Though D.s were ordained in much the same way as

deacons, there is no trace in their duties of any sacerdotal function. In the W. Church the order was condemned at sev. councils from the 5th cent. onward, and fell entirely into abeyance during the Middle Ages. It has recently been revived in sev. of the reformed Churches, e.g. the Anglican and Presbyterian.

Dead, Book of the, collection of magic spells, written on papyrus and buried with the dead in anc. Egypt. Knowledge of these spells was considered essential for happiness after death, although the idea began to creep in that this might be obtained as a reward for a good life. Thus as Osiris had been tried and declared 'true of voice, so when a dead man aspired to life after death he was thought to be judged by Osiris who was the ruler of the dead. A scene of the judgment was often included in the B. of the D., with the heart of the dead man being weighed against Truth represented by a feather. Tho'th recording the result and a monster waiting to devour the heart if not true.

Dead-nettle, popular name of sev. species, of the genus *Lamium* and family Labiatae, because of their resembling the stinging-nettles of the genus *Urtica*. *L. album*, white D., *L. purpureum*, red D., *L. moluccifolium*, intermediate D., *L. hybridum*, cut-leaved D., and *L. maculatum*, spotted D., are found wild in Britain.

Dead Sea (Lat. *Lacus Asphaltites*, Arabic *Buhr Lul*, Sea of Lot), scripturally

E.N.A.

THE DEAD SEA

In the background are the mountains of Judaea

called Salt Sea, Sea of the Plains, Sea of the Arabah, is a lake lying between Israel and Jordan. Its length is 46 m. and its greatest breadth $9\frac{1}{2}$ (average 84) m. Area 393 sq. m., of which 285 sq. m. are in Jordan. The long oval of the lake is unequally divided by the El Lisan peninsula, of loose calcareous formation. N. of the peninsula the greatest depth is 1278 ft. S. of that it is 3 to 12 ft deep. It

receives the Jordan and 6 other rivs., but has no outlet, the surplus water being carried off by evaporation. The water is intensely salt, with a sp. gr. one-sixth greater than ordinary water. It is surrounded by steep cliffs of bare limestone, rising to a height of 6000 ft. and masses of sulphur exposed by periodically occurring earthquakes lie on its borders. There is a considerable business in the exploitation of its salt deposits, and potash, bromine, magnesium, etc. There is a phosphates factory at Sodom.

Dead Sea Apple, see APPLE OF SODOM.

Dead Sea Scrolls, see SCROLLS OF THE LAW.

Deadly Nightshade, see NIGHTSHADE.

Deadman's Handle, device attached to the control gear of an electric train (or lift) which ensures that the train is automatically brought to a standstill if the driver releases his grip through sudden illness. The device is in the form of a knob, which switches off the power and applies the brakes should the handle be released when on a running notch. A similar device in the form of a treadle is used on diesel-electric trains.

Dead's Part, in Scots law, the remaining portion of the movable estate which alone may be bequeathed by will. Where the deceased leaves a widow and no children the widow takes one-half as her *jus relictae*, and the other half is D. P. If he leaves a child or children and no widow, half goes to the issue as their *legitime* and half is D. P. If he leaves widow and children, one-third is D. P., the residue going equally to the widow and children. If he dies childless and unmarried every part of the estate is D. P. The same principles apply in the case of a wife leaving movable estate. The D. P., if undisposed of, devolves on the next of kin.

Deadwood, co. seat of Lawrence co., S. Dakota, U.S.A., in the extreme W. of that state. It is the trading centre for the gold, silver, lead, and tin mines of the Black Hills. It was founded in 1876, and has some buildings of architectural interest. The graves of famous Westerners, Wild Bill Hickock, Calamity Jane, Preacher Smith, and Deadwood Dick are here. Pop. 3288.

Deaf and Dumb, or Deaf-mute. Deaf-mutism or deaf-dumbness in the sense in which it is used in this article denotes (1) the congenital deafness which arises from some original malformation of the ear and which is always accompanied by dumbness; (2) deaf-dumbness attributable to post-natal causes. Acquired deaf-dumbness, which for the most part follows on some febrile disease in very early life, is of importance from the dactylogical standpoint, but in cases where deaf-mutism has occurred later in life it is obvious that the subject may well have learnt the arts of speech and writing before his affliction, and for that reason does not present the same problem to educators as the congenital deaf-mute. Complete deafness is by no means essential as a cause of complete dumbness; a small amount of deafness may well eventuate in dumbness. Aetiological inheritance is a potent

cause of deaf-mutism; the intermarriage of deaf-mutes and consanguineous marriages are mainly responsible for its production. The prin. causes of non-congenital deafness are those which produce some inflammatory affection of the middle ear. The most prolific sources are scarlet fever and, in a lesser degree, meningitis, measles, fevers, catarrhs, abscesses, small-pox, and erysipelas. It frequently happens that mental disorder is in some way connected with deafness, and the importance of an efficient means of education is apparent from the fact that D. and D. children, if uneducated, have perforce to be classed as mentally retarded. A morbid condition of the mind must almost certainly eventuate where the deaf-mute, to however great an extent he may be susceptible to external impressions, is utterly unable to formulate coherent ideas from never having had his intellectual faculties developed by communication with other, unafflicted human beings.

Denmark, in 1817, was the first country to introduce compulsory education of deaf children. In 1890 the Education of Blind and Deaf-mute Children (Scotland) Act was passed, followed, in 1893, by a similar Act for England and Wales, making elementary education of the deaf compulsory. The 1944 Education Act made secondary education compulsory. There are schools in almost every other country in the world, although in some cases, notably China, Japan, India, and countries in S. America, the provision made is altogether inadequate. In regard to the instruction of the D. and D., it is to be noted that these instructed include for the most part persons whose vocal organs are perfect, but who from deafness are ignorant of the way to articulate the sounds of speech. Again the pupils comprise many who are not completely deaf. Deafness occurs in every degree and in some cases amounts only to an insensibility to the sharper notes of sound. This fact is carefully borne in mind by teachers when considering individual cases. But of course dactylogy or the manual communication of ideas is a science invented mainly in the interests of the more or less completely deaf, who, from never having heard a word spoken, are for that reason unable to use their vocal organs for speech. To such a person any language is a foreign language, and this has always been strongly impressed on all teachers of the D. and D.

Many of the early systems of teaching were faulty from the very ignorance of this important fact, e.g. the celebrated Abbé de l'Epée estab. through dactylogy and articulation some connection in the mind of the pupil between certain methodical signs and the language of their country, but it was by no means estab. that he effected a subjective connection between those signs and the ideas which they were intended to represent. Nevertheless he attained considerable success, and his principles were carried further by his successor, the Abbé Sicard, and the basis of his teaching in signs is that of the chief modern systems. Signs are the natural

language of the D. and D., but the attainment through signs of abstract thinking and conceptions is impossible unless a clear distinction is kept in mind between

British Deaf Times

TWO-HANDED ALPHABET

explaining a language and expressing it. The thoughts must first be awakened, and generally by signs as the most or only natural method; and when awakened those thoughts must be shaped in lan-

guage by some manual alphabet or form of writing. Down to the 16th cent. there was next to no serious effort in the direction of instructing the D. and D. It was the common assumption that instruction by means of language was limited to those who could hear. In England shortly before the pub. by Dalgarno in 1680 of his treatise, the art of instruction of the D. and D. was advanced by John Bulwer and Dr Wallis. Contemporaneously with these, D. and D. philologists, Montans, van Helmont, and Amman, were occupied with its study in Holland; and in Germany, though later, Kerger, Arnoldi, and Heinicke were devoting attention to the subject. It was in France, however, that the greatest strides were made, as indeed was the case in the instruction of the blind (*see BLIND*), and the work of de l'Épée and Sicard, however incomplete, cannot be overestimated. In England, after Dalgarno's time, the art slumbered for many years. It was revived by Henry Baker, the naturalist, and in the middle of the 18th cent. Thomas Braidwood opened an academy in Edinburgh. Braidwood's success was remarkable. He opened another school in Hackney in 1783, and his sons opened other schools in Edinburgh in 1810 and Birmingham in 1825. The first public school for free instruction of the D. and D. was opened in Bermondsey in 1792, and of this school Dr Watson, nephew of Thomas Braidwood, was head instructor for 37 years. With the development of a more enlightened social system the days have long since passed when the duty of instructing the D. and D. was left to individual effort alone. The Elementary Education Acts, 1870 to 1891, make provision for the compulsory elementary education of defective children, including in that term the deaf. The London County Council makes special provision for deaf children, having 6 day schools for the wholly deaf, 5 for the hard of hearing, and 3 residential schools. There are also centres where evening classes in lip-reading are held. The total number of deaf children in attendance at schools throughout England and Wales is not much more than 4000, in Scotland about 700.

Societies and institutions in England for the welfare of deaf-mutes include the Royal School for D. and D. Children, Margate, and the Royal Association in aid of the D. and D., and the National Institute for the Deaf. There is a national college of teachers of the deaf (blind and deaf school) at Stoke-upon-Trent.

The close of the First World War brought serious hardship to many officers and men who had lost their sense of hearing by war service, 33,791 being discharged on account of deafness (the numbers were fewer in the Second World War). On their behalf the Deafened Ex-Service Men's Fund was founded in 1919, with H.Q. at 23 Queen Anne's Gate, S.W.1.

Methods of Instruction. Where there is sufficient hearing the instruction may be auricular, but experience does not point to any great success in this method. Where the afflicted are completely deaf

the methods must be such as appeal to the eye alone. The obvious ways of so appealing are by a sign language, representation by writing, printing, and pictures, lip-reading, and the manual alphabet. Generally speaking the two prin. methods are the manual and the oral, which utilise the above means of appealing to the eye in varying degrees. The manual and the oral may also be combined, but the combined systems have not been productive of such success as the purely manual; and the oral, which is admittedly unpopular with the deaf themselves, produces a much lower percentage of successes than the manual. In the manual method, signs are first used to stimulate thoughts, and the thoughts are given vernacular expression in the mind of the pupil by finger-spelling and writing. In Great Britain the two-handed, in Europe and America, for the most part, the one-handed, manual alphabet is in vogue. That this method is successful may be inferred from the fact that so many pupils can acquire an average shorthand speed of communication of 130 words a min. Perhaps the first manual alphabet pub. in England was that of Dalgarno in 1680.

So far as the single letters are concerned the system is simplicity itself. The rules are: (1) Touch the places of the vowels (*see* diagram) with a cross-touch with any finger of the right hand; (2) point to the consonants with the thumb of the right hand. The present two-handed alphabet appears to have been derived from Dalgarno's finger-alphabet. The one-handed alphabet was invented in Spain, and was probably first pub. in the works of Bonet.

A dactylology of syllables has occasionally been employed in the instruction of the D. and D., and a system of alphabetic and syllabic dactylology was pub. by Dr Delean the younger in 1830. The application of finger-language to designate numbers is attributed to Mr Stanbury, superintendent in a New York institution for the D. and D. Only one hand, the left, is used, the right being left free to record calculations.

The cipher is represented by the closed hand. To indicate this, the position of the hand is changed from perpendicular to horizontal; the thumb is pointed forwards for 10, the thumb and forefinger for 20, and so on to 90. Hundreds are pointed downwards; thus the thumb, forefinger, and middle finger pointed downwards represent 300. If 572 be the number to be designated, three positions are required; the five fingers are pointed downwards for 500, the little finger and ring-finger forwards for 70, and the thumb and forefinger held upright for 2. To represent thousands, the left hand is placed across the body towards the right shoulder, and the signs which were used in front for units in this position represent thousands. Variations of position with the same signs are adopted for tens of thousands and higher numbers. Though complex in description, the whole is easy and comprehensive in operation. In the oral

method, although reading and writing may be utilised as in the manual, the prin. means employed are articulation and lip-reading. The *sounds* of letters as

British Deaf Times
ONE-HANDED ALPHABET

opposed to the names are taught through the medium of lip-formation; but, of course, the names must be taught where different pronunciations of the same letter are to be conveyed. Articulation, which

in this connection denotes the teaching of deaf-mutes to speak and to comprehend speech by merely watching the motion of the vocal organs, seems to be as old as the time of Bede. Not one pupil in 30 attains any appreciable degree of proficiency by this method, and in all probability it requires in the pupil a higher degree of intelligence. Much patience and kindness on the part of the teacher are absolutely essential. The speech, such as it is, of the deaf-mute (who must, of course, be of that class who are not completely dumb) is artificial, constrained, and laborious, and generally too loud and discordant from the obvious fact that he cannot hear himself speak and has never heard anyone else speak. The system has never been a really serious rival to the art of dactylology, although opinion has differed on the question whether articulation is indispensable to the acquisition of thought. Ger. teachers think it is; Eng. teachers for the most part are of the opposite opinion. The Americans seem to hold a middle view.

Occupations of Deaf-mutes. These are necessarily wider than in the case of the blind (q.v.). Indeed only those in which speech and hearing are indispensable are closed to them. As an indication of the strides made in their education it may be instructive to note the following diversity of occupation: bookbinders, carpenters, cigar-makers, cutlers, gilders, hatters, jewellers, law-writers, optical and scientific instrument makers, and printers of all kinds. Some have attained distinction in the highest branches of oil and water-colour painting, while one, at least, became a sculptor of great ability, and another a conveyancing barrister. Two Amer. women, Laura Bridgeman (1829-89) (q.v.) and Dr Helen Keller (b. 1880) (q.v.), are noted for their triumph over their disabilities. The census returns, of course, show that the highest proportion are engaged either in non-productive and indefinite or in industrial occupations; but none the less many have found employment in commercial and professional circles.

Mechanical Aids to Hearing. Numerous devices known as deaf-aids have been invented, and have reached a high degree of efficiency. A deaf-aid incorporating the results of all the latest research was commissioned by the Brit. Gov. in 1947 for manuf. and distribution under the National Health scheme. The U.S. Bell Telephone laboratories have developed a system of visible speech transmitted from a microphone to a television screen, each inflection or sound being pictorially reproduced in the form of spurts or splashes. The users can quickly learn to identify the shapes of the spectrograms as words, for each sound has its own striking and divergent form. See also GALLAUDET, THOMAS HOPKINS. See Kerr Love, *Deaf-Mutism*, 1896; G. S. Haycock, *Education of the Deaf in America*, 1926; M. Clark and G. Crowden, *The Employment of the Deaf in the United Kingdom*, 1937-8; National Institute for the Deaf, *All about the Deaf*, 1939; and R. Scott Stevenson

and Douglas Guthrie, *A History of Otology*, 1949.

Deafness, see EAR.

Deák, Ferencz (1803-76). Hungarian politician. He became famous as an advocate of moderate reform in the years preceding the 1848 revolution. After 1861 he became leader of the Moderates, and drew up the address to the Emperor Francis Joseph, demanding the restoration of the constitution of 1848 and an independent Hungarian ministry. The pre-1918 dual system of monarchy, estab. 1867 between Austria and Hungary, was largely the result of his policy.

Deakin, Alfred (1856-1919). Australian statesman and orator, b. Fitzroy, Melbourne; son of Wm D., a native of Towcester, Northamptonshire, accountant to a firm of coach proprietors. Educ. at Melbourne Univ. Admitted to the Bar, Sept. 1877. Contributed non-political articles to the *Age* and the *Leader*. He represented Victoria in the Imperial Conference at London in 1887, and took a leading part in the cause of Australian federation as a member of the National Australian Federal Convention (1897), and of the Federal Council of Australia. He visited England a second time in 1900, as one of the Australian representatives in connection with amendment of the Commonwealth Bill. He succeeded Sir Edmund Barton as Premier of Australia, and held office three times between 1903 and 1910. He was appointed to represent the Commonwealth in the Imperial Conference, 1907. His works include *Irrigation in India*, 1892, *Irrigation in Australia*, 1893, and *Temple and Tomb in India*, 1894. He was a Protectionist-Liberal-Imperialist: it is claimed for him that he was an imperialist before Rudyard Kipling began to boom imperialism; and for many years he preached the now settled dogma, 'White Australia.' Retired 1912, and in his last years suffered from loss of memory. See W. Murdoch, *Alfred Deakin*, 1923.

Deakin, Arthur (1890-1955), trade unionist, b. Sutton Coldfield. He began work in a steel factory at the age of 13, and soon became an active Socialist and trade unionist. In 1932 he became national secretary of the General Workers' group of the Transport and General Workers' Union, and became a close friend of Ernest Bevin whom he succeeded as general secretary of the union. He was a constant opponent of Communism within his own union and the trade union movement as a whole. He was made a privy councillor in 1954.

Deal ('the valley,' a form of 'dale'), seaport and watering place in Kent, England. It is a limb of the Cinque Ports, and Walmer Castle, 1 m. to the S., is the official residence of the Lord Warden. Henry VIII built 3 castles in the neighbourhood: Walmer, Sandown, and D. Sandown Castle, at which Col. Hutchinson, governor of Nottingham Castle and tn for the Parliamentarians (see HUTCHINSON, JOHN), d., had to be destroyed as dangerous, owing to the incursion of the sea. The N. portion is

now groined by the Case system. D. was never a commercial port. The lower tn came into being when Sandwich harbour silted up in late medieval times, which had for the same reason succeeded that of the Rom. Richborough and Stonar. D. lies along a steeply shelving bank up which could be hauled the small vessels ('hobbies') serving it in the Downs—the roadstead for D. D. fl. as the landing and embarking point for the Downs (with fishing as a side-line for its pop. of boatmen), and consequently grew up along the foreshore on the sites and lines occupied by medieval fishermen's huts. Its prosperity was coeval with sail and reached its peak in late Georgian times. The inhab. to-day, proverbially courageous, are employed in boat-building, light industries, and catering for holiday makers, and many are employed in the E. Kent coal mines in the area. The tn church was not finished till 1716, and is a square, early Georgian building of simple merit, previous to which the very picturesque church of Old or Upper D. served the par. Old D. proper lies about a m. inland. There is a newer D., formerly known as Victoria Town, adjoining it to the S. in the vicinity of the castle built by Henry VIII. The intermediate area, formed by Middle Street, Coppin Street, Griffin Street, Dolphin Street, etc., is the historical D. Pop. 24,276 (1954). The administrative bor. of D. includes Walmer (q.v.) and the vil. of Great Mongeham.

Deal (Wood), a piece of square-sawn softwood timber, 2 in. to 4 in. thick and 9 in. to 11 in. wide inclusive. The term is now regarded as old-fashioned and is going out of use. At one time any piece of softwood of fair size was termed 'a deal,' and European Redwood (*Pinus sylvestris*) was often referred to as 'red' or 'yellow deal'; European whitewood—the common spruce (*Picea excelsa*)—was referred to as 'white deal.' Workers at the docks who unload softwood from ships are still referred to as 'deal porters.' See **TIMBER**.

Dealfish, (*Trachipterus*), a genus of oceanic fishes of the family Trachipteridae. Sev. species are known in European waters. The *raapmar* from Norway and Iceland is found sometimes round the coasts of Scotland. It is about 4½ ft. in length, and silvery in colour.

De Amicis, Edmondo, see **AMICIS**.

Dean (Lat. *decanus*, from Gk *deka*, ten), title of various eccles. functionaries. The title was originally derived from a Rom. civil officer mentioned under Theodosius and Justinian. Its first use is found in the monasteries, where the *decanus* had the supervision of 10 monks. When the canonical life was introduced among the clergy resident at cathedrals, the title was often applied to their head. Mention of an archipresbyter, a somewhat similar officer attached to a bishop's staff, occurs in St. Jerome's 4th epistle to Rusticus. The D. of an Anglican cathedral has entire charge of the fabric of the building, the arrangement of the services, and the management of property. There are also certain D.s of *peculiars*, who have

charge of particular churches not under episcopal supervision, such as the church of Battle in Sussex and the chapels royal. *Rural D.s* have held office in England from very early times. Their duty is to attend to the concerns of parts of a diocese and report thereon to the bishop. The bishop of London is D. of the prov. of Canterbury. In the Rom. Catholic Church the D. of the Sacred College is the cardinal who has held rank longest. The office is generally held by the bishop of Ostia and Velletri.

Dean, East and West, 2 rural dists. of Gloucestershire, England, forming part of the Forest of Dean (q.v.). E. D. comprises 11 pars., pop. 20,609; and W. D. 6, pop. 18,173.

Dean, Forest of, tract of land and national park in W. Gloucestershire, England, situated between the Severn and Wye valleys. It was a royal forest, and much of the timber was cut down by order of Charles I, but it was reafforested by order of Parliament after the Restoration. A great portion of its timber was formerly utilised for the navy. Coal and iron abound throughout the forest, also clay, building stone, and ochre. The principal tns are Cinderford (q.v.) and Coleford (q.v.). An account of the F. of D. has been pub. by H.M.S.O. as a national park guide.

Dean of Guild, prior to the Burgh Reform Act of 1834, head of the numerous trade guilds in Scottish burghs. His function was to act as arbiter in all mercantile and maritime affairs within the burgh. His present powers consist mainly in regulating the erection of suitable buildings and condemning those unfit for habitation. See also **DEACON OF A TRADE**.

Deane, Richard (1610–53), adm. and gen. at sea. In 1644 he fought with the parl. army in Cornwall, and was also present at the battles of Naseby, Preston, and Worcester. He was appointed joint commander with Blake and Monck in 1653, and lost his life at the first battle off the N. Foreland.

Deane, par. of Bolton (q.v.).

Dearborn, city in Wayne co., SE. Michigan, on R. Rouge (freighter docks). It is the home of the Ford Motor Co. D. manufs. aircraft parts, steel, metal products, and bricks. The Edison Institute of Technology, Greenfield Village, and a veterans' hospital are here. The hp. of Henry Ford has been restored. Pop. 95,000.

Dearne, urb. dist. of Yorks (W. Riding), England, 7 m. NE. of Rotherham, created (1937) from the former urb. dists. of Bolton upon Dearne and Thurnscoe. Coal-mining is the chief industry. Pop. 25,620.

Deat, Marcel (1894–1945), Fr. politician, b. Guérisny in Nièvre. Deputy in 1928, and minister for air in 1936, he accepted office under the Vichy Gov. in 1940, and founded the so-called 'unity' party, the Rassemblement National Populaire. He was executed for treason after the liberation of France.

Death. Under **BIOLOGY** it is pointed out that there is a continual change proceeding in every cell of any organism,

waste matter being carried off and new matter deposited. Thus cells of organisms are continually dying, and D. in this molecular sense is an essential to life. But it inevitably follows that, because of this process of metabolism, D. in the larger sense, i.e. the D. of the entire organism, must ensue. Thus D. would occur naturally by the gradual decay of the organism as in old age, but most organisms do not die in this way. The majority of D.s are *accidental*, being caused by disease or violence. And D. thus caused must begin, as Bichat said, at the heart, the head, or the lungs. But these three *vital* organs, the heart, brain, and lungs, are mutually dependent, and while D. may be immediately caused by the failure of one of them, yet that one may have failed through an impairment in the functioning of another. D. from failure of the heart may be sudden, as in *syncope*, or gradual, as in the action of some poisons. Or, again, it may occur because the blood is insufficient in amount to excite the heart, as in the case of *anaemia*. D. from failure of respiration, or *asphyxia*, again, is chiefly due to violence, although certain poisons and *tetanus* may cause it. D. which begins at the brain, or D. by *coma*, is caused either by violence, or by the action of poisons, or by the formation of clots of blood in the vessels.

The signs of approaching D. are sometimes well marked, as in natural D. from old age, by a vacancy in the intellect, and an atrophy of the senses and sentiments. Again, delirium and even dementia, or imbecility, are often precedents of D. Similarly the muscles relax, and are incapacitated, the voice becomes low, and the heart either begins to fail gradually, the pulse becoming faster but weaker, or it may beat irregularly though not be weaker, or it may suddenly contract violently and stop. The respiration again may be hurried and panting, or slow and laborious, while the 'death rattle,' as it is commonly termed, is caused through the passage of air from the lungs through the fluid (mucus) which has collected in the air passages. The signs of actual D. are: (1) *The extinction of the vital functions*. The cessation of circulation and respiration may not always signify D., for they may, as in drowning and in newly born infants, be entirely suspended for a while and then restored, or they may even be reduced so low that while they have not ceased they may yet be incapable of detection. Loss of heat is a tolerably certain sign, although in exceptional cases the temp. may rise after D. Certain signs of D., however, are the loss of contractility of the muscles on application of a galvanic current. (2) *Changes in the tissues*. The most important of these is, of course, the *rigor mortis*, which, commencing in the neck and trunk, proceeding through the upper and then the lower extremities, then passing away in the same order after from 24 to 36 hrs, is a sure sign of D. (3) *Changes in appearance*. These are well marked, but the chief are the lividity of various parts of the body, and the ap-

pearance of a green tint on the skin of the abdomen, accompanied by a separation of the epidermis.

For conceptions of D. held by primitive and civilised races, see BURIAL CUSTOMS; IMMORTALITY; PHILOSOPHY; RESURRECTION; TRANSMIGRATION, etc.

Death, Registration of, see REGISTRATION OF BIRTHS, MARRIAGES, AND DEATHS.

Death Cap, see AMANITA.

Death Duties. The only death duty remaining after 1949 was the Estate Duty. The Legacy and Succession Duties were repealed in that year. See ESTATE DUTY; LEGACY AND SUCCESSION DUTIES.

Death Valley, or the **Amargosa Desert**, gloomy tract of desert land from 100 to 280 ft below the level of the sea and with an area of 2906 sq. m., situated in Inyo co., California, U.S.A. The Amargosa R. flows into it. It has a wide variety of bird life, but plant life has only a wide-spaced, precarious footing. It is now a National Monument. See D. C. Peattie, *The Road of a Naturalist*, 1941. (See illustration on p. 297.)

Death Watch, name of a certain class of coleoptera or beetle (*Anobium*). They are about $\frac{1}{2}$ in. long, with small, round, and convex bodies of light brown colour. They are found in old wainscoting, and the wood dust they make in the process of their burrowings can often be seen near old woodwork. When disturbed they simulate death. Many unfounded superstitions have grown up around them; the ticking noise which they make by striking the head against the wood is really a sexual signal. See ANOBIDAE.

Death's-head Moth, or *Acherontia atropes*, curious species of the family Sphingidae. It is the largest Brit. hawk-moth, with downy wings measuring 5 in. from tip to tip, and its thorax is marked as though with a skull. When it is at rest it sometimes gives out a squeaking noise, produced probably by rubbing the palpi upon the proboscis. The caterpillar is about 4 in. long and is brightly coloured, feeding on potato plants.

Deauville, Fr. seaside resort in the dept of Calvados, on the Eng. Channel. It is the more fashionable neighbour of Trouville (q.v.), with which it is linked by a bridge over the R. Touques. It is called 'la Plage Fleurie,' and is known for its fine beach, horse-racing, and casino. Pop. 5400.

De Bary, Heinrich Anton (1831-88), Ger. botanist and biologist, who made valuable discoveries in mycology and bacteriology, demonstrating the power of parasitic growths in the production of disease. Chief works: *Die Mycetozoen*, 1864; *Beiträge zur Morphologie und Physiologie der Pilze*, 1864-82; and *Vorlesungen über Bakterien*, 1886, Eng. trans., 1888.

De Bay, Michael, see BAITS, MICHAEL.
Debbieg, Hugh (1731-1810), gen. who as cadet gunner was present at the sieges of Louisburg and Quebec under the commandship of Wolfe, and served with distinction at L'Orient (1746) and Bergen-op-Zoom (1747). A secret mission

to France and Spain occupied him during 1767, and he was entrusted with the protection of London in the Gordon Riots (1780).

De Bene Esse, technical legal expression equivalent to 'provisionally,' and applied to the conditional doing of an act for the time being, subject to such act being disallowed on a fuller examination of its propriety. The term is particularly applied to the provisional examination of a witness before a trial where it is feared that the witness, by reason of age or illness, may be unable ever to appear at the trial (see *DEPOSITION*). A verdict taken *de bene esse* is one that may be reversed on further consideration.

transferred in the company's books. *D.s* to bearer are negotiable and pass by delivery with coupon attached for interest. It is a term used by customs officers for a certificate entitling an exporter of goods to receive bounty or drawback on exported goods. See *COMPANY AND COMPANY LAW*.

Debit and Credit, see *BOOK-KEEPING*.

De Bono, Emilio (1866-1944), It. gen. and Fascist politician, b. Cassano d'Adda. He took part in the march on Rome in 1922, was later governor of Tripolitania, and foreign minister. He commanded the It. forces in Abyssinia in 1935, and wrote an *apologia* (1936). He also wrote *Anno XIII: the Conquest of an*

U.S. Information Service: American Embassy

DEATH VALLEY, CALIFORNIA

Debenham, Frank (1883-), scientist and explorer; geologist of Scott's Brit. Antarctic *Terra Nova* expedition, 1910-13. He was prof. of geography, Cambridge Univ., 1930-49, and founded the Scott Polar Research Institute (q.v.) in 1925. He pub. the *Report on Maps and Surveys of the 'Terra Nova' expedition and in the Antarctic*, 1952, as well as other non-polar works.

Debenture (Lat. *debentur*), a deed by which a company charges its property and assets, and covenants to pay the holder the sum secured by the D. at a fixed date, together with interest up to that time. Under the Companies Acts, every D. must bear the registrar's certificate of registration. There are registered *D.s* and *D.s* to bearer. The first can only be

Empire, 1937. He voted against Mussolini in 1913 and, after trial by a special court, was shot as a traitor in Jan. 1944.

Deborah (Heb. 'bee'), prophetess and 'Judge,' wife of Lapidoth, incited Barak to free her people from the Canaanite oppression which they had endured for 20 years. She joined Barak in leading an army against the Canaanites under Sisera, and completely vanquished them in the plain of Esdraelon (Judges iv). Sisera, a fugitive, was murdered in his sleep by Jael, wife of Heber, the Kenite. The triumphant outcome of this battle ensured a long peace. The 'Song of Deborah' (Judges v) is acknowledged by scholars generally to be a genuine contemporary document, and so one of the oldest records preserved in the Bible.

See W. F. Albright, 'The Song of Deborah in the Light of Archaeology', *Bulletin of American School of Oriental Research*, 62, 1936.

Debra, Tabor, large dist. and tn of Ethiopia, E. Africa, 35 m. E. of Lake Dembea.

Debrecen, formerly **Debreczen**, city of E. Hungary, cap. of the co. of Hajdu-Bihar, 120 m. E. of Budapest (q.v.). It has long been a Calvinist stronghold. In 1849 the declaration of Hungarian independence was made by Kossuth (q.v.) in the splendid Great Church (Calvinist) of D., and in Dec. 1944 it was in D. that the provisional National Assembly met after the Ger. army had retreated from E. Hungary. During the anti-Russian risings of Oct.-Nov. 1956 the tn was under insurgent control. There is a fine Protestant college (c. 1550), and a univ. (1914) with a library containing 500,000 vols. Pharmaceutical goods and machinery are manuf., and there is a trade in livestock from the Hortobágy *puszta* (q.v.). There is an airfield. Pop. 118,000.

Debreczen, see **DEBRECEN**.

De Broglie, Prince Louis Victor (1892-), b. Dieppe. He studied arts at Paris, and then physics. Prof. at the Institut Henri Poincaré since 1928. In 1924 he pub. his famous thesis in which he predicted that all moving (atomic) particles have properties normally associated with wave motion. Experimental proof of the wave nature of electrons was given by Davisson and Germer in 1927. Awarded the Nobel Prize in 1930.

Debrosses, Charles (1709-77), Fr. lawyer and historian, b. and educ. at Dijon. He became a judge in his native tn, and gained the friendship of Diderot and Buffon. He contributed articles on language to the encyclopaedia of Diderot and Voltaire, and collected 700 fragments of Sallust which he pub. (1777) as *L'Histoire du VII^e Siècle de la République Romaine, par Salluste*.

Debs, Eugene Victor (1855-1926), Amer. railway labour leader, b. Terre Haute, Indiana. Served as a locomotive fireman. Elected to Indiana state legislature (1884); president of the American Railway Union (1893-7), for which he won a strike on the Great N. Railway. Joined the Socialists in 1897. Socialist candidate for president 1900, 1904, 1908, 1912, and 1920. From 1914 he ed. the *National Rip-Saw*, St. Louis. In 1918, being opposed to the war, he was sentenced to 10 years' imprisonment for obstructing recruiting. It was during his incarceration that he was for a fifth time nominated for president. He was released in Dec. 1921. See *Life, Writings, and Speeches*, 3rd ed. 1910, and also M. Coleman, *Eugene F. Debs, a Man Unafraid*, 1930.

Debt, liquidated or determinate sum of money due from one person to another. D. includes an obligation to pay money on a contingency which must happen, but not where the event may not happen, e.g. a contract of suretyship is not a D. D.s may be classified into: (1) D.s of record, i.e. D.s evidenced by the records

of a court of a record, the principal being recognisances, and judgment D.s; (2) specialty D.s—that is, D.s created by deed or confirmed by a special evidence under seal, such as a covenant to pay rent on a lease; and (3) D.s created by simple contract. Interest is payable on a D. only under an express or implied contract to pay interest, by trade usage, under a written contract to pay money on demand or at a fixed date, on money fraudulently withheld, in the case of D.s secured on land, under the Civil Procedure Act, 1833, where the jury allows it, and on all judgment D.s. D.s are recoverable (a) by action in the high court, whatever the amount, but, in practice, for not less than £40, otherwise costs may not be awarded. A creditor who issues a writ for a D. of a stated amount against a debtor who cannot show a *prima facie* defence may, under Order 14 of the Supreme Court, obtain from a Master (q.v.) leave to sign judgment forthwith without a formal trial; (b) by action in the co. court where the D. does not exceed £400, or equitable debts, e.g. in a foreclosure action, up to £500. There is an analogous procedure by default summons to the summary process in the high court. Actions on judgment D.s and specialty D.s are barred after 12 years, and those on simple contract D.s after 6 (see LIMITATIONS, STATUTES OF). Judgment D.s have priority over specialty and simple contract D.s against the personal estate of a deceased debtor, unless the estate is insolvent, when, if administered by the personal representatives, rates and taxes, wages or salaries of clerks or servants up to £50, and wages of labourers or workmen up to £25, must be paid first, but if administered in bankruptcy, the 3 classes are payable *pari passu*. D.s being choses in action are assignable under the Judicature Act, 1873, by writing signed by the assignor, and written notice of the assignment must be given to the debtor. There is now no imprisonment for debt, except on a judgment debt, where a debtor can pay and will not or has voluntarily put it out of his power to pay. In Scottish law D.s charged on personality are called moveable D.s, and those charged on land heritable D.s. They are recoverable either in the court of session or the sheriff court, there being analogous provisions as to jurisdiction to those which obtain in England. Following the Rom. law actions are only barred by long prescription. The process by which a creditor is allowed to detain the goods of his debtor, which happen to be in the hands of a third party, is by arrestment.

Debt, National or Public, see **PUBLIC DEBT**.

Debt Conversion refers to the replacement of gov. loans that have matured by new loans. It has been used to reduce the rate of interest on loans raised when money was dear. Wars have been a prin. cause of national debt; govts. have been forced by the urgent need of raising money at very short notice to offer high rates of interest. And after costly wars, govts. were faced with long-dated loans bearing high rates of interest. The

financial hist. of Great Britain for the past 200 years is marked by numerous D. C.s, mostly after long and costly wars and in periods of cheap money.

The first conversion of Brit. national debt came in the reign of Queen Anne, when a mixed bag of floating liabilities was converted into £9 million of S. Sea Companies 6 per cent stock. 1760 saw a conversion of £54 million of 4 per cent stock into the same amount of new stock at 3 per cent. After the Napoleonic wars numerous conversions took place. In 1817 the Irish debt of £103 million was converted into debt of the U.K. In 1822 £150 million of 5 per cent stock was converted into £157 million of 4 per cent stock, and 2 years later £70 million 4 per cent stock was converted into an equal quantity of stock at 3½ per cent. In 1830 £151 million was converted partly into 5 per cent stock at a price of 70, but mainly into 3½ per cent stock at par. A large conversion took place in 1844, when £249 million 3½ per cent stock was converted into new stock bearing 3½ per cent for 10 years and 3 per cent for 20 years. In 1853 Mr Gladstone, in pursuit of thrift, saw to the conversion of £3 million 3 per cent stock. In 1883 £70 million 3 per cent stock was converted into terminable annuities, and in 1884 £23 million 3 per cent stock was converted into 2½ per cent stock at 102 and 2½ per cent stock at 108. To Goschen belongs the credit of the last big conversion of the 19th cent. In 1888 he brought forward a plan for the conversion of the 3 per cent stocks into one class of stock to bear interest at 3 per cent for the first year, 2½ per cent for the next 14 years, and 2½ per cent for the following 20 years, and thereafter until redemption. Goschen's scheme was highly successful.

The next series of conversions took place after the First World War. After the outbreak of war, the Brit. Gov. had to borrow so heavily that in 1923 the total national debt stood at £7742 million. But by 1919 the gov. was able to convert nearly £200 million of war stocks, thus greatly reducing the interest charges. In 1921 a further £163 million were converted. Other large conversions followed, and in 1932 money being comparatively cheap, the gov. converted the 5 per cent war loan to 3½ per cent, saving annually £30 million gross and £23 million net. During the Second World War the gov. was able to borrow at low interest rates, and in spite of the huge increase in the national debt from £8000 million in 1939 to over £20,000 million in 1946, the average rate of interest remained at around 3 per cent (hence the 'three per cent war').

In 1951, after the increase in bank rate, interest rates generally rose, and in early 1957 3½ per cent war loan yielded over 5 per cent. In these circumstances (when current market rates of interest are higher than nominal rates) conversions are made to induce holders to renew their loans either by offering higher rates or by borrowing for short periods at current rates in the hope of borrowing 'long' when rates of interest are lower. Between

1945 and early 1957 nearly \$6000 million was converted. In 1954-5 alone, £1400 million was converted out of a total national debt of £27,000 million. See NATIONAL DEBT.

Debts, Interalised (First World War). During the First World War (1914-18) Great Britain had pledged her credit not only on her own behalf but also on behalf of her allies. She owed huge sums to the U.S.A. and huge sums were owing to her. Arrangements had to be made for the settlement of these colossal D. In 1922 the question of debt settlement was brought forward as a matter of urgency by U.S.A., which was the sole purely creditor nation amongst the Allies. This brought forth the Balfour note, addressed by Lord Balfour on behalf of the Brit. Gov. to the Fr. ambas. and to the representatives of the interested European govts. It said that although Great Britain had lent more than she had borrowed, she favoured the cancellation of the war D. incurred between the Allies. She could not, however, agree to the cancellation of D. owing to her from European nations without a similar concession being made by America in respect of Brit. D. By agreement between Britain and America in 1923 the Brit. debt was funded. Bonds to the value of \$4600 million were issued dated 1922, and maturing 1984, interest being payable half-yearly at the rate of 3 per cent per annum from 1922 to 1932, and thereafter at 3½ per cent until the principal was repaid. The agreement provided for the repayment of the principal by ann. instalments increasing from \$23.8 million in 1923 to \$175 million in 1984. This agreement was concluded on behalf of the Brit. Gov. by Mr Stanley (later Earl) Baldwin. In 1927 an agreement was concluded for the settlement of the war debt of Yugoslavia to Great Britain. Funding agreements were signed in respect of all the allied war D. to Great Britain except that of Russia.

When the 1932 payment of debt to America fell due, the position was: total funded debt, \$4600 million; principal paid off, \$202 million; interest paid, \$1149.7 million; total paid by Britain, \$1351.7 million. Notes were exchanged without moving the U.S.A. Gov. in its determination to exact the debt. The Brit. Gov. paid \$95.5 million in gold, intimating that the payment must not be regarded as implying a revival of the old system, but was to be taken into account when arriving at a final settlement. In 1933 the Brit. Gov. reopened talks in the hope of reaching a final settlement with America, which would not involve a resumption of the claim on Germany for reparations. The U.S. Gov. made no proposals, with the result that Britain made token payments on account of instalments falling due in June and Dec., pending a discussion of a settlement. The position in 1934 was that Britain had paid \$1464.8 million to America in respect of war D. funded at \$4600 million, yet not much more than 4 per cent of the principal had been paid off. Meanwhile

other countries were adopting the Brit. attitude. The Fr. Gov. in 1933 refused to pay any instalments upon even the commercial portion of her war debt. America sent out formal notices towards the end of 1934 reminding foreign debtors of the total of \$154,726,976 due for the Dec. 1934 instalment. The notices included a 'bill' to Great Britain for \$117,670,765. Notices continued to be served in the ensuing years by the U.S. Gov. to the Brit. Gov., and the Brit. *chargé d'affaires* in Washington continued to make the customary declaration that the Brit. Gov. would be willing to reopen discussions 'whenever circumstances are such as to warrant the hope that a satisfactory result might be reached' (1938).

Deburau, Jean Baptiste Gaspard (1796-1846), famous Fr. mimic, b. Bohemia, son of a Fr. soldier. As a youth he led a wretched life with travelling troupes; but, having learned everything from balancing a ladder on his nose to *le saut périlleux*, he hit on the idea of resuscitating a Rom. pierrot worthy of the days of Bathyllus. Thus, with befloured visage, he came to the Funambules theatre, where Charles Nodier recognised his genius. Aided by his power as a farceur, his sang-froid, lively features, and artistic intelligence, he quickly became the rage of Paris. Gautier, indeed, ranked him as an actor with Talma and Rachel—'a happy and rare accident.' His son Charles (1829-73) was also well known as a pierrot at the Funambules.

Debussy, Claude (1862-1918), Fr. composer, b. St Germain-en-Laye, studied at Paris Conservatoire from age of 11—under Lavignac, Marmontel, and Guiraud. Under the tuition of Massenet, he won the Grand Prix de Rome with his cantata *L'Enfant prodigue* in 1884. During the obligatory years of study in Rome he tried to forget the cramping influence of the old formulas and to strike out new laws more adapted to his intuition. One result was *Printemps*, an orchestral suite sent from Rome to the Institut, which appears to have shocked that body by its harmonic iconoclasm. He revitalised most forms of musical art, whether symphonic, dramatic, pianoforte, or lyrical, by sheer technical skill combined with elusive originality, and an adroit use of overtones and of unusual chords. He came to some extent under the influence of Erik Satie, but had a much stronger creative force, and he added much of his own to the harmonic innovations of Chabrier and Faure. He was not an innovator by mere caprice. He appreciated the oneness of all art; and he saw that music must develop along lines parallel to those along which poetry or painting develop. His next productions, *Arctiques oubliées*, *Cinq Poèmes de Baudelaire*, and *Suite bergamasque*, show the break-away from romanticism towards the direct interpretation of feeling. He composed his celebrated *Prélude à l'Après-midi d'un faune* under the inspiration of Mallarmé's poem, a work as original as the *Symphonie fantastique* of Berlioz and baffling by the apparent simplicity with

which it succeeds in reflecting the feelings, now ardent, now sensuous, now profound, which it is intended to express. His next masterpieces were *Chansons de Bilitis* for voice and piano, 1897, and *Nocturnes* for orchestra, 1899, all impressionist works; and in 1902 his one opera, *Pelléas et Mélisande*, which frankly discards not only the old reputedly obsolete forms, but also the lyrical dramatic form of Wagner. It is regarded by some critics as exhibiting a perfect balance between poetry and music. The only other works for the theatre he finished were the incidental music for d'Annunzio's *Martire de Saint Sébastien* and a ballet *Jeux*, composed for Diaghilev. Among his finest mature piano music are *Estampes*, 1903, 2 sets of *Images*, 1905-7, and 2 books of *Préludes*, 1910-13; and the greatest orchestral work is *La Mer*, 1903-5. He wrote many song settings of the

CLAUDE DEBUSSY

finest Fr. poetry. An early string Quartet, 1893, long remained his only chamber music, but in his last years, much troubled by a fatal illness, he began a set of sonatas for various instruments, of which only 3 were completed. See L. Laloy, *Claude Debussy*, 1944; L. Vallas, *Claude Debussy: his Life and Works* (Eng. trans.), 1933; O. Thompson, 1937; and E. Lockspeiser, *Debussy* (Master Musicians), 1936, rev. 1951.

Debye, Peter (1884-), Dutch physicist, b. Maastricht. Prof. at Zurich and later at Utrecht, Göttingen, Zurich again, and then Leipzig. Director of the Kaiser Wilhelm Institute in Berlin from 1935-9, when he went to the U.S.A. His application of quantum mechanics to the problem of specific heats of solids gave a theory in good agreement with experiment. Much of his work has been on the structure of molecules. He was awarded the Nobel Prize in 1936.

Décadents (Lat. *dc*, from; *cadere*, to fall), school of young writers and artists, such

as Baudelaire, Verlaine, Mallarmé, and Barrès, who were much discussed in France about 1882. The more debased took absinthe and drugs and endeavoured by their eccentricities to attract public attention. The Symbolist movement rose from, and absorbed the best of, the D. The Symbolists were aesthetic and literary. They delighted in half-tones, delicate shades of expression, and placed psychical sensation above realism. 'Decadent' is still applied to those modern writers and artists whose artistic ideal is the production of morbid and unhealthy types. See Symons, *The Symbolist Movement in Literature*, 1899; P. Quennell, *Baudelaire and the Symbolists*, 1929.

Decagon (Gk *deka*, ten, *gōnia*, angle), see POLYHEDRON.

Decalogue (Gk *deka*logos, ten sayings), name of the Gk fathers for the Ten Commandments, of which there are 2 versions, in Deut. v. 6-21 and Exod. xx. 2-17. They were given to the Israelites on Mt Sinai, and engraved on 2 tables of stone. These being broken, Moses was commanded to hew 2 fresh tables on which Yahweh again engraved the D. Only 4 of the precepts are peculiar to the Hebrews, the 1st, 3rd, 9th, and 10th—of the others, all 6 are found in some form in Babylonian, and 4 in Egyptian, texts. There is nothing in them inconsistent with Mosiac date. It is generally accepted that originally the 10 were briefer and more similar in form than they are now. Their apodictic form is peculiar to Israel. See also PENTATEUCH. In the IV. Church since the time of Augustine it has generally been held that the first 4 commandments, giving the duty towards God, were inscribed on the first table, and the last 6, the duty towards one's neighbour, on the second. Philo and Josephus, however, assume the natural arrangement of 5 on each table. There are 3 distinct arrangements of the commandments: (1) The Talmud makes the introductory sentence, 'I am the Lord thy God which have brought thee out of the land of Egypt, out of the house of bondage,' the first commandment, and then combines the next two (Exod. xx. 3-6) into one, thus keeping the number 10; (2) Rom. Catholics and Lutherans also combine these 2 commandments and keep the number by splitting the last commandment into 2; (3) the Gk Church, the Anglican Church, and all the other reformed bodies keep the arrangement assumed in this article. The D. deals with moral, not with ritual, questions. See H. J. Flowers, *The Permanent Value of the Ten Commandments*, 1927; A. Alt, *Die Ursprünge des Israelitischen Rechts*, 1934.

Decameron, collection of tales by Boccaccio (q.v.) written between 1348 and 1388, conceived as related in 10 days at a country villa during the plague at Florence. They are of a licentious character, but told with much humour and great literary skill. They have been drawn upon by generations of writers, including Chaucer, Shakespeare, and Tennyson.

Decamps, Alexandre Gabriel (1803-60),

celebrated Fr. painter, b. Paris, and the pupil of Abel de Pujol, David, and Ingres. He first exhibited in the Salon of 1827, the originality of his style at once attracting notice. He founded the Fr. school of Orientalism, and took high position as a colourist and landscape and genre painter. 'Café in Asia,' 'Street of a Roman Village,' 'Children Playing near a Fountain,' are among his finest pictures. Chantilly and the Wallace collection in London contain some of his best work. See lives by Moreau, 1869, and Clément, 1886.

De Candolle, see CANDOLLE, A. P. DE. **Decapitation**, or beheading, an ancient punishment employed by the Gks and Romans. First incurred in England by Earl Waltheof, beheaded by William the Conqueror (1075). Not only felons but also delinquents of high rank were formerly decapitated, the rebel lords of 1745 being the last Englishmen to incur that penalty. Those capitally convicted in France are still beheaded with the guillotine (q.v.). See CAPITAL PUNISHMENT.

Decapoda, order of malacostracan crustaceans which includes crabs, lobsters, crayfishes, and shrimps, and is therefore the best known order. Usually all the thoracic segments are fused to the head in the species, and there are always 5 pairs of trunk legs; the sexes are distinct. The decapods are widely distributed, favouring chiefly the warmer seas. The term is also used for the molluscan sub-order of Cephalopoda, which have 8 arms and 2 tentacles.

Decapolis (i.e. Ten cities), name used in ancient writings to denote a league of 10 cities situated in or near Palestine and mainly E. of the Jordan. In the 2nd cent. the number was apparently increased. The confederate cities included Scythopolis, Philadelphia, Damascus, Bella, Dium, Hippos, Gadara, Gerasa, Raphana in Bashan, and Kanatha. Details are obscure, but these towns were probably founded or settled in by some of Alexander the Great's veterans.

Decastyle, in classical architecture, a portico having 10 columns in a row.

Decatur, Stephen (1779-1820), Amer. naval commander of Fr. extraction, b. in Maryland. He achieved distinction by his daring feat at Tripoli (1804) when he made a dash into the harbour and burned the Brit. frigate *Philadelphia*, which the Tripolitans had captured. He also captured the Brit. frigate *Macedonian*, when commodore of a squadron off the Atlantic coast in 1812. Soon after leaving New York (1814) he was engaged in a hard fight with the Brit. fleet and forced to surrender. The same year he sailed in command of a squadron against Algiers, but the war was soon concluded by a treaty dictating terms to Algiers, Tunis, and Tripoli. He met his death in a duel near Washington with Commodore James Barron. See the standard life by A. S. Mackenzie, 1846, and C. T. Brady, *Stephen Decatur*, 1900.

Decatur: 1. City, cap. of Macon co., Illinois, U.S.A., 40 m. E. of Springfield, in an agric., oil, and coal area. There are

railway shops, corn and soyabean processing plants. D. manufs. automobile accessories, chemicals, plastics, and iron, steel, and brass products. It is the seat of the James Millikin Univ. Pop. 66,300.

2. City of Georgia, U.S.A., a health resort close to Atlanta. It manufs. furnaces, machinery, and prefabricated houses, and is the seat of the Agnes Scott College and the Columbia Theological Seminary. Pop. 21,635.

3. City in N. Alabama, U.S.A., formed in 1927 by the union of New D. and D. It has important manufs. Pop. 20,000.

Decazeville, Fr. tn in the dept of Aveyron. It is the centre of the Aveyron coal-field, and has ironworks. Pop. 12,100.

Decca System, see AERIAL NAVIGATION; NAVIGATION.

Deccan, comprehensively an area of India that is situated S. of the R. Nerbudda, though more particularly the dist. stretching between that riv. and Kistna. The states of Mysore, Hyderabad, and the area between Bombay and Madras constitute a major part of this large tract. With the Ghats rising to 3000 ft on the W. it forms a high plateau.

Deceased Wife's Sister. The Marriage Act, 1835, nullified as from that date all marriages between persons within the prohibited degrees of affinity (relations of marriage) while legalising those already celebrated. But by the Deceased Wife's Sister Marriage Act, 1908, marriage with a D. W. S. is legal. The Act of 1908, while validating the union as a civil contract, expressly permits any minister of a church or chapel of the Church of England to refuse to celebrate the marriage without incurring any penalty, civil or eccles., but the clergyman so refusing may permit another to officiate in his place. The Act does not legalise marriages annulled before 28 Aug. 1907, and saves all existing rights and interests. Consequently the Act in no way affected the devolution of property on intestacy as to the issue of marriages celebrated before the Act.

Decabalus, see DACIA.

Decalea, tn of Attica, seized and fortified by the Spartans in the Peloponnesian war.

December (Lat. *decem*, ten), name given to the last, or twelfth, month of the year. It is so called because before the time of Julius Caesar the first month of the old Rom. calendar was March, so that what is now the twelfth month was only the tenth. The Anglo-Saxons called D. Mid-winter-month or Yule-month.

Decembrists, the first revolutionary movement in 19th cent. Russia, after the Napoleonic wars. D., mostly aristocratic officers, aimed at introducing a liberal constitution and abolishing serfdom; some of them were Republicans. A badly prepared and conducted revolt in St Petersburg on the accession to the throne of Nicholas I (Dec. 1825) resulted in 5 D., being hanged and sev. more banished to Siberia.

Decemviri (Lat. 'ten men'), 10 magistrates of supreme authority at Rome. After the fall of the Tarquins dissatisfaction was still rife among the plebeians

because, there being no written code of laws to protect them, they depended for justice on the pleasure and will of the patricians. The tribunes appealed on behalf of the people to the senate, and in 451 BC the new magistrates were appointed (*D. legibus scribendis*, the D. for writing the laws). Their authority was supreme, and with their appointment all other magistracies ceased. According to the agreement the plebeians were eligible for the new order, but no plebeian was elected in 451 BC. At the end of their year of office the D. pub. a code of laws in 12 sections. Another body of D. was appointed for 450; they added 2 more sections, and the whole became known as the *leges duodecim tabularum* (laws of the 12 tables) (see TWELVE TABLES). The order continued to be elected each year for 3 years, but in the third year their behaviour became so despotic that the people were exasperated and the old order restored. There were other orders of D. at Rome. The *D. sacris faciundis* (D. for the performance of sacred rites) were appointed in 367 BC, principally to guard the Sibylline books. They consisted of 3 patricians and 5 plebeians, replacing the earlier patrician *duumviri* (q.v.); Sulla increased their number to 15 (*quindecimviri*) in 81 BC. The *D. litibus iudicandis* (D. for judging cases) had jurisdiction in civil cases during the republic.

Deciduous Trees shed their leaves annually in temperate climates in autumn. The fall of the leaf is caused by a layer of cork, the abscission layer, being formed across the base near the insertion of the leaf. This layer becomes disorganised, as water cannot pass through it, and so causes a break, which is hastened by wind or frost.

Decimal Point. Though adopted for various purposes by Pellous, 1492, Adam Reise, 1525, and Rudolf, 1530, the D.P. was first used by John Napier (q.v., 1550-1617) as a device to separate the fractional extensions of whole numbers formed during the computation of his table of logarithms (q.v.); but when the computations were finished the D.P. was discarded with the fractions and there is no evidence of it in his *Descriptio* (1614). Its use is, however, revealed in the *Constructio*, which was pub. posthumously by his son.

Decimal System, name applied to any system of weights, measures, etc., which has the standard unit divided into tenths, hundredths, etc., for parts below it, and multiplied by 10 or powers of 10 for parts above it in value. It has been adopted for weights and measures and money in most of the European countries, but has been rejected in Great Britain and in America for various reasons, one of the chief being that our system possesses better facilities for dividing into halves and quarters with fairness to purchasers than does the D. S. It has been found inapplicable to time. See METRE; NOTATION; NUMERALS; GRAMME.

Decimals. On account of the difficulty found in manipulating many small fractions such as $\frac{1}{2}$, $\frac{3}{4}$, $\frac{123}{1000}$, particularly in addition and subtraction, it was

found necessary to devise some simpler system of notation. This was done by an extension of the ordinary system of numeration. If we take the number 125, the figure 5 = five units; the figure 2 = two tens; the figure 1 = one hundred; i.e. going from right to left a figure becomes ten times as great at each step. A dot (called the decimal point, *q.v.*) being placed after the units figure, this process was then carried further, and figures were made to continue decreasing by ten at each step from left to right. Thus, in 125.346, the 3 = three-tenths; the 4 = four-hundredths; the 6 = six-thousandths; the whole number = 125,000. To turn any vulgar fraction into a simple decimal fraction it must be possible to bring its denominator to a power of ten. Hence, any vulgar fractions whose denominator contains any prime factor other than 5 or 2 will always contain some element which is repeated to infinity, the process never ending. Thus $\frac{1}{3} = 0.3333$, etc. This is abbreviated as $\frac{1}{3}$, a dot being placed over the figure, and it is spoken of as 'point 3 recurring.' Sometimes a whole series repeats, e.g. $\frac{1}{7} = 0.142857$, and here a dot is placed over the first and last figures. Similarly, $\frac{1}{16} = 0.0625$. The theory of D. was first comprehensively stated by the Fr. mathematician Simon Stevin (*c.* 1548 *c.* 1620).

Decimation, Rom. military punishment, inflicting execution on every tenth man (chosen by lot) of a unit found guilty of a crime meriting death.

Děšín (*Ger. Tetschen*), (Czechoslovak *tn*) in the region of Ústí nad Labem (*q.v.*) near the Ger. border. It is a riv. port on the Labe (*see* ELBE) opposite Podmokly (*q.v.*), to which it is connected by bridge. Chemicals, textiles, and paper are manuf. Pop. 30,800.

Decius, Caius Messius Quintus Trajanus (AD 201-51), Rom. emperor, *b.* Budalia in Lower Pannonia. In 249 he was sent by Philip the Arabian (*see* PHILIPPUS, MARCUS JULIUS) to put down a rising of the Moesian army, but the soldiers proclaimed him emperor against his will and persuaded him to march on Italy. Near Verona they met Philip, who, after a fierce engagement, was killed. Throughout his short reign D. was in constant conflict with the Goths and barbarously persecuted the Christians. He was killed in battle against the Goths through the treachery of Gallus, who succeeded him as emperor.

Decius Mus, Publius: 1. Consul at Rome (340 BC) and commander of the Rom. army during the Lat. war. He was said to have been told in a nocturnal vision that the army of one side and the gen. of the other must perish and to have sacrificed his life next day in order to ensure a Rom. victory.

2. Son of the above, and 4 times consul. In order that the Rom. arms might triumph he *d.* with similar heroism at Sentinum, 295 BC.

Decize, Fr. *tn.* cap. of an arron., in the dept of Nièvre, on a rocky is. in the Loire, at the summit of which is an old castle. It has glass and iron works, and potteries. Pop. 4800.

Deck, term used in ship structure to indicate the floor or platform extending from side to side of the vessel. It is usually made by covering the D. beams with steel or planking. All D.s, particularly the upper or weather D., have a slight camber or slope towards the ship's side to afford strength and facilitate the dispersal of water. Three, 4 and even as many as 13 (the *Queen Elizabeth*) D.s are usual in modern ships, the protective D.s fitted exclusively to men-of-war being always heavily armoured.

THE DECKS OF THE 'QUEEN ELIZABETH'

Decker, Thomas, *see* DEKKER.

Declaration, in an action at law, before the Judicature Act, 1873, simplified procedure, was a formal written statement of the plaintiff's case which was more detailed than the short particulars of the nature of his claim disclosed in the writ of summons. The D. could be struck out if its terms varied from the tenor of the writ; a similar rule applies to its modern equivalent, the statement of claim.

Declaration, Statutory, declaration in the form: 'I (*name*) do solemnly and sincerely declare that (*subject matter of declaration*), and I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of the Statutory Declaration Act, 1835.' By the Act this replaced an oath or affidavit for most official or departmental matters, including the verification of documents. The oath of a witness in

a court of law is not affected by the Act, which specially excepts it.

Declaration of Human Rights, Universal,
see HUMAN RIGHTS.

Declaration of Independence (U.S.A.), adopted in Congress, 4 July 1776, meeting in Philadelphia. It marks the emergence of the U.S.A. as an independent nation, and reads as follows: 'THE UNANIMOUS DECLARATION OF THE THIRTEEN UNITED STATES OF AMERICA.'

When in the Course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the Powers of the earth the separate and equal station to which the Laws of Nature and of Nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation. We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness. That to secure these rights, Governments are instituted among Men, deriving their just powers from the consent of the governed. That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its foundation on such principles and organising its powers in such form, as to them shall seem most likely to effect their Safety and Happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and accordingly all experience hath shewn, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same Object, evinces a design to reduce them under absolute Despotism, it is their right, it is their duty, to throw off such Government, and to provide new Guards for their future security. Such has been the patient sufferance of these Colonies; and such is now the necessity which constrains them to alter their former Systems of Government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute Tyranny over these States. To prove this, let Facts be submitted to a candid world. He has refused his Assent to Laws, the most wholesome and necessary for the public good. He has forbidden his Governors to pass Laws of immediate and pressing importance, unless suspended in their operation till his Assent should be obtained; and when so suspended, he has utterly neglected to attend to them. He has refused to pass other Laws for the accommodation of large districts of people, unless those people would relinquish the right of Representation in the Legislature, a right inestimable to them and formidable to tyrants only.

He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their Public Records, for the sole purpose of fatiguing them into compliance with his measures.

He has dissolved Representative Houses repeatedly, for opposing with manly firmness his invasions on the rights of the people.

He has refused for a long time, after such dissolutions, to cause others to be elected; whereby the Legislative Powers, incapable of Annihilation, have returned to the People at large for their exercise; the State remaining in the mean time exposed to all the dangers of invasion from without, and convulsions within.

He has endeavoured to prevent the population of these States; for that purpose obstructing the Laws for Naturalization of Foreigners; refusing to pass others to encourage their migration hither, and raising the conditions of new Appropriations of Lands.

He has obstructed the Administration of Justice, by refusing his Assent to Laws for establishing Judiciary Powers.

He has made Judges dependent on his Will alone, for the tenure of their offices, and the amount and payment of their salaries.

He has erected a multitude of New Offices, and sent hither swarms of Officers to harass our People, and eat out their substance.

He has kept among us, in times of peace, Standing Armies without the Consent of our legislatures.

He has affected to render the Military independent of and superior to the Civil power.

He has combined with others to subject us to a jurisdiction foreign to our constitution, and unacknowledged by our laws; giving his Assent to their Acts of pretended Legislation:

For quartering large bodies of armed troops among us:

For protecting them, by a mock Trial, from Punishment for any Murders which they should commit on the Inhabitants of these States:

For cutting off our Trade with all parts of the world:

For imposing Taxes on us without our Consent:

For depriving us in many cases, of the benefits of Trial by Jury:

For transporting us beyond Seas to be tried for pretended offences:

For abolishing the free System of English Laws in a neighbouring Province, establishing therein an Arbitrary government, and enlarging its Boundaries so as to render it at once an example and fit instrument for introducing the same absolute rule into these Colonies:

For taking away our Charters, abolishing our most valuable Laws, and altering fundamentally the Forms of our Governments:

For suspending our own Legislatures, and declaring themselves invested with power to legislate for us in all cases whatsoever.

He has abdicated Government here, by

declaring us out of his Protection and waving War against us.

He has plundered our seas, ravaged our Coasts, burnt our towns, and destroyed the lives of our people.

He is at this time transporting large Armies of foreign Mercenaries to compleat the works of death, desolation and tyranny, already begun with circumstances of Cruelty and perfidy scarcely paralleled in the most barbarous ages, and totally unworthy the Head of a civilized nation.

He has constrained our fellow Citizens taken Captive on the high Seas to bear Arms against their Country, to become the executioners of their friends and Brethren, or to fall themselves by their Hands.

He has excited domestic insurrections amongst us, and has endeavoured to bring on the inhabitants of our frontiers, the merciless Indian Savages, whose known rule of warfare, is an undistinguished destruction of all ages, sexes and conditions.

In every stage of these Oppressions We have Petitioned for Redress in the most humble terms: Our repeated Petitions have been answered only by repeated injury. A Prince, whose character is thus marked by every act which may define a Tyrant, is unfit to be the ruler of a free People.

Nor have We been wanting in attentions to our British brethren. We have warned them from time to time of attempts by their legislature to extend an unwarrantable jurisdiction over us. We have reminded them of the circumstances of our emigration and settlement here. We have appealed to their native justice and magnanimity, and we have conjured them by the ties of our common kindred to disavow these usurpations, which would inevitably interrupt our connections and correspondence. They too have been deaf to the voice of justice and of consanguinity. We must, therefore, acquiesce in the necessity, which denounces our Separation, and hold them, as we hold the rest of mankind, Enemies in War, in Peace Friends.

We, therefore, the Representatives of the united States of America, in General Congress, Assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the Name, and by Authority of the good People of these Colonies, solemnly publish and declare, That these United Colonies are, and of Right ought to be Free and Independent States; that they are Absolved from all Allegiance to the British Crown, and that all political connection between them and the State of Great Britain, is and ought to be totally dissolved; and that as Free and Independent States, they have full Power to levy War, conclude Peace, contract Alliances, establish Commerce, and to do all other Acts and Things which Independent States may of right do. And for the support of this Declaration, with a firm reliance on the protection of divine Providence, we mutually pledge to each

other our Lives, our Fortunes and our sacred Honor.

JOHN HANCOCK

The D. is important not only in the internal hist. of the U.S.A., but has had a considerable effect upon the political theory of other states. It inspired the thinkers of the Fr. revolution and influenced political reformers in Europe and S. America during the 19th cent. to a considerable extent.

Declaration of London, document which has for its object the international regulation of the mutual rights and obligations of belligerents and neutrals in time of war between any 2 or more of the signatories thereto. It was drawn up by the International Naval Conference held in London in 1909, at which plenipotentiaries of the great powers met, primarily for the purpose of coming to some agreement as to the recognised rules of international law in regard to the estab. of an international prize court. It contains 71 articles, the most important being those relating to contraband (q.v.). In regard to blockade, the D. of L. repeats the Declaration of Paris (q.v.), and establishes that a blockade must not extend beyond the ports and coasts belonging to, or occupied by, the enemy, and also that it must be applied impartially to the ships of all nations. When the First World War broke out the D. of L. had not been ratified by Great Britain, but immediately afterwards it was adopted by Orders in Council, with certain modifications, chiefly referring to conditional contraband and the doctrine of continuous voyage (see BLOCKADE). As the war progressed the

D. was found to be extremely unsatisfactory and, after further modifications, was eventually dropped altogether by the Maritime Rights Order in Council of 7 July 1916. At the outbreak of the war the other belligerents followed much the same course as Great Britain, but gradually the D. was modified out of recognition, and before the end of the war it had ceased to be an instrument possessing binding force. See also CONTRABAND.

Declaration of Paris. The object of this D., which was adopted by the leading European powers at the Congress of Paris in 1856, was to assimilate the principles of the maritime law of the different signatories on an outbreak of war. The prin. articles declare: (1) Privateering is, and remains, abolished; (2) a neutral flag covers enemy goods, except contraband of war; (3) neutral goods, except contraband of war, are not liable to confiscation under a hostile flag; (4) blockades to be binding must be effective. The result of the fact that since 1856 every civilised state, except the U.S.A., Spain, Mexico, and Venezuela, has signed the declaration is that privateers can only be employed by the signatories during a war with one of the four outstanding states. On the outbreak of the Hispano-Amer. war of 1898, the gov. of the U.S.A. bound itself to observe the articles of the declaration during the war, while Spain agreed to become bound by articles (2) and (3), with a reiteration that the D. was not binding upon her. The U.S.A. also intimated at the outbreak of the Civil war that they would observe the D.

Declaration of Rights, see BILL OF RIGHTS.

Declarations of Deceased Persons. It is axiomatic in the Eng. law of evidence that hearsay is inadmissible as proof. The best evidence is the testimony of him who made the statement. But there are certain cases where it is impracticable to adhere to the rule, and among those excepted cases are the oral or written D. of D. P. Statements made by D. P. relevant to prove any fact in issue or any fact regarded as relevant to any fact in issue include the following: (1) A declaration or statement made by a person who can be shown to have been in actual danger of death, and to have given up all hope of recovery at the time of making the declaration. Such a declaration is only relevant in the trial for the murder or manslaughter of the declarant; and to be admissible the declaration must have had reference either to the cause of death or to the attendant circumstances thereof. (2) A declaration against the pecuniary or proprietary interest of the declarant. It must be shown that the deceased had no interest in misrepresenting the matter in question, that he made the statement at or very shortly after the time when the act occurred which is sought to be proved, and that he had peculiar means of knowing the matter stated. (3) Statements made by a person in the ordinary course of business or in the discharge of professional duty. (4) D. as to pedigree,

relating to the pedigree of some person of whom the declarant was a legitimate blood relation. If made after the commencement of the action they would be inadmissible in evidence. (5) In cases where a will has been lost, or there is a suggestion that a particular will was a forgery, or obtained by wrongful means, statements made by the testator concerning the contents of his will or the manner in which he intended to dispose of his property. (6) Statements relating to the existence of a public or general right, e.g. a right of way. For the purpose of perpetuating the testimony of a person whose death is apprehended, the criminal law allows his deposition to be taken down in writing and afterwards used in evidence on proof that the deponent is either dead or unlikely ever to be able to travel or give evidence.

Declarator. D.s or declaratory actions form one of the three classical divisions of Scottish legal actions. A declaratory action is one in which some right, personal or proprietary, which is actually infringed or threatened is sought to be declared in favour of the pursuer (Eng. plaintiff), but where nothing is sought to be paid or performed by the defender (Eng. defendant). Illustrations are D.s of marriage, of bastardy, and of irritancy (loss of feu rights by non-payment of feu-duty for 2 full years). D.s may be brought either in the Court of Session or in the sheriff courts, except that D.s of marriage or nullity and D.s relating to personal status may not be brought in the latter court.

Declension (Lat. *declentio*, a turning or leaning away, i.e. the form assumed by words as they fall away from the nominative). In grammar the term signifies the inflections or changes a word receives according to its meaning or relation to other words in a sentence. Eng. has no proper D.s, only traces of a dative and genitive, neither has it genders, except in pronouns of third person. Sanskrit has 8 cases, Lat. 6, and Gk 5. Lat. cases are nominative, vocative, accusative, genitive, dative, ablative. Gk has no ablative; Sanskrit adds locative. Instrumental case-endings are gradually being dropped, and prepositions used instead, as in Fr. and It. Agglutinating languages are usually prolific in cases: the Finnish has 15, the Magyar has 20.

Declination. The angle between the magnetic meridian (vertical plane through axis of a compass needle placed at any point) and the geographic meridian (vertical plane through that point and the poles of the earth) at any point is called the D. of that point. The fact that a compass needle does not point true N. was first observed by Columbus in 1492. In Great Britain the compass needle points W. of true N. At Abinger, the magnetic station connected with the Royal Greenwich Observatory, the D. (mean ann. value) in 1954 was 8° 50' W. This D. is not constant, but changes from year to year. This secular change was first noticed by Burroughs in 1580; for example, in that year the D. at London

was 11° E., in 1657 it was nil, while in 1816 it had attained a maximum westerly value of 24° 30'. Since that date it has been gradually diminishing again; 320 years are required, it is computed, to give a complete cycle of secular changes in the D. See ISOLINIC; AGONIC LINES; MAGNETISM; DIP.

Declination, in astronomy, the complementary term to right ascension (see ASCENSION, RIGHT). It is the distance of a heavenly body from the equator, and is measured on the arc of the great circle which passes through the body and the poles. It is N. or S.—frequently denoted by + and — respectively—according to the side of the celestial equator in which the body is situated.

Declination, Magnetic, or magnetic variation, is the angle between the magnetic meridian (q.v.) and the geographical meridian. See GEOMAGNETISM; MAGNETISM, *Terrestrial Magnetism*.

Decoction (Lat. *de*, down, and *coquere*, to cook, boil), term used in pharmacy for the process of forming a solution by boiling an organic drug in water. There are as a rule about 5 grains of drug to 100 cc. of D. The drug may sometimes be boiled in oil.

Decolic Acid, see CAPRIC ACID.

Decorated Style, see ENGLISH ARCHITECTURE.

Decoration Day, or **Memorial Day**, ann. holiday (30 May) appointed by all the N. and some of the S. states of America for the purpose of decorating the graves of, and commemorating, the soldiers who lost their lives in the civil war.

Decorations, see MEDALS; ORDERS OF KNIGHTHOOD.

Decorations for War Services. *First World War*. The total number of D. or honours conferred on members of Brit. and Indian forces for services in the field and for services in connection with the war between Aug. 1914 and the termination of hostilities was upwards of 450,000. This number was made up for the most part of D. for services in the field, those 'in connection with the war' being the official description in the case of awards in respect of services during air raids, coastal bombardments, etc., or services outside a recognised theatre of military operations. For these latter services some 13,000 D. were given. Included in the total were also 5407 awards by way of promotion. The following were the numbers of the various awards made: V.C., 579; V.C. (bars), 2; G.C.B., 14; G.C.M.G., 22; G.B.E. (military div.), 5; K.C.B., 158; K.C.M.G., 197; K.B.E. and D.B.E., 74; C.B., 1052; C.M.G., 2659; C.B.E. (military div.), 1095; D.S.O., 8991; D.S.O. (bars), 784 (one of these was given for bringing down a Zeppelin airship in England); O.B.E. (military div.), 2664; B.E.O. (civil div.), 902; Red Cross and bars, 5986 (of which about 1000 were for field services); M.C., 37,041; M.C. (bars), 3125; D.C.M., 24,571; D.C.M. (bars), 478; M.M., 115,429; M.M. (bars), 5965; M.S.M. and bars, 245,508; Medals, B.E.O., 424. The total number of officers and men who passed through the Brit. Army during the

war was approximately 6,000,000. In the S. African war, when the total number of troops in the field was 448,435, the number of D. or honours was 3714, made up as follows: V.C., 79; G.C.B., 3; K.C.B., 25; C.B., 292; G.C.M.G., 4; K.C.M.G., 8; C.M.G., 110; D.S.O., 1143; and D.C.M., 2050. In the First World War the promotions for services in the field included 4 promotions to field marshal's rank, viz. Lord Haig, Lord Allenby, Lord Plumer, and Sir Wm Robertson, and, for services outside a theatre of war, 1 such promotion, viz. that of Sir Henry Wilson.

Second World War. The following is a detailed list of major wartime awards to officers and men of the R.N., R.N.R., R.N.V.R., Royal Marines, and Dominion navies: V.C., 24 (officers, 18; men, 6); G.C., 31 (officers, 26; men, 5); D.S.O., 686; D.S.O. (bars), first bar, 110; second bar, 24; third bar, 3; D.S.C., 4529; D.S.C. (bars), first bar, 425; second bar, 14; third bar, 1; Albert Medal, 35 (officers, 16—1 in gold; men, 19—2 in gold); C.G.M., 70; D.S.M., 6998; D.S.M. (bars), first bar, 152; second bar, 4; third bar, 1; G.M., 136 (officers, 85; men, 51); G.M. (bars), first bar, 16 (officers, 14; men, 2); B.E.M., 2688; B.E.M. (bars), 3; G.C.B., 10; K.C.B., 57; C.B., 159; G.B.E., 6; K.B.E., 59; D.B.E., 2; C.B.E., 362; O.B.E., 970; M.B.E., 1128. The following honours and awards went to personnel of the merchant navy and fishing fleet: G.C., 5; Empire Gallantry Medal (now replaced by G.C.), 1; knighthood, 10; C.B.E., 50; O.B.E., 1077; M.B.E., 1291; D.S.O., 18; D.S.C., 213; Albert Medal, 11; G.M., 49; D.S.M., 421; Sea Gallantry Medal, 530; M.M., 16,900; D.C.M., 1850; D.C.M. (bars), 10; B.E.M., 1717; Mention in Dispatches, 994; Commendations, 2568. Promotion, admiral of the fleet: Sir Charles Forbes, Viscount Cunningham of Hyndhope, Lord Tovey, Sir James Somerville, Sir John H. D. Cunningham, and Lord Fraser of N. Cape. Up to the end of 1945 the army awards (excluding campaign stars, defence and general war medals) were 51,800. The number of V.C.s was 181 (including 1 bar); D.S.O., 4462; D.S.O. (bars), 557; M.C., 10,386; M.C. (bars), 480. The highest number of officers and men serving in the army at any time during the last war was 2,931,000 (plus 223,000 women). This means that a total of over 4,000,000 passed through the army. The home guard at one period numbered 1,700,000. Many of these were during some of their time in the army. The total who served in the army and home guard at one time or another was over 5,000,000. The army's entitlement to campaign stars, defence medals, and war medals was over 10,000,000. Promotion to field marshal: Lord Ironside, Earl Wavell, Viscount Alanbrooke, Viscount Alexander of Tunis, Viscount Montgomery, Lord Wilson, and Sir Claude Auchinleck. The following awards were made to air force personnel, including dominion and colonial, up to the end of 1945: V.C., 27 (3 subsequently to 1945, making a total of 30); G.C., 19; G.M., 151; B.E.M., 1192; D.S.O., 1078; D.S.O. (bars), 92; C.G.M., 113; D.F.C.,

18,889; D.F.C. (bars), 1560; D.F.M., 6363; D.F.M. (bars), 57; M.C., 61; M.M., 118; A.F.C., 1709; A.F.C. (bars), 28; A.F.M., 244. The following honours were awarded: G.C.B., 9; K.C.B., 29; C.B., 195; G.B.E., 4; K.B.E., 41; D.B.E., 3; C.B.E., 452; O.B.E., 1155; M.B.E., 1695; R.R.C., 24; R.R.C. (bars), 2; associate R.R.C., 111; mentions, 37,283; commendations, 908. Promotion to marshal of the R.A.F.: Lord Nevill, Viscount Portal of Hungerford, Lord Tedder, Lord Douglas of Kirtleside, and Sir Arthur T. Harris.

Decort, Frans (1834-78). Flem. lyrical poet, b. Antwerp. He pub. the well-known Flem. almanac, *Jan en Alleman*, and trans. some of Burns's poems into his own tongue. His prin. works are *Leideren*, 1857, 1868, and *Zingzang*, 1866.

Decoy. This word has had a complicated hist. It appears in Eng. first as coy and coyduck, from the Dutch *kooi*, which is ultimately connected with Lat. *cavea*, a cave or hollow. The *de* at the beginning of the word is considered by some authorities a corruption of duck-coy, by others the Dutch article *de*, and by others a corruption of the Dutch *eende-kooi*—*eende* being the Dutch for duck. The word was also used in a particular sense to denote a swindler, and also as the name of a game of cards, as early as 1550. A *D.* is therefore an enclosure for catching ducks or other wild fowl, bringing them within range of a gun, hence any trap or enticement into a place of danger. *D.s.* are, as a rule, made on the following plan: Long tunnels lead from the sea, channel, or estuary into a pond or pool; these are covered with an arched net which gradually narrows in width. The ducks are enticed into this by a tame trained bird also known as a *D.*, or *D. duck*. Trained dogs are also used. Once the ducks are along the narrow end of the channels or pipes they are easily caught. In America, and sometimes in England, artificial *D.s.* are used. These are generally made of wood. The *D.* is placed on the water as if it were feeding. This attracts the other wild fowl within range of the concealed sportsmen. Many books have been written on the art of decoying ducks and wild fowl, the best being Sir R. W. Payne Gallwey's entitled *The Book of Duck Decoys*, 1886.

Decree, term formerly given to any adjudication by a court of equity in contradistinction to a judgment in a common law (q.v.) court. The plaintiff formulated a written statement of his case in a long technical document called a bill, and the defendant put in a written answer on oath. The *D.* which was pronounced upon the bill and answer was framed so as to meet all the exigencies of the case. Since the Judicature Act, 1875 (*see also* *Equity*), an adjudication by a judge of the chancery div. upon an action begun by originating summons is generally called a judgment, and an order made in a motion, petition, or *ex parte* application is referred to simply as an order. The term *D.* has now become more or less restricted to adjudications in administration, partnership, and foreclosure actions in the

chancery courts. The term *D.* has also a well-known meaning in connection with interim and final orders in the divorce court, a *D. nisi* being the judicial pronouncement of a divorce or judicial separation to take final effect 6 weeks later as a *D. absolute*, if the Queen's Proctor does not intervene. A similar distinction applies to a mortgagee's foreclosure action, the *D. nisi* being made absolute where the mortgagor does not redeem within the time allowed him by the court. The *D.s.* of the pope, which are called decretals, may be defined as decisions of the popes in matters of eccles. law. The *D.s.* of the pope retained their authority as law till the 14th cent., when the power of the holy see began to decline. From the 5th cent. the decretals of the popes have been collected, and there are sev. collections of them. *See also* CANON LAW; COMMON LAW; ISIDORIAN DECRETALS.

Decrescent, or Decrement, term applied in heraldry to the waning moon, i.e. its horns turned to the sinister (q.v.).

Decretals, laws added to the canon law of the Church of Rome, consisting of judicial replies by the popes to cases submitted to them for adjudication. *See also* ISIDORIAN DECRETALS.

Decretals, False, *see* ISIDORIAN DECRETALS.

Decroly, Ovide (1871-1919), Belgian doctor and teacher. In 1910 he opened a school for backward and abnormal children in Brussels, and used the experience he gained in a school for normal children in 1907. He agreed with the assertion of Dewey, the Amer. educationist, that 'education is not a preparation for life; it is life,' and modelled his teaching on a system of 'centres of interest' (*méthode globale*). The system avoids the subdivision of a scheme, with scattered headings, and substitutes groups of ideas as a foundation for lessons over a given period. These groups, previously linked, represent an uninterrupted sequence of themes, which awaken the interest and invite the co-operation of the child. *D.'s* experiences and conclusions are similar to those of Dr Maria Montessori (q.v.). *See* Amélie Hamal de (trans. Jean K. Hunt), *The Decroly Class*, 1925.

Dedeagach, *see* ALEXANDROUPOLIS.

Dedham: 1. Tn of Essex, England, on the Stour, in the midst of the Constable country, and notable for the vale of *D.*, subject of that painter's art. Once the centre of the Flemish cloth trade. Pop. 1690.

2. Co. seat of Norfolk co., Massachusetts, U.S.A., situated on the Charles R., 10 m. SW. of Boston. Fisher Ames was b. here. The prin. manufs. are envelopes, paper goods, and lightning rods; there is a printing industry. Fairbanks House (built 1636) is considered the oldest frame house in the U.S.A. Pop. 18,500.

Dedication, *see* CONSECRATION.

De Donis Conditionalibus (concerning conditional grants) Statute. This statute, passed in 1285, was intended to prevent the heirs to entailed estates from selling

or otherwise disposing of their landed estates as soon as heritable issue was *b.* to them. This they were enabled to do in spite of the intention of the grantor to tie the estate up in a strict line of descent, by reason of the judicial construction of a grant by A to 'B and the heirs of his body' as a grant of the fee simple (i.e. entire disposable estate) conditionally upon the birth of issue. The result of this interpretation was that the tenant-entail could not only bar his issue and the grantor's right to the reversion on failure of issue, but could evade his feudal services. The D. D. enacted that the will of the grantor should be observed, but failed in its purpose as soon as recourse was had to the practice of barring the entail by fines and recoveries (see COLLUSIVE ACTIONS).

Deduction, in logic, see LOGIC.

Dee, John (1527-1608), mathematician and astrologer, *b.* London, educ. at Cambridge and Louvain. Edward VI appointed him to a living and gave him a pension; consequently in Mary's reign he was persecuted and narrowly escaped with his life. Things changed, and under Elizabeth he obtained office as intellenger. For 9 years he was warden of Manchester College. During the queen's illness he was summoned for joint consultation on her recovery with the Ger. physicians. He was commanded to draw up a geographical chart of crown lands discovered by Englishmen. This is now in the Brit. Museum.

Dee: 1. Riv., 70 m. long, in N. Wales and Cheshire, rises in Merioneth, and flows into the Irish Sea by way of a wide estuary. The dangerous rapidity with which the tide rises in this neighbourhood is told of by Kingsley in his *Sands of Dee*. From Chester to the estuary there is a tidal canal 6 m. long.

2. Scottish riv. rising in the Cairngorm Mts (q.v.) from a spring on the Braemar plateau at 4000 ft. and flowing through Braemar, Ballater, Aboyne, and Kincardine (O'Neil, entering the sea at Aberdeen. Near Braemar it bursts through a rock gut called the Linn of D.). Balmoral Castle is on its banks. The salmon fisheries are valuable.

Deed (Lat. *factum*; Norman-Fr. *fact*), instrument in writing or print, upon paper or parchment, duly sealed and delivered, which operates either to pass an interest in property or to confirm a pre-existing contract by which such an interest passes, or to bind a person thereafter to do, or abstain from doing, something. D.s are of 2 kinds, indented and poll. The term indenture implies that the D. is in 2 parts or similar copies, and that the 2 parts were cut in a serrated or irregular line so that when placed together subsequently their physical correspondence would evidence the authenticity of each copy. A D. poll is cut even at the edges, and usually contains but 1 part, being the D. of 1 person or party only. The modern mode of executing a D. is by signing, sealing, and delivering. The manner of delivering a D. is for the executing party to say 'I deliver

this as my act and deed.' Sealing and delivery are essential to the validity of a D., but signing only if expressly made so. A D. which is delivered to a third person, not a party to it, to be given up to the parties involved on the fulfilment of a condition, is termed an *escrow*. The requisites of a valid D. in the U.S.A. are practically the same as in the case of any other contract, but the appointment of an attorney to execute a D. for another must as a rule be executed with the same formalities requisite to the D. itself. Seals, or whatever equivalent may be used therefor, are required in Alaska, Connecticut, Florida, Illinois, Maine, Massachusetts, Missouri, New Hampshire, New Jersey, New York, Pennsylvania, Virginia, and other states. In nearly all the states D.s by corporations must be under seal.

Deemster, title of the 2 chief judges in the Isle of Man, whose duty it is to pronounce doom or sentence. In Scotland it was formerly the title of an inferior official attached to the high court of justiciary, who was also executioner, and who had to recite the recorded judgment.

Deep-sea Deposits, see OCEAN.

Deep-sea Exploration, see ABYSSAL FAUNA; CHALLENGER EXPEDITION; DEPOSITION; DISCOVERY COMMITTEE.

Deep Sea Fisheries, see FISHERIES.

Deeping, George Warwick (1877-1950), novelist, *b.* Southend. Educ. at Merchant Taylors' and Cambridge, he studied medicine and for a time practised as a doctor. His earliest books were historical romances. After the first World War, in which he served with the R.A.M.C., he wrote his best-known novel, *Sorrell and Son*, 1925, which was followed by *Old Pylbus*, 1928; *Roper's Race*, 1929; *Exiles*, 1930; *Seven Men Came Back*, 1934; *Shabby Summer*, 1939; *Corn in Egypt*, 1941; and *Laughing House*, 1947.

Deer, or Cervidae, form a large family in the group Pecora of the Artiodactyla, in which are also classed the giraffes, oxen, antelopes, sheep, and goats. The characteristic which distinguishes the D. from all other ruminants is the presence of antlers in the males; in the reindeer only they are common to both sexes, and in the genera *Moschus* and *Hydropotes* they are lacking. These antlers are deciduous, falling every year in the rutting season, and consist of bony processes of the frontal bone, covered while growing with a sensitive, vascular, velvety skin. The D. are known fossilised from the Miocene, and there are about 60 living species which inhabit Europe, Asia, and America. *Moschus*, the musk-D., is an aberrant Asiatic genus, remarkable for the presence of a gall bladder as well as the absence of antlers; *Cervus* contains well-known species, such as the wapiti, red D., and the extinct Irish elk. The roe D., or roebuck (*Capreolus capreolus*), is the smallest of the 3 wild D. of Great Britain, to be found in the woods almost all over Scotland, New Forest, and the Lake Dist. That is to say, the roe have managed to hold on to existence over vast areas of country in which their larger cousins, the

red D. and the fallow D., were very nearly wiped out. *Rangifer*, the reindeer, and *Alces*, the elk, or moose, are circumpolar; *Muntiacus*, the muntjac, is indigenous to Asia; *Hydropotes*, the water-D., is a Chinese genus.

Kinds of Deer.—There are various kinds of D., such as the wapiti or Amer. D., the lambu D. of India, the Himalaya D., and the red D., which is the kind generally hunted in the Brit. Isles. Other species of D. in Great Britain are the fallow D. and the roe D. The red D. is of a reddish-brown colour, while from the tail underneath the body the colour becomes lighter. The red D. has ever been known by his horns, which differ materially from those of all other kinds of D. The horns consist of a beam from which points or processes project, a 12-pointer being known as a 'royal' stag. The number of these points determines the age. The yearling D. has no horns, but at 2 years old a short spire is thrown out. The age of the D. can also be deduced from the impression of its foot in the ground. If the impression measures full 2 in. at the heel he is 'warrantable,' if more he is large, heavy, and old; and if less, he is too young. The tread of a hind is much narrower than that of the male, particularly at the toe, while the hart's is broad and round at the point. The mark of a D.'s tread is called his slot; his haunt is termed his lair; where he lies down, his harbour or bed; where he rolls himself, his soiling pool; and his breaking place over a hedge, his rack. When he goes to water it is termed going to soil; if he is headed back he is blanched; and if he stops in a riv. or lies down in a pool during the chase it is called sinking himself. Stags engage in ferocious single combat for predominance in a herd.

Deer-stalking.—Method used in approaching D. without being observed by the animal. To stalk is to approach unawares. In England this method of stalking the D. in order to shoot it is rarely adopted, but in Scotland it is generally in vogue. D.-hunting in England is chiefly confined to the W., in the cos. of Devon and Somerset, and also in the New Forest. In N. America the method of stalking is largely used.

History.—The chase of the stag was considered one of the most princely and royal sports, and has existed from time immemorial; but whether it was conducted on its present lines until Queen Elizabeth's reign is doubtful. Historical records prove conclusively that there was kennelled at Simonsbath in this reign a pack of stag-hounds which hunted the D. on a similar system to that now in vogue. The method of stalking was not introduced until years later.

Methods of Hunting.—(1) By driving. (2) By stalking. Where the country was partially covered with wood, the forests were 'driven,' and the sportsmen occupied passes where they took their chance of sport, and this method is resorted to generally in the forest of Glengarry (Scotland) and in other places. But generally speaking the system has given

way to the more exciting amusement of stalking. D., like other animals, seem to foresee change of weather. At the approach of a storm they leave the higher hills and descend to the low grounds, generally 1 or 2 days before the change. On the approach of a thaw they leave the low lands and go to the mts. They never perish in snowdrifts, as sheep do, but keep to the bare ground and feed on the tops of heather. When herds of D. are driven they follow each other in a line, so that when they cross the stalker it is customary for him to lie quiet and suffer the leaders to pass before he raises his rifle. If he were to fire at the first that appeared, he would probably turn the whole of them back. Or if he were to run forward injudiciously after a few had passed, the remainder, instead of following the others in a direct line, would not cross him except under particular circumstances and disposition of ground, but would bear off and join the others afterwards. When D. are hard pressed by a dog, they run in a compact mass, the tall ones endeavouring to wedge themselves into it. They will also run in this manner when pressed by drivers on the open moor. D., except in embarrassed situations, always run up wind, and this instinct is strongly implanted in them. Thus they go forward over hill-tops and unexplored ground in perfect security, for they can smell the taint in the air at an almost incredible distance. On this account they are fond of lying in open quarries where the swells of the wind come occasionally from all quarters. By clever arrangement on the part of the stalkers, and by employing men in concealed positions to give them their wind, the D. may be driven down wind, and in certain cases they may easily be sent by a side wind to that side of the forest which they consider as their sanctuary. In large forests the method of stalking with the assistance of hillmen is generally adopted. These are placed at long intervals and help to drive the D., if possible, against the wind. This method, however, cannot be adopted in small forests, as too frequent a disturbance would make the D. forsake the ground. Trained dogs are used to chase the D. after he has been wounded.

Weapons.—The destruction of the woods, the substitution of the gun for the bow and arrow, formed quite an epoch in the habits and size of the D., as well as in the mode of killing. The bow had one advantage over the gun, viz. that of being noiseless, so that a stalker well concealed might repeat shots without giving much alarm. In Sutherland firearms were unknown until about the latter end of the 16th cent., when a large kind of blunderbuss, named by the people *glasnabhean*, was introduced. These, however, did not supplant the bow and arrow until after the middle of the 17th cent. Spears were also formerly used, chiefly for killing wounded D. See Charles IX. of France, *La Chasse royale*, 1858; A. G. Cameron, *Wild Red Deer of Scotland*, 1923; H. Fraser, *Amid the High Hills*, 1923; and Lord Latymer,

Deer: *Stalking in Scotland and New Zealand*, 1935.

Deer, Old, par. and vil. in Aberdeenshire, Scotland, 9 m. from Peterhead. The ruins exist of St Drostan's Abbey of D., which was founded in 1218-19. Near here Robert Bruce defeated the Comyns. Area 27,363 ac.; pop. 4000.

Deerfield, tn. of Franklin co., Massachusetts, U.S.A., on the D. R., 16 m. N. of Northampton; much visited by tourists, it comprises sev. vills., many of the houses dating from the 18th cent. There is a collection of colonial and Indian relics. For many years D. was the frontier post of New England on the NW. It was repeatedly taken by the Indians. On 29 Feb. 1704 300 Indians carried off John Williams, minister of the gospel in D., and 100 of his neighbours, to Montreal, murdering 19 by the way, and burning D. before starting. D. academy for boys is here. Pop. 3086.

Deerhound, dog resembling the greyhound in general appearance, from which it probably sprang. D.s are used particularly in deer-stalking, and are very quick runners with a keen scent. The chief points are as follows: head long and tapering, broadest at the ears, with a flat skull and a black nose (though the nose may be blue in the blue-fawn variety); ears small, soft, and silky, set on high and folded back, and in colour dark, preferably black; neck long, with a good mane, with sloping shoulders and a prominent nape; stern long and tapering, well covered with hair; chest deep and broad; loins well arched and drooping towards the tail, with a great breadth across the hips; legs broad and flat; forelegs straight with arched toes. The height varies from 28 to 30 in., the females being as small as 26 in.; weight from 80 to 105 lb., females from 70 to 80 lb.

Deerhurst, vil. and par. of Gloucestershire, England, 4½ m. from Tewkesbury. St Mary's church belonged to a Saxon monastery, and much Saxon work is incorporated in the fabric. Nearby, attached to a half-timbered house, is the so-called Odda's chapel, dating from 1056. Pop. 617.

Defamation is a statement pub. about a person which exposes him to hatred, ridicule, and contempt, and lowers him in the estimation of right thinking members of society generally. Defamatory statements are either libels or slanders, the distinctions being: (1) a libel is written or in some permanent form, a slander is D. by spoken words or in some transitory form, such as gestures (the broadcast of words by wireless is, however, statutorily defined as libel); (2) the pub. of a libel is presumed to have caused damage, but, with the exceptions mentioned below, a slander must be proved to have caused *actual* damage. Slanders which are actionable, without proof of *actual* damage, include (a) words calculated to disparage a person in any office, profession, calling, trade, or business held or carried on by him at the time of pub., whether or not spoken of him in connection with his office, etc.; (b) words imputing the commission of

a criminal offence punishable by imprisonment; (c) words imputing certain contagious diseases (e.g. venereal disease); (d) words imputing adultery or unchastity in a woman or young girl. With certain exceptions, defamatory statements are actionable whether or not pub. without intent to defame. A defamatory statement to be actionable civilly must be 'published' in law (i.e. communicated to a third person). A libel which is likely to cause a breach of the peace can form the subject of a criminal prosecution as well as a civil action for damages. A defamatory statement to be actionable must be capable of being understood to refer to the plaintiff.

Defences in actions for D. include: (1) justification (i.e. the defamatory statement is substantially true); (2) the words are fair comment made without malice on a matter of public interest; (3) the words complained of are privileged (*see below* and PRIVILEGE); (4) the express or implied assent of the plaintiff to the defamatory statement; (5) accord and satisfaction (i.e. the plaintiff has previously accepted an apology and/or compensation in full satisfaction); (6) the defamer, having pub. the words innocently without intending to refer to the plaintiff, has, at the earliest possible moment, 'tendered an offer of amends' under section 4 of the Defamation Act, 1952 (*see below*).

Certain statements, even if pub. maliciously or spitefully, are absolutely privileged from claims for D. These include statements made by judges, counsel, or parties in judicial proceedings; statements made by one officer of state to another in course of official duties; statements made in Parl. proceedings; reports and papers issued by order of Parliament; fair and accurate contemporaneous broadcast or newspaper reports of judicial proceedings in the U.K. The following are entitled to 'qualified privilege' (i.e. the privilege is lost if the statements were made with malice): (1) communications on matters between persons having a legitimate common interest therein; (2) fair and accurate reports of Parl. proceedings; (3) fair and accurate reports of judicial proceedings not made contemporaneously; (4) extracts from registers kept pursuant to Act of Parliament and which the public are entitled to inspect; (5) extracts from papers pub. by order of Parliament; (6) fair and accurate newspaper reports of the decisions and proceedings of certain bodies specified in the Defamation Act, 1952. Irrespective of any defamatory content, a newspaper is not obliged to publish an explanation or correction of fair and accurate reports of, *inter alia*, proceedings of any dominion or colonial legislature or court, or any notice or advertisement pub. by the authority of any court within the U.K. Certain classes of reports lose their privilege if a request to publish a reasonable explanatory or contradictory statement is refused or not adequately complied with. Examples of such reports include fair and accurate reports of the decisions of certain

professional bodies and trade associations and of the proceedings of public meetings, the meetings of local authorities, tribunals set up by statute, and of the general meetings of public companies.

The Defamation Act, 1952, to some extent protects the 'unintentional' publication of defamatory statements. At common law, if a person publishes words which are not apparently defamatory, and not intended to refer to any particular person, he is nevertheless liable in damages to anyone who can prove that his circumstances are such that those who know him understood the words to refer to him in a defamatory sense. Moreover, a person who can be identified with a fictitious character in a novel to whom defamatory references are made can sue for damages for D. Under the Defamation Act, 1952, however, a person who publishes a defamatory statement in such circumstances may make an offer of amends expressed to be for the purposes of section 4 of the Act. This is an offer to publish a suitable correction and apology and to withdraw or attempt to procure from circulation any copies of the offending statement. The offer must be accompanied by an affidavit specifying the facts relied upon to show that the words were published innocently about the person aggrieved. A person whose offer is accepted and performed cannot then be sued for D. If the offer is made promptly and is not withdrawn, the defamer will have a good defence to proceedings for D. In cases not covered by the Act, an apology is no defence but may mitigate damages. See O. S. Hickson and P. F. Carter-Ruck, *Law of Libel and Slander*, 1953; J. C. C. Gatlley, *On Libel and Slander*, 4th ed., 1953.

Default, failure to perform some legal or quasi-legal duty. For example a defaulting trustee is one who makes a wrong use of money entrusted to him or who fails to render an account of same.

Defeasance, in law, is either a condition relating to a deed, which on fulfilment defeats the force or operation of the deed and renders it void, or is itself a collateral deed made synchronously with a deed of conveyance, containing conditions on the performance of which the estate created by the conveyance may be defeated. D.s of freehold estates must be by collateral deed. D.s may also be of terms of years, executory interests, bonds, and recognisances. D.s as to title are now never used in practice, the necessary conditions always being inserted in the body of the deed.

Defence, Civil, see CIVIL DEFENCE.

Defence, Ministry of. The creation in Britain of a Minister of Defence 'responsible to Parliament for certain subjects affecting the 3 services and their supply' was announced in a White Paper issued on 5 Oct. 1946. Although it was recognised that the Prime Minister must retain the supreme responsibility for defence, the appointment of a Minister of Defence other than the Prime Minister to be in charge of the formulation and general application of a unified policy relating to

the Armed Forces of the Crown as a whole and their requirements was to be expected as a by-product of war experience. The Minister is responsible for the apportionment, in broad outline, of available resources between the 3 services, and the settlement of questions of general administration on which a common policy for the 3 services is desirable. The Prime Minister remains Chairman of the Defence Committee. The Chairman, Chiefs of Staff Committee, jointly with the three Chiefs of Staff, is the professional military adviser of the Minister of Defence, the Defence Committee, and the Cabinet. The Joint War Production Committee, under a permanent official chairman, assists the Minister of Defence in the correlation of production programmes of the services. In connection with his function of framing a general policy to govern research and development, the Minister of Defence is assisted by the Defence Research Policy Committee, its Chairman being the Scientific Adviser to the Minister of Defence. Since the Ministry of Defence was set up on 1 Jan. 1947, the Minister has assumed responsibilities arising from the United Kingdom participation in international defence organisations, e.g. under the Brussels Treaty Organisation, the North Atlantic Treaty Organisation, Western European Union, and the South East Asia Collective Defence Organisation.

Defence Committee, presided over by Prime Minister, consists of ministers, amongst whom are those of Defence, of Supply, and of Labour, the Chancellor of the Exchequer, First Lord of the Admiralty, and the secretaries of state for War and Air, who debate the problems of defence. It is advised by a sub-committee consisting of the joint services chiefs-of-staff. See also COMMITTEE OF IMPERIAL DEFENCE.

Defence Medal, decoration of the Second World War, granted for 3 years' service with forces in non-operational areas subjected to air attack or closely threatened: for 1 year's non-operational service with the forces overseas from or outside the country of residence; for 3 years' civil defence or other specified civilian service in military operational areas and for civil defence service in non-operational areas subjected to air attack or closely threatened. The time qualification in the case of mine and bomb disposal units of the forces was 3 months. The centre of the ribbon is flame-coloured and the edges are green, symbols of the enemy attacks on our green and pleasant land. Two black stripes represent the black-out. Those qualified for any one of the campaign stars could be granted this award in addition. Members of civilian services in the U.K. eligible for war chevrons for war service in the U.K. were entitled to the medal, as also were civil defence workers in Gibraltar and Malta, etc. The medal was granted without regard to the period of service to those who might have received an award or commendation for brave conduct or commendation for valuable service in the air, provided that the recipient, when the

commendation was earned, was serving in a category eligible for the medal.

Defence Mobilisation, Office of, created by President Truman, in executive order of Dec. 1950. First director: Charles Edward Wilson. Essentially a policy-making organisation, its aim was to co-ordinate all mobilisation activities of the executive branch of the U.S. Gov. Production, procurement, stabilisation, manpower, and transport came under its jurisdiction. The Defence Production Administration and the Economic Stabilisation Agency were the chief agencies given power to carry out O.D.M. policies. After the resignation of Mr Wilson in 1952, John H. Steelman served as acting director until the appointment of Henry H. Fowler in Sept. as director. Under President Eisenhower, in 1953, the O. of D. M. was merged with the Defence Production Administration and Arthur S. Flemming became head of the organisation.

Defence of the Realm Act, the name applied to a series of legislative measures enacted at different periods of the First World War by the British Gov. The Act was familiarly known as DORA, this name being derived from the initial letters of Defence of Realm Act. The first of the series, known as the Defence of the Realm Consolidated Act, 1914, was passed on 27 Nov. 1914. It authorised the trial by courts-martial, or in the case of minor offences by courts of summary jurisdiction, and punishment of persons committing offences against such regulations as might be made during the war for securing the public safety and defence of the realm by the king in council. Particular attention was directed to offences against the regulations designed (a) to prevent persons communicating with the enemy or obtaining information for that purpose or any purpose calculated to jeopardise the success of the operations of any of his majesty's forces or the forces of his allies or to assist the enemy; or (b) to secure the safety of his majesty's forces and ships and the safety of any means of communication and of railways, ports, and harbours; or (c) to prevent the spread of false reports or reports likely to cause disaffections to his majesty or to interfere with the success of his majesty's forces by land or sea or to prejudice his majesty's relations with foreign powers. The Act also made it lawful for the Admiralty or Army Council to take over (a) the whole or any part of the output of any factory or workshop engaged in the manufacture of arms, ammunitions, or warlike stores; (b) such factories, workshops entirely. In May 1915 the Act gave wide powers to the State over the supply and sale of intoxicating liquors in certain areas. Though highly unpopular, the regulations under this type of legislation were revived just before the outbreak of the Second World War, 1939—both Houses of Parliament simultaneously, on 24 Aug., passing the Emergency Powers Act, conferring wide powers on the gov. in time of emergency, including power to conscript men up to 40 years of age, and to take over industrial establs., etc.

Defender of the Faith, see FIDEL DEFENSOR.

Deferent, see PTOLEMAIC SYSTEM.

Deferred Pay was a deduction from the pay of a soldier of the Brit. Army whilst serving, which was paid to him in a lump sum when he finally left the service. It was abolished in 1898.

Deffand, Marie de Vichy-Chamrond, Marquise du (1697–1780), one of the most brilliant Fr. letter-writers of the 18th cent. In 1718 she married the Marquis du D., from whom she soon afterwards separated. Her *salon* in the rue St Dominique was frequented by the most celebrated literary men of the day, and she made herself a conspicuous and notorious figure in Parisian society. In 1753 she became blind. From 1766 she corresponded with Horace Walpole. Most of her correspondence has been pub.

Deficiency Advances, see PUBLIC DEBT.
De Filippi, Cav. Filippi (1869–1938), It. surgeon and explorer, b. at Turin, and educ. at the medical school of Turin Univ. He held posts in surgery at the univs. of Bologna and Genoa. Always a keen Alpine climber, he took part in the duke of Abruzzi's Alaskan expedition, ascending Mt St Elias; and also in the expedition to the W. Himalaya, and Baltoro Glacier in Karakoram. Under the auspices of the It. and Indian Govs. he led a scientific expedition to Karakoram, 1913–14. He pub. works on all these expeditions: *The Ascent of Mount St. Elias*, 1900; *Tuvenzori*, 1909; *Karakoram*, 1912; *Himalaya, Caracorum e Turkestan Cirese*, 1924; works on surgery and chem.; and *Italy's Protection of Art Treasures and Monuments during the War*, 1918; *The Relations of the House of Savoy with the Court of England*, 1920.

Defoe, Daniel (c. 1660–1731), journalist, novelist, and pamphleteer, b. London, son of a butcher, James Foe. About 1703 Daniel changed his name to the more aristocratic De Foe. At a dissenting academy he received a good education, and for a brief space was ambitious to become a dissenting minister, but the idea was renounced, and about 1680 he entered the hosiery business. It is known that he travelled in France and Spain, volunteered in King William's army in 1688, and made other unsuccessful attempts to embark on a business career, but about 1700 he definitely settled down in London to earn a livelihood by journalistic and vigorous pamphleteering. His rough but lively satire of 1701, entitled *The True-born Englishman*, was a spirited apology for the king's Dutch nationality, based on the folly of any people claiming purity of blood, and in particular the Eng., who are, as D. points out, a most composite race. But it was his *Shortest Way with the Dissenters*, 1702, which first made him notorious throughout the country for the House of Commons ordered the book to be burned; and the following description of him was advertised to ensure his speedy apprehension: He is 'a middle-sized, spare man, about 40 years old, of a brown complexion, and dark brown-coloured hair, but wears a wig;

a hooked nose, a sharp chin, grey eyes, and a large mole near his mouth.' This famous treatise was alleged to be written by a 'high-flying' churchman, who advocated a second Bartholomew's Day as the only effective means of getting rid of the obnoxious nonconformists. The fact that the Church party at first accepted the remedy as a serious proposal naturally aggravated their indignation when it became known that the whole pamphlet was a monstrous satire on their violent intolerance. However, the 'unabashed Defoe' found the ordeal of thrice standing in the pillory fairly pleasant, as the entire populace was on his side. His release from Newgate, where he was confined, was due to Harley's intercession with the queen in 1704. The manly dignity of his poem, *A Hymn to the Pillory*, 1703, reveals D.'s character in its most favourable light. In 1704 appeared the first number of his periodical, the *Review*, which was issued 3 times a week, and which

DANIEL DEFOE

After the engraving by M. Vandergucht.

has seldom been surpassed for its combined qualities of diversity of matter, excellence of style, and rapidity of production. Over 5000 printed pages in all were compiled by D. himself for this periodical alone. Passing over his fine denunciation of indiscriminate charity, 1704, and his elaborate *History of the Union of Great Britain*, 1709, we come to his masterpiece, the immortal *Life and Strange Surprising Adventures of Robinson Crusoe*, of York, Mariner, 1719. This work of fiction was based on the 4 years' solitary residence on the is. of Juan Fernandez of Alexander Selkirk, with whom there is a tradition that D. became personally acquainted on his return. It is safe to say that no other writer of 58 has ever produced a work comparable to *Robinson Crusoe* for the apparent artlessness of its unadorned yet intensely dramatic and arresting style, or for the irresistible reality of its atmosphere, which is, after all, one of pure romance. In the same year he pub. a sequel, *The Farther Adventures of Robinson Crusoe*, but perhaps only one in twenty thousand

who has read the first has read the second—for indeed the genius that makes Part I immortal is no longer there. D. wrote a third part in 1720, *Serious Reflections during the Life and Surprising Adventures of Robinson Crusoe*, but it is quite unreadable.

In a short article it is impossible to mention one quarter of what this most prolific of authors wrote. In his *An Appeal to Honour and Justice*, 1715, he attempted to apologise for his discreditable time-serving policy in politics. Under Godolphin he had accepted a regular salary as a staunch Whig, 1706, but he unblushingly turned Tory so as to serve his old patron Harley when he returned to office, 1710. His *Memoirs of a Cavalier and Captain Singleton*, 1720, and *A Journal of the Plague Year*, 1722, are all excellent illustrations of his power to work up circumstantial, but fictitious, detail into the most convincing of narratives. Lord Chatham believed the first to be a true hist., and few would doubt that the plague was described by an actual eye-witness, anxious only to leave behind him an authentic record. Yet D. was a child of 5 when it occurred. Prosperity rewarded D.'s indefatigable activities, and he was able to build himself a very handsome house in Stoke Newington. He was buried in Bunhill Fields. Perhaps his fecundity, his vivid imagination, his literary versatility, and his impressive style have been somewhat obscured by the unheroic, unromantic character of his moral standards (as exemplified in the realistic novels, *Moll Flanders* and *Colonel Jack*, 1722, and *Roxana*, 1724) and beliefs, as also by his offensive though by no means unique, political inconsistencies. The best collected ed. of D.'s works is the *Novels and Selected Writings*, 14 vols. (1927-1928). See G. Chalmers, *Life of Defoe*, 1785; W. Chadwick, *Life and Times of Daniel Defoe*, 1859; W. Lee, *Life and Newly Discovered Writings of Daniel Defoe*, 1869; W. Minto, *Defoe*, 1879; T. Wright, *Life of Daniel Defoe*, 1894; W. P. Trent, *Daniel Defoe: How to Know Him*, 1916; P. Dutton, *Defoe et ses romans*, 1924; and J. Sutherland, *Defoe*, 1937.

Deforcement, in Scots law, denotes the forcible opposition or resistance made to an officer of the law who is at the time employed in executing a legal warrant.

De Forest, John William (1828-1906). Amer. novelist, b. Humphreysville, Conn. In 1851 he pub. a *History of the Indians of Connecticut*, but his most famous book, *Miss Ravenel's Conversion from Secession to Loyalty*, 1867, was a realistic novel of the Civil War, in which De F. served under Sheridan. Others of his novels, all distinguished by vigorous character-drawing, are *Kate Beaumont*, 1872; *The Wethered Affair*, 1873; *Honest John Vane*, 1875; *Playing the Mischief*, 1876; *Irene the Missionary*, 1879; and *A Lover's Recall*, 1898.

De Forest, Lee (1873-). Amer. physicist and wireless technician, b. Council Bluffs, Iowa. Graduated from the Sheffield Scientific School of Yale Univ. in 1899. He has devoted his whole life to wireless,

being a pioneer in the development of wireless telephony in America. He has taken out over 200 U.S.A. patents on radio telephony and telegraphy inventions. One of his most important is the 'Audion' detector, oscillator, amplifier, which made possible transcontinental telephone service by both wire and wireless. He also carried out experiments on phonoflms, later known as talkies. He became vice-president of the Radio Telephone Company in 1913.

Deformity, condition arising from imperfect or perverted development of any structure of the body. D.s may be congenital or acquired. The conditions giving rise to congenital abnormalities are studied under the name of teratology. Acquired D.s are due to accident, disease, the maintenance of abnormal conditions in the course of a trade or occupation, or deliberately contrived compression at the dictate of custom, religion, etc.

Defregger, Franz, Ritter von (1835-1921). Austrian *genre* painter. The picture that first made him famous was 'Speckbacher,' painted in 1868, a picture of the Hofer rising in 1809. After this came 'The Dance,' 'The Prize Horse,' and *genre* pictures of Tyrolean peasant life. In 1876 he painted his famous 'Victors Return,' and in 1898 his masterpiece, 'Hofer going to his Death.' See life by H. Hammer, 1940.

Degas, Hilaire-Germaine Edgard (1834-1917). Fr. painter and engraver, b. Paris and educ. at the École des Beaux-Arts. He was one of the most celebrated Impressionist painters, and showed 24 canvases in the second Impressionist exhibition (1876), but differed from his colleagues in his classic drawing (much influenced by Ingres) and his devotion to Parisian life as subject matter. His subjects include portraits, racehorses, ballet girls, and the circus, and he worked in oils, water-colours, and pastels; he was also a lithographer. His 'Au Café' (L'Absinthe) was fiercely attacked in London (1893), but his masterly ballet scenes were generally admired in his lifetime, and his 'Danseuse à la Barre' (Metropolitan Museum) was sold for 450,000 frs. Failing sight in his later years caused him to take to sculpture. See lives by J. Meier-Graefe, 1923; A. Vollard, 1924; and P. A. Lemoine, *Degas et son œuvre*, 1946-9.

De Gasperi, Alcide, see GASPERI.

De Geer, Louis Gerhard, Baron (1818-1896). Swedish statesman, remembered for his reform of his country's representative system (which had existed unchanged from the later Middle Ages) to a bicameral elective system in 1865-6.

Deggendorf, Ger. tn in the *Land* of Bavaria (q.v.), on the Danube (q.v.), 80 m. NE. of Munich. It has ant. walls, a Gothic tn hall, and sev. old churches. Its riv. harbour is busy, it has a boatyard, and it is a tourist centre. Pop. 17,000.

D'Eglantine, see FABRE D' EGLANTINE.

Deglution, see SWALLOWING.

Dégoutte, Jean Marie Joseph (1866-1938). Fr. gen. who gained distinction in the First World War when commanding the Fr. 6th Army during the Ger.

retreat from the Marne in July and Aug. 1918. He qualified at the École Normale Supérieure but suddenly decided to go to St Cyr, was commissioned to the 4th Zouaves, and went to Tunis. Studied law and languages, becoming proficient in Chinese, Malagasy, and Ger. He served in the Chinese war of 1900, and before the First World War held an important post in Morocco. Commanded the Moroccan div. in the earlier part of the war. Promoted again in 1917, he was given command of the 6th Army in the final phase of the war, reaching the rank of gen. of div. Was commander-in-chief of Fr. troops in occupation of Rhine from 1919 to 1924. Member of Supreme Army Council.

Degree of Latitude, length along a meridian such that the arc between its N. and S. ends is one D. (360th part of the circumference of a circle). A D. of **Longitude** is the arc, measured on the equator, between two meridians that include a spherical angle of one D. at the poles. This arc subtends an angle of one D. at the centre of the earth and is the same length everywhere on the equator, but a degree of lat. varies slightly from equator to poles owing to the earth's polar flattening. See EARTH; LATITUDE AND LONGITUDE.

Degrees in Arts were first granted in the Middle Ages. Even in Rom. times the expression arts or liberal arts was freely applied to certain branches of learning, and about AD 1200 those who devoted themselves to the study of philosophy and science in contradistinction to theology, medicine, and law were said to belong to the Faculty of Arts. Their course of study embraced the 'Trivium,' that is, grammar, dialectic, and rhetoric, and the 'Quadrivium,' which included arithmetic, geometry, astronomy, and music; for such were the divs. of knowledge handed down by the schools of the Rom. Empire. In the 12th and 13th cents. the earliest univs., such as those of Bologna, Paris, Oxford, and Cambridge, began to develop, and it was found necessary to confer some recognised licence on those eligible to teach. Originally, therefore, the degree was a certificate endowing its owner with the privilege of teaching in public at the various centres of learning. The pope was regarded as the final giver of every degree, and no community of pedagogues, however learned, could call themselves a univ. unless they had obtained the papal recognition. Thus in Paris the Master of Arts degree was primarily nothing more than a formal permission from the chancellor of Notre Dame Cathedral for its holder to take his master's chair among his brother profs. and to embark on his pedagogic career. Candidates for D. in A. were obliged even as late as the 18th cent. to take part in dialectical discussions or disputations—a performance known as the keeping of their 'Act.' On 3 occasions the aspirant was obliged to read a Lat. thesis and then to enter into a debate, conducted in a syllogistic form, with a doctor of the faculty and one or more

opponents. At first the subject for discussion was almost invariably taken from Aristotle, but later it was based, for one of the occasions at least, on the *Principia*, or some other treatise of Newton. The last vestige of this system of 'disputation' or 'Act' for the B.A. degree finally disappeared from Cambridge Univ. in 1838, when written examinations became the one recognised test. Gradually the latter had superseded the disputations, as it was found impossible by this means adequately to examine the knowledge of the student in such subjects as mathematics. It soon became the rule in leading univs. that no matriculated student could attain to a degree unless he had conformed to regulations regarding attendance at lectures and residence in the univ. At Paris in the 15th cent. a course of 4 years' study was one of the qualifications necessary for the master in arts, the minimum period for a degree in most univs. to-day being 3 years. In Cambridge an honours degree in arts is called a *tripos*, a name originating from the fact that on the day for conferring new degrees it was the custom for an old bachelor to sit on a *tripos* or stool and to enter into a mock and humorous disputation with his new associates. The Bachelor of Arts degree is of comparatively recent growth, and in Scottish univs. there is an M.A., but no B.A. degree. In England, and in most countries where Eng. education has been influential, the B.A. is recognised as the first degree in arts subjects. It is conferred on the satisfactory completion of a 3 or 4 year course. At Oxford and Cambridge the B.A. is the first degree whether the course leading to it is in arts or science. This is not the case in other Eng. univs. Nevertheless the range of subjects in which a B.A. can be acquired is very great. There are, in the main, 2 types of degree: those in which a student specialises with some intensity and those in which he spreads his study more widely. Formerly the first type was called an *Honours* degree, the latter a *Pass* or *Ordinary* degree. Some univs. now describe them as *Special* and *General* degrees respectively. Some titles now refer to the special field in which the degree is acquired. For example Manchester Univ. awards a B.A. (Admin.), whilst B.A. (Econ.) degrees are awarded at Bristol, Manchester, Durham, and Sheffield Univs. An M.A. degree can be obtained at Oxford and Cambridge after the B.A. without further examination. A specified period of time after matriculation must elapse before a graduate is entitled to a master's degree, for which a fee is then paid. In other Eng. univs. the M.A. is a research degree. It is acquired on the successful presentation of a thesis and candidates may be requested to pass written papers on matters relevant to their work. London Univ. grants M.A. degrees in the following subjects: Anthropology; Archaeology; History of Art; Classics; Education; Geography; History; Mathematics; Medieval and Modern Languages; Oriental Languages; Com-

parative Philology; Philosophy; Psychology; Slavonic and East European Studies; and Sociology. The B.Litt. (Bachelor of Literature) awarded by Oxford is a research degree in arts; it is also awarded by Glasgow and St Andrews. At Cambridge and Durham the degree is called an M.Litt. Doctor's degrees can be obtained in arts subjects, the most usual being the D.Phil. (Oxford) or Ph.D. (Doctor of Philosophy). All the univs. in the U.K. confer this degree on the completion of a course of advanced study and research. The highest award is a doctor of literature (D.Lit., D.Litt., Litt.D.). It is conferred upon graduates distinguished by their contributions to the advancement of learning or science and is based upon a special thesis or upon pub. works.

Degrees in the U.S.A. follow the Eng. pattern as far as stages are concerned. They can however be acquired in a very wide range of subjects indeed. Their first or bachelor's degrees are very much less specialised than those in U.K., and examinations tend to be of the objective test type (although this is not universal). Some univs. confer A.B. (*Artium Baccalaureus*). The M.A. or A.M. is acquired with or without thesis depending on the regulations of individual univs. The Ph.D. and Ed.D. (Doctor of Education) are the highest awards in arts subjects.

Degrees in Commerce, see COMMERCIAL EDUCATION; UNIVERSITIES.

Degrees in Law, see LEGAL EDUCATION.

Degrees in Science were first awarded in England during the 19th cent. First degrees in science awarded after the successful completion of a 3 or 4 year univ. course are called Bachelor of Science, B.Sc., except at Oxford and Cambridge where they are Bachelor of Arts. The B.Sc. at Oxford is a research degree. First degrees are of 2 kinds: *Honours* or *Special* degrees involve a specialised study of 1 subject; *General*, *Pass*, or *Ordinary* degrees cover more subjects less intensely. The titles of many first degrees include the special field of study. For example a B.Sc. (Eng.) is awarded at London, Southampton, Aberdeen and Nottingham Univs.; B.Sc. Tech. at Manchester and Sheffield; B.Sc. (Econ.) at London, Southampton, and Belfast; and B.Sc. (Agric.) at London. A Master of Science M.Sc. degree is not conferred at Oxford but it is the first research degree in science at most other univs. It may be obtained on the basis of written papers or the submission of a thesis or both. There are also master's degrees in technical subjects: for example M.Eng., M. Met., M.Sc. (Eng.), M.Sc. (Min.), M.Sc. Tech., and M.Tech. Perhaps the most usual research degree in science subjects is the Doctor of Philosophy degree, Ph.D. Very distinguished work (by thesis or on the basis of pub. work) is recognised by the award of a Doctorate of Science, Sc.D., D.Sc., D.Sc. (Eng.), D.Eng., and D.Sc. (Econ.) for example. It is perhaps true to say that professional advancement in science depends more upon the acquisition of a

research degree than of an arts degree in U.K. This is due to the nature of scientific work which calls for some training in research techniques. See DEGREES IN ARTS.

De Gubernatis, Angelo (1840-1913), It. author and orientalist, b. Turin. He was appointed prof. of Sanskrit at Florence in 1863, and at Rome in 1891. His works include *Zoological Mythology*, 1872; *Ricordi biografici*, 1873; *Mitologia Vendica*, 1875; *Mythologie des Plantes*, 1878; *Dizionario biografico, degli Scrittori contemporanei*, 1878 ff.; and *Storia universale della Letteratura*, 1882-85. He also wrote some 9 dramas, and pub. a vol. of poetry in 1864.

Dehiscence, in botany, term indicating the opening of the anther of a flower to allow the escape of the pollen; or of fruit indicating the break-up of the fruit or seed case to allow the seeds to escape. Fruits are said to be indehiscent when the ripe seed-vessel falls to the ground without letting the seeds escape. There are 3 kinds of D.: *calcular*, the seed-vessel parting in divs.; *transverse*, the seeds escaping by the falling of a lid; *porous*, seeds escaping through small pores.

Dehiscent Fruit, see FRUIT.

Dehmel, Richard (1863-1920), Ger. poet, b. Wendisch-Hermesdorf. With Detlev von Liliencron he represents the transition from the naturalistic school to more flexible poetic forms. Although D. does not shut himself away from current social issues, his poetry has a strong metaphysical bias, and owes much to Nietzsche both in form and content (e.g. *Aber die Liebe*, 1893; *Weib und Welt*, 1896; *Verwandlungen der Venus*, 1907). He also wrote the essay *Betrachtungen über Kunst, Gott und die Welt*, 1909; and his autobiography *Kriegstagebuch*, 1919. See J. Bab, *Richard Dehmel*, 1926; H. Schöcher, *Richard Dehmel, der Mensch und der Denker*, 1928.

Dehra Dun, a tn of Uttar Pradesh state in India, situated in a valley below the foothills of the Himalayas. It is best known as the home of the Forest Research Institute and the National Defence Academy.

Dehydrogenation (in chemistry). When hydrogen is removed from an organic compound and no other elements replace it, the process is known as D. Many hydroaromatic compounds may be dehydrogenated by heating with sulphur or with selenium. Thus cyclohexanol will give phenol, and cyclohexyl mercaptan, thiophenol, when heated with sulphur. See also OXIDATION.

Deianira, mythical daughter of Althaea and Oeneus, and sister of Melicæ. Hercules and Achelous fought for D.; Hercules being victorious claimed her for his wife. She involuntarily caused her husband's death by sending him the robe presented to her by the centaur Nessus. It was said to preserve love, but in reality was poisoned. When Hercules died in agony D., in despair, killed herself.

Deidamia, daughter of Lycomedes (q.v.), King of the Dolopians in the Is. of Scyros.

When Achilles hid there in maiden's attire, he made her the mother of Pyrrhus or Neoptolemus.

Deification, see APOTHEOSIS.

Deioces, or **Dajaukku**, first king of the Medes, who, according to Herodotus, reigned from 690 to 647 bc, though this lengthy reign may be due to a confusion with the years of his son Phraortes. Dajaukku is mentioned in an Assyrian text of 715 bc.

Deiotarus (d. 30 bc), tetrarch of Galicia, received from the Rom. Senate the title of King of Galicia and Armenia, in return for his services during the Asiatic wars. In the Civil war he joined Pompey. He was accused of plotting against Caesar's life, and Cicero defended him in an oration still extant.

Deiphobe, Cumaean Sibyl, child of Glaucus.

Deiphobus, son of Priam and Hecuba. He married Helen after the death of Paris, and was killed by Menelaus at Troy.

Deira, Anglian kingdom, extending from the Tees to the Humber. With its N. neighbour, Bernicia, it was finally merged in the kingdom of Northumbria (q.v.).

Deirdre, mythical heroine of 1 of the 3 tragic Gaelic poems of Ireland. Destined to be the bride of King Conchobhar, D. falls in love with Naisi (or Noisi), son of Usnagh, and is protected by him and by his brothers. The king slays the 3 young men, and the poem, *Deirdre's Lament over the Sons of Usnagh*, recalls the happy days spent with Naisi in Alba (i.e. Scotland), on Lough Etive, and contrasts them with her present misery in the house of the king. D.'s story is beautifully treated by J. M. Synge (q.v.) in his verse drama, *Deirdre of the Sorrows*. See K. Meyer, *Ancient Irish Poetry*, 1911.

Deism (from Lat. *deus*, god), strictly speaking the belief in a god, synonymous with theism as opposed to atheism. The term is generally used, however, in opposition to revealed religion, and especially to Christianity. Thus Deists are those who believe in a personal God, the Creator of the universe, but regard him as detached from the world to which he has made no revelation. The term is often further restricted to a movement in England which began in the 17th cent. and fl. during the first half of the 18th cent., which was characterised by a strong aversion from Christianity, and a belief in the light of nature and reason as a sufficient guide in doctrine and practice. It called forth many defenders of orthodoxy among the Queen Anne prelates, and had little final effect on Eng. thought. It considerably influenced Voltaire, and had much in common with later Ger. rationalism. Lord Herbert of Cherbury is regarded as 'the father of English D.' Others prominent in the movement were Charles Blount, Matthew Tindal (*Christianity as Old as the Creation*), Wm. Wollaston, Thomas Woolston, John Toland (*Christianity not Mystical*), Anthony Ashley Cooper, 3rd earl of Shaftesbury, Viscount Bolingbroke, and Anthony Collins.

Déjazet, Pauline Virginie (1797-1875), Fr. actress, *b.* Paris. She went on the stage when she was 5 years old, played at the Théâtre des Jeunes-Élèves, in 1821 at the Gymnase, in 1834 at the Théâtre du Palais-Royal, from 1844 to 1849 at the Variétés, and at the Théâtre Déjazet.

Dekker, Eduard Douwes, pseudonym 'Multatuli' (1820-87), Dutch writer, *b.* Amsterdam, who became assistant-resident at Lebak, W. Java. He began to protest against the abuses of the Dutch colonial system, and, being threatened with dismissal, he resigned his post and returned to Holland. His fame as an author was made by his brilliant romance, *Max Havelaar*, 1860, exposing the scandals of the Dutch Gov. in Java. His *Ideën* were pub. 1862-77, and another novel, *De Geschiedenis van Woutertje Pieterse*, 1890. See J. Saks, *Multatuli*, 1937; G. Stuijveling, *Multatuli en de welsprekendheid*, 1952.

Dekker, Thomas (c. 1570-c. 1632), dramatist and pamphleteer, *b.* London. Little is known of his life. He was writing plays for the Admiral's Men in 1598, and appears to have been much in request as a collaborator about this time. Four of his best plays are *Old Fortunatus*, 1600, *The Shoemaker's Holiday*, 1600, a realist comedy, *Satirromastix*, 1602, a satire on Ben Jonson, and *The Honest Whore*, 1604, a tragedy. Less important pieces that can with some confidence be ascribed to him are *The Whore of Babylon*, 1607, *If It Be Not Good the Devil Is In It*, 1612, and *Match Me in London*, 1631. He also collaborated with Middleton and Webster in some plays, and with Ford and Rowley in *The Witch of Edmonton*, 1621, which protests against the persecution of witches. Although Dekker suffered from poverty and was more than once imprisoned for debt, his work attracts by its sunny kindness and simplicity, while the beauty of the lyrics contained in his plays caused Lamb to declare that he 'had poetry enough for anything.' He was also the author of a number of prose pamphlets. *The Wonderful Year*, 1603, describes the plague in London; and the famous *Gull's Hornbook*, 1609, pictures the life of London gallants. Moral satires are *The Seven Deadly Sins of London*, 1606; *News from Hell*, 1606; and *Lantern and Candlelight*, 1609. D.'s *Dramatic Works* were ed. by R. H. Shepherd, 4 vols., 1873; his *Non-Dramatic Works* by A. B. Grosart, 5 vols., 1884-6. See A. C. Swinburne, *The Age of Shakespeare*, 1908; M. L. Hunt, *Thomas Dekker*, 1911.

De Koven, Reginald (1859-1920), Amer. composer, *b.* Middletown, Connecticut. First worked as a musical critic; studied music in Europe. The best known among his compositions are light operas such as *Robin Hood*, 1890 (one of the most successful of Amer. comic operas), *Rob Roy*, 1894, *Maid Marian*, 1901. He also wrote 2 grand operas, *The Canterbury Pilgrims*, 1917, and *Rip Van Winkle*, 1920, and c. 400 songs.

De la Beche, Sir Henry Thomas, see BECHE.

Delaborde, Henri François (1764-1833),

Fr. gen., son of a baker, *b.* Dijon. He joined in the wars of the revolution on the side of Napoleon. In 1793, after the battle at Saverne (Zabern), he was made gen. He was for a time governor of Corsica. In 1812 he served with Napoleon in the Russian war.

Delacroix, Ferdinand Victor Eugène (1798-1863), Fr. historical painter, leader of the Romantic movement, *b.* Charenton, near Paris, his father being foreign minister under the Directory. He was a brilliant colourist and a bold innovator. His earliest success (1822), 'Dante crossing Acheron in Charon's Boat' (Louvre), is an epoch-making picture. His 'Massacres of Scio', 1824, made him a leader. A visit to England (1825) gave him intimate contact with its literature and art, and he produced lithographic illustrations of *Hamlet* and *Macbeth* as well as of Goethe's *Faust*. A visit to Africa (1832) produced his superb 'Women of Algiers' (Louvre). In 1845 he was employed to decorate the library of the Luxembourg, and the ceiling of the Salon de la Paix in the Hôtel de Ville, 1853; but perhaps his greatest work, summing up the romantic spirit, is his vision of the July Revolution of 1830, 'Liberty guiding the People' (Louvre). 'The violence of Delacroix's character seems to show itself in the scenes of frenzy and bloodshed which he loved to paint and around which his imagination continually played. In his many pictures of animals fighting, the masks of tigers and horses assume expressions of malevolence that are disconcertingly human. . . . If we do not look for *joie de vivre* in the work of Delacroix we certainly find the emotional force of his nature translated into terms of colour—colour glowing luridly among the swirling shadows of a general conflagration' (Edward Sackville-West). Baudelaire devoted a wonderful essay to D.'s work in *L'Art Romantique*. See lives by C. Maucclair, 1909; R. Escholler, 1926-8; and H. Graber, 1938; and his *Journal* (abridged in Eng. trans. by W. Pach), 1948.

Delafield, E. M., pen-name of Edmée Elizabeth Monica de la Pasture (1890-1943), daughter of a novelist. In the first World War she was a V.A.D. at Exeter, and wrote of her experiences in *The War Workers*, 1918. In 1919 she married Major A. P. Dashwood, O.B.E., and they settled in Devon, where she was a Justice of the Peace. Her novels include *Consequences*, 1919, and *The Way Things Are*, 1927; *Messalina of the Suburbs*, 1924, and *Women Are Like That*, 1929, are collections of short stories. In 1931 she wrote *The Diary of a Provincial Lady*, which was so successful that she followed it with 3 sequels, the last being *The Provincial Lady in War Time*, 1940.

Delagoa Bay, see LOURENÇO MARQUES.

Delagrangé, Léon (1873-1910), Fr. aviation pioneer who, with G. Voisin, made in 1907 the powered biplane which, although it was not itself successful, led directly to the successful biplanes of the first 'generation' of European aviation, 1908-9.

Delamain, Richard, see SLIDE RULE.

De la Mare, Walter John, O.M. (1873-1956), poet and novelist, b. Charlton in Kent, of Scottish and Huguenot descent. Educ. at St Paul's Cathedral Choir School, where he founded a school magazine, *The Chorister's Journal*. In 1890 he became a clerk in the offices of the Anglo-Amer. Oil Company, and remained there for 18 years. His first book, *Sonnet of Childhood*, was pub. in 1902 under the anagrammatic pseudonym Walter Ramal. In 1908 he was granted a Civil List pension which enabled him to devote all his time to writing. His first novel, *Henry Brocken*, 1904, was followed by *The Three Mulla-Mullaars*, 1910; *The Return*, 1910, which won the Polignac Prize; and *Memoirs of a Midwife*, which won the Tait Black Memorial Prize for 1922. *The Listeners and Other Poems*, 1912, estab. his reputation as a writer of delicately imaginative verse in the twin domains of childhood and dreamland. Later vols. of verse were *Peacock Pie*, 1913; *Molloy*, 1918; *The Veil*, 1921; *Down-again-Derry*, 1922; and *The Fleeting*, 1933. *Rhymes and Verses*, 1944, gathered together the poems written for children, while *Collected Poems*, 1942, contained the rest of his verse. *Collected Stories for Children* appeared in 1944 and *Collected Tales* in 1950, and in 1954 he was awarded the Foyle Poetry Prize for *O Lovely England*. All his work is marked by exquisite craftsmanship, with a faerie atmosphere peculiarly his own. He was made a Companion of Honour in 1948 and awarded the Order of Merit in 1953; he also received honorary degrees from sev. univs. See studies by R. L. Mægroz, 1924; F. Reid, 1929; J. A. Atkins, 1947; H. C. Duffin, 1949; and H. K. Hopkins, 1953.

Delambre, Jean Baptiste Joseph (1749-1822), Fr. mathematician and astronomer. He early attracted the friendship of the Abbé Delille, and obtained a place in the Collège de Plessis. Afterwards he entered the Collège de France, where he taught and studied under Lalande, and on the latter's death in 1807 succeeded to the professorship of astronomy. With Méchain he was appointed by the Fr. Gov. to measure the arc of the meridian between Barcelona and Dunkirk. His chief works were the *Bases du Système Métrique Décimal*, 1806-10, and *Histoire de l'Astronomie*, 1817-27.

Delamere Forest, 4000 ac. of woodland (including Eddisbury Hill and Kelsborrow Castle, both anc. Brit. camps) in NW. Cheshire, England, formerly a chase of the earls of Chester.

Deland, Margaretta Wade, née Campbell (1857-1945), Amer. authoress, b. Allegheny, Pennsylvania. She was educ. at Pelham Priory, a school kept by Eng. women near New York. She taught industrial design in the Girls' Normal College, New York, 1878-9. Her many tales include *John Ward, Preacher*, 1888; *Old Chester Tales*, 1898; *Dr Lavendar's People*, 1903; *The Awakening of Helena Ritchie*, 1906; *The Iron Woman*, 1911; *The Hands of Esau*, 1914; *Around Old Chester*, 1915; *The Vehement Flame*, 1922; *The Kays*, 1926; and *Captain Archer's Daugh-*

ter, 1932. *If this be I*, 1935, is an account of her childhood.

Delane, John Thaddeus (1817-79), journalist, b. London. Educ. at Oxford, he became editor of *The Times* in 1841 at the age of 24, and held the post for 36 years. Under his editorship the paper became the chief organ of public opinion and attained a pre-eminence which it has retained ever since. D. seldom wrote himself, but maintained a rigorous supervision of the work of his staff. See life by A. L. Dament, 1908.

Delano, Jane Arminda (1862-1919), Amer. nurse who distinguished herself in the First World War. B. at Townsend, New York, she first trained as a teacher, then later as a nurse at the Bellevue Hospital School of Nursing in 1884. During the Sp.-Amer. war she became interested in Red Cross work, and from 1911 devoted her life to its organisation. In 1918 she was made director of the dept of nursing, supplying nurses to the army and navy. For her services in France she was awarded the Distinguished Service Medal and the Amer. Red Cross.

Delany, Patrick (c. 1685-1768), Irish divine, a popular preacher, and an intimate of Swift when that great man returned to Ireland after the death of Queen Anne. D.'s affection for Swift led to the pub. of his *Observations upon Lord Orrery's Remarks upon the Life and Writings of Dr. Jonathan Swift*, 1754, in which he rebutted certain damaging statements made by Orrery. In 1743 D. married Mrs Pendarves, who wrote her reminiscences, issued posthumously.

De la Pole, see POLE, DE LA.

De la Ramée, Louise, see LIDA.

Delarey, or De la Rey, Jacobus Herklas (1847-1914), assistant commandant-gen. of the Transvaal forces in the Boer war from 1899 to 1902. In 1899 he opposed Lord Methuen at Belmont, at Enslin, at Modder R., and at Magersfontein. In 1900 he defeated Gen. Clements at Nooitgedacht, but was himself repulsed near Ventersburg in 1901, at Vlakfontein, and at Moodwill, where he made an attack on Maj.-Gen. Kekewich. In 1902 he captured von Donop's convoy near Wolmaranstad, also Lord Methuen's at Tweebosch. On 31 March 1902 he was defeated by Gen. (later Lord) Kitchener. He joined the Boer peace delegates on 9 April at Klerksdorp, and signed the conditions of surrender at Vereeniging 31 May. In Sept. he came over to England with Louis Botha and Christian de Wet. He became a member of the Transvaal Assembly, and later a senator of the Union of S. Africa. He was shot dead near Johannesburg by a police patrol who mistook his car for that of a criminal gang, 16 Sept. 1914.

De la Rive, Auguste Arthur (1801-73), Swiss physicist, b. Geneva; son of Charles Gaspard de la R., prof. of pharmaceutical chem. there. At 22 became prof. of natural philosophy in the Geneva Academy. He investigated the temp. of the earth's crust, and invented electro-gilding. He wrote *Traité d'électricité théorique et appliquée*, 1854-8.

Delaroche, Hippolyte, called **Pau** (1797-1856), Fr. painter. He studied under Gros, and, like Delacroix, revolted early against the classicism of the school of David. He soon gained popularity, and met with far less opposition than Delacroix, but did not possess any of the latter's genius. In 1827 he gained the decoration of the Legion of Honour for his 'Capture of the Trocadero,' and in 1833 was made prof. at the Ecole des Beaux-Arts. After a visit to Italy he received a commission in 1837 for a picture 27 metres long, to decorate the lecture theatre of the Ecole des Beaux-Arts. The picture represents the artists of his time with a background of the sculptors and architects of the Parthenon. It was finished in 1841, and in 1855 was badly damaged by fire. D. set himself to repair the damage, but d. before he could do so. In 1835 he exhibited 'Head of an Angel,' a study of Horace Vernet's daughter, whom he loved with an absorbing passion.

De la Roche, Mazo (1885-), Canadian novelist, b. Toronto. She was educ. at Toronto Univ. In 1927 she was awarded the *Atlantic Monthly's* 10,000 dollar prize for her novel *Jalna*, the first of a series of stories telling of 3 generations of the Whiteoaks, a tempestuous family living in Ontario and ruled by an iron-willed matriarch. Other books of the chronicle are *Whiteoaks of Jalna*, 1929; *The Master of Jalna*, 1933; *Whiteoak Harvest*, 1936; *Whiteoak Heritage*, 1940; *The Building of Jalna*, 1944; *Return to Jalna*, 1949; and *The Whiteoak Brothers*, 1953. She also wrote sev. plays and a hist. of Quebec. In 1938 she was awarded the Lorna Pierce Medal of the Royal Society of Canada.

De la Rue, Warren (1815-89), astronomer, b. Guernsey. He invented the photo-heliograph for studying the sun's surface, and his photograph of the solar eclipse of the sun in 1860 settled conclusively the solar character of the prominences. His work, *Researches on Solar Physics*, was pub. 1869-70, and *On the Phenomena of the Electric Discharge* in 1881.

De la Salle, see LA SALLE. **RENÉ ROBERT CAVELIER**; and **SALLE, JEAN BAPTISTE DE LA, ST.**

De Lattre de Tassigny, Jean, see LATTRE.

Delaunay, Louis Arsène (1826-1903), Fr. actor, son of a wine-seller. He made his appearance at the Comédie Française as Dorante in Corneille's *Le Menteur*. Then began his long and brilliant career in young lovers' parts, in which he acted until 60 years of age. He played with success in the dramas of Victor Hugo and Molière, but it was in de Musset's plays that his talents found their best expression.

Delavigne, Jean François Casimir (1793-1843), Fr. poet and dramatist, b. Le Havre. At the age of 16 he composed an ode on the birth of Napoleon's son. During 1815 he wrote a series of satires against the restoration of the Fr. monarchy, which were known as *Messénienes*, and he wrote most of his prin. plays between the years 1820 and 1830. They are *Les Vêpres Siciliennes* (tragedy), 1818; *Les Comé-*

diens, 1820; *L'Ecole des Vieillards*, 1823, one of his best works; *Marino Faliero*, 1829; *Les Enfants d'Edouard*, 1833. He wrote a hymn called *La Parisienne* for the revolution in 1830, and *La l'arsoviennne* at the time of the Polish rebellion. In 1832 he wrote a tragedy called *Louis XI*, which was founded upon Scott's *Quentin Durward*. His best poetry is characterised by warm feeling and sincerity. A collection of his works was pub. in 1885. He became a member of the Fr. Academy in 1825.

Delaware: 1. S. Atlantic state, one of the original 13 states of the U.S.A. Except for Rhode Is. it is the smallest state, having an area of 2057 sq. m. Its boundaries are Pennsylvania on the N., D. R. (the largest in the state), D. Bay, and the Atlantic Ocean on the E., Maryland on the S. and W. Brandywine R. is famous for the revolutionary battle of 1777. General farming (wheat, corn, oats, rye, barley) is characteristic of the N., while to the S. the soil is better suited to the growing of fruit and truck produce. Peas, tomatoes, strawberries, beans, asparagus, potatoes, melons, and cucumbers are the important truck crops; apples and peaches are the chief fruits. Poultry-raising is a major source of income. The large annual fish catch in D. Bay includes oysters and other shellfish, menhaden, shad, herring, and rockfish. Lewes is the chief fishing centre. Mineral resources are limited to clay, sand, gravel, and small deposits of feldspar, granite, and kaolin. Iron, steel, and leather industries all flourish, the prin. manufacturing centre being Wilmington, which, like New Castle and Lewes, has also an excellent harbour. Other industries are the manuf. of pigments, chemicals, textiles, rayon, aircraft, and machinery; there are also railroad shops and oil refineries. D. has a good railroad (of over 325 m.), and the state is crossed by a canal connecting D. and Chesapeake Bays. D. Memorial Bridge, across the D. R. near New Castle, is an important highway link. Settled first by Swedes and Finns from Christiania in 1638, D. passed into the hands of the Dutch in 1655, and 9 years later was surrendered, together with New Amsterdam (New York), to the Eng. In 1682 Wm Penn obtained proprietary rights in the state, which finally procured a constitution in 1776. Although a slave state up to 1861, D. was not in favour of secession, and sent many men to join the ranks of Lincoln. The state possesses a small univ. (1833), which is situated in Newark. The name of the state is derived from that of the Brit. colonial governor, Thomas West, Lord de la Warr (q.v.). The pop. of D. is 318,085. The prin. cities are Wilmington, 110,355; Newark, 6731; Dover, 6223; New Castle, 5396; Milford, 5180. See E. N. Valandigham, *Delaware and the Eastern Shore*, 1922; and W. A. Powell, *History of Delaware*, 1928.

2. City, co. seat of D. co., Ohio, U.S.A., on the Olentangy R. It is a trading centre for an agric. area, with some

manufs. D. is the seat of Ohio Wesleyan Univ. Rutherford Hayes was b. here. Pop. 11,800.

Delaware River, U.S.A., is formed by 2 branches which rise in the W. Catskills of New York and unite at Hancock, D. co. Hence it flows S.E., forming the New York-Pennsylvania line, to Port Jervis, N.Y., then S. between Pennsylvania and New Jersey to the head of Delaware Bay. It is 315 m. long, and is tidal to Trenton, N.J. The Chesapeake and Delaware Canal now links the riv. with the head of Chesapeake Bay. Delaware Water Gap, where the riv. cuts through Kittatinny Mt. ridge, is a resort area. There are major bridges at Trenton, Philadelphia, and Wilmington.

De la Warr, Thomas West, Baron (1577-1618), colonial governor of America, b. Hampshire. In 1602 he succeeded to the titles and estates as the 3rd (counting from Lord West, the 2nd founder) or 12th (counting from Roger de la W., the 1st founder) baron. In 1609 he was a member of the Virginia Company Council, and was appointed governor and captain-general of Virginia for life. He sailed in 1610 with 3 ships and 150 settlers equipped at his own expense and landed at Jamestown. He was a just and efficient ruler, rebuilt Jamestown, and constructed 2 forts. In 1611 he returned to England. On hearing of the misrule of his deputy, he set sail for Virginia, but d. en route. See DELAWARE.

Delbrück, Hans Georg Ludwig (1848-1929), Ger. historian, b. Bergen, Rügen. He was appointed in 1896 prof. at the univ. of Berlin, in succession to Treitschke, but was far more liberal in his views than the latter. His *History of the Art of War*, 1900, was widely read in Germany. It is said that the strategical conception of the double encirclement adopted by Hindenburg and Ludendorff at the battle of Tannenberg was suggested by D.'s analysis of the battle of Cannae. After the First World War he began a *History of the World*, of which he had completed 4 vols. at his death. Among his other works are lives of Frederick the Great, Napoleon, Moltke, and Ludendorff, and works on military strategy.

Delbrück, Martin Frederik Rudolf von (1817-1903), Prussian statesman, b. Berlin. As minister of commerce he did much to extend the Zollverein. He helped Bismarck considerably before the Franco-Prussian war in holding together the S. Ger. states. Later he disagreed with Bismarck on the tariff question. He resigned in 1876 and sat as a member of the Reichstag.

Delcassé, Théophile (1852-1923), Fr. statesman, b. Pamiers, Ariège. He was a prominent figure in European politics for 25 years. He helped to bring about the Franco-Russian alliance, was one of the architects of the Franco-It. rapprochement, and was largely responsible for the Entente Cordiale. He first read for the Bar, and then joined Gambetta on the staff of the *République Française*, writing articles on foreign policy. D. began his political career as deputy for Foix in 1889,

and was colonial minister in the Dupuy Cabinet, 1894. He was made minister of foreign affairs in 1898 under Brisson, in which year he settled the differences between Great Britain and France over the Fashoda (q.v.) question. He held the same position in the Dupuy (1898), Waldeck-Rousseau (1899), Combes (1902), and Rouvier (1905) Cabinets. From the outset it was his policy to lift France from the state of weakness and isolation in which it had been the aim of Germany to keep her ever since the treaty of Frankfurt, and it has been said of him that his diplomacy saved his country from disaster in 1914. He became minister of marine under Briand, 1909, and continued to hold office under Monis and Poincaré. In Feb. 1913 he was appointed ambas. at St Petersburg, and on his return, in Feb. 1914, he expressed his suspicions of Ger. aggressive designs. He became foreign minister again on the outbreak of the First World War, and negotiated the pact of London, by which the Allies agreed to make peace overtures only by common agreement. In Oct. 1915 he resigned after a dispute with the Fr. Cabinet on the Salonika expedition, and thereafter retired from political life. See G. Reynald, *La Diplomatie française: l'œuvre de Théophile Delcassé*, 1915; and C. W. Porter, *The Career of Théophile Delcassé*, 1930.

Del Credere Commission, higher rate charged by an agent, in respect of which he guarantees the solvency of the purchaser. The contract need not necessarily be in writing, and the principal has no right to make a claim on his agent before he has sought to recover his due from the third party.

Deledda, Grazia (1871-1936), It. novelist, b. Nuoro in Sardinia. She began to write at an early age, and her novels and short stories, which are in a naturalistic vein, are remarkable for the sympathy and humour with which they describe the life of the peasants of Sardinia. She has the classic qualities—simplicity, freshness, and that fine restraint that leads the great mind into intensity of effects. Among her best-known novels are *Elías Portolu*, 1902; *Dopo il divorzio*, 1905 (Eng. trans. *After the Divorce*); and *La Madre*, 1920 (Eng. trans. *The Mother*, 1928). Other works: *L'Ombra del Passato*, 1908; *Canne al vento*, 1913; *La fuga in Egitto*, 1926. She married Palmirino Madessani, a gov. official, in 1897, and leaving Sardinia for the first time she settled down to a happy married life in Rome. Her literary reputation grew, and in 1926 she was awarded the Nobel prize for literature. See L. Falchi, *L'opera di Grazia Deledda*, 1937; E. De Micheli, *Grazia Deledda e il decadentismo*, 1938.

Delegates, Court of, was the prin. court of appeal in eccles. causes, and from the decisions of the Admiralty court. By a statute passed in the second year of the reign of William IV the court was abolished, and its powers transferred to the Privy Council.

Delfico, Melchiorre (1744-1835), It. economist, b. Teramo in the Abruzzi.

His special study was political economy and jurisprudence, and the writings he pub. had great influence in the country, and many abuses were corrected. One of his most important works led to the abolition in Naples of certain restrictions in connection with the sale and exportation of agric. produce. Made a councillor of state in the brief reign of Joseph Bonaparte in Naples. Employed on the new judicial organisation of Naples by Murat. President of the commission of archives under King Ferdinand I. Granted a large pension on retirement. Among his notable works was his *Researches in Roman Jurisprudence*, 1790. In this and other works, which have been reprinted sev. times, he anticipated the scepticism of Niebuhr, and treats the early hist. of Rome as fabulous, denying to the Romans, before the second Punic war, all arts but those of agriculture and making war. See G. de Tipaldo, *Biografia degli Italiani illustri*, 1834; and G. de Filippis Delfico, *Della Vita e delle Opere di Melchiorre Delfico*, 1836.

Delft, anct tn in the prov. of S. Holland, Netherlands, 8 m. N.W. of Rotterdam. It has clean canals bordered with lime-trees; the R. Schie passes through it and out into the Maas at Delfshaven. D., the bp. of the 2 famous painters van Mierevelt and Jan Vermeer (qq.v.), is an almost perfect specimen of a 17th-cent. Dutch tn. Here William the Silent was assassinated in 1584, and the hole in the staircase made by the bullet can still be seen. His residence, the Prinsenhof, now contains an interesting museum devoted to the war between the Dutch and the Spanish (1568-1648). Beneath his monument in the New Church are the vault of the House of Orange and the memorial of Grotius (q.v.), the great jurist. In the Old Church is the monument of Adm. Tromp, a victor in 32 sea-battles, and that of Piet Hein, adm. of the W. India Company, who in 1628 captured the Sp. treasure fleet. The Stadhuis or tn hall in the Groot market contains portraits by van Mierevelt. The Nieuwe Kerk (New Church) has a fine 356-ft tower with a carillon dating back to 1663. The Technical Univ. was founded in 1863. The famous D.-ware (q.v.) business has been revived. There are munufs. of yeast, alcohol, glue and gelatine, dyes, machinery, cigars, telegraph and telephone cables. The tn was occupied by the Germans in 1940. Pop. (1954) 68,587.

Delft-ware, term used in England to mean earthenware covered with a tin-glaze. This opaque white enamel coating is often painted in blue, yellow, and other colours and then fired. This type of ware was first made in the Netherlands c. 1520 in imitation of It. maiolica, but it was not until 1584 that it was made at the tn of Delft. It was introduced into England by Dutch potters about 1571, first at London (Lambeth, etc.), and was later made at Liverpool and Bristol. See F. H. Garner, *English Delftware*, 1948. See EARTHENWARE, European.

Delgo, or **Delje**, tn of upper Egypt, situated on the Nile.

Delhi, cap. city of the Republic of India and the seat of the Central Gov. of India, situated on the r.b. of R. Jumna, 112 m. N.W. of Agra. D. is also a small, self-contained state with its own legislature. There are in fact two cities of D., Old D. and New D. There are also extensive ruins and remains of earlier cities. Little is known in detail of the hist. of the D. vicinity until the Muslim invasions about AD 1200. The ruined cities of D. date from that time, and the present Old D. dates from 1639, when the Emperor Shah Jehan began to build the great fort. It remained the cap. city of the Mogul emperors, and came under Brit. control in 1804. It has for centuries been the scene of much fighting, having been sacked many times. In 1911, on the occasion of the Durbar held by King George V, it was announced that the cap. of the (Brit.) Gov. of India would be moved from Calcutta to D., and New D. was founded at that time. New D., which is some 4 m. S. of Old D., was largely designed and built by Sir Edwin Lutyens and Sir Herbert Baker (qq.v.). The tn is laid out both spaciouly and graciously, with the main gov. buildings and offices, and Parliament House, constructed of the local red sandstone. A number of anct monuments have been skillfully included in the design. The remains of the old cities are innumerable. In Old D. the most notable sights are the fort itself and the Jama Masjid. Chandni Chauk is the most famous of the old streets. In and around New D. are the Purana Kila (Old Fort), Humayun's tomb, the Nizam-ud-din shrine, the tomb of Safdar Jang, the Quth Minar (q.v.), and the old city fort of Tughlaqabad.

In Old D. the traditional crafts of jewellers, ivory workers, and embroiderers are still pursued vigorously. The tn is also a great central market for the products of the surrounding countryside. New D. is an entirely modern city, with a large circular shopping centre, clubs, and modern hotels. Since it became the cap. city of India it has expanded very rapidly, but during World War II was grossly overcrowded and defaced with temporary buildings. Strenuous efforts have been made to restore its former amenities.

Delhi Conference, called in 1940 on the proposal of the viceroy, Lord Linlithgow, to develop the war capacities of the participating countries—Australia, New Zealand, S. Africa, India, Burma, S. Rhodesia, Ceylon, the E. African dependencies, Hong Kong, Brit. Malaya, and Palestine—particularly in regard to the maintenance of the Brit. forces in the Middle E. The aim of the conference was to relieve Great Britain of such of her war burdens as could be borne by the participating countries by the development of their resources to meet both their own needs and the ever-increasing war needs of Great Britain.

Delia, quinquennial feast of Apollo at Delos.

Delian League, see DELOS.

Delibes, Léo (1836-91), Fr. composer, b. St Germain-du-Val (Sarthe). His first

noteworthy composition was the ballet music for *La Source*, which was produced in 1866. This was very successful, and he followed it up with another similar work, *Coppélia*, in 1870, also an opera entitled *Le Roi l'a dit*, 1873. In 1876 he produced a mythological ballet, *Sylvia*, and in 1883 his most successful opera, *Lakmé*. In 1865 he secured a minor post at the Paris Opéra, and in 1881 he was appointed prof. of composition at the Conservatoire.

Delict, term in Scots law meaning a civil wrong. It is equivalent to the Eng. term 'tort.' Essentially it involves an unjustified invasion of the rights of others.

Delirium, temporary derangement of the mental processes usually associated with some form of bodily disease. D. may accompany any feverish condition, and varies in intensity according to the extent and degree of the fever; inflammatory disease affecting the brain is particularly liable to cause D. A toxic condition of the blood induced by the absorption of drugs such as opium, chloroform, and alcohol is apt to cause mental aberration. Exhaustion, whether as the effect of wasting disease, prolonged bodily exertion, or nervous strain, is also a possible cause. The types of mental

The act may be either deliberately wrongful or merely negligent and may or may not be a criminal offence.

Delilah, Samson's Philistine mistress who treacherously betrayed him (Judges xvi. 4ff.). See also SAMSON.

Delille, Jacques (1738-1813), Fr. poet, b. Aigueperse, Auvergne. His trans. of Virgil's *Georgics*, 1769, brought him into prominence, and on Voltaire's recommendation he was admitted into the Academy. His didactic poem, *Les Jardins*, 1782, received extravagant praise. During the revolution he settled in London, where he trans. *Paradise Lost*. On his return to France he produced a trans. of the *Aeneid*, 1804. See L. Audiat, *J. Delille*, 1902.

Deliquescence, Deliquescent, see HYGROSCOPIC.

perversion are illusions, hallucinations, and delusions. Illusions are false perceptions where the image formed in consciousness does not correspond with the external object; hallucinations are fictitious perceptions, where images are formed without any external object; delusions are false ideas, where the subject conceives a state of things to be true without any foundation in reality.

Delirium tremens is one of a series of symptoms arising from continued indulgence in alcohol. It rarely happens that a single bout of heavy drinking culminates in this form of alcoholism, although the effects of long continued drinking may show themselves after a particularly heavy bout. Some individuals seem altogether immune, the poisonous effects of alcohol not including actual D. From the

fact that many patients have more than one attack, it appears either that the first attack predisposes to another, or that certain individuals are especially susceptible. Lately it has been shown that vitamin B deficiency, which often accompanies alcoholism, is connected with D. T. Any bodily disorder acts as a predisposing cause of D., and the patient complains of general ill health before the characteristic symptoms set in. He has a feeling of restlessness during the day, and either does not sleep or is troubled with bad dreams during the night. Mental confusion increases until any form of mental derangement may appear. There are muscular tremors and continual perspiration. The patient has hallucinations, seeing unpleasant animals all around him; he may have delusions, being convinced that he is being confined by enemies. He is liable to be violent on occasion. The attack usually lasts about 4 to 6 days, ending in a deep sleep, and leaving the patient in an extremely exhausted state.

Delisle, Guillaume (1675-1726). Fr. scientist of Paris, eldest son of the historian and geographer (*d.* 1720), pupil of his father and of Cassini. He was one of the founders of modern geography. Before him some maps still reflected those of Ptolemaeus (2nd cent. AD). He pub. about 134 maps, many purely geographical, others in connection with eds. of voyages of discovery. In 1700 appeared his map of the world, and celestial and terrestrial globes. In 1702 D. became a member of L'Académie des Sciences, in 1718 geographer to King Louis XV. He wrote *Atlas Géographique* (not pub. until 1789), and contributed to *Mémoires de l'Académie des Sciences*.

Delisle, Joseph Nicholas (1688-1768), Fr. astronomer, *b.* Paris. In 1725 he went to St Petersburg by order of the Empress Catherine, and there founded an observatory. He is famous as the originator of a method for observing the transits of Venus and Mercury by instants of contacts.

Delisle, Léopold Victor (1826-1910), Fr. historian and librarian, *b.* Valognes, Manche. From 1874 to 1905 he was general administrator of the Bibliothèque Nationale in Paris, and in 1837 a catalogue of the Bibliothèque Nationale was begun under his supervision. He wrote *Catalogue des actes de Philippe-Auguste*, 1886, etc.

Delitzsch, Franz (1813-90), celebrated theologian and Hebraist, *b.* Leipzig. His great learning and work diffused theological knowledge and criticism in Germany, England, and America. His commentaries on Genesis, the Psalms, Proverbs, and Ecclesiastes, 1847, were included in the complete commentary on the O.T., ed. by Keil and D. His other works are *System der biblischen Psychologie*, 1855; *Jesus und Hillel*, 1867; and a trans. of the N.T. into Heb., 1877.

Delitzsch, Ger. tn in the dist. of Leipzig, 12 m. N. of Leipzig (q.v.). It is a spa, and has manufs. of sugar, tobacco, and leather goods. Pop. 25,000.

Delium, anct Gk tn, situated on the

Boeotian coast about 25 m. N. of Athens. In 424 BC it was the scene of a battle in which the Athenians were defeated by the Boeotians.

Delius, Frederick (1862-1934), musical composer, of Dutch and Ger. ancestry, *b.* Bradford, Yorks., educ. at Bradford Grammar School and the International College, Isleworth. He at first entered his father's business of wool importing, travelling to Germany, Sweden, and France, but in 1882 he went to Florida to grow oranges. Here he bought a piano and received instruction from the Brooklyn organist, Thomas F. Ward. D. had played the piano as a small child, and when about 7 years of age had been given violin lessons. After a period of music-teaching in America, he returned to

Elliott & Fry
FREDERICK DELIUS

Europe in Aug. 1886, and at the Leipzig Conservatoire studied under Hans Sitt, Reinecke, and Jadassohn. His orchestral suite, *Florida*, was performed in 1888, with Grieg and Sinding in the audience. In 1890 he made Paris his home, where his friends included Ravel, Strindberg, and Gauguin, and he met and married the Dan. painter, Jelka Rosen. In 1897 he provoked a storm in Norway by his satirical rendering of the national anthem in the incidental music he wrote for Heiberg's play *Folkeraadet*. In May 1899 his music was performed at the old St James's Hall, London, meeting with both adverse and enthusiastic criticism. In the same year he settled down on a small property at Grez-sur-Loing, near Fontainebleau, where he lived and composed until his death. A D. festival, organised by Sir Thomas Beecham in London in 1929, aroused much enthusiasm, performances being

given of *A Mass of Life*, *Appalachia*, and extracts from the operas *Fennimore* and *Gerda* and *A Village Romeo and Juliet*. *A Mass of Life* (from Nietzsche's *Zarathustra*), perhaps his most ambitious composition, was composed in 1904-5. The incidental music for Flecker's *Hassan* became well known in London by the long run of the play in 1923. D.'s music is marked by a rare sense of introspection. This is exemplified alike in his earlier and later work, e.g. in his symphonic poem *Paris*, which is far from reflecting the popular fallacy of a garish and gay city, and his *Brigg Fair*, a splendid ruminative set of orchestral variations on a Lincolnshire folksong. Opinion is somewhat divided on the merits of D.'s music. His emotional range was limited, his rhythmic subtlety not marked, and as he relied mainly on his harmonic resources the result is often a certain monotony of mood and texture. His last years were tragically saddened by blindness and paralysis. See Philip Heseltine, *Frederick Delius*, 1923; Clare Delius, *Frederick Delius: Memories of My Brother*, 1935; Eric Fenby, *Delius as I knew him*, 1936; and A. Hutchings, *Delius*, 1948.

Delius, Nikolaus (1818-88), Ger. philologist and Shakespearean scholar, b. Bremen. From 1855 to 1880 he was a prof. at Bonn. His prin. work was his ed. of Shakespeare, 1854-61, with supplement 1865.

Dell, Ethel Mary (1881-1939), novelist, b. Streatham. Educ. at a private school there, she started to write at an early age and had great success with *The Way of an Eagle*, 1912. After that she produced over 30 vols.—novels and collections of short stories. She married Lt.-Col. G. T. Savage, D.S.O., in 1922. Her stories, as well as her verses (a small book of which appeared in 1923), appealed to readers who unite a love of romance with a pious orthodoxy. Among her novels were *The Knife of Diamonds*, 1913; *The Rocks of Valpre*, 1914; *The Keeper of the Door*, 1915; *Greatheart*, 1918; *The Obstacle Race*, 1921; *The Altar of Honour*, 1928; and *Honeysball Farm*, 1937.

Della Casa, Giovanni, see CASA.

Della Cruscani, group of Eng. poets resident in Florence in the latter part of the 18th cent. They took the name from the famous It. Accademia della Crusca (literally Academy of Chaff), which was founded in 1582 with the object of purifying the It. language (sifting away its 'chaff'), and which pub. an important dictionary in 1612. Leaders of the Eng. group were Robert Merry (1755-98) and Hannah Cowley (q.v.). The verse of the D. C. pub. in the *World* and the *Oracle*, and collected in *The British Album*, 1789, had a vogue for a time, but it was silly, fantastic, sentimental, and insipid, and the movement expired under the biting satire that William Gifford (q.v.) poured on it in his *Ravens*, 1791, and *Maeiad*, 1792.

Della Porta, Giambattista (c. 1541-1615), It. physicist, b. and d. Naples. As a youth he travelled in Italy, Spain, and France, and when only about 15 had

already formulated the first 3 vols. of his *Magia Naturalis*. He took part in the foundation of the Accademia dei Oziosi in Naples, then later himself founded the Accademia Secretorum Naturae. Pope Paul V caused the latter to be closed, but in 1610 D. P. was admitted to the Accademia dei Sinceri. Besides his works on natural magic, optics (including the camera obscura), gardening, physiology, and other subjects, he wrote sev. successful comedies in his later days which were collected and pub. in Naples in 1726.

Della Quercia, Jacopo (1374-1438). It. sculptor, b. La Quercia near Siena, son of a goldsmith. He executed a beautiful tomb for the wife of Paolo Guinigi, tyrant of Lucca, and the Fonte Gaia, built in the square at Siena, 1409-19. He partly decorated the portal of San Petronio, Bologna, with sculptural reliefs.

Della Robbia, see ROBBIÀ.

Dellys, small seaport 50 m. E. of Algiers. Pop. (1946) 18,485.

Delmenhorst, Ger. tn in the Land of Lower Saxony (q.v.), 64 m. NW. of Hanover (q.v.). It manufs. linoleum, and has also textile and other industries. Pop. 65,000.

Deloney, Thomas (1543-1600), poet and novelist. He worked as a silk weaver in Norwich and wrote popular ballads, one of which, on the scarcity of corn in 1596, got him into trouble with the authorities. He then took to writing prose fiction, in which he ranks with Greene and Nash, portraying effectively the everyday life of middle-class citizens and craftsmen. His *Jack of Newberie*, 1597, tells of weavers, *The Gentle Craft*, 1598, of shoemakers, and *Thomas of Reading*, 1600, of clothiers. Collections of his verse are *Strange Histories*, 1602, and *The Garland of Good Will*, 1618. His works were ed. by F. O. Mann in 1912.

De Long, George Washington (1844-81), Amer. explorer, native of New York. He took part in a relief expedition to the Arctic, where Charles Francis Hall was exploring Melville Bay (1873). In 1879 he commanded the *Jeannette* on a polar expedition; when in 1881 the ship foundered, after months of hardship he succumbed in N. Siberia. See *Voyage of the 'Jeannette'*, 1882, ed. by his wife.

Deloraine, small tn midway between Launceston and Devonport, Tasmania, in good farming country (mainly cattle). There are road and rail connections to Launceston. Pop. 1600.

Delorme, Philibert (1512-70), Fr. architect, b. Lyons, was trained by his father as a builder, studied in Italy 1533-6, returned to France c. 1540. Was given charge of the work at Fontainebleau, 1548; extended the palace of the Tuileries, 1565, with Bullant (q.v.); extended the château of Chenonceaux, 1557; also designed the châteaux of St. Maurice-Fosses, c. 1540, and Anet, 1552-9. He wrote important books on architecture and building construction.

Delos, smallest (about 3 m. long and 1 to 1½ m. broad) and most famous of the Cyclades Is. in the Aegean. Its modern

name is Mikra Dili, lying between Megali Dili (anc. Rheneia) and Myconus. Its name refers to the legend that suddenly it rose above the surface of the waves, and that, whereas at first it floated, Zeus fastened it to the bottom so as to make it a safe refuge for Leto, who was there able to give birth to her twin offspring, Artemis and Apollo. Henceforward the little Is. was sacred to Apollo, within whose precincts were built many temples and treasures, including a shrine in his own honour. D. was famous for the splendour and solemnity of her festivals, to which men came from all corners of the earth, and the periodic festival was also frequented by hundreds of merchants; for on the fall of Corinth in 146 bc D. became a great mart—a centre for the extensive trade between S. Europe and

the S. slopes of Mt Parnassus, and celebrated in anc. times for its oracle. It appears to have been a sacred place at least from the 2nd millennium bc, the sanctuary of a pre-hellenic chthonian deity whose shrine and oracle were taken over by Apollo. This transfer, commemorated each year at the festival of Septima, is represented in the legend of the serpent Pytho's death at Apollo's hands. Hence too the name Pytho, sometimes used of D., and the adjective in 'Pythian Games.' The temple of Apollo (Doric without and Ionic within) was the repository of splendid native offerings and immense treasures, many of which were removed by Nero, and others by Constantine. To the SW. lay the Adytum, where the oracle was delivered; it was supposed to be the centre of the

PHOCIS: THE SITE OF DELPHI

the Asiatic coast. Her excellent roadstead became known to slave traders, who often bartered as many as 10,000 slaves a day at D. Many laws and customs bear witness to the inviolable and holy character of the shrine. The tn of D. built at the base of the great granite crag known as Mt Cynthus, never recovered from its devastation during the Mithridatic war of 87 bc. Half-way up the slope of Cynthus 10 great blocks of granite form a vaulted chamber which was the anc. temple seen by Aeneas when he paid his homage to the city of Apollo (*Aeneid* iii. 84). Between Cynthus and the sea may still be seen the ruins of temples, courts, and colonnades, even a portion of the colossal statue of the god himself and the remains of the shining city. See W. A. Laidlaw, *A History of Delos*, 1933. See also CYCLADES.

Delphi (modern **Kastri**), tn of Phocis, on

earth, and the exact spot was marked by a stone called the *omphalos* (navel), thought to have been recently discovered. At first the oracles, which were always sung by a priestess called Pythia, were delivered only on Apollo's birthday; but later, if the sacrifices were propitious, the Pythia prophesied each day. These oracles were given in ecstatic and often very ambiguous hexameters, until men sarcastically remarked on the imperfection of the prosody of the god, who was, notwithstanding, the patron of poetry. Later, they were enunciated in prose. It is not known how the ecstasy or frenzy was produced. Excavations by Fr. archaeologists since 1880 have made the traditional theory untenable, viz. that it was brought on by vapours arising from the earth. But the effects of unreasoning faith together with strong emotional suggestion are familiar even in our own

day. Up to the time of the Persian wars all Gk states and many foreigners from Italy and Asia, as for instance the famous Croesus of Lydia, came to consult the god on such vital questions as the sending out of colonies, the declaration of war, and the enactment of new laws, but after that time honour and glory fell away from the sanctuary because of the venality, deceit, and strong Spartan sympathies of the priesthood. During the Sacred war (356-346 bc) the Phocians sacked the treasury, and were afterwards condemned for this sacrilege to pay 10,000 talents to the shrine. The Delphic temple was the chief sanctuary of the Amphictyonic league, which controlled international right, and from 586 bc onwards celebrated the famous Pythian games. The theatre of D., which is one of the best preserved, lies to the SW. of the temple. No doubt D. was an information bureau which had its intelligence agents everywhere throughout Greece. That for a thousand years it maintained its illimitable prestige by pure trickery is unlikely. 'It is neither easy,' said Aristotle, of oracular dreams, 'to despise such things, nor yet to believe them.' Except after consultation with D. no Gk colony was ever founded, and even Plato thought the advice of D. a wise preliminary in all national undertakings. There were dignity and pathos in the last of its oracles to the Emperor Julian: 'Go ye and tell the emperor that the carved work of this sanctuary is cast down upon the ground, and the god thereof hath no longer where to lay his head. And, the laurel of his divination is withered, and the waters that spoke with voices are dried up.' See T. Dempsey, *Delphic Oracle*, 1918; F. Poulsen, *Delphi*, 1920; P. Hutton, *Greek Cities*, 1932; and H. W. Parke and D. E. W. Wormell, *The Delphic Oracle* (2 vols.), 1957.

Delphin Classics, set of 64 vols. of Lat. and Gk classics, ed. in France from 1674 to 1730 by 39 scholars under the direction of Montausier, Mme Anne Dacier, Bossuet, and Huet. They were for the use of Louis XIV's son, called the Grand Dauphin. They are now of little use.

Delphinida, see DOLPHIN.

Delphinium, large genus of annuals, biennials, and perennials, family Ranunculaceae, natives of Europe, Asia, and N. America. Commonly grown are the annuals *D. ajacis*, larkspur, *D. consolida*, branching larkspur, and *D. paniculatum*, Macedonian larkspur, and their varieties; and the perennials *D. formosum*, *D. grandiflorum*, *D. nudicaule* and hybrids. *D. candidum*, *D. macrocentron*, and *D. wellbyi* are N. African species, needing greenhouse culture.

Delphinus, or **The Dolphin**, small constellation near Aquila. From time immemorial it has been identified with a dolphin, the Romans calling it Vector Arionis (the bearer of Arion) and the Greeks the Sacred Fish.

Del Rio, city of SW. Texas, U.S.A., co. seat of Val Verde co., a trading centre shipping wool and mohair. Pop. 14,200.

Delta (from the shape of the Gk letter Δ, delta), name applied to alluvial tracts of land enclosed between the bifurcating branches of a riv. and the sea or lake which receives them. The term was first used with reference to the mouth of the Nile. D.s are formed by the solid matter or fine silt which is brought down in suspension by all rivs., and which is the measure of the denudation they accomplish in their course. The formation of D.s seems to depend rather on the absence of opposing currents where the rivs. reach the sea than on the amount of sediment carried down. For where there are strong ebb tides or ocean currents the detritus is deposited out at sea. Thus many D.s occur in inland lakes, in sheltered bays, and especially in the tideless estuaries of the Mediterranean. But it would seem that every riv. tends to form a D., and in support of this theory it may be noted that all large estuaries are being gradually silted up. The La Plati, for example, is full of shallows and sandbanks, and Darwin held that the green pampas was merely the result of sediment accumulated in a former and larger estuary of that riv. As regards the great D. of the Nile (8569 sq. m.), the old belief that Egypt was the gift of that riv. is strictly true with reference to lower Egypt. This D. begins to be formed 90 m. from the sea, and at its greatest breadth is 85 m. across. But one of the greatest D.s in the world is that of the Ganges. The enclosed region of 31,880 sq. m. is itself traversed by innumerable streams that are continually interlacing. Over the D. the riv. reaches the ocean through some 15 mouths, the most easterly branch being the main stream, whilst the most westerly is the sacred Lingli. The deltaic arms of the Niger are 7 in number, the chief channel being the Nun, the most easterly Old Calabar; the tract enclosed, which is as large as Ireland, is covered with jungles, forests, and swamps. D.s are termed lacustrine, fluvial, or oceanic, according as the channels which form them flow into lakes, rivs., or seas.

Delta Metal, alloy invented by G. A. Dick in 1833. It is really a variant of high tensile brass, consisting of copper and zinc, to which a small proportion of ferro-manganese has been added.

Deltoid, triangular, having the shape of the Gk letter Δ (delta). The *deltoid muscle* is attached to the clavicle, acromion, and spine of the scapula, also to the shaft of the humerus; its function is to abduct the arm, i.e. draw it away from the side.

De Luc, Jean André, see LUC.

Deluge, *The*, see FLOOD.

Delusion, a false idea, as when a mental patient fancies he is Napoleon or that there is a conspiracy against his life. See HALLUCINATIONS; ILLUSION; INSANITY.

Delvin, Baron, see NUGENT, SIR R.

Delvinë, or **Delvino**, tn of Albania, 48 m. NW. by W. of Janina. The hills around are covered with orange groves and olive plantations. Pop. 6000.

Delyannis, Theodoros (1826-1905), Gk statesman, b. Kalavryta. He represented

Greece at the Congress of Berlin, 1878. He was prime minister 4 times between 1878 and 1905, when he was assassinated. His political career was based on recovering more Gk provs. from Turkey.

Demand and Supply, see SUPPLY AND DEMAND.

Demantoid, emerald-green garnet, being a gem variety of andradite, cut and worn as a precious stone in Russia. Found in granular masses in serpentine in the Urals, and sometimes known as Uralian emerald, though the true emerald also occurs in those mts. It has the most dery display of rainbow colours in any major precious stone. Sometimes incorrectly called olivine.

Demaratus, king of Sparta from 510 to 491 BC, when he was deposed by Cleomenes. He then went to Persia, where he was welcomed by Darius, and afterwards accompanied Xerxes in his invasion of Greece.

Demavend, Mount, see DAMAVAND, MOUNT.

Dembea, productive, well-cultivated dist. of Ethiopia, situated northward of Lake D. The cap. of the dist. is Gondar.

Dembinski, Henryk (1791-1864), Polish patriot and gen. who, from 1809 to 1813, went as a volunteer to fight in the wars against Russia and Germany; he distinguished himself greatly at the battle of Leipzig. He became gen. in the Polish Army in the rising against Russia, 1830-1, and at the fall of Warsaw he fled to France. In 1849 he joined the Hungarians against the Austrians and Russians, and was made commander-in-chief of the Hungarian Army by Kossuth, but was defeated at Kapolna.

Deme originally meant the dist. inhabited by a tribe which formed an independent community. These small communities gradually became joined together into larger ones, and the word came to signify a country dist., a township, or a par. These D.s were especially important in the gov. of Attica as founded by Cleisthenes in 508 BC.

Dementia, see INSANITY; PSYCHIATRY.

Demerara, riv. and co. of Brit. Guiana. The riv. enters the Atlantic at Georgetown (q.v.); its length is about 200 m. The co. lies mostly between the R.s D. and Berbice, and fronts the sea for about 65 m. It was originally a Dutch settlement. The brown sugar known as D. was first produced here. See BRITISH GUIANA.

Demeter, one of the great divinities of Greece; goddess of earth's fruits, especially of the corn. Her legend was as follows. She was daughter of Cronus and Rhea, and sister of Zeus to whom she bore a daughter Persephone. The latter, while gathering flowers in Asia, was carried off by Pluto (Hades). D., after wandering in search of her daughter, learned her whereabouts from Helios (the Sun). Thereupon she quitted Olympus in anger and dwelt upon earth, conferring blessings wherever she was kindly received and severely punishing those who rejected her, until she was welcomed at Eleusis. But as her indignation continued there was famine upon earth until Zeus agreed that Persephone

should spend two-thirds of the year with her. The meaning of the legend is clear: Persephone, carried off to the underworld, is the seed-corn, which remains concealed in the ground during part of the year; returning to her mother, she represents the rising corn. In Attica D. was worshipped with great solemnity at the Eleusinia (see ELEUSINIAN MYSTERIES) and Thesmophoria. The latter was intended to commemorate the introduction of the principles of civilised life, which were ascribed to D. because agriculture is the basis of civilisation. The Romans, receiving the worship of D. from Sicily, called her Ceres and honoured her with an ann. festival known as Cerealia. See L. R. Farnell, *The Cults of the Greek States*, vol. iii, pp. 29 ff., 1896-1909; T. W. Allen, W. R. Halliday, and E. E. Sikes, *Introduction to the 'Hymn to Demeter' in Homeric Hymns*, 2nd ed., 1936; C. Seltman, *The Twelve Olympians*, 1932.

Demetrius Nicator, or **Demetrius II**, king of Syria (145-141 and 129-126 BC), son of D. Soter (q.v.). He remained in exile for sev. years after his father's death, and then landed in Cilicia and defeated Balas, who had usurped the throne. He married Cleopatra, an Egyptian princess, and lived a life of cruelty and vice. In 138, during a war with the Parthians, he was taken prisoner and detained for 10 years, the throne being filled in the meantime by his brother, Antiochus Sidetes. He regained his position as king in 129, but his subjects rebelled and he was murdered at Tyre (126).

Demetrius Phalereus (c. 345-c. 283 BC), Gk orator and philosopher, b. Phalerum; studied under Theophrastus; was forced to flee into exile by Phocion. After Phocion's death Cassander made him governor of Athens in 317, and he administered the affairs of the city wisely for 10 years. In 307, on the approach of Demetrius Poliorcetes, he fled. Settling at Alexandria, he played some part in the foundation of the library.

Demetrius Poliorcetes ('the Besieger'), king of Macedonia (294-288 BC), b. c. 335, the son of Antigonus I of Asia and Stratonice. During his father's lifetime he was engaged in frequent campaigns against Cassander (q.v.) and his allies. Most notable of these was the siege of Rhodes (305) which won him his surname. After the defeat and death of his father at Ipsus (301) his fortunes declined until, in 294, he was acknowledged by the Macedonian army as their king. In 288, however, he was ousted in favour of Pyrrhus, fled to Cilicia where he ultimately surrendered to Seleucus (285), and died 2 years later in honourable captivity.

Demetrius Soter, or **Demetrius I**, king of Syria (162-150 BC), b. about 185 BC, son of Seleucus IV, Philopator. As a boy he was sent to Rome as a hostage and detained there while his uncle, Antiochus Epiphanes, usurped the throne on the death of Seleucus in 175. He finally escaped, and was acknowledged king by the Syrians, and later by Rome. He was slain by Alexander Balas.

Demi-lion, Demi-man, or Demi-rose, see HERALDRY, *Common charges*.

Deming, co. seat of Lunaco, SW. New Mexico, U.S.A., with a large sanatorium for tuberculosis. Pop. 4000.

Demir-Hissar, see SIDEROKASTRON.

Demise, Anglo-Fr. legal term (from the Fr. *démétire*, to send away) for the transfer of a property, especially by lease. The phrase 'demise of the crown' is used in Eng. law, and means the immediate transfer of kingship and all its attributes to the next heir without any interregnum.

Demiurgos, or Demiurge, Gnostic name for the God whom they thought to be the creator of the material world, as distinct from the true, eternal, and unknowable God, who had no connection with matter. Marcion (q.v.) identified the D. with Jehovah, the God of the Jews.

Demmin, Ger. tn in the dist. of Neubrandenburg, on the Peene, 26 m. NNW. of Neubrandenburg (q.v.). It was one of the first Slav settlements in Pomerania, and was conquered by Henry the Lion (q.v.) in 1164. It later belonged to the Hanseatic League (q.v.). There are sugar, beer, engineering, and distilling industries. Pop. 18,000.

Democracy. The term is of Gk origin meaning literally 'power of the people.' It is used to designate a form of State gov. A democrat is a partisan of gov. by the people. The kernel of a democratic state-form is the constitutional right of the people to govern themselves. D. further means a society based on equality. In a metaphorical sense the word D. is also employed to characterise the tendency of the progressive nations during the last 2 centuries towards a social and political organisation based on popular control. Continental writers, especially the Fr., use the word in a social sense; Gk philosophers used it in a gov. sense; and Eng. and Amer. political writers limit its use to the exercise of political power by the people. D.'s final aim is not confined to the estab. of a republican gov., and can accommodate itself within the limits of a monarchic state. A monarch reigns, but does not govern. In democratic republics all citizens have equal rights, and are as a body, at least theoretically, the formal rulers of the State. Monarchies and republics are both exposed to the danger that a master man may hold the reins of state and rule as a despot, or dictator. The decadence of the aristocratic and moneyed classes leads to *oligarchy*. The degeneration of the masses leads to the worst of all powers, to *ochlocracy*—anglicised, the rule of the rabble. D. as a social principle rests upon the doctrine of the essential equality of all men—a notion derived from the Christian conception of the equality of all men before God, which owes its transference from religion to society and politics mainly to the works of Jean Jacques Rousseau. The rise in Europe after the First World War of the various totalitarian systems, denoting the single-party dictatorial type of gov., as opposed to the liberal conception which assigns to the State only restricted powers, gradually eliminated all pretence of democratic

principles in the gov. of those countries. For soon the sphere of state influence extended over the whole of private life as well as public, and demanded the full submission of the individual to the requirements of the State without even any pretence of freely elected representation. See also INDIVIDUALISM. See T. Paine, *Common Sense*, 1776; A. de Tocqueville, *Democracy in America*, 1842; J. Bryce, *American Commonwealth*, 1888; W. E. Lecky, *Democracy and Liberty*, 1896; J. A. Hobson, *Democracy after the War*, 1917; Sir N. Angell, *The Public Mind*, 1926; J. A. R. Marriott, *Dictatorship and Democracy*, 1935; W. H. Hutt, *Economists and the Public*, 1936; Walter Lippmann, *The Good Society*, 1938; B. E. Lippincott, *Democracy in Transition*, 1938; E. Barker, *Reflections on Government*, 1942; H. J. Laski, *Reflections on the Revolution of our Time*, 1943; A. D. Lindsay, *The Modern Democratic State*, 1943; F. A. von Hayek, *The Road to Serfdom*, 1944; and L. C. Robbins, *The Theory of Economic Policy*, 1952.

Democrats, name of one of the 2 great historic parties in the U.S.A., the Republicans (q.v.) being the other. The D. may be compared in many respects—fiscal policy, social policy, their attitude to the political dangers of centralisation, and so on—to the Liberal party in Great Britain. The policy of the D. has undergone many changes during the last century, but in the main D. have stood for state rights and human rights as against the growing tendency of the central or federal gov. to usurp power. This question of state rights has always been to the fore in the U.S.A., and was one of the first questions to agitate the young republic. George Washington, the first president, with his lieutenant, Alexander Hamilton, secretary of the treasury, was the leader of the party called the Federalists, which stood for a strong national or centralised gov. Opposing him was Thomas Jefferson, the secretary of state, who stood for decentralisation (see CENTRALISATION), and whose party was known indifferently as the Republicans, the Democratic Republicans, and the D. The title of Republicans disappeared towards the end of the first decade of the 19th cent., and that of Democratic Republicans in the campaigns of 1828. The party elected Jefferson as president in 1801, and remained in control of the gov. till 1841. Since then they have been in power from 1845 to 1849, 1853 to 1861, 1885 to 1889, 1893 to 1897, 1913 to 1921, and 1932 to 1952. Democratic presidents since Jefferson have been Madison Monroe, J. Q. Adams, Jackson, Van Buren, Tyler, Polk, Pierce, Buchanan, Cleveland, Thomas Woodrow Wilson, F. D. Roosevelt, and H. S. Truman. In pursuance of their general policy of supporting state rights, the D. in the main lent their aid to the S. states before the Civil war, 1861–5. The party opposing them took the old name of the D., viz. Republicans, in 1856. In later years, after the passions of the Civil war had cooled, the questions at issue between the D. and the Republicans were

mainly the currency and the tariff. President Grover Cleveland crystallised the Democratic attitude by speaking of a tariff for revenue only, that is one to raise only such money as the gov. needed for its expenses, rather than the high protective tariff which the Republicans advocated to aid Amer. manufs. The currency issue became acute in the famous campaign of 1896, when Wm Jennings Bryan was the Democratic nominee for president on the free silver platform. He advocated bi-metalism (q.v.) instead of the gold standard. In 3 separate presidential campaigns, when he was the nominee, this was one of the great issues, and then it dropped out of the party platform. Even on the tariff the D. are not such extreme opponents as they used to be, admitting that a certain amount of protection is necessary for the country, but opposing the high tariffs urged by the Republicans. One of the more recent presidential campaigns was fought by the D. mainly on the prohibition issue, the nominee, 'Al' Smith, being a 'wet.' It resulted in an overwhelming defeat for his party, 4 S. states voting Republican for the first time since the Civil war. After the Civil war the D. were pressed into the background, and they did not recover until 1876. Democratic administrations were elected in 1884 and 1892 (Cleveland), 1912 and 1916 (Woodrow Wilson), 1932, 1936, 1940, 1944 (Roosevelt), and 1948 (Truman). The D.s were defeated in 1952, after 20 years of office, by Eisenhower, but this was a personal victory for a respected army commander as well as for Republican policies. The D. party is correctly regarded as the more liberal party in the U.S.A. But the difference between the 2 great Amer. parties is not simply that of Liberal and Conservative in the Brit. connotation of those terms, for there are Liberal and Conservative Republicans, as well as Liberal and Conservative D. The Democratic party has been strongest in the S. states—the solid S.—and these states are still Democratic. The main issue in the earlier terms of President Franklin Roosevelt was the New Deal. Later this was merged in the war effort; but on foreign policy there is no marked or obvious difference between the D. and the Republicans, though it may be that there is a stronger tendency to traditional Amer. isolationism in the latter. See PARTY GOVERNMENT.

Democritus (c. 460–c. 370 BC), Gk philosopher, and disciple of Leucippus (q.v.), whose theory he developed. His purpose was to reconcile the monism of Parmenides and Zeno with the pluralism of Empedocles and Anaxagoras. The resulting system is known as 'atomism,' which was not, however, a scientific system like modern atomic physics, but a metaphysical hypothesis. All things originate from a vortex of atoms, and differ according to the shape and arrangement of the atoms of which they consist. Fragments of D.'s works have survived. See C. Bailey, *Greek Atomists and Epicurus*, 1928.

Demography, see VITAL STATISTICS.

Demoiselle, or Numidian Crane, grutiform bird, *Anthropoides virgo*, closely allied to the cranes. It breeds in E. Europe and N. Asia; and winters in NE. Africa and S. Asia.

Demoivre, Abraham (1667–1754), Fr. mathematician and demographer, b. at Vitry and educ. at Sedan, Saumur, and Paris. On the revocation of the Edict of Nantes he, being a Protestant, fled to England, and supported himself by giving lessons and by lecturing. He owed much to Newton's *Principia Mathematica*, and afterwards dedicated his *Doctrine of Chances* to that Eng. mathematician. He was chosen as judge in the famous contest between Newton and Leibnitz for the merit of the invention of fluxions. His pub. works include *Annuities upon Lives*, 1725, and *Miscellaneous Analytica de Seriebus et Quadraturis*, 1730. Referred to by Pope: 'Sure as Demoivre without rule or line.'

D.'s Formula is usually stated in the form $(\cos x + i \sin x)^n = \cos nx + i \sin nx$.

D.'s Hypothesis is an hypothesis on the duration of human life, formed by D., as he informs us in the preface of his *Treatise on Annuities*, some years after the pub. of the first ed. of his *Treatise on Chances*, on the inspection of Halley's Breslau Tables. Observing that the decrements of life at the middle ages were very nearly uniform, D. made an extension of this law to the whole of life, not thereby intending to assert that any such principle was correct for childhood and old age, but simply that the effect of the error upon the value of annuities at the middle ages of life would be trivial. The hypothesis is as follows: *Of 86 persons born, one dies every year, till all are extinct*. The remainder of 86 years, at every age, D. called the *complement of life*. The half of the complement of life is the average duration (commonly called the expectation); and the peculiarity of D.'s Hypothesis is that, according to it, every person has an even chance of living the average time of people of his age, which is not true of other tables. The Northampton Tables certainly do nearly coincide with this law at the middle periods of life, but the Carlisle and most other tables differ materially from it.

Demonetisation, term used in connection with currency in 2 senses. The first and more general sense is used for the divesting of money of a standard value (see BIMETALLISM). The second is the withdrawing of coin from circulation. This is done by proclamation stating that after a specified date a certain coin will not be legal tender.

Demonology, branch of religion which deals with spirits or demons. In every religion the presence of these spirits is acknowledged. Two chief classes of demons are recognised, though the distinction is not always clearly drawn. The first class consists of departed human beings who are regarded as still influencing their descendants. These are usually termed ghosts, and are capable of doing good or evil. The second class, usually called demons,

consists of spirits which never inhabited a body, and which are frequently derived from the powers of nature, and are conceived of as associated with the manifestation of that power. The distinction between good and evil spirits depends more upon the sphere of their action than upon their nature. Fire and disease are evil when they attack the individual, but beneficent when invoked against his enemies. As the idea of God evolved, so has the idea of the evil forces opposed to Him. In polytheistic religions, the many gods are balanced by a multitude of demons and spirits, each often having its especial sphere assigned to it. In monotheistic religions 1 God is usually opposed by 1 single evil spirit. Perfect dualism is found in Zoroastrianism, where every good is opposed by its evil, and Ormuzd is opposed by Ahriman. Similarly in Christianity and O.T. Judaism, Jehovah is opposed by Satan, and the hosts of the good angels are opposed by the hosts of the fallen angels. Here, however, we find the evil definitely placed in subordination to the good, a fact which is most clearly exemplified in Job, where Satan appears as a servant of God, whose permission he must ask before tempting Job. The gospels distinctly recognise the belief that disease was sometimes the result of possession by demons, and the early Church carried on Christ's method of expelling them. Exorcists long formed an active minor order, and the name still remains in the Rom. Catholic Church. The common opinion of the early Church was that the gods of all heathen nations were evil spirits who had usurped the place of God, an idea which found its greatest expression in Milton's *Paradise Lost*. In the N. lands they were further discredited by being made ridiculous. The Satan of the miracle plays was a fool whom everyone might outwit, the ancestor of the Elizabethan clown. The most elaborate system of D. is the Muslim, which is largely derived from that of the popular Judaism shown in the apocalyptic books. Belief in more or less malevolent spirits survived throughout the Middle Ages, and late examples of belief in witchcraft among the edue. may be found in Burton and Sir Thomas Browne, and both Addison (*Spectator*, 117) and Johnson (*Rasselas*, ch. xxxi) refer to it. Popular belief has not yet died. The belief in vampires is chiefly found in Slavonic lands, but many references to the succubi who consort with men in their sleep, and incubi, who consort with women, may be found everywhere. See Sir Walter Scott, *Demology and Witchcraft*, 1830; Roskoff, *Geschichte des Teufels*, 1869; E. B. Tylor, *Primitive Culture*, 1871; M. Conway, *Demology and Devil Lore*, 1879; P. Carus, *History of the Devil and the Idea of Evil*, etc., 1900; M. Summers, *The History of Witchcraft and Demology*, 1926, and *The Vampire: his Kith and Kin*, 1928; and G. Hubener, *Beowulf and German Exorcism*, 1935.

De Montherlant, H., see MONTHERLANT.
De Morgan, Augustus (1806-71), eminent mathematician, b. Madura in India.

Edu. at Cambridge, he was prof. of mathematics in London Univ. from 1828 till his death. De M. had strong ideas about the union of logic and mathematics, and in his series of papers entitled *A Budget of Paradoxes*, he discussed mathematical fallacies with much wit and the keenest logic. In support of a decimal coinage he drew up a report which was recommended by a committee of the House of Commons. He wrote treatises on almost every dept. of mathematics, on arithmetic, algebra, trigonometry, and differential and integral calculus, this last pronounced to be the most complete treatise on the subject ever produced in England. See life by S. E. de Morgan, 1882.

De Morgan, William Frend (1839-1917), artist and novelist, b. London, son of the above. Educ. at London Univ., he studied art at the Royal Academy School, where he formed friendships with Morris, Rossetti, Burne-Jones, and others of the Pre-Raphaelite (q.v.) circle. For 40 years he devoted himself to the designing of artistic pottery and stained glass. In 1871 he estab. a pottery industry in Chelsea, and rediscovered the process of making coloured lustres; and in 1888 he erected a factory at Fulham. It was only when he retired from this at the age of 67 that he started producing novels in imitation of his idol, Dickens. *Joseph Vance*, 1906, was a great success, and in the remaining years of his life he wrote 6 more novels—*Alice-for-Short*, 1907, *Somehow Good*, 1908, *It Never Can Happen Again*, 1909, *An Affair of Dishonour*, 1910, *A Likely Story*, 1911, and *When Ghost Meets Ghost*, 1914. Two novels which he left unfinished were completed by his wife, one of them, *Old Man's Youth*, being largely autobiographical. See A. M. W. Stirling, *De Morgan and his Wife*, 1922.

Demosthenes (384-322 BC), Athenian orator, possibly the greatest of all time, b. in the deme of Paconia, in Attica, his father being a wealthy citizen. His father d. early, leaving much wealth to his children, but the guardians abused their trust. D. prosecuted them on coming of age, and his success on this occasion led to his decision to embrace public life. He underwent a most strenuous course of training to overcome an impediment of speech; but the picturesque details of that training, in the course of which he is said to have filled his mouth with pebbles and vied with the thunder of waves on the seashore, rest upon no very cogent evidence. His first appearance in politics was made in the year 354, when in his speech 'On the Navy Boards' (Symmories) he discouraged attack on Persia. To 352 belongs his speech 'For the Megalopolitans,' but his fame was not achieved till the next year, when in his First Philippic he made a strenuous attack on Philip of Macedon, urging his countrymen to cease their mutual jealousies and unite against this common menace. In 349 D. delivered his 3 Olynthiacs, in which he urged the Athenians to defend Olynthus against Philip. In 347, however, Philip gained this last Athenian outpost,

and D. was one of the ambas. sent to negotiate peace with the Macedonian king. The probity of the orator himself was above suspicion; but bribery in other quarters was more successful, and the conqueror was allowed to possess himself of Thermopylae. Peace was concluded in 346, but Philip's intrigues went on continually, and D. gave himself to the work of denouncing them in no measured terms. To this period belong his Second and Third Philippics (344 and 341). On the same work of counteracting Macedonian influence he had gone as ambas. to the Peloponnese in 344. The famous speech 'On the Affairs of the Chersonese,' in the same year as the Third Philippic, forms with the latter oration D.'s crowning effort. When Philip again began a course of active aggression in 340, it was D. who rallied all possible forces against him and supported Gk hopes until the terrible disaster of Chaeronea (338). This ends the era of the

have held him as the greatest of all orators. There is a complete ed. of D.'s orations by S. H. Butcher and W. Rieu (3 vols., 1903-31). See A. W. Pickard-Cambridge, *Demosthenes*, 1914; W. Jaeger, *Demosthenes, The Origin and Growth of his Policy*, 1938.

Demosthenes, son of Alcisthenes, an Athenian gen., prominent in the Peloponnesian war. In 425 he garrisoned Pylos, a rocky promontory on the Lacedaemonian coast, and defended it against the Spartans till relieved by the Athenian fleet, when he obliged the Spartan force on Sphacteria, a neighbouring is., to capitulate. Shortly afterwards he gained Nicaea, but failed to gain Megara. In 413 he and Eurymedon were sent to the relief of Nicias, who was in difficulties at Syracuse. He made a night attack on Epipolae, but was defeated, and counselled Nicias to retreat. The manoeuvre was postponed until too late, and the Athenians were totally defeated in 2 battles and Nicias and D. taken prisoners. Both were put to death.

Demotic Writing. The terms demotic (from Gk *demotikos*, 'of the people') and enchorial (from Gk *enkhōrios*, 'of the country') denote that this Egyptian writing was used for the purposes of daily life. Indeed, while Herodotus (II, 36) employs for it the term *demotika grammata*, 'vulgar characters,' (Clement of Alexandria (*Stromata*, v. 4), of about AD 200, who gave us the names hieroglyphic and hieratic, calls the D. W. *grammata epistolographika*, 'epistolary characters,' that is the script used for writing letters.)

D. was a development of hieratic, which was the cursive form of Egyptian hieroglyphic writing. Externally the D. signs became so cursive that their aspect had nothing in common with that of the original hieroglyphic characters. The difficulty in reading D. is increased by the fact that 2 or more hieratic signs were combined into a single D. character, thus creating a kind of monogram.

However, as a system of writing, D. was no more advanced than hieroglyphic and essentially it consisted of ideograms and phonograms: the former representing concrete objects or abstract ideas without expressing their names, the latter representing spoken words or phonemes. On the other hand, in order to eliminate ambiguities and confusion in interpreting the texts, the number of *homophones* (i.e. signs having the same sounds, but representing different objects and thus being of different form) was so reduced that generally speaking the single phonemes could only be represented by 1 or 2 different characters. Unlike hieroglyphic and hieratic, which could be written in different directions, D. always was written horizontally, from right to left. D. originated in the 8th and 7th cents. BC, and gradually developed till it received its final form in the 4th cent. BC. In the time of the Ptolemys, Alexander the Great's successors in Egypt, which they ruled until the occupation of Rome, D. was considered to be of greater importance than hieratic. Proclamations and documents of general importance were then

DEMOSTHENES

political activity of D. Henceforth he devoted himself chiefly to municipal affairs. So highly was he held in honour that, in 336, Ctesiphon proposed that he should be presented by the state with a gold crown. To prevent this bill passing the Assembly, Aeschines gave notice that he would proceed against Ctesiphon for introducing an unconstitutional measure. He procrastinated until 330, when his speech 'Against Ctesiphon' evoked from D. the immortal oration 'On the Crown.' In 324 the orator was accused of appropriating 20 talents, and was imprisoned. He escaped, and was recalled in the next year to support the Athenian league against Antipater. On the failure of this, Antipater demanded his surrender, and he fled to the temple of Poseidon on the is. of Calauria, and took poison. The private life of D. was of the noblest, and his strenuous and unselfish exertions in the cause of his country entitle him to a high place among the great men of antiquity. All critics since his own day

set forth in hieroglyphic, D., and Gk. In the famous Rosetta Stone, D. occupies the middle portion of the *stèle*.

The latest D. document which can be dated belongs to AD 476. It was the end of the Egyptian scripts, but the Egyptian language did not die out. It continued to be used as *Coptic*, for which a new alphabet was created. Out of its 32 letters 25 were borrowed from the Gk, and 7 signs were taken over from the D. W. for Egyptian sounds which could not be expressed by Gk characters. See W. Spiegelberg, *Demotische Grammatik*, 1925; E. Seidl, *Demotische Urkundenlehre nach den frühptolomäischen Texten*, 1937; S. R. K. Glanville, *Catalogue of Demotic Papyri in the British Museum*, 1939; and D. Diringer, *The Alphabet, a Key to the History of Mankind*, pp. 66-71, 1948.

Demotika, see DIDYMOTICHION.

Dempsey, Sir Miles Christopher (1896-), soldier, b. Hoylake, Cheshire; educ. at Shrewsbury School, from which he went to the R.M.C., Sandhurst, in 1914; commissioned in 1915, and saw service in France and Iraq during the First World War. He received his majority in 1932, and was promoted to the rank of lieutenant-colonel in 1938. He distinguished himself in the early part of the Second World War by the rearguard action which he conducted to defend the evacuation of the Brit. Army from Dunkirk. He later commanded the 13th Corps of the Eighth Army in N. Africa, and was also one of the Brit. commanders in the invasion of Europe in 1944. In the subsequent campaign in France and Germany he led the Second Army with the rank of lieutenant-general, and entered Germany with his troops in Jan. 1945. Awarded D.S.O., 1940; M.C., K.C.B., 1944; and K.B.E., 1945. Commander-in-chief Allied land forces, SE. Asia, 1945-6; commander-in-chief Middle E., 1946-7. Gen., 1946. Retired 1947.

Dempsey, William Harrison (Jack) (1896-), boxer, b. Manassas, Colorado, of Scottish, Irish, and Amer. extraction. Originally a hard-rock miner, D. fought his first professional fight in Colorado in 1914. By defeating Willard in 1919 he became world heavyweight champion, and in 1921 he enhanced his reputation by knocking out Carpenter at Jersey City. In 1922 he toured Europe, and in 1923 a terrific contest with Firpo ended in Firpo's defeat. D. defeated every boxer of note until in 1926 he lost his title to Tunney; a year later he made a gallant effort to regain it, but was defeated on points after 10 rounds.

Demurrage, allowance made to a shipowner by the freighter for the detention of the ship in port beyond the specified time of sailing. A certain number of days, called lay days or lie days, are allowed for receiving and discharging cargo, and it is usually stipulated that the freighter may detain the vessel, after the expiration of these days, on payment of so much *per diem* for overtime. The D. ceases as soon as the vessel is cleared ready for sailing, though she may be prevented from doing so by adverse weather, etc.

Demurrer. In the language of pleadings in an action at law, D. signifies an issue upon a matter of law as opposed to fact, i.e. it confesses the facts as stated by the opposite party to be true, but avers that those facts disclose no cause of action or ground of defence. A D. is now known technically as an objection in point of law. In criminal law D. is an objection by the accused that the facts, even if true, do not in law constitute the crime with which he is charged. Such a D. seldom occurs in practice.

Demy: 1. See PAPER.

2. (i.e. half-fellow) Name given to the holder of a scholarship at Magdalen College, Oxford.

Denain, Fr. tn in the dept of Nord, on the Scheldt canal. An obelisk marks the scene of the decisive victory of Villars over Prince Eugene in July 1712, during the war of the Sp. Succession (see under SPAIN, *History*). D. has coal-mines and ironworks. Pop. 24,900.

Denarius: 1. Rom. silver coin, first minted c. 187 bc, equal at first to 10 asses, whence its name, but afterwards considered equal to 16 asses, when the weight of the as was reduced in consequence of the scarcity of silver. The value of the D. under the republic was rather more than 8d., and at a later period about 7d. The gold D. was worth about 25 silver denarii. The D. of the Empire sank by successive debasements to something little better than copper.

2. Also a weight. The Rom. lb. (libra) contained 96 denarii, the oz. 8, and the D. 3, scruples.

Denbigh, Rudolph Robert Basil Aloysius Augustine Fielding, 9th Earl of (1859-1939), lord-in-waiting to Queen Victoria and to King Edward VII from 1897 to 1906. He is chiefly remembered for his activity in the introduction and development in Britain of the sugar-beet industry. His efforts both by propaganda and in Parliament resulted in the erection of the first sugar-beet factory, at Cantley, Norfolk, in 1912.

Denbigh, or Denbighshire, co. of N. Wales, on the Irish Sea, and between the Dee and the Conway. Area 664 sq. m. It contains the fertile valleys of Llangollen and the Clwyd. The whole surface is rugged and mountainous. The rocks are chiefly Silurian clay and graywacke slates, with some granite and trap, and bands of Devonian, Carboniferous, and Permian strata. Coal, lead (yielding some silver), iron, limestone, grindstone, and flagstone abound. D. yields excellent dairy produce, and is well timbered. Chief tns: Colwyn Bay, Denbigh, Ruthin, Wrexham, Llanrwst, Abergelle, Holt, and Ruabon. Rivs.: Dee, Conway, Elwy, Clwyd. Tumuli and other pre-Rom. remains still exist. Pop. 170,699.

Denbigh, co. tn of Denbighshire, 30 m. W. of Chester, but the assizes are held at Ruthin. Stands on a steep limestone hill, which is crowned by an anct castle on the site of a fortress erected by William the Conqueror. The gatehouse is one of the finest in England, from whence can be had a magnificent view of the vale and

hills. The newer part was built at the bottom of the hill, after the destruction of a great part of the old tn, about 1550. In 1645 Charles I took refuge in the castle after the battle of Rowton Heath. Pop. 8127.

Den Bosch, see *S'HERTOGENBOSCH*.

Dender, riv. of Belgium. Its source is in the prov. of Hainaut, and its course is N. and N.E. through Hainaut and E. Flanders. It joins the Scheldt at Dendermonde, after passing Ath, Grammont, Ninove, and Alost, and is navigable from its junction with the Scheldt to Ath.

Dendera (Gk *Tentyra*, Coptic *Tentore*), vil. in Upper Egypt opposite Kena, once a city, the centre of the worship of the cow-goddess Hat-hor (h.v.) from the Pyramid Age. The temple was built in the 1st cent. bc. by the later Ptolemys and finished by Augustus; much of the decoration is later. It is one of the most complete temples in Egypt, and famous for the Zodiacs on the ceilings, in which the crab is represented as a scarab; one zodiac from a chamber on the roof was removed in 1820 to the Bibliothèque Nationale in Paris.

Dendermonde (Fr. *Termonde*), tn in the prov. of E. Flanders, Belgium, near the junction of the R. Dender and the Scheldt. In 1667 the inhab. repulsed Louis XIV by opening the sluices and inundating the whole dist. He said that only an army of ducks could take it, but Marlborough did take it in 1706. On 4 Sept. 1914 the Germans entered it and damaged or destroyed 1200 out of 1400 houses, after looting them all. The Belgians reoccupied it on 10 Sept., and it was bombarded and retaken by the Germans on 16 Sept. The Gothic 15th-cent. church of Notre Dame was much damaged by the bombardment, and the tn hall of the 14th to 16th cents. was burned. The imposing Palais de Justice adjoins it. Pop. 9600.

Dendrites, or **Dendritic Markings**, geological term. Stains usually black or brown, and branching like fern fronds. They are generally found in the joints and at the div. planes of rocks. They are caused by infiltration of iron and manganese solutions into cracks from whence they have afterwards evaporated. Like markings are also seen in agate or chalcedony, forming a species of moss-agate.

Dendrochronology, the counting and examination of the ann. growth-rings in timber with the object of determining its relative age and the various changes in climate during its growth. It has been largely used in Arizona in the dating of Indian archaeological remains and its use is extending to other areas and periods. See *ARCHAEOLOGY*.

Dendromys (Gk *dendron*, tree, *mys*, mouse), a genus of rodents, belongs to the family Muridae, which comprises mice, rats, voles, and other well-known creatures. It consists of about half-a-dozen species dwelling in Ethiopia. *D. typus* (or *mesomelas*) is about 8 in. long, over half its length belonging to its strong, slender, prehensile tail. In colour it is reddish-brown above, whitish beneath, and its habitat is the branch of a tree,

where it constructs a nest and rears its young.

Dendrophis, genus of tree-snakes of the sub-family Colubrinae, all of which are non-venomous and harmless. The keeled scales along the back are wider than those along the flanks, and the snakes glide up trees in almost a straight line. The genus has representatives in Australia and Africa.

Dene Holes are narrow vertical shafts opening out into double or trefoil or double trefoil caves sunk through the overlying Thanet sand into the chalk rock in certain dists. of Kent and Essex, particularly on the escarpment of the N. Downs and near the Thames estuary. Their use and age has been much disputed. While some may possibly be of pre-Rom. date, others are much more recent, and D. H. have in fact been made within living memory. Many holes were certainly chalk wells or marling pits. Other uses which have been suggested are as hiding places from the Viking raiders, underground silos, and even flint mines of the Neolithic period. Probably more nonsense has been written about D. H. than any other archaeological problem.

Denfle, Friedrich Heinrich Seuse (1814-1905), Austrian priest and historian, b. Imst, Tyrol, son of Johann D., schoolmaster and organist. Studied at Brixen. Joined Dominicans, 1861. Received holy orders, 1866; visited Rome; became prof. of theology in the Dominican monastery at Graz, and famous as preacher. Archivist to the Vatican, 1883; prepared new ed. of St Thomas Aquinas. With P. Ehrle ed. *Archiv für Literatur und Kirchengeschichte des Mittelalters*, 1885-1900. His *Luther und Luthertum in der ersten Entwicklung*, 1904-9 (completed by Weis), aroused much controversy. See lives by M. Grabmann, 1905; and A. Troger, 1908.

D'Enghien, Louis Antoine Henri de Bourbon Condé, Duc, see *ENGHIEN*, Duc d'.

Dengue, or **Breakbone Fever**, or **Dandy Fever**, acute epidemic virus disease, peculiar to tropical and sub-tropical countries. In many ways it resembles rheumatic fever and influenza. The typical case begins with pains in the back, limbs, and joints, a rising temp. following rigors. Before the temp. falls an itching rash appears; the temp. generally falls about the 5th day. There is, however, an intermittent type in which the temp. sinks on the 3rd and 4th days, and rises on the 5th before its final lysis. Extreme weakness follows, and heart failure has to be guarded against by the use of stimulants and nourishment, and also much rest; but it is rarely fatal. D. is transmitted by mosquitoes of the genus *Aedes*, *A. aegypti* and *A. albopictus* being the 2 mainly incriminated.

Den Haag, see *HAGUE*, THE.

Denham, Sir John (1615-69), poet, b. Dublin. He was educ. in Dublin and at Trinity College, Oxford, where he gained the reputation of being 'a slow, dreaming young man, and more addicted to gambling than study.' In 1634 he married and went to live at Egham,

Surrey. At the outbreak of the Civil war he was high sheriff of Surrey, but he had no military ability, and surrendered Farnham Castle, of which he was governor, to the parliament. After a short imprisonment he joined the king at Oxford, and engaged in many secret services for him. In 1665 he temporarily lost his reason, according to common report on account of the duke of York's attentions to his wife. D. was a better poet than soldier or diplomat, and his poem *Cooper's Hill*, 1642, describing the scenery of the Thames Valley at Egham, was the model of Pope's *Windsor Forest*. Among his other works were *The Sophy*, 1642, a tragedy in 5 acts; *The Anatomy of Play*, 1651, a prose tract against gambling; *The Destruction of Troop*, 1656, a paraphrase of part of the second book of the *Aeneid*; *Directions to a Painter*, 1667, a bitter satire on the shameful conduct of the Dutch war; and a beautiful elegy on Abraham Cowley, 1667. His *Poetical Works* were ed. by T. H. Banks in 1928.

Den Helder, see HELDER.

Denia (anc. *Hemeroscopion*; Rom. *Dianium*), Sp. tn in the prov. of Alicante, on the Mediterranean. Founded by the Phoenicians, it was important in Rom. times, and under the Moors its pop. was 50,000. Its prin. industries are toy-making and fruit preserving. Pop. 12,000.

Denier, formerly the unit of silver coinage in France, worth $\frac{1}{20}$ of the *lièvre d'argent*. Cf. the Lat. *denarius* (first issued c. 187 bc, worth 10 asses). From the 16th cent. it was a copper coin of insignificant value, worth $\frac{1}{4}$ of a sou.

Denikin, Anton (1872-1947), Russian gen. of humble origin; entered the army 1887, became a divisional commander in S. Army in the early part of the First World War. At the Russian Revolution he joined Kornilov (q.v.) and was later imprisoned with him. Both escaped and gained the shores of the Black Sea in the Caucasus. Here they joined Gen. Alexeyev's volunteer army. Kornilov d. in Mar. 1918, and D. commanded the force which opposed the Bolsheviks in S. Russia. On Alexeyev's death D. became leader of the anti-Bolshevik forces in S. Russia. D., though a good soldier, was not equal to the occasion as a politician, and he vainly tried to set up a military dictatorship. By the summer of 1919 his forces became demoralised, and when the Bolsheviks attacked them in Nov. 1919 they broke up completely. After the collapse of his army D. fled to Istanbul. He was offered asylum in England, but preferred to go to Brussels. Later he lived in France and finally went to America, where he d. His conduct of the campaign which ended in the 'White' retreat from Orel in 1919 has been criticised on grounds of strategy. That he failed was due in part to his own lack of the indefinable qualities which make a leader of men, in greater part to the extraordinary conditions of the civil war. He pub. sev. vols. on the hist. of the Russian Revolution and Civil War. Two of these, *The Russian Turmoil*, 1922, and *The White Army*, 1924, appeared in Eng.

Deniliquin, municipal tn of New S. Wales, Australia, situated on the Edwards R., in the co. of Townsend, about 490 m. SW. of Sydney. Pop. 4910.

Denim, a coarse twill cotton overall cloth.

Denis. Denys, or Dionysius (1st cent. AD). As a member of the Areopagus he was converted by St Paul (Acts xvii. 34); and early writers say that he became first bishop of Athens, dying in 95. Much later he was confused with St D., first bishop of Paris and patron of France (feast 9 Oct.), and the writings of a 5th-cent. Syrian monk (pseudo-Dionysius) were falsely attributed to him. His feast is likewise on 9 Oct., though Benedict XIV intended to suppress it.

Denis, St, see ST DENIS.

Denison, George Taylor (1839-1925), Canadian soldier and author, b. Toronto, grandson of Lt-Col. George Taylor 1). (1783-1853), who raised the volunteer corps known as Denison's Horse. Called to the Bar, 1861; became a lieutenant-colonel in the active militia, 1866. Served against the Fenian raid of 1866 and the rebellion of 1885. In 1877 he was appointed police magistrate of Toronto. His prin. work, *A History of Cavalry*, 1877, is a standard book and has been trans. into Russian, Ger., and Jap. He also wrote *The Fenian Raid at Fort Erie*, 1866; *Modern Cavalry*, 1868; *Soldiering in Canada*, 1900; *The Struggle for Imperial Unity*, 1909; and *Recollections of a Police Magistrate*, 1920.

Denison, city of Grayson co., Texas, U.S.A., 3 m. S. of Red It., with railway repair shops, mills, oil refineries, and wagon works. Pop. 17,500.

Denizen (through Fr. from Lat. *de intus*, from within), one who obtains through letters patent certain of the privileges of a Brit. subject. When abroad he enjoys the same advantages as a Brit. subject.

Denizli, or Denizli, il of Asiatic Turkey, and tn of same name, about 50 m. S. of Alashehr, and connected with Izmir (Smyrna) by rail. It is the trading centre of an important agric. region, manufacturing textiles; D. exports barley, opium, cotton, and nuts. The ruins of Laodicea are near by. Pop. (II) 368,853; (tn) 22,000.

Denman, Thomas, 1st Baron Denman (1779-1854), lawyer, called to the Bar in 1806, and entered Parliament in 1818. In 1820 Queen Caroline made him her solicitor-general. In that capacity, with Brougham, who was attorney-general, he took an active part in the queen's defence before the House of Lords, and compelled the gov. to withdraw the Bill of Pains and Penalties. D. became attorney-general in 1830, and was lord chief justice from 1832 until 1850, when ill-health compelled him to resign. He was an able though not a brilliant judge. See life by Sir J. Arnold, 1873.

Denman College, Abingdon, Berkshire, England, college of the National Federation of Women's Institutes (q.v.).

Denmark (Dan. *Danmark*), kingdom of N. Europe, and the smallest of the N. states, lying between 54° 34'-57° 45' N.

lat. and $8^{\circ} 5' - 15^{\circ} 12'$ E. long., consisting of a part of the European mainland (the main and N. part of the peninsula of Jutland) and the is. of Zealand (Dan. Sjælland), Fyn, Lolland, Falster, Møen, Langeland, Bornholm in the Baltic Sea, and sev. smaller is. The outlying parts of D. comprise the self-governing Faeroe Is. and Greenland, which by an amendment to the constitution in 1953 ceased to be a colony and became part of D. itself. Iceland (q.v.) became an independent rep. in 1944. Jutland is separated from Norway by the Skagerrack, and from Sweden by the Kattegat. The is. of Fyn and Zealand make 3 channels—the Little Belt, the

Royal Danish Ministry of Foreign Affairs, Copenhagen

FREDERIKSHAVN CUTTERS PUTTING
OUT TO SEA

Great Belt, and the Sound, which is the quickest route to the Baltic. The surface of Jutland presents an almost continuous plain, only a few ft. above sea-level, but the flatness of the landscape is relieved by the gentle slopes of wooded hills. The highest point is Ejler Baynehoej, which reaches a height of about 560 ft. Jutland is thus a part of the great European plain. The W. coast of Jutland is low and sandy, with long spits of sand fringing shallow lagoons. The W. coast is thus without adequate harbours, and its shoals and sandbanks are a peril to mariners. The Lim Fjord, which is quite unlike the fjords of Norway in character, cuts Jutland in two. The prin. fjords and inlets of D. are the Ise Fjord, Roskilde-Fjord, and Ringkøbing-Fjord. As no inland

point in Jutland is more than 50 m. distant from the sea there are no rivs. of importance. The Gudenaa, the longest, is only 85 m. long. There are many small lakes and well-constructed canals, which compensate for the dearth of riv. transport. The climate of D. is rendered temperate owing to the proximity of the sea on all sides, and resembles that of the E. of Scotland. The cold in the is. in winter is less severe than in Jutland. There are no deposits of coal or minerals of much value in D. The W. portions of Jutland consist of barren moorland to some extent, but the E. div. is very fertile and rich in pasturage.

Agriculture and Industry. About 95 per cent of the total land area is productive. Much of the former heath land has been reclaimed since the end of the last century. There are over 200,000 farms, most of them belonging to co-operative societies, which were founded by the farmers themselves. One-fourth of the pop. live exclusively by agriculture, and about one-half by manufs. and trade. The chief plant products are wheat, rye, oats, barley, grass, roots, and potatoes. Cattle, sheep, horses, pigs, and poultry are reared; bacon, butter, cheese, and eggs are produced in great quantities, with a large surplus for export. Beet-sugar and margarine are also manufactured. The fishing industry is increasing in importance. Woollen, cotton, and linen goods are manufactured, but mainly for home supply. Paper-making, iron-smelting, and porcelain manuf. are thriving industries. D. has a unique situation with regard to commerce. It is the key to the Baltic, and is in a good line of communication with all the chief ports of Europe. The Danes have from very ant. times been a great sea-faring people, and in temperament are well suited for commercial life. The chief exports are agricultural, including bacon, butter, cheese, eggs, hides, skins, horses, and cattle; and from Greenland and the Faeroe Is. dried fish, elderdown, feathers, and oil. About half of the exports go to Britain, which buys most of the butter and bacon. Another important trading partner is the Federal German Rep. The chief imports are iron, coal, and other minerals, as well as oils, timber, woollens, silks and cottons, hardware, fruit, tea, coffee, cereals, feeding stuffs and fertilisers, oil seeds, and colonial produce. In 1955 a quarter of all imports came from Britain, the chief items being coal, coke, manufactured fuel, iron and steel, cotton yarn goods, and woollen and worsted yarns and manufs.

Population. The area of D., including the is. in the Baltic, is 16,576 sq. m., and the pop. is 4,448,409. Copenhagen (København), on the is. of Zealand, is the cap.; pop. 753,360.

Helsingør (pop. 23,900), with its strong fortress of Kronborg, commands the Sound. Odense (105,915) is the chief tn on the is. of Fyn. Aalborg (83,210), on the Lim Fjord, is an important mkt tn and canal front. Other tns are Aarhus (118,945), Horsens (36,570), Randers

(41,720), Esbjerg (50,920), Fredericia (27,910), Kolding (33,170), and Vejle (30,760). The Faeroe Is. area 540 sq. m., have a pop. of 31,780. A wide measure of autonomy was granted in 1947 to the people of the Faeroe Is.

Religion. The estab. church is the Evangelical Lutheran Church, introduced in 1536, at which date the church revenue was taken over by the Crown. Great tolerance is given to all religious sects and no political inconvenience is experienced by the heterodox.

Education. This was made compulsory in 1814, and is free. A notable feature of adult education is the system of Folk High Schools (q.v.), instituted in 1844 at

Faeroe Is. and 2 in Greenland. In the present Folketing the major parties are the Social Democrats, the Liberals, and the Conservatives. The franchise age was lowered from 25 to 23 under the new constitution in 1953.

Finance. The monetary unit is the *krone* of 100 *ore*. Following sterling it was devalued in Sept. 1949, and its present value is 1s. 1d. The National Bank of D., estab. in 1813 and transformed from a private limited company into a state-controlled institution in 1936, has the sole right of issuing notes.

Communications. D. possesses about 3100 m. of railways, over half of which are operated by the State, and the rest

Danish Agricultural Producers' Information Service
PACKETING BUTTER STRAIGHT FROM THE CHURN AT A CO-OPERATIVE DAIRY
IN DENMARK

Rødding. The univ. of Copenhagen was founded in 1479, and since 1875 admits both men and women students, now numbering about 5000. The univ. of Aarhus, founded in 1928, has 1800 students; the technical univ. of D. at Copenhagen has 1900 students. There are many training colleges, the Royal Academy of Music and that of Fine Arts, and colleges of engineering, navigation, and domestic science.

Government and Constitution. Since 1660 the throne has been hereditary, and the power of the monarch is limited by the constitution. The 2-chamber system was abolished by the new constitution in 1953, when the *Rigsdag* was limited to 1 chamber, the Folketing, consisting of 179 members, 2 of whom are elected in the

by companies in which the State or municipalities have an economic interest. Compared with other countries the railway network in D. is highly developed, and this holds whether measured by the area of the country or by the number of inhab. Ferry services connect various parts of the country, extending to the Swedish and German coasts. Motorisation has made considerable headway, and in proportion to the number of inhab. D. has, next to France and Great Britain, more motor vehicles than any other European country. D. occupies an excellent position in the centre of the great N. European countries, and has an important transit trade. The Scandinavian Airlines System (SAS) was set up in 1945 by the air services of D.,

Norway, and Sweden. Copenhagen is one of the leading air-traffic centres. The Dan. merchant marine has over 2000 vessels—steamships, steam tankers, motor-ships (about four-fifths), and motor tankers. The postal, telegraph, and national telephone services, as well as broadcasting, are State-operated. In 1954 television was introduced.

Defence. Military defence is based on compulsory national service. The navy consists of coastal destroyers, frigates, motor torpedo-boats, submarines, mine-layers, and mine-sweepers. Coastal defences comprise coast fortifications. The air force mainly consists of jet-propelled aircraft. In 1948 a home guard was estab.

Negotiations with Sweden and Norway for a Scandinavian defensive alliance in 1949 were unsuccessful, and D. became a member of N.A.T.O.

History. The hist. of D. during the first 9 Christian centuries is generally obscure, despite considerable archaeological discoveries made during the past 50 years, and much information must be derived from saga and legend. The Danes claimed origin from Dan, and tradition gives Zealand as being the original home of these peoples, and certainly a religious sanctuary. Pliney makes the earliest reference to this country, and further references are made in Tacitus. The Danes began to achieve European prominence during the 9th cent. With the Norwegians they became known as Vikings and sea-rovers, and it is as Vikings that the Frankish chronicles of the time of Charlemagne make mention of them; whilst during the 9th cent. the stories of their raids and the deaths of their kings are mentioned as events in the hist. of Scotland and of England.

The hist. of D. becomes less obscure about the beginning of the 9th cent. Attempts were made from the great Ger. Sees to convert the Danes, whose kings began to be recognised by the other kings of Europe. From about the year 800 almost to the end of the 15th cent. the name of Dane was feared throughout Europe. To the Litany was added the new phrase 'From the fury of the Dane, Good Lord, deliver us.' From the reign of Charlemagne to the settlement of Rollo in France, Europe was disturbed everywhere by the raids of these pirates of the N. During the 9th cent. many efforts were made to convert the Dane, but it was not until well after the middle of the 10th cent. that we may regard D. as having been in any sense fully converted to Christianity. During the 10th cent. D. tried to extend her ters.; parts of Germany were seized, especially the mouths of the rivs. During the reign of Canute the Great the whole Scandinavian peninsula for a time became one, but the attempt to dominate England, started by Sweyn and continued by Canute the Great, failed after Canute's death.

The hist. of D. during the 11th and 12th cents. is troublous and complicated. Between the death of Canute the Great and the accession of Valdemar the

country was harassed by internal troubles, and by continual disputed successions. With the accession of Valdemar I D. began to become a really strong and consolidated kingdom. The country was the most fertile and the nearest to W. civilisation of the countries of Scandinavia. This gave it advantages which it was not slow to use. D. gradually became the leading nation of the Scandinavian peninsula. In 1241 Valdemar II d., and throughout the 13th and 14th cents. civil war and constitutional struggles continued. The nobles gradually became more powerful than the king. The monarch was shorn of many of his prerogatives. The nobles gained charters, but used their power simply for the increase of their own wealth. On the death of Christopher II (1332) D. was torn by internal struggles, and was on the point of total disintegration; but the royal power was re-estab. by Valdemar IV. Under his daughter Margaret D., Norway, and Sweden were united by the union of Kalmar (1397). This union benefited only D., and was highly unpopular in the other 2 countries. Further, it threatened the power of the Hansatic League, with the result that D. found herself involved in a long war with Holstein—the work of the league. Under Christian I (of Oldenburg) both the Dan. Slesvig and the Ger. Holstein were incorporated in D. (1460), and the king had to promise that the 2 dukedoms should remain united for ever. Once again the authority of the Crown began to deteriorate. The monarch steadily lost his power to the landowners, who became the aristocracy of the 15th cent., and the peasants were reduced to mere serfs.

During the 15th cent. the union of the 3 kingdoms was broken up. Norway remained with D.—she was by far the poorest of the 3 kingdoms and had been practically depopulated by the Black Death. Sweden was still for a time nominally ruled by the Dan. kings, and D. was still the leading power of the 3 kingdoms, but during the early 16th cent. the union received a fatal blow in a massacre by Christian II at Stockholm (1520). From that time the Swedes were the irreconcilable foes of the union. Christian II, however, attempted to establish a strong and well-governed kingdom. This reign coincided with the Reformation in Europe, and finally he was driven into exile, and his uncle, Frederick I, became king. Sweden also at this time was separated for ever by the election of Gustavus Vasa to the throne of that country. The reign of Frederick I was a period of transition, but during the reign of his son, Christian III, the Reformation doctrines were definitely estab. in D. The townspeople and the peasants attempted a rising in 1534-6 against the nobility, but they were denounced by the assembly of lords, who also dealt a final blow at the Rom. Catholic Church in D., the lands of the bishops being handed over to the king and the lords. A new church ordinance was drawn up and approved by Luther, and in 1537 the Dan. Church became entirely

Protestant. The power of D. increased. During the 16th cent. D. was one of the great powers of Europe, and we may well regard the reigns of Frederick II and Christian IV as the period of D.'s greatest strength.

The accession of Christian IV marks a period which may be aptly termed transitional. The power of the king, although nominally very great, was in reality limited by the liberties and privileges of the nobility, and by the increasing liberal tendencies of the burghesses. D. was, above all else, a great Scandinavian power, and she still possessed Norway. This led her into continual disputes with Sweden and also with the maritime nations, the Netherlands and England, who coveted the North Sea fisheries. D. exploited her controlling position at the entrance and exit of the Baltic by levying a duty on the cargo of all ships passing through the Sound. Before the end of the reign D. had begun to lose to Sweden some of her ters., and from that time her possessions continually grew smaller. The next king, Frederick III, although still further shorn of his royal powers, was nevertheless imbued with an idea of winning back the lost ters. In this he was steadfastly supported by his people, and finally, when Charles X seemed to be surrounded by insuperable difficulties in Poland, D. rushed to war. She was defeated and crushed by the Swedes, the last campaigns of this war forming one of the most dramatic episodes of the hist. of war, and D. was forced to sign a disastrous peace at Roskilde in 1658. This was followed by a second war with Sweden, and this time the terms of the treaty were rather easier for D.; much that she had given up was restored, but her Swedish provs. were lost, and the dominion of the N. passed out of her hands for ever. The war had the further result of removing the privileges from the nobles, and finally, after much intrigue and a threatened *coup d'état*, Frederick III succeeded in forcing the council of the realm to recognise him as an hereditary monarch. Thanks to the burghers he was soon able to establish himself as an absolute monarch. From 1660 to 1848 Dan. kings ruled according to 'the king's law' without a parliament or an estates assembly. The change was on the whole beneficial to D. and of vast importance to Norway, which became prosperous and more energetic. During the reign of Christian V, and under the wise diplomacy of the Chancellor Griffenfeldt, D. seemed likely to become again a great European power. The ambitions of France and the alliance of that country with Sweden gave D. her opportunity. The chancellor played his hand with skill, and it was not until Sweden openly attacked Prussia that D. came definitely into the field as the opponent of the Fr. and Swedes. The fall of Griffenfeldt in 1676, however, paved the way for the humiliation of D., and the peace made in 1679 did not benefit D. at all, although on her had fallen the brunt of the battle.

During the early part of the 18th cent. she played an important part in the N.

war, in which Sweden, Hanover, and Prussia were involved, only to find at the end of it that Prussia and Hanover benefited by her territorial conquests, while she had to remain satisfied with financial compensation and the incorporation of the ducal part of Slesvig into the Dan. kingdom. For a time the country remained at peace, and a beginning was made in the attempt to end serfdom in D. During the 18th cent. it was mainly questions of land tenure and agriculture that troubled the Dan. statesmen. Attempts had been made to bring about relief by abolishing such services as militia service, but the price of corn still continued to fall and the peasantry still continued to emigrate. For a while reactionary measures were tried, and these for a short time had the desired effect. Efforts were made to restore the trading prosperity of the nation, and were not without success. Treaty after treaty was signed which gave D. great trading privileges, but still agric. conditions at home showed no change. Under the Bernstorffs matters improved, and before the end of the century D. had declared the importation of corn to be free and had practically emancipated her peasantry. The foreign policy of the century may be summed up in the word neutrality, and by studiously remaining firm to this policy she was enabled to steer clear of all the wars which Europe waged during this period. But it was also a close adherence to this policy, together with the domination of Russia, that resulted in 2 breaches with Britain.

In 1800 the armed neutrality of the N. threatened the power of Britain. Prussia, Sweden, and Russia leagued themselves together, and the latter power practically forced the acquiescence of D. Napoleon closed the continental ports and the Brit. Navy replied by blockade of W. Europe. When D. organised a convoy system to protect her shipping, Britain found it necessary to detach D., and so Parker and Nelson sailed for Copenhagen, where the Dan. fleet was destroyed and the fortifications dismantled. The second breach was caused by Napoleon's desire to close the harbours of the N. to Brit. trade. D. desired to remain neutral, and if this was not possible was resolved to attack even France; but a Brit. fleet was dispatched to take possession of the Dan. fleet, and at the same time to offer D. very generous terms. D. was prepared to be courted, but not to be coerced. As a result Britain took by force what she could not obtain by diplomacy, and D. became an ally of Napoleon and remained staunch to the end of the war. In 1814, by the treaty of Kiel, she lost Norway to Sweden, and in the following year, as duke of Holstein, the Dan. king joined the Ger. confederation, but refused to allow Slesvig to become a member of it, since it formed part of the Dan. kingdom. The position of D. during the period immediately following the Napoleonic wars was one of great poverty and distress. Essentially an agric. country, the falling price of corn impoverished her, and the loss of Norway,

although to a certain extent a relief, was by no means as great a relief as it seemed. One great reform was introduced during this period: the educational reform of 1814, which provided for the compulsory education of every child from the 7th to the 14th year. This reform was the forerunner of many liberal measures which led up to the granting of the democratic constitution in 1849. Absolute monarchy had ended. In Mar. 1848 the Ger. Holstein leaders demanded a free joint constitution for Slesvig and Holstein, while the Dan. National Liberals advocated a free constitution for D. and Slesvig and the separation of Holstein from Slesvig. The ensuing war between D. and Holstein had great international ramifications, and finally the protocol of London was drawn up by the great non-Ger. powers in 1850, guaranteeing the indivisibility of the Dan. monarchy. D. had to promise not to attach herself closer to Slesvig than to Holstein. However, in 1863 D. promised Holstein a new constitution of her own, while Slesvig was to have a *joint constitution with D.* Bismarck struck and D. lost both Holstein and Slesvig. The loss of Slesvig entailed a revised constitution promulgated in 1866. In 1901 the Farmers' party formed their first administration; but of greater ultimate political significance was the rise of the Dan. Social Democratic party during this period, though it did not yet succeed in gaining office. During the First World War D. succeeded in maintaining her neutrality, and by the treaty of Versailles it was decided to settle the Slesvig question by plebiscite. In 1920 N. Slesvig voted for D. by 75,431 votes to 25,329, and was incorporated with D. under the name South Jutland Provs.

In 1924 the first Social Democratic Gov. came into power with the assistance of the Radicals, who had governed the country during the First World War. After a Liberal interval in 1926-9 the Social Democrats ruled until the Second World War. D.'s position at the opening of the war was difficult. She early co-ordinated her policy of neutrality with that of the other Scandinavian states. Pledges were given by both Germany and Britain to respect that neutrality.

History during the German Occupation, 1940-5. Despite the non-aggression pact which Hitler had signed with D. on 31 May 1939, Ger. troops marched across the Dan. frontier on 9 April 1940. Heavy concentrations of Ger. forces on the Slesvig border had warned the Danes of the menace to their country, but they were powerless. After a short but fierce resistance the Social Democratic Premier Stauning gave in under strong protest. King Christian appealed to the country to show a dignified and correct demeanour to the Germans. People felt bound by loyalty to his request. The king's sense of reality and deep sentiment of responsibility offered a guarantee which no political leader in D. was able to counterbalance. A core of resistance hardened under the lead of J. Christmas Møller, Conservative leader and minister of com-

merce, but the Germans soon ousted him through the helpless Dan. Gov. Gradually effective power passed from Stauning to the collaborationist, Scavenius, the foreign minister, from whose policy Stauning consistently held himself strictly aloof. In a memorandum dated 9 April 1940 to the Dan. Gov. on the aims and purposes of their invasion the Ger. Reich gave all manner of specious promises, one of which was that they would respect the integrity and independence of D. The country was, however, economically fleeced; leading politicians were forced out of office and replaced by quislings; writers were arrested; and a censorship estab. The Germans also openly discussed the role which was assigned to D. under the New Order (q.v.), and which gave to D.

Royal Danish Embassy

THE BRIDGE ACROSS THE LITTLE BELT, CONNECTING JUTLAND AND FYN

merely the functions of a vassal state. D.'s 8 torpedo boats, her only naval assets, were taken by the Germans. The Dan. Army was reduced to the size and function of a mere police force. A Ger. attempt to force D. into a customs and currency union with Germany failed, notwithstanding the support of Scavenius, owing to the firmness of the king and the rest of the gov. Dan. agriculture and industry were pressed into the service of the Germans. Fortunately the most valuable part of the Dan. mercantile marine was out of the Dan. reach on 9 April 1940 and joined the Allied cause. Meanwhile a Dan. council had been set up in London as a rallying centre for Danes abroad who wished to fight for the Allies.

From the end of Aug. 1943 the Danes were openly at war with Germany.

Earlier the Scaevinius Gov., with the endorsement of King Christian, had rejected a Ger. ultimatum imposing all manner of restrictions on Dan. life and liberty. The Danes had always been convinced of Germany's ultimate defeat and chafed under the stigma of the great betrayal of 1940, which tricked them into apparent acquiescence in the Ger. occupation. Under the inspiring leadership of the Dan. Freedom Council, which maintained the closest liaison with supreme H.Q. Allied expeditionary force, the resistance movement, which had existed in D. ever since 1940, intensified sabotage against Ger. lines of communication and strategical

general election in 1947 the Social Democrats took over the administration as a minority gov. In 1945 D. entered U.N. In 1949 she signed the North Atlantic Pact and joined the Council of Europe.

Far-reaching constitutional changes have been made in D. in recent years. The constitution of 1953 abolished the 2-chamber legislature and the sole legislative chamber is now the Folketing. A new succession law was linked to the new constitution. This restricted the succession right to descendants of Christian X and his wife, and allowed women to succeed to the throne (sovereigns' daughters ranking after sons). This has enabled

Royal Danish Ministry of Foreign Affairs, Copenhagen
THE NEW TOWN HALL IN COPENHAGEN

establs. The clandestine press fl., notwithstanding all the efforts of the Germans to suppress it. Many Danes d. at the hands of the Gestapo.

On 5 May 1945 the Ger. armies in D., NW. Germany, and the Netherlands surrendered to F.M. Montgomery, who during a visit to Copenhagen later in the month declared that the Dan. resistance movement had been 'second to none.'

Post-war Period. On the eve of the liberation a coalition gov. had been formed by representatives of the traditional political parties and the resistance movement under the leadership of Vilhelm Buhl, with J. Christmas Møller as minister for foreign affairs. In Oct. 1945 a new Rigsdag was elected, the Liberals (Farmers) forming the gov. After a new

King Frederick's eldest daughter to become heir-presumptive to her father. D.'s economy made a speedy recovery in the immediate post-war years., but has suffered increasingly from inflationary pressure. In the general election of 1957 the Social Democrats, though weakened, were able to retain office, but Hansen's post-election gov. had now to rely on support from non-Socialists to a considerable extent.

Danish Language and Literature. Before the year AD 1000 the language spoken in D. was more or less identical with the language spoken in Norway and Sweden. The first Dan. texts known are runic inscriptions from about AD 400 and there are many runic stones from the Viking period and the early Middle Ages. The special Dan. characteristics from this period are the substitution of single long vowels for diphthongs, and the loss of initial *h* before *l*. Not until about 1300 is there a real literature in Dan. The most important sources are some prov. laws, medical books, and later also prayer books, travel books, legends, a collection of proverbs, and a rhymed chronicle (the first Dan. printed book, pub. 1495). In this period initial *h* disappears before *n*, *l*, and *r*, and original diphthongs have become monophthongs; original mutation has often been lost, and 3 distinct dialects have developed—of Scania, of Zealand, and of Jutland. Altogether, before 1500 a considerable simplification has taken place: the original masculine and feminine genders of the nouns have developed into a common gender, and the conjugation of the verbs has been greatly simplified. The most important sound change after 1500 is the change after a vowel of *p*, *t*, *k* into *b*, *d*, *g*.

An important element in modern Dan. is the 'glottal stop,' which developed from an original accent. Until 1948 Dan. followed the Ger. habit of writing all nouns with capital letters, but this has been abandoned by an Act of the Dan. Rigsdag in 1948. At the same time the letter *d* was officially accepted instead of *aa*. The standard dictionary is *Ordbog over det danske Sprog*, a work of 27 vols., pub. 1918-54. For the hist. of the language, see P. Skautrup, *Det danske Sprogs Historie* (in 3 vols.), 1943-9.

Most of the Dan. literature of the Middle Ages is in Lat. Of particular prominence is the 12th-cent. historian Saxo Grammaticus (q.v.), whose work *Gesta Danorum*, in 16 parts, contained the saga of D. from mythical times to 1216. Aet. Dan. heroic legends (e.g. the legend of Amleth) form the most important part of the entire work. Of eminent importance are also the Dan. ballads of which a total of nearly 550 exist in about 3000 varying eds. The most important of them were created between 1200 and 1500. They were the property of the chivalry and sung as an accompaniment to dances, but they were not written down till after the end of the Middle Ages. They are more epic in character than the Fr. and Ger. ballads, and there is a distinct resemblance between Dan. and Scottish ballads. The first printed ballad ed. appeared in 1591 (by A. S. Vedel). The

modern scholarly ed. (by Grundtvig, Olrik, and Grøner Nielsen) is in 5 vols., 1853-1919. Dating from the Middle Ages are also a collection of proverbs (by Peder Laale), law-books, edifying books, and some dramas. The period of the Dan. Reformation (1520-70) is first marked by a great many polemic pamphlets, with Poul Helgesen (b. 1480) as the outstanding defender of the Catholic Faith, and Hans Tavsén, Christiern Pedersen, and Hans Mikkelsen as the prominent representatives of Lutheran doctrines. Peder Palladius, the first Lutheran bishop of Zealand, wrote a *Visitation Book*, characteristic of his frank and lively style, and Christiern Pedersen made a trans. of the Bible, pub. in 1550 as *Christian III's Bible*—from the text of which the written modern Dan. language is derived. Among the hymn-writers of this period special mention should be made of Hans Thomsson and Hans Christensen Sthen. The Reformation was followed by a period of Lutheran orthodoxy with Niels Hemmingsen (1513-1600) as its great theological exponent. The first Dan. hist. to succeed Saxo's work was written by Arild Huitfeldt, whose work *Danmarks Riges Historie* was pub. in 10 vols. in 1595-1603. There were many scientific and scholarly works from the 16th and 17th cents, by Anders Sørensen Vedel (1542-1616), Erik Pontoppidan, Peder Syv (and 1707), Tycho Brahe (1546 1601), Ole Rømer, Thomas Bartholin, Niels Steensen, Ole Borch, and Simon Paulli. A new artificial poetry imitating the classics was written by Anders Arreboe (1587-1637), whose chief work, *Heræmeron*, 1661, describes the Creation in hexameters and alexandrines. Søren Therkelsen imitated Fr. pastoral poetry, and Anders Bording (1619-77) was a versatile poet of the baroque period; he was also the editor of D.'s first newspaper, *Den danske Mercurius*, 1666-77, where the news appeared in rhymed alexandrines. The greatest poet of the 17th cent. was Thomas King (1634-1703), whose hymns are still much in use. In the beginning of the 18th cent. Ludvig Holberg (q.v., later Baron Holberg) (1684-1754) is the greatest name. He was b. in Norway, but settled down in D. where he became a prof. in the univ. of Copenhagen. Holberg is D.'s sole playwright of European importance, and with his comedies he created the modern Dan. drama. He also wrote sev. histories and philosophical essays.

H. A. Brorson (1691-1764) was a writer of pietistic hymns, Ambrosius Stub (1705-1758) an inspired and versatile poet, whose poems range from religious hymns to drinking songs. Johan Herman Wessel (1742-85) was a talented satirist and humorist, whose mock-heroic drama, *Kærlighed uden Strømper*, 1772, ridiculed the bad imitations of Fr. classicism. Towards the end of the 18th cent. there were various Brit. influences upon Dan. literature. The writings of Young, Thomson, and Pope are traceable in sev. Dan. poets, notably in Tullin. The Eng. 'Spectator literature' had great effects on Dan. periodical literature, and

Shakespeare, Milton, Sterne, Ossian, and Fielding had their effects on Johannes Ewald (q.v.) (1743-81). His odes, his tragedies with subjects from Nordic legends and mythology, and his patriotic heroic play *Fiskerne*, 1778, deserve special mention. P. A. Heiberg (1758-1841) was a violent radical inspired by the ideas of the Fr. Revolution. For his antimonarchistic writings he was made an exile and lived the latter half of his life as a refugee in France. Another radical writer was Malthé Conrad Bruun who became later a well-known geographer. Jens Baggesen (1764-1826) distinguished himself as an emotional lyrical poet, a humorist, and a fine prose-writer. His autobiographical sketch *Labyrinthen*, 1792-3, has a high place in the hist. of Dan. prose.

The romantic revival in D. came via Germany and began with the works of Adam Oehlenschläger (q.v.) (1779-1850). His lyrics, his tragedies (often with motives from old Dan. legends), and his re-writing in verse of old Norse mythology, in *Nordens Guder*, had an enormous influence on Dan. literature and thought in the 19th cent. To the romantic school belonged also Schack v. Staffeldt (1769-1826) and B. S. Ingemann (1789-1862), whose historical romances are Dan. equivalents to Scott's Waverley novels. Ingemann was also a pure and exquisite lyrical poet of many 'Morning and Evening Songs.' N. F. S. Grundtvig (q.v.) (1783-1872) also belonged to the romantic school. He was a very prolific writer, D.'s greatest hymnist, her most renowned educationalist, a liberal politician, and a diligent historian and antiquarian; his influence has been very considerable both in and outside D. Carsten Hauch (q.v.) (1790-1872) was a sober and genuine poet, novelist, and dramatic writer. A new realistic interest made itself felt in the writings of Poul Møller (q.v.) (1794-1838) and St Blicher (1782-1848). Poul Møller's greatest contribution to Dan. literature is his novel *En dansk Students Eventyr*, 1824. Blicher was inspired by the Ossian poetry of Macpherson; outstanding among his lyrics is *Trækfuglene*, 1838. His many short stories have a realistic background in Jutlandish life and conditions. Johan Ludvig Heiberg (q.v.) (1791-1860) introduced Hegelian philosophy into D., and was for a time the dominating literary critic of Copenhagen. He re-created the Fr. *vaudevilles* on Dan. soil, but he also wrote some more serious dramas, e.g. the national drama *Elverhøj* and the philosophical drama *En Sjælefler Døden*, 1841. His mother, Fru Gyllembourg, was well known for her stories with everyday subjects, and his wife, Johanne Louise Heiberg, was a famous actress in the Royal Theatre of Copenhagen. To the same aesthetic school belonged also Henrik Hertz (q.v.) (1798-1870), an author of epic and lyric poetry and of bourgeois plays and serious romantic dramas. Prominent among a new school of lyrical poets about the middle of the century were Christian Winther (1796-

1876), Ludvig Pædoher (q.v.) (1793-1874), and Emil Aarestrup (q.v.) (1800-1856). Especially Winther and Aarestrup are known for their fine love lyrics. Frederik Paludan-Müller (q.v.) (1809-76) was originally influenced by Byron, but he gradually became the great moralist in Dan. literature. His main work is the verse novel *Adam Homo*, 1841-8. Hans Christian Andersen (q.v.) (1805-75) even in his own lifetime acquired international fame through his fairy tales. He was also the author of sev. novels, plays, and poems. Another contemporary writer of European fame is Søren Kierkegaard (q.v.) (1813-55), a religious philosopher whose books are on the borderline of philosophy and belles-lettres. Among his philosophical works, *Either-Or*, 1843, is the most important. M. A. Goldschmidt (1819-87) was a gifted novelist of Jewish origin, who described conditions among the Jewish community in Copenhagen. His chief novels are *En Jøde*, 1845, and *Ravnen*, 1867. Less important are the poets Carl Ploug (1813-94), J. C. Hostrup (1812-92), Christian Richardt (1831-92), and H. V. Kaalund (1818-85). H. E. Schack wrote 1 novel of great importance, *Phantasterne*, 1857.

About 1870 a new radical, 'naturalistic' movement began in D., led by the eminent critic Georg Brandes (q.v.) (1842-1927). His chief work, *Main Currents in Contemporary European Literature*, 1871-90, was met with both enthusiasm and antagonism, but his many critical works had an enormous influence on Scandinavian literature. J. P. Jacobsen (q.v.) (1847-85) was the first exponent of naturalist fiction in D. through his 2 novels *Fru Marie Grubbe*, 1876, and *Niels Lyhne*, 1880, and his short stories. Holger Drachmann (q.v.) (1846-1908) was mainly a lyrical poet, generally considered D.'s finest poet in the 19th cent. Henrik Pontopidan (1857-1943) was a sober and distinguished novelist, whose novel *Lykke-Per*, 1898-1904, is one of the landmarks of the Dan. novel. Other novelists from the 1880's are Karl Gjellerup (1857-1919) and Herman Bang (1857-1912). In the nineties a generation of lyrical poets were the dominating names: Johannes Jørgensen (q.v.) (b. 1866), Viggo Stuckenberg (1863-1906), Sophus Clausen (1865-1931), Ludvig Holstein (1864-1943), and Helge Rode (1870-1937). Jakob Knudsen (1858-1917) was a novelist inspired by the ideas of Grundtvig and the Dan. Folk High Schools, and Gustav Wied (1858-1914) was a cynical satirist as a writer of novels and plays.

A new 'pleasant movement' was inaugurated in Dan. literature by the Jutlandish lyrical poets Thøger Larsen (1875-1928), Johan Skjoldborg (1861-1936), and Jeppe Aakjaer (1866-1930), and by the Jutlandish novelist Johannes V. Jensen (q.v.) (1873-1950), whose main work, *The Long Journey*, is based on the Darwinistic theories of evolution. Jensen is also a fine lyrical poet and essayist. Martin Anderson Nexø (q.v.) (b. 1869) has won international fame with his proletarian novels, *Pelle the Conqueror*, 1906-10,

and *Little—Daughter of Man*, 1917–21. His *Memoirs*, 1932–39, rank very high. Other noteworthy novelists are Harald Kilde (1878–1918), Knud Hjort (1869–1932), and Marie Bregendahl (1867–1940).

Of the authors between and after the 2 wars, special mention should be made of the novelists Jacob Paludan (b. 1896), Johannes Buchholtz (1882–1940), Harry Seiberg (1880–1954), Haas Kirk (b. 1898), Knuth Becker (b. 1893), Thit Jensen (b. 1876), Mogens Klitgaard (1906–45), Harald Herdal (b. 1900), Marcus Lauesen (b. 1907), H. C. Branner (b. 1903), and Martin A. Hansen (1909–55). Of the lyrical poets the most important names are Hans Hartvig Scedorff Pedersen (b. 1892), Kai Hoffman (1874–1949), Tom Kristensen (b. 1893), Otto Gelsted (b. 1888), Nis Petersen (1897–1943), Paul la Cour (1902–56), Tove Ditlevsen (b. 1918), and Morton Nielson (1922–44). The prominent playwrights from this period are Kaj Munk (1898–1944), Kjeld Abell (b. 1901), Soya (b. 1896), and Knud Sønderyb (b. 1909).

Art. Dan. art. portrays national culture stretching over 10 millenniums, from the time when birds and animals were carved in amber with a high degree of artistic competence to the pottery of Copenhagen of to-day, with its wonderfully perfect glazes and correct shapes. In the years 2000–1500 BC the Danes had not yet learned from the rest of Europe the secret of bronze, yet they carved copies of bronze axes in stone with a craftsmanship equal to the best ancient ritual jade carvings of the sinic world. When they learned how bronze was made they developed an exquisite art in bronze (1500–800 BC), inventing the signal-horn or lur, stated to be one of the oldest musical instruments in the world; some of these lurs can still be played. The early bronze period of D. coincided with the Cretan, and the later period with the heyday of classical Greece: this independent flowering of a culture is sufficient refutation of the theory that lands beyond the influence of Mediterranean culture were barbarous until the 11th cent. AD, when the Christian church reached D. Dan. art. continued to find its expression in architecture and decoration (see SCANDINAVIAN ARCHITECTURE).

The first Dan. painters representing neo-classicism in the 18th cent. were N. A. Abildgaard (1742–1848) and Jens Juel (1745–1802). C. V. Eckersberg (1783–1853) was a pupil of David in Paris. Among his contemporaries in the 'Golden Age' were Christen Købke (1810–48), P. C. Skovgaard (1817–75), J. T. Lundbye (1818–48), and Dankvart Dreyer (1816–52). To the same period belonged also the fine illustrator Wilhelm Marstrand (1810–73). The greatest Dan. painters towards the end of the 18th cent. were P. S. Krøyer (1851–1909), L. A. Ring (1854–1933), Theodor Philipsen (1840–1920), Vilhelm Hammershøi (1864–1916); among the 20th cent. Dan. painters special mention should be made of Poul S. Christiansen (1855–1933), Fritz Syberg (1862–1939), J. F. Willumsen

(b. 1863), Harald Giersing (1881–1927), the 2 brothers Joakim Skovgaard (1856–1933) and Niels Skovgaard (1858–1939), Niels Larsen Stevns (1861–1941), Edvard Weie (1879–1943), Olaf Rude (b. 1886), Oluf Høst (b. 1884), Johannes Larsen (b. 1867), Jens Søndergaard (b. 1895), Vilhelm Lundstrøm (b. 1893), and Knud Agger (b. 1895). Particularly noteworthy among modern Dan. sculptors are Kai Nielsen (1882–1924), Gerhard Henning (b. 1880), Adam Fischer (b. 1888), Astrid Noack (b. 1889), Mogens Bøggild (b. 1901), and Knud Nellemose (b. 1908).

Fine craftsmanship in furniture, interior decoration, ornaments, porcelain, and jewellery remains a notable feature of Dan. art: the silversmith, Georg Jensen (1866–1935) achieved fame as an artist, and created the silverware which bears his name.

Bibliography. LITERATURE AND ART: Sir E. Gosse, *Studies in the Literature of Northern Europe*, 1879; F. Horn, *History of the Literature of the Scandinavian North*, 1884; H. Weltmeyer, *Denmark*, 1891; A. Redslob, *Architektur und Kunstgewerbe Alt-Danemarks*, 1914, 1921; E. Fable, *Danmarks Malerkunst*, 1927; H. Topœ-Jensen, *Scandinavian Literature*, 1929; and *Scandinavian Literature from Brantes to Our Day*, 1929; C. S. Peters and V. Anderson, *Illustreret dansk Litteraturhistorie*, I–IV, 1929–35; G. Antrup Larsen, *Scandinavian Literature*, 1930; Helge-Kjaergaard, *Die dänische Literatur der neuesten Zeit*, 1934; F. Blankner, *History of the Scandinavian Literatures*, 1938; H. Briv, *Danmarks Digtere*, 1944; and E. Bredsdorff, *A Bibliography of Danish Literature in English Translation*, 1949.

Dennis, C. J., see AUSTRALIAN LITERATURE.

Dennis, John (1657–1734), critic and playwright, b. London, son of a saddler. He was educ. at Harrow and at Cambridge. He lived the improvident life of a literary adventurer, and was a political writer, a poet, a dramatist, and a critic. It is as the last that he is principally known, not from his own works, but from Pope's *Essays on Criticism* and *The Dunciad*. D., unfortunately for himself, was throughout his life a butt for nimble wits and spirits more sociable and pleasant than his own, and early he was condemned by Pope and Swift as 'a Whig dog' and left unread. Nor was he any match for the malice and cleverness of Pope, who did not appreciate D.'s criticisms of his work. But at least if a surly and sour critic D. was a passionate lover of spiritual and intellectual beauty. This is evident in his best-known work, *Essay on the Genius and Writings of Shakespeare*, 1712, and also in his *Reflections Critical and Satirical on Pope's Essay upon Criticism*, 1711, *Remarks upon 'Cato'*, 1713, and *True Character of Mr. Pope and his Writings*, 1716. His own original plays were dull and are interesting only because they illustrate his dramatic theories, among which was no slavish adherence to the unities. His adaptations of *The Merry Wives of*

Windsor (The Comical Gallant, 1702) and of *Coriolanus* (The Invader of his Country, 1720) have been criticised for vandalism. The first collected and complete ed. of D.'s critical writings is *The Critical Works of John Dennis*, ed. by E. N. Hooker (2 vols.), 1939, 1943. See H. G. Paul, *John Dennis, his Life and Criticism*, 1911.

Denny and Dunipace, burgh in Stirling-shire, Scotland, 7 m. S. of Stirling, on the R. Carron. The dist. is rich in historical associations, and there are numerous Pictish and Rom. remains. The Torwood, with its anct castle, has been a formation point in many battles. Sir Wm Wallace, the Scottish patriot, spent his boyhood here. The prin. industries are papermaking, and iron and steel founding. Coal is mined locally. Pop. 7000.

Denominations. The Three, Presbyterians, Baptists, and Independents—living in or near London. They had the privilege of presenting an address to the sovereign at certain times, and in 1727 organised 'the General Body of Protestant Dissenting Ministers of the T. D.'

Denotation, see CONNOTATION.

Density. *Absolute D.*, term used in physics to express the quantity or mass of matter contained in any unit of vol. *Relative D.*, or sp. gr., is the comparison of the mass of the substance concerned with the mass of the same vol. of some standard matter, which for liquids or solids is generally taken as water at its temp. of maximum D. (4° C., 39° F.) and at ordinary pressure; for gases the standard is hydrogen at ordinary temp. and pressure. Since in the metric system, which is usually employed, the unit of mass is the mass of a ml. of water at 4° C., the relative D. is the same as the absolute D. expressed in g/ml. The least dense metal element known is lithium (0.53, if the D. of water be called unity); the densest is osmium (22.47); the D. of hydrogen is 0.0009. See SPECIFIC GRAVITY.

Dent, John Charles (1841–87), Canadian journalist and writer on historical subjects, b. Kendal, Westmorland. He was taken to Ontario in infancy. He was called to the Bar in 1865 and practised for a short period. D. returned to England and worked as a journalist there and later in Toronto. His pub. works include *The Canadian Portrait Gallery*, 1880–1; *The Last Forty Years: Canada since the Union of 1841*, 1881, in collaboration with Henry Scadding; *Toronto: Past and Present*, 1884; and *The Story of the Upper Canadian Rebellion*, 1885. See also J. King, *The Other Side of the 'Story of the Upper Canadian Rebellion'*, 1886.

Dent, Joseph Malaby (1849–1926), publisher, b. Darlington, where his father, the son of a small Swaledale farmer, kept a colourman's shop and taught music. After some early training as a bookbinder in his native tn, he went to London in 1867, working at his craft for 5 years before setting up his own workshop in Hoxton. A book-lover from the first, he began then to experiment in a small way as a book producer and publisher.

Having estab. himself in offices and a bindery in Great E. Street in 1888, he put forth some notably well-produced eds. of Lamb, and others of his favourite writers. He had already formed a friendship with some of the Toynbee Hall (q.v.) residents, and with them made excursions to Italy, which he revered as the cradle of European typography and the bookbinding art. He pub. many *éditions de luxe* of works on It. cities and was a shrewd discoverer of talent in young illustrators, among these being Aubrey Beardsley, R. Anning Bell, and Arthur Rackham. The Temple Shakespeare appeared in 1894 and the Temple Classics in 1896, both under the editorship of Israel Gollancz; and they were followed by pocket eds. of favourite

Drawing by Dora Noyes
J. M. DENT

authors, which quickly gained for him a reputation as a London publisher of the first rank. In 1897 the business was transferred to 29–30 Bedford Street, Covent Garden, where he planned the scheme which developed into Everyman's Library (q.v.). His idea was to build up a great 'city of books' on popular lines, and he always kept in view the type of reader who, like himself, had left school at 13 and must provide his own 'further education' by reading book after book in his spare time. In 1906 the manufacturing business moved to Letchworth in Herts, and in 1912 the publishing office moved across the street to Nos. 10–13, which Dent built and named Aldine House.

Dent also produced many series of educational books, which have proved their value by their wide circulation

throughout the schools of the Commonwealth. *Everyman's Encyclopaedia* in its original form was also due to his enterprise. Throughout his career publishers and book-lovers and the great reading public in America appreciated and supported his many and varied enterprises. In Canada, too, he formed a growing connection by his repeated visits, and in 1912 a branch Aldine House was opened at Toronto. He was succeeded as head of the firm by his son, Hugh Ralston D. (1874-1938), who in 1938 ed. his *Memoirs* (first privately printed, 1921).

Dent Blanche, see **BLANCHE, DENT**.

Dent-du-Midi, see **MIDI, DENT DU**.

Dental Service, National, see **NATIONAL DENTAL SERVICE**.

Dental Surgeon, see **DENTISTRY: TEETH**.

Dentalium, or **Elephant's Tusk Shell**, one of the genera of molluscs which form the class Scaphopoda. The shell is tusk-shaped and opens at both ends, from the larger of which the long foot appears and is used in creeping movements. The mollusc has tentacles around its mouth, is lacking in eyes and heart, and lives in muddy sand at great depths of the sea.

Dentatus, Manlius Curtius, Rom. gen. and one of the great heroes of the republic. As consul in 290 B.C. he conquered the Samnites, and during his second consulship in 275 he defeated Pyrrhus (q.v.), and afterwards retired to his Sabine farm. Recalled to fill the office of censor in 272, he undertook the construction of an aqueduct, but *d.* in 270 before its completion. D. was ranked upon as a model of the old Rom. virtues.

Dentil, in classical architecture, one of a series of cubical blocks, like teeth in shape, placed beneath the corona of a cornice. Generally the height of each D. is double its width, while the spaces between the blocks are one-third the height.

Dentine, see **TEETH**.

Dentistry, see **NATIONAL DENTAL SERVICE: TEETH**.

Dentition, process of development and cutting of the teeth. See **TEETH**.

Denton: 1. To 7 m. S.E. of Manchester, England; manufs. felt and silk hats. There is a light engineering industry. Pop. 27,612 (1934).

2. Vill. in the W. Riding of Yorks, England, 2½ m. N.E. of Ilkley, the bp. of Sir Thomas Fairfax.

3. Co. seat of D. Co., Texas, U.S.A., 34 m. N.N.E. of Fort Worth, raising cotton and grain, and manufacturing pottery and bricks. It is the seat of the N. Texas State College and of the Texas State College for women. Pop. 21,400.

D'Entrecasteaux, group of Brit. is., situated in the Pacific Ocean, off the S.E. coast of New Guinea in Papua. They consist of 3 prin. is., separated by narrow channels, with a total area of 1200 sq. m. Pop. 34,000. Their name is derived from the Fr. admiral, Bruni d'E. Exports are copra, pearl, and shell.

Denudation, or **Erosion**, wearing away of the surface of the earth, a process which is carried on by various agents.

The effect of D. is seen in the various features of the earth's surface, as riv. valleys, gorges, and the shapes of cliffs and rocks. Water in various forms—rivs., streams, rain, frost, and glaciers—is the great cause of D., though some is due to wind, to temp. change, and to plants and animals. The rivs. wear away their beds and make them wider with the continual flow of their water, and carry away particles of rock washed down by the rain or other agent, and so wear away the surface over which they flow, the amount of D. done by a riv. varying according to the region. Glaciers also are powerful in this respect, owing to the debris which they carry along in their courses. Rain wears away the surface of the rocks, both by beating on them and by chemical processes. Frost is instrumental in splitting the rocks to pieces, and in causing fissures in them; the sea wears away the bases of cliffs, thus causing the overhanging rock to give way, and altering from time to time the shape of the coast-line. The general appearance of the land, therefore, is due to the various denuding agents in any particular locality, and although many hundreds of years may pass before the change is perceptible, yet on examining the land it can be seen that it is always undergoing this D. See A. Holmes, *Principles of Physical Geology*, 1944.

Denver, cap. of Colorado, U.S.A., on the S. bank of S. Platte R., 15 m. from the E. base of the Rocky Mts. in a rolling plain. It is the largest city in the state, and the nearest large city to important gold and silver mines and oil shale deposits. The city is the official gateway to 12 national parks and 32 national monuments. Among the peaks visible from D. are Pikes Peak, Mt. Evans, Grays Peak, Longs Peak, and Torreys Peak. D. is now served by sev. railroads, transcontinental airlines, and highways, and has a direct rail route to the Pacific coast. The city is the financial, distribution, and industrial centre for a large livestock and agric. region. It manufs. mining and farm machinery, tyres, and other rubber products; there are large stockyards and oil-refining and motor-assembly plants. Furniture, electrical apparatus, explosives, clothing, and cotton and fibre products are also made. Canning and meat-packing are important. It is administrative H.Q. for sev. federal agencies, including the U.S. custom house and mint. Educational institutions include the univ. of Denver, univ. of Colorado Medical School, Loretto Heights College, Regis College, Rockmount College, and Westminster Law School. Near by are Fitzsimons Army Hospital, the Colorado School of Mines, a naval air station, and Lowry Air Force base. Points of interest are the capitol building, the Palace Theatre (1873), the Windsor Hotel (1880), the City and Country Building, the civic centre, and the Colorado Museum of Natural Hist. Pop. (1950) 415,786.

Denys St., see **DENIS**.

Deodand (Lat. *Deo dandum*, to be given to God), term used for anything which had

caused the death of a human being, whether that death was brought about intentionally or accidentally, as by the law the thing was given over to the Crown to be put to some good use, and thus 'given to God.' This practice was abolished in 1846.

Deodar, or *Cedrus deodara*, species of conifer, which occurs in the Himalayas. The plant is a beautiful evergreen tree,

DEODAR

the leaves persisting for over a year, and the cone takes 2 or 3 years in ripening.

Deodatum, see ST DIE.

Deodoriser (Lat. *de*, away from; *odor*, smell), substance used for destroying harmful smells, chiefly those which arise from decomposing matter. Charcoal and quicklime are very powerful D.s. Disinfectants may be D.s if they destroy smells, as for instance zinc chloride.

Deogiri, see DAULATABAD.

Déols, or **Bourg-Dieu**, Fr. tn in the dept of Indre, a suburb of Châteauroux (q.v.). There are ruins of a 10th-cent. abbey, and an interesting church, partly 12th cent. Pop. 3600.

D'Eon, Chevalier, see EON DE BEAUMONT.

Deoprayag, see DEVAPRAYAGA.

Deo-van (Col des Nuages), pass through the mts of Annam (q.v.), 45 m. S. of Hue (q.v.), through which passes a railway and the main N.-S. road of Viet Nam. The pass is about 2000 ft and noted for its unsurpassed views of sea and mts.

Deoxidation, see OXYGEN.

Department (Fr. *département*), term used for a territorial div. of France corresponding roughly to an Eng. co. Before the revolution France was divided into 34 provs., but in 1790 by a decree of the Assembly it was redivided into 83 D.s. Under Napoleon the number was increased to 130, but is now 90. The 3 D.s of Algeria, since 1881, have been regarded as D.s of France proper, and in 1947 the colonies of Martinique, Guadeloupe, Réunion, and Fr. Guiana were given the status of overseas D.s. D.s receive their names generally from a prominent riv. or mt contained within their boundaries.

Each D. is presided over by a *prefect*, and is divided into *arrons.*, each under a *sub-prefect*. The *arrons.* are divided into *cantons*, and the *cantons* into *coms.* corresponding to an Eng. *par.* Paris is in the D. of the Seine.

Depew, Chauncey Mitchell (1834-1928), Amer. politician, educ. at Yale Univ., and called to the Bar in 1856. His political career began in 1862. From 1899 to 1911 he was U.S. senator (for New York). D. was chairman of the board of directors for 3 railroads, including the New York Central and Hudson R. Railroad Company.

Dephlegmator, section of a distilling apparatus which separates vapours of different boiling points, the less volatile being condensed and returned to the still. The simplest form of D. is an elongated plain or bulbous tube emerging from the still in which condensation results from air-cooling, the surviving vapours roughly representing the more volatile constituents. The most effective D., however, consists of a column of bulbs so arranged that the condensed vapours are temporarily retained, while the vapours from the still pass through them. The result is that an exchange is continuously effected between the more volatile constituents of the condensed liquid and the less volatile constituents of the vapours arising from the still. If the heat is sufficiently regular, it is possible to tap distillates of different boiling points according to their distance from the source of heat. Other types of D.s consist of a packed column, bubble plate column, or variable reflux head.

Depilatories (from Lat. *depilare*, to pull out the hair), chemical agents, such as calcium hydro-sulphide, or a mixture of pitch, resin, and lime, used for the removal of superfluous hair from the scalp, face, or other skin surface. Electric needle treatment, known as electrolysis, is the modern and most effective depilatory. Irradiation of the scalp with X-rays is used when complete removal of the hair of the head is necessary, as, for instance, in the treatment of ringworm.

D'Epinay, Louise, see EPINAY.

Deploy, military expression, meaning literally to unfold. A gen. is said to D. or spread out his troops when he so alters their formation as to present a wider front to the enemy, his object being to have as many weapons as possible on the front and fighting line.

Deportation, term revived during the First World War to describe the practice adopted by Germany of deporting the civil pop. of an enemy country which had been occupied. This was carried out in Belgium, and the practice was adopted largely to secure what was in effect slave labour. On 3 Oct. 1916 a decree was issued from Ger. general H.Q. authorising Ger. military courts to deport, for the purpose of forced labour, any unemployed Belgians. Thousands of men were compelled to work in Germany, thus releasing men for service in the field. During the Second World War Germany resorted to the same practice on an even larger scale, and the forced labour thus secured was

organised with thoroughness and brutality as a part of the Ger. war machine. It is estimated that some 3,000,000 Poles were put to forced labour in Germany during the course of the war. Over 1,000,000 Poles were also deported to Russia in 1939, and of these a number were later drafted into the Polish Army which was created in the U.S.S.R. to fight against Germany. France also suffered severely during the Ger. occupation, and the number of Frenchmen deported for labour in Germany amounted to 765,000. In 1943 there was also wholesale D. of Jews from Denmark at the hands of the Ger., and the civil pop. of Norway, too, suffered in the same way. After the war ended, Poland and the Soviet Union annexed Ger. ter. E. of the Oder-Neisse line, and the Ger. pop. in this area was deported in its entirety, in circumstances entailing considerable hardship. (See also DISPLACED PERSONS.) For D. as a statutory punishment during the 17th and 18th cents. see TRANSPORTATION.

Deposit, in the law of bailments (borrowed from the Rom. law), signifies a movable thing which a man puts in the hands of another to keep till it is asked for, nothing being given to the depositary for his custody of the thing. The benefit being entirely unilateral, the depositary is not liable for loss or deterioration, provided he is not guilty of dishonesty or gross negligence. If, however, he voluntarily undertook the custody of the thing, he would be answerable for loss or damage occasioned by only slight neglect. Money is said to be on D. with a banker as opposed to money on current account. The transaction is really a loan, repayable by the banker on demand with or without interest, according to agreement. In contracts for the sale of land D. means a sum customarily given in part payment of the purchase money as a guarantee of good faith.

Deposition. By the action of the various superficial or epigene agents of change (wind, sun, rain, running water, and frost) rocks are disintegrated and the material transported from place to place, finally forming the sev. deposits classified below. *Aeolian deposits* are those deposits formed by the action of the wind. Examples of these are the sand dunes which occur in our coasts and the remarkable loess found in the valley of the Rhône and extending over the whole of central Europe. *River deposits* occur in banks and terraces. The sediment carried by the riv. in suspension is laid down where the current is slackest along the riv. course. Thus, alluvial fans and cones are formed at the bases of hills where there is a sudden decrease in the gradient of the riv. When a stream reaches a lake or the sea, its current is destroyed and the sediment in suspension is dropped, giving rise to deltas and lacustrine deposits. The main types of riv. deposits are alluvial cones and fans, alluvial plains, deltas and levees. *Glacial deposits* are occasionally of considerable thickness, as in terminal moraines (see GLACIERS). *Lacustrine deposits* may be mechanically formed, as

when sediment is deposited from rivs., or may be chemically or organically formed. The chemically formed deposits are chiefly deposits of sodium chloride and carbonate and sulphate of lime, caused by supersaturation of the waters due to evaporation. The organically formed deposits may be formed from calcareous shells or from the siliceous remains of diatomaceous plants. *Marine deposits* are of the greatest importance, and may be divided into 2 classes: (1) shore or littoral deposits; and (2) deep-sea deposits. The former consist of gravel, sand, or mud brought down by rivs. or worn off the coasts by wave action, or of limestone made up of the calcareous shells or skeletons of the coastal fauna. The material brought down by rivs., if not directly deposited to form deltas, may be carried out and deposited on the sea bottom. The deposits thus formed may vary, alternately coarse and fine, according to the state of the riv.; but the material sorted by wave action is generally arranged in order of coarseness, gravel nearest the coast, then sand, then fine mud and silt. These mechanical deposits are found fringing the land to a distance of from 100 to 200 m. out to sea, corresponding more or less with the 100-fathom submarine contour. On the outer edges of this fringe are found the blue, red, and green, and the volcanic muds, together with some deep-sea sands carried out by strong currents from the continental shelf. Beyond this depth we find the second class of marine deposits. These are chiefly organic, and are either calcareous or siliceous. The Globigerina ooze, which occurs throughout the Atlantic Ocean and in parts of the Indian and Pacific Oceans, consists of the calcareous shells of Foraminifera, which live at the surface of the water, but which after death sink and accumulate upon the ocean floor. Beyond a depth of about 2 m. this ooze is not found, since the shells are dissolved before they reach the bottom. On the ocean floor in the deeper parts, below 2½ m., are found the siliceous oozes, i.e. the radiolarian and diatomaceous oozes. The former is made up of the siliceous shells of Radiolaria, and is found in the E. Indian Ocean and in the Pacific. The latter, consisting of the siliceous frustules of diatoms, is found in a wide belt encircling the S. Ocean. Red clay is a red-brown deposit, and consists of the insoluble residue of Foraminifera, manganese nodules, glauconite crystals, pumice, volcanic and meteoric dust, and phosphatic nodules. It is found in the deepest parts of the oceans below 2500 fathoms, and contains fossils such as the teeth of sharks and the ear bones of whales. The greater part of the floor of the Pacific Ocean is covered by the red clay, which is the most widely spread oceanic deposit. For classification of deep-sea deposits see Sir John Murray's *Report of Challenger Expedition*, 1891.

Deposition, in law, the written testimony of a witness in a judicial proceeding. D.s. before a magistrate are the sworn statements or affirmations of those who are

cognisance of the facts relating to a crime for which some person has been arrested. These statements are committed to writing by the magistrate's clerk, and read over and signed by the witness making them and by the magistrate. Such D.s are not evidence at the trial of the accused, but those of a witness who is dead or too ill to travel are evidence. D.s, whether in favour of or against the prisoner, may be taken before the committing magistrate in the presence of the prisoner, and subsequently given in evidence at the trial. To perpetuate the testimony of persons whose death is apprehended, or who are dangerously ill, a magistrate has power to take their evidence down in writing and transmit it to the proper quarter to be read at the trial in the event of the deponent proving unable to appear. In all these cases the prisoner must be given an opportunity of cross-examining the deponent at the time the D. is taken. In civil cases, unless the court orders otherwise, witnesses must give oral evidence. In interlocutory proceedings (q.v.), some actions in the Chancery Div. (q.v.) and the Divisional Court of Queen's Bench Div., and applications in the divorce court for maintenance and custody, evidence is given on affidavit.

Deposition of Clergymen is usually the result of immorality, matrimonial infidelity, or heresy. It involves the loss of benefice and holy orders, and is administered by the eccles. courts of the Anglican and Scottish Churches.

Depreciation. *see* BOOK-KEEPING.

Depression. *see* INSANITY.

Depression, Cyclonic. *see* METEOROLOGY.

Depression of the Land. *see* SUBSIDENCE.

Deprets, Agostino (1813-87), lt. statesman. He joined Mazzini's Young Italy movement as a young man. At first he was an opponent of Cavour, but later supported him, and was sent by Cavour to attempt a reconciliation with Garibaldi in Sicily (1860). His premiership dates, with one brief interval, from 1876 to 1887. Though his administration was marred by extravagance in finance he was instrumental in enlarging the suffrage and in creating the Triple Alliance.

De Profundis (Lat. 'out of the depths'), title and first words of Ps. cxxx. (Vulgate (XXXIX), one of the 7 penitential psalms. In the Roman rite it forms part of the office for the burial of the dead, for whom it is often recited.

Deptford (meaning 'deep ford'), parl. and metropolitan bor. of London, on the S. bank of the Thames immediately W. of Greenwich. It was a fishing vill. when Henry VIII founded the shipbuilding yard here in 1512 (closed in 1869), which, together with the yard at Woolwich, proved to be of paramount importance in the development of the Royal Navy, and which led to rapid development of D. into a tn. The royal victualling yard of the navy was estab. here in 1745. Among historic events in D. are Drake's reception of knighthood, Marlowe's death in a tavern brawl, and Peter the Great's residence at John Evelyn's house. It is a

bor. of many streets and few open spaces, but there is a park of 11 ac. on the site of Evelyn's house. Goldsmiths' College, a technical school founded in 1891 by the Goldsmiths' Company, is now incorporated in London Univ. The tn originally consisted of 2 pars., but that of St Nicholas is now in the bor. of Greenwich. D. returns 1 member to Parliament. Area 1564 ac.; pop. 73,800.

Depth Charge, explosive device for sinking hostile submarines. It is a case containing a high explosive charge ignited by a hydrostatic valve. This valve can be set to the required depth below the surface. Even if the explosion fails to sink the submarine it may be sufficient to force it to rise to the surface, when it may be sunk by gun fire. A D. C. may either be released from an inclined chute or projected by a mortar. The second method has the advantage that it enables the charge to be fired at its objective, instead of delaying action until the vessel reaches the point where the submarine is located. Between 30 and 40 Ger. submarines were sunk by D. Cs in the First World War, and they were used with success by the R.N. in the Second World War.

De Quincey, Thomas (1785-1859), critic and essayist, b. Manchester. The aristocratic 'De' was assumed by himself, his father, a merchant, whom he lost while he was still a child, having been known by the name of Quincey. His *Autobiographic Sketches* give a vivid picture of his early years at the family residence of Greenheys, and show him as a highly imaginative and over-sensitive child. He was educ. at Bath Grammar School, next at a private school in Wilts., and in 1801 was sent to Manchester Grammar School, from which he ran away, and for some time rambled in Wales. Tiring of this, he went to London in 1802 and led a Bohemian life. His friends, thinking it time to interfere, sent him in 1803 to Worcester College, Oxford. This did not, however, preclude brief interludes in London, on one of which he made his first acquaintance with opium, which was to play so disastrous a part in his future life. In 1807 he became acquainted with Coleridge, Wordsworth, and Southey, and soon afterwards with Charles Lamb. He paid various visits to the Lakes, and in 1809 settled at Townend, Grasmere, where he pursued his studies, becoming gradually more and more enslaved by opium. His marriage to Margaret Simpson, daughter of a farmer, took place in 1816.

Up to this time he had written nothing, but had been steeping his mind in Ger. metaphysics and out-of-the-way learning of various kinds; but in 1819 he sketched out *Prolegomena of all Future Systems of Political Economy*, which, however, was never finished. In the same year he acted as editor of the *Westmorland Gazette*. His true literary career began in 1821 with the pub. in the *London Magazine* of *The Confessions of an English Opium-Eater*. Thereafter he produced a long series of articles, some of them

almost on the scale of books, in *Blackwood's* and *Tait's* magazines, the *Edinburgh Literary Gazette*, and *Hogg's Instructor*. These include 'Murder Considered as One of the Fine Arts,' 1827, and, in his later and more important period, 'Suspisia de Profundis,' 1845. 'The Spanish Military Nun,' 1847, 'The English Mail Coach' and 'The Vision of Sudden Death,' 1849. In 1853 he began a collected ed. of his works, which was the main occupation of his later years. He had in 1830 brought his family to Edinburgh, which, except for 2 years, 1841-3, when he lived in Glasgow, was his home till his death. In 1837, on his wife's death, he placed the children in the neighbouring village of Lasswade, while he lived in solitude, moving from one dingy lodging to another as each in turn became choked up with an accumulation of papers. At the time of his death there were 6 such sets of lodgings, on all of which he was paying rent.

De Quincey stands out among the masters of style in the Eng. language. In his greatest passages, as in the 'Vision of Sudden Death' and the 'Dream Fugue,' the cadence of his elaborately piled-up sentences falls like cathedral music, or gives an abiding expression to the fleeting pictures of his most gorgeous dreams. His character unfortunately bore no correspondence to his intellectual endowments. His moral system had in fact been shattered by indulgence in opium. His appearance and manners have been thus described: 'A short and fragile, but well proportioned frame; a shaven and compact head; a face beaming with intellectual light, with rare, almost feminine, beauty of feature and complexion; a fascinating courtesy of manner; and a fullness, swiftness, and elegance of silvery speech.' The standard ed. of his works, 14 vols., 1889-90, was by Prof. D. Masson, who also wrote a life in 1881. *See also* lives by H. A. Page, 1877; J. Hogg, 1895; M. Elwin, 1935; and H. A. Eaton, 1936.

Dera Ismail Khan, tn of Pakistan, from which roads lead in various directions to the hills of the frontier. There are interesting remains near by suggesting an old Hindu kingdom.

Derain, André (1880-1954), Fr. painter, b. Chatou. He studied painting in Paris and in 1899 met Matisse. He joined with Matisse and Vlaminck in the free use of bright colour that caused them to be described as 'Les Fauves.' After 1918 he painted in the S. of France and Italy. In his later work he sought old master qualities. He also illustrated books and designed for the stage. *See* E. Faure, *Derain*, 1923.

Derating Act, *see* RATES AND RATING; LOCAL GOVERNMENT FINANCE.

Derayeh, *see* DARAIYEH.

Derbent (Persian *Derbend*), tn on W. shore of Caspian Sea, 150 m. NW. of Baku, the second industrial and cultural centre of Daghestan (q.v.). It has an ancient citadel and mosques. It was founded in the 6th cent. by Persians, and has been Russian since 1806. Pop. (1926) 23,000 (c. 1914, 33,000).

Derby, Earls of, an Eng. title which has been borne by the family of Stanley since 1485. Earlier it had been held by the family of Ferrers. The family of Stanley is of very considerable antiquity. *Thomas, 2nd Baron Stanley* (c. 1435-1504), was created earl of D. in 1485, for his services at Bosworth, where he crowned the victor. *Edward Stanley, 3rd earl* (1508-72), took a prominent part in political and military affairs. He was a commissioner at the trial of Lady Jane Grey, and a privy councillor under 3 sovereigns. *Henry Stanley, 4th earl* (1531-93), married in 1555 Margaret Clifford, granddaughter of Mary Tudor, sister of Henry VIII. He was a commissioner at the trial of Mary Queen of Scots (1586); 2 years later he was sent on a mission to Spain, and on his return was appointed lord high steward. Of the successors to the earldom, *Edward George Geoffrey Stanley, 14th earl* (1799-1869), was the most notable. He was b. Knowsley and educ. at Eton and Christ Church, Oxford. Entering Parliament as a Whig in his 23rd year, he was appointed by Canning in 1827 under-secretary for the colonies, an office he retained under Goderich. In the Grey administration (1830) he became chief secretary for Ireland. He left the Whigs in 1834 and in 1841 accepted the colonial secretaryship under Peel, but resigned in 1844 over the free trade issue. In 1844 he went to the House of Lords as Lord Stanley. It was not until 1851 that he succeeded to the earldom. In the following year he formed a protectionist administration, in which Disraeli was chancellor of the exchequer. This administration held office only a few months; and D. became prime minister again in Feb. 1858, but his second ministry only lasted 16 months. D. became prime minister for the third and last time in 1866, but 2 years later ill-health forced him to resign, and he was succeeded by Disraeli. As a statesman D. was not outstanding; he was, however, a first-class speaker and a very fine classical scholar. A good deal of the credit given to him by his contemporaries, especially in the reconstruction and reorganisation of the Conservative party after the fall of Peel, really belonged to Disraeli. His eldest son, *Edward Henry Stanley, 15th earl* (1826-93), educ. at Rugby and Trinity College, Cambridge, was also a statesman. He was under-secretary for foreign affairs in 1852, and colonial secretary in 1858. In D.'s third ministry he became foreign secretary, and retained that position under Disraeli. He succeeded to the earldom in 1869, and was again foreign secretary under Disraeli (1874-8). He became a Liberal in 1880, and 2 years later became colonial secretary under Gladstone; but he was opposed to Home Rule, and became leader of the Liberal Unionists in the House of Lords. Like his father he was a good speaker, and it is to the credit of his sincerity that by leaving the Conservatives in 1880 he sacrificed his succession to the premiership. He was succeeded by his brother, *Frederick Arthur Stanley* (1841-1908), *Baron Stanley*

of Preston (created Aug. 1886). He was educ. at Eton and was M.P. for Preston, for N. Lancs. and for Blackpool successively from 1865 to 1886; a lord of the admiralty in 1868, financial secretary to the War Office, 1874-7, to the Treasury, 1877-8, secretary of state for war, 1878-80, vice-president of committee of Council on Education, 1885, secretary of state for colonies, 1885-6, president of board of trade, 1886-8, and governor-general of Canada, 1888-93. He was succeeded by his oldest son, *Edward George Villiers Stanley* (1865-1948), separately noticed as 17th earl (see *DERBY*). The 18th Earl D. is *Edward John Stanley* (b. 1918). He succeeded his grandfather in 1948.

Derby, Edward George Villiers Stanley, 17th Earl of (1865-1948), politician, educ. at Wellington College, and served in Grenadier Guards 1885-95. He was aide-de-camp to the governor-general of Canada (his father), 1889-91. D. returned from Canada in 1891, and in 1892 was elected as a Unionist for the Westhoughton div. of Lancs. and sat for the constituency until 1906. Two years after his election he was appointed a junior lord of the Treasury. During the S. African war he was first chief press censor and later private secretary to Lord Roberts. He became financial secretary to the War Office in 1900, and in 1903 he was appointed postmaster-general with a seat in the cabinet—an office which he held until 1905. In 1908 he succeeded to the earldom. As director-general of recruiting during 1915-16, first under Lord Kitchener and later under Lloyd George, he performed one of his most conspicuous public services by organising what came to be known as the D. scheme of voluntary enlistment—the enlivening effort made by the first coalition gov. in the First World War to adhere to the voluntary principle. When Lloyd George formed the second coalition gov. in Dec. 1916, D. became secretary of state for war. Early in 1918 he was appointed Brit. ambas. in Paris, and remained there for nearly 2 years. When Bonar Law became prime minister of a Conservative gov., which most of the ex-cabinet ministers of his party were debarred from joining by their loyalty to the coalition, D. returned (1922) to his old post as war minister and only retired with the defeat and resignation of the first Baldwin cabinet in Jan. 1924. That was his last cabinet office, and therewith his political career ended, for he waived his claims to further office when the ex-coalition Conservatives returned to the fold. D. was a great patron of the turf. His horses were successful in many of the great events under the rules of the Jockey Club, but it was not until 1924 that he won the Derby with Sansovino; in 1933 he was again successful with Hyperion, one of the best horses in thoroughbred hist. He took the 1912 substitute race with Watling Street.

Derby, parli., municipal, and co. bor., and co. tn. of Derbyshire, England. on the R. Derwent, 125 m. from London. The form D. is derived from the Dan. name

Deoraby given to a former Anglian settlement. Up to the Domesday survey D. was a market tn. and the defensive earthworks and keep erected under William the Conqueror were known as Copecastle, denoting 'market castle.' Later the right to have a merchant guild was confirmed, together with a monopoly in cloth-dyeing. Records show that D. sent its first 2 bor. members to Edward I's 23rd parliament in 1295. Half the total pop. of the co. died during the Black Death (1349), and the plague of 1592 caused further widespread suffering in D. D.'s charter was confirmed sev. times, and in James I's reign 6 fairs were permitted. In 1637, under a charter of Charles I, local gov. was vested in a mayor, 9 aldermen, and a number of brethren and burgesses, and the number of fairs permitted was increased to 7. D.'s last charter was granted in 1682 by Charles II. The tn. began to emerge as a manufacturing centre at the end of the 17th cent., and in 1717 John Lombe introduced England's first silk mill, on the banks of the Derwent. The opening of the D. canal (1836) gave an impetus to industry, and 3 years later the railway reached D., the line at first running between Nottingham and D. only. Soon afterwards the Birmingham, Gloucester, and D. Junction railway was opened, and in 1841 D. was linked by rail to Leeds. On the amalgamation of the separate companies into the Midland Railway Company D. became its H.Q., and this was to affect the tn.'s later development. D. has numerous historic and impressive buildings. Dominating the top of St Mary's Gate is D. cathedral, dedicated to All Saints, standing in Queen Street, the second highest (210 ft.) par. church in England. The 16th-cent. tower is a fine example of Gothic architecture. D.'s main thoroughfare, St Peter's Street, takes its name from the ancient church standing there, 1 of 6 D. churches mentioned in Domesday Book. It is now largely Perpendicular in style, with some Norman features. Other churches are St. Alkmund's (decorated), rebuilt in 1846; St. Werburgh's, named after Werburgha, daughter of the king of Mercia, the church where Dr. Johnson married Mrs. Porter (9 July 1735). The chief Rom. Catholic church is St Mary's, designed by Pugin. In the Wardwick is the free library and museum, the latter notable for the Prince Charlie room with memories of the invasion by the Young Pretender. The museum and art gallery, together with the library in the same building, were presented to the tn. in 1878 by Michael Thomas Bass, M.P., and the art gallery was extended in 1914-15. At St Mary's Gate is the co. hall, built in 1660, and modernised in 1866, though the facade remains unaltered. Features of old D. include the 'Dolphin,' an overhanging black-and-white inn of 1530; D. school, first mentioned in a charter of 1160 (though the present building dates from 1554), where Flamsteed was a pupil; the first Methodist preaching house in St Michael's Lane; the tall square tower,

with arched and canopied roof, of John Lombe's silk mill; the chapel of St Mary's of the Bridge, dating from the 13th cent.; and the house in Exeter Street where Herbert Spencer was b. There are 3 nurseries, 52 primary, 19 secondary modern and 4 grammar schools, and 1 Junior college of art. The D. College of Art for advanced courses in art is administered by the local authority. A school of science was commenced in 1870 and is now called the D. Technical College. The D. training college, founded 1850 by the diocese of Lichfield, became in 1927 the D., Southwell, and Lichfield College. Institutions include Queen Street baths, built in 1932; the Royal Infirmary, the hospital for women, and 4 other hospitals. Features of modern D. created under the central improvements scheme are the council house, the bus station, the Riverside Gardens, Morledge Market, and the cattle market. The oldest park belonging to the corporation is the Arboretum, given to the tn in 1840, and laid out by the architect J. C. Loudon; other parks include Darley Abbey (60 ac.), Markeaton Park (200 ac.), the Racecourse Park (125 ac.); Riverside Gardens, which, like the Arboretum, is in the midst of a densely built-up area; the municipal sports ground; and various miscellaneous parks and recreation grounds. The airport at Burnaston, 5 m. from D., is owned and controlled by the D. Corporation.

D. is a great industrial centre, renowned for the quality of its engineering products. As H.Q. of the old Midland railway it soon became an important railway centre, not only for operational and administrative purposes, but by virtue of the large locomotive, carriage, and wagon works built near the station. After 1900 the process of industrial expansion continued, with the estab. of the great Rolls-Royce factory in 1906. Although D. is not one of the largest of midland industrial tns, there is considerable diversity of industries: aero engines, aircraft components, iron castings, artificial silk, plastics, sugar refining, electric motors, cables, can-making machinery, power presses, mining equipment, steam units for electric-power plants, hosiery, rayon, narrow fabrics, and tapes, porcelain (Royal Crown Derby porcelain), paints and chemicals.

D. is governed by a council of 64 members, of whom 16 are aldermen, elected by the councillors, who number 48, and are elected by the citizens.

D. is the seat of a bishop (see created 1927). The bor. is divided into 2 parl. constituencies. Pop. (est.) 200,000, including suburbs.

Derby. Between 1745 and 1750 a factory was founded at D., producing a soft-paste porcelain (q.v.) under Wm Duesbury, who d. 1786. From 1786 to 1811 it continued to produce a fine porcelain, known as 'Crown Derby' because of the mark used, and from 1811 to 1848 a bone china known as 'Bloor Derby' (because it was owned by Robert Bloor), the decoration of which marked a fall from the high artistic standards. After the Old Derby Works closed in

1848, some of the potters estab. a small factory in King Street, Derby, which lasted to 1870. An entirely new company opened in 1876, called the 'Royal Crown Derby Porcelain Company', which makes a high-quality china ware (q.v.). See J. Haslem, *The Old Derby China Factory*, 1876; F. B. Gilhaspy, *Crown Derby*, 1951. See BISCUIT.

Derby Stakes. celebrated horse-race, instituted by the earl of D. in 1780. The D. is a sweepstake of 100 sovereigns each, 50 sovereigns forfeit if declared by Tuesday in the week before running, or 10 sovereigns only if declared by the first Tuesday in July in the year before running. Five thousand sovereigns, including a gold trophy, is added to the sweepstake, the winner taking 85 per cent, the 2nd 10 per cent, and the 3rd 5 per cent of the total stakes. The race is run on the 2nd day of the summer meeting at Epsom, Surrey, falling sometimes in May, sometimes in June; on D. Day the road from London is covered by a continuous stream of traffic. There is also a D. run every spring at Churchill Downs, the famous race track in Louisville, Kentucky, U.S.A.; the winner receives \$10,000. See HORSE-RACING.

Derbyshire, midland co. of England, bounded by Yorks, Cheshire, Staffordshire, Leicestershire, and Notts. D. contains numerous antiquities, including the pre-historic circle of Arbor Low, the most important in England after Stonehenge and Avebury. Other places of interest are the ruined abbeys of Dale and Beauchief, the Saxon crypt at Repton, and the mansions Haddon Hall, Hardwick Hall, and Chatsworth House (magnificent seat of the dukes of Devonshire). The co. was associated with the retreat of Prince Charles Edward (1745) and the reversal of the Stuarts' fortunes. The S. part of the co. is fertile, and produces cereals and root crops, but the N. is very rugged and mountainous, and the Peak dist. provides some of the most picturesque scenery in England. Here, in the S. spurs of the Pennine chain, rise the numerous rvs. of the co., tribs. of the Mersey, Don, and Trent. After the Trent itself, which intersects the S. part of the co., the chief rvs. are the Derwent, Wye, Dane, Goyt, Dove, and Rother. In the neighbourhood of Buxton and Matlock are valuable medicinal mineral springs. One of the chief industries of the co. is coal-mining, chiefly in the E.; other minerals and metals worked are iron, lead, zinc, barytes, fluorspar, and gypsum. Sandstone, marble, and pipe-clay for the potteries are also obtained. Sheep-farming is extensively carried on in the N. hills, while the S. plains form a noted corn-growing and dairy-farming dist. Other industries are porcelain, silk, cotton, hosiery, iron, woollen, lace, and elastic-web manufs. The chief tns are Derby (the co. tn) Matlock, Buxton, Chesterfield, Glossop, Ilkeston, and Long Eaton. D. returns 9 members to Parliament, 2 for the bor. of Derby and 7 for the co. Area 643,572 ac. (land and inland water); pop. 826,000.

Derocto, or **Atargatis**, Gk forms for a Syrian combination of Atar and Até, names of a goddess worshipped in Syria, and possibly of Lydian origin (cf. Cybele, Attis). The main shrine at Hierapolis is described in detail by Lucian (*De Dea Syria*). Gk writers tell a legend of her as half-fish (Diodorus Siculus, II, 4). She is apparently equivalent to Astarte (q.v.) and was worshipped like her with sexual rites, her priests (*Galli*) being eunuchs, self-castrated in a religious frenzy at her orgies. The fish and dove were sacred to her as to Astarte.

Dercum, **Francis Xavier** (1856-1931), Amer. neurologist, b. Philadelphia. In 1888 he described the disease known as D.'s disease (*Adiposis dolorosa*). His chief works are *Clinical Manual of Mental Diseases*, 1913; *Biology of the Internal Secretions*, 1924; and *Physiology of the Mind*, 1925. Modern treatment of certain mental disorders owes much to D.'s pioneering work in showing the relationship between such diseases and the endocrine glands.

Derecske, tn of Hungary, in Hajdu-Bihar co., 10 m. SSW. of Debrecen (q.v.). It has a trade in cereals, livestock, and tobacco. Pop. 10,500.

Dereham, **East**, mrkt tn of England, in Norfolk, 16 m. NW. of Norwich. There are iron foundries, malt-houses, and a furniture factory. A monument has been erected to Wm Cowper, the poet, who took up his residence here in 1796, and is buried here. George Borrow was b. here in 1803. Pop. 6,571.

Derelet, term in Eng. law, denoting any property which the owner has deserted or wilfully cast away. It is most commonly applied to a ship abandoned by the capt. and crew. The first comes to a wreck can claim salvage from the Crown or from the persons who have a right to unclaimed D. vessels. Land reclaimed from the sea is said to be D. (i.e. forsaken by the sea, from Lat. *dereelinquere*), and belongs either to the owner of the adjoining lands, supposing it is given up gradually, or to the Crown in case of a sudden and considerable recession of the sea.

Derg, **Lough**, 4 m. NW. of Pettigo, co. Donegal, Rep. of Ireland, is 3 m. long by 24 m. broad, with an area of 24 sq. m. It has a beautiful aspect, in spite of its wild surroundings, being studded with many small is. Saint's Is. has the remains of a ruined priory. Station Is., the reputed scene of St Patrick's purgatory, is one of the most celebrated holy places in Ireland, being visited by pilgrims from all over the world between 1 June and 15 Aug.

Derham, **William** (1657-1735), philosopher and divine, b. Stoulton, near Worcester. In 1696 he pub. *The Artificial Clockmaker*, and from 1711 to 1712 he was Boyle lecturer. His other works are *Physico-Theology*, 1713; *Astro-Theology*, 1715; *Christo-Theology*, 1730; and *A Defence of the Church's Right in Leasehold Estates*, 1731.

De Rivera, **Primo**, see PRIMO.

Dermatine, mineral compound with a

sp. gr. of 2.1, found in Waldheim, Saxony, and consisting of silica, magnesia, protoxide of iron, and water. It is reniform, stalactitic, brittle, and resinous, coloured blackish-green with yellow streaks.

Dermatitis, inflammation of the skin. See SKIN, Diseases.

Dermatology (Gk *derma*, skin), the science of the treatment of the skin and skin diseases. See SKIN.

Dermostidae, a family of Coleoptera, contains numerous species of beetles which are harmless when adult, but in the larval stage do much damage to the collections of naturalists, and are particularly destructive to skins.

Derna, coast tn in Cyrenaica. It is situated on a bay which is frequently inaccessible during spring and winter, in an oasis of date palms and bananas. After Benghazi it is the most important settlement in Cyrenaica. The tn changed hands sev. times during the campaigns in N. Africa in the Second World War. It was captured by the Brit. on 30 Jan. 1941, and reoccupied by the Italians on 8 April, recaptured on 22 Dec., and again reoccupied by the Ger. and It. armies on 7 Feb. 1942. It finally fell to the Allies in the Eighth Army advance after El Alamein in Nov. 1942. Pop. 21,547.

De Robeck, **Admiral Sir John Michael** (1862-1928), 2nd son of 4th Baron de R. of Gownan Grange, Nans. Eirc. Entered the R.N. as a cadet, 1875; capt., 1902, rear-admiral, 1911, Vice-admiral, 1917, admiral of the fleet, 1925. At the outbreak of the First World War was appointed to command of 9th Cruiser Squadron, and was engaged in the protection of commerce on the Finisterre station, where he captured the N.-Ger. Lloyd steamer *Schlesien*. He was appointed second in command of the fleet at the Dardanelles early in 1915, and succeeded to the chief command on 16 Mar. 1915. At the end of 1916 he was appointed to command the 2nd Battle Squadron of the Grand Fleet, a position he retained to 1919, when he was appointed commander-in-chief of the Mediterranean fleet. At the same time he was Brit. high commissioner at Constantinople pending the signature of Turkey to the peace treaty. In 1922 he was appointed commander-in-chief of the Atlantic fleet and held that position until 1924.

De Rougemont, **Louis**, real name **Henri Louis Grin** (1847-1921), pseudo-explorer, native of Gressy, Switzerland. Became known first through his address to the anthropological section of the Brit. Association, on 9 Sept. 1898, in which he claimed to have lived for 30 years among the Australian aborigines. His imaginary adventures in company with an Eskimo named Etukishuk were pub. serially in the *Wide World Magazine*. His complete exposure as an impostor was made in the *Daily Chronicle*.

Déroulède, **Paul** (1846-1914), Fr. man of letters and politician, b. Paris, studied law, and was called to the Bar in 1870. During the Franco-Prussian war he was taken prisoner at Sedan. His *Chants du*

soldat, pub. In 1872, achieved such popularity that in 1875 he pub. his *Nouveaux Chants d'un soldat*. Gounod wrote the music for his patriotic hymn, *Vive la France*, which was sung at the exhibition of 1878. His name is especially associated with the *Ligue des patriotes*, which he instituted in 1882. But when he tried to use the organisation to promote the cause of Boulanger, he was obliged to retire from his presidency. The league was suppressed by the gov. in 1889 as a political menace. Deputy for the first time in 1889, he became notorious for the violence of his anti-Dreyfus policy. Banished in 1900 for attempting to overthrow the constitution, he was allowed to return to France in 1905.

Derpt, see TARTH.

Derry, see LONDONDERRY.

Dertosá, see TORTOSA.

De Ruyter, Michiel Adriaanszoon (1607–1676). Dutch naval commander, *b.* Flushing, where there is a monument to him in the Jakobskerk. A capt. in 1635, he was stationed some time in the E. Indies, and in 1647 sank a detachment of Algerian ships off Sallee. In 1652 he succeeded in preserving his convoy of merchantmen in spite of the conflict with the Eng. fleet near Plymouth. During the war of 1652–4 de R. ably seconded van Tromp, so that at the close of the struggle the Dutch leaders had at least held their own against Blake and Monck. During the second Eng. war de R. obtained a narrow victory, after a grim fight, over Monck in 1666, but was himself obliged to retreat to Dutch harbours before Ayscue a little later in the same year. But it was in 1667 that de R.'s daring brought him his highest glory, for with de Witt he sailed up the Medway as far as Chatham, and there destroyed all the Eng. shipping. In 1659 he had aided Denmark by conquering the Swedish fleet. In 1672 he won some advantage over the combined Eng. and Fr. fleets in Solebay, but in 1676, whilst engaging in a desperate encounter with the Fr. Adm. Duquesne at Syracuse, he was mortally wounded.

Dervish (Persian, derivation unknown). Before Islam was a century old, men adopted ascetic practices; some adopted continuously, i.e. every other day throughout the year, and of one it was said that he always looked as if he were coming from a funeral. Before the end of the 2nd cent. some led a communal life under a teacher, and a little later houses were built where men lived or met for religious exercises in common. Many were not satisfied with their Muslim public worship and sought additional ways of communing with God, laying stress on His love for men and His desire to have men love Him. This broke down the barrier set by orthodoxy between God and man (*viz.* 'nothing is like Him') and sometimes led to pantheism and also to antinomianism when men claimed to be so near to God that it did not matter what they did. In the 12th cent. brotherhoods were formed, each under a head who claimed to have received a special instruction, handed down through a chain of transmitters

from the prophet or one of his companions. A central convent was founded, daughter houses grew out of it and sent their contributions to the head. A member of such an order was a D. and there were usually lay brothers in addition to the full members. Often the headship was kept in the founder's family. Each order had its own ritual, a form of words often accompanied by actions; the object was to induce ecstasy in which communion with God was easier. Thus one had its ritual dance, in another the members ate live coals or gashed themselves with knives. A convent was usually a centre for teaching and was often a civilising influence and a lodging for travellers. The head of the Bek-tashi order girded the sultan of Turkey at his accession with the sword of Othman, and the Senussi was a political force which gave a king to Libya. There were also D.s who were not attached to any order, and led a wandering life, begging their way, often addicted to drugs. See O. Dupont and X. Copolani, *Les Confréries religieuses musulmanes*, 1897; J. K. Birge, *The Bektashi Order of Derrishes*, 1937.

Derwent: 1. Riv. of Cumberland, England, rising near Bow Fell and Scafell, and flowing N. and N.E. to D. Water and Bassenthwaite, then W. through a narrow valley past Cockermouth to the Solway Firth near Workington, a total length of 34 m. The water is wonderfully clear, but the D. is not navigable.

2. Riv. of Derbyshire, England, rises in Bleaklow Hill, N. of the Peak, and flowing through a narrow valley, where it receives the Noe and Wye, flows S. past Chatsworth, Matlock, and Belper into a low plain S. of Derby. From here it flows S.E. in a very winding course, to join the Trent near Sawley, on the Leicestershire border, a total distance of about 60 m. The riv. is not navigable except for pleasure boats in certain reaches near Matlock.

3. Trib. of the R. Tyne, England, 30 m. long, forming for part of its course the boundary between Northumberland and co. Durham.

4. Riv. of Yorks, England, rising on the Yorks moors, and flowing 57 m. S. through Malton to join the Ouse between Selby and Goole.

Derwent Water, lake in the SW. of Cumberland, England, 238 ft above sea level, stretching for 3 m. to the S. of Keswick; greatest breadth 1 m., depth never exceeding 72 ft. Overlooked by Castle Head (530 ft), it is noted for its wild beauty, and especially for the Floating Isle and the Lodore Falls near its head. Brandelhow, on the W. side, bought by public subscription in 1902, was the first National Trust property in the Lake Dist. The Ruskin memorial on Friar's Crag was handed over to the trust in 1900.

Derwentwater, James Radcliffe, or **Radclyffe**, Earl of (1689–1716), a leader in the Jacobite rebellion of 1715, was captured and confined to the Tower of London after the rout at Preston. His youth,

courtesy, bravery, and rank, the efforts of his friends, and his own appeal for the king's mercy were powerless to stay his execution in 1716 on Tower Hill. *See* life by F. J. A. Skeet, 1929.

Derzhavin, Gavril Romanovich (1743-1816), Russian poet; he was minister of justice, 1802-5. His poetry is the highest achievement in Russia of the Classicist school and is marked by sublimity and vigour of thought and expression. His most famous work is the philosophical ode *God*.

Desaguadero: 1. Riv. of Peru and Bolivia, since 1904 part of the boundary of Bolivia. It drains (as the name implies) Lake Titicaca, and flows SE. for some 200 m. with gradually lessening volume to Lake Poopo. It gives its name to the valley dist. of the Andes, through which it flows. It is navigable for small craft.

2. Riv. in the W. of the Argentine; *see* SALADO, 2.

Desaix de Veygoux, *see* VEYGOUX.

Desart, Sir Hamilton John Agmonde-sham Cuffe, 5th Earl of and 7th Baron, also Viscount Castle Cuffe, of Desart, co. Kilkenny (1848-1934), 2nd son of 3rd earl. He was called to the Bar, 1872; solicitor to the Treasury and queen's (and king's) proctor, 1894-1909; director of public prosecutions, 1894-1908. Succeeded to peerage, 1898. During his tenure of office he undertook the prosecutions in the following *causes célèbres*: Jameson Raid case; Jabez Balfour, of Liberator fraud notoriety; the Maybrick murder case; the moat farm murder; the trial of Neil Cream; and the Lord Russell bigamy case in the House of Lords.

Desaugiers, Marc Antoine Madeleine (1772-1827), Fr. dramatist and songwriter, *b. Fréjus*; he fled from the terrors of the revolution to San Domingo, where, during the great Negro rebellion, he was captured and almost lost his life. On his return to France in 1797 a storm of popular applause at once greeted his operas and comedies, which were produced in rapid succession at the Théâtre des Variétés and the Vaudeville. A higher literary merit belongs to some of his drinking songs and lampoons, which he sang himself with considerable *éclat* in many Parisian salons. At his death he was manager of the Vaudeville.

Desbarres, Joseph Frederick Wallat (1722-1824), engineer, *b. in* England of Huguenot parents. During the siege of Quebec he served as aide-de-camp to Gen. Wolfe. The engineering operations during the conquest of Canada which followed were under his charge, whilst from 1763 to 1773 he surveyed the shores of Nova Scotia. He became lieutenant-governor first of Cape Breton (1784-1804), and afterwards of Prince Edward Is. (1805-13).

Desborough, John (1608-80), soldier and statesman, *b. Eltisley, Cambs.* In 1636 he married Jane, sister of Oliver Cromwell, on whose side he fought gallantly during the Civil war. He opposed Cromwell's assumption of quasi-royal powers, however, although he himself sat in Crom-

well's House of Lords, and after the protector's death he became a strong partisan of Fleetwood. In 1660 and 1666 he was imprisoned in the Tower for alleged intrigues against Charles II. Butler satirised him in *Hudibras* and the *Parable of the Lion and Fox*.

Desborough of Taplow, 1st Baron, *see* GRENFELL, WILLIAM HENRY.

Descartes, René (Latinised as *Renatus Cartesius*) (1596-1650), Fr. philosopher, *b. La Haye, Touraine*, and educ. at the Jesuit school of La Flèche. In 1617 he went to Holland and entered the army of Prince Maurice of Orange. In 1619 he entered the service of Bavaria, and while in winter quarters at Neuberg on the Danube found time for the reflections which afterwards resulted in the *Discours de la méthode*. In 1625 he settled in Paris, but went to the Netherlands in 1629, and

RENÉ DESCARTES

Engraving from the painting by Franz Hals

lived there mainly until 1649. In 1650 he went to the court of Sweden at the invitation of Queen Christina, but he *d.* at Stockholm within a few months. In 1666 his body was removed to Paris, and in 1819 transferred to St Germain-des-Près. D. is generally considered the 'father of modern philosophy.' Even in his school-days he found it impossible to accept scholastic tradition and theological dogma as knowledge, and his first step towards evolving a philosophical system was to discard all books. In 1637 appeared the *Discours de la méthode*, in which he traces his mental development from his earliest years to the point when he refused to believe anything unless it were supported by incontrovertible and absolute proof. Starting with doubt as the only sure test, he applied it to all that had hitherto passed as knowledge, and the only proposition which stood the test seemed the fact of his own existence. This he

formulated as 'Cogito: ergo sum,' clearly describing the relation between consciousness and existence. From this he next concluded that 'whatever is clearly and distinctly thought must be true,' whence he arrived at the idea of the existence of a Perfect Being, because from the intuition of our own imperfection we evolve the idea of perfection, and if the idea of perfection is certain, then perfection must exist. The cardinal point in the philosophy of D. is the essential difference between spirit and matter, between thinking and extending substances, into one of which classes all things fall, and which can in no way exert any influence upon each other or partake of each other's attributes. The principles of the *Discours de la méthode* are dealt with more fully in *Méditations de prima philosophia*, 1641, and *Principia philosophiae*, 1644. From philosophy he applied his principles to physics, and his celebrated theory of vortices, explaining the motions of the heavenly bodies, was only superseded by Newton's theory of gravitation. It was in mathematics that D. achieved the most lasting results; he first recognised the real meaning of the negative roots of equations and founded analytical geometry, the application of algebra to geometry. Besides his philosophical and mathematical treatises, D. was the author of *Traité des passions de l'âme*, 1649, for Queen Christina. See also CAMBRIDGE PLATONISTS; INNATE IDEAS. See J. Millet, *Descartes, sa vie, ses travaux, ses découvertes*, 1867-71; K. Fischer, *Descartes and his School* (Eng. trans.), 1887; *Descartes: his Life and Times*, and trans. of the chief works, by Elizabeth S. Haldane, 1905-11; *Cambridge Modern History*, vol. iv, 1906, 'Descartes and Cartesianism'; G. Milhaud, *Descartes, Savant*, 1921; C. von Brockdorff, *Descartes*, 1923; C. Adam and G. Milhaud, *Correspondance*, 1936-41; L. Brunschwig, *Descartes et Pascal*, 1945; and S. V. Keeling, *Descartes*, 1948.

Descent (from Norman-Fr. *discent*), see in heredity, DARWINISM; in law, INHERITANCE; in science, BIOLOGY.

Deschamps, Eustache (c. 1338-1415), Fr. poet, b. Vertos in Champagne. One of the victims of the siege of Rheims, he cherished to his death a bitter hatred of the Eng. nation. Besides serving in the Flem. wars he is said to have suffered imprisonment by the Saracens, and to have wandered through Syria and Egypt, Italy and Hungary. In 1360 he became vassal to Princess Isabella, and for some time he was *huissier d'armes* to King Charles V. Indeed, the list of honourable offices he held under nearly all contemporary princes attests his great popularity. The numerous *virolays*, satires, ballades, rondeaux, and farces of this roi de Laidure, as he styled himself, which were unprinted till 1832, justify his claim to be recognised as the first lyric poet to write in modern Fr. His one epic poem was entitled *Miroir de Mariage*, and he wrote an *Art of Poetry* in prose, 1392. His complete works were pub. by Q. de Saint-Hilaire and G. Raynaud in 11 vols., 1878-1903. See E. Hoepfner, *E. Deschamps, Leben und Werke*, 1904.

Deschanel, Émile Auguste Étienne Martin (1819-1904), Fr. man of letters, b. Paris, was appointed to the professorship of rhetoric at Paris. He was obliged to leave France because of the vehemence with which he preached republican doctrines in his *Catholicisme et Socialisme*, 1850. But in 1881 he was elected to the chair of modern languages in the Collège de France. Most of his publs., e.g. *Les Courtisanes Grecques*, 1854, *Études sur Aristophanes*, 1867, and *Le Romantisme des classiques*, 1882, deal with the literature of the ancients. Hisson, Paul Eugène Louis (1856-1922), was president of the Fr. rep. in 1920.

Deschutes, riv. of U.S.A., rising on E. side of the Cascade Mts. Its course is chiefly NNE., and its length is about 240 m. It flows through a volcano dist., dividing Wasco co., and finally enters the Columbia R. It is used for power and irrigation.

Deseronto, small tn of Ontario, Canada, situated on the bay of Quinté, in Hastings co., about 30 m. SW. of Kingston. Has trade in lumbering and fruit growing. Pop. 1645.

Desert (Lat. *desertum*, from *deserere*, to abandon), geographical term for a barren and uninhabited dist. of large extent. The term may be used to include the Tundras or frozen plains fringing the Arctic regions, the great ice-wastes of the Arctic and Antarctic continents, and sometimes the temporary wastes or steppes which are covered with vegetation only for a few months in the spring. The name is more usually restricted, however, to the hot, dry dists. of the low latitudes, where the temps. are extreme, the rainfall very scanty, and evaporation very rapid. These hot D.s occur in 2 belts encircling the earth; in the N. hemisphere there stretch the great Sahara, Libyan, and Nubian D.s, the D.s of Arabia, Persia, Turkestan, and Gobi, which continue in the great basin of N. America. The S. ring, less extensive and more broken, includes the Kalahari D. in Africa, the interior of Australia, and the Atacama D. in S. America. The essential characteristic of a D. is its lack of rain and the scarcity both of moisture on its surface and of watery vapour in the atmosphere which might decrease the excessive radiation. The temps. are extreme, ranging from 120° F. in the daytime, with the sand itself at a temp. of 150° F., to below freezing-point at night. D.s occur at all altitudes, from below sea level to sev. thousand ft. above it, and may be of a flat appearance broken only by driving waves of sand, and bounded by the sharp circle of the horizon, or a rocky plateau, hollowed and cut into valleys and ravines. Cloud-bursts provide the greater part of the scanty rainfall, and sandstorms of terrific force and velocity are of frequent occurrence. The mirage (q.v.) is a peculiar feature of great D.s, and is largely the cause of the tales of genii and evil spirits prevalent among D. peoples. Absolute lack of vegetation is rare, but the plants grow very scantily, and are specially adapted to D. conditions, being mainly of

the spinifex family and the prickly variety of the cactus, whose glazed surface retains such moisture as it obtains from the soil. Animal life is similarly restricted, the camel being the only beast of burden able to withstand D. conditions. Where natural springs are found the surrounding land becomes a marvel of fertility, and an oasis (q.v.) settlement grows up, while the rivs., such as the Nile, are used for the irrigation of wide tracts, and the sinking of artesian wells is frequently practised in the Sahara. See also Gobi; KALAHARI; SAHARA. See A. McInerny, *Deserts and the Birth of Civilisation*, 1932, and *The Role of the Deserts*, 1934; P. B. Sears, *Desert on the March*, 1935; J. Harris, *Soil of Desert Vegetation*, 1936; and R. A. Bagnold, *The Physics of Blown Sand and Desert Dunes*, 1941.

Desertion may be defined as intentional abandonment of a post or obligation to which the offender is bound by legal or moral laws: (1) D. in the armed forces is being absent without leave when there is no intention to return, as distinguished from absence without leave from other causes. The practice of deserting from one regiment to another to avoid foreign service or aiding the civil power is designated fraudulent enlistment, as distinguished from D. D. when on active service is punishable with death in all European countries. All who attempt to induce D., or who harbour deserters, are liable to punishment. When D. occurs at other times it is punished with imprisonment for the first offence, and a term of penal servitude, to be determined by the president of the court martial, for all subsequent offences. All deserters must be tried by court martial, and when convicted forfeit all prior service and any advantages accrued to them from such service, as well as being liable to serve again for the full term of the forfeited service. (2) D. from the merchant service is punishable with forfeiture of pay, and as directed by the Merchant Shipping Act, 1894. (3) D. of wife or children. A deserted wife, by the law of England, may take proceedings against her husband for a maintenance order if she becomes chargeable to the par. He may be charged as a rogue and vagabond under the Vagrancy Act, 1824. D. without cause for at least 3 years is a ground for a petition of divorce by husband or wife; and, similarly, either spouse may present a petition for judicial separation. The Summary Jurisdiction (Married Women) Act of 1895 gives a deserted wife the custody of any children up to the age of 16, and provides that the husband shall pay a weekly sum towards their maintenance. In such circumstances the wife may obtain an order to protect such property as she may herself acquire, or already possesses in her own right. In Scotland D. without sufficient cause for 4 years is ground for a decree of divorce. See DIVORCE; HUSBAND AND WIFE.

Desforges, Pierre Jean-Baptiste Choudard (1746-1806), Fr. playwright. At first an actor in the Comédie Italienne, he later joined a company of wandering players.

for whom he wrote and adapted plays. He married an actress, and both spent 3 years at St Petersburg. On his return he produced *Tom Jones à Londres* at the Comédie Italienne, 1782, an adaptation of Fielding's novel. His *Jocande*, 1790, was written for the music of Louis Jadin. But his greatest success was the comedy *L'Épreuve villageoise*, 1785, the music for which was composed by Grétry.

Deshoulières, Madame Antoinette Du Ligier de la Garde (1638-94), Fr. poetess, b. Paris. She was considered by Voltaire to be the best of the women poets of France. She was a prominent figure for her beauty and wit at the court of Louis XIV, and was the centre of a circle of the most eminent literary men of her time. She wrote odes, ballades, madrigals, and idylls, of which only a few of the last have lived. Complete eds. of her works were pub. in 1695 and 1799. See C. A. Sainte-Beuve, *Portraits de femmes*, 1892.

Desiccation, the process of drying or removing water from a substance. This may be done by heating the substance and causing evaporation of the moisture, or by various chemical agents, such as calcium chloride, sulphuric acid, potassium hydrate, which are applied by means of a desiccator. This is a closed vessel in which the substance to be dried is placed in one part, with the hygroscopic substance which is to dry it in a separate adjacent part. Vacuum D. is a quicker process, and is caused by exhausting the air from the desiccator. Currents of dry air also act as desiccators. Certain organisms have the power of undergoing the process of D. and retaining sufficient latent life to enable them to recover, but the longer the period of D. has been, the longer they take to recover; nematodes, or 'paste-cels,' have been known to revive after nearly 20 years. Rotifers (q.v.) are said to recover after a long period of D., but it is generally considered that it is only the eggs which survive, and that the fully developed organism is really dead. Bear-animacules, or tardigrades, are also said to survive. Among plants, seeds and spores seem able to resist any period of D.

Design (Lat. *designare*, to mark out), in the fine arts, is the drawing or plan which is to act as a guide to the finished representation; the arrangement of the details which are to go to make the whole not only with regard to their artistic completeness, but also with regard to their appropriateness and general utility in the position which they are designed to occupy and the materials from which they are to be constructed. D. does not necessarily mean originality or novelty; more frequently it is the development of old ideas to suit new conditions. In some arts, such as pottery and silver or goldsmiths' work, the form and material are an essential part of the D.; in such arts it is necessary, therefore, that the designer should know the processes, the qualities of the materials, and the practical use of the requisite tools, so that he is not only a designer but also a practical craftsman. The keen competition for export markets

after the Second World War has increased the importance of industrial design (q.v.).

Design, in law, see COPYRIGHT and TRADE MARKS.

Design, Schools of. The first school of design was opened under the auspices of the Council of the Gov. School of Design at Somerset House in 1837. On the re-organisation of the schools in 1852 the 3 main objects in view were: (1) the promotion of elementary knowledge of drawing and modelling; (2) special instruction in the knowledge and practice of ornamental art; and (3) the practical application of such knowledge to the improvement of manufs. In 1857 the central or national art training schools were removed to S. Kensington, where they have since remained. Similar S. of D. grew up in the large prov. tns. Thus as early as 1840 state grants were given to Manchester, Birmingham, Glasgow, etc., to assist them in the erection of such schools. Later new technical schools were estab. throughout the country, where enamelling, metal repoussé, wood-carving, and other artistic handicrafts were taught, as well as drawing and the laws of ornament. Since the Education Act of 1902 the art schools in most tns have been taken out of the hands of private committees, and are now managed by the municipalities with moneys derived from the local rates. The Central School of Arts and Crafts in Southampton Row (estab. by the L.C.C. in 1896) and the Leicester School of Art may be taken as types of the modern estab. where art is taught in strict relation to industrial requirements. See also INDUSTRIAL DESIGN; SCHOOLS OF ART.

Desio, lt. tn. in Lombardy (q.v.), 8 m. N. of Milan (q.v.). It has a silk industry, and was the bp. of Pope Pius XI (q.v.).

Désirade, is. of Fr. W. Indies, 4 m. E. of Guadeloupe, area 10 sq. m. Fishing is the chief industry and some sugar is grown. D. was the first is. discovered by Columbus on his second journey (1493). Pop. 1600.

Desire is used in psychology of all instances where the subject is stirred to action not by percepts— that is, by signs of the presence of the objects of pleasure—but rather by imagination or ideas. D. in man corresponds to appetite in animals, and may be defined, according to Spinoza, as 'appetite with the consciousness of it.' In ordinary speech it is customary to speak of the D. of tangible things as also of the D. of abstractions, such as wealth or truth. Intensity of D. depends on the force of the impulse to action, and not on the degree of pleasure which is expected to follow the fulfilment of that D.

Deslys, Gaby (c. 1884-1920), Fr. music-hall comedienne and dancer, was well known in Paris before her first appearance in London— viz. at the Gaiety Theatre, Sept. 1906. 'Till 1917 she was a great favourite with the London public, alike for her personal beauty and for her dazzling costumes. She also took part in light opera and farce. She d. in Paris leaving a life interest in her fortune of £400,000 to her mother and sister; after

their deaths it was to go to the poor of Marseilles.

Desmids (Gk *desmos*, bond) constitute a large genus of fresh-water algae which bear considerable resemblance to diatoms, but differ from them in being bright green in colour and having the cell-wall composed of cellulose instead of silica.

Des Moines: 1. Riv. of Minnesota and Iowa, U.S.A. Rising in the SW. of Minnesota, it traverses Iowa with a southeasterly course, and joins the Mississippi at Keokuk. Near its mouth it marks the Missouri state line. Length 535 m.

2. City, cap. of Iowa, U.S.A., on the Des Moines R. in the 'corn belt' and a coal-mining area, 300 m. W. of Chicago. It is a centre of commerce, insurance, printing and publishing, and meat packing, and manufs. farm machinery, aeroplane parts, foundry products, flour, and clothing. It has had a city manager since 1950, and is the seat of Drake Univ., the Cumming School of Art, and Des Moines Still College of Osteopathy and Surgery. Other points of interest: state capitol, civic centre, art centre, Drake-Des Moines Symphony Orchestra, state fair grounds. Pop. 173,000.

Desmond, Earls of, Irish family who exercised considerable influence over the SW. of Ireland. Beginning with Maurice Fitzgerald (d. 1356), the line came to an end in Gerald Fitzgerald, the 15th earl, who was murdered in his retreat among the Kerry Mts, 1583, his place of hiding having been betrayed to the Eng. He had sacked Youghal and murdered the inhab. as a direct challenge to Elizabeth's Gov. Consequently he was proclaimed a traitor, and spent the last 2 years of his life as an outlaw.

Desmoulins, Camille (1760-91), Fr. revolutionary and journalist, b. Guise, Aisne, first became well-known after his harangue to the mob on 12 July 1789. 'To arms!' he cried; 'this dismissal (i.e. that of Necker) is the toxin of the St Bartholomew of the patriots.' It was the beginning of the Fr. Revolution; 2 days afterwards the Bastille fell. Nevertheless a permanent stammer drove D. to write down all his inflammatory speeches. His pamphlets entitled *La Philosophie du peuple français*, 1788, *La France libre*, 1789, and the series that subsequently appeared in *Les Révolutions de France et de Brabant*, 1789-91, contain extremist revolutionary doctrines. Associated first with Mirabeau, and on his death with Danton, D. was partly responsible for the downfall and ruthless massacres of the Girondists. Later, however, with Danton, D. advocated a moderation of the Terror. Robespierre considered that D. had held him up to ridicule in his newspaper, *Le Vieux Cordelier*, and, with Danton, D. was guillotined, 5 April 1794. A few days later his young wife was also guillotined. See lives by R. Arnaud, 1928, and P. Compton, 1933.

Desna, navigable left trib. of the R. Dnieper in Russia. It rises near Smolensk and joins the Dnieper near Kiev. It is chiefly used for floating timber. Length 740 m.

Desor, Pierre Jean Edouard (1811-82), Swiss geologist and palaeontologist. Pub. papers on Echinoderms, anct. lake habitations, and on desert conditions. Pub. *Aus Scherra*, 1865.

De Soto, Fernando, see SOTO.

Despard, Mrs Charlotte French (1844-1939), one of the prin. leaders of the women's suffrage movement. Much influenced by Shelley. Twice imprisoned. She laboured as a poor law guardian and a Socialist orator, and was well known among the poor of Dublin. Though a sister to the first Earl Ypres, she was an extreme pacifist during the First World War. In 1919 she stood for Parliament at Battersea. Afterwards she went to live in Dublin, where her support of Mr de Valera, both before the treaty of 1922 and in the ensuing civil war, brought her into conflict with the authorities. In 1926, at the age of 82, Mrs D. marched from the Embankment to Hyde Park in a procession of women representing the various professions to demand equality of franchise; and with the royal assent to the Bill in 1928 she saw her greatest ambition realised.

Despard, Edward Marcus (1751-1803), Irish conspirator, who spent 18 years in military service in the W. Indies and later as superintendent of Yucatan. Recalled on trivial charges and found innocent even of these (1792), he was notwithstanding imprisoned for 2 years. He was finally beheaded because of his share in a plot to assassinate the king.

Despencer, Baron Le, see DASHWOOD.

D'Espercy, see FRANCHET D'ESPEREY.

Des Périers, Bonaventure (c. 1510-44), Fr. writer, b. Arnay-le-Duc, Burgundy. In 1536 he became the secretary of Margaret, queen of Navarre. His *Cymbalum mundi*, 1537, is a book of 4 dialogues, satirising Christianity. The work was in parts very daring, and the outcry which ensued caused the queen to withdraw her patronage. In 1544 Des P. committed suicide. The work upon which his fame principally rests is his *Nouvelles recreations et joueur deris* (pub. posthumously in 1558), a collection of short stories, often crude but always amusing, told in a natural and lively style. The *Œuvres françois de Des Périers* were ed. by L. Lacour (2 vols.), 1856. See P. A. Becker, *B. Des Périers*, 1924; H. Just, *La Pensée secrète de B. Des Périers et le sens du 'Cymbalum mundi'*, 1948.

Des Plaines, residential city in NE. Illinois, U.S.A., in a truck-farming area, manufacturing sprinklers, fertilisers, greenhouses. Limestone is quarried. It is the seat of Elmhurst College. Pop. 21,300.

Despotism, the oppressive and sometimes illegal rule of one man; the reverse of democracy. The name, like tyrant, is of Gk origin and had nothing of its present significance. The title despot was given to the master of a household of slaves; then to the absolute ruler of E. countries with whom the Gks came in contact. Later it came to be an honorary title given to princes in the Byzantine empire, and it is still employed in something of its

old sense as a mode of addressing a bishop in the Gk Church. The beginning of its present use was the employment, as in the case of tyrant, of the word to describe a ruler who had no right to be the ruler although his gov. may have been beneficial. See INDIVIDUALISM.

Despoto Dagh, see RHODOPE MOUNTAINS.

Despréaux, N., see BOILEAU-DESPRÉAUX.

Desquamation, shedding of the epithelium or surface skin. It occurs commonly after certain skin diseases and erythematous rashes, notably that of scarlet fever.

Desssalines, Jean Jacques (1758-1806), Negro emperor, b. in Guinca, Africa, and carried to Haiti as a slave. In the insurrection of 1791 he assumed the name of his master, a Fr. planter, and fought as a lieutenant under Toussaint l'Ouverture. After submitting to France he was made governor of the S. part of the is., but began the war anew, defeated the Fr. at the battle of St. Marc, and after unspeakable cruelties drove them from the is., 1803. Haiti declared itself independent in 1804, and D. was elected governor, and in the following year emperor under the title of Jean Jacques I. His tyranny and cruelty soon alienated his supporters, and in 1806, while trying to suppress a revolt, he was murdered by Pétion and Christophe, the latter of whom succeeded him.

Dessau, Ger. city in the dist. of Halle, on the Mulde near its confluence with the Elbe, 27 m. NNE. of Halle (q.v.). It was formerly cap. of Anhalt (q.v.). It is a finely laid-out city, with interesting Baroque buildings, including the former ducal palace. It has manufs. of rolling-stock, textiles, chemicals, and iron goods. The city was heavily bombed during the Second World War, in consequence of the large aircraft factories in its neighbourhood. It was captured by the Amer. 1st Army on 21 April 1945. D. was the bp. of Moses Mendelssohn, Wilhelm Müller, and F. Max Müller (qq.v.). Pop. 90,000.

De Staël, Madame, see STAËL.

Desterro, see FLORIANOPOLIS.

Destouches, Philippe (1680-1754), Fr. dramatist, b. Tours. His real name was Néricault. In 1699 he became secretary to the Fr. ambas. in Switzerland, and wrote during that time *Le Curieux Impertinent*, 1710; *L'Ingrat*, 1712; *L'Irrésolu*, 1713; *Le Médisant*, 1715. From 1716 to 1722 he was secretary to the embassy in London. On his return to France he was elected to the Academy, 1723, and subsequently produced *Le Philosophe Marié*, 1727, and his masterpiece *Le Glorieux*, 1732, a picture of the struggle between the old nobility and the wealthy bourgeois. Like Molière, he wished to revive the comedy of character, but in style he rather followed Boileau-Despréaux; his later comedies were spoilt by his carrying the moralising tendency to extremes.

Destroyer, Torpedo Boat, small, fast, unarmoured warship heavily armed with torpedo tubes and guns up to 4.7 in. This class of vessel was developed to supersede the 'torpedo gunboat' or 'torpedo

catcher,' which in turn had been built to destroy torpedo boats. The destroyer acts in squadrons and her duties are to sink the destroyers of the enemy by gunfire, torpedo the larger enemy ships, protect her own battle fleet from torpedo attack, and set up smoke-screens. During the 1914-18 and 1939-45 wars destroyers were also used for escorting convoys of merchant shipping, combating the submarines by means of explosive depth-charges, and as minelayers. The first Brit. destroyer was built by Messrs. Yarrow in 1893 and named *Havock*. She was much lighter and smaller than the 'catchers' she was replacing, but had relatively great length with a low free-board and was equipped with high-speed engines capable of developing 3500 brake horse-power which enabled a speed of 26½ knots to be attained. The great advance in speed of this vessel and her sister ships over the existing torpedo boats was due mainly to the alteration in lines, small draught, high engine power, and reduction in weight brought about by using thinner plates—in some cases they were only ½ in. thick—and cutting out armour plating. Landmarks in the design of destroyers were the introduction of the water-tube boiler, replacement of reciprocating engines by steam-turbines, and the use of oil fuel instead of coal. Torpedo tubes used to be rigidly fixed in the bows, but as the speed of the torpedo was improved these had to be abolished because, after firing, the destroyer at first overran the torpedo, which soon gathered way and hit the parent ship behind. Partly owing to the big increase in the cost of ship-building since the end of World War II, the Royal Navy has, to some extent, replaced D.s by frigates, which are smaller and cheaper. In 1956 the Royal Navy had 68 D.s. about two-thirds of this number being in reserve. The main classes of D. are the Battles, Weapons and 'C's. D.s of the Battle class, which is one of the newer classes, are of 2315 or 2460 tons displacement. They were designed for service in the Pacific in the war against Japan, but hostilities ceased before any were completed. They have a speed of 36 knots, 4 or 5 4.5 guns, 8 or 9 40-mm. anti-aircraft guns, and 8 or 10 21-in. torpedo tubes. Many war-time D.s have been converted into fast anti-submarine frigates. A typical modern D. of the U.S. Navy is that of the 'Allen M. Sumner' class. Its dimensions are 376½ ft by 40½ ft with a displacement of 2200 tons and a speed of over 35 knots. Its armament includes 6 5-in. guns, many close-range anti-aircraft guns, and 5 21-in. torpedo tubes. Larger vessels are those of the 'Gearing' class which with similar armament have a length of 390½ ft and a displacement of 2400 tons. The squadron-leader is a kind of super-destroyer, being larger and more powerfully armed than the others, and acts as flagship to destroyer flotillas. The U.S. Navy has some guided missile D.s under construction. Russia was reported to have 150 D.s in 1954.

Destructors, furnaces employed for the

destruction of refuse. The disposal of refuse from towns has presented a problem to the authorities from time immemorial, but with the concentration of pop. reached in modern civilisations the matter became urgent. Such methods of disposal as dumping into the sea are clearly possible only in special circumstances, but the fact that much of the refuse consists of carbonaceous material (e.g. paper, straw, animal and vegetable remains, cinders, etc.) suggested the idea of destroying it by combustion. Destructor-furnaces are commonly erected in series, and, after the refuse has been collected, tins, cans, and pieces of iron are withdrawn magnetically, fine dust is removed, and the residue then fed into the furnaces. High temps. are necessary (about 2000°) for satisfactory destruction, and in some cases the heat evolved is used to produce steam. Destructors are comparatively expensive to construct and run, but the convenience and cleanliness are worth paying for. Many different types of destructors are in use, e.g. the Heenan type and the Horsfall and Sterling type. *See also* REFUSE, DISPOSAL OF.

Desuetude, technical word in Scottish law, denoting the revocation of some law, simply through disuse or the practice of some usage quite contrary to the terms of the law, which has received its sanction through a general consensus of opinion, and not through any legal enactment. Thus when a man was charged in 1887 with opening a pie and lemonade shop on Sunday he set up a plea of D. as regards the law of 1661 against Sabbath profanation. In this particular case the Act of 1661 was held not to have 'gone into D.' In Eng. jurisprudence, a statute never lapses 'by D.', but can become inoperative only by repeal.

Desvaux, Etienne Émile (1830-54), botanist and writer on Chilean grasses and sedges.

Desvres, Fr. tn in the dept of Pas-de-Calais, 10 m. ESE. of Boulogne. It has ironworks, tanneries, and potteries. Pop. 5500.

De Tabley, John Byrne Leicester Warren, Baron (1835-95), poet, b. Cheshire. He was educ. at Eton and Christ Church, Oxford. Between 1859 and 1865 he pub. 7 vols. of verse, remarkable for their grace and refinement of feeling, but his *Philoctetes*, 1866, which won the admiration of Gladstone and Browning, first gave full illustration of his fine classical culture. His careful drama entitled *The Soldier of Fortune*, 1876, met with a cold reception; a selection of *Poems Dramatic and Lyric*, 1893, proved that his poetical gifts had not been impaired by his life as a recluse. De T. was also an excellent amateur in botany and numismatics, and his work on the flora of Cheshire was pub. in 1899, with a memoir by Sir M. G. Duff.

Detachment, in its military sense, refers to a small body of infantry or armour dispatched from the main army, brigade, battalion, company, or whatever unit it may be, for the performance of some particular duty. In naval terminology the word is similarly used to denote the

dismissal from the fleet or squadron of 2 or more vessels on a special service. A 'gun detachment' means the number of artillery soldiers required to take care of a single gun.

Détaille, Jean-Baptiste Edouard (1848-1912), Fr. painter, b. Paris. He was a pupil of Meissonnier, his first picture exhibited in the Salon being 'A Corner of Meissonnier's Studio,' 1867. His finest pictures are undoubtedly his realistic paintings of military life, either of the scenes from contemporary wars, such as his 'En reconnaissance,' 1875, 'Le Régiment qui passe,' 1876, and his 'Salut aux blessés,' 1877, which represent episodes in the Franco-Prussian campaigns, or from the Napoleonic battles such as his 'Sortie de la garnison de Huningue en 1815,' and his representations of Napoleon in Egypt, 1878, and of the engagement between Cossacks and the Imperial Guard in 1814, 1870. His best-known portraits are of the Prince of Wales, Duke of Connaught, and Emperor of Russia, 1898, while 'Le Rêve,' 1888, and 'Les Victimes du devoir' are 2 of his most famous pictures. See G. Goetschy, *Les jeunes peintres militaires*, 1878.

Detective, see POLICE.

Detective Story. The D. S. proper begins with the tales of Edgar Allan Poe (q.v.), whose 'Murders in the Rue Morgue,' 'Mystery of Marie Rogêt' and 'Purloined Letter,' 1845, introduce the first fictional detective, Auguste Dupin. In France there had already appeared the *Mémoires*, 1829, of Eugène Vidocq, that extraordinary character who began as a thief and ended as a master-detective, and these were followed in 1866 by the novels of Émile Gaboriau, creator of the investigator M. Lecoq. The cult of the *roman policier* has never been so popular on the Continent as in Britain and America, though it produced Gaston Leroux's brilliant *Mystery of the Yellow Room*, 1908, and the innumerable psychological crime stories of the Belgian Georges Simenon. In England the tradition starts with *The Moonstone*, 1868, by Wilkie Collins, which a great critic once called the first, longest, and best of D. novels, though Collins's Sergeant Cuff had a predecessor of sorts in Inspector Bucket of Dickens's *Bleak House*. In 1886 there was pub. in Melbourne *The Mystery of a Hansom Cab* by Fergus Hume, which is said to have created an all-time record by selling half a million copies, but this early success is now forgotten.

It was in the next year, 1887, that the D. S. entered its classic period with the pub. of Conan Doyle's *Study in Scarlet*. This was a tentative effort, only half the book being given over to Sherlock Holmes's exploits and the rest being pure adventure. But after the pub. in the nineties of the series of short stories describing his cases, Sherlock Holmes attained immortality and his name became a household word as familiar as Hamlet or Romeo. In later years Holmes societies were formed; a Holmes literature was built up, solemnly reconstructing his life and attainments as

if he was a real person; there were a number of clever parodies, the most amusing being Maurice Leblanc's *Arsène Lupin versus Holmes*; and of course there were countless imitators. It may be doubted whether in their own line the Holmes series have ever been equalled; and it is an indirect proof of their supremacy that the D. fiction which followed tended to split into 2 distinct groups, each covering only a part of Conan Doyle's range. On the one hand there were the scientific investigators, who catalogued cigarette ends and wielded the microscope with all Holmes's attention to detail. Greatest of these was R. Austin Freeman, whose stories of Dr Thorndyke are said to have given some hints to Scotland Yard itself; and with him may be grouped the matter-of-fact Freeman Wills Crofts, creator of Inspector French, Philip Macdonald with his Colonel Gethryn, and John Dickson Carr, sometimes writing as Carter Dickson, who carried verisimilitude so far that he sometimes worked on actual historical incidents.

But the painstaking study of concrete clues was only one side of Sherlock Holmes's method. He also possessed a masterly insight into criminal psychology; and to develop this side of the D. S. an entirely different set of writers sprang up, the earliest being G. K. Chesterton, whose Father Brown reasons almost entirely from psychological evidence. His chief followers in this field have been women writers, of whom the most noteworthy is Agatha Christie, whose Belgian detective Hercule Poirot insists that the 'little grey cells' by which he analyses character and motive are far more important than the tracing and following up of tangible clues. The stressing of the psychological side gave a human interest to the crime story, which had tended more and more to become a mere intellectual puzzle, and in fact the psychological type shades off into the kind of novel in which the character-drawing is as important as the mystery. Such are the books of Margery Allingham and Ngaio Marsh, and the brilliant D. novels of Dorothy Sayers, whom some would place highest among the women writers. But Miss Sayers has a part also in another tradition, which was first estab. by E. C. Bentley. It was in 1913 that he pub. *Trent's Last Case*, which with its sequel is his only D. novel; the influence of this book was far-reaching, for it proved that a detective need not always behave with the grave self-importance typical of Holmes and his imitators. The 'judicious levity' once advocated by one of Stevenson's characters was passed on by Trent to Miss Sayers's Lord Peter Wimsey and to many others.

Parallel with the Brit. D. S. writers there have been many exponents of it in America. But there, curiously, the position of women writers is reversed. In Britain they entered the field late but came to eclipse the men in the psychological dept. In America they were prominent at the beginning but have now taken a back place. The work of Anna

Katherine Green (sometimes termed the mother of the D. story), of Mary Roberts Rinehart and Carolyn Wells now seems outlived and pedestrian. Among Amer. D. S. writers the great names (both pseudonyms) are S. S. Vau Dine, whose Philo Vance is among the most brilliant and sophisticated of investigators, and Ellery Queen, who is his own inspector and has compiled anthologies of D.S.s as well as editing a magazine devoted to them. Alongside these we may place Erle Stanley Gardner, whose versatile lawyer Perry Mason combines rapidity of action with Machiavellian legal manoeuvres. The tendency of later Amer. crime fiction has sometimes been to degenerate into mere accounts of gang warfare, of which it may fairly be said that too many crooks spoil the plot. The post-war cult of violence and brutality has had a debasing effect on the D. S. just as it has had on the cinema.

In addition to the regular writers of D. fiction there are many authors who have made this a sideline of their regular work. Edgar Wallace, for example, who was in the main a writer of adventure stories, created a most lifelike detective in his J. G. Reeder; A. E. W. Mason's Hanaud can hold his own with the best investigators; and along with these we may place some of the mystery stories of John Buchan and Baroness Orczy. But the spy story falls properly into a different class, as do tales of gentleman burglars like Raffles or 'the Saint,' which have their place under the heading PICARESQUE NOVEL. D. S. writing has also formed the relaxation of a number of distinguished scholars, such as Cecil Day Lewis, the Oxford prof. of poetry, who writes under the pseudonym Nicholas Blake, and Mgr Ronald Knox. What may be termed the highbrow cult of the D. S. has been responsible for the formulation of an elaborate set of rules which are sometimes claimed to govern its composition, and which are as rigid and unnecessary as the dramatic unities so unjustly fathered on Aristotle. See Howard Haycraft, *Murder for Pleasure*, 1942; E. Queen, *Queen's Quorum*, 1953.

Detergent. Synthetic D.s are substances used as an alternative to soap for cleansing operations. Many of them are sulphated or sulphonated substances produced as a by-product in petroleum refining.

The efficiency and behaviour of D.s are influenced by their structures, the nature of the material to be cleaned, the nature of the dirt, the temp. of the cleansing operation, and the pH of the solution. Hence each D. will achieve its optimum efficiency under various conditions.

D.s may be classified as anionic, e.g. Gardinols and Lissapols, cationic, e.g. Sapamines, and non-ionic, e.g. the Igepals, according to the nature of the surface active ions on ionisation. Generally they contain hydrocarbon groups which are water repellent or hydrophobic and responsible for the surface activity of the D., as well as one or more water soluble or hydrophilic groups.

The action of D.s is complex but involves a lowering of the surface tension at the interface between the water and the material to be cleaned, the hydrophobic groups lying on this interface. These water repellent groups then dissolve the dirt, keep it in suspension, and bring with them the hydrophilic groups which dissolve in the water and allow the surface of the dirty material to become completely wet so that the water can penetrate the material if it is porous. Thus a D. acts as a bridge between the solid material and the water. Its concentration must be adequate to retain the dirt in suspension or redeposition of the dirt will occur.

D.s should have a high D. value and should be stable in hard water, thus being able to disperse the well-known 'scum' produced when ordinary soap is used. They should be stable to acids, alkalis, and inorganic salts, i.e. able to clean in various media, and should possess free rinsing properties to avoid possible absorption through the skin or being with food through the leaving of small quantities on crockery after washing up.

One disadvantage of soap for cleansing purposes is the formation of scum in hard water, as both calcium and magnesium soaps are insoluble, these being formed by the interaction of the carboxyl groups in soap with the Ca and Mg salts in the hard water. Synthetic D.s having no carboxyl group would thus appear to be the solution to this problem of scum formation, but the survival of soaps for cleansing purposes offers some evidence of the intrinsic value of the carboxyl group despite many attempts to block it or change it. See also BLEACHING; SOAP.

Determinants, in mathematics, a system of symbols whereby many calculations are facilitated. Consider 2 homogeneous linear equations, $a_1x + b_1y = 0$; $a_2x + b_2y = 0$. By multiplying the first by b_2 and the second by b_1 , and subtracting, we get $x(a_1b_2 - a_2b_1) = 0$, whence $a_1b_2 - a_2b_1 = 0$. This may be written $\begin{vmatrix} a_1 & a_2 \\ b_1 & b_2 \end{vmatrix} = 0$, and the expression on the left is called a D. of the second order, consisting of 2 rows and 2 columns. The value is not altered by changing rows into columns or vice versa, thus $\begin{vmatrix} a_1 & b_1 \\ a_2 & b_2 \end{vmatrix} = a_1b_2 - a_2b_1$.

Interchanging 2 rows or columns changes the sign; thus $\begin{vmatrix} a_2 & a_1 \\ b_2 & b_1 \end{vmatrix} = a_2b_1 - a_1b_2$. Consider 3 homogeneous linear equations, $a_1x + b_1y + c_1z = 0$; $a_2x + b_2y + c_2z = 0$; $a_3x + b_3y + c_3z = 0$. From the second and third we get by the rule of cross-multiplication

$$\frac{x}{b_2c_3 - b_3c_2} = \frac{y}{c_2a_3 - c_3a_2} = \frac{z}{a_2b_3 - a_3b_2}. \text{ Substituting the proportional quantities for } x, y, \text{ and } z \text{ in the first equation, we get } a_1(b_2c_3 - b_3c_2) + b_1(c_2a_3 - c_3a_2) + c_1(a_2b_3 - a_3b_2) = 0, \text{ or}$$

$$a_1 \begin{vmatrix} b_2 & c_2 \\ b_3 & c_3 \end{vmatrix} + b_1 \begin{vmatrix} c_2 & a_2 \\ c_3 & a_3 \end{vmatrix} + c_1 \begin{vmatrix} a_2 & b_2 \\ a_3 & b_3 \end{vmatrix} = 0.$$

This may be written $\begin{vmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{vmatrix} = 0$ and the expression on the left is known as a

D. of the third order, consisting of 3 rows and 3 columns. It is to be noted that the coefficient of a , b , or c , is the D. of the second order obtained by omitting the row and the column containing that constituent in the D. of the third order. Some of the properties of D. are: if 2 adjacent columns or rows are interchanged, the sign of the D. is changed without other alteration in value; if 2 rows or columns are identical the D. = 0; if each constituent in a row or column is multiplied by the same factor, the D. is multiplied by that factor. See T. Muir, *The Theory of Determinants in the Historical Order of Development*, 1923, and *Contributions to the History of Determinants*, 1930.

Determinism (from Lat. *determinare*, to prescribe), name applied to the doctrine that man's every action is directly dependent either on his environment or on his impulses and motives, the dependence being so mathematical that his behaviour could in every case be predicted were it possible to appreciate the exact nature and relative force of the external and internal impulses which drive him to behave as he does. It is therefore a doctrine in direct opposition to the doctrine of Free Will, taught in Christian theology, and known to psychologists under the names of Indeterminism, Voluntarism, and Indifferentism, by which it is held that man has complete moral freedom to choose between different courses of action. 'Hard' D. bears a very close resemblance to necessitarianism, and the old fatalistic beliefs, whilst 'soft' D. accounts for 'remorse' by allowing that in some cases it is really open to a man to make a deliberate choice. The theory of evolution, by which man is regarded as a mere link in the 'chain of causal development,' owing his motives, appetites, and aversions and indeed his whole mental outlook largely to inherited tendency and environment, lends support to the determinists.

Detinue, a term in law for the action brought for the recovery of goods, or their value, with damages for detaining them if they cannot be recovered, by the real owner of the goods against whoever is in actual possession of the same.

Detmold, Ger. tn in the Land of N. Rhine-Westphalia (q.v.), on the Werre, 102 m. ENE. of Düsseldorf (q.v.). It was formerly the cap. of Lippe (q.v.). It is a beautiful tn with a Renaissance castle, an 18th cent. palace (now an academy of music), and a fine medieval church. On the Grotenburg, in the Teutoburger Wald (q.v.), 3 m. SW. of the tn stands a huge copper statue (90 ft high on a 90 ft high plinth) of Arminius (q.v.). D. is a tourist centre and has a furniture industry. Grabbe and Freiligrath were natives of the tn. Pop. 32,000.

De Tocqueville, see TOCQUEVILLE.

Detonator, small supply of an easily exploded substance used to discharge the main explosive constituent of a cartridge, shell, or mine. A substance formerly in general use for this purpose is mercury fulminate, which in Brit. service am-

munition was mixed with potassium chlorate and antimony sulphide. The fulminate when exploded produces gases at a high temperature and pressure, conditions under which dynamite and other comparatively inert explosives are effectively discharged. Mercury fulminate has now been partly superseded by such improved detonators as lead azide, PbN₂. The term D. is also applied to the small metal cases fixed on railway lines to serve as fog-signals. See also EXPLOSIVES; SIGNALS.

Detritus, a geological term denoting gravel, sand, or other water-worn matter, and angular or subangular débris, which have accumulated in consequence of the disintegration of rocks.

Detroit, 5th largest city in the U.S.A., is in Michigan, 486 m. W. of New York in an air line and 247 m. E. of Chicago, on the Detroit R. 18 m. above Lake Erie and 60 m. from Lake Huron. It fronts 11 m. on the riv. and has an area of 140 sq. m., surrounding the 2 independent cities of Hamtramck and Highland Park. A bridge and 2 tunnels connect D. with Windsor, Ontario, across the riv. Among the chief buildings are St Paul's Cathedral, Blessed Sacrament Cathedral, the city hall, D. Public Library, D. Institute of Arts, the Penobscot Building, and the Guardian Building. D. carries on an enormous commercial traffic by railway, water, and air. A Fr. fur-trader estab. it as a trading post in 1701. In 1760 it was taken by the Brit., who held it as a military post until 1796. D. has been the centre of the motor-car industry since its earliest days. Other important industries are pharmaceuticals and chemicals, varnish, oil refining, shipbuilding, aircraft, railway cars, rubber products, steel, aluminium, adding machines, and electrical and television equipment. Educational and other institutions include Wayne Univ., the univ. of D., Lawrence Institute of Technology, D. Institute of Technology, D. Symphony Orchestra. The pop. was 285,700 in 1900, 465,800 in 1910, 693,700 in 1920, and 1,849,600 in 1950. See G. D. Catlin, *The Story of Detroit*, 1923; W. A. Simonds, *Henry Ford and Greenfield Village*, 1938; F. Barcus, *All Around Detroit*, 1939.

Detroit, University of, at Detroit, Michigan, a Jesuit co-educational institution of higher education, opened in 1877 as Detroit College and reorganised in 1911 as U. of D. It has colleges of arts and sciences, engineering, and commerce and finance, a graduate school, and schools of law and dentistry. The univ. library contained 168,000 vols. in 1956. With a teaching staff of 527 in 1955 there were 8600 students.

Detakoye, Selo, see PUSHKIN.

Dettingen, Ger. vil. in the Land of Bavaria (q.v.), 8 m. NW. of Aschaffenburg (q.v.). In a battle here in 1743 the Brit., Ger., and Austrian forces under George II (q.v.) defeated the Fr. under the Duc de Noailles (q.v.); this was the last battle in which an Eng. monarch took part.

Deucalion, in Gk mythology, son of Prometheus. When Zeus determined to

destroy mankind on account of its wickedness. D. and his wife Pyrrha were exempted from the universal doom. D. built a boat which, after floating for 9 days, rested on the summit of Parnassus. On asking the oracle of Themis what they were to do next, they were ordered to throw stones behind them. Those of D. became men, and those of Pyrrha women. See Ovid, *Metam.* 1.

Deûle, riv. in the depts Pas-de-Calais and Nord, France. It is a trib. of the Lys, which itself unites with the Scheldt in Belgium. Rising near Carency, it flows past Lille, where it once filled the moat of the pentagonal citadel, and Quesnoy, joining the main riv. near Deulemont.

Deûle, mrrkt tn in the prov. of E. Flanders, Belgium, 7 m. S.W. of Ghent. It is the centre of the picturesque dist. of the lower Lys, with splendid landscapes and pastures, and has an historic castle in Renaissance style. Pop. 1300.

Deus Nogueira Ramos, João de (1830-1896), Portuguese poet who probably appeals to a greater number of his countrymen than any other native poet with the exception of Camoëns and Garrett. But for his ardent admirers none of his poems would have reached the public, for he was indifferent to fame and a careless, spasmodic composer. Posterity will treasure his spontaneous and emotional lyrical outpourings such as his *Rachel*, *Marina*, *Descalça*, *Vida*, and above all his exquisite *Flores do Campo*, 1869. The *Campo de Flores*, 1893, is the best ed. of his poems. By turns D.'s writing is imitative, idyllic, pessimistic, and devout; it is notable for its intense purity and elemental simplicity. He is also the author of a reading method (*Cartilha Maternal*, 1876) which was officially approved in the schools.

Deuteronomy, the 5th book of the Pentateuch, which from the 17th cent. onwards was one of the great battlegrounds of biblical criticism. Before that time it was universally held to be entirely of Mosaic authorship, but it is now often regarded as a gradual compilation, of which the greater part dates from the reign of Manasseh. Nevertheless, much of the material in it is very old (see W. F. Albright, *From Stone Age to Christianity*, 1940; G. von Rad, *Deuteronomische Studien*, 1948). An earlier form was discovered in the reign of Josiah, and exercised a great influence on that monarch. The work sub-divides greatly. Chapters i-iv and v-xi give 2 introductory exhortations, the former being largely historical. After this come a variety of exhortations and historical accounts interspersed with poems. The high moral tone of the book is shown by the fact that of a quotation from it Christ said: 'On these words hang all the law and the prophets,' and that from D. were taken all Christ's answers to the Tempter in the wilderness. The name of the book is taken from the Septuagint trans. of the words 'this law' in chapter xvii. 18. See S. R. Driver, *Deuteronomy*, 1920; J. Finn, *The Unity of the Pentateuch*, 1917.

Deutsch, Emanuel Oscar Menahem (1829-73), Semitist, b. Neisse (Silesia), studied Hebrew under his uncle, a Talmudist, and in 1855 became an assistant librarian at the Brit. Museum. Besides contributing to Smith's *Dictionary of the Bible*, Kittel's *Cyclopaedia of Biblical Literature*, *The Times*, etc., he lectured on Semitic Palaeography and wrote on Phoenician inscriptions and other Semitic subjects in the *Saturday Review* and the *Athenaeum*.

Deutsch, Nicolas Manuel (1484-1530), Swiss painter, poet, and reformer, b. Bern. He studied painting at Colmar and at Venice under Titian, and was commissioned to paint a series of pictures for the monastery of his native city. This work, the 'Dance of Death,' was in the style of Holbein, but only copies of it exist. His 'Beheading of John the Baptist' (Basle) well illustrates his fanciful style of composition. In his latter years D. took an active part in public affairs, and especially distinguished himself as a promoter of the Reformation. His writings consist of various controversial treatises, *Moralities and Mysteries*, and popular songs.

Deutsch-Eylau, see ILAWA.

Deutsch-Krone, see WALZ.

Deutschbrod, see HAVLICKOV BROD.

Deutsche Bank, one of the big banks in Germany. It was founded in 1870 with its chief office in Berlin. Its main purpose was to provide a ready assistance in all financial matters to Ger. commercial men. The D. B. did good service in Germany's rapid development in industry and commerce during the last 2 decades of the 19th cent., and continued up to the outbreak of the First World War in 1914. In addition to branches throughout Germany, it had others in Europe, particularly in the SE. The D. B. amalgamated with the Disconto-Gesellschaft (founded 1856) in 1929. In 1933 the Dresdner and Commerzund Privatbank was also assimilated, and further widening of its network of branches took place in 1938.

'Deutsche Rundschau', Ger. monthly review, founded in Berlin by Julius Rodenberg, 1874, as a counterpart to the Fr. *Revue des Deux Mondes* (q.v.). In 1888 the D. R. was temporarily suspended by Bismarck on account of the pub. of the war-diary, 1870-1, of the Emperor Frederick (q.v.). After the First World War it entered the field of politics as an independent organ under the control of Rudolf Prechel, seeking to find a way out of the chaos in Germany. From 1932 onwards it strongly opposed National Socialism, until its publisher was arrested, 1942, and the review prohibited. It appeared again in 1946 in Berlin, but after the blockade was removed to Stuttgart. The D. R. favours the idea of European federation.

Deutz, tn of Germany, incorporated in Cologne (q.v.) in 1888.

Deutzia, genus of Saxifragaceae, grows wild in the N. of India, China, and Japan. *D. scabra*, *D. gracilis*, and *D. pulchra* are cultivated in Britain, and the first-named is remarkable for its silicious stellate hairs.

Deux Sèvres, see **SÈVRES, DEUX**.
Deva, in in Rumania, on the Mures 82 m. E. by N. of Timisoara. It has picturesque ruins. Pop. (1930) 10,500.

De Valera, Eamon (1882-), Irish patriot and statesman, b. New York City, his father being Spanish and his mother Irish. He was educ. in Ireland at Blackrock College and the Royal Univ. at Dublin. He gained sev. scholastic degrees and taught mathematics, Fr., and Latin in various colleges and educational establs. He was for many years a student of Irish and an active member of the Gaelic League. He joined the Irish Volunteers at their formation in 1913 and was adjutant of the Dublin brigade 1915-16, taking part in the Easter rising of 1916 as commandant. He was taken prisoner and sentenced to death, but the sentence was commuted to penal servitude for life. At the general amnesty in 1917 he was released, and again plunged into political affairs, being elected Sinn Féin M.P. for East Clare. From 1917 to 1921 he was president of the Irish Volunteers, and he was president of Sinn Féin (q.v.) from the former year until 1926 when Fianna Fail (q.v.) was founded. He was re-arrested in May 1918 and confined in Lincoln prison from which he escaped in Feb. 1919. Travelling to the U.S.A., he raised a loan of 6 million dollars for the Irish Republican movement. From 1919 to 1922 he was president of the 'Irish Republic.' He rejected the Anglo-Irish treaty in Dail Eireann during the debates of Dec. 1921 to Jan. 1922. He took part in the Civil war of 1922-23 and was imprisoned in Aug. 1923, being released in July 1924. He was leader of the Opposition in the Irish Free State parliament from 1927 to 1932. In the elections of 1932 he secured a sound majority over Cosgrave (q.v.), and became president of the executive council (i.e. prime minister). He met with some opposition in the country from O'Duffy's (q.v.) Blueshirt movement, which, however, he reduced to insignificance by the speech he made in the Dail when the Wearing of Uniforms (Restriction) Bill became law. He then went ahead with his programme of social, industrial, and agric. reform. Production and wages rose, and the numbers employed increased. The Senate was abolished and the governor-generalship was slowly whittled away until in 1937 it disappeared. The obligation of the Oireachtas to take the oath of allegiance to the Crown was abolished, as was also the right of appeal to the Judicial Committee of the privy council. D. played the leading part in framing the present constitution of the Rep. of Ireland by which the country became a sovereign independent state. In 1932 the Fianna Fail Gov. rejected the Brit. Gov.'s claim to payment of the land annuities; payment was therefore withheld, and the so-called 'Economic War' began. This conflict was ended by the London agreement which D. negotiated with Neville Chamberlain in 1938. The Brit. Gov. accepted £10,000,000 in final settlement, and Britain surrendered the right to enter or fortify S. Irish

ports. The elections which followed further strengthened D.'s position. In 1938 he was president of the assembly of the League of Nations; he had already in 1932 been made president of the League's Council for its 68th and special sessions. Before war broke out in 1939 D. began to intensify the campaign for ending the partition of Ireland, but his efforts were checked by the outbreak of I.R.A. terrorism. With the beginning of the Second World War D. brought the army up to war strength, and A.R.P. services were started. He had general support in declaring the neutrality of the Rep. of Ireland—a position which was maintained throughout the war.

Keystone Press

EMON DE VALERA

In Feb. 1948 following a general election D.'s party (Fianna Fail) was defeated by a combination of Fine Gael, Labour, Farmers', and other parties, and he was succeeded as Taoiseach (prime minister) by John A. Costello (q.v.); he then went to America and Australia to publicise the campaign against partition.

After the general election of 1951 he again became prime minister until 1954, when his party was narrowly defeated in a general election. The Fianna Fail party was again returned to power in the general election of March, 1957, and D. once more became Taoiseach. See **IRELAND, REPUBLIC OF, History**.

De Valois, Dame Ninette (**Edris Stannus**) (1898-), dancer and choreographer, and director of the Sadler's Wells Ballet, b. Ireland. She danced with the Diaghilev

Ballet from 1923 to 1926, in which year she founded a school. In 1931 she formed the Vic-Wells Ballet (see ROYAL BALLET), and has directed the fortunes of this company from its humble beginnings until its flowering into the national organisation it has become to-day. In addition to her achievements as organiser and administrator, which have led directly to Eng. ballet reaching parity with the ballet of other countries, she has devised the choreography of many ballets, particularly in the early years of the company's hist., the best known being *Job*, 1931, *The Haunted Ballroom*, 1934, *The Rake's Progress*, 1935, *Checkmate*, 1937, *The Prospect Before Us*, 1940, *Don Quixote*, 1950. She was awarded the C.B.E. in 1947, and created a D.B.E. in 1951.

Devanagari is the most important of the scripts of India, the script of Sanskrit, and the main literary vehicle of various Indian languages and dialects; it is also the official script of India. *Dera* means in Sanskrit 'heavenly,' and *D* means the 'Nagari of the Gods,' the 'divine,' 'royal,' or 'Brahman Nagari.' The original meaning of the term 'Nagari' is uncertain, but it is usually explained as 'writing used in cities' or 'town-script.' *D* developed in the 7th and 8th cents. AD from the Siddhamatrkā character, which descended from the W. branch of the E. Gupta (used in the 4th-5th cent. AD). The Gupta type, through other prototypes of the N. Indian sub-division, finally goes back to the Brahmi script, the mother-alphabet of all the Indian scripts (see ALPHABET). *D* consists of 48 signs, of which 14 are vowels and diphthongs, and 34 basic consonants known as *aksharas*. Its main weakness is its semi-syllabic character: a short *a* is inherent in each consonant unless otherwise indicated. Therefore in order to represent a pure consonant an oblique stroke, called *virama*, is placed below the character in question, or compounds of 2 or 3 basic consonants are used. *D*, being mainly used for Sanskrit (a purely literary language), has after a long course of literary treatment and grammatical refinement remained practically standardised during the last millennium. There are, however, 2 main varieties, the E. and the W.

Devant, David (1868-1941), illusionist, b. London, son of an artist in poor circumstances. He worked as a page boy and telephone operator, but spent much of his time in the study of conjuring. He began by touring in the provinces and, in 1893, appeared with Maskelyne at the old Egyptian Hall, from which time his reputation was established. He became Maskelyne's partner in 1905 and continued to perform at St George's Hall till attacked by a nervous breakdown at the beginning of the First World War. He was the leading conjurer of his day, and perhaps the foremost magician of all time. His books include *My Magic Life*, 1931, and *Secrets of My Magic*, 1936.

Devaprayaga, or **Deoprayag**, vil., 2266 ft above sea level, at the confluence of the Alaknanda and Bhagirathi, in the

dist. of Garwhal, India. The 2 rivers form the Ganges below Deoprayag. Here is the famous temple of Rama Chandra, the resort of Hindu pilgrims.

Dévaványa, tn of Hungary, in Békés co., 23 m. NNW. of Békéscsaba (q.v.). It is a railway centre, and has a trade in cereals, livestock, and tobacco. Pop. 15,500.

Development, in music, the 2nd section of a movement in sonata form, following the exposition, where the thematic material is subjected to various D.s according to the composer's fancy. The usual method is to develop the 1st or 2nd subjects or both, but subsidiary subjects may be used as well, or instead, and new matter may be introduced at will.

Development and Road Improvement Funds Act, 1909, provided for the appointment of roads boards with power to construct and maintain new roads and to make advances to co. councils and other highway authorities in respect of the construction of new roads and the improvement of existing ones. See also HIGHWAYS.

Development Commission, a gov. dept set up under the Development and Road Improvement Funds Acts of 1909 and 1910, for the purpose of administering funds for the development of agriculture, rural industries, and fisheries, land reclamation, and harbour maintenance.

Devenish, is. and par. in Lower Lough Erne, co. Fermanagh, N. Ireland, famous for its eccles. remains.

Deventer, General Sir Jacob Louis Van (1874-1922), S. African soldier, b. in Orange Free State. He came into prominence as one of Gen. Smuts' lieutenants during the Boer War, particularly in connection with the invasion of Cape Colony. He served on Botha's staff in the campaign in German SW. Africa, 1914-15. Commanded a mounted brigade at the outset of the campaign against the Germans in E. Africa, and eventually commanded the whole force. After much hard fighting he drove his opponent, Gen. Paul von Lettow-Vorbeck (q.v.), into Portuguese ter.

Deventer, industrial tn in the prov. of Overijssel, Netherlands, situated on the R. IJssel, 23 m. NNE. of Arnhem. It has exactly the appearance of a tn of the Middle Ages. Part of the prin. church dates from the 12th cent.; the crypt of St Leobinus is supposed to date from 1040. The Weigh-house is a curious little edifice of 1528. There are many elegant and charming houses, and iron foundries and carpet factories. In the Middle Ages *D*. was a Hanseatic city and an educational centre; Thomas à Kempis and Erasmus studied there. *D*. was captured from the Spaniards by Prince Maurice of Orange. The artist Terburg, whose pictures are to be found all over Europe, lived at *D*. and died there in 1681. Pop. 50,878.

De Vere, Sir Aubrey, originally Hunt (1788-1846), poet, b. Adare, Co. Limerick. He was educ. at Harrow, where Byron and Peel were his schoolmates. A country gentleman, he lived a life of retirement. His sonnets appeared first in 1842, and

were spoken of by Wordsworth as 'the most perfect of our age.' *Julian the Apostate*, was pub. in 1822, and *The Duke of Mercia*, a play, in the following year. See memoir by his son Aubrey (q.v.) in D. V.'s verse drama *Mary Tudor*, 1884.

De Vere, Aubrey Thomas (1814-1902), poet, b. Adare, Co. Limerick, son of the above. He was educ. at Trinity College, Dublin. In 1842 he pub. *The Waldenses, or the Fall of Rora*, which contained some exquisite lyrics, and in the following year he issued a companion vol., *The Search after Proserpine, Recollections of Greece, and other Poems*. Besides poems, he wrote in prose concerning Ireland's wrongs, for while he held no brief for the disruption of the union he was an ardent sympathiser with the distress of the Irish folk. *English Miscellany and Irish Misdeeds*, 1848, was the prin. of these works, *Ireland and Proportional Representation*, 1885, the last. Not a great poet, at his best, especially when the theme was romantic, he rose to a high level. He pub. his *Recollections* in 1897. See W. P. Ward, *Aubrey de Vere, A Memoir*, 1904.

Devereux, Robert and Walter, see ESSEX, EARL OF; ESSEX, R. D. (2nd and 3rd Earls); ESSEX, W. D.

Deveron, riv. of Scotland, rising on the Banffshire-Aberdeenshire border near Cabrach. It is at first merely a mt torrent, but flowing NE. through part of NW. Aberdeenshire and then re-entering Banffshire it gradually becomes broader and slower, until after a course of 61 m. it joins the sea at Banff. Salmon and trout abound in its waters.

Devers, Jacob Loucks (1887-). Amer. soldier, b. York, Pennsylvania; graduated at West Point. He became an authority on mechanisation and in 1939 was chief-of-staff responsible for the defences of Panama. In 1942 he was promoted to lieutenant-general and was chief of U.S. armoured forces. In 1943 he became commander of the U.S. forces in the European theatre of war and later deputy commander in the Mediterranean theatre. He relinquished this appointment to take command of the Sixth Army Group, consisting of U.S. and Fr. forces, operating in the S. of France and in Alsace. He was commanding general Army Ground Forces from 1945 until 1948. He retired from the army in 1949.

Devi, see DURGA.

Deviation, see COMPASS, MAGNETIC.

Devil (O.E. *deofol*, from Gk. via Lat. *diabolus*, 'Slanderer' = Heb. Satan, 'Adversary'; cf. the dominical comment, 'a liar, and the father of lies.' John viii. 44), in Christian, Jewish and Moslem belief, a fallen angel, who with a multitude of lesser devils was created good and glorious, but by rebellion against God became irredeemably evil and odious, and was cast out of heaven. With his fellow devils he became the enemy of God and His creatures, especially man whom he tries to seduce and ruin. He is not regarded as the source or personal principle of evil, but as the prime promoter and organiser of it. His existence and that of his attendant spirits is clearly

taught by Christ and throughout the N.T. Yet there has been a tendency among Protestant liberal theologians to deny it, for many reasons. In part they have perhaps been influenced by reaction against medieval imagery, depicting a devil as a scarlet satyr with a forked tail, ridiculous to modern eyes. But their chief argument has been that the belief is dualistic, personifying evil as a power over, or against, God. That this is a fallacy should be clear from the exposition given above. The devil is not thought of as a self-existent being, nor as a personification of evil, except in a poetic sense, but as a creature, like man, created good, but in rebellion.

The Hebrews were slow to distinguish primary from secondary causation, and tended for centuries to attribute all events, good and evil alike, to God as their source, except human sin. Even the impulse to evil was described as being from Him. The idea of permissive causality had not yet dawned on them. So the tempter of Eve is symbolically portrayed as a serpent, whom God had made, in Gen. iii; and in 1 Sam. xvi. 14 it is an evil spirit from the Lord that troubles Saul; in 2 Sam. xxiv. 1 God himself moves David to sin by taking a census, in contrast with the post-exilic version in 1 Chron. xxi. 1, which substitutes 'the Satan,' though still as God's agent; in 1 Kings xxii. 20-23 Micaiah sees a lying angel from God entering the false prophet. The name Satan first occurs in Job i (probably post-exilic), but (as in Chron.) with an article which shows that it is a title, not a proper name as yet. 'The Satan' is still an angel of God, whose duty it is to watch and report on the misdemeanours of man. Chronicles later adds the duty of testing him by suggestion of evil.

It has been suggested that the further development of Jewish demonology was due to Persian influence. Zoroastrianism was genuinely dualistic, teaching that the God of Light and Good, Mazda, was at war with the equally powerful God of Darkness and Evil, Ahriman. The same suggestion has been made about Angelology (see ANGELS; ARCHANGELS), but in neither case has it been convincingly demonstrated. It may reasonably be conjectured that what happened was that, in the disturbed conditions following the exile, the old conception of the Satan became theologically unified with hitherto unassimilated folk beliefs about evil spirits, as found universally among mankind, and dimly discernible in Lev. xvi. 5 (connecting Azazel, identified by Jewish tradition as a demon, with the scapegoat) and Isa. xlii. 21. At any rate in Tobit iii we find a real demon, Asmodeus, and a great deal about other demons is told us in the book, though they are always described as hostile, but inferior and subject to God and His angels. In Wisd. of Sol. ii. 24 the devil is finally identified with the serpent tempter of Eve. The apocryphal *Book of the Secret of Enoch* tells us of the revolt of Satan and his fall from heaven. In the N.T. the evil

one has a number of names, e.g. the Devil (Matt. iv. 5), the Tempter (Matt. iv. 3), Satan (Matt. iv. 10), Beelzebub (Matt. x. 25), the Adversary (1 Pet. v. 8), the Accuser of the Brethren (Rev. xii. 10), the old Serpent (Rev. xx. 2), and the great Dragon (Rev. xii. 9). Jesus recognises distinctly a Kingdom of Evil ruled by a Prince, the power of darkness, who is His chief adversary from the temptation to the cross, and whose unclean minions take possession of the souls of men, inflicting not only temptation but also physical mental disorders and disease upon them. Rev. xii depicts the struggle of the Church in terms of the primeval war in heaven between Michael and his faithful angels against the Dragon and his Angels, and the fall of Satan from heaven to find a sphere for his wicked purposes in the world, though one overruled by God's Will to a good end. Speculative theology has seen the Divine plan to raise man in dignity above the angels by the Incarnation as the occasion for the Angelic Revolt. See also SATANISM; WITCHCRAFT. C. G. A. Harnack, *History of Dogma*, 1895-6; J. Tixeront, *Histoire des Dogmes*, 1912-14; *Les Études Carmelitaines*, 'Satan' (Bruges), 1948.

Devil-fish, name applied to various fishes, chiefly belonging to the ray family, Mobulidae. It is also applied to the octopus, which is, of course, not a fish, but a mollusc, and to the angler fishes (q.v.) or sea-devils. Sea-devil rays have flat and tessellated teeth, broad flat bodies and long, thin, whip-like tails; they are voracious and crush molluscs with their hard teeth. Species of the different genera attain great size. The manta or greater devil fish (*Manta birostris*) grows to a weight of at least 3000 lb.

Deville, Étienne Henri Sainte-Claire, see **SAINTÉ-CLAIRE**.

Devil's Advocate, see **ADVOCATUS DIABOLI**.

Devil's Bridge: 1. Vil. in Cardiganshire, Wales, 10½ m. ESE. of Aberystwyth, on the R. Mynach which here joins the R. Rheidol, in a picturesque setting of rocks and waterfalls. Over the deep gorge (114 ft) are 3 bridges, the lowest and oldest (12th cent.) believed to have been built by the monks of Strata Florida Abbey, the middle bridge dating from 1753, and an iron road bridge having been constructed in 1901. Pop. 100.

2. Famous bridge in Switzerland (Ger. Teufelsbrücke) over the Reuss in the canton of Uri, 1¼ m. from the spot where the St Gotthard pass road comes out on to the valley of Andermatt. Here the riv., which is 4590 ft above sea-level, forms a fine waterfall of 100 ft. A big modern bridge was built by the side of it in 1955 to deal with the increasing traffic over the St Gotthard.

Devil's Coach-horse, or **Black Cocktail**, the beetle known less graphically as *Ocypus olens*. This species, which is Brit., is about 1 in. in length, narrow in shape, active in habit, and usually carnivorous in diet.

Devil's Dyke: 1. Anct earthwork extending from Wood Ditton to Reach in

Cambs, England. It is 18 ft high, and once formed a boundary between E. Anglia and Mercia.

2. A huge fissure 4½ m. NW. by N. of Brighton in Sussex, England. It is the object of excursions for tourists from Brighton.

Devil's Island, French Guiana, see **SALUT, ÎLES DU**.

De Vinne, Theodore Low (1828-1914), Amer. printer and writer on typography, b. Stamford, Connecticut, and early apprenticed to a printer. At 19 he was employed by Francis Hart of New York; became junior partner in 1858, and after Hart's death in 1877 changed the name of the firm to Theo. L. De Vinne & Co. He was part-founder and president of the Grolier Club, whose early publs. were produced by the De Vinne Press. His work was invariably of the highest quality; the *Century Dictionary* showing his artistry and care. His chief works are *The Invention of Printing*, 1876; *The Practice of Typography*, 1900-4; and *Notable Printers of Italy during the Fifteenth Century*, 1910.

Devizes, mrkt tn and municipal bor. of Wilts, England, near the Kennet and Avon Canal. The tn owes its origin to a magnificent castle, of which very few fragments remain, built by Roger, Bishop of Salisbury, about 1132. Round the castle grew up a prosperous tn which from the time of Henry VIII till about 1820 was famous for its cloth, and from the time of Edward III for its wool. The tn, besides its modern castle, contains a remarkable Gothic mrkt-cross, the partly Norman churches of St John and St Mary, a museum, and a corn-exchange. Its prin. industry at the present day is building, and contracts are sought for public works. Light electrical products are manuf. Pop. 7920 (1954).

Devolution: 1. The first war embarked on by Louis XIV of France with the single object of extending the boundaries of his kingdom is known as the War of Devolution (1667-8). When his father-in-law, Philip IV of Spain, died, Louis, by introducing a civil right of inheritance into politics, claimed Flanders as the possession of his wife, Maria Theresa.

2. Also the name given to the schemes for the administration of Ireland, as enunciated by the Irish Reform Association, formed in 1903.

Devon (or **Devonshire**), SW. co. of England, bounded by the Bristol Channel on the N., by Cornwall on the W., the Eng. Channel on the S., and Dorset and Somerset on the E. It is the third co. in size in England, with an area of 2604 sq. m. The surface is hilly, with the rolling upland of Dartmoor, broken into numerous rugged 'tors,' in the SW.; Exmoor in the NW.; and the E. Devon plateau. On the lower slopes the soil is fertile, especially in the lower Exe valley, with its orchards and mrkt gardens. The coast-line of D. extends for about 150 m.; the N. coast is very rugged, with cliffs 400-500 ft high and great rocky inlets, of which the chief is Bideford Bay. On the S. coast are Bolt Tail and Start Point among others; and Tor Bay and Plymouth Sound, one of

the finest harbours in the kingdom. The chief riva. are the Tamar (59 m.), the Exe (54 m.), the Dart, the Teign, the Tav, the Torridge, and the Plym. Parts of D., particularly Dartmoor, are rich in pre-historic remains. It was one of the last co. conquered by the Saxons, and became one of the wealthiest, with an economy based on farming, fishing, mining, and the tin and woollen trades. There was a large overseas trade also, providing a nursery for the D. seamen; during the 17th cent., however, this began to decline.

D. is primarily a pasture co., and is famous for its cattle and dairy produce. It is rich in minerals; the tin mines were long important, and copper, lead, iron, and manganese have all been worked, as well as china and terra-cotta clays, granite, limestone, and sandstone. There is some inshore fishing; shell fish are more plentiful than other varieties. Apart from the naval dockyards at Plymouth, the chief industries of the co. are the ball and china clay industry to the S. and W. of Dartmoor, farming, and the tourist trade. Exeter is the co. tn; other tns of importance are Plymouth, with its dockyards, Torquay, and Paignton, noted resorts; Exmouth, Burnstaple, Tiverton, Teignmouth, Sidmouth, and Bideford. Famous Devonians include St Boniface, the Anglo-Saxon missionary to Europe; Bracton, the great medieval lawyer; Sir Francis Drake and Sir Walter Raleigh; Sir John Hawkins, John Davis, Sir Humphrey Gilbert, and Sir Richard Grenville; Princess Henrietta, Duchess of Orleans; John Churchill, Duke of Marlborough; Newcomen, the engineer; Sir Joshua Reynolds; Joanna Southcott; S. T. Coleridge; and Charles Kingsley.

The co. returns 6 members to Parliament. Pop. 798,283. See *Devon and Cornwall*, Survey Committee of the University College of the South West, 1947; Nikolaus Pevsner, *South Devon and North Devon* (Penguin Buildings of England Series), 1952; Devon County Council, *Development Plan Analysis*, 1952; D. St Leger Gordon, *Dartmoor*, 1953, and *Devonshire*, 1950; W. G. Hoskins, *Devon*, 1954; and *Devon* in the Victoria County History.

Devon, riv. of Scotland, which rises in the Ochil Hills at a height of 1800 ft. It is noted for its beautiful scenery, which has been immortalised by Burns. There is a series of remarkable falls below the Crook of Devon, known as the Devil's Mill, Caldron Linn, and Rumbling Bridge. Trout abound in the riv., and after a course of 33 m. it falls into the Forth at Cambus.

Devon Breed, see CATTLE.

Devonian System, in geology, the stratigraphical name applied to the Palaeozoic rocks lying between the underlying Silurian and the succeeding Carboniferous System.

The marine deposits formed during the D. Period are known as Devonian, but the continental deposits of the same age are called the Old Red Sandstone. The D. period was one in which much of N. Europe was a continent while to the S. of

a line running through the Bristol Channel marine conditions prevailed. Extensive vulcanicity occurred in D. times, many traces of which remain in the Midland Valley of Scotland.

Devonport, Hudson Ewbank Kearley, 1st Viscount and Baron of Whittington, Buckinghamshire (1856-1934), politician, educ. at Cranleigh. He represented Devonport as a Liberal from 1892 to 1910, being port. secretary to the board of trade from 1905-9. From 1909-25 he was first chairman of the Port of London Authority. During the First World War he was food controller (1916-17) and he received his viscounty in 1917.

Devonport (before 1824 called **Plymouth Dock**), until 1914 port., municipal, and co. bor., situated on a peninsula formed by the Hamoaze and Stonehouse Pool at the head of Plymouth Sound, and forming with Plymouth and Stonehouse the 'Three Towns.' D. is one of the chief naval and military stations in the Brit. Is.; it owes its origin to the dockyard estab. here by William III in 1689. The naval estab. extend nearly 4 m. along the Hamoaze and include, besides the original dockyard, the Keyham steam yard and factory, the gun-wharf, the Gov. House and Admiralty House on Mt Wise, the naval and military barracks, and the Royal Naval Engineering College at Keyham. In 1836 fresh extensions were begun at the Keyham Yard, which were opened under the name of Devonport North Yard by the Prince of Wales in 1907, and this dockyard has since been further extended. There is a powder magazine on Drake's Is. at the entrance to the Hamoaze (estuary of the Tamar); Mt Edgcombe on the N. side is guarded by forts, and the harbour is fortified and guarded by warships. D. and Stonehouse were amalgamated with Plymouth in 1914, the 3 now forming the city of Plymouth, having been so designated by royal letters patent on 18 Oct. 1928.

Devonport, tn and tourist centre on NW. coast of Tasmania, 65 m. from Launceston, with good port facilities; an outlet for agric. produce, potatoes, peas, sheep. The modern airport is being extended to handle daily inter- and intra-state services. Pop. 11,000.

Devonshire, Spencer Compton Cavendish, 8th Duke of (1833-1908), statesman, eldest son of the 7th duke, educ. at Trinity College, Cambridge. In 1857 he entered Parliament, as a Palmerstonian Liberal, and in 1874, on the defeat of Gladstone at the general election, and his resignation of the leadership of the party, the Liberals chose Lord Hartington (as D. was then known) in his stead. In 1880, on the defeat of Disraeli, he was invited to form an administration, but Gladstone having returned to the House to take up the matter of the 'Bulgarian atrocities,' he withdrew in favour of his old chief. In 1882 he went to the War Office, and was there during the period of disaster which resulted in the evacuation of the Sudan and the death of Gordon. Owing to his views on Home Rule he declined office when Gladstone again came

into power in 1886, and moved the rejection of the Bill, which shortly afterwards was thrown out on the second reading by a majority of 90. At the general election which followed, the Conservatives and the Liberal-Unionists (as the seceders called themselves) were in a majority, and Lord Salisbury invited Hartington to join a coalition ministry, in which he would accept office. This Hartington declined to do, but in 1894 he finally accepted office in a Conservative gov. He had succeeded his father to the dukedom in 1891. He then became President of the Council under Salisbury, and retained his office under Balfour. In 1904 he resigned, being opposed to the policy of tariff reform, which henceforth became the leading feature in the Conservative programme. D. was an intimate friend of Edward VII. In his early days he was fond of hunting, and all his life he was a notable race-goer; racing was, perhaps, his chief interest outside politics. See life by B. Holland, 1911.

Devonshire, Victor Christian William Cavendish, 9th Duke of (1868-1938), politician, eldest son of 3rd son of 7th duke, educ. at Eton and Trinity College, Cambridge. He entered Parliament at the age of 23 as Conservative member for W. Derbyshire, a seat that had been held by the Cavendish family for the greater part of 2 centuries. He succeeded to the dukedom in 1908. He held a number of political appointments, and from 1916 to 1921 was governor-general of Canada. After the break-up of the coalition ministry he became, in 1922, colonial secretary, and by coming forward with a personal guarantee of £500,000 was largely instrumental in saving the project of the Brit. Empire Exhibition at Wembley from abandonment. His son, *Edward William Spencer Cavendish, 10th duke of D.* (1895-1950), was educ. at Eton and Trinity College, Cambridge, and was colonial secretary 1943-5. He was succeeded to the dukedom by his son, *Andrew Robert Buxton Cavendish (b. 1920).*

Devonshire, see DEVON.

Devrient, name of a Ger. family of actors, particularly Ludwig D. (1784-1832), who was noted for his Shakespearean rôles, and his 3 nephews, Karl August (1797-1872), Philip Eduard (1801-77), and Gustav Emil (1803-72). The last was noted for his Hamlet which he played in London and Dresden. Otto D. (1838-94), the son of Philip Eduard, was also noted for his adaptation of Goethe's *Faust*, 1876. Other plays by him were *Tiberius Gracchus*, 1871, and *Gustav Adolf*, 1891. Max D. (1857-1929) was the son of Gustav Emil and followed in his father's profession.

De Vries, Hugo (1848-1935), Dutch botanist, b. Haarlem, educ. at Leyden and Heidelberg, and under Julius Sachs at Würzburg. After holding various educational posts in Germany, he accepted the professorial chair of botany in Amsterdam, where he applied himself to the problems of evolution as they affect plant life. In his botanical research work he was

influenced by the Mendelian theories, and originated the theory of mutation. He made special use of the *Oenothera lamarckiana*, or evening primrose, which now grows profusely in Europe, though originally a native of America. See essays in *Berichten der deutschen botanischen Gesellschaft*; and his prin. work, *Die Mutationstheorie*, 1901-3.

Dew (Old Eng. *deaw*), the moisture found on the surface of the earth during the night and early morning, particularly after a hot day, and produced by condensation of the vapour of the atmosphere on contact with the earth cooled by radiation. The old theory, dating from the earliest times, was that D. fell from above; it was Dr W. C. Wells, of London, in his *Essay on Dew*, 1814, who promulgated the above theory of radiation. He went on to say that for every definite pressure and temp. of the atmosphere there is a definite quantity of water-vapour which can be kept in suspension until it comes in contact with some cool substance, and is itself cooled below a certain temp., when the vapour will condense. This point of temp. is called the 'dew-point.' In 1885 Aitken by experiments discovered that while undoubtedly some of the moisture called D. was the result of condensation of the atmosphere, the 'greater part' is formed from moisture 'just risen from the earth or to the surface of plant leaves.' During the night, when evaporation ceases to a great extent, the vapour still rising from the ground is either condensed at once on its cold surface, or is trapped by the grass or plant-leaves which have cooled even faster than the surface of the ground. D. can be formed only under certain conditions: wind can prevent the atmosphere from remaining sufficiently long in contact with the earth to cause condensation, and a cloudy sky prevents D. by checking radiation. When the temp. of objects with which the vapour comes in contact falls below freezing point, the D. is condensed into a solid substance and is called 'hoar-frost.' The average ann. deposit of D. near London is 1 to 1.5 in.

Dew Line, see DEW SYSTEM.

Dew Ponds, found on the upper reaches of the chalk hills in the S. of England and in a few other localities. They are used as a source of water supply for cattle, and it was once thought that they were entirely dew-, not rain-fed. See Gilbert White, *Natural History and Antiquities of Selborne*, 1789. D. P. do not readily dry up in a hot dry summer, and so far no adequate reason has been found.

Dew System, distant early warning system of radar stations and air strips set up in the N. Amer. Arctic by agreement between the U.S. and Canadian Govs. in 1955. See *Canada. Treaty Series (Ottawa)*, 1955, No. 8.

Dewar, Sir James (1842-1923), chemist and physicist, b. Kincardine-on-Forth. He early developed a taste for music, and made violins. Educ. at Dollar Academy and at Edinburgh Univ., where he assisted Lyon Playfair. Also studied at Ghent and later was demonstrator of chem. at

Edinburgh, and lecturer in the Dick Veterinary College. In 1875 he became Jacksonian prof. of Natural Experimental Philosophy at Cambridge, and in 1877 was made F.R.S. and Fullerian prof. of chem. at the Royal Institution, London. Among numerous other honours, he received the Rumford medal of the Royal Society in 1894, was the first holder of the Hodgkins gold medal of the Smithsonian Institution, Washington, and the first Brit. scientist to be awarded the Lavoisier medal of the Fr. Academy of Sciences (1904). He was co-inventor with Sir Frederic Abel of cordite, made valuable experiments in spectroscopy and investigated the physiological action of light; but his 'low temperature' discoveries form his most valuable contribution to science. Besides being the first to demonstrate before a public audience the liquefaction of oxygen and air, he invented an apparatus by which liquid oxygen by the pint can be produced, devised vacuum-jacketed vessels (now known universally as thermos flasks) for the storage of liquid gases, first collected liquid hydrogen (in 1898), and finally (1899) succeeded in solidifying this gas as he had previously (1886) solidified oxygen. His experiments showing the gas-absorbing properties of cooled charcoal led, during the First World War, to the invention of antidotes to poison-gas. He was knighted in 1904; and d. at the Royal Institution, London. See also BELLBY; CARBONISATION.

Dewberry, or *Rubus caesius*, is a species of Rosaceae nearly related to *R. fruticosus*, the bramble. It receives its name from the fine waxy secretion which covers the black shining fruit and somewhat resembles dew. The fruit resembles the bramble in appearance, but is somewhat coarser and more acid, and the plant is also called the running briar. See also BLACKBERRY.

D'Ewes, Sir Simonds (1602-50), antiquary, b. Suffolk and educ. at St John's College, Cambridge. He was knighted in 1626, and became an M.P. in 1640, being expelled from Parliament during Pride's Purge, 1648. His parl. records are of great historical value. See *The Autobiography and Correspondence of Sir Simonds D'Ewes*, ed. J. O. Halliwell, 1845; and W. Notestein, *The Journal of Sir Simonds D'Ewes*, 1923.

De Wet, Christian Rudolph (1854-1922), Boer gen. and statesman, b. at Farm Leeuwkop, Orange Free State, served in the first war (1880-1) between the Eng. and his countrymen as a field cornet. From 1885 to 1897 he was a member of the Orange Free State Volksraad, and when the S. African War broke out in 1899 he became general and commander-in-chief of the Free State forces, fighting at first under Cronje in the W. He proved himself perhaps the most formidable of all the Boer leaders in guerrilla tactics. In 1907 he was elected a member of the new parliament of the Orange Free Colony and also minister of agriculture. In the Closer Union convention of 1908-9 he was a delegate. An ardent Nationalist at heart, he chose the picturesque role of

the Dutch patriot rather than join the greater cause as a S. African. He gave expression to his views in 1912, when he joined Gen. Hertzog, who was pursuing a separatist policy, and therefore seceded entirely from the S. African party. He became an active member of the National party, and the outbreak of the First World War gave him the opportunity of expressing his extreme views in an active form, for he headed a revolt against the gov. He was captured by Botha in Dec. 1914 and brought to trial on charges of high treason, on many of which he was convicted. He was sentenced to 6 years' imprisonment and fined £20,000. After being in captivity for a year he was released on giving an undertaking not to engage in political agitation. He d. at Bloemfontein.

De Wette, Wilhelm Martin Leberecht (1780-1849), Ger. theologian, b. Ulla, near Weimar. Influenced by Herder, and studied theology under Paulus. Prof. of theology at Heidelberg (1807-10) and Berlin Univs. His fearless but spiritual criticism of the Bible distinguishes him from pure rationalists like Paulus and from the school of orthodox writers and super-naturalists. His chief works are *Commentar über die Psalmen*, 1811; *Über Religion und Theologie*, 1815; and *Einkleitung in das Neue Testament*, 1836.

Dewey, George (1837-1917), Amer. adm., b. Montpelier, Vermont, U.S.A. Graduated at the Anier. Naval Academy in 1858. He served with the Mediterranean Squadron until the outbreak of the Civil war, when he was made executive officer of the sloop *Mississippi*. He was in the fleet commanded by Adm. Farragut when the latter forced the passage between Fort St Philip and Fort Jackson which guarded the entrance to the Mississippi some 70 m. below New Orleans. He also took part in the action by which Farragut captured that great S. city and port. After the war D. was made commander in 1872 and capt. in 1884. In 1887 he was an instructor at the Naval Academy. He was made a commodore in 1896, and when the Sp.-Amer. war broke out was in command of the fleet in Asiatic waters. He received secret orders to proceed to the Philippines and engage the Sp. fleet, which was lying in Manila Bay. Under the cover of darkness on the night of 30 April, D. sailed his fleet of 9 ships through without being discovered. The 10 Sp. ships under Adm. Montojo had the protection of the guns of Cavite, a tn near Manila. The battle which ensued soon after dawn was short and decisive, for the weight of metal was on the side of the Americans. By early afternoon the Sp. fleet was a mass of smoking ruins, and hundreds of Spaniards were dead or wounded. Not a single Amer. ship was disabled or a single sailor killed. The news astonished the U.S.A., and D. became a popular hero. D. and his fleet participated in the capture of Manila. After the war was over D. returned home, and was given a triumphant welcome. He was promoted adm., and Congress gave him a sword of honour. He served

on the first Philippine commission in 1899, and in 1901 was president of the court of inquiry into the controversy arising out of the naval battle of Santiago. D. was made president of the General Board of the Navy Dept in 1900, and held the office until his death 17 years later. See J. Barrett, *Admiral George Dewey*, 1899.

Dewey, John (1859-1952), Amer. philosopher, b. Burlington, Vermont; son of Archibald S. D. Educ. at univ. of Vermont; Ph.D., Johns Hopkins, 1884. Prof. of philosophy at univ. of Minnesota, 1888-9; of Michigan, 1889-94; of Chicago—where he was also director of the School of Education—1894-1904; and then for more than 30 years at Columbia Univ., where he was prof. of philosophy and later prof. emeritus. He has been termed a pragmatist; but his is not the pragmatism of Wm James; it is more like the pragmatism of Peirce, and is more generally called instrumentalism. In Sept. 1929 he presided at the inauguration of a League for Independent Political Action—intended to supply a new Labour party in Amer. politics. Works include: *Psychology*, 1886; *Critical Theory of Ethics*, 1894; *Study of Ethics*, 1894; *How I've Think*, 1909; *Democracy and Education*, 1916; *Human Nature and Conduct*, 1922; *Experience and Nature*, 1925; *The Public and its Problems*, 1927; *The Quest for Certainty*, 1929; *Art as Experience*, 1935; *Logic, the Theory of Enquiry*, 1938; *Freedom and Culture*, 1940. See W. T. Feldman, *The Philosophy of John Dewey*, 1934.

Dewey, Melvil, see CATALOGUES AND CLASSIFICATION.

Dewey, Thomas Edmund (1902-), Amer. lawyer and politician. He was educ. at the univ. of Michigan and studied law at Columbia Univ. In 1925 he entered the legal profession, becoming in 1931 assistant to the U.S. attorney for the S. dist. of New York, and 4 years later he was appointed special prosecutor for the Investigation of Organized Crime in New York. In this capacity and in the more important position of district attorney for New York, to which he was appointed in 1937, he was prominently associated with the suppression of racketeering. He took an active part in the presidential campaign in 1940 on behalf of Wendell Wilkie, the Republican candidate, and his speeches during the campaign were pub. in the same year under the title *The Case against the New Deal*. In 1942 and again in 1946 and 1950 he was elected governor of New York, and his administration was notable for its drive against inefficiency and corruption. His success led to his nomination as Republican candidate in the presidential election of 1944. He polled over 40 per cent of the votes but lost the election to President Roosevelt by some 3½ million votes. In 1948 he was again defeated, by Roosevelt's successor President Truman. D. retained much influence in the Republican Party, however, and helped to promote the candidature of Eisenhower (q.v.) in 1952 and 1956. See R. Hughes, *Thomas E. Dewey*, 1944.

De Windt, Harry (1856-1933), explorer

and journalist, acted as aide-de-camp to his brother-in-law, Rajah Brooke of Sarawak, from 1876 to 1878. From 1887 to 1894 he divided his time between reaching France by land from Pekin, travelling on horseback to India via Persia from Russia, and inspecting the mines and especially the prisons of Siberia. In 1895 he was chosen Eng. delegate at the Penal Congress in Paris. His effort to cross from New York to Paris by land, undertaken in 1896 for the *Pall Mall Gazette*, ended in wreckage on the Bering Straits, but in 1901-2 he successfully accomplished the journey the other way round (Paris to New York) for the *Daily Express*. Was special correspondent of the *Westminster Gazette* in 1906 in the Balkans and Russia, the sequel being the illuminating book entitled *Through Savage Europe*, 1907. Pub. also *My restless Life*, 1908, *A Woman in Black*, 1912, *Russia as I Know it*, 1916.

De Witt, Cornelius (1623-72), Dutch burgomaster and patriot, brother of J. de W. (q.v.), b. at Dort, of which he became burgomaster at the age of 27. It was through his influence that his more famous brother became pensionary of Dordrecht. He supported his brother's policy with great ability and courage, notably when he sailed with de Ruyter after the proclamation of the 'perpetual edict'—of which he disapproved—abolishing the hereditary office of stadtholder. But after the disaster of 1672 the partisans of the House of Orange whipped up popular feeling against the 2 brothers, and Cornelius was arrested on a false charge of conspiring to poison the prince of Orange. He was murdered by the mob on his release from prison.

De Witt, Jan (1625-72), Dutch statesman, b. at Dort, the son of Jacob de W., a burgomaster of Dort and deputy to the states of Holland, from whom he inherited his republican principles. In 1650 he was elected pensioner of Dort, and unsuccessfully opposed the war against England. The disasters of the war made his pacific policy so popular that in 1653 he was elected grand pensionary of Holland for a period of 5 years, and was re-elected in 1658 and 1663. In the meantime William II, the stadtholder, had died, leaving only an infant as heir, so that de W. was able to turn from his opposition to the dynastic pretensions of the family of Orange to international politics. In 1654 he negotiated a treaty with Cromwell with a secret proviso that no member of the House of Orange should be made stadtholder. On the accession of Charles II to the throne of England the treaty of peace was rendered void, and in spite of de W.'s efforts for peace, war broke out again between the 2 countries in 1665. De W. conducted it with vigour and skill, and on the death of Adm. Opdam personally took command of the fleet, and by his diplomatic skill contrived the treaty of Breda (1667) and the formation of the triple alliance between Holland, England, and Sweden (1668) to frustrate the designs of Louis XIV in Holland. Louis, however, bribed Charles II to desert

the alliance, and in 1672 suddenly invaded the United Prov. The action was too sudden to render preparation possible; the people blamed de W., and appointed the young prince of Orange commander of the forces. De W. thereupon resigned his office of pensionary. His brother, Cornelius, had been tried and acquitted on a charge of conspiring against William, and Jan de W. went to meet him on his release. An infuriated mob burst into the prison, probably at the instigation of William of Orange's followers, and murdered both brothers.

Dewsbury, mkt tn. co. and parl. bor. in the W. Riding of Yorks, England, on the R. Calder, 8 m. SSW. of Leeds, in the heart of the woollen dist. D. is a tn of great antiquity, and, according to tradition, Paulinus preached Christianity to the heathen Saxons on the site of the par. church in AD 627. Among the public buildings are the par. church of All Saints, with some remains of early Eng. architecture (rebuilt in the 18th cent.), the tn hall (1888), the Wheelwright Grammar Schools, a covered and an extensive open mkt, and a theatre. The 14th cent. court house of the rectory manor is used as a par. hall; Crow Nest Park is 73 ac. in extent. Coal is worked in the neighbourhood, and industries include woollen and shoddy mills for blankets, carpets, druggists, and worsted yarn, engineering, and dyeing. Pop. 53,476.

Dexter, Henry Martyn (1821-90), Amer. Congregationalist minister. He was pastor of a church in Manchester, New Hampshire (1844-9), and later at the Pine Street Church in Boston (1849-67), but also found time to edit the *Congregationalist*, 1851-90, and the *Congregationalist Quarterly*, 1858-60. Furthermore he was the author of many treatises, chiefly on Congregationalism (1865-85).

Dexter, see *HERALDRY, The Shield and its parts*.

Dexter Breed, see *CATTLE*.

Dextrine, or **British Gum**, the soluble or gummy substance obtained from starch by the action of diastase or certain acids on starch, or by heating starch to 392° F. (200° C.). D. and starch are related in structure, and both possess the empirical formula $C_6H_{10}O_5$. D. receives its name from its power of rotating the plane of plane polarised light to the 'right', i.e. in a clockwise direction as viewed through the eyepiece of the polarimeter (q.v.). Pure D. is an odourless, whitish substance. It does not reduce Fehling's solution. It is often used as a substitute for gum-arabic for stiffening materials, sizing papers, and thickening ink; also for postage stamps and adhesive labels.

Dextrose, also called glucose grape-sugar, and diabetie sugar, a carbohydrate of the formula $C_6H_{12}O_6$. It occurs in honey, grapes, in the body fluids of the animal kingdom, and in the urine of diabetie patients. It forms about 0.15 per cent of normal arterial blood. The sugar of grapes consists largely of D. as the fruit ripens, but when quite ripe it becomes 'invert' sugar, that is equal quantities of D. and laevulose. Pure D.

crystallises in 6-sided plates; it melts at 86° C., and loses its water of crystallisation at 110° C.; it is soluble in water but only slightly soluble in alcohol. Invert sugar or saccharum is used in the brewing industry. It is prepared by treating cane or beet sugar with dilute acid. The excess of acid is removed with chalk, and the product concentrated to a thick syrup. D. by itself is prepared from starch, which is treated with boiling dilute acid. The product is first a mixture of dextrin and maltose and then becomes D. In Britain the starch used for the manuf. of D. is usually (in normal times) sago, rice, or maize; in Germany, potatoes; and in America, maize. D. is used as the sweetening factor in jams, etc.

Dey (Turkish *dai*, a maternal uncle), form of address originally given to elderly men and taken by the janissaries as the title of their commanders, a commanding officer of the janissaries frequently becoming governor of the prov. in which he served. The name was given to all rulers of Algeria before the Fr. conquest, and was extended to Tripoli, and to Tunisia in the form 'bey.'

Dezful, dist. and tn of Khuzistan, Persia. The tn is situated on the R. Dez, to the N. of Ahvaz. In the vicinity are the ruins of Susa. Pop. of tn 52,200.

Dezhnev, or **East Cape**, N.-easternmost point of Asia, situated at the entrance to Bering Strait in 190° E. A distance of about 56 m. separates it from Cape Prince of Wales on the Amer. shore.

Dharma-shastra, the title given to the whole code of Hindu law, but more especially to that collection of law received directly from a divine source by the sages Manu, Yagnavalkya, and others. It is divided into 3 parts: *Achara*, rules of conduct and practice; *Vyavahara*, the administration of justice; *Prayaschitta*, penance.

Dhaulagiri, peak of the Himalaya Mts, once regarded as the loftiest, but now known to be the 6th highest. It is 26,811 ft and is situated in N. Nepal, lat. 29° N. and long. 83° 30' E. Attempts to reach the summit were made by a Swiss party in 1953 and by an Argentine party in 1954. Both reached 25,000 ft before the attempts had to be abandoned.

Dhole, species of wild dog (*Cuon javanicus*) found in packs in many parts of India. It is somewhat larger than the jackal, differs from the true dogs (genus *Canis*) in having fewer teeth, is fierce and cannot often be tamed.

Dhow, the regular Arab trading vessel of the Arabian Sea and E. African coast; formerly used more particularly for the slave trade. It is generally from 150 to 200 tons burden, with a very long yard, and a single mast with a lateen sail. The language to which the word belongs is unknown.

Dhunchee (botanical), Bengal hemp, a long strong fibre used in making cordage. It is derived from *Sesbania aculeata*, an E. Indian ann. herbaceous plant of the family Fabaceae.

Diabase, basic igneous rock consisting of augite and tridinic felspar with iron

oxides, to which is sometimes added apatite or olivine. Owing to the weathering of these rocks, the augite, which is black, speedily changes to chlorite and urallite, which cause the rocks to assume a green colour, whence its old name of greenstone is still sometimes used. The terms diabase and dolerite are used for different facies of the same set of rocks, the former being really a weathered form of the latter. Popular names for D. are trap, toadstone, and whin. They form excellent stones for road-mending, and many are found in the N. of England.

Diabelli, Antonio (1781-1858), Austrian composer, b. Vienna; also founder of a firm of music publishers. He is chiefly remembered by the fact that a waltz composed by him was used by Beethoven as the theme of his *Thirty-three Variations on a Theme by Diabelli* (Op. 120).

ARAB DHOW

E.N.A.

Diabetes, a disease characterised by increased output of urine. *D. mellitus* is a metabolic disease in which the body is incapable of fully utilising carbohydrate and characterised by a raised sugar content of the blood (hyperglycaemia) and sugar in the urine (glycosuria). The normal fasting blood sugar level is about 100 mg. per 100 ml., and it is found that when the blood sugar level is raised to 180 mg. per 100 ml. there is a leakage through the kidneys into the urine. The level at which this leakage occurs is known as the 'renal threshold.' A few people in normal health have a lowered renal threshold and consequent leakage of sugar on any slight rise within normal limits of the blood sugar. Glycosuria in these subjects is of no significance. In common parlance the term D. is always used as meaning the disease *D. mellitus*. It is caused by the failure of the cells of the pancreas (q.v.), called the is. of Langerhans, to secrete sufficient insulin. Insulin, a hormone, is essential to the utilisation of sugar by the body. Hence in a state of insulin deficiency the body fails to metabolise sugar, which therefore remains in increasing amounts in the blood, and this, as we have seen, spills
